NZ Marine Services Ltd., P.O.Box 5286, Mount Maunganui. Tel: 0064-7-5758445 or Mobile 025-980-570.

IDENTIFICATION CARDS: Not required, but Crew List should be handed to the Security Staff.
SEAMAN'S CLUBS: Bay of Plenty Seafarers Centre, Hull Road, Mount Maunganui. Tel: 0064-7-5756992. Services: Meals, snacks, shop, money exchange, international telephone and transport.

Galilee Mission, Wharf Road, Mount Maunganui. Tel: 0064-7-5758341.
CURRENCY: New Zealand Dollar (NZ$). U.S.$ 1.00 = NZ$ 1.77 (13.1.94).
GENERAL: *Gyro/Radio Repairs:* Gyro/Radio Repairs services available.
Fumigation: Fumigation services available.
Consular Services: Consular services for most countries located at either Auckland or Wellington.
Tides: Tidal rise and fall is between 1.3 m. and 2.0 m., and ebb/flood tides flow at approximately 3 knots at Neaps and 5 knots at Springs through the entrance channel.
Prevailing Winds: Southwesterly.
Charts: Admiralty Chart Reference NZ 54, 541, 5412, 5413.
AUTHORITY: Port of Tauranga Ltd., Post Bag 1, Mount Maunganui, New Zealand. *Tel:* 0064-7-5751899. *FAX:* 0064-7-5751800, 0064-7-5751747 Operations, 0064-7-5751759 Signal Station. *Contact:* John M. Halling, Chief Executive. J.I. Mayson, Operations Manager. Athole J. Herbert, Company Secretary. John M. Palmer, Engineering Manager. Colin J. Boocock, Finance Manager. Mike P. O'Rourke, Sales Manager.

TIMARU: 44.24 S. 171.19 E. (See Plan)

PORT LIMITS: 2.5 miles radius with centre at Eastern Extension Light.
DOCUMENTS: See "Auckland".
PILOTAGE: Pilotage is compulsory, and Pilots are available day and night. A vessel requiring a Pilot should remain 1.5 miles seaward of Eastern Extension Mole, near and to South of Fairway Beacon. Vessels should not proceed Northward of line of leading lights on Benvenue Cliff.

Contact Pilot on VHF Channels 16 and 9 ("Timaru Harbour Control"). Pilot boards vessel at Fairway Beacon.
ANCHORAGES: A vessel should anchor in a depth of not less than 12.8 m., sand, and Eastward of harbour light structure, and not within 1.5 miles of Eastern Extension Mole.
RESTRICTIONS: Swell and tidal conditions may affect time of entering harbour.
MAX. SIZE: Length, 200 m. (LOA 227 m. if fitted with bow and stern thrusters); Beam, no limit; Max. permissible draft 10.0 m. Time of berthing vessels of over 8.4 m. draft will depend on swell and tidal conditions and at Harbour Master's discretion.
HEALTH: Due to exposed nature of anchorage, incoming vessels are examined and Pratique is granted after a vessel berths. In event that vessel is quarantined, she will be required to return to anchorage without any contact being made with shore.
RADIO/VHF: Port of Timaru Ltd. has a radio telephone station equipped with both medium frequency and VHF installations.

Call sign "Timaru Harbour Radio", calling frequency 2182 kHz, working frequency 2162 kHz. Fixed watches maintained for a period of 15 minutes every 4 hours, e.g.: 0345 – 0400, 0745 – 0800, 1145 – 1200, 1545 – 1600, 1945 – 2000, 2345 – 2400 hrs. (New Zealand Standard Time) and at other times mutually arranged. VHF call sign is "Timaru Harbour", Channels 16 and 9.
TUGS: 1 tug, 2,238 kW. and Pilot launch/tug, 350 kW. available.
BERTHING: Berthing space available with depths alongside at LWOST, 190 m. with 10.25 m. depth; 400 m. with 10.00 m. depth; 545 m. with 9.75 m. depth; 212 m. with 9.5 m. depth; 195 m. with 8.0 m. depth and 160 m. with 6.0 m. depth., railway lines on most wharves. Rail to Christchurch and Dunedin.
SPECIALISED CARGO HANDLING FACILITIES: *All Weather Mechanical Loaders:* 4 all-weather mechanical meat loaders. Each machine is capable of loading 720 units per hour, to a max. of 2,500 units per hour. Also butter, cheese, frozen vegetables and fish can be handled. Can be used to unload suitable cargoes, e.g. fruit.
Ro/Ro - Lo/Lo Container Terminal: Terminal for handling Ro/Ro and container vessels. Mobile pedestal crane (SWL 47 tonnes) and forklifts for container handling, otherwise loading/unloading by ship's equipment. Port currently has services to Australia, Pacific Islands, Near East, Middle East and Far East, Europe, North and South America. Container cleaning and inspection facilities available.
BULK HANDLING FACILITIES: Grain silos and shiploader: 10 silos with total storage capacity 19,500 tonnes. Ship loading rate 700 tonnes per hour via conveyor/shiploader.

Bulk discharge equipment: 6 mobile hoppers (27 cu.m. capacity each hopper), normally used for discharge of fertiliser/sulphurs. Mobile pedestal crane equipped for loading/discharge by grab.

Bulk tallow facility: Storage capacity 6,000 tonnes, ship loading rate 300 tonnes per hour through 8 in. delivery pipe.
CRANES: One multi-purpose mobile pedestal crane equipped for handling containers, bulk and general cargoes. SWL 47 tonnes at 29 m. radius, 30 tonnes at 41 m. radius. Also 1×48 tonne crawler crane, 1×16 tonne crawler crane and 1 Hamilton Crane.
STEVEDORES: Two stevedoring companies operating. Labour must be ordered before 0700 hrs. weekdays and before 1500 hrs. Friday for weekend work.
MEDICAL: Full medical facilities are available as required, including an excellent public hospital.
TANKERS: 1 tanker berth, discharge through 8 in. hoses.
DENSITY: Specific gravity 1025 at all states of tide.
FRESH WATER: Available at all berths, delivered at up to 25 t.p.h. (cost $0.53 per 1,000 litres).
FUEL: Bunkers available, heavy and medium fuel oil. 24 hours advance notice required.
FIRE PRECAUTIONS: When tankers are discharging, access to wharf is prohibited except to those holding passes. Fire-fighting equipment is placed in readiness on wharf.
REPAIRS: Most deck and engine repairs can be undertaken.
GANGWAY/DECK WATCHMEN: Available if required.
CUSTOMS ALLOWANCES: See "Auckland".
REPATRIATION: Facilities exist for effecting crew changes and arranging necessary repatriations.
AIRPORT: 8 km. from port. Daily flights to and from Christchurch and Wellington. 160 km. by road to Christchurch International Airport.
TIME: Approximately March-October New Zealand Standard Time (GMT plus 12 hours). Approximately November-February New Zealand Daylight Saving Time (GMT plus 13 hours). Actual dates of changeover to and from Daylight Saving Time decided annually.
HOLIDAYS: New Year's Day; 2nd January; New Zealand Day, (6th February); Good Friday; Easter Monday; Anzac Day (25th April); Queen's Birthday (first Monday in June); South Canterbury Anniversary Day (third Monday in September); Labour Day (last Monday in October); Christmas Eve; Christmas Day; Boxing Day. All days can be worked if arrangements made.
POLICE/AMBULANCE/FIRE: Emergency No. 111 and ask operator for service required. Other than emergency calls: Police, 6884199 Timaru; Ambulance, 6847129 Timaru; Fire Brigade, 6847089 Timaru.
EMERGENCY CO-ORDINATION CENTRE: If within the port area contact Harbour Master's Office, in Ritchie Street. Tel: 6844199.
TELEPHONES: Can be supplied to vessels at all berths, rental N.Z.$14.00 per day.
STORING: See "Prelims".
1. Storing by truck only.
2. N/A.
3. Yes.
4. If necessary.
5. None.
6. If necessary.

SHIP SUPPLY SERVICE: Port Company craft will assist with transfer of crew.
SHORE LEAVE: Allowed.
GARBAGE DISPOSAL: Garbage service available with drums supplied on board as required through Port Company. Drums placed on board on vessel's arrival, collected daily and finally prior to departure. Charges NZ$ 27.00/can per day, plus labour.
WASTE OIL DISPOSAL: Small quantities only by lorry (private company).
SEAMAN'S CLUBS: South Canterbury Seafarers Club, Ritchie Street, Timaru. Tel: 03-6848811.
CURRENCY: New Zealand Dollar (NZ$). U.S.$ 1.00 = NZ$ 1.42 (1.3.94).
IDENTIFICATION CARDS: Not required.
DEVELOPMENTS: Upgrading of heavy equipment, installation of additional reefer points and development of storing/marshalling areas for logs. Container tracking system being developed.

Port's North Mole facility and container freight station has ISO 9002 Certification, and it's Marine Services should be certified by mid-1994.
AUTHORITY: Port of Timaru Ltd., P.O.Box 544, Timaru, New Zealand. *Tel:* 0064-3-6844199. *FAX:* 0064-3-6845615. *Contact:* I.J.F. Alexander, Manager - Corporate Services.

WANGANUI: 39.57 S. 175.00 E. (See Plan)

PORT LIMITS: Arc of a circle of 3 nautical miles radius centred at the flagstaff at Castlecliff, sited Lat. 39° 56′ 49″ S., Long. 174° 59′ 23″ E.
DOCUMENTS: See "Auckland".
PILOTAGE: If Wanganui is first N.Z. port, initial application for Pilot and vessel's ETA should be passed to local Agent by radio through one of three Post Office radio stations. If not first N.Z. port, this information should be given to local Agent by Agent at previous port. Final details settled when R/T contact made between pilot station and ship.

Pilot launch "Strathallen", LOA 48 ft. painted white, high midship wheelhouse. Pilot boards at anchorage position. International signals for Pilot should be used if no R/T contact made.
ANCHORAGES: One anchorage for vessels awaiting to enter.
RESTRICTIONS: Port worked day or night at HW when bar conditions are suitable.
MAX. SIZE: Length 120 m., beam 20 m., draft dependent on bar depths at particular time but usually 5.5 m. max. at HWS. No installations outside main port area.
HEALTH: See "Auckland".
RADIO: Wellington Radio ZLW. R/T frequencies 2182, 2162, 2012, 2045, 4419.5 and 6818.8 kHz.
VHF: Channels 16, 12, 9, 68 and 14.
TUGS: No tug available. Pilot launch used for swinging.
BERTHING: Berthing takes place at HW.
SPECIALISED CARGO HANDLING FACILITIES:
No. 1 Wharf: Pipeline for bulk cement connecting wharf with adjacent silos.

Direct handling into cool store. Fishing berth and fish unloader for hire and rail sidings.

Portable hoppers used for bulk cargoes to load directly into road trucks.

There are no facilities for containers, Roll-on/Roll-off traffic, liquid chemicals or LPG carriers.

CRANES: One mobile crane, capacity 4 tons. 3–20 ton from contractor.
STEVEDORES: Requirements for labour by arrangement.
MEDICAL: 24 hours' notice required if possible. Hospital facilities available. Inoculations, certificates, etc.
DENSITY: 1020 at HW. 1005 at LW. These figures vary greatly according to amount of fresh water in river.
FRESH WATER: Plentiful supply through wharf hose connections. Rate of delivery depends on height of ship's filling pipe above wharf level.
FUEL: All grades available but ship has to pump out of road tankers. Amount of notice depends on grade required.
REPAIRS: Minor deck and engine repairs possible.
GANGWAY/DECK WATCHMEN: Watchman necessary, either crew member or shore watchman.
OPENING/CLOSING HATCHES: Carried out by stevedores or crew.
CUSTOMS ALLOWANCES: See "Auckland".
REPATRIATION: Facilities exist but more easily accomplished at a main port.
AIRPORT: About 4 miles. Airport caters for internal services only which can connect with international services.
TIME: N.Z. Standard Time (12 hours in advance of GMT). N.Z. Daylight Time (13 hours in advance of GMT) is kept from last Sunday in October until first Sunday in March.
HOLIDAYS: As Auckland, except Anniversary Day holiday which is that held in Wellington Province.
POLICE/AMBULANCE/FIRE: Call 111 and ask for service required.
TELEPHONES: Arrangements can be made for placing telephones on board.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: Not required.
GARBAGE DISPOSAL: Drums available.
WASTE OIL DISPOSAL: Not available.
DELAYS: Fresh onshore winds could make entrance unworkable for a vessel waiting to enter. Cargo work stops in rain and in unusually strong wind. Bunkering would be slow if large amount of bunkers required.
DEVELOPMENTS: Development plan in course of preparation but as yet no details of size of any possible new installations or draft increases.
AUTHORITY: Ocean Terminals Ltd., P.O.Box 623, Wanganui, New Zealand. *Tel:* (06) 3447684. *FAX:* (06) 3447524. *Contact:* J.S.M. Blaikie, General Manager.

WAVERLEY HARBOUR: 39.51 S. 174.36 E.

The port of Waverley Offshore Terminal has been permanently closed to shipping. All port operations have ceased, and all aids to navigation have been discontinued and removed.

WELLINGTON: 41.17 S. 174.47 E. (See Plan)

PORT LIMITS: All waters within an arc of a circle of 3.85 nautical miles radius having its centre at a point on Outer Rock at the South end of Barretts Reef.
DOCUMENTS:
Port Health:
Completed Maritime Declaration of Health (if Pratique not granted).
2 copies of Poison List, if there is poison in the cargo (i.e. Class 6, 7 or 8 substances) or a Declaration.
Crew List, stating name, rank, sex, nationality and dates of last vaccinations.
Current Derat Exemption Certificate.
List of addresses of disembarking passengers.
List of any dangerous cargo on board.
Customs:
3 copies Passenger List.
3 copies Crew List.
1 copy Search List (Form 2).
1 copy Stores List (Form 3A).
1 copy Poisons List or Declaration.
1 copy Animals or Birds List or Declaration.
1 copy List of Firearms (not cargo) or Declaration.
1 copy Arrival Manifest, plus 2 copies for other ports visited.
1 copy of Cargo List, showing gross tonnage of cargo for discharge in New Zealand or a Declaration.
1 copy Form 1A - General Declaration.
1 copy MOT Form - Particulars of Ships.
Certificates (see also "Certificates").
1 copy MOT Form 5743 - Declaration of Insurance (for Tankers only).
Agent:
Varies, but at least 1 Crew List.
1 copy Cargo Manifest.
Agriculture:
1 copy Crew List.
3 copies Shipmaster's Bond and Guarantee (Fm. Ag. L35).
2 copies Meat Locker Declaration (Fm. Ag. L36).

Customs: Wellington is a designated Customs port. The practice of boarding all commercial vessels arriving from and departing for overseas has been replaced by a selective system known as 'Discretionary Entry/Clearance'.

When the vessel's agent has been advised that the vessel has been afforded Discretionary Entry or Clearance, the Master, Owner or Authorised Agent is required to lodge all arrival or departure documents (known as the Inward/Outward Report) at the Customs Office.

Discretionary Entry is granted depending on the vessel's last port, crew and voyage history. It is applied in most cases for coastwise voyages.

PILOTAGE: Pilotage is compulsory within that area of the Pilotage District being Northward of a line drawn 090° from Gordon Point through the Rear Lead Light on Hope Shoal to the Eastern shore, for all merchant vessels over 500 tons gross, except vessels whose Masters have Pilotage Exemption Certificates and to which exemption applies.
Pilotage District: The outer limit of the Pilotage District is an arc of a circle 3.0 miles in radius centred on Outer Rock.
Notice for Requiring Pilot: All vessels requiring a Pilot are required to give 24 hours notice by radio of their estimated time of arrival (ETA), at the pilot boarding area.

An updated ETA is required 4 hours before arrival in every case and again 1 hour before arrival.

Vessels approaching Wellington from the North and East may contact Wellington Harbour Radio (Beacon Hill) for amending and confirming ETA's via the VHF repeater on Cape Palliser (VHF Channel 4). The approximate range to the Northward is to Castlepoint.

If the vessel will be late arriving, a new ETA must be sent 4 hours before the original ETA.

ETA messages should be sent through a coastal radio station, or other means, addressed to "Pilots – Wellington".

Vessels equipped with cell phones or fax can, in addition, repeat these messages to the port's 24 hour signal station (Beacon Hill). Tel: (04) 388-5470. Fax: (04) 388-4319.
Note: Port of Wellington is *not* fitted with Telex.

After hours the Coastal Radio Station receiving such ETA messages, direct these messages to Wellington Harbour Radio (Beacon Hill) for actioning – this station is manned 24 hours. It is preferable that all communications be directed through a Coast Radio Station but vessels with the appropriate equipment may use direct facsimile links.

Vessels coming from the North down the East coast of the North Island may contact Wellington Harbour Radio on VHF Channel 4.

Vessels approaching from the West through Cook Strait may contact Wellington Harbour Radio on VHF Channel 62.

Vessels fitted with cell (transportable) telephones may telephone such information to Wellington Harbour Radio direct on (04) 388-5470 or in office hours, direct to the Duty Pilot on (04) 472-8912. Wellington Harbour Radio is also equipped with a facsimile (04) 388-4319.
Note: If no Notice of Arrival is sent it may be up to 2 hours after a vessel is sighted by Beacon Hill before a Pilot can board.
Pilot Transfer Area – Launch: The transfer area is situated on the extension of the leading line (Front Lead and Rear Lead in transit) and approximately 3 miles from the entrance buoy, where the leading line extended meets Pilotage Limits.
Lat. 41° 24′ S. Long. 174° 49.5′ E.
This position provides adequate searoom for ship maneouvring under most conditions.

Vessels approaching for an inwards Pilot are requested to stay in the general area of this point, and in particular outside the 2 nautical mile range from Pencarrow Head Light, unless directed otherwise by Wellington Harbour Radio or the Pilot.

In heavy Southerly weather it is recommended to stay to seaward of the Pilotage Limit unless directed.

In heavy Southerly weather it may be necessary to embark or disembark the Pilot in smoother water between the Compulsory Limit and the Front Lead. The Master will be advised by the Pilot if this is necessary and a lead from the launch will be offered.

The Pilot launch "Tarakena" has a speed of about 18 knots.

Anchors should be cleared away before passing Pencarrow Light and remain on standby for berthing.

Note: In some extreme Southerly conditions, and particularly on an ebbing tide, a considerable short steep sea builds up at the entrance and in the outer part of the channel which may cause some handling problems to some vessels. Vessels will be advised by the Pilot if, in his opinion, this is the case and in the interests of safety these vessels may be advised to stand-off to seaward until conditions moderate or the tide changes.
Appraisal of Local Weather – ETA's: Vessels coming down the East coast of the North Island and not familiar with Cook Strait weather should consider local weather forecasts carefully when estimating times of arrival, particularly when in light draft or low powered. Experience has shown that in some circumstances only light Westerly winds may be blowing down the East coast until rounding Cape Palliser when a full gale from ahead may be experienced which may greatly influence the ETA.
Timing of Sending of ETA's – Pilotage and Exempted Vessels: Masters and Port users are reminded that vessels arriving over a weekend or holiday and requiring to berth before 0730 hrs. on a Monday or working day after a holiday, are required to advise their Estimated Time of Arrival (ETA) to "Pilots – Wellington", Tel: (04) 388-5470, Fax: (04) 388-4319 by 1430 hrs. on the Friday or last working day preceding a Public Holiday.

Such notification may be made directly to the Duty Pilot by the vessel's Port Agent.

This facilitates operational planning and the ordering of tugs and linesmen over the weekend or Public Holiday.

Although a basic gang of linesmen are available to service small vessels at short notice, extra linesmen to complement the mooring gangs have to be pre-ordered.

Under usual circumstances, once ordered, linesmen's time of commencing work cannot be brought forward.
Pilotage by Leading or Signalling: An extract from the Wellington Harbour Byelaws 1985, Part 3, 3.5 reads:
"3.5 Pilotage by Leading:
The leading of ships by or signalling to ships from a pilot boat under the conduct of a Pilot shall be pilotage which may be requested by a Master as a service for his ship if:
(a) by reason of adverse sea or weather conditions or otherwise the Pilot available to pilot the ship decides that he is not or will not be able with safety to board or disembark from the ship requesting his services.
(b) the number of ships requesting the services of a Pilot exceeds the numbers of Pilots available."

Pilot Launch Signals: In addition to the signal flag 'H', the pilot launch when leading by day will fly code flags 'UF' which is the International Code signal meaning 'you follow me'. By night the usual pilot boat signals only are displayed.

The pilot launch has a red hull, grey deck, white deck housing, diagonally disposed broad red band over housing, superimposed with the work "Pilot" in white lettering.

Pilot Leaving Times: When using the launch, the Pilot launch leaves its base at King's Wharf 35 minutes before the vessel's scheduled ETA.

When there is more than one arrival one hour or more apart which are to be serviced by launch, the Pilot for the second vessel may join the Pilot launch at Seatoun Wharf, approximately 30 minutes before the second or subsequent arrival.

If vessels are arriving less than 30 minutes apart, the Pilot for the second vessel will leave on the launch with the Pilot for the first vessel.

Convoy Movements: Due to the numbers of foreign fishing vessels which visit the port, these vessels, when numbers require, are sailed in a convoy system, usually at 1230 hrs. on Saturdays, Sundays and holidays, and at 1530 hrs. on weekdays.

Depending on convoy numbers and Pilot availability, a Pilot may be on the launch at the beginning of the convoy, with another Pilot or Pilots being on board selected vessels.

Mariners may meet such foreign fishing vessels proceeding inward to the anchorage on their own without waiting for a Pilot. Such vessels may or may not respond to VHF calls.

Pilot Transfer by Launch: Do not approach closer than 2 miles range from Pencarrow Head without Pilot's instructions.

Make a good lee for the Pilot launch with the wind and swell abaft the beam on the weather side and with a ship's speed of about 5 knots. The Pilot will advise you of an appropriate heading and boarding ground. The launch "Tarakena" has a service speed of about 18 knots, so Masters should bear in mind that their way needs to be reduced in good time down to the working speed required (8 knots).

Pilot Ladder: The Pilot ladder is to be constructed and rigged in accordance with IMO requirements, Regulation 17, SOLAS 1974 for Pilot ladders and The New Zealand Shipping (Pilot Ladders) Rules 1974. The ladder should be clean, properly fitted with spreaders, well clear of discharges and outlets, and all outboard fittings which may foul the Pilot Launch.

The ladder must be placed well amidships on the flat part of the hull. The Wellington launch is 25 m. in length and it requires a similar 25 m. length of flat hull to land astern of the ladder.

The bottom of the ladder should be 2.0 m. above the water.

Two *clean manilla* manropes of at least 20 mm. diameter are to be securely made fast to the ship and must not be made fast to the ladder at any point. *Manropes are to be without knots and be no longer than the ladder.*

ANCHORAGES: Depth in anchorages 15 m. to 22 m.

Fairway: Within portion of harbour lying inshore and to Westward of a line drawn from Post Point, the Easternmost point of Oriental Bay, in a 349° direction, to Kaiwharawhara Shore.

9*Inner Anchorage:* Within portion of harbour lying between the Seaward boundary of Fairway and a line drawn from Point Jerningham, in a 359° direction to Kaiwharawhara Shore.

Outer Anchorage: Within portion of harbour Eastward of Inner Anchorage.

Note: Vessels anchoring in Outer Anchorage should take up a position well up towards Kaiwharawhara.

Explosives Anchorage: Within that portion of the harbour contained in a circle with a radius of 0.3 nautical miles having as its centre a point bearing 000° true, distant 1.45 nautical miles from Point Halswell Light Beacon or in such other place within the Harbour of Wellington as may be specified by the Harbour Master on any occasion having regard to weather conditions.

Caution When Anchoring: It is advisable when anchoring (especially when in light draft) to anchor with 2 anchors well spread in a general West and East direction, as it frequently blows hard with heavy gusts of wind off the high land, causing a vessel to sheer about.

Depending on the vessel's draft, 7 shackles veered on one anchor and 3 shackles veered on the other will make the vessel lie much easier.

A strict visual and radio watch should be kept and the short anchor should be raised (and veered again later if required) should the wind change direction to a marked degree, for example when the wind backs from the Northwest to the South on the passage of a front.

Prohibited Anchorages:

(a) Anchorage is prohibited within 150 m. (500 ft.) of the jetty situated on the Northeastern side of Somes Island.
(b) Within one cable of any power or telephone cable.
(c) Within 50 m. of the Greta Point sea water intake, marked with a white triangle on the shore.
White triangular beacons, situated on the foreshore, mark the ends of the power cables.

RESTRICTIONS/MAX. SIZE: Entering and Leaving – Controlling Factors:

Maximum Draft: The maximum draft in the channel is 9.8 m. This maximum draft is when the tide gauge (Wellington) reads zero – that is, at Chart Datum.

The maximum draft for any time can be obtained by adding the current tide gauge reading to the 9.8 m. constant.

The tide gauge is situated at Waterloo Quay and Beacon Hill Signal Station is equipped with a remote tide gauge and can give readings on request.

The usual maximum drafts for channel passage are between 11.2 m. and 11.4 m., depending on the height of the tide, and providing there is no excessive swell condition in the area between Steeple Beacon and the Front Lead – Southerly swell conditions may affect these maximums.

Under Vessel Clearances:

In the entrance channel 1.5 m.
At the berth 0.9 m.

Length and Beam: Subject to any berth limitations there is no limit to length or beam for entrance to the Port.

Port Operational Hours: Subject to the operation of Port Operational Hours, vessels may enter or depart at any time.

The usual hours of operation of tugs and linesmen are 24 hours.

Pilotage is available 24 hours a day, although pilotage is generally undertaken to fit in with the above stated port operational hours.

Deep draft vessels which are subject to tidal constraints, vessels with emergencies, sickness, etc., are handled at any time.

Small non-commercial vessels (i.e. foreign fishing vessels requiring bunkering only or storing) are generally, but subject to other Port movements, only piloted within the pilotage hours of 0700 – 1800 daily.

Tides: Masters wishing to know the height of the tide at any time may direct their request to Wellington Harbour Radio (Channel 14).

For information concerning heights and times of high water refer to the New Zealand Nautical Almanac.

Tidal Range: Neaps 0.8 m. Springs 1.00 m.
Tidal stream in entrance channel: Min. 0.3 knots.
Max. 0.8 knots.

HEALTH: 24 hours before arrival, despatch message through a Coastal Radio Station, to Port Health, Wellington. Radio Pratique can be granted at the discretion of Port Health. The request for pratique is to state ETA, last port with date of departure, number of crew, number of passengers, state of health of all crew and passengers, and indicate if there is a doctor on board. Once pratique is granted it covers all subsequent coastal movements on that voyage.

Vessels requesting Pratique should exhibit the appropriate international signals until Pratique is granted.

Vessels are usually cleared by the authorities once berthed alongside.

Health Officers Examination Ground: Within that portion of the harbour contained in a circle with a radius of 0.2 nautical miles, having as its centre a point bearing 347° True, distant 0.56 nautical miles from Point Jerningham Lt. Beacon, or such other place within the Harbour of Wellington as may be specified by the Harbour Master on any occasion having regard to relevant circumstances. Until Pratique has been granted, vessels arriving from ports beyond New Zealand must not proceed inwards beyond the limits of this area.

RADIO: *Beacon Hill Signal Station:* A signal station (call sign 'Wellington Harbour Radio' and marked as 'SS' on Chart NZ 4633) is situated on Beacon Hill, at an elevation of 131 m., and about 2 miles North-Northwestward from Pencarrow Head.

A 24 hour watch is maintained on VHF Channel 16, VHF Channel 14 and MF 2182 kHz (working 2012 kHz). Channel 14 is the local working channel. Channels 4 and 62 also available.

Shipping movements, berthing information, local weather and sea conditions at the entrance, tide heights and navigational information can be obtained on request.

Frequencies available – M/F (Range 100 miles):
TX 2182, 2162, 2012, 2045, 2129, 4125 kHz (calling 2182).
RX 2182, 2153, 2012, 2045, 2129, 4125 kHz (working 2012).
Frequencies – VHF (Range 30 miles):
Calling – Channel 16 (international).
Channel 14 (local call).
Working – Channel 14 (local working).
Channel 12 – (tugs, etc.).
Other Channels used – 10, 9, 62, 68, 71 and others.
Routine – Continuous service on M/F and VHF. Monitors M/F 2182 and VHF Channels 16 and 14.

RADAR: A radar with ranges 0.25 to 72 nautical miles is situated at the Signal Station.

The radar is installed for the information of the signalman only.

VHF: *Port Operations:* To avoid unnecessary VHF channel changing, all vessels within Wellington Harbour limits are requested to use VHF Channel 14 for receiving and transmitting harbour traffic.

All vessels arriving at the port are requested to make their initial call on Channel 16 and then change to Channel 14 and remain on that channel whilst in harbour limits (unless actually working with tugs).

Where possible they should also monitor Channel 16 as this still remains the International Safety Channel.

All Port Company floating plant will initially listen and transmit on VHF Channel 14.

The tugs/ship manoeuvring channel is Channel 12.

Beacon Hill Signal Station will inform the Masters of all ships arriving at the port of the need to remain on Channel 14 whilst in harbour limits.

The Duty Pilot can be contacted on Channel 14 during office hours (call "Port Operations Pilots Office"). Linesmen can also be contacted on this channel (call "Shipping Supervisor" or "Boatmen Mobile").

Also see "Radio".

TUGS: The Port of Wellington Ltd. owns 2×2,700 h.p. (2,200 kW) Voith Schneider water tractor tugs, ('Kupe' and 'Toia'). Bollard pull is 28 tonnes and each has a free running speed of 11 knots, with a steaming endurance of approximately 9 days. Two tugs are equipped for fire fighting, deep water towage and salvage duties. The tugs are painted bright red.

The tugs are available for hire by the Port of Wellington Ltd., subject to the provisions of the standard form of Hire and Indemnification Agreement. The Port of Wellington Ltd. and the Harbour Master may also direct a vessel to take a tug and the Harbour Master may also direct the manner in which it is used.

Harbour tow lines (hawsers) are provided by the tug.

Tugs usually meet vessels approximately 40 minutes from the usual Pilot boarding area.

BERTHING: (Max. drafts using criteria of 0.9 m. underkeel clearance).

Wharf	*Berth* No.	*Berth Length* (m.)	*Max. Draft* * (m.)
Overseas Terminal	2	238	9.2 & 8.4
Overseas Terminal	3	255	9.2
Taranaki Breast		234	7.5
Taranaki Wharf		152	7.4
Queen's Wharf	1	224	7.4 & 6.5
	2	93	4.8
	3	92	5.2 & 4.3
	4	114	7.0 & 5.5
	5	79	4.8 & 2.8
Waterloo Quay	2	110	6.0 & 6.1
Waterloo Quay	3	107	5.0
Inter Island Wharf	2	150	6.9
Inter Island Wharf	3	213	8.4 & 7.5
Glasgow Wharf	2	218	8.4 & 6.3
Glasgow Wharf	3	240	8.4 & 7.2
King's Wharf	2	251	8.5 & 6.5
Thorndon Container	1	292	11.1
Thorndon Container	2	292	10.6
Aotea Quay	1 – 6	1,115	9.8 to 8.4
Seaview		250	11.2
Burnham		257	8.2 & 4.9
Miramar West		165	9.0 & 7.3

* The maximum drafts indicated are the drafts at chart datum (i.e. tide gauge reading zero). Low water tide predictions are generally 0.2 – 0.4 positive and may allow deeper drafts than those indicated.

Notes: Tankers use berths at Seaview, Burnham and Aotea Quay.

Harbour Service craft using King's No. 2.

Berths at Overseas Terminal to Police Jetty (inclusive) are owned by another Company, but are allocated an operating agreement by the Port of Wellington Ltd.

CRANES:

Wharf Cranes:

Wharf	*Distance of Centre First Rail Track from Outside Face of Berth*	*Cranes* No.	*SWL* (tonnes)	*Outreach Past Wharf Fender*
Glasgow 3	3.63 m.	3	3.0	18.5 m.
(Maximum radius 22.8 m. Minimum radius 6.1 m.)				
Thorndon	– (D crane)	1	46.00	32.2 m.
Container	– (C crane)	1	46.00	32.2 m.
Wharves	– (B crane)	1	52.83	32.2 m.
Aotea Quay 2 and 3 only	4.57 m.	4	4.5	15.5 m.

(Maximum radius 15.5 m. Minimum radius 7.6 m.).

(3 cranes rigged for grabs with SWL 2 tonnes).

Mobile Cranes: The Port of Wellington Ltd. has 3 mobile cranes available for cargo operations with capacities of 20,000 kg., 5,000 kg. and 4,000 kg.

CARGO HANDLING FACILITIES:

Thorndon Container Berth: This area comprises 2 berths with a total length of 585 m. Maximum draft alongside is 11.1 m. (SW). The berth is served by 3 container cranes with maximum lifting capacities of 46, 46 and 52.8 tonnes. Crane outreach is 32 m. The berth is served by a back-up area totalling 24 hectares. There is maximum storage for 6,284 containers, including 1,370 refrigerated containers.

Usual working hours within the terminal are 0730 – 2230 hrs. on weekdays, but the terminal has the capacity to operate on a 24 hour basis if required, and 0800 – 2200 hrs. on other days, including holidays.

The berth is a common user berth but is owned by a consortium of shareholders involved in the New Zealand container trade.

The cranes are owned by the Port of Wellington Ltd. The Terminal operators are: Container Terminals Ltd., P.O. Box 563, Wellington (Manager: Mr.P.Snow).

Bulk Petroleum Products: Tanker terminals are provided at Seaview, Burnham and Aotea Quay. Maximum drafts alongside these berths (when tide is at chart datum) are Seaview – 11.2 m., Burnham – 8.2 m. and Aotea Quay – 9.8 m.

Also see "Tankers".

Roll-on/Roll-off Berths: There are two dedicated Roll-on/Roll-off berths provided for the inter-island rail ferry link. Vessels with quarter ramps may use Glasgow Wharf No. 3 (length 235 m. – max. draft 8.4 m. with open areas of 4,200 sq.m. with 2,000 sq.m. adjacent), Aotea Quay No. 4/5 (length no limit, max. draft 8.4 m. with open back-up area of 9,500 sq.m.) or Aotea Quay No. 1/Container Berth No. 2. There is also a dedicated Roll-on/Roll-off Inter-Island Wharf No. 2.

BULK CARGO FACILITIES: *Cement:* There are 3 dedicated cement manifolds at Aotea Quay No. 5/6, discharging to storage and packing areas.

Wheat and other bulk cargoes: There are available 2 wheeled mobile hoppers with a capacity of 25 tonnes. Three cranes at Aotea Quay are fitted with grabs, SWL 2 tonnes.

General: There are available several areas of open stacking area (see above under "Roll-on/Roll-off Berths" suitable for stacking of any bulk cargo and containers. Aotea Quay has 1 cargo shed with floor storage area of 5,120 sq.m., suitable for general cargo, served by internal cranes with a capacity of 5 tonnes.

STEVEDORES: There are 4 main stevedoring companies based in Wellington, one of which is a dedicated container terminal operator.

1. Container Terminals Ltd. This is the operating division of a consortium of major shipping companies involved in the container trades.
   Manager: Peter Snow.
   Telephone: 472-2395.
   Facsimile: (4) 499.0524.
2. Wellington Cargo Services. A subsidiary of Port of Wellington Ltd.
   Cargo Manager: Roger Sullivan
   Telephone: 472-8912
   Facsimile: (4) 734.549 (Harbour Office)
3. Wellington Stevedoring Services.
   Manager: David Oliver.
   Telephone: 473-9088
   Facsimile: (4) 499.2000
4. Pacifica Shipping Ltd.
   Local Manager: Roger Grylls.
   Telephone: 472-8381
   Facsimile: (4) 731.966

From time to time stevedoring companies from other ports may operate in Wellington, mainly on specialised cargoes.

Watersiders Working Hours:

Hours of work are as follows:

1st period	0730 – 1600 hrs.
2nd period	1600 – 2330 hrs.
3rd period	2330 – 0730 hrs.

Watersiders are available to work 7 days per week. A maximum of 2 hours overtime can be worked after the first shift, with an extension of a further hour if the vessel is sailing.

A 30 minute meal break is taken within the shift.

Stevedoring Equipment: The Port of Wellington owns most of the stevedoring equipment available in the port. This is hired out as required.

Major equipment available:

1 × 30 tonne forklift truck with 40 ft. (12.2 m.) and 20 ft. (6.1 m.) spreaders (SWL under the spreader is 25 tonnes).

1 × 28 tonne forklift truck.

1 × 25 tonne forklift truck with fork and 20 ft. side frame.

4 × 7 tonne forklift trucks.

6 × 4 tonne forklift trucks.

6 towing tractors with drawbar, capacities 7,000 kg. – 3,000 kg.

5 × 20 tonne trailers (TEU compatible).

20 × 2.5 tonne capacity trailers.

2 Mobile cranes with capacities ranging from 4 tonnes to 20 tonnes. Also see "Cranes".

MEDICAL: Wellington is a main centre and all medical facilities are available. With adequate notice Agents can arrange the service required. Wellington Public Hospital is a main facility.

TANKERS: Tanker terminals are provided at Seaview, Burnham and Aotea Quay.

Aotea Quay No. 1 is primarily a general cargo berth. When used as a tanker terminal the berth is fenced off with barriers, and the overhead electric crane line isolated.

Tankers are berthed and sailed at Seaview and Aotea Quay during the hours of darkness – see "Restrictions/Max. Size" – "Port Operational Hours" for more specific detail on berthing and sailing hours. Tankers are also sailed from Burnham during the hours of darkness up to 2200 hrs. and after 0630 hrs., provided they are berthed bow North, that is, starboard side to, but are *NOT* manoeuvred for berthing during the hours of darkness in Evans Bay.

As Evans Bay is in the direct approach or departure route for aircraft using Wellington International Airport, all vessels moving in Evans Bay are required to report their air-draft to Wellington Harbour Radio who will forward this height to the airport Control Tower.

Depending on the strength of the prevailing weather, tankers are usually berthed starboard side to at Seaview, so as to utilise the solid apron for landing gangways. Vessels are also usually berthed starboard side to at Burnham, that is, they are swung on berthing so as to have their bows North. Vessels may berth either side to at Aotea Quay.

Oil Spills: Contact Wellington Harbour Radio (Channel 14 – 24 hours) with particulars. This station will advise the appropriate personnel.

General: Side hose connections are to be used at all berths, and ship's cranes or derricks are required for hose lifting and brow gangways (where used).

Boiler and galley fires are not required to be extinguished.

All precautions must be taken to avoid pollution of the harbour. Scuppers must be plugged and absorbent material kept at hand in the event of spillage.

The General Cargo Regs. (1968/240, para. 106) state that all tankers should have towing hawsers placed overside when berthed at any berth. These towing hawsers should be of such size as to be able to accept the tugs in the Port of Wellington. These tugs have a bollard pull of approximately 28 tons and considerably more in some 'indirect pull' situations.

Seaview Wharf: Seaview Wharf is exposed to the weather and in the event of a Southerly gale special attention must be paid to the vessel's moorings.

Cargo Operations in Hours of Darkness: Subject to approval from the Harbour Master or his representative, discharge of oil and chemical cargoes is permitted during the hours of darkness. During these hours pipelines must not be disconnected without first obtaining the permission of the Harbour Master.

Discharging to Road Tankers at Seaview Terminal: Direct loading to a road tanker may be undertaken at Seaview providing the following procedures are complied with:

1. The vessel is completely shutdown and engaged in no other cargo operations before road tankers are allowed onto the jetty.
2. The vessel remains completely shutdown for the duration of the transfer, i.e. no sampling of other tanks will take place.
3. The road tankers will stay as far away as practicable from the vessel.
4. No more than 2 road tankers to be at the T-head of the jetty at the same time with their drivers in attendance throughout.

Concurrent operations are not permitted. This is a safety measure due to the restricted access and manoeuvring area for large road trucks on the berth and its approach road.

Tanker Berth Pipelines:

Details of industry pipelines serving the tanker terminals are as follows:

Seaview Terminal:

1 × 100 mm./4 in.	Industry Chemical S/S
1 × 100 mm./4 in.	BST Chemical S/S
1 × 100 mm./4 in.	BST Chemical S/S
1 × 150 mm./6 in.	Industry Chemical S/S
1 × 150 mm./6 in.	BST Chemical S/S
1 × 200 mm./8 in.	Industry White Oil
1 × 250 mm./10 in.	Industry Lube Oil
1 × 350 mm./14 in.	Industry White Oil
1 × 350 mm./14 in.	Gas oil

Aotea Quay:

1 × 200 mm./8 in.	Light Fuel Oil
1 × 300 mm./12 in.	Gas Oil
1 × 300 mm./12 in.	Spare line – not in use

Burnham:

1 × 250 mm./10 in.	Jet A1 – Mobil
1 × 200 mm./8 in.	Bitumen – Shell

DENSITY: Density in the harbour varies between 1032 and 1036.

FRESH WATER: Fresh water is available at all berths on application to the Port Services Manager and after hours through Wellington Harbour Radio on Channel 14.

Water can also be supplied in small quantities from Port Company tugs.

Water is supplied from the city system and average loading rates are about 25-30 tonnes per hour, per hose, depending on line pressures.

FUEL: The following fuels are available:

Aotea Quay No. 1:
Light Marine Fuel Oil 40.
Marine Gas Oil.

Aotea Quay No. 5:
Light Marine Fuel Oil 40.
Marine Gas Oil.

Aotea Quay No. 6:
Marine Gas Oil only.

Seaview Terminal:
Marine Gas Oil only (by special arrangement with the Oil Companies concerned).

Small quantities of bunker and lubricating fuel may be taken by road tanker at all berths (but not concurrent with tanker operations).

Bunker Loading Rates: Bunker loading rates depend mainly on the ability of the vessel to receive the product.

The product may be either gravity fed or pumped aboard.

As a guide, a maximum of about 100 tonnes per hour by pipeline can be supplied at Aotea Quay berths using 100 mm./4 in. hoses.

CONSULS: Consular Representatives or Embassies in Wellington: Australia, Austria, Canada, Chile, Republic of China, Cook Islands, Czech Rep., Denmark, Fiji, Finland, France, Germany, Iceland, India, Indonesia, Israel, Italy, Japan, Korea, Malaysia, Netherlands, Norway, Papua New Guinea, Philippines, Portugal, Russia, Singapore, Sweden, Switzerland, Thailand, U.K., U.S.A., Western Samoa, Yugoslavia.

REPAIRS: Major repairs can be undertaken. There are machine shops and foundries. Diving equipment and the services of trained divers are available for underwater inspections and repairs. Marine Radio and Radar Services, licensed compass adjusters.

Divers: Diving equipment and the services of divers are available for underwater video and photography inspections (with the provision of inspection reports), basic hull repairs, hull cleaning and underwater cutting (on wooden and metal hulls) using hydraulically operated and metal cutting equipment.

DRY DOCKS: None.

SURVEYORS: Marine Surveyors from the Ministry of Transport, Lloyd's Surveyors and private cargo surveyors are available.

GANGWAY/DECK WATCHMEN: Watchmen are available through Union Maritime Services who are the agents for the Shipping Federation of New Zealand who supply the watch personnel. Contact: Union Maritime Services, Wellington. Fax: (04) 384-5853.

OPENING/CLOSING HATCHES: Work normally carried out by stevedores. Only time crew are to open and close top hatches is when advised by stevedores. In case of hydraulic hatches in tweendecks, crew are to open and close, not stevedores.

HOLIDAYS: New Year's Day (1st January); 2nd January; Wellington Province Anniversary Day (22nd January); Waterside Workers Union Picnic Day (generally observed on Monday of the week 29th January falls); Waitangi Day, (6th February); Good Friday; Easter Monday; Anzac Day (25th April); Sovereign's Birthday Observance (first Monday in June); Labour Day (fourth Monday in October); Christmas Day (25th December); Boxing Day (26th December).

Note: Normal port operations during public holidays if services are required.

CERTIFICATES: Customs Department require Ship's Register on arrival.

Marine Division, Ministry of Transport require:
Load Line Certificate.
Tonnage Certificate.
Certificate of Registry.
Convention Certificates, i.e.
Safety Equipment Certificate.
Safety Radio-telegraphy Certificate.
Safety Construction Certificate.
Exemption Certificate (if any).
If passenger ship, Passenger and Safety Certificate.
Cargo Gear Register.
Certificates for all Cargo Gear, i.e. runners, spans, shackles, swivels, etc.
Derat Certificate.
Oil Pollution Certificate.

REPATRIATION: Facilities are available for crew changes and arranging any necessary repatriations.

AIRPORT: Situated 7 km. S.E. of City Wharves by road; regular internal and Australian services.

TIME: Local time is GMT plus 12 hours in Winter, (Daylight saving of one extra hour during Summer months, October to March).

CUSTOMS ALLOWANCES: See "Auckland".

POLICE/AMBULANCE/FIRE:

	Routine	Emergency
Wharf Police	4723-000	Dial 111 and ask operator for service required
Ambulance	4722-999	
Fire Brigade	3850-188	

EMERGENCY CO-ORDINATION CENTRE: Contact Wellington Harbour Radio (Channel 14 – 24 hours) with particulars.

TELEPHONES: Vessels may be connected to the telephone system at all city berths on application to the Port of Wellington Ltd. (and attended to by the Shipping Services Co-ordinator). New Zealand coastal tankers only may be connected to the telephone system at the oil berths.

Depending on tonnage, up to three telephones may be connected per vessel, and these are included within the Port Tariff.

Telephones are usually provided for local calls only. Toll calls outside the local charge area may be made on selected telephones, but such calls are for the users account.

Telephones may be requested 'toll barred', where it is not possible to make toll calls, or 'toll free' calls.

SERVICES:

Shore Electricity: Available at all city berths on application to the Port of Wellington Ltd. – type AC/50 kHz, voltage 230 – 400 volts, amperage either 60 or 200 amps.

Storm Ropes: Two 96 mm. ropes with a breaking strain of approximately 72 tonnes are available for hire.

Weighbridge: A road weighbridge of 40 tonnes capacity is available on wharf.

Compass Adjusters: At least two licenced compass adjusters are available in the port.

Slop Removal: Small quantities of slop removal can be removed by road tanker. Arranged through private contractors.

Chart Supply: All New Zealand charts can be supplied at short notice.

Painting Punts: Small painting punts are available for hire through the Port of Wellington Ltd.

Steam Cleaning: The Port of Wellington has an industrial steam cleaning facility available.

Gangway: Brow gangways of varying lengths are available for hire.

Boat Hire: The Pilot craft "Tarakena" is available for hire to transport personnel or stores to vessels at anchor when not required for piloting duties.

Nautical Publications and Safety Equipment: There are several ships providores in the port who can supply these requirements.

BANKS: The following banks have branches and agencies in Wellington:

	Telex
ANZ Banking Group N.Z. Ltd	NZ 3385
Bank of New Zealand	NZ 3344
National Bank of N.Z. Ltd	NZ 31388
Westpac Banking Corporation	NZ 3884

STORING: Vehicles can proceed alongside ships to load and unload stores.

SHORE LEAVE: Crew members are allowed shore leave at all times.

IDENTIFICATION CARDS: Not required.

GARBAGE DISPOSAL: Garbage cans are provided on board. Costs are included in port hire charges. Limit of 8 cans for vessels up to 10,000 g.r.t, and 10 cans over this size. Additional cans NZ$ 20 or NZ$ 40 for 44 gal. drums. Contact Port Authority for details.

WASTE OIL DISPOSAL: 24 hour service available via tanker truck.

Thurline Transport Services, P.O.Box 38668, Petone. Tel: 5682185. Fax: 5682185.

Anslows, P.O.Box 29003, Ngaio, Wellington. Tel: 4723140. Fax: 4723140.

SEAMAN'S CLUBS: Missions to Seamen, 25 Upland Road, Kelburn, Wellington. Tel: 4757293. Services: Shop, snacks and bar.

British Sailors Society, 121 Thorndon Quay. Tel: 4722259 or 4728311. Services: Shop, snacks, international telephone and transportation.

CURRENCY: New Zealand Dollar (NZ$).

GENERAL: For nautical and more detailed information on New Zealand ports, refer to the following publications which are kept up to date by the issue of Notices to Mariners in respect of nautical matters:
New Zealand Port Information Manual and New Zealand Pilot
New Zealand Nautical Almanac

These publications and up to date charts are available from New Zealand Government Shipping Offices.

Charts and Navigational Information:

NZ 4633	Wellington.
NZ 4634	Wellington Harbour Entrance and Plans of wharves.
NZ 463	Approaches to Wellington.
NP 51	New Zealand Pilot 1987.
(annually)	New Zealand Nautical Almanac.

Regulations:
Wellington Harbour Bylaws 1985.
General Harbour Regulations (Nautical and Misc.) 1968/239.
General Harbour Regulations (Ship, Cargo and Dock Safety) 1968/240.
Health (Quarantine) Regulations 1983/52.
Marine Pollution Act 1974.
Dangerous Goods Regulations 1985.
(plus amendments).

Garbage: Garbage may only be disposed of in accordance with strict N.Z. Government Regulations. Heavy penalties are provided for those breaching the regulations.

The responsibility for the collection and incineration of all refuse is carried out by the Port of Wellington Ltd. under the supervision of the Ministry of Agriculture and Fisheries.

All vessels, unless fitted with a garbage incinerator or holding tanks approved by the Ministry, will receive and have collected suitably approved refuse bins on a daily basis, Sundays and holidays excepted, unless so requested by the vessel or the Ministry.

Cans must not be placed on the wharf.

The following *must not* be placed in cans for incineration:

(i) Chemicals or any dangerously combustible or explosive material.
(ii) Fuel, lubricating or other oils.
(iii) Bilge scrapings, metals, concrete or other non combustible solids.
(iv) Oil soaked rags and wastes.

Garbage Incinerator: An incinerator facility is available within the port, capable of burning approximately 16 tonnes of refuse a day.

AUTHORITY: Port of Wellington Ltd., P.O. Box 794, Wellington, New Zealand. *Tel:* (04) 472-8912. *FAX:* (04) 499-0720 (Administration), 473-4549 (Shipping). *Contact:* Graham Mulligan, Managing Director. Paul Wright, Operations Manager. Captain R.J. Field, Executive Pilot.

WESTPORT: 41.45 S. 171.40 E. (See Plan)

LOCATION: The port is situated at the mouth of the Buller River and has a bar at its entrance. Two breakwaters approximately 155.5 m. apart form the entrance and farther within are 3 tide training walls.

Passage over the bar is considered impracticable when the river is in flood or during a N.W.'ly gale. In bad weather the sea breaks heavily over the outer part of the bar.

The town of Westport and wharves are situated on the Eastern bank of the Buller River, about 1.5 miles within the entrance.

APPROACHES: *Cape Foulwind:* A light flashing every 12 seconds, visible 21 miles (nominal range 14), is exhibited at an elevation of 70.40 m. (231 ft.) from a white concrete tower situated on Cape Foulwind, a headland about 6 miles Westward of the harbour entrance. The light is obscured when bearing more than 242°.

Main Harbour Light: A light flashing every 5 seconds (flash 1 sec.), visible 8 miles, is exhibited at an elevation of 19.8 m. (65 ft.) from a white lattice tower on the old signal station situated about 1.5 cables from the head of the Western breakwater.

Caution: At night, care must be taken not to mistake the powerful electric lights of a coal industry situated about 9 miles Eastward of Westport, or the lights of cement works about 3 miles Westward of Westport, for the harbour lights.

Directional Light (occasional): A fixed red, white, and green directional light is exhibited from the same tower as the Main Harbour Light as required – not always exhibited. This light is redirected to suit the best water over the bar. The arcs of the sectors from East to West are red 12°, white 2°, and green 6°, and their nominal ranges 12, 16, and 12 miles respectively.

Radio Masts: Red fixed obstruction lights are shown from radio masts situated about 8 cables S.S.W. and 5.5 miles Westward of the main harbour light.

Landmark: Three chimney stacks, each 60.7 m. (199 ft.) in height, close together with two adjacent silos, are situated about 4 miles Westward of Westport. They are of white appearance and are conspicuous from seaward.

Entering: When within 2 miles of the harbour entrance or on the Harbour Master's advice, steer to bring the main leading beacons on the Eastern Full-tide Wall in line. On entering between the breakwaters, the inner leads will be in line at approximately abeam of the old signal station and course should be altered to starboard to maintain the inner leads in line. Pass the white flashing light on the Western Half-tide Wall on starboard hand. These inner leads direct ships between the Western Half-tide Wall and the Eastern Full-tide Wall. When abeam of the fixed light on the Eastern Full-tide Wall, this light will change colour to fixed green; on observing this change steer for the wharves.

Note: Wharf working lights close to the line of the outer leads will be extinguished as and when required for vessels which have notified their intention to enter.

Floodlights: Two powerful floodlights are exhibited from two lattice-work towers, 29 m. (95 ft.) in height, situated in the railway yards at Westport. These lights, about 3.75 cables apart, are in line bearing 163°. They must not be used for navigational purposes.

PILOTAGE: Pilotage is compulsory. All vessels should notify the Harbour Master of their intention to enter at least 12 hours before arrival. No vessel must attempt to enter the port until authority to do so is received from the signal station. In the event of a Pilot being unable to board, a vessel will be led through the bar.

Pilotage District: All the waters comprised within the harbour of Westport having as their outward seaward limit the arc of a circle running from the landward boundary of the foreshore Westward of the Western Breakwater and thence into the Tasman Sea and thence to the landward boundary of the foreshore Eastward of the Eastern Breakwater such arc being the arc of a circle 1.5 nautical miles radius having as its centre the signal station on the Western Breakwater.

Old Signal Station: The old signal station is in a square concrete building with a white lattice signal mast and is situated about 1.5 cables within the head of the Western Breakwater. It has a large white diamond painted on the seaward wall and white horizontal bands on the East and West walls.

New Signal Station: The new signal station is situated at the harbour office at the northern end of the main wharf, 1.2 nautical miles within the harbour entrance. Vessels can communicate by radiotelephone, VHF, or by morse signalling lamp. Call sign: "Westport Harbour Radio".

Visual watches are maintained for pilotage purposes and for all vessels entering and leaving harbour (at the Harbour Office situated at the lower end of the Crane Wharf).

ANCHORAGES: Vessels can anchor in Buller Bay in depths from 18.3 m. to 23.7 m. (10 to 13 fathoms). A recommended berth is in a position 2 miles Northward of the old signal station.

Caution: There is poor holding ground Eastward of the entrance to the harbour and in the S.W. part of Buller Bay. Vessels should be prepared to proceed to sea directly there are signs of wind rising from the West to North quarter, as anchorage in Buller Bay is unsafe during N.W. gales. A falling barometer and lightning Westward and S.W. of Westport are almost certain indications of deteriorating weather conditions.

Quarantine Anchorage: In the open roadstead within the navigable area enclosed in a circle having a radius of 2 nautical miles from the old signal station, or such other position within the aforesaid area as may be indicated by the Westport Harbour Authorities in accordance with existing local weather conditions.

RESTRICTIONS: All vessels, may, depending on weather, bar and draft conditions, enter, berth, unberth, and depart during the hours of darkness. Vessels berth and unberth at or near HW.

MAX. SIZE: LOA 131.7 m. Beam 20 m. – 25 m., depending on bar condition.

Bar Depths: Depths over the sand and shingle bar vary between 1.8 m. (6 ft.) and 3.6 m. (12 ft.) at chart datum.

River Depths: There is ample depth in the river for all vessels which can cross the bar. Vessels up to 120 m. (393 ft. 08 in.) in length can turn in the harbour at HW neaps provided they do not draw more than 5.4 m. (17 ft. 08 in.) forward; vessels up to 131.7 m. (432 ft.) in length can use the port, but there is only swinging room if drawing not more than 4.6 m. (15 ft.) forward.

VHF: Westport Harbour Radio and tug on VHF.

RADAR: A radar station, operated by Westport Harbour Staff, has been established at the new signal station (position of scanner: Lat. 41° 44′ 50.77″ S., Long. 171° 35′ 40.31″ E.). Range 12 miles. Masters of vessels equipped with VHF or radiotelephone may request from the Harbour Master's Office, during conditions of restricted visibility, particulars of their bearing and range as shown on the radar screen. The information given will be in the following form:

According to my observation you are bearing .... degrees.......... miles from the Westport Radar Station.

TUGS: 1×420 h.p.

BERTHING: *Crane Wharf:* A quay-type wharf 670.6 m. (2,200 ft.) in length of wooden construction which has 243.8 m. (800 ft.) of usable berthage with depths of 5.8 m. (19 ft.) below chart datum alongside. The bottom is shingle.

The deck level is 7.2 m. (23 ft. 6 in.) above chart datum.

Merchandise Wharf: A quay-type wharf of wooden construction situated about 243.8 m. (800 ft.) farther Southward to Crane Wharf. Maximum berthage is 152.4 m. (500 ft.) with depths alongside of from 4.3 m. to 5.2 m. (14 ft. to 17 ft.) below chart datum. The bottom is shingle.

The deck level is 6.5 m. (21 ft. 3 in.) above chart datum.

In the inlet to the lagoon, from the seaward end of the Crane Wharf, there is a wharf used for Harbour Authority vessels.

CRANES: 1×12 tonne movable electric crane with 18.3 m. (60 ft.) outreach are situated on Crane Wharf.

MEDICAL: Local hospital for minor ailments. Base hospital at Greymouth. Dentist locally available.

FRESH WATER: Available.

FUEL: Diesel and lub oil available in limited quantities in drums.

REPAIRS: One machine shop for minor repairs.

SURVEYORS: Stationed at Christchurch.

GARBAGE DISPOSAL: Available on request. Drums provided for small quantities. Large quantities disposed of by arrangement.

WASTE OIL DISPOSAL: Not available.

SEAMAN'S CLUBS: None.

CURRENCY: New Zealand Dollar (NZ$).

REGULATIONS: The Master of any vessel which touches the bar when outward bound shall inform the Harbour Master by radiotelephone, VHF, or morse signalling lamp after he is clear of the bar. This will be acknowledged by the Harbour Master or the watchkeeper on duty at the Harbour Master's Office.

GENERAL: *Berthing Signals:* These are given from the new signal station. Vessels drawing more than 2.4 m. (8 ft.) must inform the new signal station on arrival of their draft.

Tidal and Bar Information: All information regarding bar conditions and tides is communicated by radiotelephone, VHF, or morse signalling lamp.

Tides: Heights of tides above chart datum are:

MHWS	3.30 m.	(10.8 ft.)	MHWN	2.54 m. (8.33 ft.)
MLWS	0.28 m.	(0.91 ft.)	MLWN	0.91 m. (2.98 ft.)
Range	3.12 m.	(10.23 ft.)	Range	1.63 m. (5.35 ft.)

A tidal gauge, situated in the Harbour Master's Office, shows automatically the depth above chart datum.

For information concerning heights and times of high and low water see New Zealand Nautical Almanac.

Tidal Streams and Currents: Outside the bar the flood stream sets Westward and the ebb stream Eastward. The rate of the tidal stream is least about the time of HW and during 1 to 2 hours before and after HW.

During river freshes, which may occur at any time of the year, the river current in the harbour attains a rate of from 8 to 10 knots.

The tides rise highest with Easterly winds and lowest with Westerly winds.

Currents set across the bar according to the direction and force of the wind. Strong winds from the West and S.W. cause Easterly sets with rates of up to 6 knots; Easterly winds cause sets to the Westward with less effect.

Berthing Light: A small quick-flashing amber light is placed on the berth at night to indicate where the vessel's bridge should be placed alongside.
Garbage: Refuse must be kept on board. No arrangement is made for its collection.
Communications: Westport is on the railway. For freight purposes only; there are connections to Christchurch and Greymouth and Nelson by bus on weekdays. The domestic airport lies South of the port with flights to Wellington daily.
Customs: Westport is a Customs sub-port controlled by the Collector of Customs, Christchurch.
AUTHORITY: Westport Harbour Authority Administered on their behalf by: Buller Port Services Ltd., P.O.Box 335, Main Wharf Harbour Office, Westport, New Zealand. *Tel:* 0064-3-7897249. *FAX:* 0064-3-7897739.
Contact: Captain Sean Bolt, Harbour Master.

WHANGAREI: 35.45 S. 174.21 E. (See Plan)

PORT LIMITS: From a point due South of the summit of Sentinel Rock, thence to a point 5 cables due East of Sentinel Rock, thence to a point 5 cables due East of Bream Head, thence to a point 5 cables due East of Tutukaka Head, thence to Tutukaka Head.
DOCUMENTS:

3 copies Passenger List.
3 copies Crew List.
1 copy Search List (Form 2).
1 copy Stores List (Form 3).
1 copy Prohibited and Restricted Immigrants.
1 copy Poisons List.
1 copy Animals and Birds List.
1 copy List of Firearms (not cargo).
1 copy Arrival Manifest (Form 1).
1 copy List showing the gross tonnage of cargo for discharge in New Zealand.

PILOTAGE: Compulsory. Pilots embark on the line of leads 141°/321° at the seaward extremity of Pilotage District, i.e. up to 1.5 miles South-Eastward of the Fairway Buoy. In heavy Easterly weather, it may be necessary for pilot vessel to lead ship in through the Outer Channel and embark in the lee of Frenchman Island.

Pilots are available all hours day and night subject to prior minimum notice of 24 hours being received during normal week-day working hours Second notice confirming or amending first to be sent 4 hours before expected arrival or during the previous working day if possible. The Pilot supplies a set of Harbour bye-laws. Pratique, Agriculture and Customs clearance is normally undertaken on arrival at berth.

Pilot boats are equipped with VHF. Working frequency is Channel 11, but Channels 6, 8 and 16 are also fitted. Pilot vessels are *Ngapuhi* – call sign ZM2146. Range approximately 20 miles. *Ngapuhi* painted blue, white housing, yellow capping rails. Pilot vessel *Kemp* has blue hull with yellow deckhouse.

Pilot ladder with manropes required.
ANCHORAGE: Situated 5 to 10 cables Eastward of the Fairway Buoy in 12 to 20 fathoms (21.63 m. – 36.57 m.) of water in the section enclosed by the Fairway Buoy bearing 225° T to 315° T. Holding ground good in fine sand, but exposed to Easterly weather.
Harbour Anchorage: At Marsden Point, 2 cables West of Passage Island Light, in 5 fathoms (9.14 m.) of water. Max. draft 7.31 m. (24 ft.). Good holding ground, sand and shell bottom.
RESTRICTIONS: Controlling depth in entrance channel 15.24 m. (50 ft.) MLWS. Depth in upper harbour channel maintained at 8.53 m. (28 ft.) MLWS.
MAX. SIZE: Marsden Point: Oil Refinery dolphin berths, LOA 304 m., draft 16.0 m. (52 ft. 06 in.), Cargo berth LOA 182.88 m. (600 ft.), draft 8.52 m. (28 ft.)

Port Whangarei: LOA 182.88 m. (600 ft.), draft 9.44 m. (31 ft.).
HEALTH: All vessels examined by Health Officer on arrival.
VHF: The station is Marsden Point, Whangarei. Call sign "Whangarei Harbour Radio" Continuous 24-hour watch is maintained on VHF Channels 16 and 11, range 40 miles.
RADAR: Tugs and pilot boats *Ngapuhi* and *Kemp* fitted with radar.
TUGS: Available. Tugs equipped with VHF. Tugs usually secure to vessels entering in vicinity of Frenchman Island. Numbers of tugs normally used are: 1 tug for vessels up to 25,000 d.w.t., 2 tugs for vessels from 25,000 – 70,000 d.w.t., 3 tugs for vessels over 70,000 d.w.t. Unberthing: 1 tug is normally required for vessels under 25,000 d.w.t., and 2 tugs for all other vessels, subject weather conditions. These parameters are under examination.
BERTHING: Marsden Point Oil Berths (2) – operated by the New Zealand Refining Company, Marsden Point. LOA 304 m. Max. draft 16.0 m. when berthing on H.W. and 13.1 m. maximum if berthing on L.W.

Marsden Point Cargo Berth (1), LOA 190 m., max. draft 8.53 m. at any state of the tide.

Port Whangarei berths (3), LOA 190 m., max. draft 9.44 m. when berthing on H.W. and 7.31 m. maximum if berthing on L.W.

Portland berths, bulk cement berth; LOA 82.89 m., max. draft 5.63 m. when berthing on H.W. and 4.26 m. maximum if berthing on L.W.
SPECIALISED CARGO HANDLING FACILITIES: Portland bulk cement loading jetty.

Port Whangarei, 7 portable hoppers for use discharge of bulk cargoes.
STEVEDORES: Confirmation of arrival time 4 hours before ETA or revised ETA, whichever is earlier is required. Notice of arrival during a week-end or public holiday must be given not later than 1400 hrs. on the last working day preceding arrival.
MEDICAL: Hospital and dental services available.

TANKERS: *ETA Advice:* Advise Agent on Departure from last Port. Agent will then telex/fax Refinery Check Lists to Master.

Confirmation of ETA to Agents and Port Corporation. If ETA is Saturday, Sunday or a Monday Public Holiday, notice must be given before 1400 hrs. on previous Friday. Also, advise that vessel is oil tight. 4 hours before arrival:

Final ETA to Port Corporation, confirming or amending 24 hour advice. Also see "VHF".
Berthing: Marsden Point Oil Berths – Vessels up to approximately 30,000 d.w.t. are berthed at any state of the tide and swing bow to tide before berthing.

Vessels in excess of 40,000 d.w.t. are berthed at high and low slack water only. Max. draft LW 13.1 m.; max. draft HW 15.24 m. Vessel's deadweight may be increased dependent on weather.

The Pilot will board 1 hour 15 minutes before H.W. and 2 hours 15 minutes before L.W. for vessels in excess of 50,000 d.w.t.
Restrictions: Due to limited operating height of hose gantry at both berths, vessels must at all time restrict the vertical distance from top of manifold to waterline to 15 m. or less.

During the ballasting operation a safe trim must be maintained and every care must be taken to ensure that no oil escapes into the waters of the harbour.
Loading/Discharging: Slop reception facilities are available. Diameter of load/dischage line 10 in. ASA.
Regulations: Vessels must be oil tight. Prior to entering an inspection is made by the pilot boat to confirm this.

All deck scuppers must be plugged and made oil tight.
DENSITY: 1025.
FRESH WATER: At Northland Port Corporation wharves by hose 15 – 20 t.p.h. at 40 cents per 1,000 litres. Refinery jetties 10 t.p.h. at NZ$1.50 per 1,000 litres.
FUEL: Available from Refinery berths (viscosities 3,500 secs. Red 1. 1,500 secs. Red 1 and MDO).
FIRE PRECAUTIONS: Tugs have fire-fighting capability. Tankers to have fire wires fore and aft.
CONSULS: None.
REPAIRS: Most repairs undertaken.
DRY DOCKS: None. One slipway capable of receiving vessels up to 1,500 tonnes/d.w.
SURVEYORS: 1. Cargo Inspectors are readily available and are employed by ships' Agents, usually in the form of a reputable Master Mariner working for the Harbour Authority.

2. Surveyors for Lloyd's, American Bureau, Bureau Veritas, etc., should be arranged through the offices of the surveyor required in Auckland.
OPENING/CLOSING HATCHES: Usually carried out by stevedores.
CUSTOMS ALLOWANCES: Tobacco: 200 cigarettes or 250 gm. tobacco or 50 cigars permitted each crew member. Wine/spirit: one opened bottle wine/spirits for each crew member.

A New Zealand flag ship arriving from overseas may have a concessionary allowance.
REPATRIATION: Facilities exist.
AIRPORT: 12.8 km. (8 miles) from Port Whangarei; regular daily internal flights.
TIME: GMT plus 12 hours. Daylight saving time observed from early October to early March.
HOLIDAYS: The following are recognised holidays: New Year's Day; 2nd January; Anniversary Day (usually last week in January); Waitangi Day (6th February); Good Friday; Easter Monday; Anzac Day (25th April); Sovereign's Birthday (first Monday in June); Labour Day (fourth Monday in October); Christmas Day; Boxing Day; Waterside Workers Picnic Day.
POLICE/AMBULANCE/FIRE: Telephone 111 for emergency, and ask for service required.
EMERGENCY CO-ORDINATION CENTRE: Contact any harbour radio station or police station.
TELEPHONES: Available at wharves.
SERVICES: Tank cleaning, radio and radar repairs. Compass adjuster from Auckland.
SHIP SUPPLY SERVICE: Port Company craft will assist with transfer of crew and stores in an emergency.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: Crew are to carry some form of indentification (Seaman's Book).
GARBAGE DISPOSAL: Garbage cans are put on board by port corporation work boat on arrival. These are changed daily. All overseas vessels must use bins provided as required by government regulations.
WASTE OIL DISPOSAL: Oily slops from tankers are accepted at refinery jetties up to a maximum of 15,000 tonne at Marsden Point. Tel: (09) 432-8311. At Whangarei facility limited to road tankers. Contact Allens United Cleaning Service. Tel: (09) 438-2203.
SEAMAN'S CLUBS: Flying Angel, P.O.Box 14, Ruakaka. Facilities include pool, table tennis, shop, telephone (international), foreign exchange. Tel: (09) 432-7987 or 432-7433.
CURRENCY: New Zealand Dollar (NZ$).
REGULATIONS: Issued by Pilot on arrival.

Should a vessel be berthed at Main No. 2, then other vessels are restricted to passing inwards and outwards from Main No. 3 during the top half of the tidal cycle.
DELAYS: Tidal delays and berth vacancies.
AUTHORITY: Northland Port Corporation (NZ) Ltd., P.O. Box 848, Whangarei, New Zealand. *Tel:* (09) 438-1279. *FAX:* (09) 438-7067.
Contact: T.W. Archer, General Manager. P.T. Barling, Marine Operations Superintendent. 24 hour duty numbers: Tel: 09-4382253. Fax: 09-438430.

Nicaragua

GENERAL

DOCUMENTS: *Consular Documents:*
The Consular Law of October 26, 1904, amended by a decree of September 5, 1952, provides that "Nicaraguan Consuls must, regardless of the flag of the vessel, visa, certify or draw up in conformity with the Master; the Crew List and the Passenger List, or the "no passengers" declaration, or changes in any of the lists, when for that voyage, the lists were visaed, certified or formulated by the Nicaraguan Consul, or where there is none, by the Consul of a friendly country".

There is much confusion in enforcing of the Consular Regulations, since often consular clearances in ports of loading that are not the last port of call before reaching Nicaragua are complete, that is with visa of all forms, not merely the manifest. Visa of the original bill of lading by the shipper is also required, a procedure that is later monitored by Customs through the import policy. The fine for failure to comply with this requirement is 100% of the FOB value of the goods.

Required Prior to Arrival:

Arrival Notice:

48 hours before the vessel's arrival in the Pilot Waiting Area, the Shipping Agency must submit to the Port Authority the form entitled "Arrival Notice" in 5 copies.

24 hours before, the ship's arrival is reported in writing to the Captain of the Port, Customs, Maritime Health and the Delegation of the Agricultural Ministry.

Information on Cargo for the Port:

The arrival notice is accompanied by a stowage plan, if any, plus a breakdown of the cargo to be unloaded. At least the total tonnage of cargo to be handled is to be reported.

Additional Requirements:

If the ship carries export cargo, that fact must be reported to the Port Authority 2 to 6 days in advance, according to the amount of cargo, so that the ship can tie-up at the pier most suitable for unloading its cargo.

On Arrival:

Type of Document	*Number and Distribution of Documents*						
Basic Forms	*Captain of Port*	*Customs*	*Security*	*Maritime Health*	*Agriculture*	*Port Authority*	*Total*
General Declaration	1	3	–	–	1	2	7

Sets of Bills of Lading	–	–	–	–	–	1	1
Dangerous Cargo List	–	–	–	–	–	2	2
List of Cargo to be Loaded	–	–	–	–	–	–	1
Stowage Plan of Cargo to be Loaded	–	–	–	–	–	2	2
Tally Books	1	7	–	–	1	7	16

(a) This form is not required, but if it is available, carry 3 copies.
(b) Customs checks the clearance from the last port and remits it to the Captain of the Port.
(c) With consular visa.
(d) 3 visaed manifests for each port of loading are required, but 1 visaed and 2 without visa are acceptable.

Other Requirements:

In the port of Corinto, the following documents must be submitted: *Basic Forms:* Cargo Manifest, 20 copies, 3 of which must be visaed. Crew List, 8 copies, 3 of which must be visaed. Passenger List, 8 copies, 3 of which must be visaed. Ship's Stores List, 8 copies, 3 of which must be visaed. Maritime Health Declaration, 2 copies.
Additional Documents: Clearance from the last port, certified. Ballast Manifest, 12 copies, 5 of which must be visaed. Voyage Memorandum, 10 copies. Bill of Lading, 3 sets for each port of loading. Stowage Plan, 3 copies. List of Cargo Distribution, 4 copies. Tally Books, 10 copies.

Prior to Departure:

Before clearance, a report is submitted to Customs on export cargo, so that it can be compared with the export policies.

The vessel's clearance permit is requested from the Captain of the Port, which requires payment of 84 cordobas for this service, and for the official visit.

Customs considers the ship cleared and countersigns the clearance permit when the following payment vouchers have been submitted to it:

Mayor's Fee	300.00 cordobas
Municipal Welfare Fund	300.00 cordobas
Maritime Health Official Visit	56.00 cordobas
Agriculture Official Visit	30.00 cordobas
Customs Administration Fees	14.00 cordobas for unloading 21.00 cordobas for loading and unloading or, loading only

Certification that the vessel's documents were approved by the Nicaraguan Consul at the last port of call before arrival in the country. If there is no consulate, the Port Captain's declaration is accepted. If the documents are visaed and stamped "fees to be collected in Nicaragua", the fees amount to 207 cordobas (U.S.$31), which are divided as follows:

Clearance Permit	U.S.$ 9.00
Manifest	U.S.$10.00
Crew List	U.S.$ 6.00
Passenger List	U.S.$ 6.00

If consular visa is not obtained, Customs charges twice the rates mentioned.

If the cargo comes from other ports and is bound for Nicaragua, only a visaed manifest is required, which costs U.S.$10. Failure to comply with this requirement is punishable by a fine of U.S.$50 for each manifest.

PIRACY: Report dated 1982.
"Our vessel was off the East coast of Nicaragua at Lat. 14° 10′ N., Long. 83° 07′ W., on the morning of January 31st. The main engine was stopped for minor repairs when an armed motor boat with seven men and no identification attacked our ship, putting hundreds of bullet holes in the bridge, funnel and elsewhere but not injuring any crew. The attack commenced at 1115 hrs. and was broken off at 1145 hrs., when the vessel got back under way".

CORINTO: 12.30 N. 87.11 W. (See Plan)

ARRIVED SHIP: Vessels are considered as arrived only after having negotiated the entrance channel and are safely inside the proper harbour; vessels at the Pilot station are not considered as having arrived.
DOCUMENTS: (Also see "General" before first port).
For the official clearance, the following authorities will board the vessel:
The Port Captain
The Operations Chief
The Public Health Delegate
The Delegate from the Ministry of Agriculture and Livestock
A representative of the Port Authority
Two Customs Officers
A representative of the steamship agency.

Each vessel must present documents legalised by the Nicaraguan Consul from the port of origin of the cargo as well as from the last port of call before Corinto. The documents required are the following:

	Legalised	Non-legalised
From the port of origin of the cargo:		
Cargo Manifest	3	18
Bills of Lading	—	2
Tally Books	—	14
From the last port of call:		
Manifest	3	18
Clearance	1	—
Crew List	—	6
Passenger List	3	6
Stores List	—	6
Health Declaration	—	3
Voyage Memorandum	3	10

In the cases where there is no Nicaraguan Consul at the port of origin of the cargo or at the last port of call, the documents may be legalised by the Consul of a friendly nation or can be certified by some competent authority of the port certifying that there is no Nicaraguan Consul in said port. When a vessel brings cargo for Corinto from the last port of call, then it must also bring both sets of documents mentioned above, the manifest in the second group being replaced by the Cargo Manifest.

Once these documents are satisfactorily received, the vessel is declared in "Free Pratique" or rather, officially cleared and numbered by the Port Authorities.

Vessels are cleared, numbered and attended in their successive order of arrival with the exception of vessels loading perishable cargo (bananas). In Corinto there is no preferential treatment given to these vessels since they operate on their own special berth.

To clear the vessel for sailing, the only requirement is the presentation of a Customs Solvency Certificate and the Clearance for the next port of call extended by the Port Captain.
Customs: Customs assigns 2 Customs Guards to each vessel docked or anchored, the vessel being under the obligation to provide these guards 3 meals daily. Besides meals, guards on anchored vessels must be given a cabin since watches are made in shifts.
PILOTAGE: The Port Authority must receive in writing from Agents advice regarding vessel's ETA 72 hours prior to vessel's arrival and a confirmation 12 hours prior to arrival. All advice must be sent through Agents by cable via Balboa or Limon Station. Pilotage is compulsory on all vessels exceeding 500 g.r.t or exceeding 7 ft. draft. Pilot boards 1 mile off Isla de El Cardon.
ANCHORAGES: The anchorage inside the harbour can accommodate 5 vessels, depending on size and draft.
RESTRICTIONS: The port is open 24 hours; however, entry is restricted in accordance with tide and vessel's draft. Access channel and turning basin dredged to 13.5 m. Due allowance should be made for heavy swell if necessary. Speed limit 8 knots in Corinto Bay, and 5 knots in the vicinity of berths or other craft.
MAX. SIZE: Maximum permissible length 650 ft., 80 ft. beam. Draft controlled by depth of water in approach channel and state of swell (typical draft 13.5 m.).
RADIO: ETA cables are generally routed via NBA Balboa Station or TIM Limon Station.

VHF: The Port Authority has a VHF station to communicate directly with all vessels nearing the port.

HEALTH: After entry and vessel has berthed or anchored, 3 long blasts are given requesting Free Pratique; after these blasts the Authorities board the vessel together with the Agent's representative and proceed with distribution of the documentation. In the event of any suspected disease on board, the action to be taken will be given by the Representative of the Health Department. There is no automatic Pratique even though vessel is proceeding from another port in the same country.

Although the port is open 24 hours, vessels arriving after 2100 hrs. are not boarded by the Authorities until 0600 hrs. the following day, unless the vessel will berth and commence operations immediately. This being the case, Free Pratique is granted regardless of the hour. This arrangement is restricted to 0100 hrs. as gangs are not allowed to commence operations after that hour.

TUGS: Compulsory for berthing and unberthing. The tug joins vessel just after vessel passes Buoy No. 7. Tug's lines are generally used: however, at times ship's lines are used. There is no charge for use of tug's lines. 1 tug of 2,182 h.p. (30 ton bollard pull), 1 tug of 1,100 h.p. and one launch of 167 h.p. available.

BERTHING: There is no preferential berthing, and berthing is indicated by the Port Authority. Vessels are attended to in the manner "first come first served".

Berthing facilities are as follows:

1. Container Pier, length 240 m. Depth alongside 13 m. (Designed for 25,000 d.w.t. vessels).
2. Concrete Pier (Container Pier extension of this Pier). Length 370 m. (2 berths). Depth alongside 12.1 m.
3. A special berth with conveyor-belt system for loading of carton boxes such as bananas, frozen meat, as well as the handling of inbound and outbound cargoes such as fertiliser and cottonseed meal. Bananas can be loaded into 4 hatches at one time at a rate of 4,500 boxes per hatch per hour. Depth alongside at LW is 11.2 m.

Port Authority equipment includes fork-lift trucks with capacity up to 7,000 lb., 6 tractors with 5,000 lb. capacity, 95 trailers with 4,000 lb. capacity, 10 trailers of 40 tons for 20 ft. and 40 ft. containers, 3 front end loaders for 20 ft. and 40 ft. containers and 3 barges (2×60 ton and 1×80 ton capacity).

CRANES: Two mobile cranes, capacity 30 tons and 25 tons, and 1×40 ton crane for containers.

STEVEDORES: *Working Hours:* The Port gives service 24 hours a day under the following schedule:

From 0700 to 1200
From 1300 to 1800
From 1900 to 2400
From 0001 to 0600

Each shift is of 8 hours. Meal hours are from 0600 to 0700; 1200 to 1300 and 1800 to 1900. The first shift commences at 0700 and is completed at 1600; the second shift is from 1600 to 2330. When a vessel announces with sufficient notice its intention to work during night-time continuously until the following day then a second shift does not work a full 8 hours but is relieved at 2200 hrs. and completely new gang takes over from 2200 until 0600 the following day.

When a vessel does not wish to work during the entire night, it may do two things: (1) Suspend all operations at 2330; (2) Work with the gangs of the second shift up until 0230 hrs. of the following day after which time the gangs of said second shift cannot continue working. Normally gangs are called at the following fixed official hours: 0630, 0930, 1230, 1530, 1830 and 2130, however on special occasions and with the approval of the syndicate, it is possible to integrate gangs at any hour of the day.

Average Cargo Handling Rates:

Exports:	Tonnes per gang hour
Cottonseed meal in bulk	48
Raw sugar in bulk-dumped by hand	48
Cottonseed in bags	45
Coffee in bags	45
Sesame seed in bags	45
Cotton in bales of 250 kilos each	40
Frozen meat	28
Lumber	12

Imports:	Tonnes per gang hour
Drums	40
Wire rolls	40
Bulk cargo (discharged by clam-shells)	35
Fertilisers – insecticides in bags	30
Vehicles (by weight)	30
Paper rolls	27
Wheat (by aspirators)	20
Oats (by aspirators)	15
General cargo	15

MEDICAL: There are several doctors in the port and most of the Agents have a particular doctor to their service. Hospital facilities are also available. No particular inoculation is required.

FRESH WATER: Fresh water is available and is supplied from connections on the pier, by gravity, at a rate of approximately 10 t.p.h.

FUEL: Corinto cannot supply bunkers. In emergencies small quantities of bunkers and/or diesel oil may be supplied by private firms.

CONSULS: In Corinto:

Colombia
Costa Rica
Denmark
Ecuador
El Salvador
France
Honduras
Mexico
Sweden
Venezuela

REPAIRS: There are no shipyards; no large scale repairs available. Small motors and generators may be repaired in shops in Corinto and Chinandega.

GANGWAY/DECK WATCHMEN: After entering, 2 Custom Officers are placed on board all vessels and their meals must be furnished on board.

TANKERS: The only tankers which frequent this port are those of Esso Standard and Parcel Tankers. There is one tanker berth; depth alongside 12.2 m. and each of the above-mentioned companies have their particular load/discharge lines.

The Esso tankers only discharge oils, the Parcel tankers discharge solvents and occasionally others load cotton seed oil.

There are 9 lines belonging to the consignees ranging from 4 in. to 12 in.

Loading rates:		*Tonnes per hour*
Molasses	12 in. pipe	140
Bunker or asphalt	8 in. pipe	409
Aviation gasoline	6 in. pipe	237
Hexane	6 in. pipe	240
Aromatics	6 in. pipe	203
Chemical Products	6 in. pipe	210
Turpentine	6 in. pipe	125
Coconut oil	4 in. pipe	60
Lubricants	4 in. pipe	45
Tallow	4 in. pipe	35

DENSITY: (Average) Rainy season 1014, dry season 1020.

OPENING/CLOSING HATCHES: If vessel is equipped with regular hatch boards or pontoons, stevedores open and close hatches as well as swing out booms. However, if covers are of the MacGregor type or mechanical, the crew has to do the job.

CERTIFICATES: Ship's Registry Certificate is required from ships making their first call at the port.

CUSTOMS ALLOWANCES: There is no limit on tobacco allowance to be held out of Bond but crew members are only permitted to take 2 packages of 20 cigarettes ashore. Crew not permitted to take any alcohol ashore. Anyone trying to do so will be subjected to heavy fine through Master of their vessel.

REPATRIATION: Can be effected.

AIRPORT: The airport at Managua is approximately 150 km. from the port and served by regular airlines with daily flights.

TIME: Local time is Central Standard Time, GMT minus 6 hours. There are no alterations during the year.

HOLIDAYS: Official holidays are: January 1st (New Year's Day); Holy Thursday; Good Friday; May 1st (Labour Day); May 3rd (Local Patron Saint's Day); July 14th (Annullment Chamorro-Bryan Treaty); September 14th (San Jacinto Independence Battle Day); September 15th (Independence Day); October 12th (Columbus Day); December 25th (Christmas Day).

In accordance with regulations, no work will be done on these days, however, from experience, with the only exception of May 1st (Labour Day), all other holidays are workable under special arrangement.

POLICE/AMBULANCE/FIRE: Police 269; Ambulance 313; Fire 421.

SERVICES: *Provisions:* There are several ship chandlers operating in the port who are in position to supply vessels with provisions necessary and required by stewards, engine or deck departments.

Laundry: The same ship chandlers can take care of any amount of laundry. Drycleaning can be done by these suppliers in the nearby city of Chinandega.

Cleaning: There are special gangs of labourers in the port who work on vessels doing odd jobs such as cleaning, chipping, painting, etc.

Transportation: For anchored vessels, there is a very efficient ship-to-shore launch service.

There is taxi service available for transportation by day or night to any part of the country. There is an air-conditioned express bus service between Corinto and Managua under the following schedule:

From Corinto	0400 hrs.	arrive Managua	0645 hrs.
From Corinto	0600 hrs.	arrive Managua	0845 hrs.
From Managua	1445 hrs.	arrive Corinto	1800 hrs.
From Managua	1745 hrs.	arrive Corinto	2030 hrs.

Hotels: There is a small third-class hostel in the port, however in the city of Chinandega there is the Hotel Cosiguina with all the modern conveniences and facilities desired. Chinandega is connected to Corinto by a modern highway.

SHORE LEAVE: Allowed. See "Identification Cards".

IDENTIFICATION CARDS: Crew members allowed ashore if they wish to do so after being previously identified by means of a Seaman's Book or a Passport. This document is kept by the Customs Guard at the foot of the gangway and given back to the crew member when he returns to the vessel.

DEVELOPMENTS: Projected installation of bulk handling plant, additional warehouses and extension of pier by 1,500 ft. with 2 transit sheds, new administration building, stevedores shed, equipment shed and repair shops; re-designing of range lights and buoys and increasing amount of same, also area for Industrial Park.

A 40 ton container handling crane, 70,000 lb. capacity front loader, tractors and trailers have been ordered for the container berth.

SHIPMASTER'S REPORT: August 1981.

Documents:

12 copies Ship's Particulars.
3 Legalised and 7 without Visa Ballast Manifests.
3 Legalised and 7 without Visa Passenger Lists.
10 copies Negative List.
3 Legalised and 7 without Visa Crew Lists.
3 copies Crew Declaration List.
3 Legalised and 7 without Visa Stores Lists.
7 copies Mail List.
Vaccination List.
Health Declaration Form.

Pilotage: Compulsory. Pilot boards by Buoy No. 2. Notice required 72 hours.

Anchorage: 3 miles West of Isla Cardon Lt. Depth at LW is 48 ft.

Max. Size: LOA 700 ft., max. draft 28 ft., mean tidal range 8 ft.

Restrictions: Vessels may enter and leave anytime, day or night.

Radio: Limon Radio.
VHF: Port Authority on Channel 16.
Tugs: None available at time of visit.
Berthing: Vessel berthed at Banana Pier (Lat. 12° 28.6′ N., Long. 87° 10.2′ W.). Distance from entrance to berth is 4 miles. Max. LOA 600 ft., max. draft 25 ft. Least depth in Channel to berth 26 ft. 6 in. Density 1016.
Services: The following are available: Fresh water, fresh provisions, Lloyd's Surveyor, telex, diesel oil (expensive), doctor and hospital.
General: On arrival at the Pilot Station the Pilot will board accompanied by a member of the Quarantine Department who will insist on going into every cabin, Store Room, etc., armed with a pressurised can of insecticide for fumigation purposes. This will take approximately 1 hour. The vessel is not allowed in the channel until the Quarantine fumigation formalities are over so it is advisable to approach the Pilotage Station No. 2 Buoy at right angles to the channel.

Once safely secured and if in convenient position to lower the accommodation ladder it must be lowered or B.O.T. gangway rigged to one of the dolphins. Ensure that the Board of Trade ladder is in good condition and the wheels running free as the vessel tends to roll a little at the Banana Pier if there is any swell outside. No official or stevedore labour will climb a pilot ladder so it is essential to have one of these access ready on arrival.

The Doctor will board and after medical clearance the Port Officials (Army) and Immigration Officer will board. They will browse through the various documents whilst Immigration Officer will check all Passports, I.D. Cards, etc., and eventually he will physically check that everyone is on board. These Officials and Immigration Officer do not speak a word of English, the Agent is conversant in English and is most helpful.

On completion of Immigration formalities, 2 Ship's Officers are required to escort two groups of Port Authority Officials who will search every cabin except the Master's for drugs. On completion the Customs Officer will seal the bond and beer lockers. Beer is allowed out of the locker before it is sealed. There is no set allowance for cigarettes and spirits within reasonable bounds.

Shore leave; if anyone requires shore leave a form is furnished by the Immigration Official which must be filled in. Shore leave is allowed from 1700 hrs. to 2200 hrs. Anyone extending this period will be fined U.S.$25.

Time taken for clearance is approximately 2 hours.

Clearing vessel outwards most Immigration Officers want to physically check everyone on board, this takes 1.5 hours.

It is essential that rat guards are fitted to *all* ropes, if not a heavy fine will be imposed.

Navigation: Pilots are satisfactory. The depths of water on the Chart are dubious. Have echo sounder on at all times. If docking or undocking between tides, both Ebb and Flood tides are very strong and there is no tug.

At the Banana Pier there is an unprotected dolphin (solid concrete) at the North end and one at the South end, the others are fendered.

SHIPMASTER'S REPORT: February 1987.

1. On anchoring, the Pilot, doctor and assistant board the vessel. After inspecting vaccination lists, and all cabins are sprayed, permission is given to weigh anchor.
2. Pilot very capable. 1 tug available.
3. Documents required when alongside:
    14 copies Manifest in Ballast.
    17 copies Manifest of Cargo (3 copies visaed).
    14 copies Bills of Lading.
    17 copies Crew List (3 copies visaed).
    17 copies Stores List (3 copies visaed).
    8 copies Money List.
    8 copies Personal Effects Lists.
4. During our stay at La Guaira the following were visaed: Crew Lists, Passenger Lists, Arms and Ammunition Lists, Narcotics List. The Nicaraguan Consul at Caracas charged U.S.$175.00 for this service.
5. Authorities were polite. Before sealing stores it was possible to take out immediate requirements (cigarettes, spirits, etc.).
6. All crew members to be present and passed by Immigration Officer one by one, in order to obtain shore passes.
7. Shore leave possible at following times: Master/Chief Officer/Chief Engineer from 0800 – 2400 hrs. Others 0800 – 2200 hrs.
8. All cabins and decks inspected by 1 Customs Officer and 2 soldiers.
9. It is possible to contact Agent 24 hours a day on VHF Channels 16 and 12, even on holidays.
10. Departure depends on Immigration Officer. All crew members to be passed by the Officer.
11. Pilot boards after clearance given.
12. It is possible to shift cargo, even containers, via the quay.
13. All stevedores equipment is up to date.
14. Consult "Guide to Port Entry" for further navigation details.

AUTHORITY: Autoridad Portuaria de Corinto, Apartardo Postal No. 11, Corinto, Nicaragua. *Tel:* 211-214. *Telex:* 1294. *Contact:* The General Manager.

Empresa Nacional de Puertos, Apartado Postal No. 3570-2727, Managua, Nicaragua. *Tel:* 74452, 74430, 74383. *Telex:* 2422. *Contact:* Cesar Delgadillo Machado, Director General.

PUERTO CABEZAS: 14.01 N. 83.23 W.

DOCUMENTS: (Also see "General" before first port).
1 Clearance from Last Port.
10 Voyage Memorandums.
11 Crew Lists.
10 Passenger Lists.
10 Stores Lists.
1 Bill of Health.
12 Ballast Manifests.
13 Manifests of Cargo.
4 Bills of Lading.
10 sets Tally Books.

PILOTAGE: ETA required 24 hours before arrival at the port. The Pilot uses a boat with an outboard motor and boards about 1 mile off the port. Agent advises the Pilot the date of arrival, he goes out when he sees vessel.
ANCHORAGES: Vessels can anchor about 0.5 mile South of the wharf. Depths in anchorage 20 ft. – 22 ft.
MAX. SIZE: Max. length 400 ft. Draft 19 ft. 6 in. Difference between high and low tide is 18 in.
HEALTH: The inspection takes place on arrival. It is not necessary when the vessel comes from another port in Nicaragua.
RADIO: The Port has a radiotelephone for personal use, but they make contacts with vessels. The frequency is 2738 kHz.
TUGS: There is no tug service.
BERTHING: One wooden quay, length 683 m. Width 8.4 m. and depth 6.7 m. at the seaward end. There is wreck in front of the wharf. The location is: Lat. 14° 0′ 57″ N., Long. 82° 22′ 4″ W., 1,200 yd. from wharf end.
STEVEDORES: The Agent advises stevedores of arrival of vessel. They discharge 8 tons of general cargo each hatch (one gang) per hour.
MEDICAL: Not necessary to advise the need of a doctor, only for emergencies. One hospital and two other doctors, apart from the official doctor of the port.
TANKERS: There are 2 pipes of 6 in. diameter on the wharf. There is no special berth for oil tankers.
DENSITY: 1025.
FRESH WATER: Fresh water is carried to the wharf by truck or from one pipe on the wharf. Boiler water is carried to the vessel by the pipe on the wharf.
FUEL: Gasoline, diesel oil and lubricants are supplied by Texaco. Arrangements are made when the vessel arrives.
CONSULS: Only consul of Panama available locally.
REPAIRS: Minor repairs only can be effected.
GANGWAY/DECK WATCHMEN: Not compulsory. It is customary to have two Customs guards on the gangway.
OPENING/CLOSING HATCHES: The opening and closing of hatches is done together by the crew of the vessel and the stevedores.
CUSTOMS ALLOWANCES: Each of the crew can have 2 packs of cigarettes with the seal broken, and one bottle of wine or liquor opened.
REPATRIATION: It is possible and only a passport needed. Necessary to go to the capital by air, thence to any part of the world.
AIRPORT: Distance to airport from wharf is about 2 km. Service every day to the capital except Sundays and holidays. The name of the only airline is Aeronica.
TIME: Local time is Central Standard Time, GMT minus 6 hours.
HOLIDAYS: Holidays are 1st January; Holy Thursday; Good Friday; 1st May; 14th July; 14th and 15th September; 12th October and the 25th December.
SHORE LEAVE: The crew is allowed to go ashore after the vessel is received by the Authorities.
IDENTIFICATION CARDS: Not needed, just passport or Seaman's Book.
DELAYS: Delays in berthing can be expected due to bad weather.
DEVELOPMENTS: A hydrographic survey has been completed in the port zone and surrounding area to establish the best place for future port facilities or whether expansion should be made to the existing port. This survey is being effected in view of projected installation of paper and pulp industry and forthcoming development of agricultural and mineral products which could be exported through the port.

The Port Authority is taking the necessary steps to get technical and financial help to make a general survey of the zone in order to find an adequate and/or protected site to place the new port installations. Port plans are combined with the paper and pulp industry, which is supposed to be installed in the next few years.

AUTHORITY: Empresa Nacional de Puertos, Apartado Postal No. 3570, Managua, Nicaragua. *Tel:* 74430, 74452, 74383. *Telex:* 2422. *Contact:* Cesar Delgadillo Machado, Director General.

PUERTO SANDINO: 12.12 N. 86.46 W. (See Plan)

DOCUMENTS: (Also see "General" before first port).
Clearance from previous Port.
6 copies Voyage Memorandum.
6 Stores Lists.
6 Passenger Lists or negative declaration, 3 to be visaed.
6 Crew Lists.
8 Cargo Manifests, 3 to be visaed.
8 Tally books.
6 Lists of Mail, Explosives or Drugs if carried.

9 Crew Lists and 6 Stores Lists should be despatched by the Nicaragua Consul at loading port if possible, otherwise they are forwarded by Agents from the Panama Canal.

APPROACHES: *Shipowner's Report:* 1981. Charted positions of the mooring buoys, navigation aids and other coastal landmarks are unreliable and may be off by two miles.

It is strongly recommended that approach to the coast not be made at night-time unless radar-assisted navigation is possible. The radar should be used while making the approach. Vessels may anchor about one mile S.W. of the radar/light buoy No.1 which is positioned W.N.W. of the mooring buoys.

Vessels are cautioned against proceeding North and East of the radar/light buoy No.1. The recommended approach to the anchorage and the pilot boarding area is made on a course of 045° with volcano Momotombo dead ahead.

If a night-time approach to the anchorage is made, it is best to determine well in advance (using radar and visual means) that the sea-buoy is lighted. There have been reported instances of this light being extinguished on occasion.

PILOTAGE: Optional; by local Pilots. Leading lights are installed, at the entrance to the port, prominently sited on a hill. Several buoys indicate exact anchorage positions.

Tankers: A Pilot is provided by the oil company in agreement with the Panama Canal Authority. Pilot boards about 0.5 mile West of the sea berth.

ANCHORAGES: About 1.75 miles off port entrance, depth is 30 ft. at low water, and about 45 ft. at high water.

RESTRICTIONS: Port is open day and night without exception.

MAX. SIZE: Tankers at Sea Line Terminal up to 850 ft. length and 41 ft. draft.

HEALTH: Port Health Inspector boards all vessels on arrival.

RADIO: Nicaragua does not have a coast radio station. All traffic should be sent via Balboa. Ships transitting the Panama Canal bound for Puerto Sandino shall give the agent at the Panama Canal, prior to departure from Balboa, their ETA message for transmittal to Nicaragua.

VHF: The office of the Captain of the Port has a VHF. Normally Channel 6 and 16 are used for calling. If no answer try Channel 13 as this is usually the channel used for communication. If VHF communication cannot be established proceed to anchorage.

TUGS: Not available for manoeuvring vessels. 5 small tugs employed for shifting lighters.

BERTHING: No quays for ocean-going vessels. Vessels work cargo to lighters at the anchorage.

2 lighters (100 ft. × 30 ft.) each with capacity of 400 tons.

STEVEDORES: Port has 4 gangs of 40 men each for boarding vessels.

MEDICAL: Doctor available in case of emergency. Nearest hospital at Leon, 35 km. away.

TANKERS: *Sealine Terminal:* The sea berth is situated in approximate location Lat. 12° 10′ N., Long. 86° 49′ W., about 2 miles offshore in a depth of 47 ft. Discharge rate 7,500 bbls./p.h.

Strong winds may delay berthing or cause vessel to vacate the berth once moored. Sailing at night is not recommended for safety reasons. The discharge hose is lifted on the port side by ship's crew.

Mooring Masters: The services of a Mooring Master/Adviser is provided by Esso.

The Mooring Master will either board ship West of the sea berth or prior arrangements will be made with owners and/or Agent to have the Mooring Master embark and disembark at Balboa, and accompany vessel for the voyage.

The Mooring Master and Refinery Representative will remain aboard at all times while the vessel is moored in the berth. A mooring launch is kept standing-by the ship to let go lines in case it should become necessary to vacate the berth due to bad weather. It is imperative that this launch be kept at the ship at all times.

Moorings: The sea berth consists of 5 mooring buoys, 2 forward and 3 astern. Usually 4 to 5 lines are required forward and 8 lines aft. The approach to the berth with the Mooring Master on board is made on an Easterly course, turning Southward between Buoys No. 3 and 4. The ship's starboard anchor is occasionally dropped, to steady her head in the berth. One or two shackles of chain are used. 2 line boats take the ship's lines to the buoys, usually in the following sequence (See "Plan").

(1) 2 lines to Buoy No. 5; 2 lines to Buoy No. 1.
(2) 2 lines to Buoy No. 3; 2 lines to Buoy No. 2.

The crew should be ready to bend mooring lines together, so as to reach the forward buoys. Once berthed, the tankers should have the following mooring lines out:

Buoy No.	Nos. of Lines	Approximate Distance, Ship to Buoy	
1	2 – 3	855 ft.	250 m.
2	2	700 ft.	200 m.
3	2	330 ft.	100 m.
4	2	430 ft.	130 m.
5	4	300 ft.	90 m.

Steel mooring wires cannot be used as the size and capability of the line boats prohibit this.

Vessels moor and unmoor in daylight hours only.

Tugs: Not available.

Hoses and Ship's Boom: Ship's crew assists with hose connecting. A 12 in. diameter submarine hose is lifted on the port side.

The ship's boom (minimum 5 tons SWL) must be in readiness for hose lifting on the Port side.

Gangway: It is necessary to rig an accommodation ladder. A good clean pilot ladder is satisfactory. If the ladder is rigged on the port side, it must be shifted to starboard after vessel is secure in the sea berth.

Oil Pollution Prevention: The usual sensitivity as to oil pollution exists in this area. There are no oil dispersants or spray equipment available ashore. A customs guard remains aboard each ship during entire port stay and reports any oil spills to his supervisors ashore.

Bunkers and Fresh Water: Not available.

Fire Fighting: Ships should have all fire fighting equipment in readiness while in berth. There are no floating fire fighting units available in this area to assist tankers.

Repairs: No ship repair facilities are available. Divers can be made available with advance notice.

Ship's Stores and Provisions: No facilities.

FRESH WATER: Not available for supply to ships.

FUEL: Not available for supply to ships.

CONSULS: Nearest at Leon, 35 km. distant.

REPAIRS: Small items for repair can be sent to Leon.

OPENING/CLOSING HATCHES: Normally performed by stevedores. Mechanically operated hatches are opened by ship's crew.

CUSTOMS ALLOWANCES: Each crewman allowed two packets of cigarettes. No wine/spirits allowed to be taken ashore.

REPATRIATION: No facilities for crew changes. If crew member left behind, Agents are responsible for his repatriation at vessel's expense.

AIRPORT: Las Mercedes international airport at Managua, 75 km. away.

TIME: Central standard time, GMT minus 6 hours. No alterations.

HOLIDAYS: All holidays can be worked.

POLICE/FIRE/AMBULANCE: Police available locally. Nearest fire and ambulance stations are at Leon, 35 km. away.

IDENTIFICATION CARDS: Seaman's Book required for going ashore.

SHIPMASTER'S REPORT: 1978.

Approach: Coastwise from the North, no difficulties being encountered.

Anchorage: Vessel anchored in position with the rear leading light bearing 088°(T) – 2.1 miles, starboard anchor used, 4 shackles in 8 fathoms of water.

It is advisable to run in to the anchorage slightly to the North of the leading line, thus avoiding the shoal patches on and to the Southward of the line. The anchor should, however, be let go right on the leads, otherwise the vessel will be required to shift anchorage, as happened in our case.

Buoyage was as per B.A. Chart 1960.

Point Penas del Tiscuco: Now has a large power station on it, not shown on the Chart. This is a good land mark when making the port. The shape of the point, as observed on Radar, appeared slightly different from the shape shown on the Chart.

Pilotage: Pilot is available if required, but was not used. I would advise a deep draft vessel to take a Pilot.

Communications: For long distance communications, it is best to maintain radio watches.

The Charterer's Agents have a VHF set in their office at Corinto and contact can be maintained for day to day matters in this way.

Charterer's Agents: They have a resident water clerk at Pto. Sandino, who can be contacted on Channel 27, VHF. He is available from 0800 to 1200 hrs. and from 1400 to 1800 hrs.

Under normal circumstances, a representative from Corinto will meet the vessel on arrival and visit her prior to departure, but this was not possible on this occasion.

Documents required: As per "Guide to Port Entry".

Officials: Were helpful. 1 Customs guard is on duty at all times, but the Guards are regularly relieved from the shore and the ship is not required to provide accommodation for them.

Cargo Work: Continuous and fast. Large, modern lighters, towed by powerful tugs, were used. Due to the swell, these lighters ranged heavily alongside. Although the lighters were well fendered, several indentations were caused in the ship's side. Delays due to lack of lighters were minimal.

Rate of discharge, net of delays, was 60 tons per gang hour, steel coiled rod.

Pratique: Granted on arrival.

Provisions: Not purchased.

Fresh Water: Unobtainable.

Shore Leave: Under normal circumstances, can be arranged by using the lighters.

AUTHORITY: Empresa Nacional de Puertos, Apartado Postal No. 3570, Managua, Nicaragua. *Tel:* 74430, 74452, 74383. *Telex:* 2422.
Contact: Cesar Delgadillo Machado, Director General.

SAN JUAN DEL SUR: 11.15 N. 85.53 W.

SHIPMASTER'S REPORT: December 1984 (Updated 1986).

DOCUMENTS:
10 copies Passenger Declaration.
10 copies Ballast Declaration.
10 copies General Declaration (Ship's Particulars).
6 copies Provision and Store Lists.
6 copies Personal Declaration.
1 copy Ammunition List.
12 copies Crew List.
Clearance from last port.

Authorities: The following Authorities board after anchoring: Customs, Immigration, Captain of the Port, Doctor, Military.

A Customs search will probably be made. It takes 4 hours to clear vessel.

APPROACHES: Straight in from sea on an 067° (T) course to anchorage. At the time of the vessel's visit the light on the headland South of the bay (Fl. 6 secs.) and 1 red leading light were extinguished.
PILOTAGE: Pilot available. We arrived after dark and had to wait until 0600 hrs. the following day for the Pilot.
ANCHORAGES: Vessel anchored about 1.5 miles out in 15 fathoms to await Pilot.

Discharging anchorage is about 0.5 miles from the jetty in 5 fathoms. We anchored about 1 mile from the jetty in 10 fathoms as another vessel occupied the innermost anchorage. Walking back anchor to bottom and paying out cable as ship falls astern is recommended. When anchor was dropped in 15 fathoms area it took some time to hold.

The holding ground at the working anchorage was good, both vessels lying to 1 anchor in Force 6 – 7 winds and choppy seas.
TUGS: There is a small tug which is used to tow barges, also numerous launches.
EQUIPMENT: 3 barges of 150 tons – size about 24 m. × 5 m. 2 barges of 40 tons – size about 12 m. × 3 m.

Barges are open and are fitted with tyre fenders. Barges can also be obtained from nearby ports.

4 Fork lift trucks of 8 tons and 2 of 2.5 tons capacity. (Not all of these trucks were sighted).

3 mobile cranes for discharging barges ashore. There are also tractors ashore.
Storage: There is a large storage shed and an unsurfaced storage yard.
STEVEDORES: Port Authority stevedores. The port works 24 hours a day as follows:

From 0700 – 1200 hrs. Straight time.
From 1300 – 1800 hrs. Straight time.
From 1900 – 2200 hrs. Straight time.
From 2200 – 0600 hrs. Double time.
Sundays and holidays triple time.

Labour works 24 hours and are then replaced by other gangs.

Meal hours are from 0600 – 0700, 1200 – 1300 and 1800 – 1900 hrs., however, these hours are flexible often expanding to 2 hours. Labour go ashore for their meal hour.

The steel was discharged at about 35 tons per gang hour.
FRESH WATER: Not available.
FUEL: Not available.
CONSULS: None.
REPAIRS: Noted that barges were being constructed at San Juan and it is possible that steel work could be done in an emergency.
GANGWAY/DECK WATCHMEN: One armed military guard, an Immigration Officer and 1 Customs Officer live on the vessel during vessel's stay.
OPENING/CLOSING HATCHES: MacGregor hatches opened by the crew, we also used crew for pontoons.
CERTIFICATES: Certificates inspected on board, not taken ashore.
CUSTOMS ALLOWANCES: Not known. The Master of another vessel advised that the Customs were quite generous.
AIRPORT: At Managua some 2 hours by road.
TIME: GMT minus 6 hours.
SHORE LEAVE: Passes are issued to the crew. 3 senior officers are given 24 hour passes, other officers and crew required to be on board by 2200 hrs.
DEVELOPMENTS: It is planned to build a pier in order that vessels may berth alongside.
GENERAL:
Charts and Publications: General Chart B.A. 1049 – Ellana Bay to San Jose.

Harbour Chart BA 1960 – Plans on West Coast of Central America.
Port Information: Admiralty Sailing Directions Vol. 8, Eighth Edition, "Pacific Coasts of Central America" and United States Pilot.
Weather: Winds from N.E. Force 6 – 7 from December to February.
Winds from S.W. in July and August.
Squalls experienced in May and October.
Refer to Admiralty Sailing Directions.
Hotels: One small third class hotel and a number of boarding houses. A tourist hotel is being built but is not complete.
Communications: Post Office can place telephone calls internally and internationally, reception on international line bad.

The Post Office is equipped with an internal telex machine.
Operations: Good. The speed at which a vessel can be discharged depends on the availability of gangs and lighters. The turnaround time of barges is quite rapid and the gangs work well. We achieved 35 tons per gang hour and the other vessel, discharging bagged beans, did equally as well.

NOTES

Please also advise Shipping Guides Ltd.

Nigeria

GENERAL

TERRITORIAL WATERS: The territorial waters of Nigeria shall for all purposes extend to 30 nautical miles from the coast of Nigeria (measured from low water mark), or the seaward limits of inland waters.

RADIO:
Accurate ETA Required:
The following circular has been received from the Nigerian Ports PLC: Quote:

It is observed with regret that ships arrive in our territorial waters/roads long before their published Expected Time of Arrival, thus building up unnecessary congestion which Decree 40 of 1975 (now Act 40) was promulgated to check. The effect of this phenomenon is that the control built into the 'Ship Entry Notice' is neutralised and abused.

To give the desired effect to the control of ships inflow as intended in the 'Ship Entry Notice' no ships arriving 7 days earlier or later than their Expected Time of Arrival will be treated as Arrived Vessels and therefore will not be accorded berthing facilities. Action will be taken to clear such ships from our roads to the high seas and such Owners or Agents will be blacklisted.

With the Federal Government's relaxation of import restrictions which is followed by a progressive rise in the number of ships calling, the need for rigid application of the provisions of Act 40 cannot be over-emphasised. It will therefore be in the best interest of all concerned to co-operate in this direction with a view to controlling a possible build-up of waiting vessels.

Shipping companies are invited to take advantage of other ports outside Lagos and Port Harcourt, where facilities are under-utilised, such as Calabar and the Delta ports.

Fines will be imposed if vessels arrive early.

Unquote.

Notice: Issuance of Ship Entry Notice (SEN) and Decree (ACT) 40 of December 1975 (amended July 1986).

The following received from the Nigerian Ports PLC is for Principals information and guidance.

Efficient port operation which is necessary to give the desired quick turn round to ships can, among other steps, only be attained through effective allocation and use of available resources in terms of berthing facilities and other port inputs. In addition there is also the need on the part of all port users to abide with laid down rules and procedures for maximum benefit. In view of the foregoing and in order to rationalise sailings to all Nigerian ports, you are hereby reminded on the provisions of Decree (ACT) 40 of December 1975 which stipulates:

3 weeks' notice to be given for applications for ships scheduled to Nigeria before they could be considered for SEN (Ship Entry Notice).

You are also advised to take advantage of the facilities available at the under-utilised ports of Warri, Port Harcourt and Calabar, which equally have connecting links with the hinterland of the country.

Note: The SEN is not applicable to vessels carrying crude oil or petroleum products in bulk.

Notice: From Terminal Operator to vessel's Master (Dated August 1991).

ETA Reporting Procedure Nigerian Terminals:

For crude oil export planning, it is important that ETA's of tankers nominated to load at Nigerian terminals are known well in advance. For this purpose we request you to adhere to the following:

Vessels are required to report their ETA at the applicable Terminal anchorage or Fairway Buoy as follows:

(a) 7 days before estimated arrival, or upon clearing last port if there is less than 7 days steaming time before estimated arrival.
(b) 72 hours before estimated arrival.
(c) 48 hours before estimated arrival.
(d) 24 hours before estimated arrival.
(e) Any other time(s) between the 72 hours notice, 48 hours notice and 24 hours notice when estimated arrival is to be revised by more than 12 hours from that most recently notified.

As soon as vessels are within VHF range of the destination, the Terminal should be contacted on the applicable VHF channel for berthing information.

ANCHORAGE:
Thefts from Vessels at Anchorage: There have been recent reports of vessels being boarded and robbed of ship's stores (tarpaulins, paint, ropes, etc.) while the vessels were laying at anchor in the Lagos Roads and the Bonny River.

In some cases the thieves were seen to be armed.

We regret to have to caution Masters of the danger of theft, and to ensure attractive goods are kept under safe lock. Guards should be posted at night, whether in port or in the Roads. Alternatively, while in the roads, vessels could steam out a further few miles, out of reach of small boats. Also see "Bonny" – "Piracy".

CARGO GEAR: Nigerian Ports PLC inspect all cargo gear certificates on arrival.

SURVEYORS: If a Lloyd's Surveyor is required at any port other than Lagos at least 3 days' notice is required to make travel arrangements.

PILOTAGE: Bonny River Ports: Pilotage is now compulsory for all classes of vessels including service boats, fishing boats, etc. Harbour Master Bonny has been instructed that no vessel shall be allowed to enter Bonny town anchorage until all Nigerian Ports PLC dues are fully paid in advance and clearance for entry is received from the Chief Port Harbour Master, Port Harcourt.

All vessels will therefore be piloted to their various berths by Nigerian Ports PLC Pilots only and no exception will be granted and all genuine unexpired local pilotage licences are now revoked.

Delta Ports: Notice to all shipping companies, Agents and port users from Nigerian Ports PLC, dated 28th July 1992.

Compulsory Pilotage for the following Areas of the Delta Ports:

With immediate effect, the following areas of the Delta Ports are hereby declared Compulsory Pilotage Districts:

(1) Fairway Buoy to Escravos Station/Lighthouse.
(2) Escravos Station/Lighthouse to Bennett Island.
(3) Escravos Station/Lighthouse to Koko Port.
(4) Escravos Station/Lighthouse to Sapele Port.
*(5) Bennett Island to Warri Port.

All vessels of whatever description, except those vessels exempted by statute, must now be piloted inwards and outwards by Nigerian Ports PLC Licenced Pilots.

Where for reasons of emergencies only, the Nigerian Ports PLC Licenced Pilots cannot board any vessel(s), the Harbour Master can authorise such vessel(s) to proceed inwards and/or outwards without a Pilot, but the normal pilotage charges shall be raised against such vessel(s), as if Nigerian Ports PLC Licenced Pilot had piloted the vessel(s).

Signed: General Manager, Central Zone.

* Bennett Island to Warri Port is already a Compulsory Pilotage District.

Ports affected: Burutu, Escravos, Koko and Sapele.

Report: August 1992.

15 vessels waiting at Escravos Pilot Station, as no pilots available.

REPATRIATION/CREW CHANGES: Immigration Authorities now insist that expatriate crew members should obtain entry visa prior to coming into Nigeria to join any vessel trading within Nigerian Territorial Waters. The entry visa should be valid for 3 months and at the expiration can be extended for another 3 months and no more.

DOCUMENTS: The Port Authorities have to be provided with 26 copies of the Cargo Manifest 14 days before the vessel berths (distribution: NPA 17 sets, Customs 5 sets, Agencies 2 sets and Container Control 2 sets).

From Port Manager – River Ports.

Central Planning and Information Centre: It will be mandatory on all Shipping Companies Agents and others intending to work their vessels in our ports to submit the underlisted documents to the Principal Traffic Officer in charge of C.P. & I.C. at the former office of the Deputy Dock Superintendent inside the wharf at least 7 days before the commencement of discharging operations of their vessels:

(a) Ship's Entry Notice (SEN).
(b) Ship's Manifest.
(c) Stowage Plan.
(d) Hatch List.
(e) Bulk Item List.
(f) Special/Valuable Cargo List.
(g) Hazardous/Dangerous Cargo List.

This stipulation came into effect as from 22nd August, 1983. It should be emphasised that as from that date preference is given to any ship which complies with the above stipulation.

Port State Control: The Surveyor of Ships, Federal Ministry of Transport, has issued the following circular letter:

"Following the ratification of SOLAS 1974 and Resolution A466 (XII) by the Federal Government of Nigeria, the Maritime Administration has decided to implement Port State Control which entails:

1. Maritime Surveyors boarding all flag state ships in the harbours for purposes of inspecting all international certificates of ships.
(a) International Cargo Ship Safety Certificate,
(b) International Cargo Ship Radio Telegraphy Certificate,
(c) International Load Line Certificate,
(d) International Safety Construction Certificate,
(e) Classification Certificate, and
(f) Certificate of Registry.

2. Manning: (a) particulars of Masters, (b) particulars of Chief Engineer.

3. General inspection – if the Surveyor considers the ship to be sub-standard and if found un-seaworthy, vessel will be detained until defects are rectified.

4. It is therefore pertinent that all shipping Agents bring this new dimension of safety inspection by national Surveyors to all their shipping Masters calling at any port in Port Harcourt and all other ports in Nigeria where we have our Surveyors"

Report: 1986.

Master's only to declare cargo for Nigerian port and not to include In-transit cargo in order to avoid difficulties with the Nigerian Ports PLC

TANKER CHECK LIST: January 1992.

The following "Check List", of items that need attention for tankers calling at Nigeria, has been compiled by associates in Nigeria.

1. At nomination of vessel to NNPC or Equity Holder as prospective lifter:
   (a) In Nigeria, we have what we call the 90% rule. This means, that all vessels loading at offshore terminals are obliged to load up to 90% of their deadweight. Since most lots of crude oil sold in Nigeria average around 900,000 barrels, vessels with d.w.t. of up to 140,000 are normally used as loaders (maximum size for Bonny Inshore is 135,000 d.w.t.).
   (b) At the Inner Terminal in Bonny, the rule is 60% of total d.w.t., unless vessel will top-up at another terminal up to 90%.
   (c) Vessels, partly loaded at other ports outside Nigeria, are accepted, provided the vessel sails from Nigeria with up to 90% capacity loaded.
   (d) Only if the vessel is loading at more than one Nigerian terminal, will they allow a loading of under 90%, but by the last terminal, the capacity of 90% must be met.

(e) Sometimes vessels are remeasured by owners, in order for the deadweight to comply with this 90% rule. In such cases, the nominating party must submit original remeasurement certificates at the time of nomination. NNPC use the weekly Lloyd's Ship Movement List to determine the d.w.t. of any vessel, and if the remeasured tonnage is not shown therein, they will reject the nomination, unless they received confirmation from Lloyd's Register (irrespective of vessel's class) on original letterhead to the effect that the remeasurement has taken place.

(f) To be accepted as a loader, the vessel must not have called in South Africa for at least 6 months. If she performed badly at any previous call, the vessel could be rejected out of hand without explanation. Thus, Masters should report any performance lapses noticed, and steps should be taken to rectify them before vessel is renominated to call in Nigeria.

2. On acceptance of your vessel as a loader:

(a) There are 3 clearances that must be obtained prior to loading any vessel. These are:

NNPC Marketing Division.
NNPC Inspectorate Division now known as D.P.R. (Department of Petroleum Resources).
Navy Task Force for Crude Oil.

(b) The Nigerian Ports PLC have recently dictated, that vessels will not be allowed to berth, unless the preliminary proforma bill is settled (which they now enhance by 25% for possible variations). Principals should thus endeavour to give Agents sufficient lead time between nomination and laydays to ensure no delays. For your guidance, it may take Nigerian Ports PLC accounts department several working days to raise the preliminary bill. The terminals affected by this directive are Bonny Inshore, Okrika, Warri and Lagos.

(c) Once the vessel has been nominated, and is on any terminal's program, it is safe to enter Nigerian territorial waters (Nigeria define territorial waters as 30 miles from the furthest terminal – not the coastline).

3. On completion of loading:

(a) EDP has been abolished at all terminals, except Qua Iboe and Antan, but Master can refuse even at those terminals, although vessel will be made to stand-off until the documents are ready.

(b) Masters should refuse to sign any blank forms, especially Bills of Lading, for whatever reason.

(c) Radio/communcation rooms should preferably be restricted with only authorised radio/telex operators of the vessels being allowed into them. There have been cases of fraudulent messages being sent on vessel radios.

(d) Particular care should be given to the comings and goings of any unauthorised persons.

(e) Prior to sailing, a thorough search of all spaces should be made for stowaways.

4. Piracy:

Especially at Bonny Anchorage, piracy, in the form of armed groups of people coming on board to steal vessels' ropes, has been rampant. Thus any vessel in the area is advised to drift at least 30 miles offshore, and maintain watches on the deck. Water cannons should be made ready to repel boarders. The pirates gain entrance to the vessel by climbing the anchor chain, although they have been known to board vessels amidships on ropes thrown onto the deck.

5. Vessels, calling at Refinery Jetties or discharge facilities for refined products, should be wary of allowing anybody not authorised to board the vessel. Any visitors should be escorted at all times, while on board.

Above is a brief synopsis of the major points, that should be kept in mind, when sending vessels to Nigeria. We should point out that the situation is not static, and could change at any time. However, we trust you have been given a clear idea of the nature of the business in its current condition.

LOADING: *Oil Terminals:* A new regulation which took effect from 3rd December 1984, applies to all oil terminals in Nigeria. Vessels must load up to 90% of their deadweight. The remaining 10% being allowance for bunkers/water. Vessels are permitted to load part cargo at more than one terminal/port within Nigeria. This means that a vessel can load part cargo at one terminal and then complement loading at another terminal also within Nigeria. Vessels coming into Nigeria to load crude oil must arrive in ballast without part cargo from another country, otherwise such a vessel will not be allowed to load.

Since introducing the law that vessels with part cargo from another country cannot call at a Nigerian terminal the following new regulations have come into force.

Quote:

Tankers coming into Nigeria may now come in with part cargo provided that:

1. The quantity of the cargo to be brought in and its source are given at the time the tanker is nominated.

2. All details about the incoming cargo are declared to the Customs on arrival at the Nigerian terminal.

3. Such vessels will be fully loaded within the operational tolerance limit as set in (1) above before departing from Nigeria.

However, still in force is the 90% loading at offshore terminals of d.w.t. for tankers which arrived in ballast. Vessels are not permitted to load part cargo but can complement loading at more than one terminal provided within Nigeria.

Unquote.

Report: November 1989.

Vessels loading at offshore terminals are required to load to 90% of their deadweight. Vessels at inshore terminals are required to load to 60% of their deadweight due to draft restrictions.

FUEL: Some companies have now been licensed for the purpose of bunkering vessels. The stipulations in Nigerian Ports PLC Harbour Master's Notice No.2/83 (See "Lagos") must however be strictly adhered to. The Master should contact the Agent in this regard.

WATCHMEN: Compulsory. Tankers require 4 men and general cargo vessels 16 men.

SHIPMASTER'S REPORT: 1978.

No ship is to enter Nigerian waters unless issued with a Ship's Entry Number.

ANTAN TERMINAL: 04.13 N. 08.20 E. (See Plan)

LOCATION: Antan Oil Terminal is located offshore of Nigeria, at Lat. 04° 13′ N., Long. 08° 20′ E. in a water depth of 126 ft.

The terminal consists of the tanker-based floating production, storage and off-loading system "FPSO VI" of 285,000 d.w.t., moored by means of a stern yoke to a platform mounted single point mooring. The "FPSO VI" has a crude oil storage capacity of some 230,000 tons. The "FPSO VI" contains equipment necessary for production, storage and transhipment of crude oil. The Antan Marine Terminal offices, testing laboratory and accommodation for terminal personnel are also located on board the "FPSO VI".

To comply with international regulations, during the hours of darkness the "FPSO VI" will show lights with the distinctive characteristics of the Morse code letter "U". In periods of poor visibility the fog signal will sound the Morse code for the letter "U".

Vessels using the terminal will be moored in tandem, bow to bow, to the storage tanker and loading will be by means of a floating hose between the vessels.

DOCUMENTS: The following forms are required by Customs and Health Officials:

1 copy Vessel Registration Certificate
1 copy Last Port Clearance
8 copies (for past 6 weeks) Ports of Call List
3 copies Stores List
7 copies Arms and Ammunition List
4 copies Master's Declaration
9 copies Crew List
3 copies Crew Declaration List
9 copies Passenger List
9 copies Kroo Boy List
3 copies Stowaway List
3 copies Vaccination List
5 copies Animal List

Note:

(a) Also on arrival, 20 copies of Notice of Readiness.

(b) Before sailing and immediately upon completion of loading, vessel must provide 20 copies of Ullage Report. Government Officials representing various departments may, at their discretion, board the vessels in the Terminal area.

ESSENTIAL REQUIREMENTS: *Summary of most essential requirements to be met by tankers lifting oil at Antan Oil Terminal:*

1. Berthing and unberthing shall only be permitted at the discretion of SBM's Terminal Superintendent.

2. No dirty ballast disposal.

3. Advise arrival time by radio.

4. SBM's Mooring Master together with Custom Officials meet ships in suggested anchorage area.

5. Make a lee for SBM's Mooring Master and Officials to board.

6. Have ready: 2 messenger lines forward; ship's derrick on port side, port manifold with 16 in. connection.

7. Vessel's Master responsible for safety of own ship at all times.

8. Lifting vessel's crew performs all operations of mooring, connecting and disconnecting hoses, and unmooring aboard lifting vessel.

9. Do not close valves against crude flow.

10. Emergency flow stop signal if all communications fail will be a continuous sounding of ship's whistle from either lifting vessel or "FPSO VI".

11. No shore leave or crew changes are permitted.

12. When arriving: by day fly flag "Q"; by night display red light over white light for Quarantine Service.

13. Vessel's anchors to be secured against accidental use from the time the SBM Mooring Master boards.

14. All vessels must exhibit the Nigerian National Ensign from their foremast or other appropriate place while in the vicinity of the moorings.

15. Smit Bracket of lifting vessel if fitted, is free, greased and ready for use. A large 14 lb. hammer should also be available.

16. During loading: by day fly flag "B"; by night display red light.

17. Vessel must arrive with no less than 30% ballast/cargo on board and be able to maintain this condition during the loading period.

Note:

Antan local time is GMT plus 1 hour throughout the year.

No supplies of any kind or medical services (except in case of emergency and subject to a doctor being available), or other services of any kind are available at Antan Oil Terminal.

PILOTAGE: Pilot boards at the anchorage.

ANCHORAGE: Suggested anchorage area consists of a circle radius 1.5 miles, positioned 4 miles due South of the FPSO VI mooring platform, in postiton Lat. 04° 14′ N., Long. 08° 19′ E.

MAX. SIZE: The terminal is designed for tandem off-loading of shuttle tankers from 100,000 d.w.t. to 270,000 d.w.t. Although there is no specific allowable maximum draft, shuttle tankers berthing at the terminal are expected to have sufficient ballast/or cargo already on board of up to 30% deadweight.

Minimum size 100,000 d.w.t. Max. size 270,000 d.w.t. There is no draft restriction.

HEALTH: The vessel shall have a clean Bill of Health or equivalent document from the last port of call. The vessel's Master and all members of the crew shall possess International Certificates of Health showing such valid Vaccination Certificates as all required by current Nigerian Law. From time to time Cholera Vaccination Certificates may be required and it is, therefore, prudent that all crew members be in possesion of valid Cholera Vaccination Certificates.

RADIO: 1. It is most important that incoming tankers advise their ETA, 72 hours, 48 hours, 24 hours and 4 hours in advance of arrival, stating GMT or local time.

Call sign 3EYH3.

Terminal listens to Portishead Radio at 0900-1000Z and 2100-2200Z daily on 17236 kHz.

Local R/T Frequency: 6,992.1 A3J 24 hours.

Inmarsat Telex No: 1331763. Answerback 1331763 FPSO X.

Selcall No: 1C 21876.

VHF working channel: 6.

Once direct communication has been established, the terminal will provide a pre-arrival message.

The following information shall be included in the message given 72 hours in advance:

(1) Name of tanker and radio call sign.
(2) ETA.
(3) Cargo requirements.
(4) Deballast time.
(5) Maximum loading rate capabilities in t.p.h.
(6) Estimated draft on arrival.
(7) If there is any sickness aboard or clean bill of health.
(8) Last port of call.
(9) Any hull, bulkhead, valve or pipeline leaks on vessel which could negatively affect loading or cause pollution.
(10) Distance in feet from the bow to tanker's loading manifold, and from port rail to manifold.
(11) Agreement of Compliance with these Antan Oil Terminal user Regulations and Procedures.,

All vessels shall confirm ETA 24 hours and 4 hours distant or any time a 1 hour change of ETA is determined.

2. On receipt of the first message from the lifting vessel, Ashland Oil (Nigeria) Company will respond to the tanker giving preliminary requirements of the Terminal. Vessel's Masters will comply with these requirements in all details in order to facilitate Vessel turnaround and government formalities.

3. Once ships are within 4 hours of Antan Oil Terminal, communication should begin with the "FPSO VI" on VHF Channel 16. When contact has been made on this channel, further communication will be conducted on a mutually compatible channel, normally Channel 6.

4. The SBM Mooring Master will carry a VHF/FM Radio-Telephone when he boards the Tanker.

5. The 4 hour signal should confirm information on the time required to discharge ballast after arrival and should establish a better ETA.

6. Insufficient or inaccurate ETA messages can cause delays as Government officials have to come from elsewhere. Acceptance of Notice of Readiness may be affected by such insufficiency or inaccuracy.

RESTRICTIONS: Day and night-time mooring/unmooring of vessels at the terminal is possible. However, night-time mooring is permitted only at the sole discretion of the Terminal Superintendent, weather conditions permitting.

TUGS: *Mooring Launches:* The terminal maintains boats to assist in mooring and unmooring vessels. These boat are directed by the Mooring Master, to whom requests by the lifting vessel for action or assistance must be directed.

TERMINAL FACILITIES: 1. Vessels using the terminal will be moored bow to bow (tandem), to the "FPSO VI" by means of a 150 ft. nylon mooring rope. On the outer end of the mooring rope is a short length of chain ending in a triangle plate for connection to the lifting vessel's Smit Bracket. For vessels not equipped with a Smit Bracket or chain stopper, extra equipment consisting of a 82 ft.×17 in. snotter, with special shackle can be supplied.

2. During the period the lifting vessel is on the berth a tug/supply vessel furnished by the terminal will remain secured to the stern of the lifting vessel. The lifting vessel shall have no authority to direct or control the tug/supply vessel.

3. The loading hose connection is ASA 150 16 in. I.D.

4. Loading rates at the terminal will be governed by either the lifting vessel's maximum loading rate, or the maximum pumping rate of the "FPSO VI" whichever is the lesser.

5. The companies do not perform general agency functions. Owners or Charterers of vessels calling at the terminal must arrange for their own Agents.

BERTHING: 1. Lifting vessels will normally be accepted and berthed in chronological order of arrival provided such vessels have current nomination for cargo valid at the time of tender, carry clean ballast, if any, and have cargo tanks in a fit condition to receive cargo. Also, they must be in all respects properly equipped, manned and ready to moor. Should berthing be delayed on account of bad weather, vessels will keep their position in line.

2. Vessels required to leave the terminal area on account of bad weather should keep in contact with the terminal via the Radio Telephony Station at Antan Oil Terminal, in order that they may be available when the weather is fit for resumption of operations. SBM reserve the right to load vessels out of turn followng the return of good weather. Further, SBM reserves the right to decline to moor a specific vessel if its condition or facilities are unsafe for mooring or loading even though the terminal may be open to other vessels.

3. The decision of SBM's Terminal Superintendent on berthing will be final.

4. A lifting vessel will be expected to have ready on the forecastle head the following equipment: windlass ready for use, Smit Bracket free, open and greased: a large coil of messenger line and a large 14 lb. hammer.

5. On approaching the berth, the messenger line is lowered to a small boat. This boat will take the end of the messenger line and attach it to the end of a floating rope. SBM Mooring Master will then instruct the crew to heave in the ropes successively until the chafe chain is in the fairlead and the triangle plate is in a position to be fitted to the Smit connector.

6. Once the lifting vessel is connected to the mooring, its engines, on request of SBM's Mooring Master, may have to be run "very slowly" astern in order to avoid contact between the two vessels until the tug/supply vessel has been made fast to the stern of the lifting vessel.

VESSEL'S GEAR: 1. SBM's Mooring Master may reject a ship if it is not, upon inspection, properly equipped or if it is not suitably manned or if he deems it to have dirty ballast or tanks unsuitable for receiving the cargo. A vessel is suitably manned only if it has a full complement of officers and crew in a sober condition, competent and willing to carry out their duties and orders, and sufficient English is spoken so that SBM's Mooring Master can understand and be understood.

2. All vessels must be equipped with a good working propulsion unit as passed by an appropriate classification society. Inoperative vessels or partially inoperative vessels will be rejected. Should vessels become inoperative while on the berth, they may be removed from the terminal area by the Company at the expense of the Owners or Charterers of the vessel.

3. Additionally, a vessel must have both bower anchors and ground tackle in good working condition and in such sizes and amounts as to meet either "Lloyds" or "ABS" standards although they may be in fact classified by other societies. On instruction from SBM's Mooring Master, the vessel's anchors must be properly secured against accidental dropping.

4. All vessels must carry suitable stoppers for all manila or synthetic lines for mooring use.

5. All vessels must have suitable winches or capstans in good operating condition on the forecastle deck.

6. All vessels must be adequately equipped with a 10 ton derrick boom, blocks, tackles, wire runners and sundry equipment on both sides to efficiently hoist the hoses to the loading position. Sundry equipment should include wrenches, drift pins, nuts and bolts, wire and fibre strops, drip pans, gaskets, etc. To assist in vessel's turnaround, the vessel should have all necessary booms and cargo gear rigged and ready before being boarded by SBM's Mooring Master. All vessels which consider the lifting capacity of their gear to be marginal should strengthen their gear accordingly. This does not relieve the vessel of the necessity to provide adequate lifting gear as already described for Antan Oil Terminal operations.

7. The vessel's manifold should be prepared for 16 in. 150 ASA hose connection prior to the vessel's arrival. Where no crossover valves exist on loading manifolds it is recommended that loops between loading lines on the starboard side of these manifolds be fitted. Vessels equipped with smaller than 16 in. hose connections at the loading manifold should arrive with such hose connections suitably adapted for 16 in. hose so that maximum flow through the 16 in. cargo hose will be achieved.

Vessels equipped with larger than 16 in. hose connections at the loading manifold should provide their own reducers.

MOORING/UNMOORING:

1. The terminal is normally open 24 hours a day, 7 days a week, weather conditions permitting. The Terminal Superintendent shall be the final authority as to when the terminal is open or closed for normal working due to weather conditions. Night time berthing will only be permitted at the sole discretion of SBM's Terminal Superintendent.

2. Vessels to be moored, anchored or manoeuvred at Antan Oil Terminal will be boarded by SBM's Mooring Master in the close vicinity of the suggested anchorage area as shown in the "Plan Section". The anchorage area consists of a circle of radius 1.5 miles positioned 4 miles due South of the FPSO VI mooring platform in positionLat. 04° 14′ N., Long. 08° 19′ E. No lifting vessel may enter the terminal area unless SBM's Mooring Master is on board. SBM's Mooring Master will advise the vessel's Master on approaches to the berth, mooring, unmooring, tug handling, connecting and disconnecting the hoses and other operations within the anchorage and terminal area. All such manoeuvring of vessels shall be carried out only in accordance with the advice of SBM's Mooring Master, except where the vessel's Master believes such advice to be contrary to the proper navigation and safety of the vessel and crew, and subject to the understanding that in all cases and circumstances the Master of the vessel being manoeuvred shall remain solely responsible on behalf of his vessel's Owners or Charterers for the safety and proper manoeuvring of the vessel. The vessel's Master or one of his designated qualified deck officers specifically appointed by him at the time must be on the navigation bridge at all times while the vessel is being manoeuvred.

3. Vessels will provide a lee for the SBM Mooring Master's boat while the Mooring Master is boarding and leaving. All vessels are requested to have a pilot ladder safely and securely rigged and ready for immediate use and long enough to reach the Mooring Master's boat. A combination of a pilot ladder and vessel's accommodation ladder so arranged that personnel can first use the pilot ladder part way up the vessel's side and then transfer to the accommodation ladder is recommended, especially on very large vessels. A light line should be ready to take aboard the Mooring Master's portable radio. There should be adequate lighting at night.

4. The SBM Mooring Master will be in direct control of all the vessel's communications while in the terminal area. Any unauthorised communications will at the option of SBM's Mooring Master be cause for the cessation of all operations except clearing of the berth, and the vessel's Notice of Readiness will immediately be nullified.

5. Raising, lowering, connecting and disconnecting of oil loading hoses, as well as all other labours and duties on board will be performed by the vessel's crew under advice of the SBM Mooring Master (see "Vessel's Gear").

6. The Mooring Master may refuse to accept a vessel for loading, if he considers the vessel's condition to be unsatisfactory. In the event the Master of lifting vessel and SBM's Master can not agree to a procedure by which the vessel can meet satisfactory loading conditions, both Ashland and the charterer of the vessel shall be immediately contacted so that corrections can be made. The time required to bring the vessel into satisfactory condition shall not count as used lay time.

7. The services of SBM's Mooring Master are provided without charge upon the express understanding and conditions that when the Mooring Master goes on board the vessel for the purpose of assisting such vessel, he becomes for such purposes the servant of the Owners or Charterers of the vessel, and the Companies shall not be liable for any damage or injury resulting from any advice or assistance or actions given or made by the Mooring Master.

8. SBM's Mooring Master may require the vessel to unmoor at any time he deems it necessary for the safety of the vessel or mooring or both, or for infringement of these Terminal Regulations.

9. Various combinations of wind, sea and tidal conditions, also the size, length, ballasted trim, and handling qualities of a vessel can affect the decision to berth a vessel at Antan Oil Terminal. All these factors have to be evaluated before a final berthing decision is made and agreed by the vessel's Master and SBM's Mooring Master. All time lost, as a result of weather conditions, shall count as half time in laytime or demurrage calculations.

HOSES: *Connecting Hoses:* 1. After the vessel is securely moored the cargo hose will be hoisted aboard, normally on the port side. The berth is equipped with a single 16 in. loading hose string, the weight of the hose lift being approximately 7 tons. Therefore, all lifting equipment and tackle should have a safe working load of at least 10 tons. The hose is lifted by vessel's gear and crew, and all connecting of the hose will be carried out by them. The lifting derrick, equipment, tackle, etc., should be topped off and ready on arrival. Terminal loading hoses are fitted with ASI 150 flat face flanges with Camlock couplings and vessels should have adapters and fittings to enable these hoses to be connected to the vessel's manifold. SBM's Mooring Master advises the vessel's personnel on hose lifting and connecting procedures; however, a vessel's Master or deck officer must be present and must direct the vessel's crew in all handling. SBM's Mooring Master may reject a vessel for unsatisfactory hose handling.

2. When SBM's Mooring Master is assigned to a vessel, the vessel at her cost will supply him with meals at the same time and in the same manner as for comparable personnel of the vessel. The vessel will also provide a suitable cabin and smoking facilities.

LOADING: *Loading Readiness and Arrival Time:* 1. SBM will make every effort to moor offtaking vessels upon arrival in daylight, weather permitting. Night-time berthing shall only be permitted at the discretion of SBM's Terminal Superintendent.

2. Notice of Readiness will not be accepted at the time of arrival unless the vessel is in all respects ready to load including compliance with all terms of these Antan Oil Terminal Regulations. Arrival time will be considered as the time when SBM's Mooring Master boards the vessel, or the time the vessel reaches the deep water Anchorage area, whichever occurs first. The approved Anchorage area is shown (see "Plan"). Notice of Readiness shall be in English.

3. During loading the International Code Flag "B" shall be displayed from a top-most signal halyard during daylight hours. During hours of darkness a red light shall be displayed; visible at a distance of at least one mile and shown an unbroken light all around the horizon.

BALLAST: *Regulations require either:*

1. Segregated or dedicated ballast facilities.
   or
2. Ballast able to be discharged and cargo loaded concurrently.
   or
3. Tanker arrives partially loaded.

All vessels must maintain a minimum of 30% Summer deadweight at all times while at the terminal.

Disposal of Ballast: 1. Owners and Masters are responsible for complying with all International Conventions and Nigerian Laws concerning pollution of the sea, having particular regard for the offshore sector. The Nigerian Authorities are becoming increasingly concerned at the rising level of pollution in these waters and any infringement of the International Laws regarding pollution of the sea by oil will be dealt with most severely. Pollution of the sea by dirty ballast water, bilge discharge or any other means will result in heavy fines being imposed, and in severe cases may result in imprisonment or confiscation of the vessel concerned.

2. Vessels must arrive with clean ballast only. There are no facilities for disposal of dirty ballast. It is the Master's responsibility to see that no oil of any kind is pumped or spilled overboard from his vessel. This includes oily water from bilges, crude residue from previous voyages or any other matter that may result in pollution of the sea. Any fines imposed or third party claims shall be for the vessel's account.

3. In addition to the lights usually displayed, vessels discharging ballast or loading cargo during darkness will illuminate the area around the vessel to the satisfaction of the SBM Mooring Master, in order that any oil on the surface of the sea may be readily detected and appropriate action taken. Vessels unable to illuminate the sea satisfactorily may not discharge ballast during darkness. Vessels should provide suitable floodlights for work on deck during night operations.

4. If evidence of oil appears during deballasting, the vessel will be rejected forthwith and will not be accepted until satisfactory evidence is produced that such ballast was disposed of in a proper manner. If during inspection or during progress of loading it is revealed that the vessel's tanks are not tight or that oil is leaking from the vessel, the vessel may be rejected or refused further loading. The vessel will not be later accepted for loading, unless satisfactory evidence of repair is submitted, duly certified by "Lloyds", "ABS", or other recognised surveyors. Any vessel rejected because of dirty ballast or sea pollution will automatically nullify her "Notice of Readiness" and will lose any priority of position for loading. SBM at its sole discretion may suspend, delay or unberth any vessel which is under suspicion of oil pollution. The Companies will not be liable for any demurrage, loss claims or demands resulting from such suspension, delay or unberthing.

5. Vessel should have segregated ballast facilities and be capable of maintaining a minimum of 30% draft at all times and be capable of discharging clean ballast in accordance with MARPOL either concurrent with loading or separately.

6. If the vessel cannot comply with the above conditions then it should arrive at the terminal at least 30% laden with cargo.

7. All spillage of oil must be reported immediately to the SBM Terminal Superintendent and a detailed report must be written, signed and submitted by the Master of the lifting vessel concerned.

DENSITY: 1025.

SURVEYORS: Watson Gray and Caleb Brett available from Port Harcourt.

WATCHMEN: The Terminal Regulations stipulates the shuttle tanker is to have not less than 1 deck officer and 3 seamen on duty and available at all times. One of the seamen shall also keep watch at the bow to avoid shuttle tanker contact with FPSO IV (Antan Terminal).

GARBAGE DISPOSAL: Drums provided on board and sent on-shore for disposal.

WASTE OIL DISPOSAL: No facilities.

CURRENCY: Naira. U.S.$ 1.00 = N.22.00. U.K.£ 1.00 = N.32.51 (March 1994).

WEATHER: The navigator is referred to published sailing instructions for this area for information on winds, tides and currents, viz: The Defense Mapping Agency (DMA) Pub. 121, Sailing Directions (Planning Guide) for the South Atlantic Ocean, and Pub. 123, Sailing Directions (Enroute) for the Southwest Coast of Africa, published by the U.S. Government Printing Offices Washington D.C. British Admiralty: Africa Pilot Vol. 1, Published by the Hydrographer of the Navy London.

Tides: The maximum range of tide in this area is about 6.5 ft.

Currents: The general set of current in the area is Eastward except during the Harmattan season, from November to February, when it is Westward. Within depths of 50 ft. or 60 ft. the current is irregular with many eddies. Outside those depths the speed of the current is about half a knot.

Winds: The Guinea Monsoon is the prevailing Southwesterly to Westerly wind (average speed 5-10 m.p.h.) which is strongest in the months March through November (average speed 10-20 m.p.h.). During the months of July through September the Guinea Monsoon is strengthened in speed because of the Saharan heat blow. The Guinea Monsoon is moisture laden and causes heavy rainfall in Nigerian area. Waves and swell in the area are mostly Westerly.

Harmattan winds occur intermittently during December-February period. The Harmattan winds are dry and often laden with Saharan dust. They are offshore winds and do not develop waves of significant height.

Waves: Waves are generally from Westerly direction and average about 2 to 4 ft., increasing in height with the stronger Monsoon wind during the months of July through November when the average height is about 4 ft. to 6 ft.

Rainfall: The heaviest average rainfall is in July (442 mm.). During the Harmattan season in January the rainfall averages about 42 mm.

GENERAL: *Charts:* British Admiralty Charts Nos. 1357 and 1860 and U.S. Navy Charts No. 57160 and 57163.

Repairs: Should it be necessary to supply divers, a boat, materials, equipment or labour, to carry out repair work to enable the vessel to continue loading, any costs involved will be charged to the vessel's account at rates to be established at that time. These services will only be provided in emergencies.

Services: There will be no bunkers, no fresh water, no small boat hire, no shore leave, no shore services, and no medical assistance (except in cases of emergency) available at the Terminal. Information on port services in the area should be obtained from the vessel's Agents.

Shore Leave/Repatriation: Crew members cannot leave the vessel at Antan Oil Terminal except in cases of extreme urgency. Even in an emergency it should be noted that Seamen's books may not be valid under the local Government Law. A valid Passport is required. No crew changes will be permitted during the period a vessel is in the terminal area.

Documents: After each tanker lifting, the terminal will prepare all necessary loading documents. Documentation will be finalised on board the lifting vessel as soon as practicable after loading operations are completed.

Visitors: Visitors must obtain a special pass from the SBM Terminal Superintendent at least 48 hours before visiting the terminal. Visitors will be restricted to a minimum due to the hazards involved

OPERATOR: Ashland Oil (Nigeria) Company, P.O.Box 2629, Lagos, Nigeria. *Tel:* 613334, 612657, 614277. *Telex:* 21877, 21103 and 22175, attention General Manager. *FAX:* 616816. *Contact:* The General Manager.

BONNY: 04.26 N. 07.09 E. (Inshore Terminal)
04.11 N. 07.14 E. (Offshore Terminal)
(See Plan)

IMPORTANT NOTICE: Vessels lifting crude oil must comply with restrictions that may be generally imposed by the Government of the Federal Republic of Nigeria on vessels entering Nigerian Waters for any purpose whatsoever.

DOCUMENTS:
3 Stowaway Lists.
7 Crew Lists.
3 Vaccination Lists.
3 Maritime Declarations of Health.
8 Lists of Last Port of Call (6 weeks).
6 Lists of Birds & Animals.
7 Passenger Lists.
4 Stores Lists.
4 Personal Effects Lists.
2 Arms & Ammunition Lists.
3 Narcotics Lists.
3 Kroo Boy Lists.
1 Clearance Last Port.

Agent: Requires Nigerian Ports PLC Lights and Buoy Dues form.

PILOTAGE: *Inshore berths:* Pilotage is compulsory. Pilots board off Fairway Buoy; incoming ships must *not* enter Bonny Channel without a Pilot on board unless instructed to do so by Nigerian Ports PLC on VHF.

Offshore berths (SBMs): Berthing Master will board vessel on arrival or at anchorage, and remains on board throughout and acts as Loading Master. On arrival at anchorage contact Berthing Master on VHF Channel 10, call sign "Offshore Pilot".

N.B. Also contact Bonny Terminal on Channel 8 on arrival at Offshore anchorage to ensure vessel's arrival details are recorded.

ANCHORAGES: *Inner Berths:* Consult chart.

Outer Berths: 3 miles South of manifold platform in position Lat. 4° 11.2′ N., Long. 7° 14.2′ E.

Vessels must not proceed inshore of this position without a Pilot. When at anchor listening watch must be kept on VHF Channel 8 and this Channel must not be used for inter-ship communication.

RESTRICTIONS: *Inshore berths:* Tide, no night pilotage.

Offshore berths: Worst weather period June – September, when heavy swell may be encountered.

Inshore berths: The maximum draft to which a vessel can load at Bonny is governed by three factors *viz.*
1. Datum Depth in Bonny Channel.
2. Height of the tide.
3. The underkeel clearance allowed.

Datum depth of the Bonny Channel is dependent on the amount of dredging; at present time the Datum depth is 10.25 m. (33 ft. 07in.)

Note: This depth can change and Operators and Charterers of vessels stemmed for the Inshore berths are reminded to ensure that they are in possession of the latest depths which can be obtained on application from their Agents.

Tide is variable but the relevant factor is the height of the tide at the time the vessel will transit the Channel. The underkeel clearance allowed is dependent on the time of the year and is related to the height of the swell expected to be encountered in the Bonny Channel.

The present allowances during the year are as follows:

1/1 to 15/2 = 2 ft. 6 in. – 0.76 m.
16/2 to 15/3 = 2 ft. 9 in. – 0.84 m.
16/3 to 31/3 = 3 ft. 0 in. – 0.91 m.
1/4 to 30/4 = 3 ft. 3 in. – 0.99 m.
1/5 to 15/5 = 3 ft. 6 in. – 1.07 m.
16/5 to 31/5 = 3 ft. 9 in. – 1.14 m.
1/6 to 31/8 = 4 ft. 0 in. – 1.22 m.
1/9 to 15/9 = 3 ft. 0 in. – 1.14 m.
16/9 to 30/9 = 3 ft. 6 in. – 1.07 m.
1/10 to 15/10 = 3 ft. 3 in. – 0.99 m.
16/10 to 31/10 = 3 ft. 0 in. – 0.91 m.
1/11 to 15/12 = 2 ft. 9 in. – 0.84 m.
16/12 to 31/12 = 2 ft. 6 in. – 0.76 m.

Thus it can be seen that the maximum draft at any particular time is equal to:

Datum Depth plus Height of Tide minus Underkeel Clearance Allowance.

A typical calculation would be as follows:

		ft.	in.
Datum Depth	=	33	4
Height of Tide	=	+ 7	0
		40	4
Underkeel Clearance Allowance		– 3	9
Max. Draft	=	36	7

HEALTH: "Q" flag to be shown on arrival, except if from another Nigerian port, yellow fever inoculations compulsory. In case of suspected disease on board, advance notice to Agent advisable. Valid Yellow Fever Certificates to be produced for all crew members. Also Derat Exemption Certificate.

RADIO: ETA messages of tankers, which are to load at Bonny (inshore and offshore), are to report their ETA direct to Shell Lagos Telex No. 21235 Attention: MRCL or via the INMARSAT system to "Shell Lagos MRCL" Telex No. 1772142 (SHLT X), 72 hours before arrival, using Satcom when available on board. Experience has shown that this system improves communications considerably. 48 hours and 24 hours before arrival at the Fairway Buoy a further ETA message should be sent to Lagos Agents. When approaching or anchored at the Fairway Buoy vessels should contact Bonny Terminal on Channel 8 and Bonny Harbour Master on Channel 14 when bound for the Bonny Inshore Berths passing date and time of arrival, thereafter keeping watch on VHF Channels 8 and 14. Failure to comply with the requirements for ETA messages may result in delays in berthing the ship.

ETA by Radio for all Ships: Shell Nigeria is a subscriber to the "Inmarsat" system and vessels can now send their ETA's direct to "Shell Lagos-MRCL".

Shell Nigeria's Inmarsat subscriber numbers are as follows:

	Access No.	Answer Back
Telex	1772142	SHLT
Telephone	1772144	

In view of the communication problems in this part of the world, we would request you to instruct your vessels to send their ETA's direct to "Shell Lagos-MRCL" when loading at Bonny.

Our standard ETA reporting procedure is as follows:

Vessels are required to report their ETA at the Terminal anchorage or Fairway Buoy as follows:

(a) 7 days before estimated arrival, or upon clearing last port if there is less than 7 days steaming time before estimated arrival.
(b) 72 hours before estimated arrival.
(c) 48 hours before estimated arrival.
(d) 24 hours before estimated arrival.
(e) Any other time(s) between the 72 hours notice, 48 hours notice and 24 hours notice when estimated arrival is to be revised by more than 12 hours from that most recently notified.

As soon as vessels are within VHF range of Bonny, the Terminal should be contacted on VHF Channel 8 for berthing information.

Also see "General – Radio" before first port.

VHF: Nigerian Ports PLC Bonny Harbour Master – Channels 14 and 16.Bonny Terminal – Channels 8, 16 and 10.

Special Regulations: It is essential for ships proceeding to inshore berths to pass time of arrival on VHF Channel 14 as soon as possible on arrival off Fairway Buoy.

Also see "Radio".

Shipmaster's Report: 1987.

The following are alterations to VHF Channels at Bonny Offshore Terminal.

Channel 10 – Bonny Offshore Terminal and Bonny Offshore Pilot.
Channel 8 – Shell Bonny.
Channel 14 – Bonny Signal Station.

Bonny Signal Station must be called before arrival/departure giving all usual information on ship's particulars, cargo information required when loaded, voyage details, etc.

DEADFREIGHT: Due to draft limitation at Bonny Inshore, Deadfreight applies (when necessary). This means that the Terminal will obtain approval from the Minister of Petroleum and Energy for the Deadfreight.

Also see "General".

MAX. SIZE: *Inshore Terminal:* Min. size approximately 18,000 tonnes SDWT or 161 m. (530 ft.) LOA. Max. length 320 m. (1,050 ft.). Max. beam no restriction. Max. SDWT – 135,000 tonnes, subject to review during wet season, i.e. May to October. Max. draft, see "Restrictions", draft may be reduced due to silting (mud and sand shifting, caused by current).

Offshore Terminal: Min. SDWT 45,000 tonnes. Max. SDWT 350,000 tonnes. Max. length no restriction. Max. beam no restriction. Max. draft 22.8 m. (75 ft.).

Also see "Port Harcourt" – "Report".

TUGS: None available.

BERTHING: *Inshore Terminal:* There are 3 berths (CBMs) designated A, B and C, from upstream. A and C consisting of (5 buoys (1 astern, 1 on each quarter, 1 ahead and 1 on the inshore bow). A and C are flood tide berths. B is ebb and flood tide berth consisting of 6 buoys, the 6th buoy is on the offshore bow or quarter depending on which direction the ship is berthed.

Tankers berth on the flood tide (or ebb at Berth B) using the offshore ship's anchor as an additional mooring point. Ships moor by means of 40 mm. wires (provided by the Terminal). One 40 mm. wire is picked up from each of the buoys and ship's ropes are not normally used. Mooring is carried out by ship's crew; and care must be taken to ensure that the mooring wires are laid out in a seamanlike manner to prevent the formation of runs and kinks. Mooring wires must not be kept on tension winches, but stoppered off by means of Carpenter's stoppers provided by the Terminal, and then "turned up" on the bitts. Two men from the Terminal are put on board the vessel to assist the ship's crew to position and set up the Carpenter's stoppers.

Vessels must be equipped with hose handling derricks with a SWL of not less than 10 tonnes.

Vessels must arrive with clean ballast.

Load-on-top system operates at Bonny. Slops cannot be accepted ashore. Maximum loading rate: 5,000 t.p.h.

Grades handled: both light and medium crudes.

Offshore Terminal: 2 SBMs fitted with 2 × 16 in. double nylon moorings and 1 hose string terminating in 2×16 in. diameter end hoses.

No. 1 SBM is S.S.W. of the Platform. No. 2 SBM is S.S.E. of the Platform.

Berthing effected under guidance of Berthing Master and local assistant who both remain on board throughout loading operations. Accommodation to be provided for Berthing Master and Assistant, Nigerian Ports PLC Pollution Officer and a Cargo Surveyor. Whilst berthed, a mooring launch remains secured at the stern (ship's polyprop rope), so that in the event of the vessel riding up on the SBM, she will tow to correct the situation.

Vessels must be equipped with hose handling derricks with a capacity of not less than 10 tonnes.

Vessels must arrive with clean ballast.

Load-on-top system operates at Bonny. Slops cannot be accepted ashore. Max. loading rate: 6,000 t.p.h. Grades handled: Bonny Medium and Light. Medium is handled as Sandwich loading.

HOSES: *Inshore Terminal:* (Amidships). Vessels should endeavour to present 2×12 in. diameter 150 ASA connections on the port side of the vessel when berthing at Berths A and C. On Berth B, 2×12 in. 150 ASA connections should be provided on the port or starboard sides of the vessel – dependent on whether the vessel is berthing on ebb or flood tides. Vessel's hose handling derrick to be rigged and plumbed overside. Hoses will be connected by shore labour, but winchmen must be supplied to operate the ship's lifting gear. The derrick runner must be equipped with a suitable hook. The estimated weight of each hose string at Berths A, B and C, when lifting with the ship in light condition is between 3 tonnes and 5 tonnes. Ships fitted with only 5 tonne derricks should exercise care when lifting to avoid shock loads.

Weight of Hoses: The following table gives the approximate weights of hose strings in tonnes (including fittings, floats and pick-up buoy) with all hoses full of crude oil S.G. 0.850. The assumed total lift is 7.5 m.(25 ft.) above deck level, with the tanker on light draft.

Size of Tanker *d.w.t.*	*12 in. I.D. Hoses* *tonnes*
100,000	5.1
70,000	4.9
50,000	4.7
35,000	4.5
18,000	4.2

Offshore Terminal: Port or starboard side amidships (dependent on which SBM is used). Vessels should endeavour to present 2×16 in. standard 150 ASA connections on arrival. Ship's crew are required to connect and disconnect the hoses under the advice of the Berthing Master and/or his assistant. A derrick SWL at least 7 tonnes must be rigged ready on both port and starboard sides and plumbed clear of the side. Derrick runner must be equipped with suitable hook.

Weight of Hoses: The following table gives the approximate weights of hose strings in tonnes (including fittings, floats and pick-up buoy) with all hoses full of crude oil S.G. 0.850. The assumed total lift is 7.5 m. (25 ft.) above deck level, with the tanker on light draft.

Size of Tanker *d.w.t.*	*16 in. I.D. Hoses* *tonnes*
500,000	11.4
330,000	9.4
270,000	9.1
200,000	8.7
100,000	7.5
70,000	7.1

SHORE LINE SYSTEM: *Inshore Terminal:* Crude oil is loaded at Berths A and C via 32 in. submarine lines and 2 strings of flexible hoses each consisting of 6 lengths of 12 in. hose and via a 28 in. submarine line and 2 strings of 7 lengths of 12 in. flexible hoses at Berth B.

Reducers are made available by the Terminal on request.

Offshore Terminal: Vessels load through SBM from shore through a 48 in. diameter line, thence through a 24 in. diameter floating hose which is terminated by a "Y" piece and two 16 in. diameter hose tails which connect to the ship's manifold. Loading rates up to 6,000 t.p.h. may be expected. The 48 in. submarine loading line to the shore is some 16 miles in length, therefore great care must be exercised during loading when ship's valves are manipulated to avoid pressure surges. Pressure recorders are normally fitted at the spool piece between ship's manifold and tail end of the hose string to monitor pressure changes generated on board the vessel.

BALLAST: No facilities for dirty ballast, no tank cleaning facilities.

MEDICAL: Hospital at Bonny. Also see "General".

DENSITY: *Inshore Terminal:* 1020 at HW. 1015 at LW during rainy season. *Offshore Terminal:* Salt.

FRESH WATER: Available by barge at rate of 15 t.p.h. 48 hours' advance notice required as barge comes from Port Harcourt.

FUEL: Available only by barge from Port Harcourt.

CONSULS: None.

REPAIRS: No facilities available. See "General".

WATCHMEN: Whilst berthed at the SBM a security watch must be kept on the forecastle head by member(s) of the ship's crew throughout the hours of darkness, to raise the alarm and advise the Berthing Master on the approach of local small craft. Instances have occured at Nigerian offshore terminals where a nylon mooring rope has been cut and stolen with the vessel in the berth. The Berthing Master should also be advised in the event that the vessel rides up to the SBM. Also see "Notice" and "Piracy".

CUSTOMS ALLOWANCES: 200 cigarettes per man per 7 days. 1 bottle of wine or 1 bottle of spirits per officer per 7 days.

REPATRIATION: Possible via Port Harcourt and Lagos.

AIRPORT: 28 miles by river, to Port Harcourt, then 30 km. by road, flights twice daily to Lagos, 5 international flights per week to London, Rome and Amsterdam.

TIME: GMT plus 1 hour, no change.

POLICE/AMBULANCE/FIRE: Contact via Harbour Master, or Shell on VHF Channel 8.

SHORE LEAVE: Not permitted.

IDENTIFICATION CARDS: Crew to carry Passport or Seaman's Book whilst ashore.

GARBAGE/WASTE OIL DISPOSAL: No facilities.

SEAMAN'S CLUBS: None.

GENERAL: Accommodation ladder must be rigged – used in conjunction with pilot ladder at offshore terminal – and for direct access in inshore terminal.

Limited medical assistance available but in extreme emergencies only. Treatment of minor ailments and vaccinations, etc. is under no circumstances available. It may be possible in the event of an accident to obtain medical advice (Contact Terminal on VHF Channel 8 in the first instance).

Pollution of the sea by dirty ballast, bilge discharge or any other means will result in heavy fines, or in severe cases, imprisonment.

Any attempt on the part of the boarding officers to persuade the Master to supply more than normal representation should be resisted. In the event of any problem arising over such a matter, full details should be *reported to the Agent and to the Terminal.*

Nigerian flag to be flown.

Air letter forms are not acceptable unless with Nigerian stamps.

Delays: Inshore berths: None if the channel buoys are lit. Otherwise, only daylight pilotage.

Offshore berths: Worst weather period June–September when heavy swell may be encountered.

Immobilisation of engines: Not permitted at the inshore berths. Not permitted at SBMs. Not advised at sea anchorage due to indifferent holding ground and the existence of obstructions and foul ground in the vicinity.

Loading: Ships are required to load cargo as rapidly as possible by day and night in accordance with the terms of their charter parties.

This means that ships are expected to load as fast as the Company can supply or they can safely receive. The question of how fast a ship can load is the responsibility of the Master having regard to his Owner's instructions, the charter party and the experience of ship's personnel. However, as further guidance and in absence of any instructions to the contrary, ships are accepted by the Company on the understanding that ships will be able to accept a bulk loading rate per hour of not less than ten per cent of the summer deadweight of the vessel.

At offshore berth the Berthing Master acts as Loading Master during loading operations and is provided with walkie-talkie radio to ensure adequate ship/shore communication.

Loading Masters visit each vessel, and Masters are requested to co-operate in the completion of the Company's Tanker Port Performance Time Sheet by ship and shore personnel. Only crude oil is handled at Company's terminals, loading temperatures and specific gravities of Light and Bonny crude are usually within the following ranges:

Light	0.8400 – 0.8500	at loading temperature
Medium	0.8600 – 0.900	at loading temperature

Early Departure Procedure: There is no Early Departure Procedure at either Bonny Inshore or Offshore Terminals.

Documents are brought to the ship for signature after completion at loading.

Customs and Agency representatives will normally board vessels before commencement of loading. Depending on other commitments of the offshore launch, it may be necessary to request Masters to provide temporary accommodation for these officials.

NOTICE: *Special Notice to all Masters:*

There have been recent cases of serious theft from vessels in the Port of Bonny. It appears that the intruders who invariably gain access to the vessel via the anchor hawse pipe have on occasions been armed.

In your own interest we would advise you to arrange to have a strong jet of water running down the hawsepipe of the anchor in use. The other anchor should be stowed in the pipe and not left hanging off. In addition, you should implement the normal standard precautions of augmenting deck watches and arranging over-board floodlights where possible. Jets of water around the stern will also deter intruders from gaining access by other means.

All the assaults on ships have been made from canoes; therefore we suggest that traders and other persons in canoes be discouraged from coming close to your vessel.

Should unauthorised persons gain access to your vessel, instruct Shell Company Radio Operator to contact the terminal who in turn will contact the local police. Also see "Piracy".

PIRACY: February 1986: An act of piracy took place at Bonny Offshore in February 1986. About 8-10 pirates were involved, they boarded the vessel via the hawse pipe. A seaman was bound hand and foot and guarded while the other pirates went to the ship's stores. It is suggested that Shipowners and Operators urge their ships' crews to take extra care when in this vicinity.

April 1987: Vessel attacked by 6 pirates at night whilst waiting to load.

August 1987: A vessel lying 15 miles South of Bonny Fairway Buoy was boarded by 30 armed men who attacked and seriously injured 2 crewmen and made off with some walkie talkies and the hawsers.

February 1988: Whilst waiting at anchor at Bonny River Fairway Buoy to proceed to Port Harcourt, vessel was boarded by a gang of about 10 pirates who broke the locks/chains to the Fore Peak strong room. The gang left the vessel when discovered by the vessel's watchmen who sounded the ship's whistle and flashed the searchlights.

Notice issued by Nigerian Ports PLC at Port Harcourt:

Sea Piracy at Bonny Fairway Buoy: While the Nigerian Navy is geared to combat the ugly situation of piracy on board deep sea vessels anchored offshore of Bonny awaiting berth, it is recommended that the Masters of such vessels should screen all the visitors accompanying Customs/Immigration and Security Agents and unscrupulous men be kept out of the vessels.

As a precaution against undesirables having easy access to the vessels, it is also recommended that the Pilot ladder is hoisted back aboard the vessel after use and not left hanging over the ship's side.

NOTE: April 1992.

Masters of vessels are always advised to drift within Radar (VHF) range instead of anchoring near the Fairway Buoy. This has resulted in a "Nil Attacks" report for the last 2 years. This is an advice given out by the Oil Companies Joint "Marine Operators" committee and is applicable to all Nigerian offshore terminals.

SHIPMASTER'S REPORT: January 1983.

Pilot on arrival and departure requires 4 copies Nigerian Ports PLC Master's Declaration.

Immigration liable to check all Discharge Books.

Health Doctor liable to check all vaccination dates in books.

Shore boat keeps a constant check on ballast discharge.

According to Customs no 'Ladies' are allowed to visit and if any found on board then Customs are liable to rummage vessel.

There was no night navigation in channel as buoys were unlit.

Vessels normally unberth at half tide and if waiting for daylight channel navigation, will anchor in the Prohibited Anchorage Area off berths.

SHIPMASTER'S REPORT: November 1983 (Updated 1990).
Documents: Also required:
3 copies Kroo Boy List (People under 18 years.)
3 copies Currency List.

Pilotage: Inshore Terminals: In nearly all cases pilots request Masters' of vessels to proceed to Buoy No. 29. However, in cases where Masters are not familiar with the Bonny Channel, pilots will still board at the Fairway Buoy when requested to do so.

Pilots also advise Masters of vessels regarding the situation of the buoys in the Bonny Channel (missing, not in position, un-lit, etc.).

SHIPMASTER'S REPORT: February 1990.

Vessel which is a 40,000 tonnes deadweight tanker loaded in Bonny, Nigeria, during the last week of February. My orders were to load a maximum cargo consistent with high water sailing draft, of low pour low sulphur fuel oil.

On the run into Bonny, the Brass Oil Terminal gas line flare was clearly seen at night at over 13 miles (BA Chart No. 1863), approximate position Lat. 03° 56′ N., Long. 06° 24′ E., as was the Bonny gas line flare in approximate position Lat. 04° 16′ N., Long. 07° 19′ E. There was no Racon observed in operation at Bonny Offshore Terminal. The Fairway Buoy was observed in approximate position Lat. 04° 13′ N., Long. 07° 01′ E. (BA Chart No. 3287) and later noted to be unlit, anchorage South of the buoy is spacious in greater than 10 fathoms. This anchorage position will place a vessel over 10 miles off the coast, but this is no protection from Bonny River pirates. A few days before our arrival a vessel was attacked in this very anchorage by a canoe – full of assumed locals but were beaten off by the crew with the help of parachute flares and line throwing guns during a battle which lasted for an hour. After reporting in, the ship's agent was contacted and I was advised to go out at night to 30 miles off the coast. This was done and the vessel drifted during the night with an alert 3 man deckwatch plus bridge officer. No incident occurred and vessel re-anchored at dawn off the Fairway Buoy. Some ships appeared to leave the anchorage at night. We berthed port side to alongside anchored storage tanker "Tuma" (130,000 d.w.t.) in approximate position Lat. 04° 25′ N., Long. 07° 08′ E. The "Tuma" has Yokohama type fenders and berthing was routine.

Two flexible hoses of 10 in. and 8 in. were used to load and the rate was about 1,700 tonnes p.h. Specific gravity 0.9507 at 15° C. and loading temperature around 42° C.

Unfortunately "Tuma" developed problems so we anchored at Bonny Town where loading was completed by "Tuma's" replenishment tanker "Delfi". Bunkers were taken ex-barge whilst at anchor and fresh water is also available here but not at the Fairway Buoy Anchorage. There was a lot of small boat traffic in the river and a deck watch was kept and hawse pipes were securely blocked. Plentiful supplies of local fruit can be bartered for from the canoes and this was taken advantage of (bananas, pineapples, papayas, coconuts, etc. were fresh and of good quality).

During loading the ship is assigned a Cargo Co-ordinator who proved to be extremely helpful and was able to provide or would find out all necessary information required. In other words he did co-ordinate loading operations and he also does the cargo papers. Surveyors were SGS. One bit of information which was not forthcoming was the maximum draft I was allowed to exit the channel, which is dredged to 36 ft. The tidal prediction for my sailing day was 2.4 m. or 2.5 m. and the density at the anchorage was observed to be 1018. Cargo was arbitrarily stopped by "Delfi" and vessel sailed drawing 11.7 m. even keel at 1018 density. Least depth observed under the keel when transiting the channel was never less than 2.5 m. (slightly more than 46 ft. total).

The following buoys were missing on departure – Nos. 24, 21, 17, 12, 11, 10, 9, 8, 7, 3 and 2. No lighthouses were lit at night.

Entry and boarding officials: Fairly efficient and fairly routine, make sure that you have "Nil Declarations" for everything you don't have, such as animals, mail, stowaways, arms and ammunition, passengers and "Boat People". The usual "presents" were requested but denied. The government is trying to crack down and there are jingles on the local radio station.

SHIPMASTER'S REPORT: August 1991.

The vessel (a 135,000 tonnes d.w.t. tanker) loaded Bonny Medium Crude Oil at Bonny Inshore Terminal.

When approaching Bonny, vessel has to rely on Brass Oil Terminal flare (approximate position 03° 56.2′ N., 06° 24′ E.), Bonny gas line flare (approximate position 04° 16′ N., 07° 19.5′ E.) and Bonny Offshore Terminal for fixing the vessel's position. Use of the echo sounder is also very helpful while approaching the Fairway Buoy, which is in approximate position 04° 13′ N., 07° 00.5′ E. Both the above mentioned flares were picked up at a range of 20 miles. The land is very low lying and Fouche Pt. and Field Pt. were picked up on radar when the vessel was 5 miles South of the Fairway Buoy. Neither Field Pt. Lighthouse nor any of the channel buoys were lit.

We were only able to contact "Shell Bonny" on VHF Channel 8 as the VHF sets of the Agent and the Port Signal Station were out of order. Communication in general was found to be poor.

Upon arrival 3 miles South of the Fairway Buoy, we "reported our arrival" to Shell Bonny, and were advised by them not to anchor off the Fairway Buoy, but to drift 15 miles – 20 miles South of the Fairway Buoy, due to the risk of being boarded by pirates.

As we had arrived in the late evening, and there were no berthing prospects we drifted 20 miles South of the Fairway Buoy, and anchored off the Fairway Buoy the next morning after daybreak.

The Pilot boarded off the Fairway Buoy. Pilot tries to persuade the Master to enter the channel and says that he will board midway. But it is not advisable to do so as a large number of the channel marking buoys are missing, and we found one of the buoys with a broken topmark drifting in the middle of the channel.

Vessel berthed on flood tide at Berth "B" with hose connections on the port side. Vessel moored by dropping starboard anchor and then falling back by paying out on the anchor cable to a position between the buoys.

There are no tugs to assist in mooring.

Vessel was finally secured with 6 wires, each of 40 mm. diameter, forward and aft. Forward moorings consisted of 2 wires each from a buoy on either bow and 2 wires from a buoy right ahead. After moorings were similar to forward with 2 wires from buoys on each quarter and one buoy right astern.

Mooring men from shore assisted the ship's crew in mooring the vessel. Carpenter's stoppers are brought by the mooring gang to transfer the wires from the winches to the bollards. The Loading Master proved to be very helpful and would get any information required. We were given the maximum permissible draft and river water density in writing from the terminal.

Vessel was not allowed to commence loading until cleared by Port Officials. About 15 persons boarded the vessel from Port Health, Customs, Immigration and Navy Task Force to clear the vessel inwards. Requests were made for very large quantities of "presents" and pressure put on the Master. A compromise was reached for a reasonable amount of "presents and souvenirs".

Size of connections were 2×12 in. The loading rate achieved was 4,600 cu.m./hr., despite a request for 7,000 cu.m./hr.

After completion of loading it took about 10 hours to prepare the documents, during which time the vessel was anchored 3 cables off the berth.

While casting-off the mooring wires the crew should be kept well clear of the wires as they are allowed to just run free out of the fairleads and snake around very dangerously.

While at the buoys or at anchor in the river a good anti-piracy watch was maintained with 4 crewmen on deck. Also all accommodation doors, with the exception of one door, were kept locked from inside because we were warned by all the Port Officials of piracy, thefts and the possibility of stowaways boarding the vessel. Prior to departure a thorough search was made for stowaways.

We were loaded to a draft of 10.90 m. The letter from the Terminal stated a maximum permissible sailing draft of 10.90 m. and depth of water over the bar as 12.12 m. and river water density of 1020. Over the bar in the channel an under-keel clearance of 1.2 m. was recorded.

The outward Pilot disembarked at the Fairway Buoy as is the practice with all loaded tankers.

AUTHORITY: Nigerian Ports PLC.
Operator: The Shell Petroleum Development Company of Nigeria Ltd., Freeman House, 21-22 Marina, Private Mail Bag 2418, Lagos, Nigeria. *Tel:* 601600 (17 lines), 601820 (9 lines). *Telex:* 21235. *Cables:* "Shell, Lagos". *Contact:* Marine Co-ordinator – MRCL. Tel: 2634210 (direct line).

BRASS TERMINAL: 04.04 N. 06.17 E. (See Plan)

LOCATION: Brass Terminal is an open mooring located 13.5 miles off the South Nigerian coast at: Lat. 4° 04′ N., Long. 6° 17′ 10″ E.

Chart of the area is BA 1863.

Brass Terminal operates on a 24 hours, seven days a week basis, including public holidays.

PORT LIMITS: The limit within which a vessel is considered arrived and to be within operational waters is 3 miles seaward of the BOP.

FLAG: All vessels are required to fly the Nigerian Flag on the foremast during daylight hours.

GENERAL:
Description: Brass Terminal consists of 2 SBMs. These buoys serve as a single mooring point for a tanker and enables it to freely rotate a full 360° angle while handling cargo. Each ground mooring consists of 6 sets of radial chains, each set is attached to an anchor pile. The 6 mooring legs are made of 3.25 in. diameter chain. Water depth is approximately 90 ft. Two strings of floating hoses connect each buoy with the header at the end of the sea line. The system is built to provide a safe mooring for tankers up to 300,000 d.w.t. under the following environmental conditions:

(a) Max. wind speed of 30 knots and max. significant wave height of 9 ft.

(b) Max. wind speed of 20 knots and max. significant wave height of 10 ft.

(c) Max. wind speed of 10 knots and max. significant wave height of 11 ft.

However maximum overall length should be 1,200 ft., and the minimum 720 ft.

Signals: Each single buoy is equipped with:

Radio Beacon – Racon (the ship's radar must operate at X band 3 cm., 9300 to 9500 MHz and with horizontally polarized radiation. The controls for radar gain, sea clutter and differentiator FTC should be set at normal position).

NOTICE OF READINESS: Notice of Readiness will be tendered on arrival provided that vessel is ready to load in all respects and after Free Pratique has been granted. Lay time will commence 6 hours after acceptance of Notice of Readiness for vessels arriving within agreed ETA range or when loading commences whichever is earlier.

DOCUMENTS: To be submitted on arrival:

- Maritime Declaration of Health
- 4 copies Vaccination List
- 8 copies Arrival Crew List
- 6 copies port of call list —for the past 6 weeks or 3 previous ports with dates of Arrivals/Departures)
- 6 copies Passenger List
- 6 copies Animal or Livestock List
- 6 copies Arms and Ammunitions List
- 4 copies Stores List
- 4 copies Crew Declaration List signed by all crew members
- Customs Clearance for last Port of Call.

The Naval Office in charge of the task force on crude oil liftings at Brass Terminal has advised that all tankers calling at Brass from other Nigerian Ports must obtain, in addition to the normal Customs Clearance, a Health Clearance Certificate from the first Port of Call.

APPROACHES: *Agbara Field:* One drilling Platform, has been installed in position 03° 56.5′ N., 06° 23.8′ E. (about 10.12 miles S.E. of the NAOC BOP). This structure is equipped with necessary navigational aids including warning lights and fog horn.

PILOTAGE: The Mooring Master will board the tanker in the anchorage area and all manoeuvring of ships within the Terminal area shall be done only in accordance with advice of the Mooring Master subject to the understanding that in all cases and circumstances the Master of the vessel being manoeuvred shall remain solely responsible for the safety and proper manoeuvring of the vessel and possible damage to the Terminal or service boats.

The Berthing Master and 3 local assistants remain on board throughout loading operations and accommodation to be provided.

ANCHORAGE: Vessels awaiting the Mooring Master should anchor in a position approximately 2.5 miles N.E. of the terminal. Depth of anchorage area range from 15 fathoms to 16 fathoms. Holding ground is fairly good.

Un-nominated Vessels: Tankers arriving at the terminal un-nominated, that is, not yet formally programmed to load at Brass River for that current month or vessels standing-by awaiting instructions from Owners/Charterers or under-going repairs are advised to anchor outside the terminal operational waters as given in "Port Limits".

HEALTH: Masters are advised, for avoidance of delays, to have valid cholera and yellow fever papers before departure last port of call. However, medical and health requirements are to be included in notices of ETA transmitted to Agents. Such information is also to be confirmed by VHF Radio immediately on arrival to the port.

RADIO: VHF radio telephone Channel 16 (156.8 MHz) is in use 24 hours a day as a stand-by Channel. A not too busy Channel (6, 8, 10, 12 or 14) will be used as working channel by the Marine Office/Berthing Master acting as Loading Master during Mooring/Loading operations. They are provided with walkie talkie radios to ensure adequate ship/shore communications.

Cablegrammes: Cables to Brass Terminal may be sent to LAGOS RADIO and addressed to AGIPOIL LAGOS and FREIGHT LAGOS.

Acceptance Procedures: The following vessels are not permitted to enter Nigerian territorial waters:

(a) Any vessel which is owned directly or through subsidiaries or chartered or managed by companies or persons in Israel, or is registered in Israel.

(b) Any vessel which has called at a port in Israel during a period of 6 weeks immediately proceeding her arrival off any of the Nigerian Terminals (a port call includes the calling off or near a port for the purpose of receiving services from the shore by helicopter or launch boat).

(c) Any vessel which has as officers, crew, passengers or supernumeries who are nationals or residents of Israel.

All vessels must give the Company at least 5 days' notice of arrival at Brass; this ETA to be updated 72, 48 and 24 hours prior to arrival by cablegramme sent via Lagos Radio and addressed to: AGIPOIL LAGOS and FREIGHT LAGOS.

The messages should specify cargo requirement, ANSI diameter of flanges used for loading connections, safe working load of port derrick, advise whether a Smit's towing bracket is available, last port of call and final (discharging) port, sickness on board if any.

Vessels should contact the Brass Marine Office by VHF as soon as possible.

Upon arrival of vessel off the Terminal, Government Authorities shall check to ensure that the above mentioned provisions, set in points (a), (b) and (c), have been adhered to. Any infringement of said provisions may have serious consequences for the Master, Owner or Charterer of the vessel.

Shipping Agents: The only Shipping Agent – Alraine Agency, operating in the port for and on behalf of other shipping Agents has been provided with marine VHF Radio set. Masters of vessels when within range can contact the Agent on Channel 16. Advance report of ETA to the port must be made available to the Agent through their office in Lagos: Mail address – 26 Creek Road, Apapa., P.O.Box 2206, LAGOS; Telex 21244 and 22330; Freight – Lagos.

BERTHING:

Mooring: *Fore:* Each single buoy mooring is equipped with a mooring line system. The chain is fitted with a special open link which can be used if the vessel is equipped with Smit's Bracket.

Aft: Whilst berthed, mooring rope must be ready on the poop deck so that the mooring launch (line boat) may in the event of the vessel riding up on the SBM make fast and tow to realign vessel. Whilst berthed at an SBM a security watch must be kept on the forecastle head by member(s) of the ship's crew throughout the hours of darkness to raise the alarm and advise the Berthing Master on the approach of any local small craft.

Instances have occurred at Nigerian offshore Terminals where a nylon mooring rope has been cut and stolen with the vessel in the berth.

LOADING: The line boat will tow the end of the floating hoses to the point below the tanker's port cargo manifold. The safe working load of the tanker's port derrick should be at least 7 tons.

Loading Operations can commence only after the Loading Permit is issued by the Custom Authorities, NNPC inspectorate and Navy Commander.

Ships are requested to load cargo as rapidly as possible by day and night in accordance with the terms of their Charter Party.

Ships are expected and nominations of vessels are accepted by NAOC on the understanding that ships will be able to accept a bulk loading rate per hour of not less than 10% of the Summer d.w.t. of the vessel or at the optimum terminal loading rate, whichever is lower.

It is extremely dangerous to close ship's valves against the oil stream as such operation may create excessive pressure in terminal piping and hoses.

Should damage result from failure to observe this precaution the Master of the vessel will be held responsible.

During the loading operations the following signals shall be displayed: International Code Flag "B" during daylight. By night a red light, visible all round the horizon at a distance of at least 2 miles.

Brass Blend crude oil loading temperature is reasonably constant as well as API gravity at approximately:

Brass Blend	85°F	40.00 API	R.V.P. 10.00 (approx.)

The approximate loading rate is 5,000 t.p.h.

Also see "General" before first port.

POLLUTION: Pollution of rivers and beaches by oil is a serious matter. The Mooring Master shall inspect tanker's ballast so that there will be no chance of even a small amount of pollution when the ballast is pumped out, thereby lessening any possibility of infringement of the pollution restrictions envisaged by Nigerian law.

Pollution of the sea by dirty ballast, bilge discharge or any other means will result in heavy fines or in severe cases, imprisonment.

MEDICAL: Although medical assistance is normally not available locally, Agency will provide medical assistance to the tankers' personnel when required in advance. In case of emergency the Terminal medical facilities will be at tanker's disposal.

FRESH WATER: Not available.

FUEL: Not available.

REPAIRS: There are no facilities available in the Terminal for vessel repairs. However, in case of necessity contact Agent.

REPATRIATION: Permitted only in cases of emergency and only if the person concerned holds the necessary documents, i.e. Yellow Fever Certificates.

MAIL: Ship's mail and personal mail will be handed through vessel's Agent.

SAFETY:

Smoking, lighters, matches: Smoking is prohibited on board during loading operations except those areas in the accommodation jointly agreed to by the Master and the Terminal Representative. Personnel on board the vessel other than in the accepted areas, must not carry lighters or matches.

Portable equipment: Any electrical equipment which is not wholly within an approved explosion proof container, an approved air pressurised container or any equipment which is not intrinsically safe, must be disconnected from the power supply.

Hand Torches: Only those hand torches provided with a Certificate of Approval delivered by a recognised authority are allowed.

Radio transmitters, radar: The main transmitting aerials must be grounded. VHF apparatus are allowed provided their output power is not higher than one watt.

Portable radio transmitter must be of approved type for safe operation in flammable gas areas.

Radar must be switched off.

Doors and portholes: Amidship doors and portholes are to be kept closed during loading operations except for entering or leaving accommodation.

Doors and portholes on the fore-end of the after accommodation must be kept closed.

Access to the after accommodation may be from the stern or from the side doors.

Air conditioning: Central air-conditioning is allowed but air intakes must be shut off and full circulation must be adopted.

All window type coolers must be disconnected unless the units are safe to operate in flammable gas areas (as certified by a recognised authority).

Ventilators: Should any doubt arise that flammable gases may enter the area, ventilators must be completely closed.

Galley: Gas, oil or coal fires are prohibited. Only approved flame-proof electrical equipment or steam heated galleys are permitted.

Lights: During loading operations vapour-proof electric lights only are allowed.

Moored vessels discharging ballast or loading cargo during period of darkness will brilliantly illuminate the sea around the ship so that any pollution can be readily observed.

Cargo and unused connections: A deck officer is also requested to inspect cargo connections and hoses to ensure that they are in good condition.

All unused connections must be blanked.

Cargo tanks: All tank lids are to be kept closed. The method of venting requested by the terminal is the closed system.

Should the ship not be equipped with the closed venting system, tank portholes will be opened for intermittent periods but such portholes will be protected with flame arresters.

Main engines: The ship's engines must remain ready for immediate use in case of emergency. Therefore no engine repairs or overhauling are allowed.

Boilers: Blowing of boiler tubes is forbidden whilst moored.

Vessel maintenance: During the time a vessel is moored at Brass Terminal, use of tools which may cause sparks or fire is forbidden in dangerous areas.

Fire fighting: The Master of the vessel must keep a continuous fire watch during loading operations. All fire equipment must remain ready for immediate use.

Unsafe operations: The Master of the vessel will remain solely responsible for damage of any sort that may occur and which is due in whole or in part to infringement of aforesaid safety regulations.

Lifebuoys: Lifebuoys should be available in loading manifold area and at the entry and exit from ship, e.g. at the pilot ladder.

Scuppers: All scuppers must be plugged with leak-proof plugs, and remain plugged until all hoses are disconnected.

WEATHER: *Climate:* The weather is generally fine from November to April, but it is unfavourable during the remaining period of the year owing to the high humidity degree. The temperature varies comparatively little from 70° F to 100° F and averages over 80° F.

Winds: Most winds are from South-Westerly direction with a normal speed range 5 to 18 knots.

Tides: The tidal mean range is 4.6 ft. Main values (referred to chart datum) are as follows:

Mean LW spring level	0.2 ft.
Mean HW spring level	6.1 ft.
Lowest LW level	−0.6 ft.
Highest HW level	7.1 ft.

Currents: Maximum total strength of the current (tidal + density + wind drift) is about three knots.

Direction: North-North Westerly for approximately 75% of the year, South-South Easterly for the remainder. The currents often reverse direction very quickly causing the tanker to swing heavily at the buoy.

SHORE LEAVE: Crew members cannot leave the vessel at Brass except in cases of emergency.

SHIPMASTER'S REPORT: 1976.

Documents:

1 Maritime Declaration of Health.
2 Vaccinations Lists.
6 Crew Lists.
4 Passengers Lists.
2 Stores Lists.
2 Personal Effects Lists.
4 Arms and Ammunitions Declarations.
4 Lists of Animals and Birds.
4 Lists of Ports of Call (last 6 weeks).
Clearance from last port.

Approaches: Coast line is well defined on high definition radar at a distance of 12 miles to 15 miles and sounding machine will assist efficiently while approaching.

Terminal consists of a central platform showing 2 flashing lights (one red and one white) – letter "U".

Two SBMs: No. 1 situated 1 mile East of the platform is equipped with a Racon (letter "A"). No. 2 situated 1 mile West of the platform.

Pilotage: Berthing Master will board the vessel 2.5 miles North East of the platform. Contact "Brass Terminal" on VHF Channel 16 for berthing instructions and immediately on anchoring to ensure that vessel's arrival is recorded.

Anchorage: 2.5 miles N.E. of the platform.

Restrictions: Vessels berth in daylight hours only.

Max. Size: About 250,000 d.w.t.

Pratique: Agent, Health and Customs Officers board at same time as Berthing Master.

Radio: ETA to be given via Lagos Radio, 120, 72, 48 and 24 hours before arrival at the Terminal anchorage.

Tugs: None available.

Berthing: Effected under the guidance of Berthing Master assisted by a party of 4 Nigerian people and ship's crew.

Whilst berthed a mooring rope must be ready on the poop deck so that the mooring launch, in the event of the vessel riding up on the SBM, may make fast and tow to realign the vessel.

Each SBM is fitted with 2 nylon mooring ropes connected on a single chain and two hose strings with 16 in. end hoses. Position of hose connection: amidships port side. Vessel should endeavour to present on arrival 2×16 in. connections on port side. A derrick of 7 to 10 tons SWL with a suitable hook must be rigged ready on port side.

Medical: No facilities but assistance may be given on an emergency basis.

Density: About 1025.

Fresh Water: Not available.

Fuel: Not available.

Repatriation: No crew changes possible.

Shore Leave: Not permitted.

General: Crude oil handled is: Light Nigerian Crude API=44.0. Temperature about sea temperature, R.V.P.=10.5. Two of the four Nigerian crew stay on the forecastle head and maintain security watch throughout loading operations. Accommodation must be provided for Berthing Master and 2 men. Accommodation ladder is not required. Pilot ladder or pilot hoist are more suitable because of the swell. Immobilisation of engine is not permitted at SBMs.

Early Departure Procedure: Masters are required to sign all documents in blank. On completion of loading, seals are controlled by customs officer and Agents complete Master's and Consignee's copies of documents whilst ship is disconnecting and leaving berth.

SHIPMASTER'S REPORT: May 1980.

Documents: 5 each of Passengers or Nil passengers, Nil stowaways, Nil distressed seamen, Nil birds and animals, Narcotics List, Ports of Call, Clearance Last Port and 3 copies Deviation Cable.

Customs: All lengths of cloth to be placed under seal.

AUTHORITY: *Operator:* Nigerian AGIP Oil Co. Ltd. Head Office, 9/11 MacCarthy Street, Lagos. P.O.Box 1268, Lagos. *Tel:* 600880/9 (10 lines) *Cables:* Agipoil – Lagos. *Telex:* 21268. *Contact:* Captain G. Palchetti, Marine Superintendent.

District New Base: Mile 4 – Port Harcourt, P.O.Box 923. *Tel:* 300400/20 (21 lines). *Cables:* Agipoil – Port Harcourt.

AGENT: Alraine (Nigeria) Ltd., 26 Creek Road, Apapa. P.O.Box 265, Apapa and P.O.Box 2206, Lagos. Tel: 234 1 877 580/873887. Fax: 234 1 874 542. Telex 21244 and 22330. Cables: "Freight Lagos".

BURUTU: 05.21 N. 05.31 E. (See Plan)

No commercial vessels are today using the Port of Burutu. Future developments include the construction of a major ship repair facility with graving dock, capacity 150,000 d.w.t.

PILOTAGE: To obtain a pilot, call "Niger Line Burutu" on VHF Channel 16.

Also see "General" – "Pilotage" before first port.

CALABAR: (See Plan)

Old Port: 04.58 N. 08.17 E.
New Port: 05.04 N. 08.16 E.

LOCATION: New Calabar Port (Lat. 05° 04′ N., Long. 08° 17′ E.) is situated about 84 km. from the Fairway Buoy in Calabar River going through a well marked channel by 58 buoys (IALA System). The channel is dredged to 8.0 m. chart datum with 150 m. width. Old Port is 74 km. from Fairway Buoy.

DOCUMENTS:

Nigerian Ports PLC:

7 copies Manifest.
copy SEN (Ship Entry Notice).
Agent to pay in advance for ship.
Clearing Agent to pay wharfage and wharfinger.
4 copies Stowage Plans.
4 copies Hatch Lists.
3 copies Hazardous Cargo Lists.
4 copies Container Lists.
8 copies Master's Declarations. (4 inward, 4 outward)
5 copies Passenger Lists.

Customs:

2 copies Crew Lists.
2 copies Stores Lists.
List of Ports of Call.
1 copy Animals List.
1 copy Arms and Ammunition List.
1 copy Passenger List.
1 copy Crew Personnel Effects List.

Quarantine:

2 copies Crew List.
1 copies Inoculation List.
2 copies Derat Certificates.
1 copy Clearance from Last Port of Call.
1 copy Stores List.
2 copies Vaccination Certificates.

PILOTAGE: Compulsory pilotage from anchorage area which is between Buoys No. 24 and 25 (near Parrot Island). Ship calls Calabar Port Control on VHF Channel 16 asking for advice from 0600 – 1800 hrs. Ship will be advised when the Pilot will board her, normally it takes about 1.5 hours for the Pilot to reach the ship. There is a pilot cutter flying "H" flag. The vessel is normally allowed to enter after the Agent books a Pilot, and dues are paid,.

ANCHORAGES: The area between Buoys No. 24 and 25 is a good area for anchorage. The depth is 8 m., with 3 – 4 shackles the ship holds well. There is a deeper area called "Parrot Deep" with depth 11.0 m. at C.D.

RESTRICTIONS: When a vessel arrives at the Fairway Buoy Lat. 04° 18′ 31.7″ N., Long. 08° 14′ 51.3″ E., which can be passed on either side, the vessel can call "Calabar Port Control" or "Harbour Master's Office" on VHF Channel 16 and if no contact made, vessel may proceed to Parrot Island. No night navigation in channel.

MAX. SIZE: Max. LOA 170 m. and draft 7.6 m.

RADIO/VHF: No radio service in Calabar at present. "Port Control" operates from 0600 – 1800 hrs. on VHF Channel 16. Steps are in hand to extend the service for 24 hours. S.S.B. 2182 kHz. also available.

RADAR: No radar service.

TUGS: 4 small tugs of 240 h.p. 1 manoeuvring tug of 2,400 h.p. Ship's lines to be used if towing, at a charge.

STEVEDORES: Supplied on request of Agent round the clock if required.

MEDICAL: Port Authority clinic and Government Hospitals. Swiss Air Ambulance also available for repatriation.

BERTHING: Old Port:
Ashland Oil Co. – Mellerio Wharf (Private): Length 51 m., max. draft 8 m. Can accommodate vessels up to 150 m. LOA.
Ashland Oil Co. – Jackson Wharf (Private): Length 27 m., max. depth 8 m. Can accommodate vessels up to 100 m. LOA.
Calcemco Wharf (Private): Jetty 75 m. but the depth is affected at the moment, and draft is restricted to 4 m. Can accommodate vessels up to 160 m. LOA.
MacIver Jetty (Private): 55 m. long, max. draft 5.5 m. Used by lighters.
New Port: Length of berth 860 m., can accommodate 4 – 5 vessels of 150 m. LOA with a depth alongside of 9 m. Distance between bollards 30 m.
Pool: 11 mooring buoys can accommodate 10 vessels, length between buoys varies from 220 m. to 130 m.
CARGO FACILITIES: 3 transit sheds, each 175 m. long by 40 m. wide. 2 warehouses of the same dimensions, fire station, fully equipped with up-to-date fire fighting appliances.
Cargo Equipment: 19 forklift trucks, 3 – 6 tons capacity. 6 mobile cranes, 25 tons capacity. 20 trailers of 40 – 60 tons capacity. 6 Mafi tractors. 3 freight lifters of 25 tonnes and 6 freight lifters of 13 tonnes. 6 Portal cranes 10 – 25 tons capacity. 2 tower cranes 36 tons capacity.

Modern Gear Store with new cargo handling gear including spreaders and wires for 20 ft. containers plus lorry and lifting gear. (Note: Shipping Companies should provide their own gear for heavy lifts and 40 ft. containers).
Barges and Pontoons: There are a number of barges and pontoons for seaward-side or mid-stream discharge – tonnages vary between 60 tons and 500 tons.
Container Areas:

A.	Pack I	5,500 sq.m.
B.	Pack II	4,000 sq.m.
C.	Pack III	4,000 sq.m. for empty containers only.

FRESH WATER: Can be supplied in the New Harbour. (2 water tanks, 2,400 litres each).
FUEL: Diesel oil can be supplied by motor tankers (30 tons each).
REPAIRS: Deck and engine repairs can be carried out. Under water repairs can be carried out on vessels not exceeding the following dimensions: Length 62.5 m., breadth 12.5 m. and draft 1.5 m.
DRY DOCKS: Graving dock available. Size: Length 62.5 m., breadth 12.5 m., draft 1.5 m.
Slipway: Capable of taking vessels up to 25 tons.
SURVEYORS: Lloyd's and Bureau Veritas are available.
WATCHMEN: Security men are compulsory and supplied by the Agent.
OPENING/CLOSING HATCHES: By crew.
REPATRIATION: A good air link from Calabar International Airport to different places in the world via Lagos, Douala and Libreville.
POLICE/AMBULANCE/FIRE: Ambulance: Contact Harbour Master. Fire: Port Fire Service operates on VHF Channel 14. Port Fire Officer Tel: 221573 (Office). Police: Tel: 221575 Office, 223196 House.
CUSTOMS ALLOWANCES: See "Lagos".
SHORE LEAVE: See "Lagos".
IDENTIFICATION CARDS: See "Lagos".
GARBAGE DISPOSAL:
(a) The Nigerian Ports PLC at Calabar provides garbage disposal facilities to vessels at the new port. Ship's Agents apply for such services on application forms.
(b) Collection of these services is solely by the Authority, and charges not fixed, and vary on mode of supply and regularity.
WASTE OIL DISPOSAL: No facilities available.
SEAMAN'S CLUBS: The Seaman's Club is in the making and being handled by "Port Working Committee". However, in the meantime, the Port Authority provides clubs facilities, such as recreational games, drinks and swimming pool, at their Harbour Village for seafarers, a distance of about 4 km. from the new port.
CURRENCY: The local currency rate of exchange against U.S.Dollar fluctuates daily at an alarming rate. There is no restriction whatsoever on exchange, and all major currencies are exchangeable.
DEVELOPMENTS: Steps in hand to bring the depth to 9 m. chart datum and to widen the channel.

SHIPMASTER'S REPORT: October 1986. (Updated 1994).
Re: "Buoyage System at Calabar River".

1. For a Vessel approaching Calabar Fairway from South it is very difficult to distinguish the Fairway Buoy at night, because of the density of oil platforms and pipes and also their dense illumination. On the other hand, for vessels approaching from Westwards (their draft permitting), it is easier sailing between the shoreline and the platforms determining their position by land and on their arrival at Fairway Buoy having a fix with the West Point. The Fairway Buoy lies near and S.E. of a platform the position of which is: Lat. 04° 21.70′ N., Long. 08° 14.80′ E.

Position of the Fairway Buoy: Lat. 04° 20.70′ N., Long. 08° 15.30′ E.

2. Because of the strong tidal currents prevailing in the area of the river's estuary, the lateral buoys constantly drift, and as a result of this, their charted positions are not to be relied upon and some of them do not even exist. (In March 1990, No. 11 Buoy was missing). Note: All channel buoys (total 54) being laid in April 1992.

3. The positions of the following buoys were altered as follows:
No. 6. Red. In position: Lat. 04° 27.38′ N., Long. 08° 20.82′ E.
No. 7. Green. In position: Lat. 04° 27.40′ N., Long. 08° 20.63′ E.
No. 13. Constantly drifts between the positions: Lat. 04° 32.17′ N., Long. 08° 23.18′ E. and Lat. 04° 32.27′ N., Long. 08° 23.08′ E. (Missing in March 1990). Note: In position April 1992.
No. 16. Red. In approx. position Lat. 04° 37.61′ N., Long. 08° 22.35′ E. (Missing in March 1990). Note: In position April 1992.
No. 17. In position.

4. The following buoys were found in their correct positions:
No. 18 Red. Lat. 04° 40.45′ N., Long. 08° 21.75′ E.
No. 19A Green. Lat. 04° 40.55′ N., Long. 08° 21.90′ E. (Missing in March 1990). Note: In position April 1992.
No. 19 Green. Lat. 04° 41.92′ N., Long. 08° 21.32′ E.
No. 20 Red. Lat. 04° 41.85′ N., Long. 08° 21.20′ E.
No. 21 Green. Lat. 04° 43.90′ N., Long. 08° 20.55′ E.
No. 22 Red. Lat. 04° 44.70′ N., Long. 08° 20.11′ E.
From Buoy No. 22 to Parrot Island the channel buoys are in their positions.

5. During the navigation from No. 19 buoy all the way through to Parrot Island anchorage, extreme caution is needed because of the floating tree trunks drifting outwards and inwards in the river following the current, of which only a small part is distinguishable above water.

6. Because of the doubtful positions of the buoys the safest way to navigate is determining the vessels' position by the river banks' line as shown on the radar. The following points are characteristically conspicuous on the radar screen especially with HW, all of them lying on the port side for inbound vessels:

1. West Point.
2. Okposo.
3. Tom Shot Point.
4. The edge of Red Cliff.
5. Jackdaw Point.
6. Sandy Point (on the starboard side).

AUTHORITY: Nigerian Ports PLC, P.M.B. 1014, Calabar, Cross River State, Nigeria.
Managed By: Port Manager *Tel:* 221179, 222429, 225111-5 Office; 223124 House. Traffic Manager Tel: 220189 Office; 221570 House. Chief Port Harbour Master Tel: 221562 Office; 222968 House. Pilot Office Tel: 225444 House. Calabar Exchange Code 087. *Telex:* Calport 65170. *Cables:* Genports, Calabar.
AGENT: Intertrans (Nigeria) Ltd. P.O.Box 10, Calabar. Tel: 087-222-554. Telex: Via Lagos 21244. Attn: Calabar.

DEGEMA (Including Abonnema): 04.44 N. 06.46 E.

LOCATION: Degema and Abonnema are very close to each other on the Sonbreiro River and are divided by a Creek through which launches and small craft sail to Port Harcourt.
PILOTAGE: Compulsory through Boler Creek. Pilots embark at Bonny.
BERTHING: The ports are approached from Bonny via Boler Creek, which has a depth of 4.88 m. at HW. Anchorages for 3 vessels in harbour to load/discharge, max. draft 16 ft. (limited by depth of Boler Creek). Cargo is handled by lighters.

Bulk Oil Plants of Nigeria Ltd. operate a berth for the loading of bulk palm oil onto main line vessels.
AUTHORITY: Harbour Master, Port Harcourt.

ESCRAVOS: 05.30 N. 05.00 E. (See Plan)

DOCUMENTS:
8 Crew Lists.
7 Passenger or "Nil" Passenger Lists.
7 Animal Lists.
5 Narcotics Lists.
5 Arms and Ammunition Lists.
4 Stores Lists.
4 Crew Declaration Lists.
Documents concerning cargo if any aboard.

Following paper's, required by the terminal operating company, Chevron Nigeria Ltd., will be supplied by the Mooring Master:

The Master of tankers calling for the first time at Escravos will be supplied with the terminal information booklet.

The Master is requested to sign the "Conditions of Entry and Use of Escravos Terminal, Nigeria" and the "Safety Requirements" forms prior to start of berthing.

Before the loading operations are commenced, the Master must also sign two letters concerning the loading and stoppage of cargo procedured.

Other papers to be filled up and signed by the Master are:
Ship's Reports.
Master's Declaration.

At completion of loading, only in event of cargo ship/shore difference over ± 0.5%, the Master will be required to sign the "Certificate of Undertaking".
PILOTAGE: Compulsory. Boarding area is in a position approximately 3 miles W.N.W. of the Berth Operations Platform. Also see "General" and "General" – "Pilotage" before first port.
NAVIGATION AIDS: *Berth Operations Platform:* This is a conspicuous steel structure 85 ft. high (Position 05° 30′ 32″ N., 05° 00′ 19.5″ E.), between the berth and the shore. On top of this structure is a heliport, which at night is surrounded by red lights. In the event of a power failure a green intermittent light will be shown from one corner of the seaward side of the platform.

A RACON reflector is mounted on this platform for easy identification of the Chevron sea loading area. Radar transmission from the incoming vessel triggers the RACON Unit which responds with the Morse Code letter "G" (– – ·), followed by a solid tail. This signal is observed visually on the ship's radar screen and appears very close to the point where the radar echo of the berth operations platform itself should appear.

The racon is, however, most of time out of service. An RDF, located at the local airport for air traffic purpose, can be useful for Escravos Terminal approach in poor visibility conditions. Such RDF, working on 305 kHz frequency with ES (. ...)signal, is of limited power, being not an official navigational aid, and can be detected at a distance of about 30 miles.

Berth No. 2 – SBM: Light: White. Light 6.0 secs., Eclipse 4.0 secs. Range 5 miles. Radar Reflector.

Foghorn: Electric air oscillator. Range 0.5 miles, letter "U" every minute.

Berth No. 3 – SBM: Light: White. Light Fl. 10 secs. Range 4.5 miles. Radar Reflector.

Foghorn: Range 2 miles, letter "U" every minute.

Charts: B.A. 1862 and B.A. 3304.

ANCHORAGE: Vessels required to anchor on arrival will anchor in position approx. 3 miles W.N.W. of the Berth Operations Platform, i.e. in a position Lat. 05° 31′ 00″ N., Long. 04° 57′ 30″ E., or as otherwise instructed.

On approaching the terminal, VHF contact can be established with the Mooring Master on Channel 10, and the vessel will be advised of which berth has been nominated for her cargo. At the same time, the vessel will be advised where the Mooring Master will board. In cases where VHF contact is not made, the vessels will remain in the anchorage area until such time as contact is made by radio or the pilot boat. Vessels are advised to anchor only in the stated area due to the existence of submarine pipelines in other areas.

Mooring Master's office is presently equipped with Channels 10 and 16 for communications with the incoming tankers, but it is expected that in the future a marine set with all the VHF channels will be installed.

Anchorage is forbidden in the mooring area.

RESTRICTIONS: Mooring and unmooring operations will be undertaken by day and by night under normal weather conditions.

Notice of Readiness will be accepted by the Company representative on boarding, providing that the ship is in all respects ready to load.

MAX. SIZE: The Escravos Terminal consists of two Single Buoy Mooring Berths No. 2 and 3 only, the conventional Sea Berth (Berth No. 1) having now been de-commissioned.

The location of the Sea Terminal Berth No. 2 (SBM) for vessels up to 120,000 d.w.t. is off the North of the Escravos River in a position Lat. 5° 30′ 37″ N., Long. 4° 59′ 25″ E., and has a minimum depth of water of 65 ft. at LWS.

Berth No. 3 (SBM) is situated 4.25 miles W.S.W. of No. 2 berth in a position Lat. 5° 29′ 29″ N., Long. 4° 55′ 54″ E., and will accommodate vessels up to 300,000 d.w.t. in a minimum depth of 100 ft. at LWS on a year round basis, but during the dry season, October to March, vessels up to 350,000 d.w.t. will be accommodated on receipt of their acceptability by the Terminal.

RADIO: Vessels bound for Escravos must advise their ETA to Chevron, Lagos, 72 hours and 24 hours before arrival – the message to contain the vessel's name, ETA, Master's name. A 24 hour watch is maintained on VHF Channel 10, in the Senior Mooring Master's Office, and ships are usually able to make contact on this Channel at a distance of 20 miles to 40 miles on the seaward side of the Berth Operations Platform. Channels 10 and 10A used for internal traffic and ship berthing operations. Also see "Anchorage".

Incoming vessels may be advised by the Mooring Master to keep outside Nigerian territorial waters where no official nomination or clearance has yet been received by the terminal. In such cases, the vessel is required to monitor continuously VHF Channel 10 and await permission to proceed to the anchorage.

HEALTH: Arriving vessels will be required to supply information for dispatch in the Inward Pratique to the local government agencies, such information (i.e. name of vessel, nationality, Summer d.w.t., arrival time, last port of call, next port of call, owner's name and address, quantity of cargo required, destination of cargo, crew nationality, home port, Master's name, Certificate of Registry, bunkers on arrival, draft on arrival, cargo on board) should be at hand on the bridge and passed by VHF Channel 10 at the Mooring Master's request.

MOORING: Before arrival at the pilot boarding area, it will be necessary to ensure that the following moorings are ready for use on arrival at the berths:

Forward: 2 mooring ropes on forecastle – buoyant lines if possible, e.g. polypropylene, on the forecastle head.

When the vessel is within reasonable distance of the buoy, 1 ship's line will be carried by the mooring launch to the floating buoy lines and secured to same, this line will then be heaved aboard. As the buoy rope comes clear of the water it will be noted that a chain is attached to it. This chain is to be secured to either a bow stopper or a towing bracket if fitted on the vessel otherwise terminal provided Pelikan hooks will be used, the latter being secured to a set of bitts on the vessel. This chain is to be secured in such a manner that the mooring rope is outside of the extreme length of the vessel; i.e. so that the chain will absorb any chafing if the buoy line crosses the bow.

Because of the mooring chain weight, incoming vessels are requested to particularly check the efficiency of their bow winches.

Power must be available at all times on deck winches and windlass while vessel is at the berth.

Aft: A mooring line must be available aft, secured to the bitts and of sufficient length to enable a tug-boat to pick up the eye and tow on it to realign the vessel if necessary. If available, a buoyant line is also preferred in this position.

There are no special arrangements for unmooring.

MEDICAL: Not available except in an emergency.

CARGO: Nigerian Light Crude - API 36.5° approx. Temperature 90°F. (fairly steady throughout the year).

HOSES: Lifting, connecting, disconnecting, lowering and other handling of hoses will be performed by the ship's crew, as advised by the Company representative, and the Company will provide a pipeline gang to assist the ship's crew. At all times a deck officer must be in attendance.

Port derrick must be rigged and ready for use on arrival and vessels are cautioned that the weight of each hose is at least 7 tons under favourable conditions. In any case, members of the ship's crew will be required to operate the winch or winches.

Particular care should be taken during the hose handling operations in order to avoid serious damage to the hoses, on the plate edges, rails, etc. The cargo hoses are fitted with Camlock connections and blank flanges. As no equipment will be supplied from the shore; it is essential that all vessels nominated for this port have an adequate supply of gaskets, nuts, bolts, spanners, tools, etc. ASA reducers for use with the Camlock connections can be supplied in an emergency in the standard sizes. Failure to have these items will lead to delay in berthing and could even lead to a situation where the vessel may no longer be accepted by the terminal. Such delays would be for the ship's account.

Before hose handling operations begin, materials must be near the manifold and remain near the manifold to cope with any escape of oil, i.e. drip trays, sand, detergent, etc., and must in the event of a spill be utilised as rapidly as possible.

Berth No. 2: Loading is through an SBM which is approx. 40 ft. in diameter and held in position by 4 chains secured to piles sunk into the seabed. 1×24 in. floating hose is secured to buoy and has 2×16 in. tail pieces attached to it; they are also fitted with Camlock connections.

Berth No. 3: Same as No. 2 but improved type and more heavily moored with 8 chains secured to piles sunk into the seabed. There is 1×24 in. floating hose with 2×16 in. tail pieces. There are ASA flanges with Camlock connections, similar to those at Berth No. 2.

There are 2 SBM Berths only at this terminal – the conventional berth (No. 1) has been de-commissioned. The max. loading rate is 30,000 b.p.h. (approximately 4,000 t.p.h.).

LOADING/BALLAST: All vessels must arrive with only clean or segregated ballast as there is no ballast reception facilities.

"Load on top" is accepted, and vessels are requested to arrive with the slops settled. A minimum 30% Summer d.w.t. is to be maintained by all vessels, while manoeuvering or moored at the terminal, either by simultaneous deballasting and loading, or by loading part cargo first, stopping the operation for deballasting and completing cargo.

The Nigerian Government has very strong views on pollution and vessels are warned that a very careful watch is kept at all times to ensure that pollution does not take place, or that if pollution should occur it is controlled as quickly as possible.

An Oil Pollution Monitoring Inspector is assigned to each vessel on behalf of Nigerian Ports PLC.

All vessels are cautioned to keep a close watch on the floating hose (or hoses) towards the end of deballasting, as it is possible, under certain conditions of weather and tide for the hose to become trapped under the fore-foot of the vessel. Should this situation appear likely to arise vessels are requested to attempt to keep the fore-foot submerged by transfer of water or bunkers, etc. If the hose becomes foul, it must be disconnected and towed clear causing considerable delay to the vessel.

During the hours of darkness it is requested that searchlights from bridge wings and approved floodlights be used to illuminate the surrounding water to facilitate detection of oil and assist generally in loading operations. Vessels are advised that failure to supply sufficient lighting could result in cargo operations not being allowed during the hours of darkness. Such delay would be for the ship's accounts.

After the ballast tanks have been inspected and found to be satisfactory, deballasting will commence on the advice of the Cargo Surveyor. When all the ballast has been discharged, the tanks will again be inspected and if ready for cargo a Dry Certificate, if presented, will be signed by the Company representative. In any case, cargo will be loaded when both ship and shore are ready to commence operations. In no circumstances will the vessel be expected to load at a faster rate than that requested by the Master. It is the ship's responsibility to check that the requested loading rate is not being exceeded. The Company for their part will make every effort to maintain the requested rate and will advise of any alteration of loading rate immediately; prior warning being given if circumstances permit.

Throughout the deballasting and cargo operations, a deck officer must be on deck with sufficient crew members to safely handle the operation. Company representatives will be on board throughout to co-ordinate terminal and marine operations and will be in constant communication with the terminal by portable and/or ship's VHF sets. Before loading commences the amount of cargo required must be given to the Company Representative in writing and the Terminal will, in conjunction with the vessel, arrange to stop the flow of cargo at this predetermined figure.

THERE ARE NO FACILITIES AVAILABLE TO DISCHARGE EXCESS CARGO SHOULD THE VESSEL OVERLOAD.

When requesting the tonnage required in writing, a statement should be included, and will be deemed to include, that Chevron Nigeria Limited will not be held responsible for any errors or any costs or claims arising directly or indirectly from such errors. Such statement is a condition of loading. It is recommended that frequent checks are made on the loading speed and the quantities received and required so that, if possible, adjustments can be made.

The Company Representative will advise on the detailed procedure for shutting down and disconnecting, but briefly, after cargo is completed and oil has ceased to flow, loading valves on the shore and Berth Operation Platform (BOP) will be closed. Then and not before, the vessel's manifold valves may be closed.

Do not close ship's valves against incoming oil as such procedure creates excessive pressure which may damage hoses, terminal facilities, or ship's piping. Vessels will be held liable for damages resulting from failure to observe this precaution. In addition to the above, serious pollution could result which will involve the vessel in further claims and or fines. Therefore, for the sake and safety of all parties concerned, please use the utmost care and vigilance when loading at this terminal.

Figures taken after completion will be passed to the shore by VHF and a ship/shore difference obtained. Full sets of cargo papers will be prepared and delivered to the Master as speedily as possible. However the briefer form of documentation can be used, but only with Master's acceptance, the remainder of the documents will be forwarded by airmail. At the same time the Company will arrange clearance for the vessel. Loading signal to be displayed is the International Code flag "B" from a conspicuous halyard during the hours of daylight. During the hours of darkness a red light visible all around the horizon at a distance of at least one mile is to be exhibited.

REPAIRS: No facilities of any kind are available at this port.

Under no circumstances are engine repairs or the immobilisation of main engines permitted within the port limits.

REPATRIATION: Not permitted except in grave emergency and then only if the person concerned holds all the necessary valid certificates and documents, e.g. valid Cholera and Yellow Fever Certificates.

WEATHER AND CURRENTS: Wind and swell are mostly from a South-westerly direction. The weather is generally good from November to May, but is unfavourable during the wet season, i.e. May to November. For approximately 75% of the year the current sets in a N.N.W. direction and for the remainder of the year it is reversed, i.e. S.S.E. The strength of the current varies from 0.5 to 1.5 knots, and the currents frequently reverse direction very quickly causing the vessel to yaw (swing) heavily at the berth.

FRESH WATER: Not available.

FUEL: Available. A fuel barge from Warri can go alongside vessels whilst still at anchor.

STORES: Stores are not available at this Terminal and urgent spares/equipment forwarded by air can take up to 3 weeks to clear formalities. In view of this it is essential that Chevron be advised of the airwaybill number at the earliest opportunity to avoid further delays.

NATIONAL FLAG: Available from the Company.

TIME: Local time is GMT plus one hour throughout the year.

SHORE LEAVE: In view of the isolated positions of the buoy moorings (approx. 15 and 19 miles from shore) Masters are strongly advised not to grant shore leave. The weather and swell conditions could result in persons being injured either embarking or disembarking from the vessel, and in addition the boat journey will take approx. 2.0 – 2.5 hours. Should the weather deteriorate, it could mean delay to the vessel as outward clearance would not be granted until all the crew were on board the vessel. As the terminal does not own any suitable boats, it would be necessary for the vessel to charter one for shore leave purposes.

In view of the foregoing, the terminal does not recommend shore leave being granted.

GARBAGE DISPOSAL: No facilities.

WASTE OIL DISPOSAL: No facilities.

CURRENCY: Naira (N.).

Quantities allowed out of the country limited to Naira 50.00 plus U.S.$ 5,000.00 or the equivalent in foreign currency.

GENERAL: In view of the exposed location of the berths, the Mooring Master and pipeline gang will have to remain on board throughout the vessel's stay at the berth and, therefore, it will be necessary for the vessel to arrange food and accommodation for this period. A pipeline gang will usually consist of four men, but this number may be varied at the discretion of the Company.

It is assumed that the Mooring Master will be accommodated in the Pilot Room; but where such a room does not exist on board, then accommodation equivalent to a minimum standard required for a Senior Officer is to be provided. In the case of meals, due allowance and provision is to be made for the fact that irregular hours of work by day and night may be involved.

AGENCY: Owners of vessels calling at the terminal must arrange for their own agents. Principle Agents are: Gulf Agency and Shipping Ltd., Lagos, and Elder Dempster Agency, Lagos.

OPERATOR: The Senior Mooring Master – Escravos, c/o Chevron Nigeria Limited, Kilometre 19, Lagos – Epe Expressway, Lekki. Postal address: P.M.B. 2469, Lagos, Nigeria. *Tel:* 664180, 664157, 664414, 664046. *Telex:* 21314. *Cables:* Cogon, Lagos. *FAX:* Extension 8129.

FORCADOS (Offshore Terminal): 05.10 N. 05.10 E. (See Plan)

IMPORTANT NOTICE: Vessels lifting crude oil must comply with restrictions that may be generally imposed by the Government of the Federal Republic of Nigeria on vessels entering Nigerian Waters for any purpose whatsoever.

DOCUMENTS:

	Customs	*Health*	*Agent*
Vaccination List	–	3	–
Maritime Declaration of Health	–	3	–
List of Last Port of Call (6 weeks)	1	5	2
List of Arms and Ammunition	2	–	–
List of Animals and Birds	2	4	2
Crew List	1	4	2
Passenger List	1	4	2
Stowaway List	1	1	1
Stores List	1	–	–
Personal Effects List	1	–	1
Clearance from Last Port of Call	1	–	–
Derat Exemption Certificate (copies).	–	3	3

Vaccination Booklets for all crew to be sighted.

Officials: Vessel will be boarded on arrival by a Naval Taskforce, Customs, Immigration, Health and Agents for clearance. These officials will normally board during daylight, but Masters of vessels will be advised if night boarding by officials will be required.

Berthing Master's Report: September 1992: 8 copies of each document required.

APPROACHES: An efficient sounding machine and a high definition radar will assist in making the terminal for the first time. A heavy cluster of radar echoes from the Escravos area may be recorded on passing the 100-fathom line. On making the 20 fathom line from the West, it is reported that the coastline from North Point to Moore Point and from South Point to Ajamabri shows on the radar screen with good chart comparison.

Once the vessel's position is ascertained and the course for Forcados adopted, the first and most obvious sighting, at night, will be that of the platform, which is marked with numerous fixed lights at several levels. The platform, which also serves as a helicopter platform, is in close proximity to the two SBMs.

PILOTAGE: Berthing Master will board vessel on arrival or at anchorage, and remains on board throughout. Contact Forcados Terminal on VHF Channel 8, and they will advise pilots. Call sign "Forcados Offshore Pilots". *N.B.:* Also contact "Forcados Terminal" on Channel 8 immediately on anchoring to ensure that vessel's arrival is recorded and that berthing turn will be in correct sequence.

Arriving tankers are to make a good lee for the embarking Pilot. Boarding facilities such as pilot ladders must not be made of nylon rope.

ANCHORAGES: 3 miles West of or 3 miles N.W. of Production Platform.

Vessels must not proceed inshore from these positions without a Pilot. Vessels should contact "Forcados Terminal" on VHF Channel 8 immediately on anchoring to ensure that vessel's arrival is recorded and that berthing turn will be in correct sequence.

When at anchor, vessel should maintain a constant listening watch on VHF Channel 14, which may not be used for intership exchanges.

Main engine must be ready at short notice.

Note: A 14 mile × 48 in. pipeline extends from the coast at South Point near Forcados to the manifold Platform and thence to the SBMs. Vessels are warned not to anchor in the vicinity of the pipeline.

RESTRICTIONS: Vessels berth at any state of tide, night or day.

Also see "Max. Size".

MAX. SIZE: Minimum size 45,000 tonnes Summer d.w.t. Max. size 320,000 tonnes Summer d.w.t. Vertical distance bow fairlead to water line not to exceed 60 ft. at any time. No restriction on length and beam. Max. draft 65 ft.

PRATIQUE: Health and Customs Officers board at a convenient hour and come from Forcados, 20 miles distant from the buoys. Normally travel by high-speed launch, but may occasionally use helicopter.

RADIO: Vessels are required to report their ETA as follows:

(a) 7 days before estimated arrival, or upon clearing last port, if there is less than 7 days steaming time before arrival.
(b) 72 hours before arrival.
(c) 48 hours before arrival.
(d) 24 hours before arrival.
(e) Any other time(s) between the 72 hours notice, 48 hours notice and 24 hours notice, when estimated time of arrival is to be revised by more than 12 hours.

Vessels should send their ETA messages to "Shell Lagos MRCL". Telex: 21235, or via the Inmarsat System to "Shell Lagos" No. 1772142 (SRLTX) or Fax: 15636864.

Also see "General" – "Radio" before first port.

VHF: Vessels approaching Forcados are to give their particulars and receive instructions for berthing on Channel 8.

TUGS: No tugs available. A mooring launch assists in mooring and remains standing-by. A mooring rope must be ready on the poop deck, so that in cases of vessel riding up on the SBM, the launch may make fast and tow to realign vessel.

BERTHING: Effected under guidance of Berthing Master and local assistant who both remain on board throughout loading operations. Accommodation for both to be provided. Whilst berthed a suitable buoyant mooring rope must be ready on the poop deck so that the mooring launch (line boat) may, in the event of the vessel riding up on the SBM, make fast and tow to realign vessel.

Two SBMs each fitted with 2 OCIMF standard 15 in. × 150 ft. nylon grommet ropes and 1 hose string some 840 ft. long with 2×16 in. end hoses. No. 1 SBM is South of platform and No. 2 is West.

Position of hose connections: Amidships on port or starboard side, depending on seasonal conditions (See "Shipmaster's Report" dated December 1989). Vessels should endeavour to present 2×16 in. (400 mm.) (150 ASA) connections on arrival. Ship's crew are required to connect and disconnect the hoses under the advice of the Berthing Master and/or his assistant. A derrick, SWL at least 10 tonnes, must be rigged ready on both sides and plumbed clear of ship's side. Derrick runner must be equipped with suitable hook.

In the case of vessels with a heavy multisheaved block a short wire strop of adequate strength with a hook should be provided.

Weight of Hoses: The following table gives the approximate weights of hose strings in tonnes (including fittings, floats and pick-up buoy) with all hoses full of crude oil of SG 0.850. The assumed total lift is 7.5 m. (25 ft.) above deck level, with the tanker on light draft.

Size of Tanker	*16 in. Inside Diameter Hoses*
500,000 d.w.t.	11.4
330,000 d.w.t.	9.4
270,000 d.w.t.	9.1
200,000 d.w.t.	8.7
100,000 d.w.t.	7.5
70,000 d.w.t.	7.1

Loading: Load-on-top system operates at Forcados. Slops cannot be accepted ashore. Vessels must arrive with clean ballast. Maximum loading rate 9,300 t.p.h.

A single grade of crude oil is handled which is known as "Forcados Blend".

Shore Line System: Vessels load through SBM from shore through 48 in. line to SBM. The 48 in. submarine line to the SBM is some 14 miles in length, therefore great care must be exercised during loading when ship's valves are manipulated to avoid pressure surges. Pressure recorders are normally fitted at the spool piece between ship's manifold and tail end of the hose string to monitor pressure changes generated on board the vessel.

Cargo Documents: On completion of loading, processing of documents takes 6 hours.

Depending on other commitments of the offshore launch, it may be necessary to request Master to provide temporary accommodation for the officials.

BALLAST: There are no facilities for the receipt of ballast. Vessels must arrive with absolutely clean ballast.

MEDICAL: Limited medical assistance available but in extreme emergencies only. Treatment of minor ailments and vaccinations, etc. is under no circumstances available. It may be possible in the event of an accident to obtain medical advice. Contact Terminal VHF Channel 8 in first instance.

DENSITY: 1025.

FRESH WATER: Not available.

FUEL: Available. Contact Agent.

REPAIRS: No facilities available.

CUSTOMS: See "Documents".

WATCHMEN: Whilst berthed at an SBM, a security watch must be kept on the forecastle head by member(s) of the ship's crew throughout the hours of darkness to raise the alarm and advise Berthing Master on the approach of local small craft. Instances have occurred at Nigerian Offshore Terminals where nylon mooring ropes have been cut and stolen with the vessel in the berth. The Berthing Master should also be advised in the event that the vessel rides up to the SBM.

REPATRIATION: Possible, but not advisable.

SHORE LEAVE: Not permitted.

GARBAGE DISPOSAL: No service available.

WASTE OIL DISPOSAL: No collection service available.

CURRENCY: Not applicable as no shore leave allowed.

GENERAL: Nigerian flag to be flown.

Air letter forms are not acceptable unless used with Nigerian stamps.

Freeboard: The maximum forward freeboard is 60 ft. while vessel is moored to the SBM. Masters are requested to comply with this limitation.

Loading: Ships are required to load cargo as rapidly as possible by day and night in accordance with the terms of their charter parties.

This means that ships are expected to load as fast as the Company can supply or they can safely receive. The question of how fast a ship can load is the responsibility of the Master having regard to his Owner's instructions, the charter party and the experience of ships' personnel. However, as further guidance, and in absence of any instructions to the contrary, ships are accepted by the Company on the understanding that ships will be able to accept a bulk loading rate per hour of not less than 10% of the summer deadweight of the vessel.

At Offshore Berth the Berthing Master acts as Loading Master during Loading Operations and is provided with "walkie-talkie" radios to ensure adequate ship/shore communication.

Loading Masters visit each vessel, and Masters are requested to co-operate in the completion of the Company's Tanker Port Performance Time Sheet by ship and shore personnel. Only crude oil is handled at the Company's terminal, loading temperature and specific gravity of the grade of crude, Forcados Blend is reasonably constant and is approximately 0.856 at loading temperature of 86°F.

Immobilisation of Engines: Not permitted at SBMs. Not advisable at sea anchorages as there are many obstructions if vessel drags anchor.

Restrictions Which May Cause Delays: Weather. Worst period June–September when heavy swell may be encountered.

Early Departure Procedure: There is no Early Departure Procedure at Forcados Terminal. Completed documents are brought to the ship for signature after completion of loading.

Customs and Agency representatives will normally board vessels during daylight hours. Government regulations require that all vessels are cleared inwards before commencement of loading. Depending on other commitments of the offshore launch, it may be necessary to request Masters to provide temporary accommodation for these officials. Any attempt on the part of the boarding officers to persuade the Master to supply more than normal representation should be resisted. In the event of any problem arising over such a matter full details should be reported to the Agent.

Stores: No facilities except those arranged through the Agent.

Tides and Currents: Seaward of the terminal, the general set of the current is S.E., rate about 0.5 knots, except during the Harmattan Season (November-February) when it is N.W. Within the 20 m. line (10 fathom line) the current is irregular and at times strong.

Wind and Sea: The prevailing wind is S.W. during the rainy season (May-October) and N.E. during the dry season (November-April). Worst period is June-September, when heavy swell may be encountered. Fog occurs during December and January, especially in the morning. Heavy rains begin in April and continue until October. Annual rainfall averages 4.5 m. (180 in.).

SHIPMASTER'S REPORT: The SBMs are sited about 11 miles offshore.

Moorings: Starboard derrick topped and doubled up. If accommodation ladder rigged, then on port-side. Not necessary for vessels up to 50,000 d.w.t.

Hoses: All sizes of reducers available.

SHIPMASTER'S REPORT: 1979.

Documents: Ship's stamp to be on all documents.

5 lists Ports of Call; 5 Arms and Ammunition (3 for Agent, 2 for Customs); 4 each of vaccinations; nil passengers; nil stowaways; crew labour list (presumably DBS); 1 copy of Diversion Cable; 4 lists "Nil" animals or birds.

Pilotage: Require accommodation ladder with pilot ladder for large vessels due to swell.

VHF: Channel 8 for all communications with Pilot, Loading Terminal, and Cargo Operations.

Berthing: Line required aft should preferably be polypropylene or one that floats.

Tankers: Loading temperature about 99°F, will vary slightly depending on loading rate.

SHIPMASTER'S REPORT: December 1989 (Updated 1992).

EDP not in operation. On completion of loading, vessel leaves the SBM and anchors awaiting papers, normally about 8 hours. All documents prepared ashore to Shipper's advice, and delivered by launch to be signed on board. No security pinhole punch allowed. Destination terminal requires SCAC code before loading, and they put it on the Bills of Lading ashore.

Fourteen officials board before berthing to give clearance, Check last Port Clearance and Discharge Books, etc.

2 SBM's in use but only one loads at a time. SBM No. 1 – hoses portside, and SBM No. 2 – hoses starboard side. Draft and freeboard restrictions enforced.

Loading pumps ashore are turbines driven by gas from oilfields, so load rate fluctuates according to gas pressure ashore. The maximum is about 9,000 t.p.h.

Currents in the vicinity of the SBM's are irregular, and can cause problems during approach. Expatriate Loadmasters and local surveyors attended vessel.

SHIPMASTER'S REPORT: August 1991 (Updated 1992).

Contact made with "Shell Forcados" on VHF Channel 8 when 25 miles off the terminal.

Upon arrival vessel anchored 2 miles West of the platform in a depth of about 30 m. as instructed by terminal.

Despite coming from Bonny, vessel was boarded by 12 Port Officials to clear the vessel inwards. They checked Last Port Clearance, Health Books, CDC, etc. and issued Port Clearance for departure. Request for rather large amounts of "presents" made by the Port Officials, especially bonded stores/provisions/paint. Each person given one item as "present". Port Officials do not board the vessel at the time of departure.

Two SBM's in use, but as different loading rates cannot be given to 2 vessels loading simultaneously, only one SBM is used at a time for loading. Currents in the vicinity of the SBM's are very variable and make approach difficult.

Throughout our stay at the SBM a tug was made fast astern, with a ship's polypropylene hawser, to prevent the vessel from overriding the SBM.

Despite a request for a loading rate of 7,000 cu.m./hr., we achieved a rate of 5,800 cu.m./hr. Pilot advised that the loading depends upon gas pressure ashore, as the shore pumps are turbines driven by gas from the oilfields.

After completion of loading, vessel cast-off from the SBM and anchored 3 miles N.W. of platform to await documents, which takes about 8 hours to be prepared. EDP not being followed.

Accommodation is required for 4 persons (Pilot/Loading Master, local Mooring Master, local SGS representative and Nigerian Port PLC Surveyor).

We were able to pass ETA and cargo requirements to "Shell Lagos" – (Attention MRCL 1) via "Inmarsat" Telex No. 1772142 (SHLT X) which proved to be very helpful.

OPERATOR: The Shell Petroleum Development Co. of Nigeria Ltd., Freeman House, 21-22 Marina, Private Mail Bag 2418, Lagos, Nigeria. *Tel:* 601600 (17 lines), 601820 (9 lines). *Telex:* 21235. *Cables:* Shell, Lagos. *Contact:* Marine Co-ordinator.

KOKO: 06.01 N. 05.29 E. **(See Plan)**

DOCUMENTS: See "Lagos".

APPROACH: Escravos Fairway Buoy Lat. 05° 30′ N., Long. 05° 04′ E. for entry to Escravos River. Present draft limit 6.4 m. Dredging of channel from Escravos down to 10 m. expected to be completed soon.

PILOTAGE: See "General" – "Pilotage" before first port.

Compulsory for all vessels. Whenever ships are bound for Koko Port, Masters should send telegram at least 7 days in advance before ship's arrival at Escravos Fairway Buoy to Escravos Pilot Station, P.O.Box 368, Warri, Nigeria via 'Lagos (50W)' confirming Ship's name, Call Sign, Flag, LOA, Draft, Port of destination, Last Port and accurate ETA at Escravos Bar. When Escravos Pilot Station is aware of ship's ETA, it will arrange a reliable Pilot for the ship, before her arrival at Escravos Bar. On approaching Escravos Fairway Buoy, Masters should contact Escravos Pilot Station direct on VHF Channel 16 (Working on Channel 14) to report Vessel's arrival and request the name of the pilot boarding. After which the Pilot will be sent onboard outside the Breakwater to pilot the vessel up river to Koko Mid-Stream Anchorage, where the Sapele Harbour Pilot normally comes onboard to take vessel alongside. Berthing operations are carried out during daylight hours only.

The mouth of Escravos River (5° 31′ 30″ N., 5° 07′ 20″ E.) is the main entrance for the Niger Delta Ports of Warri, Burutu, Koko and Sapele. Before entering any of the rivers, creeks and channels from Escravos to the above Ports, vessels will embark a Pilot from the Pilot's Station before proceeding up river. Positions should be broadcast at frequent intervals and vessels should keep constant VHF listening watch on

Channel 16. The Pilot Station at Escravos is located 0.5 miles South of the Escravos Beacon and operates from 0600 hrs. – 1800 hrs. daily. Pilot boards inward bound vessels about 2.0 miles S.W. of the Breakwater from a motor boat flying 'SG' in international code flags. Ships are advised to hoist the same 'SG' Flags on the Mast, on arrival at Escravos Bar. Positions and movements can be exchanged with other vessels in the vicinity on VHF.

In foggy weather periods, vessels are advised to proceed inside the Breakwater to the Pilot Station to embark a Pilot, as the pilot boat is not equipped with navigation aids. The IALA Maritime Buoyage System 'A' (Red to Port) is adopted after the entrance down the Escravos River. Vessels should sound 3 prolonged blasts followed by one short blast (– – – ·) on the whistle as "Pilot Call Signal" on arrival at Buoys No. 11/12, when proceeding to the Pilot Station at intervals of 10 minutes. In such cases, the pilot will board inward bound ships after 1.0 miles from Buoys No. 13/14. Vessels sometime drop anchor at the Pilot Station and wait for further instructions from Koko Port Control before proceeding up river to Koko Mid-Stream Anchorage. On arrival of vessel at the Pilot Station a pilot usually boards with one helmsman and they may stay onboard until the ship sails back to Escravos Pilot Station. In most cases, the helmsman stays onboard and the Pilot comes back when the ship is ready to sail.

RADIO: See "Lagos" for ETA advices to Agent. Warri Harbour Master at Warri, or Beach Master at Koko, to be contacted on VHF Channel 16.

VHF: Contact Pilot VHF Channel 16, working on Channel 14. Hours are 0600 – 1800 daily. Contact Agent in Warri on VHF Channel 16.

BERTHING: Two hard quay berths giving a total quay length of 137 m. and max. draft of 7.32 m. Berthing during daylight hours only.

MEDICAL: Facilities available.

FRESH WATER: Available and delivered by barge.

FUEL: Diesel oil available locally and delivered by barge. Fuel oil available by barge from Warri and arranged through Agent, both products in limited supply.

FIRE PRECAUTIONS: No local facilities.

REPAIRS: No local facilities. See "Warri".

GANGWAY/DECK WATCHMEN: Compulsory during the night while in port.

REPATRIATION: By road to Benin or Warri, both connected with Lagos by regular air service.

TIDE: Range approx. 2 m., and velocity up to 3.5 knots.

DENSITY: Salt.

SHORE LEAVE: See "Lagos".

IDENTIFICATION CARDS: See "Lagos".

TELEPHONES: Not available for placing on board. Available in Post and Telegrams Office in Sapele, and at Agent's Office at Warri.

SHIPMASTER'S REPORT: 1977.

Documents: Livestock List also required.

Pilotage: Request Creek Pilots through Escravos Pilot on VHF Channel 16. The Pilots are local fishermen and race each other to the vessel to offer their services. They will not proceed beyond the breakwater. Special care must be taken when entering, as many of the buoys are out of position.

A strong N.W. current runs by the breakwater, also there is a heavy swell which makes steering difficult.

Draft varies but seems to be not less than 18 ft. at LW to 24 ft. at HW. In Escravos not only a Pilot boards the ship but a helmsman too. The latter is quite useful especially in the narrow part of Nana Creek.

Koko has a VHF station Channel 16 for port operations.

Cargo shed capacity is insufficient, so more often than not this shed is full and cargo is discharged into "direct delivery". But because of the bad infrastructure of this port and the frequent lack of lorries, this discharge is a slow operation (sometimes less than 100 tons per day).

Ships waiting for berthing at Koko can anchor downstream or upstream of the berth. The anchorage is good and the "Creekpilots" stay onboard, i.e. they stay till the ship's return to Escravos, where they boarded.

Repatriation: By road to Warri and there by small plane to Port Harcourt or Lagos.

LAGOS (including Apapa and Tin Can Island): 06.27 N. 03.24 E. (See Plan)

DOCUMENTS:

Documentation Procedures:

(1) By Federal Decree 3 weeks prior to vessel's arrival the Agent requires certain information from Principals in order to register the vessel with NPA for obtaining the Ship Entry Notice (SEN). Not applicable to vessels carrying petroleum products in bulk, or in ballast.

Without SEN the vessel cannot enter Nigerian territorial waters (30 nautical miles).

Information required is as follows: Name of ship, nationality, g.r.t., n.r.t., draft, LOA, Port of Registry, Certificate of Registry Number, Owners and/or Agents in Nigeria, Port of Origin, Port(s) desired in Nigeria, ETA, Total Tonnage of Cargo to be Carried (Outward and Inward), Description of Landings and Loadings for which permission is sought, e.g. General Cargo, Containers (in container vessel or mixed cargo vessel). Cement, Bulk Liquid, etc.

In addition, for preparation of preliminary Manifest, the following are required: Shipper, name and address, Consignee, name and address, Cargo Marks, Cargo Quantities (numbers), Cargo Description, whether Freight Prepaid or Collect, Estimated Time of Departure from Port of Loading.

(2) 14 days prior to arrival Agent requires:
10 Manifests.
3 Stowage Lists.
3 Hatch Lists.

(3) On arrival at Lagos, Master must be prepared to present:
5 Ports of Call Lists (last voyage).
5 Crew Lists.
4 Kroo Boy Lists.
4 Animal Lists.
*4 Arms and Ammunition Lists (if none on board only 2).
1 Extra Manifest for transhipment (if applicable).
1 Stores List.
1 Crew Declaration List (personal effects).
1 Declaration of Health.
1 Vaccination List.
1 Narcotics List
1 Parcel List.
5 Passengers Lists.
1 Stowaway List.
1 Declaration – fuel in double bottom tanks.
Currency List (for National Safety Organisation). Foreign currency may have to be deposited ashore.

*Ship's Master allowed 1 gun and 100/150 rounds of ammunition.

Where not applicable all documents still to be prepared bearing the marking "Nil".

Other forms prepared by the Agent and furnished on arrival.

(4) For departure all documentation prepared by the Agent.

Berthing Procedures:

(1) Master to cable Agent via Lagos Radio ETA 7, 4, 2 and 1 day prior to arrival enabling Agent to declare vessel at the Berthing Committee Meeting well in advance.

(2) Master to contact Agent on VHF Channel 16 prior to arrival at anchorage (range approximately 30 miles).

(3) On arrival at anchorage Master to contact Lagos Port, Call Sign "East Mole Station" giving all vessel and cargo particulars, Agent's name, SEN No. and date of issue. Vessel also to cable Harbour Master's Office for identical information. Thereafter watch on VHF as per Agent's instructions.

(4) Only on arrival and strictly after declaration can Agent book Pilot and time for boarding will be advised.

(5) The pilot station (Call sign "Chief Pilot's Office") will contact vessel well in advance to allow her to proceed to the Fairway Buoy for boarding of Pilot.

(6) The Agent with the Health, Immigration and Customs and Excise Authorities board the vessel after berthing.

Unberthing Procedures:

(1) Agent prepares (outward) Customs clearance and delivers a copy to Master.

(2) Agent books Pilot and advises time for boarding.

(3) Vessel keeps continuous watch on VHF for instructions from the Chief Pilot's Office.

PILOTAGE: Compulsory. Hoist "G" flag. Contact Pilot by VHF Channel 16. No pilot boat stationed outside. Daylight service only (until 1600 hrs.).

Only on arrival, and strictly after declaration, can Agent book Pilot; time for boarding will be advised.

The pilot station (call sign "Chief Pilot's Office") will contact vessel well in advance to allow her to proceed to the Fairway Buoy for boarding of Pilot.

ANCHORAGES:

	Length	Draft
Pool 1	480 ft.	24 ft.
Pool 2	600 ft.	28 ft.
Pool 3	450 ft.	26 ft.
Pool 4	450 ft.	26 ft.
Badagry Creek	380 ft.	22 ft.

Vessels not permitted to remain at anchor at Pool 1 during hours of darkness due to poor holding ground.

4 vessels, maximum length 380 ft. can anchor at Badagry Creek Anchorage. Max. draft 22 ft.

RESTRICTIONS: Max. draft Pool Anchorage 8.23 m., Bruce Mooring Buoys 8.23 m., Marina Mooring Buoys 8.23 m., Apapa Hard Quay Nos. 1 – 14, 8.23 m., Apapa Hard Quay Nos. 15 – 20 10.50 m. and Tin Can Island Berth Nos. 1 – 10, 9.50 m.

MAX. SIZE: Max. draft 10.0 m. (salt water)

HEALTH: Port Health Officer boards vessel on arrival. ETA's must be advised by ship or Agent direct to Port Health. Pratique automatic when from Nigerian port. Also see "General".

RADIO: Master to cable Agent via Lagos Radio ETA 7, 4, 2 and 1 day prior to arrival, enabling Agent to declare vessel at the Berthing Committee Meeting well in advance.

Master to contact Agent on VHF Channel 16 prior to arrival at anchorage (range approx. 30 miles).

On arrival at anchorage, Master to contact Lagos Port, call sign "Signal Station" giving all vessel and cargo particulars, Agent's name, SEN No. and date of issue. Vessel also to cable Harbour Master's Office identical information. Thereafter watch on VHF as per Agent's instructions.

TUGS: No specific joining position, depending on tide and on Pilot's request, otherwise close to berth. Normally ship's line used. 1 tug 1,800 h.p., 1 tug 1,226 h.p., 1 tug 825 h.p. and several smaller tugs for towing lighters. 24 hour service available. Also see "General".

BERTHING: Daylight hours only.

No specific arrival time is required for berths, except for Petroleum Wharf where tankers need high water. Berthing on ebb tide required for Fish Wharf and Ijora Wharf.

Unberthing: See "Documents".

Apapa Berths: 19 general cargo berths, 1 bulk cargo berth at Ijora, 6 container berths including 1 Ro/Ro ramp. Also 3 petroleum berths, 1 gas oil, 3 bulk oil and 1 grain berth, 5 storage sheds, although no cold storage available. Quay cranes not operative. The third Apapa Wharf extension is now completed and in full use. Container Quay 1,600 m. 2 gantry cranes with 40 tons lifting capacity have been installed and are in use with stacking area for Ro/Ro and containers. General cargo quay 525 m. Depth alongside 10.5 m. Vessel's Agent to make arrangements for discharge of 40 ft. containers due to lack of equipment.

Tin Can Island Berths: Tin Can Island Port (TCIP) is situated N.W. of Apapa, North of Badagry Creek.

Draft Restrictions: Berths 1 – 10, 9.50 m.

Tugs: 2 of 1,400 h.p.

Accommodation: Area 73 hectares, quay length of 2.5 km. Extensive quay apron 40 m. wide with berthing capacity for 10 – 15 vessels, of which 2 for Ro/Ro, depending on size of vessels and one of which has fixed stern ramp. Bulk berth for handling bulk commodities. Two service berths for tugs and light craft.

Dredged Channel is 200 m. wide with turning basin.

Two fresh water wells (250 m. deep) with purification plant.

Ten quayside cranes – 8 of 6 tonnes at 28 m. radius, 2 of 10 tonnes at 25 m. radius, transit sheds and warehouse each of 7,000 sq. m. area.

No cold storage.

Midstream Berth: 8 Marina Buoys and 1 Bruce Buoy.

CRANES: 1 floating crane of 100 metric tonnes and 1 of 250 metric tonnes. Apapa and Tin Can Island equipped with mobile cranes, forklift trucks, tractors, freight lifters, conveyors, trailers and container handlers.

250 ton crane: 50 ton lift at 31 m.
100 ton lift at 28 m.
150 ton lift at 21 m.
250 ton lift at 10 m.

STEVEDORES: Available. First shift: 0730 – 1530 hrs.; 2nd shift: 1530 – 2230 hrs.; 3rd shift: 2230 – 0730 hrs. Overtime is paid for 2nd and 3rd shifts. Saturdays 0730 – 1530 hrs.

Overtime, Sunday and third shift not always worked as Nigerian Ports PLC making cutbacks.

MEDICAL: Agents to be given advance notice of medical attention required as early as possible. Hospital facilities available. International Certificates of yellow fever required.

TANKERS: 3 berths operated by the Port Authority. Length 177 m. Max. draft 7.62 m. No night berthing. Water and bunkers available. (Subject to tidal restriction).

Atlas Cove Berth: The Atlas Cove Jetty has 2 berths of LOA 180 m. and 80 m. and draft of 10.7 m. and 6.3 m. respectively.

Report: October 1981

Facilities for tankers discharging clean products.

(a) No Ship Entry Notice is required for tankers coming into Nigeria to load/discharge cargo.

(b) There are three main oil tanker jetties available in Lagos namely PWA, NOJ and BOP each with max. LOA of 175 m. and max. draft. 7.6 m. There is also another jetty called "Ijora Wharf" from which Mobil Oil mostly take delivery of their cargo. This jetty has max. LOA of 115 m. and 18ft. 6 in. draft.

(c) Bunkers are supplied to vessels at these jetties by pipeline as well as by barges.

(d) Fresh water is also available from both Nigerian Ports PLC and private barges but difficult in most cases.

DENSITY: 1012.

FRESH WATER: Delivery by barges at between 20 to 40 t.p.h. Advance notification needed. Available by pipeline at Tin Can Island.

Notice: February 1984.

It is hereby notified to Owners/shipping companies including their Agents that owing largely to the limited quantity of available fresh water in the port, the maximum quantity of fresh water to be approved to any vessel for one request is 50 tons only.

Other new requests for the same vessel will not be approved until all requests previously recorded before them are supplied. The Assistant Harbour Masters will not allow any request for more than 50 tons of fresh water to be paid for. Please ensure strict compliance.

FUEL: Fuel oil available by barge only, coal bunkers obtained from Ijora Wharf. A guarantee of sufficient bunkers to last the period of stay on a berth will be one of the conditions to be satisfied before a vessel is allocated a berth.

SEN also required for vessels taking bunkers only.

Also see "General – Notice No. 2/83".

FIRE PRECAUTIONS: Tankers and vessels with explosives: fire-boat always in attendance with fire-control depot ashore working in conjunction with the Harbour Master on VHF Channel 16. Port area tugboats also equipped for fire fighting.

CONSULS: Most countries maintain Embassies/High Commissions or Consuls.

REPAIRS: Major repairs available. Spares often in short supply.

DRY DOCKS: Authority maintains large, well-equipped dockyard, which, while primarily for maintenance of Authority's own fleet, provides facilities to commercial interests. There is a modern floating dock which has lifting capacity of 4,000 tons. Max. draft 18 ft. Synchro-lift available lifting capacity 100 tons max.

In addition to facilities offered by Authority's dockyard, major shipping agencies in port maintain dockyard installations, including slipways for taking smaller vessels and lighters; can provide first-aid repair for main line vessels.

Bull Nose – No. 1 – can accommodate a vessel of 380 ft. in length and max. draft 16 ft. 6 in.

Bull Nose – No. 2 – can accommodate a vessel of 250 ft. in length and max. draft 16 ft. 6 in.

GANGWAY/DECK WATCHMEN: Compulsory during night while in port. Recommended at night also for vessels anchored Lagos roads unless at least 20 miles offshore as pirates may attack vessel.

If vessel is attacked blow whistle continuously to attract attention of Security Agents, and call Port Authority on VHF Channel 16.

OPENING/CLOSING HATCHES: Stevedores/crew.

CUSTOMS ALLOWANCES: Tobacco allowance: 200 cigarettes per person, re-issue after 7 days. Wine/Spirit: 1 part bottle, re-issue to officers after 7 days.

REPATRIATION: Facilities available for effecting crew changes and arranging any necessary repatriations.

AIRPORT: Ikeja 14.4 km. from port, served by regular airlines.

TIME: GMT plus 1 hour.

HOLIDAYS: Fixed: New Year's Day (1st January); National Day (1st October); Christmas Day (25th December); Boxing Day (26th December). Variable: Good Friday; Easter Monday; Eid-El-Fitir Festival; Eid-El-Kebir Festival; Maolud Nabiyyi (Mohammed's Birthday). Port closed on National Day, Good Friday and Christmas Day.

POLICE/AMBULANCE/FIRE: Police Apapa 45798, Lagos Custom 20030; Ambulance Apapa 41341/227; Fire Apapa 41741, Lagos Custom 20777, General Emergencies 199.

TELEPHONES: No arrangements for telephones on board.

SERVICES: Small services available.

SHORE LEAVE: Crew members allowed ashore after clearance by Port Health and Immigration Authorities.

IDENTIFICATION CARDS: Passports or identity cards.

GENERAL: Notice issued by the Harbour Master in May, 1976:

Will all ships' Agencies note that from the date of this circular letter, Lagos Radio has been instructed to reject any telex messages from any ship addressed to the Harbour Authority unless the itemised particulars are included:

(a) Ship's name.
(b) Ship's call sign.
(c) Ship's Agent's name.
(d) Ship's length overall.
(e) Ship's tonnage loaded.
(f) Ship's draft.
(g) Nature of cargo (i.e. cement, general cargo, etc.).
(h) Last port of call.

Notice issued by the Nigerian Federal Ministry of Health in May, 1976:

Please communicate to all Masters that request for Radio Pratique either by international sanitary codes or otherwise must state clearly the following:

(a) Last port of call.
(b) Number of crew.
(c) Vaccination and inoculation of crew.
(d) Date and time of arrival.
(e) Condition of ship.
(f) Number of passengers onboard.
(g) Name of Agent.

Notice dated 1982 issued by Nigerian Ports PLC.

The following documents must be despatched with manifest from the last loading port in order to report vessel in advance to the Department of Customs and submit advance manifest to facilitate payment of Nigerian Ports PLC dues to berth vessel on arrival.

1. Crew Declaration.
2. Crew List.
3. List of Arms and Ammunition.
4. Passenger List.
5. Animals List.
6. List of Ports of Call.
7. Mail List.
8. Authority to Act as Agents.

Two copies of each of the documents are necessary.

Nigerian Ports PLC Harbour Master's Notice No. 2/83:

"BUNKERING IN PORT

Further to my previous circulars concerning bunkering in port, it is still observed that Masters/Agents of vessels calling at port of Lagos are not advising the Harbour Master before bunkering the vessel about their intention to bunker the vessel.

It is imperative that Masters/Owners of vessels/Agents should, before 'repeat' before bunkering the vessel, forward to the Harbour Master, the N.N.P.C. document showing that the supplier is an authorised one and the Nigerian Ports PLC Licence permitting the barge to supply vessels with bunkers.

This notice should also be in good time before bunkering the vessel to enable the Harbour Master to advise the Chief Fire Officer about the operation. This instruction should be carried out whenever a vessel is getting bunker to ensure that N.N.P.C. instructions and Nigerian Ports PLC regulations are complied with, failing which heavy fines must be imposed."

AUTHORITY: Nigerian Ports PLC, Private Mail Bag 12588, 26-28 Marina, Lagos, Nigeria. *Tel:* 600620 (12 lines). *Telex:* 21500, 213763. *FAX:* 630306. *Cables:* Genports, Lagos.

AGENT: Alraine (Nigeria) Ltd., 26 Creek Road, Apapa, Lagos. P.O. Box 2206, Lagos. Tel: 877580, 873887. Cables: "Freight Lagos". Telex: 21244 and 22330. Fax: 874542.

ODUDU TERMINAL (OML 100): 04.00 N. 07.45 E.

(See Plan)

PORT LIMITS: *Arrived Vessel:* When vessel drops anchor in the anchorage area or time when Mooring Master boards, which ever occurs first.

Charts: B.A. Charts No. 1357, 1860 and 1863. U.S. Navy Charts No. 57160 and 57163. French Chart SHOM No. 7188.

Terminal Area: Lines joining the following points:

(A) 04° 04' N., 07° 40' E.
(B) 04° 04' N., 07° 55' E.
(C) 03° 50' N., 07° 40' E.
(D) 03° 50' N., 07° 55' E.

DOCUMENTS: *Customs and Health Requirements:*

1. Nigerian Government Customs, Immigration and Task Force officials will board the vessel at the same time as the SBM's Mooring Master. They will provide Inward Clearance and Free Pratique services. Nigerian Government Regulations are strictly enforced.

   Cigarettes, cigars, tobacco, matches, spirits, wines, perfumes, arms, ammunition and other restricted items must be locked under Customs seal from the time the vessel arrives until the time the vessel leaves Nigerian territorial waters.

   Each person is allowed 200 cigarettes per week of stay or the equivalent amount of tobacco or cigars in lieu thereof. Each person is allowed 1 bottle of spirits and 1 case of beer.

   Special allowances are made for Masters under special circumstances. If the slop chest and bonded stores are not combined in one locker, the Customs Officer must be informed.
2. The vessel shall have a clean Bill of Health or an equivalent document from the last port of call. The vessel's Master and all crew members shall possess international certificates of health showing such valid vaccination certificates as required by current Nigerian Law. From time to time cholera, smallpox and yellow fever vaccination certificates may be required, and it is therefore prudent for all crew members to be in possession of these certificates.
3. The following forms are required by Customs and Health Officials:

   1 copy Vessel Registration Certificate.
   1 copy Last Port Clearance.
   8 copies Ports of Call List (for last 6 weeks).
   3 copies Stores List.
   7 copies Arms and Ammunition List.
   4 copies Master's Declaration of Health.
   9 copies Crew List.
   3 copies Crew Declaration List.
   9 copies Passenger List.
   9 copies Kroo Boy List.
   3 copies Stowaway List.
   3 copies Vaccination List.
   5 copies Animal List.
   20 copies Notice of Readiness (on arrival).

   Also see "Certificates".

   Before sailing and immediately upon completion of loading, vessel must provide 20 copies of Ullage Report.

   Government officials representing various departments may, at their discretion, board the vessels in the Terminal area.

ESSENTIAL REQUIREMENTS: *Summary of the most Essential Requirements to be met by Tankers Lifting Oil at the Terminal:*

1. Charterer must give Elf and FSO a minimum of 10 days notice prior to loading, in order to allow time for the necessary clearances and approvals of the Nigerian Authorities.
2. Vessel must be fitted with a bow chain stopper, and fairleads suitable for 3 in. chain.
3. Vessel must arrive with not less than 30% ballast/cargo on board and be able to maintain this condition during the loading period.
4. Upon arrival, vessel's trim must not be more than 2.0 m. by the stern with the propeller nearly submerged.
5. Normally the Terminal towing vessel will provide a tow wire, but vessel must provide and make ready for use, a mooring line in good condition, suitable for towing at the stern.
6. Berthing and unberthing shall only be permitted at the discretion of SBM's Terminal Superintendent.
7. No dirty ballast disposal.
8. Advise arrival time by radio (see "Radio" for other required information).
9. SBM's Mooring Master together with Custom Officials meet ships in suggested Anchorage Area.
10. Make a lee for SBM's Mooring Master and Officials to board.
11. Have ready: 2 messenger lines forward, ship's derrick on port side and port manifold with 2×16 in. connections.
12. Vessel's Master responsible for safety of own ship at all times.
13. Lifting vessel's crew performs all operations of mooring, connecting and disconnecting hoses, and unmooring aboard lifting vessel.
14. Do not close valves against crude flow.
15. Current Nigerian Government Regulations require that export tankers depart fully loaded, although they may arrive partially loaded.
16. Emergency flow stop signal, if all communications fail, will be a continuous sounding of ship's whistle from either lifting vessel or storage vessel.
17. No shore leave or crew change is permitted, except in case of emergency.
18. When arriving:

    By Day: Fly International Code Flag "Q".
    By Night: Display red light over white light for Quarantine Service.
19. Vessel's anchors to be secured against accidental use from the time the SBM Mooring Master boards.
20. All vessels must exhibit the Nigerian National Ensign from their foremast or other appropriate place, while in the vicinity of the moorings.
21. During loading:

    By Day: Fly International Code Flag "B".
    By Night: Display red light (see "Readiness").
22. All cargo tanks must be fully inerted.

Note that:

Local time is GMT plus 1 hour throughout the year.

No supplies of any kind or medical services (except in case of emergency and subject to a doctor being available), or other services of any kind are available at the Terminal.

PILOTAGE: See "Berthing – Mooring/Unmooring".

ANCHORAGE: The tanker anchorage area consists of circle radius 1.5 miles which centre is positioned 5.5 miles, bearing 065°(T) from the FSO XV Domy. Centre of anchorage Lat. 04° 02′ N., Long. 07° 50′ E. (also see "Plans").

Also see "Berthing – Mooring/Unmooring – No. 2".

RESTRICTIONS: *Berthing:* Berthing undertaken day and night, weather permitting. Terminal Superintendent shall be final authority as to when the terminal is open or closed.

Unberthing: Day or night, no restrictions.

Also see "Readiness".

MAX. SIZE: *Arrival:* Not less than 30% of Summer d.w.t. Berth designed to accept 80,000 – 280,000 d.w.t. tonnes.

Departure: 280,000 d.w.t. tonnes.

Depth: 64 m.

HEALTH: See "Documents".

RADIO:

1. *Cable or Telex:* It is most important that incoming tankers advise their ETA, 72 hours, 24 hours and 4 hours in advance of arrival, stating GMT or local time. Also see "Essential Requirements – No. 1".

   Contact with the Terminal is as follows:

   Vessel Name: "FSO XV Domy".
   Call Sign: C6JZ4.
   Traffic lists from Portishead Radio and St.Lys.
   Working frequency 6992.1 kHz. (24 hours).
   Inmarsat Telex No. 61327.
   Inmarsat Phone No. 581/583 and 1103701. Ship Station Atlantic Ocean.
   VHF Frequency: Channels 16 and 72.

   This information is published in the Admiralty List of Radio Signals, Volume 6, and the Book of Beacons and Fog Signals, Serie C (SHOM).

   The following shall be included in the 72-hour message:

   (1) Name of tanker and radio call sign.
   (2) ETA.
   (3) Cargo requirements.
   (4) Deballast time.
   (5) Maximum loading rate capabilities in t.p.h.
   (6) Estimated draft on arrival.
   (7) If there is any sickness aboard or clean Bill of Health.
   (8) Last port of call.
   (9) Any hull, bulkhead, valve or pipeline leaks on vessel which could negatively affect loading or cause pollution.
   (10) Distance in feet from the bow to tanker's loading manifold, and from port rail to manifold.
   (11) Advise if vessel fitted with one or two bow chain stoppers.
   (12) Advise if bow chain stoppers are suitable for Terminal's 84 mm. mooring chain.
   (13) Acceptance and compliance with these OML 100 Oil Terminal User Regulations and Procedures.

   All vessels shall confirm ETA 24 hours and 4 hours distant or any time a one-hour change of ETA is determined.
2. The Terminal maintains a listening watch on 2182 kHz and VHF Channels 6 and 16.
3. On receipt of the first message from the lifting vessel, Companies will respond to the tanker giving preliminary requirements of the Terminal. Vessel's Master will comply with these requirements in all details in order to facilitate vessel turnaround and Government formalities.
4. Once ships are within 4 hours of the Terminal, communication should begin with the "FSO XV" on International Marine VHF Channel 16. When contact has been made on this channel, further communication will be conducted on a mutually compatible channel, normally Channel 6.
5. The SBM Mooring Master will carry a VHF/FM Radiotelephone when he boards the tanker.
6. The 4-hour signal should confirm information on the time required to discharge ballast after arrival and should establish a better ETA.
7. Insufficient or inaccurate ETA messages can cause delays as Government officials have to come from elsewhere. Acceptance of Notice of Readiness may be affected by such insufficiency or inaccuracy.

TUGS: The Terminal maintains boats to assist in mooring and unmooring vessels. These boats are directed by the Mooring Master, to whom requests by the lifting vessel for action or assistance must be directed.

READINESS: *Loading Readiness and Arrival Time:*

1. SBM will make every effort to moor off-taking vessels upon arrival in daylight, weather permitting. Night-time berthing shall only be permitted at the discretion of SBM's Terminal Superintendent.
2. Notice of Readiness will not be accepted as at the time of arrival, unless the vessel is in all respects ready to load, including compliance with all terms of these Terminal Regulations. Arrival time will be considered as the time when SBM's Mooring Master boards the vessel, or the time the vessel reaches the Deep Water Anchorage Area, whichever occurs first. Notice of Readiness shall be in English.
3. During loading the International Code Flag "B" shall be displayed from a top-most signal halyard during daylight hours. During hours of darkness, a red light shall be displayed; visible at a distance of at least 1 mile and show an unbroken light all around the horizon.

BERTHING: Terminal Facilities:

1. Vessels using the Terminal will be moored bow to stern of the "FSO XV" by means of a nylon mooring rope approximately 45 m. in length at the end of which is a short length of 3 in. diameter chain. The chain will be made fast to the lifting vessel by means of the lifting vessel's bow stopper.

   Note that the Oil Companies International Forum recommend that all ships securing to a single point mooring be fitted with one or two bow chain stoppers. Details of the bow chain stopper are given in the booklet "Recommendations for Equipment Employed in the Mooring of Ships at a Single Point Mooring" (OCIMF 1988, 2nd Edition). This recommendation became mandatory for tankers loading crude oil in Nigeria in July 1990.
2. During the period the lifting vessel is on the berth, a tug/supply vessel furnished by the Terminal will remain secured to the stern of the lifting vessel. The tug/supply vessel will be directed by the Mooring Master, to whom requests by the lifting vessel for tug/supply vessel actions or assistance should be addressed. Should the Master of the lifting vessel disagree with a Mooring Master's decision, it is requested that he supply his reasons for the disagreement, in writing, promptly to the Terminal Superintendent.
3. The loading hose connections are ASA 150 16 in. I.D.
4. Loading rates at the Terminal will be governed by either the lifting vessel's maximum loading rate, or the maximum pumping rate of the "FSO XV" (8,000 cu.m./hr. to 12,000 cu.m./hr.), whichever is the lesser.
5. The Companies do not perform general agency functions. Owners or Charterers of vessels calling at the Terminal must arrange for their own Agents.

Mooring /Unmooring:

1. The Terminal is normally open 24 hours a day, 7 days a week, weather conditions permitting. The Terminal Superintendent shall be the final authority as to when the Terminal is open or closed.
2. Vessels to be moored, anchored or manoeuvred at the Terminal will be boarded by SBM's Mooring Master in the close vicinity of the suggested Anchorage Area. The Anchorage Area consists of a circle of radius 1.5 miles which centre is positioned 5.5 miles, bearing 065° from the "FSO XV" with coordinates Latitude 04° 02′ N., Longitude 07° 50′ E. No lifting vessel may enter the Terminal area unless SBM's Mooring Master is on board. SBM's Mooring Master will advise the vessel's Master on approaches to the berth, mooring, unmooring, tug handling, connecting and disconnecting the hoses and other operations within the anchorage and Terminal area. All such manoeuvring of vessel shall be carried out only in accordance with the advise of SBM's Mooring Master, except where the vessel's Master believes such advice to be contrary to the proper navigation and safety of the vessel and crew, and subject to the understanding that in all cases and circumstances the Master of the vessel being manoeuvred shall remain solely responsible on behalf of his vessel's Owners or Charterers for the safety and proper manoeuvring of the vessel. The vessel's Master, or one of his designated qualified Deck Officers specifically appointed by him at the time, must be on the navigation bridge at all times while the vessel is being manoeuvred.
3. The embarkation and disembarkation of the Mooring Master is entirely the responsibility of the Master of the lifting vessel.
   - (i) On all vessels, in which the distance from the sea level to the point which permits access to or departure from the vessel exceeds 9.0 m., it should be anticipated that the Mooring Master will embark and disembark by means of an accommodation ladder together with a pilot ladder on each side, unless it is not possible to carry one.
   - (ii) The ladder should be orientated towards the stern. When it is utilised, the lowest extremity of the ladder should rest solidly against the side of the vessel, set back in relation to the midships part of the vessel and set back in relation to the half midships section and away from any discharge outlets.

     Configurations which conform better to particular types of vessels and which present the same degree of safety shall be acceptable.
   - (iii) The length of the accommodation ladder should be sufficiently long, so that its gradient does not exceed 55°.
   - (iv) The bottom landing of the accommodation ladder should be positioned horizontally when the ladder is in service.
   - (v) Intermediate landings, if there are any, should automatically position themselves horizontally. The dimensions of the steps and the treads of the accommodation ladder should permit placement of the foot in a correct and sure fashion, given the gradient of the accommodation ladder.
   - (vi) The ladder and the landing should be equipped with two stairway sides and rigid hand railing, but if ropes are utilised, they should be well tightened and correctly placed. The vertical space between the hand railing or the ropes and the side of the ladder shall be close enough for safety.
   - (vii) The pilot ladder should be positioned immediately alongside the bottom landing of the accommodation ladder and its top should be at least 2.0 m. above the bottom landing.
   - (viii) There must be a night light which permits proper illumination along the entire length of the ladder.
   - (ix) If a trap door in the bottom landing of the accommodation ladder is used to rig the pilot ladder, this door should be no smaller than 750 mm. × 750 mm. In this case, the aft part of the bottom landing should be enclosed as described in paragraph (vi) above, and the pilot ladder should extend from the bottom landing up to the level of the hand railing.
   - (x) The accommodation ladder, including the hoisting mechanism, must be approved by the vessel's country of registry.
4. The SBM's Mooring Master will be in direct control of all the vessel's communications while in the Terminal area. Any unauthorised communications will, at the option of SBM's Mooring Master, cause the cessation of all operations except clearing of the berth, and the vessel's Notice of Readiness will immediately be nullified.
5. Raising, lowering, connecting and disconnecting of oil loading hoses, as well as all other labours and duties on shipboard will be performed by the vessel's crew under advice of the SBM's Mooring Master (see "Loading – Connecting Hoses").
6. The Mooring Master may refuse to accept a vessel for loading, if he considers the vessel's condition to be unsatisfactory. In the event the Master of the lifting vessel and SBM's Mooring Master cannot agree to a procedure by which the vessel can meet satisfactory loading conditions, both Company and the Charterer of the vessel shall be immediately contacted, so that corrections can be made. Time required to bring the vessel into satisfactory condition shall not count as used laytime.
7. The services of SBM's Mooring Master are provided without charge upon the express understanding and condition that when the Mooring Master goes on board the vessel for the purpose of assisting such vessel, he becomes for such purposes the servant of the Owners or Charterers of the vessel, and the Companies shall not be liable for any damage or injury resulting from any advice or assistance or actions given or made by the Mooring Master.
8. SBM's Mooring Master may require the vessel to unmoor at any time he deems it necessary for the safety of the vessel or Terminal or both, or for infringement of these Oil Terminal Regulations.
9. Various combinations of wind, sea and tidal conditions, also the size, length, ballasted trim and handling qualities of a vessel can affect the decision to berth/unberth a vessel at the OML 100 Terminal. All these factors have to be evaluated before a final berthing/unberthing decision is made and agreed by the vessel's Master and SBM's Mooring Master.
10. In the event of a storm nearby, loading shall be suspended if necessary. In the event of a fire on board a vessel moored in the Terminal area, the Master shall give the alert by means of short and rapid blasts of the siren. He is responsible for making use of all methods at his disposal of fighting the fire. He shall take any measure to get underway if necessary.

Berthing:

1. Lifting vessels will normally be accepted and berthed in chronological order of arrival, provided such vessels have current nomination for cargo valid at the time of tender, carry clean ballast, if any, and have cargo tanks in a fit condition to receive cargo. Also, they must be in all respects properly equipped, manned and ready to moor. Should berthing be delayed on account of bad weather, vessels will keep their position in line.
2. Vessels required to leave the Terminal area on account of bad weather should keep in contact with the Terminal via the Radiotelephone Station at the Terminal, in order that they may be available when the weather is fit for resumption of operations. Companies reserve the right to load vessels out-of-turn following the return of good weather. Further, SBM reserves the right to decline to moor a specific vessel, if its condition or facilities are unsafe for mooring or loading, even though the Terminal may be open to other vessels.
3. The decision of SBM's Terminal Superintendent on berthing will be final.
4. A lifting vessel will be expected to have ready on the forecastle head an operational bow chain stopper with a minimum vertical and horizontal opening of 350 mm.
5. On approaching the berth, the messenger line is lowered to a small boat. This boat will take the end of the messenger line and attach it to the end of a floating rope. SBM's Mooring Master will then instruct the crew to heave in the ropes successively until the chafe chain is in the fairlead and in a position to be secured to the chain stopper.
6. Once the lifting vessel is connected to the mooring, its engines, on request of SBM's Mooring Master, may have to be run "very slowly" astern, in order to avoid contact between the two vessels until the tug/supply vessel has been made fast to the stern of the lifting vessel.

Vessel's Gear:

1. SBM's Mooring Master may reject a ship if it is not, upon inspection, properly equipped, or if it is not suitably manned, or if he deems it to have dirty ballast or tanks unsuitable for receiving the cargo. A vessel is suitably manned only if it has a full complement of officers and crew in a sober condition, competent and willing to carry out their duties and orders, and sufficient English is spoken, so that SBM's Mooring Master can understand and be understood. The Companies shall in no circumstances be liable for any loss, damage or delay arising or resulting from any decision, justified or not, by the Mooring Master to reject a ship pursuant hereto.
2. All vessels must be equipped with a good working propulsion unit as passed by an appropriate classification society. Inoperative vessels or partially inoperative vessels will be rejected. Should vessels become inoperative while on the berth, they may be removed from the Terminal area by the Companies at the expense of the Owners or Charterers of the vessel.
3. Additionally, a vessel must have both bower anchors and ground tackle in good working condition, and in such sizes and amounts as to meet either Lloyd's, ABS or Bureau Veritas standards, although they may in fact be classified by other societies. On instruction from SBM's Mooring Master, the vessel's anchors must be properly secured against accidental dropping.
4. All vessels must carry suitable stoppers for all Manila or synthetic lines for mooring use.
5. *All vessels must have suitable winches or capstans in good operating condition on the forecastle deck.*

6. All vessels must be adequately equipped with a 15 ton S.W.L. derrick boom, blocks, tackles, wire runners and sundry equipment on both sides to efficiently hoist the hoses to the loading position. Sundry equipment should include wrenches, drift pins, nuts and bolts, wire and fibre strops, drip pans, gaskets, etc.

   To assist in vessel's turnaround, the vessel should have all necessary booms and cargo gear rigged and ready before being boarded by SBM's Mooring Master. All vessels which consider the lifting capacity of their gear to be marginal should strengthen their gear accordingly.
7. The vessel's loading manifold should be prepared for 16 in. 150 ASA hose connection prior to the vessel's arrival. Where no crossover valves exist on loading manifolds, it is recommended that loops between loading lines on the starboard side of these manifolds be fitted. Vessels, equipped with smaller than 16 in. hose connections at the loading manifold, should arrive with such hose connections suitably adapted for 16 in. hose, so that maximum flow through the 16 in. cargo hose will be achieved.

   Vessels equipped with larger than 16 in. hose connections at the loading manifold should provide their own reducers.

LOADING: *Connecting Hoses:*

1. After the vessel is securely moored, the cargo hose will be hoisted aboard, normally on the port side. The berth is equipped with a single 20 in. loading hose string dividing into 2×16 in. hose lengths at the lifting vessel end, the weight of each hose lift being approximately 7 tons. All lifting equipment and tackle should have a safe working load of at least 15 tons. The hose is lifted by vessel's gear and crew, and all connecting of the hose will be carried out by them. The lifting derrick, equipment, tackle, etc., should be topped-off and ready on arrival. Terminal loading hoses are fitted with ASI 150 flat face flanges with Camlock couplings, and vessels should have adapters and fittings to enable these hoses to be connected to the vessel's manifold. SBM's Mooring Master advises the vessel's personnel on hose lifting and connecting procedures; however, a vessel's Master or Deck Officer must be present and must direct the vessel's crew in all handling. SBM's Mooring Master may reject a vessel for unsatisfactory hose handling.
2. When SBM's Mooring Master is assigned to a vessel, the vessel at her cost will supply him with meals at the same time and in the same manner as for comparable personnel of the vessel. The vessel will also provide him with a suitable cabin.

   Also see "Berthing – Terminal Facilities".

BALLAST: *Disposal of Ballast:*

1. Owners and Masters are responsible for complying with all International Conventions and Nigerian laws concerning pollution of the sea, having particular regard for the offshore sector. The Nigerian Authorities are becoming increasingly concerned at the rising level of pollution in these waters, and any infringement of the International Laws regarding pollution of the sea by oil will be dealt with most severely. Pollution of the sea by dirty ballast water, bilge discharge or any other means, will result in heavy fines being imposed, and in severe cases, may result in imprisonment or arrest of the vessel concerned.
2. Vessels must arrive with clean ballast only. There are no facilities for disposal of dirty ballast. It is the Master's responsibility to see that no oil of any kind is pumped or spilled overboard from his vessel. This includes oily water from bilges, crude residue from previous voyages or any other matter that may result in pollution of the sea. Any fines imposed on or third party claims against the Companies or any of them shall be for the vessel's account.
3. In addition to the lights usually displayed, vessels discharging ballast or loading cargo during darkness will illuminate the area around the vessel to the satisfaction of the SBM's Mooring Master, in order that any oil on the surface of the sea may be readily detected and appropriate action taken. Vessels unable to illuminate the sea satisfactorily may not discharge ballast during darkness. Vessels should provide suitable floodlights for working on deck during night operations.
4. If evidence of oil appears during deballasting, the vessel will be rejected forthwith, and will not be accepted until satisfactory evidence is produced that such ballast was disposed of in a proper manner. If during inspection, or during progress of loading, it is revealed that the vessel's tanks are not tight or that oil is leaking from the vessel, the vessel may be rejected or refused further loading. The vessel will not be later accepted for loading, unless satisfactory evident of repair is submitted, duly certified by Lloyd's, ABS, Bureau Veritas or other recognised surveyors. Any vessel rejected because of dirty ballast or sea pollution will automatically nullify her "Notice of Readiness", and will lose any priority of position for loading. Companies may suspend, delay or unberth any vessel which is under suspicion of oil pollution.

   The Companies will not be liable for any demurrage, loss claims or demands, resulting from such suspension, delay or unberthing.
5. Vessels should present themselves with sufficient clean ballast and correct trim, in order to be able to manoeuvre safely. Such ballast shall be not less than 30% of deadweight. Deballasting may only be carried out with the agreement of SBM's Mooring Master.
6. If the vessel cannot comply with the above conditions, then it should arrive at the Terminal at least 30% laden with cargo.
7. All spillage of oil must be reported immediately to the SBM's Terminal Superintendent, and a detailed report must be written, signed and submitted by the Master of the lifting vessel concerned.

MEDICAL: No facilities.
FRESH WATER: Not available.
FUEL: Not available.
SURVEYORS: Available from Port Harcourt.
CUSTOMS ALLOWANCES: See "Documents".
TIME: GMT plus 1 hour.

CERTIFICATES:
Certificate of Registry.
Safety Equipment Certificate.
Safety Radiotelephony Certificate.
Safety Construction Certificate.
Load Line Certificate.
I.O.P.P. Certificate.
International Tonnage Certificate.
Canal Tonnage Certificate(s).
Certificate of Insurance in respect of Civil Liability for Oil Pollution.
TOVALOP Certificate.
FMC Certificate of Financial Responsibility (Water Pollution).
Date of U.S.C.G. Letter of Compliance.
Derat Exemption Certificate.
Minimum Manning Certificate.

GENERAL:

1. Should it be necessary to supply divers, a boat, materials, equipment or labour, to carry out repair work to enable the vessel to continue loading, any costs involved will be charged to the vessel's account at rates to be established at the time. These services will only be provided in emergencies.
2. There will be no small boat hire, no shore leave, no shore services, and no medical assistance (except in cases of emergency) available at the Terminal. Information on port services in the area should be obtained from the vessel's Agent.
3. Crew members cannot leave the vessel at the OML 100 Oil Terminal, except in cases of extreme urgency. Even in an emergency, it should be noted that Seamen's Books may not be valid under the local Government Law. A valid passport is required. No crew changes will be permitted during the period a vessel is in the Terminal area.
4. After each tanker lifting, the Terminal will prepare all necessary loading documents. Documentation will be finalised on board the lifting vessel as soon as practicable after loading operations are completed.
5. The currency of Nigeria is the Naira.
6. The nearest international airport is Port Harcourt, although the main entry point into the country is at Lagos.

SAFETY: *Safety Precautions:*

1. The lifting vessel's personnel are responsible for the safety of the vessel, and must take all necessary precautions whether or not so advised by SBM's Mooring Master or other Terminal personnel. The Mooring Master may refuse to accept for loading, or may suspend or delay the loading of, or may unberth the vessel, when the conditions and/or the vessel do not comply with the OML 100 Oil Terminal User Regulations and Procedures, and/or safety precautions imposed by SBM's Terminal Superintendent. The time required to bring the vessel into compliance shall not count as used laytime. A responsible English speaking ship's officer is required to be on deck or in the control room at all times.
2. When a vessel is on the moorings or vicinity thereof, its engines must remain on stand-by with full power always available for immediate use. Deck machinery shall be kept at instant readiness. Positively no repairs of any sort affecting the availability of the vessel's machinery or engines will be permitted. Other repairs (including all painting), which present any hazard to the loading operation, are strictly prohibited. The vessel's whistle is to be at instant readiness at all times.
3. The Bridge and/or Control Area shall be kept unlocked and so arranged to allow immediate entry at all times by the Mooring Master.
4. The vessel shall be suitably manned. Not less than one deck officer and 3 seamen shall be on duty, sober, alert and available at all times. One of the seamen shall always be kept on the lookout on the bow to avoid contact with the "FSO XV", and at the same time report the presence of any suspect craft in the vicinity of the vessel to SBM's Mooring Master, who will take the necessary action.
5. No person under the influence of alcohol is to be allowed on deck. The opinion of SBM's Mooring Master on the sobriety of any individual will be final, unless an independent medical physician present at the time indicates otherwise.
6. No transistor radio sets or other electrical appliances may be used on deck, unless certified for use in hazardous petroleum areas and subject to the approval of SBM's Mooring Master.
7. All scuppers must be plugged and witnessed by SBM's Mooring Master and the vessel's Master. Refusal to plug scuppers will result in the ship being rejected. Drain trays and all materials necessary to clean up any oil spillage on deck are to be available for immediate use.
8. After complete discharge of ballast, SBM's Mooring Master and Petroleum Inspector (if any) will witness closing of Pumproom sea suctions and sealing of same.
9. The presence of unauthorised craft alongside the vessel will render the vessel unacceptable for loading. It is the duty of the vessel's personnel to see that the vessel's sides are clear of all such craft.
10. SBM's Mooring Master is authorised to shut-down loading operations during severe electrical storms, or if another vessel or craft of any description comes alongside the loading vessel, and under any other circumstances which in the opinion of SBM's Mooring Master may imperil the loading operations. The Companies shall not be liable for any demurrage loss, claims, or demands resulting from such shut-down.
11. Fire fighting equipment shall be in instant readiness throughout the vessel with additional equipment available at the loading manifold while in the berth. Water shall be available on deck service at all times, and fire hoses connected at all fire stations and flaked out for immediate use.
12. No radio transmissions will be permitted on board, except with the express permission of SBM's Mooring Master in each case. This regulation shall apply during the period the vessel is in the Terminal area or under the direction of SBM's Mooring Master.

13. When vessels are at the Terminal, boiler tubes are not to be blown. Every precaution must be taken that no sparks escape from the funnel or stack or from the galley stack. No ullage hole shall be left open, unless effectively covered with a gauge mesh wire spark arrester.
14. Smoking will not be permitted on deck while the vessel is moored, and will only be permitted in places approved jointly by the vessel's Master and SBM's Mooring Master. There may be occasions when smoking will be entirely prohibited. Cigarette butts should not be thrown overboard or through portholes at any time.
15. Lifebuoys shall be available throughout the vessel, and in particular in the loading manifold area and at all points of entry and exit, e.g. at pilot ladder.
16. All vessel personnel are to be adequately instructed by the vessel's Master, to avoid breathing gas escaping from tank ullage plugs while loading, and gas vents should be used. The vessel shall be equipped with fresh air masks, gas masks and resuscitators, which shall be kept in a conspicuous and readily accessible position ready for immediate use.
17. All accommodation doors, portholes and ventilators should be closed during loading operations, and doors and openings to machinery spaces in vicinity of vessel's tanks are to be closed.
18. If an emergency stop of loading is required and communications between the vessel and Terminal fail, the vessel's siren or whistle is to be continuously sounded. This signal stops all loading.
19. Vessel shall have "Fire Towing Wires" of suitable strength laid out and hung overside to sea level from the poop deck.
20. No swimming in the sea is permitted while vessels are on the berth.
21. No fishing is permitted in the loading berths or within the restricted navigation area.
22. When manoeuvring or during their stay in the Terminal area, vessels must comply with all aspects of the International Regulations for the Prevention of Collisions at Sea.

WEATHER: The navigator is referred to published sailing instructions for this area for information on winds, tides and currents, namely:

United States Hydrographic Office Publications 121 and 123 "Sailing Directions for the South Atlantic Ocean" and "Sailing Directions for the South West Coast of Africa", published by the U.S. Government Printing Offices in Washington, D.C.

British Admiralty: Africa Pilot Vol. 1, published by the Hydrographer of the Navy.

I.M. (SHOM) France Ref: Vol. V, series C, West African Coast, 2nd Volume.

Tides: The maximum range of tide in this area is about 2.0 m.

Currents: The general set of current in the area is Eastward, except during the Harmattan season, from November to February, when it is Westward. Within depths of 15.0 m. – 20.0 m., the current is irregular with many eddies. Outside those depths, the speed of the current is about 0.5 knots.

Winds: The Guinea Monsoon is the prevailing Southwesterly to Westerly wind (average speed 5 knots – 10 knots) which is strongest in the months March through November (average speed 10 knots – 20 knots). During the months of July through September, the Guinea Monsoon is strengthened in speed because of the Saharan heat low. The Guinea Monsoon is moisture laden and causes heavy rainfall in the Nigerian area. Waves and swell in the area are mostly Westerly.

Harmattan winds occur intermittently during the December – February period. The Harmattan winds are dry and often laden with Saharan dust. They are offshore winds and do not develop waves of significant height.

Waves: Waves are generally from a Westerly direction and average about 1.0 m., increasing in height with the stronger Monsoon wind during the months of July through November, when the average height is about 1.0 m. – 2.0 m.

Rainfall: The heaviest average rainfall is in July (442 mm.). During the Harmattan season in January, the rainfall averages about 42 mm.

Temperature and Humidity: The average temperature is between 28°C and 30°C. The daily average is from 22°C – 35°C. The humidity is as high as 75% – 85%.

PENNINGTON OFFSHORE TERMINAL:

04.15 N. 05.36 E. **(See Plan)**

COURTESY FLAG: All vessels must exhibit the Nigerian National Ensign from their foremast or as appropriate while in the vicinity of the moorings.

LOCATION: The floating storage vessel, is the VLCC m.v. "Oloibiri" (272,535 d.w.t.) moored to SPM–A, one of two single point mooring berths.

1. SPM-A is located approximately 20 miles off the mouth of Fishtown River in a position
Lat. 4° 14′ 35.2″ N.
Long. 5° 36′ 53.2″ E.
2. The Export Tanker Buoy (SPM-B) is capable of accommodating vessels up to 250,000 displacement tons and is located at
Lat. 4° 15′ 0.0″ N.
Long. 5° 36′ 10.5″ E.

on a bearing of North 60° West and a distance of approximately 5,000 ft. from SPM-A. The minimum water depth at SPM-B is approximately 88 ft.

APPROACHES: Incoming tankers should make their terminal approach from a Westerly direction to a point not less than 2 miles Westward of the Export Tanker Berth. At this location the Mooring Master will board the vessel, or will direct the vessel to the Anchorage (2.5 miles S.W. of the terminal).

Pilot's Report: June 1986. B.A. Chart No. 1863. – 10 fathom depth reported by Pilot to extend 1.5 nautical miles to seaward of the charted position.

DOCUMENTS: Following documents required by Customs and Health Officials.

Last Port Clearance.
Ship's Register.
6 copies Vaccination List.
6 copies Stores List.
1 copy Crew Declaration.
15 copies Crew List.
4 copies Passenger List.
5 copies Animal List.
4 copies Ports of Call (last 6 weeks).
5 Arms and Ammunition List.
3 copies Stowaway List.
3 Crew Labour Lists.
20 Copies Dry Tank Certificate.

Also on arrival, 20 copies of Readiness Letters.

Before sailing and immediately upon completion of loading, vessel must provide 20 copies of Ullage Report.

Government Officials representing various departments may, at their discretion, board the vessels in the Terminal area.

PILOTAGE: (See "Approaches"). The Company Mooring Master, together with Customs Officials will board incoming vessel about 2 miles Southwestward of the Terminal Export buoy. Vessel's Master will be advised on approach to the berth details in respect of mooring, unmooring, connecting and disconnecting hoses, loading operations and departure from the berth.

Vessels are requested to have a combination ladder safely and securely rigged for immediate use, and long enough to reach the Mooring Master's launch. A light line should be ready to take on board the Mooring Master's radio and/or briefcase.

The Mooring Master will remain on board during loading operations and he will be in direct control of all ship communications while in Terminal area.

RESTRICTIONS: Operation of the terminal is on a 24 hour, seven days a week basis, weather and other circumstances permitting.

MAX. SIZE: Max. displacement 250,000 tons.

RADIO: Vessels proceeding to be loaded at the Terminal must cable their ETA to the Company (Cable Address: "Topcon – Lagos") 96 hours and again 24 hours prior to arrival. The Company in Lagos will then notify the Marine Superintendent Topcon, Warri. Also as early as possible prior to arrival, vessels should establish direct communication with the Terminal. The Terminal radio station watch keeping is for 5 minutes at 0700 – 1100 – 1500 – 1900 hrs. GMT.

Call Letters: 5 NDF (Oloibiri)
On A1 Listen on 8362 – 8365 kHz
On A2 Listen on 500 kHz.

Terminal equipped with Satcom No. 1772103 OLOI X (Atlantic).

Ship to Terminal communication while vessels are in the export tanker berth will be by portable VHF radio-telephone units, provided by Terminal.

The Company Mooring Master will advise ship's Master regarding emergency whistle signals set up for use in event radio-telephone units become inoperative. Use of ship's radio station and/or battery charging is prohibited while loading is in progress.

VHF: When in VHF range vessels shall contact the Terminal on VHF Channel 16 (156.8 MHz).

TUGS: *SPM Vessels:* The Terminal will have available 2 line handling vessels and one SPM-Hose maintenance vessel. These 3 vessels are under the control of the Mooring Master and are used to assist the mooring of the Tanker as required. These service vessels are not available to the Tanker for any other work.

READINESS: The Company will make every effort to load vessels upon arrival, or as promptly as berth is available, weather permitting.

"Notice of Readiness" will be accepted as at time of arrival, provided vessel is in all respects ready to load and subject to task force clearance.

Arrival time will be considered as at the time Mooring Master boards vessel, or at the time vessel anchors off the terminal, which ever occurs first.

The Mooring Master may reject a vessel if in his judgment she is not properly equipped or suitably manned, or if, upon inspection, he deems her to have dirty ballast or tanks unsuitable for cargo. However, Company will not issue any certificate or representation purporting to state that vessel's tanks, pipes and pumps and appurtenances are clean or acceptable for receiving cargo nor will the Company assume any responsibility for "contamination of cargo aboard ship caused by condition of ship's tanks, pipes, pumps or appurtenances".

The vessel shall have in readiness one nylon rope with a minimum diameter of 1 in., approximately 600 ft. long and terminated with a 2.25 in. joining shackle to attach and retrieve the SPM mooring line.

Vessels must be adequately equipped with blocks, tackle and booms to hoist the floating hose string in a safe, efficient and expeditious manner. Vessels must also have an adequate supply of nuts, bolts, gaskets and wrenches to connect cargo hoses system.

BALLAST: Absolutely no provision is made for dirty ballast. Vessels with dirty ballast will be rejected and all costs therefrom will be to the vessel's account.

It is the Ship Master's responsibility to see that no oil or oily ballast is pumped or spilled overboard. Drip pans must be used at all times and all scuppers must be plugged. The waters in and adjacent to the Terminal must not be polluted, and only clean oil-free ballast and/or clean bilge water may be discharged at the Terminal.

As soon as practicable after arrival, and prior to acceptance for loading, all vessel's tanks will be inspected for evidence of oil in ballast, and during discharge of ballast, similar inspections will continue. If evidence of oil appears at these inspections, the vessel may have to vacate berth. Upon her return, vessel will be obliged to tender new "Notice of Readiness".

If, during the first inspection or during process of loading it is revealed that vessel's tanks are not oil-tight, she will be rejected, or refused further loading.

In addition to lights usually displayed, vessels discharging ballast or loading cargo during darkness will illuminate the area around the ship to satisfaction of the Mooring Master, in order that any oil on the surface of the sea may readily be detected and appropriate action taken. Vessels unable to illuminate sea satisfactorily may not discharge ballast during darkness. Vessels should provide suitable floodlights for working on deck during night operations.

In the event any vessel should accidently discharge dirty ballast or spill oil in the vicinity of the Terminal, the Company shall have the right to take any action that may be necessary to clean up or remove any contamination or pollution resulting from such discharge of dirty ballast or spillage. In addition, the Company shall have the right to settle any claims of third parties arising from such contamination or pollution. All costs and expenses incurred by the Company to carry out the cleaning up of such contamination or pollution or the settlement of third party claims, shall be the joint and several liability of the Vessel, its Owners and Managers, and the Company shall be entitled to claim reimbursement accordingly in any jurisdiction.

Vessels properly equipped will be encouraged to discharge clean ballast and load simultaneously.

BERTHING: All manoeuvring of vessels within the loading berth area is to be done only in accordance with advice of the Company's Mooring Master, subject to the understanding that in all cases and circumstances the Master of the vessel being manoeuvred shall remain solely responsible for the safety and manoeuvring of the vessel. Vessel's Master or a qualified Deck Officer must be on bridge at all times during manoeuvring.

EXPORT TANKER BERTH FACILITIES: The Export Tanker Buoy is a conventional SBM which is 10 m. in diameter and held in position by 6 chains secured to piles sunk in the seabed. One mooring hawser with one chain and a single floating hose string extend from the buoy.

CONNECTING MOORING LINES: When the vessel is within reasonable distance of the SPM-B, ship's line will be carried by a line handling launch to the floating buoy line and secured. This line will then be heaved aboard. As the buoy ropes come clear of the water it will be noted that the chain is attached to it. This chain is to be secured through chain stopper (able to accommodate 3.25 in. chain links), in such a manner that the nylon is outside of the extreme length of the ship; i.e. so that the chain will absorb any chafing if the buoy line crosses the bow. Power must be available at all times on all winches and windlass while vessel is at the berth.

HOSES: The hose system is 910 ft. long (26 sections)×16 in. hose.

CARGO: Crude API 35.8 at 60°F. Average temperature 82°F. – 85°F.

LOADING: During loading, the International Code Flag "B" shall be displayed from top-mast signal halyard during daylight hours. During hours of darkness, a red light shall be displayed, visible at a distance of at least 1 mile, and showing unbroken light all around the horizon.

Raising, connecting, disconnecting and lowering of the floating hose system will be performed by vessel's crew under direction and supervision of an appropriate vessel's Officer as advised by the Mooring Master, who will remain on board while the vessel is in moorings.

After the vessel is securely moored the floating hose will be lifted to the rail on the port side amidships. The weight of the lift is approximately 7 tons and is lifted with the vessel's gear. The Mooring Master advises the vessel's personnel in the lifting, connecting, disconnecting and lowering of the hose system. A vessel's Deck Officer must be present, and direct the crew in all hose handling. There must be sufficient crew on deck to perform this work.

The vessel's Master is responsible for own vessel at all times. The max. loading rate is about 22,000 bbls.p.h. and the Company Mooring Master will advise in respect to loading pressures and hazards, but will not direct the loading except as may be necessary to protect the Terminal facilities. Manipulation of the vessel's valves is the direct responsibility of vessel's personnel.

Prior to commencement of loading, the Chief Officer will assure the Mooring Master that sea suction valves are *closed* and he will make note to that effect in Mooring Master's log before cargo loading is started. Final ullaging and computation of cargo will be done by an Officer of the vessel who will hand this information to the Mooring Master for transmittal to the Terminal for use in comparing metered-out cargo.

Caution: The incoming oil stream is controlled by the Terminal and it is extremely dangerous to close a cargo valve against the incoming stream. Such a procedure creates excessive pressure, which may damage hoses, piping or Terminal facilities. Vessels will be held liable for damages resulting from failure to observe this precaution.

Emergency Signal: When normal ship-to-Terminal communications fail, the emergency signal to stop the flow of oil will be a continuous blast on the whistle until oil ceases to flow. Steam or air should never be shut off from the whistle during loading. Whenever emergency whistle is used, all loading operations will be shut down until communications can be re-established.

Fire on Board of Export Tanker: The emergency signal must be given immediately to the Terminal. A vessel's Deck Officer with sufficient crew members must be ready and when so ordered by Mooring Master, close the manifold, disconnect the hose and standby on fo'castle ready to let go of the mooring line.

Terminal Stops: Request for the Terminal to stop the flow of cargo at a predetermined tonnage must be made in writing. Requests must include the statements that the Company will not be held responsible for any error and in case of overloading, the excess cargo cannot be pumped back to the Terminal. Some delays are always incurred when such a Terminal stop request is made.

SAFETY: The vessel's personnel are responsible for the safety of the vessel, and must take all necessary precautions whether or not so advised by the Mooring Master. Any safety precautions imposed by the Company Mooring Master and disregarded by ship's Officers or Crew, will be considered just cause for rejection of the vessel and all expenses and liabilities related thereto will be for account of the tanker.

Not less than 1 Deck Officer and 3 seamen shall be available on deck at all times while vessel is in the moorings.

One of those to be kept always on look-out on the bow to avoid contact with the SBM.

Power must be available at all times on deck winches and windlass while vessel is in the moorings.

The presence of unauthorised craft alongside is extremely hazardous and Masters are requested to require all unauthorised craft to clear the vessel's side prior to ballast pumping and cargo loading.

Mooring Masters are authorised to shut down loading operations during severe electrical storms, if another vessel or craft of any description comes alongside the loading vessel, and under any other circumstances which imperil loading operations.

MEDICAL: Medical assistance on an emergency basis only.

WEATHER/CURRENTS: Wind and swell are mostly from a Southwesterly direction. The weather is generally good from November to May but is unfavourable during the wet season months of May to November. The currents are irregular and at times strong. The Mooring Master will provide the Master with this information when boarding the vessel.

FRESH WATER: Not available.

FUEL: Not available.

REPAIRS: No facilities of any kind are available. Pennington Offshore Terminal is considered an open roadstead and under no circumstances may engines be shut down for repairs while a vessel is moored in the Export Tanker Berth. The vessel must be able to depart from the berth immediately on instructions to do so.

STORES: Not available.

REPATRIATION: Not permitted except in grave emergencies.

SHORE LEAVE: Not permitted.

GARBAGE DISPOSAL: No service available.

WASTE OIL DISPOSAL: No service available.

SEAMAN'S CLUBS: None.

CURRENCY: Naira. All travellers, including seamen, can export up to a maximum of 50 Naira.

GENERAL: Cargo inspection services are available from several companies who have offices in Lagos. The use of this service will be for account of vessel or Consignee.

Cash and laundry service not available.

SHIPMASTER'S REPORT: December 1983 (updated 1988).

Radio: Export tanker radio transmits on 8385 kHz and receives on Channels 5/6. Advisable to give tanker a 2 day ETA.

Berthing: During vessel's stay 1 Berthing Master, 1 Cargo Surveyor and 2 Nigerians stay on board and require food and accommodation.

The 2 Nigerians keep a buoy watch together with the vessel's own watchman.

Loading: API is usually 36.9 at 60°F. Loading rate approx. 3,000 t.p.h at 84°F.

After loading there is no EDP and it is necessary to leave the berth, anchor and wait about 2 hours for paperwork.

Customs: Customs inspect store rooms.

SHIPMASTER'S REPORT: January 1986.

Vessel loaded 1,000,000 barrels of Pennington Light Crude Oil.

Documents: The authorities now require 6 copies Vaccination List, 4 copies Stores List and 11 copies Crew List.

Approaches: The Mooring Master boarded the vessel 1.2 miles West of the export tanker buoy.

Radio: The following Standard Messages were received from the storage tanker "Oloibiri":

Standard Message No. 1:

Quote

Note to Master –

On arrival have ready on starboard side the combination ladder (gangway plus pilot ladder) STOP on port side have boom ready to lift the mooring equipment STOP on forecastle have one 1 in. diameter messenger line 600 ft. long STOP on stern have towing line ready for handing to the tug STOP after mooring you will be connected with 1×16 in. hose on your port side STOP please call Pennington Terminal on VHF Channel 16 two hours before arrival STOP thank you STOP Pennington Terminal – MASTER Oloibiri/5NDF +

Unquote

Standard Message No. 2:

Quote

In addition to messages to Topcon Lagos please advise following information to this terminal –

1 – eta Pennington Terminal (4° 14′ 35.2″ N., 05° 36′ 53.2″ E.).
2 – cargo quantity to load.
3 – deballasting time.
4 – last port of call.
5 – next port of call.
6 – port at which cargo to be discharged.
7 – note – loading rate approximately 21,000 barrels per hour. Crude oil API 36.5. Approximate temperature 82° F. Any ballast to be discharged must be clear. – Topcon Warri – Master Oloibiri +

Unquote

Tugs: 2 tugs assist with berthing. 1 tug remains and tows aft throughout the entire stay at the SBM.
Hose Connecting/Mooring: In addition to the Mooring Master, 2 men board the vessel on arrival. They assist with mooring and connecting the hose. They stay on board all the time until the vessel is unmoored.
Surveyor: 1 cargo surveyor stayed on board whilst the vessel was at the SBM.

AGENCY: The Company does not perform general agency functions. Owners of vessels calling at the Terminal may arrange for their own Agents.
NOTE: Should any vessel or craft sink or become an obstruction in the vicinity of the Terminal or at the Terminal, the Terminal Operator shall be empowered and shall have the right to take any steps it may deem necessary to remove the obstruction without notice to the owners. All expenses of such removal shall be borne by the vessel or craft or by those owning it at the time of the accident causing the obstruction, and the Terminal Operator shall be entitled to reimbursement by them for any such expenses incurred by it.
OPERATORS: Texaco Overseas (Nigeria) Petroleum Company, P.O.Box 1986, 36 Gerrard Road, Ikoyi, Lagos, Nigeria. *Tel:* (01) 2690227-36. *Telex:* 21293 Topcon Lagos. *FAX:* (01) 2692367.
Contact: J.R. Ortiz, Chairman and Managing Director.

PORT HARCOURT (incl. Okrika Refinery):
04.46 N. 07.00 E.

DOCUMENTS: Ship Entry Notice, See "Lagos".
14 days prior arrival Agent requires:
16 Manifests.
3 Stowage Plans.
3 Hatch Lists.
On arrival at Port Harcourt, Master to present:
7 Ports of Call Lists.
7 Crew Lists.
2 Kroo Boy Lists.
3 Animal Lists.
5 Arms and Ammunition Lists.
1 extra Manifest for transhipment is applicable.
4 Stores Lists.
3 Crew Declaration Lists (belongings).
1 Declaration of Health List.
4 Vaccination Lists.
3 Narcotics Lists.
2 Parcel Lists.
6 Passenger Lists.
2 Stowaway Lists.

Where not applicable, forms to be marked "nil". All other forms including departure documentation prepared by Agent.
PILOTAGE: Compulsory from Bonny Fairway buoy. The pilot station for Port Harcourt is at Bonny, 15 miles from Fairway Buoy, 28 miles from Port Harcourt. The Harbour Master keeps watch on VHF Channels 16 and 14 and on 2182 kHz from 0700 hrs. to 1800 hrs. Pilot boards at Fairway Buoy from pilot-cutter green hull, stone colour superstructure.

Position of Fairway Buoy: Lat. 4° 12′ 56″ N., Long. 7° 00′ 28″ E.

It should be noted that Bonny is an Oil Terminal and as such heavy traffic of tankers is continuous. In extreme circumstances vessels may be requested by Harbour Master to pass the channel from Fairway Buoy at Bonny, and anchor at Bonny without a Pilot, in which case latest Notices to Mariners should be studied in order not to damage oil pipelines in prohibited anchorage areas.
ANCHORAGES: Position West of Fairway Buoy, depths 8 – 9 fathoms. Also on Bonny River at Bonny Town.
RESTRICTIONS: Vessels for Okrika and Port Harcourt can only navigate during daylight.
MAX. SIZE: Also see "Berthing" and "Report". Max. draft is 7.32 m. at HW. Max. length 600 ft., no restrictions on beam. Ebb tide reaches a max. of 3 knots off the berths and 2.5 knots in the river, flood tide 2.5 knots off berths and in the river.
HEALTH: Q-flag to be shown on arrival, except if from another Nigerian port. Yellow fever inoculations compulsory.
RADIO: Master to cable "Agent" Lagos via Lagos Radio ETA 7, 4, 2 and 1 day prior arrival. Master to contact Bonny Harbour Master on VHF Channel 14 on arrival at anchorage giving all vessel and cargo particulars, Agent's name, SEN No., and date of issue.

Master also required to advise Port Harcourt Harbour Master identical information through Lagos Radio and to contact Port Harcourt Agent on VHF Channel 14, keeping watch on this Channel per Agent's instructions.
TUGS: 3 N.P.A. tugs of about 1,000 h.p.
BERTHING: *Port Harcourt:* 8 berths for general cargo at hard quays. Maximum practical draft 7.32 m.

8 dry cargo berths depth 33 ft. – 35 ft.

Mooring buoys, Dockyard Creek with 5 buoys, max. draft 7.62 m.; Dawes Island anchorage discharging for about 12 vessels, max. draft 8.23 m.; Pool 4 buoy berths max. draft 6.01 m.; Tanker buoy 1 berth.
B.O.P. Berth. This berth lies outside the Quay area, and is for the loading of palm oil by means of a direct pipeline from the installation of Bulk Oil Plants (Nigeria) Limited. It consists of a central "T" jetty with dolphins and is capable of berthing vessels up to 480 ft. in length. It is also used for the discharge of explosives as such cargo is not permitted to be handled across the general cargo Quay.

Oil is supplied by a 6 in. diameter pipe at a maximum rate of 250 t.p.h.
Coal Handling Facilities: Facilities for loading coal have been completed and a conveyor capable of loading about 60 t.p.h. is working. Max. draft at the coal berth is 7.62 m. This berth is situated at the Northern end of the port, berth No 8.

Okrika Oil Refinery: (Lat. 04° 44′ N., Long. 07° 05′ E.). Okrika lies on the Bonny River, 56 km. from the sea. The approach over the bar is by a channel 12.8 km. in length. Depth in channel: See "Bonny". The river from Bonny to Okrika has been dredged as necessary to a depth of 8.84 m. Chart Datum. The bar channel and river are well buoyed with light buoys, port and starboard. There are also beacons in the river. Jetty at the oil refinery suitable for berthing coastal and ocean tankers up to 33,000 d.w.t. The jetty is "L" shaped with a square dolphin at the end of the arm. Ocean tankers secure on the outside of the jetty making fast to two sets of mooring dolphins each end. The coastal vessels and barges are berthed on the inside of the jetty. Oil is supplied via gantry hoses on either side.

Max. draft limit for tankers sailing from port 9.67 m., draft for berthing 7.92 m.

Fresh water available from the jetty.

The tugs based at Port Harcourt are available if required.

Pilotage is compulsory from the Fairway Buoy to the Refinery Jetty except for Naval vessels and vessels of less than 1,000 tonnes whose Master holds a licence issued by the Nigerian Ports PLC. All vessels using the Refinery Jetty will berth and unberth on the flood tide only during daylight hours until further notice.

Also see "Report" and "Shipmaster's Report" dated October 1990.
STEVEDORES: Gang requirements and hatch distribution should be included in 48 hours ETA cable to Agent. Discharging general cargo 8 tons per gang/hour, cement 15 tons per gang/hour, bagged cargo 20 tons per gang/hour, loading produce 15–20 tons per gang/hour.
MEDICAL: Doctors available 24 hours, but limited supply of medicines available. Yellow fever vaccination required.
TANKERS: See "Berthing".
DENSITY: Approx. 1015.
FRESH WATER: Limited supply by barge.
FUEL: Most standard lubricants available, fuel and gas oil available by barge or road tanker. Requirements by 48 hours ETA cable.
REPAIRS: Only very minor repairs available, no spares.
GANGWAY/DECK WATCHMEN: Compulsory. Tankers take 4 watchmen and cargo vessels take 16 watchmen. Acts of piracy have taken place at the port. See "Bonny" – "Piracy".
OPENING/CLOSING HATCHES: Normally by crew.
CUSTOMS ALLOWANCES: 200 cigarettes per man per 7 days. 1 wine or 1 bottle spirits per officer per 7 days.
REPATRIATION: Possible via Lagos or Port Harcourt.
AIRPORT: Port Harcourt International Airport 30 km. from port. International and domestic flights.
TIME: GMT plus 1 hour, no changes during the year.
HOLIDAYS: See "Lagos".
POLICE/AMBULANCE/FIRE: All can be contacted by telephoning 999.
SHORE LEAVE: Allowed provided crew carry Passport or Seaman's Book.
IDENTIFICATION CARDS: Crew to carry Passport or Seaman's Book whilst ashore.

REPORT: September 1984.
(a) Okrika sailing draft now 31 ft. 9 in.
(b) Compulsory pilotage for all classes of vessels including service boats is now in force.
(c) All vessels are to direct radio messages/cables advising ETA's to the port of destination and not to Nigerian Ports PLC headquarters in Lagos to avoid delays.
(d) Station Tanker "Maryland" – 152,035 d.w.t., LOA 915.34 ft. Summer draft, 58 ft. and operating on max. draft of about 40 ft. with which she is capable of lifting 85,000 tonnes of product. Vessel's position is approximately Lat. 4° 25′ N., Long. 7° 08′ E. at Bonny Inner Anchorage.

SHIPMASTER'S REPORT: May 1982.
Documents: 6 Crew Lists, 5 Passenger Lists (or negative), 8 Arms and Ammunition Lists (or negative), 6 Livestock Lists (or negative), 7 Ports of Call Lists, 2 Bonded Store Lists, 5 Vaccination Lists, 2 Crew Declarations.

As we were a tanker in ballast we did not present any Manifests and Bills of Lading. However, the Immigration Officer asked for a declaration from Master that there were no stowaways on board. No special form used.
Pilotage: Pilot keeps watch on Channel 14 and all traffic passed from this Channel to others (12, 13). As there is a shortage of Pilots, sometimes one Pilot comes out at Fairway Buoy and boards the first vessel to enter. The two or three other vessels entering at same time are directed to follow the vessel with the Pilot on board through the entrance channel to Bonny. When no Pilot waits at "N" buoy, the Pilot on board the first vessel will direct the others to the anchorages at Bonny as far as Buoy 1A.

During our stay it was observed that sailing out was performed at any hour but sailing in was only performed during daylight hours.

As the channel from Fairway Buoy and Bonny is a one-way channel all traffic is controlled by Bonny Signal Station who keep watch on VHF Channel 14 continuously and gives permission to vessels who intend to use the channel regarding the other vessels who are using it.

The Pilot from Port Harcourt to Bonny will normally disembark at Bonny outward bound. However, if another vessel is waiting at the fairway buoy to proceed inward or if requested by Master, Pilot will take vessel to the Fairway Buoy.

Our Pilot left at Bonny Pilot Station and vessel can proceed to sea after getting permission from Bonny Signal Station to do so. If outward channel is not clear from inbound vessels you are requested to wait until the last vessel reaches "N" buoy. In some circumstances they will allow vessels to cross each other near "M" buoy but no further than that.

On this occasion it was noted that "L" buoy (starboard) was missing.

Tankers between Bonny and Port Harcourt can only proceed with Pilot and during daylight hours. When proceeding to Okrika the Pilot boards at Bonny Pilot Station or at Bonny Anchorage and conducts vessel up river to Okrika and berths vessel. If possible he starts from Bonny when tide begins flooding up river, it takes about two hours for tide to reach Okrika and vessels take about same time in steaming, so when we reached Okrika the tide begins flooding.

Tankers berth port side to and use starboard anchor to make the turn. Pass a line to a mooring buoy so that it will be on starboard bow when the vessel is berthed to assist the berthing. After completion of berthing this line is taken in, as it has no more use and on account of thieves. Vessels remain secured by 3 breast lines to dolphins forward and aft and 1 spring line to jetty forward and aft.

When sailing, after taking in all lines, the last ones being one breast line forward and aft, the starboard anchor will assist the vessel to leave the jetty and reach the middle of the channel.

Maximum draft for sailing out of Okrika Terminal is 32 ft. (9.75 m.), when berthed port side to the jetty. If berthed starboard side to the jetty the maximum sailing draft is 25 ft. (7.60 m.). It is convenient when sailing at maximum draft to go to the jetty always port side as if going starboard side to when loaded to 25 ft., vessel has to stop loading, unberth, turn and berth one more time and all these operations must be performed only during daylight hours and at special stages of tide.

Sailing out from Okrika with 32 ft. will be performed in daylight and vessels must leave jetty two hours before high tide at Bonny.

The channel from Okrika to Bonny has been kept dredged to the Chart Datum, it was well buoyed and was made by the vessel loaded without any difficulties. Our sailing draft was 32 ft.

Health: "Q" flag to be shown on arrival, on river and on berth, till the Health Authorities board the vessel and give clearance.

Okrika Jetty: Further to the information above there is a new jetty, down river, close S.E. of the former, which is ready as a normal quay, but will have to have oil loading facilities and pipelines, connected to the existing ones at the middle of the connection to shore of the former jetty. The new jetty is provided with six buoy fenders (cylindrical type), four of them in the middle, (the small type) and two (large type) near the extremities of jetty. It is expected that the mounting of pipelines, oil loading facilities and other facilities will take about 2–3 years.

Density: During our stay, May 6th – 9th, we experienced the following: at LW 1018; at HW 1019; water temperature 30°C.

Fuel: Fuel oil, diesel oil and gas oil are available. We took gas oil without difficulty but fuel oil takes a long time as occasionally they need to flush all lines and this takes time. Orders must be placed well in advance as it takes a long time to get confirmation from Lagos about the supply.

Shore Leave: No difficulties, but recommended in daylight hours.

Communications: Between Lagos and Port Harcourt are very poor. Telex lines were inoperative at time of our stay and all messages between Lagos and Port Harcourt Agency Offices were passed by radio or telephone with delays.

SHIPMASTER'S REPORT: October 1990.
Vessel: 50,000 d.w.t.
Berth: Okrika Refinery.
Report: The following is a copy of a telex received from a Master.

Okrika Pilot boards at Bonny Town. Daylight berthing only. River passage fairly well buoyed. There are two berths ('A' and 'B') on the East side of the river. Vessel berths portside to, so has to turn short round adjacent to berths. Tug "Limburgh" in attendance. After turning, starboard anchor used to check approach alongside. Tug was used as mooring boat. Tie up with 4 head/stern lines and 2 springs fore and aft. Berth 'A' is of good solid cement construction. Good fenders alongside berth at approximately 70 m. intervals. Dolphins for head lines have good leads, but aft dolphins give poor leads for stern lines and breast lines.

Berth 'B' (length 110 m.) is best berth. Also of good solid cement construction with very good fenders, leads to dolphins each end good. Both berths have 10 in. Chicksans. Density 1012 varies. Max. sailing draft 9.5 m. Communications overall chaotic, very difficult to get any information. One task force soldier onboard. We had no problems with pirates, but other vessels did. Pirates can be vicious and will come out 30 miles from coast. Port officials board at Okrika and Bonny. Vessel requires two complete sets of entry papers.

AUTHORITY: Nigerian Ports PLC, Private Mail Bag 5043, Port Harcourt, Nigeria. *Tel:* 300370/516. *Telex:* 61348. *Cables:* Genports. *FAX:* 335402. *Contact:* Port Administrator.

AGENT: Alraine (Nigeria) Limited, P.M.Bag 622, Port Harcourt. Tel: 084 222.531. Telex: 61120.

QUA IBOE: 04.20 N. 07.59 E. (See Plan)

LOCATION: The Terminal is located on the Eastern side of the estuary of the Qua Iboe River in approximate position Lat. 4° 33′ 00″ N., Long. 7° 59′ 30″ E.

The crude oil storage facilities consist of seven tanks each of 500,000 barrels capacity.

Note: The eighth tank with same capacity is nearing completion. Also under construction are three condensate tanks of 670,000 bbls. capacity each.

IMPORTANT FEATURES AT QUA IBOE TERMINAL:

1. There are 2 loading SPM's for handling VLCC's up to 300,000 d.w.t.
2. Approximate average API 36.0, average loading temperature 89°F. to 92°F.
3. Vessels proceeding to the safe anchor area should approach from the Southeast, and when instructed to anchor should drop anchor 5 miles Southeast of the Berth Operation Platform (BOP). The BOP is equipped with a Racon, transmitting the letter "K".
4. The Pilot at Qua Iboe Terminal will moor/unmoor and supervise all other operations and movements of the vessel at the Single Point Mooring Buoy and at the anchorage.
5. Safety rules are strictly enforced. The safety requirements are based on the ISGOTT standard regulations.
6. Display of quarantine signals on approach to Qua Iboe Terminal must be maintained until Free Pratique is granted. By day the flag of Nigeria must be flown throughout the vessel's stay in the Terminal area.
7. SPM No. 1 (Berth No. 2): Single Point Mooring (SPM) buoy is located in position Lat. 4° 13′ 05″ N., Long. 8° 02′ 45″ E., approximately 19.4 nautical miles, 170° of the Terminal Tank Farm. Depth of water at the manifold is 85 ft.
   Vessel's max. draft 72 ft.
8. SPM No. 2 (Berth No. 3): Single Point Mooring (SPM) buoy is located in position Lat. 4° 13′ 30″ N., Long. 8° 03′ E., approximately 18.8 nautical miles, 165° from the Terminal Tank Farm. Depth of water at the manifold is 85 ft.
   Vessel's max. draft 72 ft.

8a. *Proposed* SPM No. 3 (Berth No. 4): Single Point Mooring (SPM) to be positioned in Lat. 04° 13.3′ N., Long. 08° 05.5′ E., approximately 19.3 miles × 163° from Terminal Tank Farm. The depth of water at the manifold is 85 ft.

9. Charts and Publications: Masters of vessels proceeding to load at Qua Iboe Terminal should obtain the latest sailing directions, charts and hydrographic bulletins for the area.
   In this respect attention is drawn to the following editions of:
   (a) British Admiralty Chart: No. 1860.
   (b) British Admiralty sailing direction: African Pilot Vol. 1.
   (c) U.S. Naval Oceangraphic Charts: No. 2352, 2353.
   (d) U.S. Naval Oceangraphic sailing directions: No. 50 S-West Coast.
   (e) Latest edition of Guide to Port Entry.
   (f) Up-to-date and appropriate tide tables.

ESSENTIAL REQUIREMENTS AND QUESTIONNAIRE FOR TANKERS ARRIVING FOR LOADING:

1. No dirty ballast.
2. Nigerian time is GMT plus 1 hour.
3. All vessels must exhibit the Nigerian National Ensign while in the vicinity of the Qua Iboe Terminal moorings.
4. Vessel to radio the following information prior to arriving at Qua Iboe Terminal Anchorage:
   a. Tanker's name.
   b. Port of Registry/Country.
   c. Summer deadweight.
   d. Last port of call.
   e. Port of destination.
   f. Cargo requirements.
   g. Loading rate required.
   h. Deballasting time prior to commence loading.
   i. Arrival time at anchorage.
   j. Anchoring time.
   k. Master's name.
5. Vessel to have ready prior arrival:
   a. Port side derrick.
   b. Port side manifold for 2×16 in. hose connections.
   c. Combination ladder or pilot hoist.
   d. One floating ship's rope astern to tie-up tug.
   e. Two ship's ropes at the bow or a long 1.5 in. diameter nylon messenger.
6. Mooring Master and/or Government Officials will meet the vessel in the suggested Safe Anchorage Area.
7. Vessel to provide a good lee for the Mooring Master and/or Government Officials.
8. The Master of the vessel is fully responsible for the safety of his ship at all times.
9. Ship's crew to perform all operations of mooring/unmooring, connecting/disconnecting hoses on board the vessel.
10. Sufficient crews and at least one suitable deck officer must be on duty at all times while the vessel is moored to the SPM.
11. An Agent will be available, if requested by the Charterer/Ship's Operator.
12. The following services are not available:
    a. Shore leave.
    b. Crew changes.
    c. Supply of stores, fresh water, bunkers.
    d. Medical assistance, only on extreme emergency basis and will be debited to the vessel's account.
13. The following personnel live on board throughout the stay of the vessel.
    1 Pilot.
    1 Cargo Surveyor.
    1 Nigerian Ports PLC Environmental Inspector.
14. Lineboat is tied up astern using a ship's rope.

DOCUMENTS:

The following documents are required by the Nigerian Government Customs Representative at Qua Iboe Terminal:

4 copies Crew List.
4 copies Ports of call within the last three months.
4 copies List of Birds and Animals.
4 copies Passenger List.
4 copies Stores List (with attached list of narcotics).
4 copies List of Arms and Ammunitions.
4 copies Crew Personnel Effects List.
4 copies Vaccination List.
1 copy Sailing Clearance, last port of discharge.
1 copy Loading Instructions (telex).

In addition the Task-force Officials and the Agent require one copy each of the above listed documents.

The Master must be aware of the Nigerian National Maritime Authority (NMA) levy on oil shipments to/from Nigeria.

PILOTAGE: Vessels loading at Qua Iboe will be boarded by a Company Mooring Master either at the anchorage or where directed.

The Mooring Master will advise the ship's Master in regard to the approaches to the berth; and the mooring, unmooring, connecting, disconnection of hoses, departure from the berth and loading operations.

All vessels must have upon arrival a pilot ladder in good, clean condition safely and securely rigged. A vessel arriving with freeboard of 30 ft. or more must use its accommodation ladder in conjunction with the pilot ladder unless a "pilot hoist" or similar arrangement is available.

In the event that a vessel is deemed by the Mooring Master to be improperly or insufficiently equipped with adequate mooring facilities, lines or gear, then he shall so inform the ship's Master. In such an event the vessel will not be brought into the mooring until satisfactory gear or equipment is provided.

ANCHORAGE: Numerous submarine pipelines and structures exist in the approaches and close vicinity of the loading berths.

Under no circumstances whatsoever should vessels anchor except in the approved anchorage described below.

The Anchorage Areas are as follows:

North-West Anchorage is bounded by lines joining the following points: 04° 13.0′ N., 08° 03.0′ E.; 04° 09.8′ N., 08° 03′ E.; 04° 13′ N., 08° 05.5′ E.

South-East Anchorage is bounded by lines joining the following points: 04° 10′ N., 08° 04.3′ E.; 04° 10′ N., 08° 07′ E.; 04° 12.5′ N., 08° 07′ E.

Vessels bound for the Qua Iboe Terminal should proceed with extreme caution from the S.E. to the safe Anchorage Area. If uncertain of the vessel's position because of poor visibility stay S.E. and clear of the safe Anchorage Area until visibility has improved.

HEALTH: Pratique may be granted by radio (Lagos Radio).

The vessel should have a clean Bill of Health or an equivalent document from the last port of call. The vessel's Master and all members of the crew shall possess International Certificates of Health showing valid Cholera and Yellow Fever Vaccination Certificates.

MAX. SIZE:

Berth	*Length*	*Beam*	*Draft*
No. 2 (SPM1)	No restriction	No Limit	72 ft.
No. 3 (SPM2)	No restriction	No Limit	72 ft.

RADIO: Cable address: Mobiloil Lagos. Telex: 21228, 22608 and 21801.

Vessels proceeding to load at Qua Iboe must radio:

1. Mobiloil, Lagos indicating their cargo requirements, last port of call and ETA 7 days prior to arrival. When their passage time is such as to not permit a 7 day ETA then the maximum possible advance notice must be given.
2. Mobiloil, Lagos, confirming or amending the ETA given in (1) above at 72 hours and 24 hours prior to arrival.
3. The Nigerian Government Port Health Officer at Lagos at least 72 hours before arrival advising the following:
   - (a) Vessel's name and call sign.
   - (b) ETA Qua Iboe Terminal.
   - (c) Last port of call.
   - (d) Cargo requirements.
   - (e) Number of crew and whether healthy or not.
   - (f) Whether or not a doctor on board.
   - (g) Requesting Free Pratique.

The Port Health Official boards vessel on arrival. If the request has not been radioed to the vessel, the yellow flag "Q" by day or red over white lights by night must be displayed on arrival at Qua Iboe.

In addition, as soon as possible prior to arrival, vessels should establish direct communication with the Terminal ("Qua Iboe Control") on VHF international calling Channel 16 (156.8 MHz) or call on Channel 84 (Qua Iboe Terminal).

Vessels not equipped with VHF or whose equipment is not fully functional should advise Mobiloil, Lagos, at the time of their ETA messages previously referred to.

The (BOP) Berth Operation Platform is fitted with a Racon and transmits the Morse signal "K" (–·–). All vessels equipped with 3 cm. radar will be able to pick this up on their radar screen at a distance of approximately 17 miles – 20 miles.

After direct contact has been established with the vessel, Qua Iboe Control will transmit preliminary requirements and berthing instructions.

VHF: The primary system of communication with the terminal while in berth shall be through the Mooring Master by means of a portable VHF unit provided by the company.

TUGS: None. Terminal launches assist in berthing.

BERTHING: All vessels must be equipped with adequate on-deck and overside lighting. A spotlight should be rigged on the bridge when berthing during the hours of darkness.

To assist in the vessel's turnaround, tankers should have all booms and cargo gear rigged on the port side before the ship is boarded by the Mooring Master.

Berthing Requirements: Berth Nos. 2 and 3: All vessels proceeding to the SPM must secure their anchors with chain stoppers or compressors.

Floating hoses taken aboard on the port side.

The moorings have been designed in general accordance with the recommendations of the SPM Forum. The mooring lines consist of 2×18 in. braided nylon ropes each 160 ft. long with floats attached.

In order to heave the mooring lines aboard, the vessel must have ready on the forecastle a ship's rope or a rope messenger not less than 1.5 in. in diameter and a minimum length of 720 ft. The rope/messenger is led through a fairlead, large enough to permit the entry of a 3.25 in. diameter chafing chain, on port side or centre line (Panama Lead) down to the water clear of the ship's bulbous bow. This rope must have a good lashing attached to the eye.

The terminal line boat assisting in mooring, will proceed to the vessel, as soon as she is within her reach, to pick up the ship's rope and to make the connection with the terminal provided 12 in. circ. polypropylene rope. The ship will then heave steadily on the rope until the chafing chain lies across the fairlead of the vessel.

Tenders by vessels to load crude oil cargo at Qua Iboe, will be normally accepted and berths assigned to vessels in chronological order of arrival providing such vessels have current nomination for cargo valid at the time of tender, carry clean ballast, if any, and have cargo tanks in a fit condition to receive cargo. Also they must be in all respects properly equipped and ready to moor. Should berthing be delayed on account of bad weather, vessels will keep their position in line.

HOSES: Berth Nos. 2 and 3 SPMs are equipped with 2 floating hose strings, 870 ft. long on the left hand and 840 ft. long on the right hand facing the buoys. The over-the-rail hoses have a 16 in. ASA connection provided with a butterfly-valve at the end.

Tanker on Light Draft: Weights of Hose Strings for SPM: Indication of hose strings approximate weights of hose strings in *long tons* (including fittings and floats) with all hoses full of crude oil S.G. 0.850. Assumed total lift 25 ft. above deck level.

Size of Tanker	*Inside Diameter of Hoses* *12 in. – 16 in.×30 ft.*
285,000 d.w.t.	6.8 tons
200,000 d.w.t.	6.0 tons
100,000 d.w.t.	5.2 tons
80,000 d.w.t.	5.0 tons

LOADING: All vessels must be adequately provided with bollards or cruciforms and suitable leads to facilitate the hanging off of the hoses during the lifting operation.

The Mooring Master will inspect the vessel's cargo tanks and will sign the Dry Certificate prior to the commencement of loading.

The Mooring Master may reject a vessel if it is not upon inspection properly equipped or if it is not suitably manned or if deemed to have dirty ballast or tanks unsuitable to receive cargo. Any vessel rejected because of being insufficiently equipped, will automatically nullify her (NOR) "Notice of Readiness" and will not be accepted until satisfactory evidence is produced, that the vessel's gear is in good working condition.

The ship's Master or a suitable Qualified Officer must be on duty on the bridge at all times while the ship is manoeuvring, mooring and unmooring or whenever requested by the Mooring Master.

All mooring, unmooring and hose connection and disconnection must be carried out by the ship's crew under the supervision of a suitable Qualified Officer acting on the advice of the Mooring Master.

Ship's loading manifolds should be prepared for 2×16 in. hose connections prior to arrival at the Qua Iboe Terminal. Sundry equipment should include tools to connect the hoses, nuts, bolts, gaskets and rope strops as none of these items are supplied by the Terminal. All 16 in. hoses have ASA flanges.

The Notice of Readiness will be signed by the Mooring Master on behalf of the Company. The time for giving the Notice of Readiness is the time of the vessel's arrival at the usual anchorage, or the time of boarding of the Mooring Master, whichever is the earlier. Notice of Readiness will not be accepted unless the vessel is ready to load.

Loading normally commences with one booster pump until it is confirmed by the deck officer that the crude oil has entered the ship's tank, loading rate then will be gradually increased until the maximum or requested rate has been reached.

Pumping rate at both SPM's can be expected to be up to 53,000 bbls.hr.

The vessel must give 30 minutes notice to the Mooring Master prior to completion of loading and shall advise if a decrease in loading rate is desired. The Mooring Master will advise the vessel of the expected gross API and the approximate loading temperature.

Upon completion of loading, the vessel will be required to leave the berth immediately after disconnecting hoses to await shore figures and outward clearance at the anchorage.

Pressure Surges: Because of the long lengths and large diameters of the pipelines, ships' loading valves must not be closed against the flow of oil.

Vessels provided with mechanically or hydraulically operated valves whose closing time is less than 30 seconds must advise the Mooring Master accordingly. In such circumstances the loading rate may have to be reduced.

EARLY DEPARTURE PROCEDURE: Procedure discontinued.

BALLAST: *There are positively no facilities for disposal of dirty ballast.*

It is the ship's Master's responsibility to see that no oil of any kind is pumped or spilled overboard from the ship.

This includes oily water from bilges, crude residual from previous voyages or any other matter that may result in pollution of the sea. Any fines imposed shall be to ship's account.

As soon as it is practical, all vessels' cargo tanks will be inspected by the Mooring Master, Cargo Surveyor and Nigerian Ports PLC. Environmental Inspector, for oil in the ballast, and during discharge of ballast similar inspections will continue.

If evidence of oil appears at any of these inspections the ship will be rejected forthwith and will not be accepted until satisfactory evidence is produced that such ballast was disposed of in a proper manner. If during inspection or during progress of loading it is revealed that ship's tanks are not tight or that oil is leaking from the ship, the ship may be rejected or refused further loading.

Any vessel rejected because of dirty ballast or sea pollution will automatically nullify its "Notice of Readiness" and will lose any priority of position for loading.

A vessel must have sufficient ballast for safe handling, having due regard to existing weather and sea conditions. Through a careful watch of the weather and sea conditions, frequent exchange of information between ship and terminal, and by a knowledge of behaviour of his own vessel, the Master may come to the terminal with a minimum of ballast and thus lessen any possibility of infringement of sea pollution regulations.

Vessels are to maintain safe draft. If unable to load and deballast at the same time, then part cargo may have to be loaded before deballasting.

In addition to the lights usually displayed, vessels at the mooring discharging ballast or loading cargo during darkness will brilliantly illuminate the sea around the ship, so that any pollution will readily be noticeable.

Vessels equipped with a separate system of ballast tanks will be allowed to discharge ballast and load simultaneously, providing approval is first obtained from the Company Operations Superintendent.

DENSITY: 1015 – 1018.

FRESH WATER: Not available.

FUEL: Not available.

STORES: Not available.

MEDICAL: Only emergency medical facilities.

CUSTOMS ALLOWANCES: Nigerian Government Customs Officials will board the vessel as soon as possible after arrival to give inward clearance and "Free Pratique" service. Nigerian Government Regulations are strictly enforced.

Cigarettes, cigars, tobacco, matches, spirits, wines, perfumes, arms, ammunition and possible other items have to be locked under Customs seal from time of arrival of ship in port until time of leaving territorial waters.

Each person is allowed 200 cigarettes per week of stay or equivalent amount of tobacco or cigars in lieu thereto. Each person is allowed 1 bottle of spirit and 1 case of beer. Special allowances are made for Masters under special circumstances. If the slop chest items and the bonded store items are not combined in one locker, the Customs Officer has to be informed.

REPATRIATION: Crew changes not possible.

TIME: Nigerian local time is GMT plus 1 hour throughout the year.

SHORE LEAVE: Not possible.

GARBAGE DISPOSAL: No service available.

WASTE OIL DISPOSAL: No service available.

SEAMAN'S CLUBS: None.

WEATHER: *Tidal Streams and Currents:* Tidal streams and currents occur throughout the year in irregular directions, however, predominating in an Easterly/Westerly direction with occasional rates of 2 knots to 3 knots.

Winds: Southwesterly to Westerly winds predominate from May to September and at their strongest average between 25 knots and 30 knots. From October to April the winds are variable and unpredictable in force and direction. From December to February winds are mainly from the North and their weakest average is 5 knots to 10 knots.

Squalls: Squalls of varying intensity are common between March and November. These squalls are unpredictable in force and direction and are accompanied by torrential rain, thunder, lightning and sudden shifts in wind direction. During these squalls winds of 55 knots to 60 knots have been recorded.

Masters of vessels are therefore advised to keep a lookout for these unexpected changes in the weather conditions, keeping the engine on constant readiness to be able to leave the berth under full power on short notice.

Sea Swell: Throughout the year a long low Southwesterly swell is prevailing. During the wet season, June to October, this swell together with a rough sea becomes very high, especially during heavy squalls.

Rain: The rainfall is very heavy with a yearly average of about 3,700 mm. There are basically two seasons, a wet season from June to October and a dry season from November to May.

Fog and Visibility: Fog is virtually non-existent. Visibility is good except during heavy rains and during the dry season, when the visibility drops occasionally to 4-5 cables.

Temperature and Humidity: The average temperature is between 28° and 30° celsius. The daily range is from 22° to 35°. The humidity is high, 75% to 85%.

The surface sea temperature is between 26° and 28° celsius.

The sea bottom temperature is between 22° and 24° celsius.

GENERAL: *Agency:* The Company will handle documentation requirements for vessels loading at the Terminal. It does not carry out general vessel agency functions. Ship's mail and personal mail will be handled by Agent (Gulf Agency Company or Elder Dempster (Nigeria) Agencies).

"B" Flag: During loading, the International Code Flag "B" must be displayed from a topmast signal halyard during daylight hours. During hours of darkness a red all around light must be displayed where it can best be seen.

SHIPMASTER'S REPORT: December 1984 (Updated 1992).

1 Pilot, 1 N.P.A. Environmental Inspector and 1 Cargo Surveyor live on board.

Immigration and Customs Officials board for usual formalities and store room inspection.

Lineboat tows astern most of time using ship's line.

EDP discontinued, vessel does not obtain clearance until ship's figures checked against shore figures, after which, Customs Clearance is received. This can involve a wait of several hours. Vessel has to complete consignees' papers after sailing. Supernumeraries may cause difficulties with Immigration, it is best to have everyone signed on.

For vessels waiting, a good anchorage can be obtained in position 03° 55′ N., 05° 46′ E., taking care to avoid the 120 fathom hole in position 03° 55.5′ N., 05° 42.9′ E. When hove up, the cable was very clean with only a little mud on the anchor.

AUTHORITY: Nigerian Ports PLC, 26/28 Marina, PMB 15288, Lagos, Nigeria. *Tel:* 600620. *Telex:* 21500 ONPNPA NG. *Cables:* Genport. *Operator:* Mobil Producing Nigeria – Qua Iboe Terminal, Marine Office, c/o Mobil House, Lekki Expressway, Victoria Island, PMB 12054, Lagos, Nigeria. *Tel:* 619010, 619020, 619085, 619091. *Telex:* 21801, 21228 and 22608. *Cables:* Mobiloil, Lagos. *Contact:* Captain P.B. Etim, Marine Superintendent, Qua Iboe Terminal. Mr.Rudi Hanschitz, Operations Manager. Mr.S.O. Otori, Area Operations Manager – QIT Eket. Mr.Carl Burnett, Production Manager – Lagos.

SAPELE: 05.55 N. 05.42 E. (See Plan)

PORT LIMITS: Escravos Fairway Buoy.

DOCUMENTS: See "Warri".

APPROACHES: Escravos Fairway Buoy Lat. 05° 30′ N., Long. 05° 04′ E. for entry to Escravos River. Present draft limit 6.4 m. Dredging of channel 100 m. from Escravos down to 10 m. expected to be completed soon.

PILOTAGE: See "General" – "Pilotage" before first port.

Compulsory for all vessels. Whenever ships are bound for Sapele Port, Masters should send telegram at least 7 days in advance before ship's arrival at Escravos Fairway, to Escravos Pilot Station, P.O.Box 368, Warri, Nigeria, via 'Lagos (50W)' comfirming Ship's name, Call Sign, Flag, LOA, Draft, Port of destination, Last Port and accurate ETA Escravos Bar. When Escravos Pilot Station is aware of ship's ETA., it will arrange a reliable pilot for the ship, before her arrival at Escravos Bar. On approaching Escravos Fairway Buoy, Master should contact Escravos Pilot Station direct on VHF Channel 16 to report vessel's arrival and request the name of the Pilot boarding. Afterwhich the Pilot will be sent onboard outside the Breakwater to pilot vessel up river to Koko Mid-Stream Anchorage, where the Sapele Harbour Pilot normally comes aboard to take vessels alongside. Berthing operations are carried out during daylight hours only.

The mouth of Escravos River (5° 31′ 30″ N., 5° 07′ 20″ E.) is the main entrance for the Niger Delta Ports of Warri, Burutu, Koko and Sapele. Before entering any of the rivers, creeks and channels from Escravos to the above Ports, vessels will embark a Pilot from the Pilot Station before proceeding up river. Positions should be broadcast at frequent intervals and vessel should keep constant VHF listening watch on Channel 16. Pilot Station at Escravos is located 0.5 miles South of the Escravos Beacon and operates from 0600 hrs. to 1800 hrs. daily. Pilot boards inward bound vessels about 2.0 miles S.W. of the Breakwater from a motor boat flying 'SG' in international code Flags. Ships are advised to hoist the same 'SG' flags on the mast, on arrival at Escravos Bar. Positions and movements can be exchanged with other vessels in the vicinity on VHF.

In foggy weather periods, vessels are advised to proceed inside the Breakwater to the Pilot Station to embark a Pilot, as the pilot motor boat is not equipped with navigation aids. The IALA Maritime Buoy System 'A' (Red to Port) is adopted after the entrance down the Escravos River. Vessels should sound 3 prolonged blasts followed by one short blast (– – – ·) on the whistle as "Pilot Call Signal" on arrival at Buoys No. 11/12. when proceeding to the Pilot Station, at intervals of every 10 minutes. In such cases the Pilot will board inward bound ships after 1.0 miles from Buoys No. 13/14. Vessels sometimes drop anchor at the Pilot Station and wait for further instructions from either Koko or Sapele Port Control, before proceeding up river to Koko Mid-Stream Anchorage. On arrival of vessel at the Pilot Station, the Pilot usually boards with one helmsman and they may stay onboard until the ship sails back to Escravos Pilot Station. In most cases the helmsman stays onboard and the Pilot comes back when the ship is ready to sail.

ANCHORAGES: At Koko with max. LOA 170 m. and max. draft 6.4 m.

MAX. SIZE: Max. permissible length 170 m., draft 6.4 m., depth alongside berths 10.0 m.

HEALTH: See "Lagos".

RADIO: See "Lagos" for ETA advices to Agent.

VHF: Port Authority Sapele to be contacted on VHF Channel 16. Working hours 0700-1800.

TUGS: A tug is available as Koko to Sapele is a compulsory pilotage district.

BERTHING: Six berths (incl. one Ro-Ro) at new port. Mooring during daylight hours only.

MEDICAL: NPA Port Clinic with a doctor and a number of para-medical staff available Monday to Saturday.

FRESH WATER: Available in Sapele and supplied by water hydrant and by barge.

FUEL: Fuel oil available by barge from Warri. Diesel available locally. Both products in limited supply.

REPAIRS: No facilities.

DRY DOCKS: None.

GANGWAY/DECK WATCHMAN: Compulsory during hours of darkness while in port or at Koko Anchorage.

CLOSING/OPENING HATCHES: Either by crew or stevedores.

CUSTOMS ALLOWANCES: See "Lagos".

REPATRIATION: By road to Benin, or Warri, both connected with Lagos by regular air service.

TIME: GMT plus 1 hour.

POLICE/FIRE: Police/fire services are available in the port every day throughout the year.

TELEPHONES: External (P. & T.) and internal telephones are available in the port.

SHORE LEAVE: See "Lagos".

IDENTIFICATION CARDS: See "Lagos".

AUTHORITY: Nigerian Ports PLC, Sapele Port Complex, Private Mail Bag 4024, Sapele, Nigeria. *Cables:* Genports. *Contact:* The Port Manager.

AGENT: Alraine (Nigeria) Ltd., P.O.Box 4030, Sapele.
Tel. (234) 5441788. Telex: Lagos 21244.
N.B. Correspondence should be addressed to Warri office.

WARRI: 05.30 N. 05.44 E. (See Plan)

DOCUMENTS:
(a) Ship Entry Notice, SEN. (See "Lagos").
(b) 14 days prior arrival Agent requires:
12 copies of Manifest.
5 Stowage Plans.
5 Hatch Lists.
(c) On arrival Master to present:
7 Ports of Call Lists.
8 Crew Lists.
2 Vaccination Lists.
5 Animal Lists.
4 Arms and Ammunition Lists.
1 Extra Manifest for Transhipment (if applicable).
1 Stores List.
1 Crew Declaration List (crew belongings).
1 Maritime Declaration of Health.
2 Narcotics List.
2 Parcel Lists.
5 Passenger Lists.
1 Stowaway List.

All above to be prepared and if not applicable to be marked nil. Other forms prepared by Agent and furnished on arrival.

(d) Warri Ro/Ro Terminal Company require:
12 Copies of Manifest.
4 Copies of Dangerous/Hazardous Cargo List.
4 Copies of Discharge Plan.
2 Copies General Arrangement Plan for each vessel.

APPROACHES: Escravos Fairway Buoy Lat. 5° 30′ N., Long. 5° 04′ E. for entry to Escravos River. Present draft limit 6.4 m. Dredging of channel from Escravos down to 10 m. expected to be completed soon.

PILOTAGE: See "General" "Pilotage" before first port.

Compulsory for all vessels. Whenever ships are bound for Warri Port, Masters should send telegram at least 7 days in advance before ship's arrival at Escravos Fairway Buoy to the Harbour Master, Nigerian Ports PLC, Central Zone, Warri, confirming Ship's name, Call-Sign, Flag, LOA, Draft, Port of destination, Last port and accurate ETA at Escravos Bar. When Escravos Pilot Station is aware of ship's ETA, it will arrange a reliable pilot for the ship, before her arrival at Escravos Bar. On approaching Escravos Fairway Buoy, Master should contact Escravos Pilot Station direct on VHF Channel 16 to report vessel's arrival and request the name of the Pilot boarding and find out if vessel has permission to proceed inwards. After which the Pilot will be sent onboard outside the breakwater to pilot vessel up river to Bennett Island, where the Warri Harbour Pilot normally comes aboard to take vessels alongside. Berthing operations are carried out during daylight periods only.

The mouth of Escravos River (5° 31′ 30″ N., 5° 07′ 20″ E.) is the main entrance for the Niger Delta Ports of Warri, Burutu, Koko and Sapele. Before entering any of the rivers, creeks and channels from Escravos to the above ports, vessels will embark a pilot from the Pilot Station before proceeding up river. Positions should be broadcast at frequent intervals and vessel should keep a constant VHF listening watch on Channel 16. The Pilot Station at Escravos is located 0.5 miles South of the Escravos Beacon and operates from 0600 hrs. to 1800 hrs. daily. Pilot boards inward bound vessels about 2.0 miles S.W. of the breakwater from a stand-by pilot cutter (colour buff and green) belonging to Nigerian Ports PLC. Inward-bound vessels to call pilot cutter on VHF Channel 16 for their Pilots. Positions and movements can be exchanged with other vessels in the vicinity on VHF.

In foggy weather periods, vessels are advised to proceed inside the breakwater to the Pilot Station to embark a Pilot, as the Pilot Boat is not equipped with any navigation aids. The IALA Maritime Buoyage System 'A' (Red to Port) is adopted after the entrance down the Escravos River. Vessels should call Escravos Pilot Station on VHF Channel 16 on arrival for Pilot's information. In such cases, the Pilot will board inward-bound ships after 1.0 miles from Buoys No. 13/14. A Harbour Pilot takes over at Bennett Island.

Nigerian Ports PLC (previously Nigerian Ports Authority) conducts pilotage right from the Escravos Fairway to all the Delta Ports of Warri, Koko, Sapele and Burutu.

Note: Harbour Master, Pilots and Pilot Cutter, stationed at Escravos Pilot Station. All vessels should report their arrival to this Station on Channel 16. No call from any other station should be entertained. In case of lack of response from Escravos Pilot Station, call "Warri Port Control".

ANCHORAGES: 1 anchorage known as "the pool", opposite Okorodudu Town; max. draft for pool anchorage 14 ft. MLWS. Further anchorage at Forcados for vessels waiting to proceed to Burutu or Warri.

MAX. SIZE: LOA 156 m., and due to Escravos bar max. draft 6.4 m.

HEALTH: International Pratique Regulations prevail. Pratique *not* necessary when coming from another port in Nigeria.

RADIO: See "Lagos" for ETA advices to Agent.

VHF: Contact Port Authority and Agent via VHF Channel 16.

TUGS: 2 tugs available.

BERTHING:

Warri: The new Warri Port facilities now include:

11 hard quay berths of which 1 equipped with ramp for Ro/Ro.

10 buoy berths. Berthing daylight hours only. New Warri Port quay length 1,600 m. and depth alongside 11.50 m. 4 new sheds with total 28,800 sq. m.

Warri Refinery: 2 oil loading jetties and 2 cargo jetties specially for refined products. Berthing only during daylight hours. Refinery jetties total quay length 121.2 m. and depth alongside 7 m. Products available for lifting: AGO, HPFO, LPFO, DPK, PMS, LPGO Butane and Propane. Fresh Water available.

Private Jetty: Delta Steel Corporation at Aladja can accommodate vessels with max. draft 6.4 m.

CRANES: NPA Warri has got one 250 metric tonne floating crane and portal cranes of 10 metric tonnes and 6 metric tonnes. Mobile cranes also available.

UNBERTHING: Agent prepares outward Customs Clearance Certificate and delivers copy to Master. Agent books Pilot and advises Master time of boarding. Vessel to keep continuous watch on VHF Channel 16 for instructions from Harbour Master and Agent.

STEVEDORES: See "Lagos".

MEDICAL: Facilities available.

TANKERS: See "Berthing".

DENSITY: Brackish.

FRESH WATER: Available; delivered by barge or via hydrant.

FUEL: See "Lagos".

FIRE PRECAUTIONS: Port Authority provides modern fire-fighting equipment.

REPAIRS: Minor repairs only. *N.B.* Spare parts in short supply.

GANGWAY/DECK WATCHMAN: Compulsory in port and at anchorage Bennet Island during darkness.

OPENING/CLOSING HATCHES: By crew.

CUSTOMS ALLOWANCES: See "Lagos".

REPATRIATION: Regular airline services between Warri and Lagos.

TIME: GMT plus 1 hour.

POLICE/AMBULANCE/FIRE: All these services available in port area.

TELEPHONES: Not available – see Agent.

SHORE LEAVE: See "Lagos".

IDENTIFICATION CARDS: See "Lagos".

AUTHORITY: Nigerian Ports PLC, Central Zone, Warri, Nigeria.
Contact: General Manager.

AGENT: Intertrans (Nigeria) Ltd., 4 Khalil Road, POB 374, Warri. Tel: (234) 53232039. Telex: 43517.

NOTES

Please also advise Shipping Guides Ltd.

Commonwealth of the Northern Mariana Islands

SAIPAN (Commercial Port): 15.13 N. 145.44 E.

(See Plan)

PORT LIMITS: The Channel Entrance is marked by Buoys No. 2 and No. 3, 400 ft. wide, and the Freeway Channel marked by Buoys No. 4 and No. 5, and No. 6 and No. 7 extending 10,000 ft. length.

DOCUMENTS:

5 General Declarations.
5 Crew Manifests.
5 Passenger Manifests.
4 Crew Personal Effects Lists.
3 Sealed Stores Lists (food, medication, etc).
3 Cargo Manifests.
3 Dangerous Cargo Lists.
2 Crew Vaccination Lists.
2 Entry Permits.

Note: Entry Permit may be requested via cable to Northern Marianas Immigration or through local Agent.

PILOTAGE: Compulsory for vessels 300 g.r.t. and above. Vessels below 300 g.r.t. may request Pilot via Agent. Pilots are privately operated by Saipan Marine (Saimar). Tel: (670) 322-7345. Fax: (670) 322-7347, and Marianas Tugs and Barge (Martug). Tel: (670) 322-7788. Fax: (670) 322-5705. Private Pilot only available upon request with advance notice of at least 24 hours. Pilot boards at Tango Buoy (Pilot Station) at Lat. 15° 12′ 07″ N., Long. 145° 40′ 20″ E. Pilot communicates with Harbour Master and the vessels before entering or departing through VHF Channel 16.

ANCHORAGES:

Outside Anchorage: M (Mike): 100 ft. to 250 ft. depths with 800 yards radius, Lat. 15° 13′ 00″ N., Long. 145° 39′ 13″ E.

L (Lima): 50 ft. to 100 ft. depth with 600 yards radius, Lat. 15° 11′ 50″ N., Long. 145° 40′ 30″ E.

Inside Anchorage: N (November): 20 ft. to 40 ft. depths with 350 yards radius, Lat. 15° 13′ 30″ N., Long. 145° 42′ 30″ E.

RESTRICTIONS: No waste discharge within harbour or within territorial waters (3 miles). Harbour depth restricted to 30 ft. MSL.

MAX. SIZE: Berth space limited to 24 ft. draft and 500 ft. at longest portion of dock. Vessels longer than 500 ft. require special permission from Port Superintendent.

HEALTH: No formal clearance required; however, authorities may demand proof of immunisation against certain communicable diseases if ship is coming from infected countries.

VHF: Saipan Port Control on Channel 16 for arrival and berthing assignment. U.S. Coastguard and Civil Defence on Channel 16 for emergency and distress.

RADAR: Not available.

TUGS: Saimar: 2×2,200 h.p. and 1×200 h.p. Martug: 1×2,500 h.p. (Also see "Pilotage").

BERTHING: Charlie No. 1: 200 ft. length and 18 ft. depth.
Charlie No. 2/3: 496 ft. length and 24 ft. depth.
Charlie No. 4: 150 ft. length and 16 ft. depth (salt water).

CRANES: 2×50 ton cranes and 1 × 165 ton crane.

BULK CARGO FACILITIES: None.

SPECIALISED CARGO HANDLING FACILITIES: None.

BRIDGES: None.

STEVEDORES: Available on request prior to arrival of vessel, at least 24 hours advance notice required.

MEDICAL: At least 48 hours advance notice for requests other than emergencies. Hospital facility is limited.

TANKERS: Discharge at Baker Dock with 6 in. × 1,500 ft. long floating hose.

FRESH WATER: Available by private water tanker.

FUEL: Mobil diesel fuel ASTM No. 2 D grade, flash point 150°, API 34 – 42, viscosity SSU at 100°F. 33 – 45.

REPAIRS: No repair facilities.

DRY DOCKS: None.

SURVEYORS: John Robinson and Larry I. Guerrero.

GANGWAY/DECK WATCHMEN: Available upon request.

HATCHES: Stevedore in charge.

CUSTOMS ALLOWANCES: 1 case beer; 0.6 gallons spirits; 3 cartons cigarettes, duty free for personal consumption.

REPATRIATION: Not possible.

AIRPORT: Approximately 9 miles from port. Continental Airlines, Air Mike Express, All Nippon Airlines, Northwest Airlines and Japan Air Lines serving Saipan from Guam and Japan.

TIME: GMT plus 10 hours.

HOLIDAYS: New Year's Day (January 1st); Commonwealth Day (January 9th); President's Day (February 19th); Covenant Day (March 23rd); Memorial Day (May 28th); Liberation Day (July 4th); Labour Day (1st Monday of September); Colombus Day (2nd Monday in October); Citizen's Day (November 5th); Veteran's Day (November 12th); Thanksgiving Day (last Thursday of November); Constitution Day (December 7th); Christmas Day (December 25th).

POLICE/AMBULANCE/FIRE: Police Tel: 234-6333 and 234-6431. Ambulance Tel: 234-6222 and 234-6115. Fire Tel: 234-9222 and 234-6222.

EMERGENCY CO-ORDINATION CENTRE: U.S. Coast Guard Tel: 233-9495. Fax: 233-9493. Civil Defence Tel: 322-9528.

SERVICES: Scuba divers available.

BANKS: Bank of Guam, Telex: 607. Union Bank, Telex: 634. Bank of Saipan, Telex: 682. Bank of Hawaii, Telex: 621.

SHORE LEAVE: Crew members are allowed on shore once cleared by Immigration and Customs.

DELAYS: Due to limited berthing space, vessels are usually delayed until the berth is vacant.

SHIPMASTER'S REPORT: May 1991.

1. On this occasion, all ETA's and other required details were passed by Guam Agency, which, in most cases, is first port of discharge. On arrival at the berth, the vessel is visited by Customs and Immigration Officials. Forms and shore passes have to be made, which are later picked up by the Agent.
2. Mooring and unmooring only by daylight.
3. Pilotage compulsory.
4. Sea Anchorage: Close and East of Outer Buoy with good holding ground.
5. Approaches to the Berth: From the Outer Buoy to the first two buoys of the channel, steer 045° (approx.). The first two buoys are Buoys No. 2 and 3. When entering the channel, which is 60 m. wide, steer a course of 088° and keep to the North side of the channel. After passing Buoys No. 6 and 7, steer a more Southerly course and head for Pier B. When approximately 2 cables from Pier B, change course to 045° (approx.) with the help of 2 tugs. When abeam of Pier B, drop starboard anchor and move backwards. When 4 shackles are out on the starboard anchor, drop port anchor. With the assistance of the tugs, the vessel is moved in to a position heading 310° (approx.). The first ropes are sent from the starboard quarter, and the vessel is heaved backwards to a position approximately 40 m. from a line connecting Piers A and B. This line is clearly marked with orange buoys. When the ship is in a good position, she has approximately 10 shackles on the starboard anchor and 7 shackles on the port anchor. From starboard side aft 5 soft lines are sent to the shore (length 100 m. approx.), and from portside aft 2 soft lines of approximately 180 m. each.

Max. draft as advised by pilot is 7.0 m.
Max. draft in the berth is 9.4 m.
For berthing, wind speed not to exceed 20 knots.

When the vessel is in the berth, the wind speed is monitored, and when there is too much movement in the mooring, the vessel has to leave the berth. No exact wind speed is given.

One 6 in. floating hose taken on the portside.
Accommodation ladder on portside.
Discharge rate 350 cu.m./hr. (approx.) for white products.
On completion, and between different grades, there is a waterplug.

For approaching, B.A. Chart can be used. However, for proceeding to the berth, it is advisable to use U.S.A. Chart No. 81076.

SHIPMASTER'S REPORT: June 1991.

Our vessel discharged part cargo at Apra (Guam), leaving the following cargo on board for Saipan:

707 tonnes Unleaded Regular Mogas.
4,983 tonnes Gas Oil.

The planned draft for arrival at Saipan was 1.94 m. (forward) and 7.02 m. (aft). Shortly before completing discharge at Guam, the Agent delivered on board a Fax from the Saipan sub-agent requesting a maximum arrival draft of 22 ft. This Fax had been received by Agent in Guam one week before, but apparently no action had been taken to pass the information on. On arrival at Saipan Fairway Buoy, cargo was run to reduce the draft to 22 ft.; this was not possible earlier, as it placed the stress over seagoing limits.

There was a delay on arrival at Saipan Fairway. There is one tug based in Saipan; the second tug required for berthing comes from Guam, and it arrived one hour after us. It then had to berth for Inwards Clearance before it could work. The pilot also flew up from Guam (the same pilot berthed and unberthed the vessel at Guam and Saipan). He appeared to be the senior pilot, and was very good. He recommended berthing and unberthing during daylight hours only. I would agree with this as a requirement.

The berthing had been discussed with the pilot while in Guam, and proceeded more or less according to plan. The starboard anchor was let go earlier than originally planned, resulting in a shorter scope. The weather was reasonably good with the wind from E.N.E. It had blown up a little stronger with the passing of a rain shower, while the vessel was waiting at the Fairway Buoy, but did not give any problems during the berthing. Both tugs were used to push on the portside. Single length ropes were sufficient to reach to Dock B, but Dock A finished about 200 m. away, requiring ropes to be lashed end-to-end. When the ropes were made fast, the lashings were just outside the fairleads. Final mooring were as shown on the "Plan". Mooring took 1 hour 50 minutes, against a previous best of some 6 hours. If we were to go to Saipan again, I would plan not to use the polypropylene rope on the starboard quarter to Dock B, and would then be able to run it as a third line on the port quarter to Dock A.

The small yellow marker buoys appear to have shifted, and should be repositioned to mark the limit of shallow water.

There was one Shell boat used for all operations: A fibreglass speedboat powered by an outboard; it was adequate for running the moorings. There was one gang ashore to take the moorings. To get from Dock B to Dock A, they had to climb into their truck and drive up to the road, completely around the Shell tank farm. However, this did not particularly delay operations. The same boat was made available to ferry ship's personnel ashore. It was equipped with ship's lifejackets for the time in port (the boat handlers had their own lifejackets).

The weather remained fair throughout the port call. We were fortunately between tropical depresssions, one passing just before we arrived and Guam. The wind remained from the E.N.E. at about 12 knots, i.e. on the starboard beam.

The berth can only be described as a provisional arrangement. One 50 tonne bollard on each quarter (or possibly 2×50 tonne bollards, there were 2 bollard posts set in each block of concrete) can barely be adequate. Fortunately on Dock B, there is also what appears to be the shank of a buried anchor sticking up out of the ground, and one rope was taken to this as a back-up.

There were 2 floating strings of 6 in. hose, each said to be 1,400 ft. long. Initially discharging started with one grade on each hose. After completion of the Mogas parcel, the line was plugged with water, and then also used for gas oil. On completion of discharge, both lines were cleared with water and then blown with air. To blow with air, an air hose was connected at the vessel's manifold crossover vent connection, and air-blowing to the shore appeared very successful.

The gas oil discharged on one hose was received direct by the power station some distance away, at a bulk rate of 267 cu.m./hr. The unleaded Mogas on the second hose to Shell, discharged at a bulk rate of 351 cu.m./hr. With both hoses in use on gas oil, a rate of 585 cu.m./hr. was achieved.

SHIPMASTER'S REPORT: June 1992.

Saipan is part of the Northern Marianas Group, and is considered as U.S.Commonwealth. U.S.A. flag is flown.

Cargo orders indicated that Guam Agents (Atkins Kroll) would handle vessel at Saipan as well. However, they appointed Microl Corporation to handle agency work.

Microl is a sister company of Atkins Kroll, Guam.

Their details are as follows:

Microl Corp., P.O.Box 267, Saipan, MP 96950. Tel: 234-5911/18. Telex: 783-613 (answerback Microl Sp or Microl Spn). Fax: 234-6514.

Papers required for Port Officials are:

Customs Entry and Declaration (one per crew member, supplied by Atkins Kroll and delivered to vessel at Majuro).

Immigration Form 958, one per crew member (as above).

2 copies General Declaration.

2 copies Stores List.

2 copies Last Port Clearance.

4 copies Bill of Lading.

4 copies Cargo Manifest.

4 copies Standard Crew List.

Pilotage is daylight only, and pilot boards at Buoy "T", 2 miles S.W. of entrance channel.

There is a shoal area West of the Buoy "T", running N.E./S.W., about 5 miles long and 1 mile wide, average depth approximately 14 fathoms, where vessel could anchor whilst awaiting daylight. However, as Admiralty Sailing Directions indicated, that it is only suitable as a temporary anchorage for larger vessels, it was decided to drift off at a safe distance until pilot boarded at 0630 hrs. following day.

Pilots were American, and both efficient and friendly. The entrance channel buoys appeared to be in the correct positions. The channel was rather narrow, and with vessel drawing 7.0 m., there was 7.0 m. under the keel.

The berth area is approximately 0.5 cables N.W. of Pier A on B.A. Chart No. 1101 (Saipan Harbour Plan).

As vessel cleared Buoys No. 6 and 7, one tug was made fast on the port maindeck forward, using tug's line. The vessel then started a slow turn to starboard, to a position where vessel was North of the leading line markers on Pier B. The port anchor was then dropped, and cable slackened out to 8 shackles on deck as vessel moved forward, turning to port with tug pushing sideways. Then the starboard anchor was dropped and tug let go.

The tug re-secured on the port maindeck aft. The starboard cable was run to three and a half shackles, with vessel dropping astern into the berth, with the tug pushing the stern round. Cables were then slackened as required, until the stern was close enough to run the after lines.

There are marker buoys, not shown on the chart, which indicate the shallow water at the stern end of the berth area, and pilots advise it is safe to put the stern close to the buoys. The harbour bottom is also scattered with coral heads and wrecks, which can, at times, foul anchors and cables when berthing/unberthing. However, vessel did not experience any problems at either time.

The prevailing wind currently comes from the N.E., and standard aft moorings are 4 starboard quarter lines and 3 port quarter lines, or if wind likely to be strong, 5 starboard quarter and 4 port quarter lines.

Full length lines are needed as the leads are very long.

The tug continued to push the stern round towards Pier A to enable starboard quarter lines to be run to bollards on the end of the pier. Once these lines were out, the stern was brought back to port with the aid of the tug and wind, slacking on starboard lines as required to enable port quarter lines to be run to bollards on a concrete block, especially positioned on waste ground for the purpose. When the port lines were balanced for weight and secured, the tug pushed the stern back into the middle of the berth, and starboard lines were heaved up, balanced and secured. Weight was taken on both anchor chains to prevent the stern dropping back any further.

With the vessel in final position, Managaha Island is right ahead.

Vessel discharged 3 grades through 2×6 in. connections to 2×6 in. floating hoses. Length of shore lines 1,500 ft. Overall rates achieved were 327 cu.m./hr. for Premium ULG, 227 cu.m./hr. for Fuel Oil and 255 cu.m./hr. for Gas Oil. 500 barrels of Gas Oil was retained to flush the Fuel Oil line through, with water plugs as final line clearance after each grade.

As the tank facilities are limited here, line flushes are critical.

The terminal requested that the Gas Oil flush be down the ship's Gas Oil line into the Fuel Oil hose. This required changing the hose over. The reason for doing so was that on a previous ship's visit, a slug of Fuel Oil went down the line at the end of the Gas Oil line flush, after the terminal had changed back over to the Gas Oil tank. The ship was then issued with a Protest for Contamination.

The terminal is currently planning to install a Slop Tank which will help to alleviate such problems. It is also planning to install a Jet Tank.

Unmooring was fairly standard. The tug was initially made fast on the port maindeck aft to manoeuvre the stern across the berth. The port quarter lines were let go first, then starboard quarter lines. Once all after ropes gone, vessel commenced heaving the starboard anchor, and when all clear aft, the engine was started. The tug then transferred to the port maindeck forward and re-secured. When the starboard anchor was aweigh and clear, the port anchor was heaved up. Once the port anchor was sighted and clear, vessel then manoeuvred into position to enter the channel. No problems were encountered through the channel, and once clear, the pilots departed.

AUTHORITY: Commonwealth Ports Authority, P.O.Box 1055, Saipan, MP 96950, Commonwealth of the Northern Mariana Islands. *Contact:* Roman T. Tudela, Executive Director. *Tel:* (670) 234-8315/16/17. *FAX:* (670) 234-5962. Tony Castro, Port Superintendent. *Tel:* 322-9865, 322-9973, 322-4036. *FAX:* (670) 322-4710.

GENERAL:

REGULATIONS:

The following was translated by Shipping Guides Ltd.

REGULATIONS FOR NAVIGATING AND APPROACHING THE MARITIME DISTRICT OF GRENLAND:

Compiled by the Fisheries Department on 21st January 1988 in accordance with Section 6 of the Law of 8th June 1984, No. 51 covering ports and navigable waters.

Section 1:

Geographical and Appropriate Scope of Effect:

The Regulations are valid for navigable waters to the North of a straight line through the Northernmost point of Molen and the Northernmost point on Sasteinen.

The Regulations are valid for vessels over 50 g.r.t. or where the vessel is not measured with the greatest length over 24 m. with lesser other dimensions as determined in the individual paragraphs. They are also valid for tugs with the greatest length or beam exceeding 24 m. Vessels which push, or those which are pushed shall be reckoned as a vessel in accordance with these regulations.

Within the category of vessels with hazardous cargoes shall also be included those which have very combustible gases on board with a flash point lower than 23° C and which in ballast are not gas-free.

For the transport of bulk chlorine on all occasions the special regulations appertaining thereto are also valid.

Section 2.

Definitions:

Vessels are deemed in these regulations, and as governed by the Law of 8th June 1984 covering ports and navigable waters, to be any floating installation which can be used as a means of transport, navigation, support, production or storage, including underwater vessels of every kind. Also included are hovercraft. The Department, on application will determine by individual resolution or further regulations, what may be determined as a vessel.

G.R.T. means gross registered tons in accordance with the Ships' Measurement Convention of 1947. Conversion of gross tons in accordance with the 1969 Convention to gross registered tons shall be effected in accordance with the Maritime Navigation Directorate Regulations of 14.6.1982 covering measurement of vessels, with subsequent amendments.

For vessels with International Measurement Certifications (1947 Conventions) showing two different gross registered tonnages, the greater tonnage shall be deemed to be valid.

Hazardous Cargo shall be termed as:

1. *Packed hazardous goods and solid bulk loads* which are covered by the terms set out in the International Maritime Safety Convention SOLAS 1974 Chapter VII, Part-A and which are listed in the respective code International Maritime Dangerous Goods Code (IMDG-code) and Code of Safe Practice for Solid Bulk Cargoes (BC-code) Appendix B, with subsequent amendments, the quantity of which is 10 tons or more.

2. *Liquid bulk chemicals* which are covered by the terms set out in the International Maritime Safety Convention SOLAS 1974, Chapter VII, Part B. The materials are set out in codes:

For new vessels (built after 1st July 1986) International Code for the Construction and Equipment for Ships Carrying Dangerous Chemicals in Bulk (IBC Code) Chapter 18 with subsequent amendments.

For existing vessels (built before 1st July 1986) Code for the Construction and Equipment of Ships Carrying Dangerous Chemicals in Bulk (BCH-code) Chapter 6 with subsequent amendments.

3. *Liquid gases in bulk* which are covered by the terms set out in the International Maritime Safety Convention SOLAS 1974 Chapter VII, Part C. The materials are set out in codes:

For new vessels (built after 1st July 1986) International Code for the Construction and Equipment of Ships Carrying Liquefied Gases in Bulk (IGC Code) Chapter 19 with subsequent amendments.

For existing vessels (built after 31st October 1976, but before 1st July 1986) Code for the Construction and Equipment of Ships Carrying Liquefied Gases in Bulk (Gas Carrier Code) with subsequent amendments.

For existing vessels (built before 31st October 1976) IMO Code for existing gas carriers with subsequent amendments.

Materials which have a flashpoint of 23° C or more shall not be considered as dangerous cargoes.

Furthermore, the following materials shall not be considered as hazardous cargoes.

Product name	*Chemical formula*	*UN No.*	*UN Class*
Ammonium nitrate	NH_4NO_3	1942	5.1
Amm. nitrate fertiliser		2067	5.1
Amm. nitrate fertiliser		2068	5.1
Amm. nitrate fertiliser		2069	5.1
Amm. nitrate fertiliser		2070	5.1
Amm. nitrate fertiliser		2072	5.1
Amm. nitrate fertiliser		2071	9
Argon	Ar	1006/1951	2
Potash lye	KOH	1814	8
Carbon dioxide	CO_2	1013/2187	2
Formic acid	HCOOH	1779	8
Magnesium granules	Mg	2950	4.3
Sodium hypochloride	NaOCl	1791	8
Sodium lye	NaOH	1824	8
Spent caustic			8
Nitrogen	N_2	1066/1977	2
Salmiac spirit	NA_4OH	2672	8
Nitric acid	HNO_3	2031	8
Salt acid	HCl	1789	8
Sulphuric acid	H_2SO_4	1830	8
Titanium trichloride	T_1Cl_3	2441	4.2

The Coastal Directorate will be able to determine whether new materials may be considered as hazardous cargoes. Their deliberations will be based on whether possible damage may result to the environment as the consequence of grounding, collisions, etc.

Section 3

Traffic Centre:

The Traffic Centre at Brevik can set in motion the safety measures considered to be necessary to afford maritime traffic the highest degree of safety at all times. The Traffic Centre cannot actively intervene in the sailing and navigation of a vessel. These regulations do not detract in any way from the responsibility of a Ship's Master for her movement, navigation and manoeuvring.

The Traffic Centre shall see to it that these regulations and orders are complied with.

Vessels approaching or already in navigable waters must address all information and inquiries concerning their sailing and navigation to the Traffic Centre by VHF radio telephone Channel 80, or by telephone or telex. Radio traffic concerning a vessel's commercial operations must be directed over the nearest coastal radio station.

Section 4

Permission:

Vessels wishing to use the navigable waters, must seek prior permission from the Traffic Centre. Permission must be requested in good time and at least 1 hour prior to the arrival of the vessel in the navigable waters or before leaving her berth, anchorage or other mooring installation in the navigable waters.

Vessels carrying hazardous cargo must, however, report their arrival in the navigable waters 24 hours in advance.

The Traffic Centre can, where necessary to ensure safe traffic development, amend, withdraw or set special conditions for permission.

The Traffic Centre can, in individual cases, give a vessel permission to use parts of the navigable waters.

When applying for permission, the following details must be given to the Traffic Centre:

(a) Name of Vessel.
(b) Call Sign.
(c) Nationality.
(d) Name of Master.
(e) Length Overall.
(f) Beam.
(g) Draft.
(h) GRT.
(i) Port of destination.
(j) Type of cargo.
(k) Amount of hazardous cargo in tons.
(l) Estimated time of arrival.
(m) Estimated time of departure.

Vessels are required to give further information which the Traffic Centre may deem essential for a safe and effective development of traffic or which the Master of the vessel considers to be necessary.

Section 5

Position reporting and requirements for listening:

Vessels intending to use the navigable waters, must be equipped with fully operative maritime VHF radio telephone.

Such VHF radio installations must be operated from the vessel's mains voltage, but must have the facility for rapid changeover to battery operation, or the vessel must be equipped with portable VHF with battery charger. Such portable VHF must have sufficient range.

All communications with the Traffic Centre on VHF Channels 80, 16, 14, 13 and 12 are automatically recorded on magnetic tape.

Vessels must send a position report on:

(a) Passing the Southern limit of the navigable waters.
(b) Leaving the quay, anchorage or mooring installation.
(c) Arrival at the quay, anchorage or mooring installation.
(d) Passing other positions which may be determined by the Traffic Centre.
(e) In the event of accident.
(f) The request of the Traffic Centre.

Reports must contain the following information:

On entry:

Name of vessel.

New time of passing the Southern limit of the navigable waters.

New estimated time of arrival at the quay, anchorage or mooring installation.

New time of arrival at the quay, anchorage or mooring installation.

On sailing:

Name of vessel.

Time of leaving the quay, anchorage or mooring installation.

Estimated time of passing the Southern limit of the navigable waters.

Actual time of passing the above limit.

On sailing within the navigable waters:

Name of vessel.

Sailing time from quay, anchorage or mooring installation.

Estimated time of arrival at the quay, anchorage or mooring installation.

Time of arrival at the quay, anchorage or mooring installation.

The position report must be addressed to the Traffic Centre on VHF Channel 80.

If this position report cannot be given directly to the addressee VHF station, it must be transmitted without delay by another means, in port by the use of telephone or telex, and at sea over Tjome Radio.

Vessels underway in the navigable waters must listen out continuously on VHF Channels 16 and 80.

This requirement is valid for all vessels equipped with VHF radio telephones, irrespective of the vessel's size.

Section 6

Limitation of visibility:

Where visibility is less than 1 nautical mile (1,852 m.) in the navigable waters or a part of them, the Traffic Centre will hold back all vessels with hazardous cargoes.

Where an anchored vessel with hazardous cargo has free visibility to the quay or mooring installation, the Traffic Centre may, nevertheless, permit her to proceed to such quay or mooring installation where the Centre considers it to be appropriate. The same holds good for movement from the quay or mooring installation to a nearby anchorage.

Section 7

Capacity limitations:

On passing Dypingen, Kalven and Brevikstrommen, no vessel may have an overall length, beam and draft exceeding those quoted below:

Dypinen:

LOA	198.1 m. – 650 ft.
Beam – vessel with hazardous cargo	27.4 m. – 90 ft.
Beam – other vessels	30.5 m. – 100 ft.
Draft	10.4 m. – 34 ft.

Kalven:

LOA	274.3 m. – 900 ft.
Beam	45.7 m. – 150 ft.
Draft	13.4 m. – 44 ft.

Brevikstrommen:

LOA	198.1 m. – 650 ft.
Beam – vessel with hazardous cargo	27.4 m. – 90 ft.
Beam – other vessels	30.5 m. – 100 ft.
Draft	9.9 m. – 32.5 ft.

Pilots in Grenland can, in special circumstances, give vessels with a draft up to 10.4 m. (34 ft.), without hazardous cargo, permission to pass Brevikstrommen in daylight.

Section 8

Traffic separation:

The Traffic Centre indicates which course the vessel must use between Langsundsbukta and Brevik when she applies for permission to enter the navigable waters.

Section 9

Anchoring:

Vessels may only anchor if it is necessary. Before a vessel proceeds to an anchorage, permission must be obtained from the Traffic Centre. The Traffic Centre, on the grounds of safety, may indicate a specific anchorage to which the vessel may proceed. Anchoring, with undernoted exceptions, may only take place in the following areas and positions:

Helgerofjord:
A. Amlirogna Light in a straight bearing 062°, 0.6 nautical miles distant.
B. Amlironga Light in a straight bearing 046°, 0.4 nautical miles distant.
Eidangerfjord:
C. North on a line running East-West through Southernmost point of Orviktangen.
Frierflaket:
D. Ringsholmen Light in straight bearing 192°, 1.1 nautical miles distant.
E. ,, ,, ,, ,, ,, 207°, 1.1 ,, ,, ,,
F. ,, ,, ,, ,, ,, 202°, 0.9 ,, ,, ,,
G. ,, ,, ,, ,, ,, 212°, 0.9 ,, ,, ,,
H. ,, ,, ,, ,, ,, 219°, 0.7 ,, ,, ,,
I. ,, ,, ,, ,, ,, 226°, 0.9 ,, ,, ,,
Herrebukta:
J. Rafsnes Quay No. 3 in straight bearing 125°,0.7 nautical miles distant.
K. Rafsnes Quay No. 3 in straight bearing 125°, 0.4 nautical miles distant.

Traffic Centre can in special cases indicate other anchorages.

A vessel may anchor outside these areas where it is necessary to avoid danger. The Traffic Centre must then be informed immediately.

The Traffic Centre can refuse to give vessels at anchor permission to leave the anchorage, and can order already expedited vessels to leave anchorages.

Section 10

Use of Tugs:

Vessels over 500 g.r.t. carrying liquid condensed gases and vessels over 2,000 g.r.t. carrying hazardous cargo in bulk as defined in these Regulations must have tugs attached during entry and leaving and during manoeuvring to and from quays, mooring installations or anchorages.

The Traffic Centre can instruct a vessel which is under the above-mentioned tonnage limits and which is carrying gas or other hazardous cargoes in bulk to use tugs.

On entry, the tow lines must be connected immediately after the Pilot has come on board, insofar that wind and sea conditions do not prevent it. On sailing, tugs must be attached before vessels leave the quay, mooring installation or anchorge, and until they have passed Aroya.

The Traffic Centre can, when from a safety aspect it is deemed necessary, order the use of several tugs.

Vessels without hazardous cargo, but which exceed one or more of the following dimensions,

LOA	182.9 m. – 600 ft.
Beam	26.2 m. – 86 ft.
Draft	9.9 m. – 32.5 ft.

must have tugs attached when underway in a zone which in the South is limited by a line on bearing 045°/225° True, through Gjermesholmen Light and in the North limited by a line on bearing 270° True, through Saltbuodden Light.

Tugs used must have the capacity to control the movements of a vessel at all times.

Section 11

Tow lines:

During entry and sailing, vessels with hazardous cargo must have attached and lowered to the water fore and aft a spark-preventing and fire-resistant tow line with eye.

Section 12

Pleasure boat traffic:

Pleasure boats and open craft must refrain from entering the paths of large vessels and vessels navigating at night. They must as far as possible sail along the coast within a distance of 100 m.

Pleasure boats and open craft must not cross the path or course in such a way that the progress of a vessel which can only sail safely in such path or course is prejudiced. Sea Navigation Regulations 44 and 9 also apply.

The current section covers pleasure boats and open craft irrespective of their size.

Section 13

Dispensations:

In very special cases, the Coastal Directorate can give dispensation from these regulations. Application for dispensation must be submitted in writing to the Coastal Directorate as far as possible 1 month prior to the vessel's arrival. The Traffic Centre may in very special circumstances grant dispensation from the terms covering permission in accordance with Section 4.

Section 14

Penalties:

Where intentional or inadvertent transgressions of these regulations occurs, penalties in accordance with Penal Law Section 418 will be applied, unless stronger penalties are deemed necessary.

Section 15

Validity:

These Regulations enter into force on 1st March 1988. From that date, the Regulations covering entry in the port districts in Grenland as promulgated by the Fishery Department on 1st March, 1984, are cancelled.

(Coastal Directorate/Nautical Department, Oslo, 5th February 1988).

PILOTAGE:

REGULATIONS FOR THE USE OF PILOTS IN THE GRENLAND AREA

Issued by the Fishery Department 25th March 1988 in conjunction with the law governing the use of pilots of 9th April 1948. No. 2 Section 5, confirmed by Royal Resolution 29th April 1977.

Section 1

State Pilots must be used by vessels over 100 g.r.t. navigating in the waters to the North of a line through the North point of Molen – North point of Sasteinen. Furthermore, to the South of a straight line from Herreelva in Bamble to the Southern end of the Western Quay at Porsgrunn Factory.

Section 2

Vessels in these regulations are, in the law covering pilot usage of 9th April 1948 Section 1, also include lighters, loaded barges, pontoons, drilling platforms and similar floating installations, floating docks and dredgers.

G.R.T. means gross registered tons in accordance with the Ships' measurement Convention of 1947. Conversion of gross tonnage in accordance with the 1969 Convention to gross registered tons is effected in accordance with the Maritime Directorate Regulations of 14th June 1982 covering measurement of vessels, and subsequent amendments.

For vessels with International Measurement Certificate (1947 Convention) which indicates two different gross registered tonnages, the highest tonnage shall be taken as that valid.

Section 3

The Coastal Authority's No. 1 District or those which it authorises can give dispensation from the conditions in Section 1 for vessels under 500 g.r.t. which are not carrying hazardous cargo, when the ship's Master can prove that he frequently visits ports in the area and has therefore gained knowledge of the navigable waters and has always complied with the rules and conditions valid on each occasion for sailing and navigating in the navigable waters.

Furthermore, dispensation can also be given for vessels under 2,000 tons g.r.t. which are not carrying hazardous cargoes or cargoes covered by the rules in the International Convention governing the prevention of Pollution for ships MARPOL 73/78, where the Master or Chief Officer can prove that he has frequently visited ports in the area and has gained navigational knowledge of an adequate nature, and that he is well acquainted with the regulations and conditions which on every occasion are valid for navigation and sailing in the navigable waters. For Chief Officer it is required that in such cases they fulfil the conditions for acting as Masters of incoming vessels.

Dispensation may also be forthcoming on some strict conditions from the terms of Section 1 for vessels of 2,000 g.r.t. or more which are not carrying hazardous cargoes or cargoes which are covered by the rules in the International Convention covering prevention of Pollution from ships MARPOL 73/78. Ships' Masters or Chief Officer must in such cases also be able to prove that within the last 24 months they sailed in the navigable waters under the guidance of a State Pilot in the vessel in question or corresponding with at least 8 voyages in the navigable waters. Furthermore, ships' Masters or Chief Officer must present themselves to the Pilotage Authority in Grenland for examination concerning knowledge of the navigable waters and current regulations. The Coastal Directorate will give more precise details of this on application.

Requests for dispensation must be sent through the ship's Agent to the Pilotage Authority in Grenland. Dispensations given are valid for up to 2 years but can, however, be extended.

Section 4

When dispensation is used, there must be a navigator on the bridge who, in accordance with the conditions of Section 3, fulfils the requirements for navigation in the area without the use of a State Pilot.

Section 5

Where intentional or inadvertent transgressions of these regulations occur, penalties in accordance with Penal Law Section 418 will be applied, unless stronger penalties are deemed necessary.

Section 6

These regulations permit no alterations in the rules for the use of a state pilot for foreign non-military vessels over 50 g.r.t. as per Royal Resolution of 9th February 1968 covering forbidden maritime areas on Norwegian territory.

Section 7

These regulations come into force on 1st April 1988.

From the same date, the Regulations covering the use of pilots in the Grenland area as promulgated by the Fishery Department on 21st June 1978 with subsequent amendments are cancelled.
AUTHORITY: Coast Directorate (Harbour, Lighthouse and Pilotage Services), P.O.Box 8158, 0033 Oslo 1, Norway. *Tel:* (02) 11 40 90. *Telex:* 21555 KDIR N. *FAX:* (02) 42 48 35. *Cables:* Kystdirektoratet, Oslo, Norway.

AAHEIM: 62.02 N. 05.32 E.

SHIPMASTER'S REPORT: January 1989.

LOCATION: Aaheim, a small ore exporting village, lies in the Vanelvs Fjord. The berth is well sheltered by the islet of Torvhl in the West and the mainland to the South and East.
DOCUMENTS:
Ship's Register.
Stores List, 2 copies.
Private Property List, 2 copies.
Crew List, 2 copies.
Maritime Declaration of Health.
PILOTAGE: Give 24 hours notice of ETA to Kristiansund Pilots. (See "Notice"). When approaching from the South, the Pilot boards in position Lat. 62° 12′ N., Long. 05° 18′ E. When approaching from the North, the Pilot boards off Runde Island.
ANCHORAGE: None available outside. If due to strong winds vessel is unable to berth, then it is possible to anchor about 0.5 miles West of Fiskaahl Light (North of Slagnes).
MAX. SIZE: Max. permissible draft 13.5 m.
TUGS: One tug is available at all times. If a second tug is required, it may be called from Alesund.
BERTHING: Vessels normally berth port side to. The length of the quay available for loading is limited. Hence one shore fibre line has to be picked up and made fast at the stern. This acts as a stern line. As the stern extends outside the jetty, the remaining lines are all back springs. At least one breast line should be given due to the possibility of strong offshore winds.
LOADING: For loading lump olivine, only one shore loader is available, which runs on rails over a length of 75 m. The loader has an outreach of 16 m. The vessel has to be shifted frequently to enable loading at all hatches. The rate is claimed to be 1,000 tonnes p.h. but averages about 800 tonnes p.h. due to frequent conveyor breakdowns. For the finer grades (0 – 3 mm.) a rate of 2,500 tonnes p.h. can be achieved.
DENSITY: 1025.
FRESH WATER: Excellent drinking water available. No charge. Shore hoses available.
FUEL: Not available.
REPAIRS: Only minor repairs possible.
REPATRIATION: By taxi to Alesund and a 45 minute flight to Oslo.
CUSTOMS ALLOWANCE: 1 bottle spirits and 200 cigarettes per person.
GENERAL: Olivin (Magnesium Silicate + 7% Iron Ore). The world's largest deposit is found in Norway.

The annual world consumption of olivin is about 5 million tonnes and 2.1 million tonnes is shipped every year from Norway, thereby meeting almost 40% to 45% of the world's needs.
Holds/Tunnel Wash: No restrictions. Possible to wash down cargo holds and tunnel when alongside. However, the Agent has to be informed.
Stores: Not available.
NOTICE: Dated: July 1988.
INFORMATION ABOUT THE PILOT SERVICE IN MORE AND TRONDELAG:

The Coast Directorate has established new Regulations regarding ordering of pilot services.

As it will take some time before an official translation into English language is ready for distribution from the central authorities, we give below some information about the main points:

Vessels approaching from the sea, and vessels in port, which desire a pilot or due to national regulations are enjoined to use pilot in restricted areas, shall order the pilot with at least 24 hours notice. The order shall be confirmed 6 hours before arrival/departure and a final confirmation should be given 2 hours before arrival at the pilot station (boarding ground) or departure port.

When ordering a pilot the following information should be given about the vessel:
(a) Name.
(b) Call sign.
(c) Nationality.
(d) LOA and beam, or gross registered tonnage.
(e) Draft.
(f) Type of cargo.
(g) Destination.
(h) Purpose of call.
(i) ETA pilot station (boarding ground)/ETD port.
(j) Whether one or two pilots are required.

If the pilot has been ordered to report to a certain place at a certain time, but has to wait for the ship, waiting money has to be paid according to the Regulations for Coastal fees.

If long waiting time occurs, the pilot may be called back, due to lack of available pilots. A new pilot must then be ordered.

The new Regulations are implemented 1st August 1988.

More and Trondelag Pilot District includes the pilot stations Trondheim, Kristiansund N., Aalesund and Runde. The office is situated in Kristiansund and ordering of pilots from the stations mentioned should be given to Kristiansund.

Post address: Losoldermannen i More og Trondelag,
Kaibakken 1,
6500 Kristiansund N.,
Norway.
Telephone: 073 – 70800.

Out of office hours the pilot cutter, if the cutter is in port, receives orders for pilot on the same telephone number. If she is at sea, mobile telephone number 090 – 32997 may be used.

For direct communication between vessels and pilot cutter, maritime VHF radio-telephone may be used.

Signed: Pilot Master.

OPERATOR: A/S Olivin, N-6146 Aaheim, Norway. *Tel:* 070-24016. *Telex:* 42307. *Cables:* Olivine. *FAX:* 070-24266. *Contact:* Mr. H. Berget (private tel. 070-24152), Mr. S. Solheim (private tel. 070-24182).

AGOTNES: 60.25 N. 05.01 E. (See Plan)

DOCUMENTS:
1 General Declaration.
2 Cargo Declarations.
1 Stores List.
1 Health Declaration.
1 Personnel Effects.
2 Manifests.
PILOTAGE: Usual entrances to port at Korsfjord and Fedje.
Provisions for Advance Reports in connection with the ordering of Pilots. Issued by the Director of Pilotage.

1. Vessels approaching from the sea and desiring a Pilot should order the Pilot at 24 hours notice insofar as possible and confirm arrival at pilot station at 2 hours notice.

The advance order can be sent in the following manner:
(a) From ships at sea over radio direct to the sea pilot watch (calling frequency 2182 kHz from 2 minutes past until 10 minutes past each full hour, or over VHF-radio telephone, calling frequency 156.80 MHz, Channel 16).
(b) From ships at sea over coastal radio station to pilot station or pilot office.
(c) From broker or shipowner over telephone to sea pilot station or to any pilot office which will immediately convey the report to the sea pilot station.

2. Vessels lying in port and desiring Pilot will order the Pilot from the nearest pilot office during its office hours and if possible at 4 hours notice.

3. Vessels approaching from the sea as well as vessels lying in port shall, when making an advance order state the name and destination of the vessel and whether 1 or 2 Pilots are desired.

4. The Pilots will on the whole be despatched to the ships in accordance with the advance orders, and vessels are therefore requested to comply with the foregoing rules as far as possible in order to avoid having to wait for Pilot.

5. The international provisions for summoning Pilots by signal flags or blue lights, etc., are still in force, but should in future be used as a supplement to the radio communications or as the sole communication in emergencies.
ANCHORAGE: About 1,600 ft. North of CCB Quay, depths 29 m. – 74 m.
RESTRICTIONS: No special restrictions upon entry to the port.
MAX. SIZE: Water depths up to 60 ft. at quayside.
HEALTH: No Certificates required. In event of any disease or fever, contact Agents.
RADIO: All messages to Agents via Bergen Radio or Rogaland Radio.
VHF: Bergen Radio on Channel 16 or direct on Channel 10 (24 hour service).
TUGS: Available upon request. Vessel's lines usually used. No extra charge for tug's line.
BERTHING:
West side, quay of 180 m. long. Depth of water 60 ft.
East side, quay of 105 m. long. Depth of water 14 m.
North West side, quay of 120 m. long. Depth of water 7.2 m.
South side, 2 berths, each 60 m. long. Depth of water 10 m.
CRANES: 1 Mobile crane 210 tons lifting capacity. 4 Mobile cranes 50 tons – 100 tons lifting capacity.
BULK CARGO FACILITIES: For drilling mud and cement only.
SPECIALISED CARGO HANDLING FACILITIES: Loading/unloading carried out by mobile cranes and trucks.
BRIDGES: Bridge between Knarrevik and Drotningsvik. Height at mean level 50 m.
STEVEDORES: Provided by Coast Centre Base.
MEDICAL: 4 hospitals available (Bergen). No advance notice except serious illness.
TANKERS: Bunker line 6 in. No slop facilities.
DENSITY: About 1024.
FRESH WATER: Can be supplied alongside the quay, rate 70 t.p.h.
FUEL: New tank of 5,000 cu.m. 3 ships may take bunkers at the same time at a rate of 120 cu.m./hr.

No advance notice required.
CONSULS: (in Bergen). Austria, Belgium, Brazil, Denmark, Finland, France, Germany, Great Britain, Greece, Iceland, Netherlands, Panama, Peru, Portugal, Spain, Switzerland, Sweden, Turkey, Uruguay.
REPAIRS: All repairs possible.
DRY DOCKS: Available in Bergen. 3 Dry docks 365 ft. long with 12.5 ft. – 21 ft. depth on blocks.

1 floating dock for vessels up to 10,000 g.r.t. and 2 smaller floating docks. Largest vessel 51,839 g.r.t. Draft 34 ft. 4 in.

Drafts up to 35 ft. can be accommodated.
SURVEYORS: Lloyd's, A.B.S. and Norske Veritas.
GANGWAY/DECK WATCHMAN: Not necessary.
OPENING/CLOSING HATCHES: Normally carried out by crew.

CUSTOMS ALLOWANCES: 0.75 litres of spirit and 200 cigarettes for each member of the crew.
REPATRIATION: All facilities available for crew changes.
AIRPORT: 35 km. from Bergen Airport served by regular airlines.
TIME: GMT plus 1 hour. GMT plus 2 hours in Summer.
HOLIDAYS: New Years Day (January 1st); Maundy Thursday; Good Friday; Easter Monday; May 1st; May 17th; Ascension Day; Whit Monday.

Cargo work can be arranged with special agreement.

POLICE/AMBULANCE/FIRE: Bergen 002; Bergen 003; Bergen 001 respectively.
EMERGENCY CO-ORDINATION CENTRE: Tel: Bergen 002.
TELEPHONES: No arrangements for connection on board ships. Telephone box on quayside.
SERVICES: Compass adjuster, Radio/Radar service. Also calibration of the Direction Finder, Ships laundries.
BANKS: Bergen Bank, 5364 Kystbasen – Agotnes.
STORING: See "Prelims".

1. Vessel can be stored by barge or truck.
2. No special regulations regarding storing.
3. Trucks can proceed alongside at the berth.
4. Forklift trucks are available.
5. No special regulations regarding customs.
6. Local riggers can be employed on request.

SHORE LEAVE: After clearing inwards, crew members are allowed to go ashore without special permission.
IDENTIFICATION CARDS: Not required.
REGULATIONS: No particular or unusual regulations.
DELAYS: No particular reason for delays.
DEVELOPMENT: A new Ro/Ro berth is planned at Dock No. 31.
AUTHORITY: KS Coast Center Base, P.O.Box 55-CCB, 5364 Kystbasen, Agotnes. *Tel:* (05) 92 30 00. *Telex:* 42 835 ccb n. *FAX:* (05) 335191 *Contact:* Knut Aas, Managing Director. Hans Agotnes, Harbour Master.

ALESUND: 62.27 N. 06.09 E. (See Plan)

DOCUMENTS:

1 Crew List.
1 Passenger List.
1 Customs Documents.
1 Health Documents.
3 Manifests.
3 Bills of Lading.
1 Ship's Papers.
1 Stores Lists (provisions).

PILOTAGE: From open sea, Pilot is taken on board at Alesund Pilot Station. Watch 24 hours a day. To be called 3 – 4 hours before ETA by VHF 16, or radio.
ANCHORAGE: On the North side of the town in Valderhaugfjorden in depths of 20 m. – 60 m.; bottom, sand and mud.

On the South side of the town in Aspovagen in depths of 20 m. – 40 m., bottom mud.

RADIO: Orlandet Radio (Tel: 125) 2182 kHz and VHF Channel 16. Harbour Office (VHF Channels 16 and 12) is manned 24 hours. Tel: 21425.
TUGS: Meet vessel normally before entering the harbour, or by order.
BERTHING: *Storneskaia:* East side, length 85 m., depth 6 m. – 14 m. On this side Ro/Ro berth available ramp width 22 ft. South side, length 153 m., depth 10 m. – 14 m. West side length 60 m. depth 5.0 m. Warehouse capacity 1,600 sq.m.
Prestekaia: South side, length 220 m., depth 13 m. – 16 m. West side, length 40 m., depth 5 m. – 13 m. North side length 41 m. Depth 5 m. – 13 m. Warehouse capacity 4,100 sq. m.
Skutvika: Special quay for fishing vessels, length 330 m., depth 4 m. – 6 m. Only mooring on N.E. side. Quay, length 80 m., depth 4 m. – 7 m.

Container terminal on S.W. side. Quay length 205 m. Depth 10.0 m. – 16.0 m. Container storage area 20,000 sq.m.
Sjogata: Mooring quay, length 210 m., depth 4.0 m. – 9.0 m. At Northern Harbour there is one commercial quay.
Skansekaia: North side, length 195 m., depth 10 m. – 13 m. West Side, length 60 m. Depth 4 m. – 8 m. South side, length 130 m., depth 5 m. – 6 m. This quay forms protection for a small inner harbour with several smaller quays.
Flatholmen: Length 50 m. Depth 7 m. Dirty ballast facilities available.
Brunholmkaia: Length 100 m., depth 4.0 m.
Skansegata: Length 200 m., depth 6.0 m.
Spjelkavik Kai: Length 80 m., depth 7.0 m.
STEVEDORES: Obtained by Agent who requires ETA 12 hours before ships arrival.
CRANES: Mobile crane to lift 18 tons available. Floating crane to lift max. 100 tons available.
FRESH WATER: Available. Tel: 70121425.
FUEL: Bunkering facilities from all major oil companies. Loading by barge or pipeline at berth.
CONSULS: Denmark, Finland, France, Germany, Iceland, Italy, Mexico, Portugal, Spain, Sweden and U.K.
REPAIRS: Available.
DRY DOCKS: 2 dry docks, lifting capacities 2,750 tons and 8,000 tons.
SURVEYORS: Det Norske Veritas. Tel: 071-25290.
GANGWAY/DECK WATCHMEN: Not necessary.
OPENING/CLOSING HATCHES: This work is normally carried out by crew.
CUSTOMS ALLOWANCES: Tobacco: 200 cigarettes. Wine/Spirit: 1 bottle of spirits.
AIRPORT: Alesund Airport, Vigra. Frequent daily flights to and from Oslo. Trondheim, Bergen.
TIME: GMT plus 1 hour, GMT plus 2 hours in Summer.
HOLIDAYS: 1st May; 17th May.
POLICE/AMBULANCE/FIRE: Police 002; Ambulance 003; Fire 001.
EMERGENCY CO-ORDINATION CENTRE: Located at Sola. Tel: 51517000.
TELEPHONES: No arrangements for placing telephones on board.
IDENTIFICATION CARDS: Not required.
GARBAGE/WASTE OIL DISPOSAL: Services available. Contact Miljorens (Environmental Cleansing), Emblem 6013, Alesund, Tel: 70150184. Fax: 70150571. Facilities available for handling spilt oil, chemical waste, batteries,tank cleaning, and providing oil seperators, 20/40 ft. ISO containers and lifting equipment, and approved special waste containers. Contact Alesund Port Authority,Tel: 071-21425 or VHF Channel 16/12 for further details.
SEAMAN'S CLUBS: None.
AUTHORITY: Alesund Havnevesen, Skansekaia, 6002 Aalesund, Norway. *Tel:* 70121832 or 70121425. *FAX:* 70124084. *Contact:* Oddbjorn Humblen, Harbour Master. Tel: 70121832, 70142614.

ALVIK: 60.26 N. 06.24 E.

Alvik located in inner part of Hardangerfiord. Ferrosilisium works. Vessels from abroad may call Haugesund for Inward Customs' Clearance.
DOCUMENTS: See "Bergen".
PILOTAGE: Compulsory. Belonging to Bergen Customs' District.
BERTHING: Quay No.1: Length 80 m. 2 cranes, 7.5 and 9.5 tons. Quay No. 2: Length 90 m. 1 crane 7.5 tons. Depth alongside 7.5 m.
AUTHORITY: Alvik Port Authority, Bjolvefossen a/s, N-5614 Aalvik, Norway. *Tel:* 05-557200. *Telex:* 42146. *FAX:* 05-557305. *Cables:* Ferro Aalvik. *Contact:* Arvid Auganaes, General Manager.

ARDALSTANGEN: 61.14 N. 07.42 E. (See Plan)

LOCATION: Ardalstangen Aluminium works located in innermost part of Sognefiord. Lat. 61° 14′ 03″ N., Long. 7° 42′ 28″ E.
DOCUMENTS:

Receivers: Bills of Lading.
Manifests.
Customs: Crew List.
Bills of Lading.
Manifests.
Health Documents.
Ship's Certificates.
Ship's Papers.
Ship's Stores Declaration.
General Declaration.
3 Crew Lists.
Crews Personal Effects Declaration.
Inward and Outward Clearance.

PILOTAGE: Compulsory. Pilots belong to Bergen Customs District.
ANCHORAGE: Depth 500 ft.
RESTRICTIONS: No berthing after 2100 hrs. or before 0600 hrs.
RADIO: 12 hours notice of ETA required.
VHF: Channel 16.
TUGS: None available. Local lineboat available if required at a cost of NoK. 1,000.
BERTHING: One quay, length 600 ft., depth alongside 40 ft., 1×5 ton crane and 1×25 ton crane.

One quay, length 300 ft., depth alongside 36 ft. 1×30 ton crane. The berths are ice free.

STEVEDORES: No work Saturdays, Sundays and holidays.
MEDICAL: Advance notice required if medical attention needed.Tel: 47-56-65290.
DENSITY: 1026.
FRESH WATER: Available, cost NoK. 200 per filling.
OPENING/CLOSING HATCHES: By crew.
REPATRIATION: Crew changes and repatriation possible.
AIRPORT: 1 hour 20 minutes by ferry to airport at Sogndal.
CARGO GEAR: Loading/discharging by shore gear.
TELEPHONES: Available if required.
GARBAGE DISPOSAL: Service available daily and provided alongside. Contact Hydro Aluminium. Charges are included in port dues.
WASTE OIL DISPOSAL: Authorised service only available from Bergen.
SEAMAN'S CLUBS: None.
AUTHORITY: Hydro Aluminium Aardal, P.O. Box 303, 5870 Ovre Ardal, Norway. *Tel:* 056-59000 (47-56-59000). *FAX:* 056-59753/59555 (47-56-59753/59555). *Contact:* Anders Rudi, Port Manager (Tel: 47-56-59849).

ARENDAL: 58.28 N. 08.46 E. (See Plan)

DOCUMENTS: See "Bergen".
PILOTAGE: The pilot boat *Arendal* is stationed at Arendal. Contact may be made on VHF/RT or telephone 21071–23668 or out of office hours via Kristiandsand Radio or Tjome Radio.
ANCHORAGE: Safe anchorage ground is readily available and there are numerous mooring places for vessels not docking alongside the quays.
MAX. SIZE: See "Berthing".
RADIO: *Arrival Advice:* Notice to be sent through Agent to Port Authority, or direct on telephone No. (47) 370 13147, at least 24 hours before arrival.
TUGS: 1 tug 500 h.p.

Additional tugs can easily be requested from Kristiansand.
RADAR/VHF: Radar at Pilot station. Pilot on VHF Channels 16 and 13.
BERTHING:

	Depth (ft.)	Length (m.)
Nye Tollbodkaien	33	230
Batterrikaien	33	110
Hotellbryggen	30	77
Malmkaien	28	30
Stenkaien	26	110
Utstikkerkaien Barbu	24	58
Fryselagerkaien	22	76
Jaktekaien	20	50
Gamle Tollbodkaien	20	45
Kallevigs Brygge	20	43
Langbryggen	15	120
Ferjekaien	26	30

No tide even in exceptional weather conditions, increase in water level never exceeds 3 ft.
CRANES: 1×3 ton, 1×12 ton (mobile), 1×15 ton truck, 1×12 ton truck and 1 crane 75 ton capacity.

Several mobile cranes up to 60 ton can easily be arranged.
BRIDGES: One bridge crossing Tromoysund, height from sea level to bridge 37.0 m.
STEVEDORES: Available 24 hours and for 24 hours working.
MEDICAL: Hospital available with all facilities. Advance notice required for doctor and dentist.
FRESH WATER: Available all quays.
FUEL: Advance notice required.
FIRE PRECAUTIONS: Usual non-smoking precautions. Only when repair on tank vessels, or welding in engine room and other gas-free areas close to oil/chemical tanks, paint stores, etc., Harbour Office to be informed. Harbour authorities will arrange for firewatch on board during works.
CONSULS: Sweden, Denmark, Finland.
REPAIRS: Port has well-equipped workshop to carry out engine repairs as well as hull work above water line.
GANGWAY/DECK WATCHMEN: Recommended.
OPENING/CLOSING HATCHES: Crew or stevedores.
CERTIFICATES: Normal International Certificates required.
CUSTOMS ALLOWANCES: 200 cigarettes, 1 litre spirits.
AIRPORT: Kjevik 60 km.
TIME: GMT plus 1 hour. GMT plus 2 hours in Summer.
POLICE/AMBULANCE/FIRE: Police 22030; Fire Station 22255.
TELEPHONES: Can be placed aboard.
SHIP SUPPLY SERVICE: Available. Storing when passing entrance to Arendal can be arranged.
IDENTIFICATION CARDS: Not required.
GARBAGE DISPOSAL: Compulsory. Garbage container available at ship's expense.
AUTHORITY: Arendal Havnevesen, P.O.Box 33, N-4801 Arendal, Norway. *Tel:* (47) 370-13147 or (47) 370-23668. *FAX:* (47) 370-13155. *Contact:* Jurgen H. Sievers, Harbour Master.

BATSFJORD: 70.38 N. 29.44 E. (See Plan)

PORT LIMITS: Straight line from the light at 'Makkaur' to the 'Kolneset' defines the port limits.
DOCUMENTS:

3 copies Maritime Declaration of Health.
4 copies Cargo Declaration.
3 copies Ship's Stores Declaration.
3 copies Crew Effects Declaration.
3 copies Crew List.
2 copies General Declaration.
Clearance from last port.
3 copies Passenger List.

PILOTAGE: Not necessary. Harbour pilotage is optional, but if required, 24 hours' notice should be given.

ETAs to be reported 24 hours and 3 hours prior to arrival. Information given should include:

(a) Name/call sign of vessel.
(b) Nationality.
(c) Length, draft and g.r.t.

Pilot boarding ground 2 miles off entrance.
ANCHORAGES: Unlimited anchoring available at the Outer Harbour. Very good anchor conditions for fishing vessels in bad weather.
RESTRICTIONS: No restrictions other than maximum draft.
HEALTH: Cable Agent with following information: Ports of call during voyage, nature of cargo, number of crew and passengers, port of destination and Agent, condition of health of all on board with details of any sickness.
RADIO: Vardoe Radio, VHF and MF.
VHF: Pilot and pilot boat use Channels 16 and 12. All communications with Harbour Authorities should be conducted on Channel 12.
TUGS: One tug available. Will be ordered by Pilot on request.
BERTHING: Pilotage optional. Berths are arranged by Harbour Master. Linesmen and boatmen are arranged through Harbour Office.

Berth Number	Wharf Length (m.)	Depth at LW (m.)	
1	92	7	
2	70	5	
3	77	3	
4	273	5-7	
5	73	3	
6	50	—	(under construction)
7	110	6	
8	60	5	
9	50	8	(under construction)
10	200	6-10	
11	92	5.5	
12	60	3	
13	100	4	
14	32	3	
15	90	6	

CRANES: Mobile cranes available on request. Stationary cranes on most private piers.
STEVEDORES: Arranged through Harbour Authorities.
MEDICAL: No advance notice required except in case of serious illness which is to be included in arrival cable. Doctor and dental facilities available.
TANKERS: Discharge lines: 6 in. Slop removal possible.
DENSITY: 1025.
FRESH WATER: Available at all berths.
FUEL: Fuel delivered by pipeline at 4 berths, and by tank trucks at all other berths. Major grades of bunker fuel and diesel as well as marine lubricants can be obtained through suppliers.
REPAIRS: Most deck and engine repairs can be carried out.
DRY DOCKS: Size: 70 m. × 25 m.
SURVEYORS: Norwegian Ship Control Office.
GANGWAY/DECK WATCHMEN: Usually carried out by ship's crew, but watchmen available. Ship's gangway used, but shore gangway available.
HATCHES: Opening/closing by ship's crew.
CUSTOMS ALLOWANCES: Check with Agent.
REPATRIATION: Crew changes and repatriation can be carried out without difficulty.
AIRPORT: Distance 5 km. Served by 3 flights daily.
TIME: GMT plus 1 hour. Summertime kept.
HOLIDAYS: New Year's Day, "Skjaertorsdag" and Good Friday, Easter Monday, 1st May, 17th May, Whit Monday, Christmas (2 days).
POLICE/AMBULANCE/FIRE: Police: 83131. Ambulance: 83116. Fire: 51122. Area Code: 085.
EMERGENCY CO-ORDINATION CENTRE: Bodo Rescue Centre: Tel: 081-25000.

Rescue Vessel Station in Batsfjord: 83498 or VHF Channel 16.
TELEPHONES: No arrangements for telephone on board.
SERVICES: Compass adjusting, radar repairs, R/T repairs, gyro compass repairs, all types of electronic equipment repaired.

Divers available for surveys and underwater repairs. Several ship chandlers, ice delivery, freezing plant, Forwarding Agent, weekly arrival of UK-Continent liner.
BANKS: A/S Fiskernes Bank, P.O. Box 56, 9991 Batsfjord. Tel: 085-83451. Telex: 64378.

Ost-Finnmark Sparebank, P.O. Box 310, 9991 Batsfjord. Tel: 085-83369.
SHORE LEAVE: No restrictions.
SHIP SUPPLY SERVICE: The port renders full service for transport of passengers and goods.

For transport of sick and injured people from ships, the port is equipped with the rescue vessel m.v. "Sjofareren" all the year round.

Telephone numbers for these services are as follows:
Passenger/goods transportation: 085-83385 or 085-83607 also VHF Channels 16 and 12.

Sickness/injuries: 085-83498 also VHF Channel 16.

For helicopter services, this will be covered by the Rescue Station in Bodo, Tel: 081-21267.

Tug services will be carried out by the "Sjofareren" – see above.
AUTHORITY: Port of Batsfjord, P.O. Box 68, N-9991 Batsfjord. *Tel:* 047/85-83385 or 83607. *FAX:* 047/85-83789. *Cables:* Harbour Master, Batsfjord. *Contact:* Harald Aas, Harbour Master, Fjellvn. 2, 9990 Batsfjord. Tel: 085-83553.

BERGEN: 60.24 N. 05.19 E. (See Plan)

DOCUMENTS:

1 Provisions List.
1 List of Bonded Stores.
1 Health Declaration.
2 Manifests.
2 Crew Lists.
2 Passenger Lists.
Certificate of Tonnage.
Dangerous Cargo List.

PILOTAGE: Compulsory. Main entrance to port at Marsteinen Lighthouse (pilot station) Lat. 60° 24′ N., Long. 5° 18′ 50″ E. 24 nautical miles from town, but vessels from South may enter at Skudesnes (88 nautical miles) and from North at Fedje Pilot Station (32 nautical miles). VHF Channel 16. Practically no tide. Port free of ice throughout whole Winter and well sheltered from all winds. Sound signals for Pilot, 3 long and 1 short. Harbour pilotage not compulsory but advisable.
ANCHORAGE: Puddefiord. Good holding grounds. Depth 10 fathoms to 50 fathoms of water.
RESTRICTIONS: Vessels can enter day and night.
MAX. SIZE: Max. draft 35 ft. Vessels up to 50,000 tons have been berthed at Dokkeskyaersquay. Oil installation up to 30,000 d.w.t.
HEALTH: See "Documents". If vessel carries quarantine flag on contagious diseases, radio communication should be sent to Agents for instructions, otherwise no special regulation.
RADIO: Communication to Agent should be sent through Rogaland Radio or Bergen Radio.
VHF: VHF radio for port operations. Call sign "Bergen Port Radio".
TUGS: 2 tugs, 1×1,900 h.p. and 1× 1,000 h.p. available. Ship's lines to be used, contractors Bukser og Beredskap A/S. Tugs normally join vessel at Puddefiord or subject to requirements.
BERTHING: Berthing instructions from Harbour Authorities through Agent's office.
CONTAINER FACILITIES: Container terminal at Dokkeskjaerskai area. The quay is 210 m. long with a depth of 9 m. at MW. 1×50 ton container crane. It is intended for bow/stern loaders and is equipped with a Ro/Ro bridge with an axle load of 60 tons and 25,000 sq.m. area for storage and container handling.
BRIDGES: A bridge between Knarrevik and Drotningvik is completed. Height of bridge from the water is 50 m. at mean water level. Bridge position is 5 miles from harbour in the entrance to port from South.
STEVEDORES: Stevedoring arranged by Agents subject to requirements. 24 hours notice, important obtain in good time accurate ETA. Ordinary working hours at port 0730 hrs. – 1530 hrs. Saturdays until 1300 hrs.
CRANES: 5 shore cranes, lifting capacity 6 tons. One heavy lift crane 50 tonnes capacity.
MEDICAL: Masters to advise by radio prior arrival if medical attendance required on board. Hospital facilities available.
TANKERS: Discharge lines usually 6 in. and 8 in. No slop (residues) discharge facilities. Number of tanker berths 5: Shell, Esso, Fina, Mobil Oil, and BP. Max. drafts 30 ft.
DENSITY: Salt water.
FRESH WATER: From all quays and wharves with exception of some oil berths where water barge necessary.
FUEL: All grades of diesel, fuel and gas oil including lubricating oil available at all wharves in main entrance. Supplies also from barge subject reasonable notice.
FIRE PRECAUTIONS: No special precautions. Special harbour fire-fighting boat. As usual no smoking permitted during discharge operation.
CONSULS:

Austria	210 173	Netherlands	256 000
Belgium	233 873	Panama	200 011
Denmark	215 000	Peru	218 028

EMERGENCY CO-ORDINATION CENTRE: Brevik Control, VHF Channel 80 or telephone 35571233.
TELEPHONES: Can be placed on board at no extra cost.
BANKS: Sparebanken, Brevik. Tel: 35570822.
STORING: See "Prelims".

1. Yes.
2. No regulations.
3. Yes.
4. Yes.
5. Only bonded stores.
6. Yes.

SHORE LEAVE: Crew members allowed ashore.
IDENTIFICATION CARDS: Not needed.
REGULATIONS: *Regulations requiring the use of Pilot Services in the Grenland Area.*

In pursuance of Section 5 of Act No. 2 of 9th April 1948 relating to the Pilot Service, cf. Royal Decrees of 29th April 1977, the Ministry of Fisheries lays down the following regulations:

Section 1:

State Pilots shall be used by vessels of 100 g.r.t. and above navigating the waters North of a line through the North point Molen – North point Sasteinen.

Section 2:

The Coast Directorate or anyone it so empowers may grant exemption from the provisions in Section 1 in respect of vessels of under 500 g.r.t. which are not carrying dangerous cargo, provided that the Shipmaster is able to satisfy the authorities that he has obtained, through regular calls at ports in the area, a comprehensive knowledge of these waters and is conversant with the rules and regulations currently applicable with respect to passage and navigation in these waters. Requests for exemption shall be addressed to the Coast Directorate and forwarded via the Pilot Master in Porsgrunn.

Exemption thus granted may be revoked at any time.

Section 3:

Anyone wilfully or negligently violating these regulations shall be punished in accordance with Section 418 in the Penal Code, unless stricter penal provisions are applicable.

Section 4:

These regulations do not entail any changes to the rules concerning the use of State pilots for foreign non-military vessels of 50 g.r.t. and above laid down by Royal Decree of 9th February 1968 concerning provisions on prohibited zones in Norwegian territorial waters.

Section 5:

These regulations shall enter into force on 1st September 1978.

Also see "General" before first port.
AUTHORITY: Grenland Havnevesen, Postboks 20, 3951 Brevik, Norway. *Tel:* 03-35571200. *Cables:* Porsgrunn Havnevesen. *FAX:* 03-35571703. *Contact:* Torjus Johnson, Port Director.

BRONNOYSUND: 65.30 N. 12.13 E.

DOCUMENTS: See "Bergen".
PILOTAGE: Pilot ordered through Harbour Office, Tel: 20 078. Cable address: "Losforman".
ANCHORAGE: Prestoytaren. Lat. 65° 29.0′ N., Long. 12° 11.5′ E. Depth 28 ft. to 180 ft.
MAX. SIZE: Inner Harbour: Depth 18 ft. – 24 ft. Outer Harbour: Quay length 100 m., depth 60 ft.
RADIO: Orlandet Radio or Bodo Radio
VHF: Bronnoysund Port Radio. Channel 16 – 156.800 MHz; Channel 12 – 156.600 MHz primary work; Channel 14 – 156.700 MHz secondary work; Channel 13 – 156.650 MHz pilotage work.
TUGS: None.
BRIDGES: Bronnoysund Bridge, max. clearance – 33 m.
MEDICAL: Medical service ordered through Harbour Office. Small Hospital. Air Ambulance.
FRESH WATER: Delivered by hose to all Port Authority Berths.
FUEL: Delivered to all berths, 24 hour service.
CONSULS: None.
REPAIRS: Limited deck and engine repairs. Turner's shop and welder's shop available.

CUSTOMS ALLOWANCES: Master 400 cigarettes or 40 grams tobacco; all other crew 200 cigarettes or 20 grams tobacco. Wine/spirits; Master 2 litres; all other crew 0.75 litre.
AIRPORT: 2 km. from port. Regular airlines. Helicopter base.
TIME: GMT plus 1 hour, GMT plus 2 hours in Summer.
POLICE/AMBULANCE/FIRE: Police 20 400; Ambulance 20 500 and 20 800; Fire 20 000.
IDENTIFICATION CARDS: Crew to possess identification card with passport photo.
AUTHORITY: Bronnoy Havnevesen, P.O.Box 65, 8901 Bronnoysund, Norway. *Tel:* (086) 20078. *Contact:* R. M. Jorgensen, Harbour Master.

DRAMMEN: 59.49 N. 10.13 E. (See Plan)

DOCUMENTS:
Bill of Health.
2 Crew Lists.
2 Passenger Lists.
2 Customs Lists for crew members and passengers.
Bills of Lading.
3 Manifests for every port of discharge.
PILOTAGE: Give 6 hours notice by R/T 2182 kHz or VHF Channel 16 to "Faerder Pilot". Coast stations "Tjome Radio" LGT or "Farsund Radio" LGZ can also be used. Harbour Pilots ordered through ship's Agents. Harbour pilotage is not compulsory.
ANCHORAGES: Pilot service supplies information regarding anchorages.
RESTRICTIONS: Svelvikstrommen Channel, depth 10 m., equipped with beacons and radar reflectors for safe navigation.

During ice-breaker season, which may last from end-December, to mid-March, ice breaker is in radio contact with port and with ships needing assistance.
MAX. SIZE: Max. draft for main harbour 30 ft., otherwise no restrictions.
HEALTH: International procedure followed to obtain Pratique. In case of suspected diseases or fever inform Port Authorities, Tel: 81 88 90. When arriving from a Norwegian port - Pratique automatic.
RADIO: Tjome Radio, call sign "LGT" Farsund Radio, call sign "LGZ". Oslo Port Radio or VHF Channel 16.

Port Authority maintains VHF radio-telephone watch: Monday – Friday 0630 hrs. – 1600 hrs. and Saturday according to requirement. Call sign "Drammenhavne Radio". Not on holidays.
RADAR/VHF: VHF Channel 16 and 12 when communicating with Drammen Port Authorities. No port radar service.
TUGS: Under normal conditions not necessary except for large vessels, but available on request. Normally ship's hawsers or lines used for towing. Tugs ordered through Agent.
BERTHING: *Main Harbour*

Quays	*Depth* (m.)	*Length* (m.)	*Remarks*
Tollbukaia	7.0	110	Coastal/local traffic. Railway lines available.
Kranbrygga	7.0	200	General cargo. Railway lines available.
Myrakaia	7.0	155	General cargo and bulk. Railway lines available. Electric crane 23 tons for bulk cargoes.
Langbrygga	8.0	255	Paper, General cargo Railway lines available.
Tjomekaia	7.0	160	Paper. Railway lines available.
Holmen South	9.0	486	Gen. cargo. Air conditioned. Containers. Railway lines available.
Holmen South Ro/Ro Ramp S.E. end.	9.0	—	New Berth. Cars, Trailers. See "Container and Ro/Ro Facilities".
Holmen South Oil Berth	7.0	70	New Berth. Tankers. Size of vessel determined by water depth alongside.
Risgardkai Ro/Ro	10.0	151	Cars, Trailers
Holmen East Ro/Ro	7.0	60	Cars, Trailers
Kattegat Ro/Ro	10.0	168	Cars, Trailers,Containers. 1× 60 ton portal crane.

Container and Ro/Ro Facilities: Three Ro/Ro quays for containers, vehicles and trailers.

1. Holmen South Ro/Ro:
   Max. Depth 9.0 m.
   Length (Approx.) 486 m.
   Beam 20 m.
   Height of working ramp 0.5 m. – 2.0 m.
   Mooring boat advisable when berthing.

2. Holmen East Ro/Ro:
   Max. Depth 18 ft.
   Length (Approx.) 350 ft.
   (i) Inside ramp: Beam 30 ft., Height 5 ft.
   (ii) Outside ramp: Beam 30 ft., Height 1 ft. 6 in.
3. Risgarden Ro/Ro:
   Max. Depth 30 ft.
   Beam 105 ft.
   Length of vessels berthing depends on max. draft.
   Height of working ramp 6 ft.
4. Kattegatkaia Ro/Ro:
   Max. Depth 30 ft.
   Beam 70 ft.

Warm fruit storage of 3,600 sq.m. Air conditioned fruit-storage of 2,000 sq.m.

Also see "Tankers".

DEPTHS: Chart depths vary only slightly owing tidal fluctuations. Exceptional conditions, such as snow melting in Spring, heavy rainfall and prevailing strong Southerly or Northerly winds will cause stronger currents and a variation in water levels.

CRANES: 1×60 ton portal crane, 1×50 ton portal crane, 2×23 ton portal cranes, one equipped for bulk handling, 1×20 ton portal crane and 6 portal cranes – 3 tons to 6 tons capacity. All cranes are electric.

9×3 ton electric cranes; 1×4 ton electric crane; 1×6 ton electric crane.

BULK HANDLING FACILITIES: The 23 ton crane "Hendrik" located at Myrakaia can be adapted for bulk handling with a capacity of approximately 1,000 tons per day.

STEVEDORES: Labour must be ordered latest 1500 hrs. day before arrival. Saturdays and Mondays before 1500 hrs. on Friday. Working hours: Monday to Friday from 0700 to 1500 hrs., with breaks from 1100 to 1130 hrs. and 1500 to 1530 hrs.

Saturday from 0700 to 1200 hrs. with break from 0900 to 0930 hrs. Overtime can be arranged through Agent.

MEDICAL: In case of emergency, notice regarding required medical treatment must be given as soon as possible. First class hospital facilities available. No special inoculation or fever certificates necessary, except those according to international health regulations.

TANKERS:

Holmen South Oil Berth

Concrete quay, max. draft 7.0 m. Fresh water available.

Pipe-line connections: Gas oil 8 in.; light fuel oils 8 in.; paraffin 6 in. heavy fuel oil 4 in.

B.P. Berth, Solumstrand

9 m. wide quay at end of pier, max. draft 16.4 ft. (5 m.).,

Pipe-line connections: Propane 2 in.

Folakroken Quay: New Berth: Gullaug explosives factory. Situated 6 nautical miles North of Svelvik Narrows on East side of Dramsfjorden.

Length	114 ft. (35 m.)
Depth alongside	19 ft. (6 m.)

FRESH WATER: Delivery by hose, available anywhere.

FUEL: Available at Holmen South. Fuel 2,000 sec. and marine diesel 200 sec.

FIRE PRECAUTIONS: International danger signals and precautions practised. Wires for towing must be ready for immediate use. In case of fire on board or in vicinity, vessel must leave quay and harbour as soon as possible.

CONSULS:

Denmark Iceland Madagascar
Finland Monaco Netherlands

All other consulates situated in Oslo.

REPAIRS: Shipyard facilities for all kinds of deck and engine repairs available.

DRY DOCKS: 2 floating docks, 20,000 tons and 3,000 tons capacity. Nearest dry docks in Horten and Oslo. Distance by sea respectively 24 miles and 46 miles.

GANGWAY/DECK WATCHMEN: Watchmen recommended, through Agent.

OPENING/CLOSING HATCHES: If necessary hatches can be opened or closed by stevedores, but usually by crew.

CERTIFICATES: Usual ship's certificates according to international regulations.

CUSTOMS ALLOWANCES: Tobacco, 200 cigarettes/100 grams of tobacco allowed weekly. Wine or Spirits, 1 bottle wine or spirits usual weekly allowance.

CARGO GEAR: International Safety Regulations followed.

REPATRIATION: All facilities available.

AIRPORT: Nearest airport Oslo Airport, Fornebu, situated 16 miles by road from Drammen. Regular services to all parts of the world.

TIME: GMT plus 1 hour. GMT plus 2 hours in Summer.

HOLIDAYS: On Saturdays work stops at 1200 hrs., but if ships can be finished, loading and discharging is continued to 1830 hrs.

All Sundays; 1st January; Maundy Thursday; Good Friday; Easter Monday; 1st May; Ascension Day (17th May); Whit Monday; Christmas Day; 26th December.

On Easter, Whit, Christmas, and New Year's Eve work stops at 1400 hrs.

POLICE/AMBULANCE/FIRE: Fire-alarm accidents 832020; First-aid station 831585; Hospital 834585; Police 838170; Taxi 835060.

TELEPHONES: Telephones can be connected if ordered through Televerket. Tel: 832380.

SERVICES: Ice-breaker assistance available during Winter months.

SHORE LEAVE: No restrictions on shore leave when all formalities in order.

IDENTIFICATION CARDS: Not required.

GARBAGE DISPOSAL: Service available at no charge. Galley waste must be sealed in plastic bags. Containers are painted green and are at 5 locations in the port (Port Authority letter handed to Master).

WASTE OIL DISPOSAL: No service available.

SEAMAN'S CLUBS: None.

DELAYS: Delays may occur, when very heavy traffic cause shortage of labour.

GENERAL: Notice will be given to local Agents regarding changes or new developments which can affect usual procedure in port.

AUTHORITY: Drammen Havnevesen, Hans Kiaersgaten 1A, N-3401 Drammen, Norway. *Tel:* 4732-818890-94. *Telex:* 473281. *FAX:* 4732-812704. *Contact*: O. Mahliem, Port Captain.

EGERSUND: 58.27 N. 06.00 E. (See Plan)

DOCUMENTS: Health Certificate (forms obtainable from Customs when entering harbour). Crew List, Dangerous Cargo List, Ship's Register. Vessels bound for Egersund must be provided with document signed by Master, setting out specification of cargo to be discharged Egersund, also quantities all provisions and stores on board. Document must include name, tonnage, port of registration, last port, next port, and number of crew and passengers on board.

PILOTAGE: Pilot – if necessary – to be ordered latest 3 hours prior arrival pilot station. Order to be given to Pilot Office – telephone 51477377 or mobile 94584127, or to ship's Agent, giving ETA, name of vessel, gross tons, where Pilot required, draft in feet, and discharging/loading place. Vessels entering Egersund liable to inward and outward pilotage dues, mileage money according distance piloted; and pilot dues, whether services of Pilot used or not. Pilot station lying on Rekefjord – and Pilot available for Southern and Northern entrance, from pilot boat. Southern entrance mostly used, max. draft 37 ft. In case of using Northern entrance, ship has to pass bridge between Eigeroy and the continent. Max. height 23.5 m. Max. draft 16 ft.

ANCHORAGE: Any place in harbour available for anchorage. Especially used is Hovlandsviken – 36 ft. draft.

MAX. SIZE: Largest vessel which has entered Egersund – 45,000 d.w.t. Max. draft 31 ft. In harbour there are 2,000 ft. of quayage with 18 ft. – 27 ft. alongside.

RADIO: Rogaland Radio and Farsund Radio.

TUGS: Not available in Egersund.

BERTHING: 3,000 m. of quay frontage. Facilities for container and Ro-Ro vessels. 30 tonne fork lift.

STEVEDORES: Ordered by Agent – no ETA to stevedores necessary. Time for ordering gangs for next morning must be given by 1300 hrs. day before.

TANKERS: Esso Norge A/S bunkering station: Length 140 m. and depth 24 ft. The berth can accept vessels up to 3,000 g.r.t.

Statoil bunkering station: Located in middle of Egersund Harbour.

FRESH WATER: Can be delivered at most discharging/loading places.

FUEL: Gas oil and Light Marine Diesel oil available by truck or at bunkering station.

CONSULS: Denmark and Sweden.

REPAIRS: All minor repairs possible. Service station for electronic aids.

GANGWAY/DECK WATCHMEN: Available – but not compulsory.

OPENING/CLOSING HATCHES: Crew allowed to open and close.

CERTIFICATES: On first call Registered Tonnage Certificate necessary – thereafter not required unless gross/net tonnage changed.

CUSTOMS ALLOWANCES: (Dependent size – destination, etc.) each crew member is allowed 100 cigarettes, 20 cigars or 100 grams tobacco and one bottle spirits.

CARGO GEAR: No additional requirements. One 150 ton crane, one 30 ton crane and some mobile cranes 5 tons – 15 tons available.

HOLIDAYS: Work can usually be arranged on all holidays.

POLICE/AMBULANCE/FIRE: Police 51.49.16.00; Fire 51.49.15.00; Hospital/Ambulance Tel: 51.49.00.22.

IDENTIFICATION CARDS: Not required.

GARBAGE DISPOSAL: Service available through Container Transport, Gronvikveien 5, 4365 Hellvik. Tel: 04-496915, 24 hour service.

WASTE OIL DISPOSAL: Service available through Statoil, Lindoy, 4370 Egersund. Tel: 04-491336/490530.

SEAMAN'S CLUBS: Sjomenns Leseverelse, Nygaten 8, 4370 Egersund. Tel: 04-491226, 24 hour service.

AUTHORITY: Egersund Havnevesen, Havnebygget, Strangt. 2, P.O.Box 117, 4370 Egersund, Norway. *Tel:* 51.49.13.28 or 51.46.83.60. *FAX:* 51.49.01.96. *Contact:* Odd Hansen, Harbour Master.

FIBORGTANGEN (Skogn): 63.43 N. 11.10 E. (See Plan)

PORT LIMITS: Holsandbukta.

DOCUMENTS:

1 Crew List
1 Passenger List
1 Crew Personal Effects List.
1 Stores List
1 List of Animals
Last Port Clearance
Safety Certificates:
Safety Equipment, Load Line, Radio, Construction.

PILOTAGE: Pilotage is compulsory for all foreign vessels.

Notice of ETA and request for Pilot can be made to the local Agents, not less than 24 hours before ETA at Grip Lighthouse.

Confirmation of ETA is required 2 hours before arrival at Grip Lighthouse.

Channel 16 VHF is continuously watched by Kristiansund Radio and Pilot boat.

The usual pilot boarding point is inside Grip Lighthouse Lat. 63° 16′ N., Long. 07° 36′ E.

Pilot boat has orange upper works, white hull with the word "LOS" on each side.

The usual international signals may be employed by vessel requiring a Pilot.

In case of bad weather the pilot boat will lead ahead to sheltered waters. There is no anchorage for vessel awaiting a Pilot.

ANCHORAGES: At the bay North and N.E. of the wharf in about 20 m. of water, bottom sand, good holding ground.

Electric power cables cross from Valoya – Hestoya, anchorage in this area is prohibited.

MAX. SIZE: Vessels up to 160 m. LOA (vessels with LOA 214 m. have berthed) and 10.40 m. draft can be accepted at the North side of the wharf. On the East side 215 m. LOA, 6.4 m. draft.

HEALTH: Vessels will be cleared alongside.

RADIO: Kristiansund Radio is the long range area station.

VHF: Kristiansund Radio and Orland Radio. Continuous watch. All calling should be on Channel 16. Pilot boat also monitors Channel 16.

TUGS: Can be ordered by the local Agents.

BERTHING: The wharf is made of concrete. The North berth is 141 m. long, depth 10.4 m. The East berth is 215 m. long, depth 6.4 m. Permissible wheel loading for standard type vehicles is 12 tonnes.

STEVEDORES: *Working hours:*

Monday – Thursday	0700 – 2400
Friday	0700 – 2030

MEDICAL: Full hospital facilities available without prior notice.

FRESH WATER: Good quality water is available in unlimited quantities at about 20 tonnes per hour per connection.

FUEL: Not available, but can be ordered from Trondheim.

SURVEYORS: Cargo Inspectors: Can be ordered by local Agents.

Bureau Veritas	Tel: 73525030
Norsk Veritas	Tel: 73903500
Lloyd's Register	Tel: 73520124

GANGWAY/DECK WATCHMEN: Can be ordered by the local Agents.

OPENING/CLOSING HATCHES: Normally handled by ship's crew.

CARGO GEAR: Discharging and loading is by ship's gear, however, some mobile cranes up to 30 tonnes capacity are available for extended hire at short notice.

REPATRIATION: Scheduled aircraft connected with direct overseas flights leaves from Trondheim Airport several times a day.

TIME: Local time is GMT plus 1 hour. Summertime is used.

POLICE/AMBULANCE/FIRE: All emergency services are available through the gate watchman.

Automatic fire alarms are installed at the wharf.

EMERGENCY CO-ORDINATION CENTRE: Call nearest radio station.

BANKS: Fokus Bank. Tel: 076-85163. Telex: 55219. Levanger Sparebank. Tel: 076-85137.

STORING: Vessel can be stored by truck during loading or discharging. Fork lift trucks can be used on the jetty to handle stores. Local Riggers cannot be employed to assist with storing.

SHORE LEAVE: When Immigration and Customs have been satisfied, there is no restriction on crew's shore leave as long as they rejoin the vessel before departure.

GARBAGE DISPOSAL: Containers for garbage distributed on the wharf.

WASTE OIL DISPOSAL: Collection of waste oil is not available. Special receivers can be ordered.

SEAMAN'S CLUBS: None.

CURRENCY: Norwegian Kroner (NKr).

AUTHORITY: Norske Skogindustrier A.S., 7620 Skogn. *Tel:* 74087000. *Telex:* 55216 Skogn N. *FAX:* 74087100. *Contact:* Gjermund Lyngfelt, Terminal Manager (Private Tel. 74084244).

FLORO: 61.31 N. 05.02 E. (See Plan)

DOCUMENTS:

2 Manifests.
Crew List.
Provisions List.
Health Document.
Passenger List.

PILOTAGE: Pilotage is not compulsory when coming into Floro. Ships usually enter by Kvanhovden light. (See Admiralty Chart No. 3037). Vessels can also enter at Fedje.

Nearest station Fedje (Lat. 60° 51′ N., Long. 04° 37′ E.). Distance to Floro Harbour about 52 nautical miles. Pilot boat a white-painted cruiser-type marked "LOS" on both sides of bow.

Fixed watch on Fedje Island covers both Holmengra and Hellesoy. VHF Channels 8, 12 and 16. Listening first 10 minutes of every hour. ETA 24 hours before arrival. Telegram "Feielos". If bad weather, Pilot to be picked up on Eastern side of Fedje Island.

ANCHORAGE: No anchorages close to pilot station. Floro Harbour: space of about 1 sq.km., depths from 15 fathoms to 30 fathoms.

RESTRICTIONS: Tide difference about 1.5 m. Max. draft entering Floro Harbour 40 ft.

MAX. SIZE: Entering Floro Harbour: No restrictions in main harbour concerning length and breadth. Max. draft berthing: "Gunhildvagen" 25 ft. and length of 120 m., Ewos A/S produce feed for fish farms and Skaarfish A/S export fish.

NB. – "Gunhildvagen" lies outside main harbour, and has narrow entrance. Weather permitting, ships of 100 m. length and breadth 20 m. can pass.

BERTHING: *Vestlandske Kjopelag:* A bulk grain/molasses terminal for vessels up to 6,000 d.w.t. Berth length, 100 m. Depth alongside 7.0 m. Storage capacity 20,000 tons of Grain/Molasses.

Fugleskjaerskaia: The deep-sea pier to the West of Fugleskjaerskaia (61° 36′ N., 05° 02′ E.). Fugleskjaerskaia now offers 500 m. of pier frontage, depth from 16 ft. to 43 ft. New section: 36 m., 18 ft. depth; 140 m., 33 ft. depth; and 1 berth 43 ft. depth. Cranes of 30 ton and 45 ton capacity available.

The extension of Fugleskjaerskaia provided 21,000 sq.m. new cargo handling space. A Ro/Ro facility is also provided, max. axle load 60 tons, width 18.0 m.

Also see "Developments".

Fjord Base A/S: Located at Botnaneset. Address: P.O.Box 323, 6901 Floro. Tel: (057) 49200, 43-866. Fax: (057) 49346. Telex: 40189 fb n.

Quay A	Length 100 m.	Depth 10.0 m.
Quay B	Length 50 m.	Depth 18.0 m.
Quay C	Length 60 m.	Depth 8.0 m.
Quay D (Saga Petroleum)	Length 40 m.	Depth 10.0 m.

Mobile cranes with capacity 35 tons – 115 tons.

STEVEDORES: ETA before 1600 hrs. for gangs required next morning.

MEDICAL: Hospital close to harbour, and available any time.

TANKERS: Harbour is only used by small tankers, about 500 to 1,000 reg. tons.

FRESH WATER: Only available alongside berth. Delivery about 30 t.p.h., possibility of 60 t.p.h. At Fugleskjaerskaia fresh water available at a rate of 200 t.p.h.

FUEL: Available at Fjord Base.

CONSULS: None.

REPAIRS: Most repairs possible.

DRY DOCKS: None. There is a berth at Kleven Shipyard. Length 85 m. Depth alongside 14 m.

Also see "Developments".

GANGWAY/DECK WATCHMEN: Not required.

OPENING/CLOSING HATCHES: Mostly done by crew.

AIRPORT: Regular service with De Haviland Twin Otters, 2 flights to Oslo, 5 flights to Bergen and 2 to Aalesund each day. (Runway 860 m.).

TIME: GMT plus 1 hour. GMT plus 2 hours in Summer.

HOLIDAYS: Cargo work can be arranged any time, holidays included.

POLICE/AMBULANCE/FIRE: Police 42011; Ambulance 41011; Fire 001.

TELEPHONES: Can be arranged on board alongside wharf.

SERVICES: Servicing for all kinds of ships navigation instruments can be arranged, except adjusting radio bearings.

SHIP SUPPLY SERVICE: The port has 6 small passenger vessels (50 ft. – 60 ft.), all capable of 20 – 27 knots, one or more are vacant at any time, and willing to take on assignments.

Services can be ordered through K. Jansen, 6900 Floro. Tel: (057) 43555. Fax: (057) 43860.

Helicopters can obtained from Helicopterservice, Bergen.

SHORE LEAVE: Permitted.

CREW IDENTIFICATION CARDS: Not required.

GARBAGE DISPOSAL: Generally open containers of 8 cu.m. are ordered through the Harbour Office. Cost of delivery of one such container comes to NKr.420. Closed containers are placed on quays, where "normal" quantities (up to approximately 3-4 cu.m.) can be deposited without extra charge.

WASTE OIL DISPOSAL: Statoil runs a slop-service from Fjord Base. Tel: 057-49366. Fax: 057-49212.

SEAMAN'S CLUBS: No seaman's clubs, but local clubs arrange events for crew members if requested and time permits.

DEVELOPMENTS: A new extension of Fugleskjerskaia is going out to tender in early March 1992. A 100 m. quay front will be constructed. 6,000 sq.m. of new space will result from this project. A new cargo shed is being contemplated.

All this is caused by the greatly increased shipment of reefer containers to the Far East (frozen mackerel). A 42 ton capacity container truck has also been purchased. Extension probably operational by end of 1992.

Kvaerner Kleven Shipyard is planning construction of a building dock, 250 m. long.

AUTHORITY: Floro Havnevesen, P.O.Box 17, 6901 Floro, Norway. *Tel:* 057-41428. *FAX:* 057-40916. *Contact:* Nils A. Hovland, Assistant Harbour Master.

FRAFJORD: 58.51 N. 06.17 E. (See Plan)

SHIPMASTER'S REPORT: May 1979. Also see "Agents Report" below.

Vessel loading stones.

The berth at Frafjord is situated at the Eastern end of the Fjord leading to Frafjordsoyr (Lat. 58° 50′ 40″ N., Long. 06° 17′ E.) and consists of an angled quay 15 m. in length.

The Pilot is embarked at Kvitsoy Pilot Station and vessel then proceeds to Stavanger for Customs Clearance and Agency work due to the remoteness of the loading berth. Pilots are changed at Stavanger and this Pilot remains on board until Kvitsoy outwards.

Approach to the berth is made at right angles with 3 shackles out on the starboard anchor until the headline and forward spring can be passed to the quay, the vessel is then turned on the anchor.

The quay is made of wood and is in poor condition with one end and bollard damaged. On the quay a single fixed conveyor is situated with a mobile extending arm and this is fed from a bin filled by tip-up lorries. The approximate lorry load is 13 tonnes. The extending arm can be remotely controlled in and out but is not quite long enough to adequately fill the outboard side. If loading mixed stones the lighter stones can be projected outboard. The loading foreman tended to be inexperienced and care has to be taken not to let the height of the stow build up too much and also along the inboard side as a slight starboard list is preferable due to the shallow areas of water on the inboard side and slack ropes aft will facilitate a general movement to the deeper water, (by sliding off the bottom).

No. 2 hold is loaded completely and then the stern is canted into deeper water in order to load in No. 1. The sequence that was adopted by this vessel was to load 750 tonnes in the after end of No. 1 followed by 750 tonnes in the forward end of No. 2 and then 700 tonnes in the after end of No. 2. This increased the after draft to approximately 6.3 m. The stern was then canted out into deep water and the final 800 tonnes was loaded forward. The vessel has to be constantly moved along the quay in order to get an even stow height approximately one-third the way up the hatch coaming.

The bollards on the beach are very badly positioned and the ones on the quay which were used for the springs were on the verge of being ripped out, one already having done so on the damaged end of the quay.

Loading commenced at 1600 hrs. on 11th May and ceased at 2215 hrs. that day, resumed at 0720 hrs. on 12th May and completed at 1000 hrs. on 12th May. 3,010 tonnes of stone chippings were loaded, final draft being, forward 5.32 m., aft 5.66 m. No gangway can be used, only pilot ladder.

Little wind was experienced during our stay but I would consider that any adverse weather conditions during berthing, loading or unberthing must make this a dangerous operation.

AGENT'S REPORT: August 1984.

The Pilot can be embarked at Kvitsoy, Tananger or Skudesnes Pilot Station.

Vessel proceeds direct from pilot station to loading berth (Pilot stays on board during loading), which normally takes 6 hours for a vessel of 3,000 tons. Agency/Customs clearance is now performed at Frafjord.

The loading berth is now of concrete and extended – mooring points are new, and there is no need to use anchor when approaching the berth. Official draft limitation is 18 ft.

The max. length allowed at the berth is 95 m.

The loading foreman is now well experienced and is conducting the loading/shifting with professional skill.

GARBAGE DISPOSAL: No facilities available.
WASTE OIL DISPOSAL: No facilities available.
SEAMAN'S CLUBS: None.

AGENT: Odd H. Torjusen A.S., P.O.Box 523, N-4371 Egersund, Norway. Tel: 51-465200. Telex: 33084. Fax: 51-465211. Cables: Torjusen.

FREDRIKSTAD: 59.12 N. 10.57 E. (See Plan)

Note: On 1st January 1993, the Ports of Fredrikstad and Sarpsborg amalgamated under the name of Borg.

DOCUMENTS:
Bill of Health.
2 Crew Lists.
2 Passenger Lists.
2 Custom List for Crew Members and Passengers.
Bill of Lading.
3 Manifests for each port of discharge.

PILOTAGE: Compulsory. Pilot boarding at Faerder Lighthouse, 59° 02′ N., 10° 32′ E. or between Tresteinene Lighthouse and Vidgr. Lightbuoy, 59° 01′ N., 10° 56′ E. Agents report vessel's ETA to pilot station and vessel to give 2 hours' notice by R/T 2182 kHz or VHF Channel 16 to Faerder Pilot and Fredrikstad Pilot (Herfol Pilot). Coast station Tjome Radio LGT or Farsund Radio LGZ can also be used. Harbour Pilot and tugs, when necessary, will be arranged by Agents to meet at Belgen.

ANCHORAGES: Safe anchorage for larger vessels Belgen, East entrance. For smaller vessels anchorage to be pointed out by Pilot or Harbour Master.

RESTRICTIONS: Max. draft, East entrance 36 ft.; West entrance, 17 ft. Otherwise no restrictions.

HEALTH: See "Documents".

If vessel carries Quarantine Flag for contagious diseases, radio communication should be sent to Agent for instructions, otherwise no special regulations.

RADIO: Communication to Agent through Tjome Radio or Rogaland Radio.

VHF: Borg Port Control, Ora Quay, Tel: 69-324990 or VHF Channels 16 and 12, during daytime.

TUGS: Three tugs, 750 h.p., 1,200 h.p. and 2,700 h.p. More powerful tugs can be ordered from Oslo if necessary.

STEVEDORES: To be arranged by Agent subject to requirements. 24 hours' notice important to obtain in good time accurate ETA.

Ordinary working hours 0700 to 1530 hrs., Monday to Friday. Saturday from 0700 to 1400 hrs. 100% overtime and from 1400 hrs. for a minimum of 8 hours – 100% overtime.

Bulk cargoes are usually discharged in shifts until Saturday 2200 hrs.

BERTHING: As instructed by Harbour Master through Agent, depending on vessel's draft and size.

East River Berths:
Oera Quay:
Southern part, max. draft 34 ft.
Northern part, max. draft 28 ft. – 33 ft.
Denofa Lilleborg Quay:
Max. draft 33 ft. (5 m. off the quay).
Additional Facilities:

4 warehouses, each at 2,000 sq.m., 1 warehouse of 600 sq.m. and 1 warehouse of 10,000 sq.m.

4 ordinary cranes up to 3 – 6 tons (radius 8 m. – 26 m.).

2 mobile harbour cranes up to 40 tons at 28 m. radius and 24 tons at 40 m. radius, with telescopic container spreaders, both cranes have mechanical grabs of 8.5 cu.m.

1 × 37 tons fork lift, with telescopic container spreader.
1 × 32 tons fork lift.
2 × 28 tons fork lifts.
2 × 30 ton fork lifts.
30 × 2 ton – 12 ton fork lifts, 8 equipped to handle bales and reels.
5 Tugmasters, capacity 120 tons.
2 Ro-Ro terminals with an open area of about 40,000 sq.m.

MEDICAL: Master to advise by radio prior arrival if medical attendance required on board. Hospital facilities available.

TANKERS: Discharge pipelines usually 6 in. and 8 in. No slop (residues) discharge facilities. Tanker berths are at NUROL and Denofa/Lilleborg.

Sulphuric Acid is loaded at Oera Quay.

DENSITY: Brackish water, 2.7% salt water.
FRESH WATER: From shore or by barge. Tel: 09-346027.
FUEL: All grades available. For larger quantities, delivery arranged by barge. Tel: 09-346027, mobile 094-51764.
CONSULS: Danish, French, Finnish, Netherlands, Swedish.
REPAIRS: All repairs possible.
GANGWAY/DECK WATCHMEN: Obtainable.
OPENING/CLOSING HATCHES: Crew members allowed to open and close hatches.
SHIP'S CERTIFICATES: To be produced to Customs Authorities on arrival.
CUSTOMS ALLOWANCES: *Tobacco:* 20 cigarettes or 20 gm. tobacco per man, per day.
Wines/Spirits: 1 bottle of spirits or wine for consumption on board per crew member.
REPATRIATION: All facilities available.
AIRPORT: Fornebo, Oslo, 110 km. from Fredrikstad. Frequent connection by train.
TIME: GMT plus 1 hour. GMT plus 2 hours in Summer.
HOLIDAYS: New Year's Day (1st January); Maundy Thursday; Good Friday; Easter Monday; Labour Day (1st May); Constitution Day (17th May); Christmas Eve; Christmas Day; 2nd Christmas Day; New Year's Eve.
POLICE/AMBULANCE/FIRE: Police, Tel: 69395500; Hospital, Tel: 69393000; Fire, Tel: 693107091 or 111.
TELEPHONES: May be installed on board at the quay of Oera.
SERVICES: Compass adjusting, laundry, ship chandler for delivery of provisions and bond stores.
SHORE LEAVE: No restrictions.
IDENTIFICATION CARDS: Not required, except at the quay of Defona/Lilleborg, when Master, upon arrival, will receive a sufficient number of cards for filling-in for each crew member, to be shown when passing the gate.
GARBAGE DISPOSAL: Garbage container will be placed on quay alongside vessel on arrival by ship's agent. Container is free of charge.
WASTE OIL DISPOSAL: Waste oil can be delivered to tanker trucks. This service is provided by Ostfold Hoytrykkspyling. Tel: 09-347100. Fax: 09-346695. 24 hour service 094-55828. The charge for one litre is NKr.1.50.
SEAMAN'S CLUBS: No seaman's clubs. Most facilities are available in the city of Fredrikstad, 15 minutes from harbour.
CURRENCY: Norwegian Kroner (NKr.).
AUTHORITY: Borg Havnevesen, Oraveien 27, P.O. Box 1205, 1631 Gamle Fredrikstad. *Tel:* 69-324990. *FAX:* 69-324930. *Contact:* Sven-Jan Johansen, Port Captain (Tel: 69155188, 94315498).

GLOMFJORD: 66.50 N. 13.57 E. (See Plan)

DOCUMENTS:
3 Crew Lists.
Customs List.
Shipping Manifest.
Health Statement.
Bill of Lading.
Ship's Certificate of tonnage.

PILOTAGE: Pilot station, approach from South, is Aasvaer, 66° 17′ N., 12° 18′ E. VHF Channel 16 and radio telephone, frequency 2182.

Pilot station, approach from North, is Fleinvaer, 67° 13′ N., 13° 42′ E. Order Pilot over Bodo Radio, Tel: Bodo 22115.

ANCHORAGE: No berth for anchoring in Glomfjord but possible anchor at Sandaabukten close to Glomfjord.
HEALTH: Health certificate – only for first port in Norway.
RADIO: Sandnessjoen or Bodo Radio station.
VHF: On quay. Call: Hydro Glomfjord Port Station on Channel 16.

TUGS: None.
BERTHING: No specific requirements relating to berthing. Quay length 317 m. and depth 8 m.
STEVEDORES: In accordance with Charter Party.
MEDICAL: Medical aid in Glomfjord, and hospital in Bodo.
TIDE: Difference between high and low water about 3 m.
FRESH WATER: Alongside quay.
FUEL: None.
CONSULS/REPAIRS/REPATRIATION: None.
GANGWAY/DECK WATCHMEN: Not necessary.
OPENING/CLOSING HATCHES: Normally carried out by crew.
CERTIFICATES: Usual certificates.
CUSTOMS ALLOWANCES: 200 gm. tobacco or 200 cigarettes per man. 0.75 litre spirits or 0.75 litre wine per man.
CARGO GEAR: Discharging and loading by conveyor.
AIRPORT: Airport in Bodo.
TIME: GMT plus 1 hour. GMT plus 2 hours in Summer.
HOLIDAYS: See "Drammen".
POLICE/AMBULANCE/FIRE: Police station 52100 Meloy.
TELEPHONES: On quay.
IDENTIFICATION CARDS: Usual Passport necessary.
REGULATIONS: No particular or unusual regulations. Control by passing gate between dock area and surrounding field.

SHIPMASTER'S REPORT: 1976.
Anchorage: The nearest anchorage to the berth, which is part of Norsk Hydro's chemical plant is Sandabukta, about 6 miles away. It is safe and sheltered and the Agent will board there. Communication with Glomfjord is by VHF Channel 16 or via the local boatman with whom private arrangements for shore leave are possible.
Clearance: Ship is boarded on arrival at the anchorage by the Glomfjord Customs Officer who also acts as Immigration and Port Health.
Pilotage: There are no Harbour Pilots at Glomfjord. If proceeding direct to berth, Sea Pilot will put ship alongside. If awaiting berth at Sandabukta Anchorage, Pilot leaves there and it is normal for ships to complete the passage unaided. A Pilot can be obtained from Bodo but is not always available. If another ship is arriving at the anchorage, Pilot will transfer.

SHIPMASTER'S REPORT: September 1990.
Pilotage: Not compulsory, but advisable for foreign vessels and especially for tankers. When arriving from the South, Pilot boards 1.5 miles N.W. of Aasvaer Lighthouse, from a large cutter with a white hull and red deck house. It is similar in appearance to a fishing boat and can attain a speed of 14 knots.

Pilots have to be ordered through the Agent or through Lodingen Pilot Office, which is near Narvik. As much notice as possible is required, and notice should not be less than 2 hours when arriving, and 6 hours when leaving Glomfjord. When a vessel leaves the port, the Pilot arrives by car or by one of the attending tugs. The Pilot comes from Sandnessjoen Pilot Station by cutter, approximately 2 hours. Five pilots are stationed here for coastal duties and for berthing vessels at small ports up to Narvik.

No pilots are stationed at Aasvaer.

The distance from Glomfjord to Aasvaer is 65 miles, most of the passage is at near full sea speed and in sheltered waters through the islands.
Approaches: Lovunden Mountain in position Lat. 66° 22′ N., Long. 12° 20′ E., is 2,031 ft. above sea level, and can be seen from 45 miles on a clear day. It has a distinctive pinnacle. Sanna Island in position Lat. 66° 30′ N., Long. 12° 02′ E., is also conspicuous. Aasvaer Lighthouse is painted a distinctive red in colour, and has a very good Racon.
Charts: Charts used for approaching the port were B.A.Charts No. 3887 (3886/3885/2310).
Anchorage: There are no safe anchorages outside the pilotage district. Once inside the islands, numerous anchorages can be found. Pilot advised vessel to use Lillesjona anchorage in position Lat. 66° 13.5′ N., Long. 13° 04′ E. Pilotage is not compulsory for going to the anchorage, but it is advisable to use one, if you do not have local knowledge.
VHF: Pilots at Sandnessjoen monitor Channels 16 and 13. There is now no pilot VHF service at Aasvaer Lighthouse. Vessels should call Lodingen Pilot Office through Bodo Radio (Tel: 082-31104).

Norsk Hydro at Glomfjord listen continuously on Channels 16 and 12 from 0600 hrs. on Monday to 2200 hrs. on Friday. They do not listen at weekends or public holidays.
Tugs: 2 tugs are available, 1×1,500 h.p. and 1×2,000 h.p. One tug comes from Mo-i-rana and the other from Sandnessjoen, both these places are about 6 hours from Glomfjord.

Large vessels inward bound usually use 2 tugs and outward bound one tug, but if strong winds are blowing, 2 tugs should be ordered.

Ship's lines are used.
Berthing: Ammonia Berth: Ammonia Berth is to the West of the Fertiliser Berth, in position Lat. 66° 48.4′ N., Long. 13° 56′ E. The Ammonia Berth is of concrete pile construction with a berthing face of 30 m. length, with breasting/mooring dolphin to the West, which is connected by walkway giving another 25 m. of berthing face. The berth is set out 30 m. from the shore line (See "Late Plans").

When the vessel is berthed port side to, the ship's bow overhangs to the East so mooring is poor, no head or stern leads, only breasts and springs. There are electric capstans on the jetty and the fenders are good. Only a bridle can be used as a gangway. The berth is fairly well sheltered, except when high winds are blowing from the East, when the wind funnels from the mountains down the Fjord. At this time, the berth becomes very exposed to violent wind gusts, and in Winter long delays can be incurred with berthing and unberthing.

When approaching the berth, to berth port side to, starboard anchor is let go when approximately 100 m. off the berth, to 5 or 6 shackles in the water, to assist unberthing.

When vessel comes parallel with the berth, it is eased alongside by the tugs. This is due to shallow areas to the West of the berth. The mooring gang for the Ammonia Berth came from the fertiliser plant and do not like handling wires. For mooring, it is suggested that a vessel tries to moor with 3 head/stern lines, 2 breast lines and 2 springs at each end. This is particularly necessary during the Winter months. The rise and fall of the tide is approximately 2.0 m.

Vessels usually berth port side to at all berths. However, in my opinion, large ammonia gas tankers would be better berthing starboard side to, if the wind is calm, and using 2 tugs, thereby being in a more favourable position for leaving in ballast.

Largest vessel to berth at the Ammonia Berth was 30,000 cu.m. The Fjord is very deep, but the depth alongside at low water is 15.0 m.
Fertiliser Berth: The Fertiliser Berth has a straight quay of approximately 300 m. length. The berth can accept vessels up to 26,000 d.w.t. Depth alongside at low water is 8.5 m.
Cargo Operations: The berth is equipped with an 8 in. Chicksan (300 ASA) with clamps. It is possible to use a 150 ASA reducer. The maximum discharge rate is approximately 520 t.p.h. Discharge is to a storage cavern with a capacity of 42,000 tonnes, which is set in the hillside 60 m. below sea level. The cavern was blasted out in 1985/86. It is possible to receive warm product up to ambient temperature, but discharge is very slow.

Cavern storage compressors are in the Machinery/Control House, adjacent to the berth. Whilst the vessel is discharging, there is an operator on watch in the Control Room, and he is in continuous contact with the ship by Motorola VHF.

About 80,000 tonnes of ammonia are imported each year, and approximately 220 tons are taken from storage each day. Production at Glomfjord plant is 100,000 tonnes per year.

The surveyor from SGS is in attendance and helpful, no samples taken. A representative from Norsk Hydro is in attendance for arrival and departure survey.
Fresh Water: Available at the jetty at a good rate and is free.
Stores: A local chandler can deliver stores alongside. Fresh produce is very expensive, and the quality is poor.
Agent: Norsk Hydro have an office on the Fertiliser Quay, which is about 1 km. from the Ammonia Berth. They may be contacted between 0730 hrs. and 1500 hrs, Monday to Friday. They are very helpful when on duty, but are difficult to contact out of hours. There are two metered telephones in the office for the ship's use.
Documents: The Agent handles all documentation. Customs are based in Bodo, but do not normally attend on board. The following are to be prepared on Norwegian forms:

3 copies Crew List.
1 copy Master's Declaration, and 3 copies.
1 copy Cargo Manifest, and 2 copies.
1 copy Crew Declaration, and 2 copies.
1 copy Maritime Declaration of Health.

Radio: Bodo Radio. Melroy Radio is a slave station and can handle public correspondence. It was not possible to use the ship's satellite communicator whilst alongside, due to the high mountains surrounding the Fjord. The Agent reports that this is usually the case.
Airport: There are 5 return flights each day from Oslo to Bodo, which is 2.5 hours away by car.
General: Agent will lay on tour of the surrounding area which is interesting, especially to the glacier. The town of Glomfjord has one hotel and a few shops, but prices are high.

It is possible to make telephone calls from the hotel.

A minibus passes the berth at ten minutes to the hour on weekdays from 0700 hrs. to 0300 hrs.

Port State Control (Norwegian Coastguard) visited the vessel, they are based in Bodo. Bodo is the Northern administrative capital of Norway. They are very strict on pollution in the area.

AUTHORITY: Norsk Hydro a.s. Glomfjord, 8160 Glomfjord, Norway. *Tel:* (081) 52 321. *Telex:* 64061 Hydro N. *FAX:* (081) 52654. *Cables:* Norskhydro. *Contact:* Shipping and Clearance Office.

HALDEN: 59.08 N. 11.25 E. (See Plan)

DOCUMENTS: See "Bergen".
PILOTAGE: Pilot boat at Faerder light station. Ordering usually over Radio Land Station. Tjome Radio = LGT (also VHF). Signals according to ordinary international requirements. Exact area for Pilot boat: Faerder light station (Store Faerder); Hvasser pilot station.
ANCHORAGE: At Faerder light station in Oslofiord-Singlefiorden West side.
RESTRICTIONS: No special restrictions but larger vessels have to take necessary care with passing Svinesund. The tide current altering according to high and low water time.
MAX. SIZE: For the harbour inside Svinesund (Main Harbour) length 560 ft., beam 70 ft., draft. 25 ft.
HEALTH: Pratique, ordinary.
TUGS: If required tugs join outside Sponviksskansen light at the entrance to Svinesund. Usually ship's lines.
RADIO: All radio services over Tjome Radio-Land Station (use the ordinary international frequency — (600-705-800 m.).
VHF: Port Authority on Channels 16 and 12.

BERTHING:

Quay	*Depth* (ft.)	(m.)
Ytre Molbrygge	23	7.2
Indre Molbrygge	23	7.2
Jernbanebryggen	22	6.9
Krankaien	27	9.0
Brokaien	23	7.2
Sundsbrygge	16	5.3
Felleskjopet	16	5.0
Grain Elevator	12	3.8

FRESH WATER: Available; good quality.
FUEL: Available.
FIRE PRECAUTIONS: According to Harbour Regulations.
REPAIRS: Only small repairs carried out.
DRY DOCKS: None.
GANGWAY/DECK WATCHMEN: Not required.
OPENING/CLOSING HATCHES: Carried out by crew.
REPATRIATION: No facilities.
AIRPORT: Nearest Fornebu–Oslo.
POLICE/AMBULANCE/FIRE: Police 09-180111; Ambulance/Fire (09) 181212.
TELEPHONES: None available for shipboard use.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: Required.
GARBAGE DISPOSAL: Drums provided alongside. Contact Halden Havnekontor. Tel: 09-183200, or Alf Rod AS. Tel: 09-182233.
WASTE OIL DISPOSAL: Not available.
SEAMAN'S CLUBS: None.
AUTHORITY: Halden Havnevesen, P.O.Box 184, Langbrygga 3, 1750 Halden, Norway. *Tel:* 69-183200. *FAX:* 69-180680. *Contact:* O. Johannessen, Harbour Master.

HAMMERFEST: 70.40 N. 23.40 E. (See Plan)

DOCUMENTS: See "Bergen".
PILOTAGE: Entering from sea: Pilot should be ordered 24 hours in advance, and boards ship at Melkoy (2.5 miles off Hammerfest Harbour).
ANCHORAGE: Anchoring as appointed by the State Pilot or Harbour Pilot.
MAX. SIZE: Alongside ships up to 30,000 g.r.t., with max. draft 30 ft. For anchorage no limitation.
RADIO: Vardoe Radio, equipped with VHF.
TUGS: One small tug, bollard pull 6 tons.
BERTHING:

Berth No.	*Length*	*Berth No.*	*Length*
1	138 m.	13	85 m.
2	75 m.	14 (not built)	265 m.
3	46 m.	15 (private)	37 m.
4	50 m.	16 (private)	25 m.

11	65 m.	22 (private)	18 m.
12	45 m.	23	60 m.

MEDICAL: Hospital facilities available at Hammerfest.
TANKERS: Discharge line 8 in.
DENSITY: Salt water.
FRESH WATER: Capacity 300 t.p.h. at Harbour Board Quay. No water barge available.
FUEL: All grades except heavy fuel oil available.
CONSULS: French, Danish, Finnish, Icelandic, Netherlands and Swedish Vice-Consuls.
REPAIRS: Slipway for smaller ships, up to 200 ft. Only minor repairs and radar repairs available.
DRY DOCKS: None.
CUSTOMS ALLOWANCES: See "Stavanger".
REPATRIATION: Daily connection by ship and air.
AIRPORT: Hammerfest Airport. Regular service several times a day.
IDENTIFICATION CARDS: Not required.
GARBAGE DISPOSAL: Containers provided alongside, 24 hours notice to harbour authorities if disposal of more than 5 cu.m. is required. Charge: NKr.110 per cu.m. Collection on departure or whenever required.
WASTE OIL DISPOSAL: Tanker truck available. Capacity 20 cu.m. Notice required by harbour authorities. Charge: NKr.4,000/per cu.m.
SEAMAN'S CLUBS: "Velferd for Sjofolk og Fiskere", mostly indoor activities, skis and equipment available. Closed from June 1st until August 31st. Tel: 084-12231.
CURRENCY: Norwegian Kroner (NKr.).
AUTHORITY: Hammerfest Havnevesen, P.O.Box 123, 9601 Hammerfest, Norway. *Tel:* 784-11201/11202. *FAX:* 784-11571. *Contact:* Roll H. Stiansen, Harbour Master.

HARSTAD: 68.48 N. 16.39 E. (See Plan)

PORT LIMITS: Inside a straight line from Trondenes Church to Stangnes Light.
DOCUMENTS:
2 Crew Lists.
2 Passenger Lists.
Derat Certificate.
PILOTAGE: If entering via Andenes, 12 hours' advance notice of ETA in order to arrange Pilot. If entering via Lodingen, 2 hours' notice. VHF Channel 16 both at Lodingen and on pilot-cutter at Andenes. 24 hour watch maintained.
ANCHORAGE: Inside harbour limits, fairly good anchorages available, Pilot will assist.
RESTRICTIONS: No restrictions, except all foreign ships must have a Coast Pilot on board in inland waters.
MAX. SIZE: Any size vessel can anchor in harbour.
HEALTH: In case of suspected disease doctor has to be called by radio before entering. After calling at another Norwegian port and no disease, Pratique is not necessary.
RADIO: Routing of ETA cables to Agents at Harstad is best over Bodo Radio. VHF installed at Harbour Office.
TUGS: Two small tugs available.
BERTHING: Public quays of 680 m. Private quays of 1,200 m.
SPECIALISED CARGO-HANDLING FACILITIES: One coal bunkering station; draft about 24 ft.; equipped with crane.
Two mobile cranes, capacity 30 tons each.
Trucks: 1×20 tons, 1×10 tons. Also fork lift trucks between 1 ton and 6 tons.
MEDICAL: No advance notice required. Hospital facilities available. No medical information required if no suspected disease on board.
TANKERS: Two berths. Esso 33 ft. Norol 36 ft.
TIDE: Rise in tide about 6 ft.
FRESH WATER: Available at most quays day and night.
FUEL: All grades available. In the Winter 3 – 4 hours' notice required.
CONSULS:
British Vice-Consulate:
Strandgt. 7, Harstad. Tel: 77064631 or 77063093.
Danish Vice-Consulate:
Samasjovn 22, 9400 Harstad. Tel. 77066722 or 77064219.
REPAIRS: All types of repairs possible.
DRY DOCKS: 1 dry dock 110 m. long, 17 m. wide. Capacity: 8,000 d.w.t.
SURVEYORS: Cargo Inspectors available.
Lloyd's Register and Det Norske Veritas in Harstad.
GANGWAY/DECK WATCHMEN: Not necessary.
OPENING/CLOSING HATCHES: By crew.
CERTIFICATES: Usual international certificates.
CUSTOMS ALLOWANCES: Tobacco: 200 cigarettes or equal amount of tobacco. Wine and/or Spirits: Spirit half a bottle per person.
REPATRIATION: Facilities available.
AIRPORT: Airport of Evenes, about 45 minutes (45 km.) drive from Harstad by road.
TIME: GMT plus 1 hour. GMT plus 2 hours in Summer.
HOLIDAYS: Cargo work can be arranged on holidays, except 1st and 17th May, Easter Day and Christmas Day.
POLICE/AMBULANCE/FIRE: Police: 77069000; Ambulance: 003 or 77015000; Fire: 001 or 77061122.
EMERGENCY CO-ORDINATION CENTRE: The nearest emergency centre is Hovedredningssentralen in Bodo. Tel: 75521267/75525188.
Local contact in Harstad is the Harbour Office. Tel: 77062880 or 77062459, or Senja Police Office. Tel: 77069000.
TELEPHONES: Available, can be arranged by Agent or Dockyard.
SERVICES: Harbour Office: Tel. 77062880 or 77062459. The Norwegian Government has decided that Harstad is to be the main base for most of the oil activity North of 62° N., and the town and the harbour are under construction to meet future requirements in this connection.
BANKS: Den Norske Bank. Tel: 77063530.
Sparebanken Nord-Norge. Tel: 77013000.
Kreditkassen-Fiskernes Bank. Tel: 77066411.
STORING: See "Prelims".
1. Vessel can be stored by barge and/or truck.
2. No special regulations.
3. Trucks can proceed alongside the berth.
4. Fork lift trucks can be used on the jetty to handle stores.
5. No special regulations.
6. Local riggers can be employed to assist with storing.

SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: Not needed.
DEVELOPMENTS: *Sor-Stangnes:* Sor-Stangnes is developed, and there is a quay of 120 m. with depth 11.5 m. – 13.0 m., and another of 30 m. with depth 8.0 m. – 10.0 m.
AUTHORITY: Harstad Havnevesen, Box 193, N-9401 Harstad, Norway. *Tel:* 77062459. *FAX:* 77061413. *Contact:* K. Kollstroem, Harbour Master.

HAUGESUND: 59.25 N. 05.16 E. (See Plan)

DOCUMENTS:

3 copies Maritime Declaration of Health.
4 copies Cargo Declaration.
3 copies Ship's Stores Declaration.
3 copies Crew Effects Declaration.
3 copies Crew List.
2 copies General Declaration.
Clearance from last port.
3 copies Passenger List.

PILOTAGE: 24 hours notice addressed to Kvitsoy Pilot Station, who keep a 24 hours watch on VHF Channel 16, working Channel 13.

Pilot boards vessels off Skudenes (59° 07′ N., 05° 16′ E.) in Skude Fjord, or off Rorver (59° 27′ N., 05° 03′ E.).

Vessels proceeding to the Lay-up Area at Bovaagen, take Pilot off Skudenes.

Shipmaster's Report: September 1990.

Pilot Station now centralised on Kvitsoy Pilot Station. Tel: 04-515397. VHF Channel 13.

Rorver Pilot Station is closed.

No pilot required if arriving or sailing to the North. Pilot is required if arriving or sailing from the South (Military Zone).

ANCHORAGE: Anchorage in Karmsundet off the city can generally only take place after agreement with the Harbour Office. Alternatively safe Anchorage is possible 1 mile North of Kopervik in 30 m. of water.

MAX. SIZE:

Entrance from the North: No restrictions as to height. Minimum depth in the Harbour is 23 m.

Entrance from the South: The bridge between Haugesund and Karmoy, crossing at Salhus, free height of 45 m. Minimum depth of water 11 m. (just North of the bridge).

RADIO: Rogaland Radio.

VHF: Rogaland Radio on Channel 16. Kopervik Pilot on Channels 16 and 13. Haugesund Harbour Office on Channels 16 and 12, throughout 24 hours.

TUGS: Two tugs available in the Port and further tugs can be called from Stavanger.

BERTHING:

Berth	*Length* (m.)	*Depth at LW* (m.)
Garpeskjar – West	418	10.0
Garpeskjar – North	213	7.0
Garpeskjar – East	268	7.0
Inner Harbour	220	6.4
Killingoy Offshore Base East	120	10.0
Killingoy Offshore Base South	111	10.0
Killingoy Offshore Base West	157	15.0

At Garpeskjar – West, there is a Ro/Ro Terminal with landing point for ships ramps with a width up to 15 m.

At Garpeskjar – East, there is a Reefer Store.

There are several private companies in the port with berthing facilities with depths between 5 m. and 7 m.

Lay-Up Areas: A well recommended Lay-up Area is situated at Bovaagen Bay, just to the South of the bridge between Haugesund and Karmoy (2 miles to the South of the city).

The Lay-up Area can accommodate vessels up to 250,000 d.w.t. The depth in Bovaagen Bay is from 23 m. to 40 m., with good holding ground.

The Bollards are certified from 200 – 400 tons holding capacity.

There is a 380 volt current supply and telephone connections are available. Fresh water is supplied by boat. Entrance to the Lay-up Area in general takes place from the South, limited by a link-span 47 m. high.

To the West side of Storasundskjaerene is an excellent lay-up area for oil rigs. Bollard of 250 tons. 380 volt current supply, fresh water and telephone.

CRANES: Mobile cranes of all sizes available. Floating crane of 80 tons available.

STEVEDORES: To be ordered by local Agent in ordinary Office hours (07.30 – 15.30).

MEDICAL: Doctor and hospital facilities available at any time.

FRESH WATER: Available ex-wharf or by boat.

FUEL: Available ex-wharf and by boat or truck.

CONSULS: Denmark, Finland, France, Germany, Iceland, Sweden and United Kingdom.

Countries not mentioned above are in general represented in Stavanger.

REPAIR/DRY DOCKS: HMV Shipyard offers dry dock facilities for vessels up to 155,000 d.w.t. and a floating dock for vessels up to 17,000 d.w.t.

Drilling rigs can be berthed alongside the yard's 100 m. long "deep water quays".

There are also several smaller repair yards in the Port.

At Killingoy (offshore base) there are repair facilities in general and also service on offshore underwater works (diving operations, etc).

AIRPORT: At Karmoy, 15 minutes drive from Haugesund.

GARBAGE DISPOSAL: Collection service available from local company. Arranged through local Agent or Harbour Office.

One garbage container (5 – 7 cu.m.) is charged about N.Cr.450.00.

WASTE OIL DISPOSAL: Waste oil disposal available by truck or at berth by local company. Contact: Haugesund Skipsbase. Tel: 04-724290. Fax: 04-716740.

AUTHORITY: Haugesund Harbour Authority, P. O. Box 186, N-5501 Haugesund, Norway. *Tel:* 52714744. *FAX:* 52712819. *Contact:* A.J. Simonsen, Harbour Inspector.

HEROYA: 59.07 N. 09.38 E. (See Plan)

DOCUMENTS:

Clearance documents – forms obtainable from Custom Officers on arrival.

Derat Certificate.
Bill of Lading.
Manifest.
2 Crew Lists.
Ship's Register.

PILOTAGE: Vessels approaching from the sea and desiring a Pilot shall, as far as possible, order a Pilot 24 hours in advance and thereafter confirm arrival at Pilot Station 2 hours in advance.

Vessels lying in port and desiring a Pilot shall, as far as possible, order a Pilot 4 hours in advance and thereafter confirm departure from the port 2 hours in advance.

Orders for Pilots shall be addressed to "Brevik Control" (Channel 80). Also see "Brevik – Regulations".

Pilot boat located 1 mile S.E. of Langoytangen Lighthouse (position: Lat. 58° 59′ 30″ N., Long. 9° 45′ 30″ E.).

ANCHORAGES: All anchoring at Frierfjorden. Also see "General" before first port (Agotnes).

RESTRICTIONS: No restriction on night entry except for large vessels when Pilots prefer daylight. Also see "General" before first port (Agotnes).

MAX.SIZE: Max. draft 32 ft. 6 in., max. length 600 ft. entering Kjorttingen between Langesund and Brevik. Also see "General" before first port (Agotnes).

HEALTH: See "Documents". Norwegian Health Certificate required on clearance inwards.

RADIO: Cable Agents giving ETA, draft and cash required via Tjome Radio/LGT or Farsund Radio/LGZ.

TUGS: Tugs join at berthing place. Ship's lines used.

BERTHING: No specific requirements relating to berth.

CARGO HANDLING FACILITIES: On the East side of the river, a berth of 800 ft. length, 20 ft. to 21 ft. alongside. A new quay for vessels up to 10,000 tons, 26 ft. to 27 ft. depth, specially for handling bulk cargoes.

No berth equipped for handling Ro/Ro traffic, but berth available for liquid chemical and LPG carriers.

Norsk Hydro A/S Oil Pier, vessels up to 20,000 d.w.t.

Norsk Hydro A/S Main Quay, length 1,838 ft., draft 26 ft. to 34 ft. 6 in.

Norsk Hydro A/S Western Quay, length 1,263 ft., draft 26 ft. to 32 ft. 6 in.

CRANES:

Norsk Hydro A/S Main Quay:

4 cranes reaching 10 m.-11 m. outside quay border capacity 6 tons.
2 cranes reaching 18 m. outside quay border capacity 6 tons.
3 elevators for loading of bagged cargo reaching 16 m.

Norsk Hydro A/S Western Quay:

2 cranes reaching 18 m. outside quay border capacity 7 tons.
1 crane reaching 15 m. outside quay border capacity 8 tons.
1 crane reaching 9 m. outside quay border capacity 3 tons.
3 elevators for loading of bagged cargo reaching 8 m.

Deep Water Jetty:

2 cranes reaching 16 m. outside quay border capacity 10/12 tons for bulk cargo only.
1 crane capacity 5 tons for handling of stores, etc.

BRIDGES: Brevik Bridge max. height 45 m. Porsgrunn Bridge (VHF Channel 12) only when proceeding to Menstad, Borgestad, Waterloo and Skien, liftbridge with breadth of 30 m. Sound signals for passing bridge inward, 1 long and 2 short. Outward signals, 1 long and 1 short.

STEVEDORES: Ordered by Shippers/Receivers or Agents.

MEDICAL: All medical assistance to be arranged via Agents.

TANKERS: Discharge lines 4 in., 6 in., 8 in.

DENSITY: Brackish 4 in. – 6 in. allowance.

FRESH WATER: Obtainable various quays.

FUEL: All grades available.

FIRE PRECAUTIONS: Tankers discharging, smoking only by Officers in saloon, crew in messroom.

CONSULS: Belgium (03) 35520083 (Skien), Denmark (03) 35550069, Germany (03) 35525093 (Skien), Netherlands (03) 35522742 (Skien), Finland (03) 35552620.

REPAIRS: Repairs possible.

DRY DOCK: Draft 14 ft ., length 155 m., breadth 20 m., also 4 smaller docks.

GANGWAY/DECK WATCHMEN: Available but not compulsory.

OPENING/CLOSING HATCHES: Crew normally open and close. Otherwise according Charter Party.

CERTIFICATES: Registered Tonnage Certificate; Derat Certificate. Otherwise normal international certificates.

CUSTOMS ALLOWANCES: 400 cigarettes for the Master and 200 for each crew member. *Wine and/or Spirits:* 4 bottles spirit for Master and half bottle for each crew member.

CARGO GEAR: No additional requirements, but using vessel's rain tents.

REPATRIATION: Facilities exist for effecting crew changes and repatriation.

TIME: GMT plus 1 hour. GMT plus 2 hours in Summer (Last Sunday in March till last Sunday in September).

HOLIDAYS: New Year's Day, Maundy Day, Good Friday, Easter Eve (half day), Easter Monday, Christmas Eve (half day), Christmas Day, 26th December, New Year's Eve (half day).

POLICE/AMBULANCE/FIRE: Police 35560000; Ambulance 35550170; Fire 35551522. Other numbers: Pilot Station 35571233; Tug Station 35571144; Norsk Hydro Central 35562000; Porsgrunn Bridge 35552492; Custom House 35554540; Taxi 35556900; Harbour Office: 35571200.

IDENTIFICATION CARDS: Only necessary at quays belonging to Norsk Hydro. Special identification cards will be delivered to Master on arrival.

SHIPMASTER'S REPORT: December 1988.

Pilotage: Pilot boards about 2 miles South of Langoytangen Lighthouse (near Langesund), from a fast sea cutter painted orange. Call "Brevik Control" on VHF Channel 80, working Channel 13.

One pilot is used for the complete passage into Frierfjord, which serves Rafnes, Porsgrunn and Heroya.

When unberthing or sailing from the inner anchorage, the pilot and tugs require 2 hours notice through "Brevik Control".

Anchorage: The anchorage is located in Frierfjord off Versvik, in a depth of 20 fathoms. The anchorage is sheltered.

It is difficult to anchor outside the Pilot Limits as the water is deep and the coast is exposed to the prevailing winds.

The pilot advised that the only suitable anchorage outside is at Sasteinflak Bank, about 2.7 miles S.W. of Langoytangen Lighthouse. This anchorage is exposed to S.W. winds and swell. If vessel anchors at this location it is to report to "Brevik Control" prior to anchoring.

Approaches: The pilotage time to Rafnes via Brevik Fjord for vessels with a draft of less than 32 ft. is 1 hour. Due to restrictions at Kjortingen Passage and Brevik Bridge, vessels in excess of 32 ft. draft use Kalven Passage to the East of Brevikfjord. However, vessels can only go as far as Brevik.

The Pilot reports that the waters never ice over as the water is salt and currents are always running.

Tankers which are not gas free must have a minimum visibility of 1.0 nautical miles in order to make a passage.

Tugs: A safety tug is compulsory for all tankers which are not gas free. Large vessels require 2 tugs.

Tugs join vessels off Aroy Island and make fast astern with 2 ship's lines from the centre lead.

Fire wires are required, forward and aft, when proceeding from the pilot station to Rafnes, and vice versa.

There are 4×3,500 h.p. tugs available and one is always on stand-by at Rafnes when tankers are alongside. When vessels are alongside and not loading or unloading (cooling down does not count as loading) a charge of about £60.00 per hour is made for the stand-by tug and this is for the vessel's account.

Berthing: There are 3 berths for gas and product tankers at the Norsk Hydro Refinery at Rafnes, on the West side of the Fjord.

Largest vessel handled 32,000 cu.m. (gas vessel).

The main imports are propane and butane and the main exports are ethane, sodium and sulphuric acid.

The berths are No. 1, No. 2 and No. 3, from North to South. Berths No. 2 and No. 3 have a depth of 12.0 m. The berths are well constructed and have good fenders. The berths are 'T' shaped jetties with mooring dolphins connected by catwalks either side of the jetty.

Vessels normally berth port side alongside. Shore gangway provided.

There is a fairly strong South flowing current along the line of the jetties.

Cargo: Ethylene is loaded at Berth No. 3 from ethane Chicksan, at about 150 t.p.h. at −100°C.

The liquid and vapour Chicksans are 6 in. (150 ASA).

As handling of ethane and ethylene is through the same Chicksans, a period of 18 hours is required for shore line purge between products.

Ethylene is stored at −95°C. and is further cooled through expansion valves to −100.5°C. in order to arrive at the ship's rail at −100°C.

Stoppages for "First Foot" and "75% samples" varies due to shore loading requirement. We did not stop, due requirement for cold product and in order to avoid line heating.

Vapour return by ship's compressor, mainly at 100% compressor loading.

Ethylene is not normally exported, although it is sometimes imported. It is used for VCM, but not at the present time due to VCM cracker explosion.

Vessels are not normally allowed to stay alongside for cooling down as other vessels are usually waiting and there is a charge for a stand-by tug.

General: VHF: Whilst at anchor Tjome Radio, VHF Channels 25 and 62, was used.

Stores: Stores are expensive.

SHIPMASTER'S REPORT: October 1993.

Approaches: B.A. Chart 1327. Found to be as charted, and communications for Pilots and VTS as published.

Pilotage: Larger vessels go via Helgerfjorden, Haoyfjorden and Kalvsundet to Brevik. Smaller vessels use the channel between Geitraya and Kjortingen.

Two Pilots board and leave just inside the pilot station charted, but are in contact by VHF during the approach.

Pilots require 2 hours notice for shifting berth and departure. The Agent and Loading Foreman liaise with the vessel to reduce delays.

As the bulk fertiliser requires covering on completion of loading before the hatches are closed, allow about 2 hours for this work to be completed, and order Pilots when loading is completed.

Tugs: Larger vessels take a tug forward and aft, using 2 ship's lines to each tug. Tugs join just after clearing Kalvsundet inward and remain with the vessel until berthing is completed. Similarly outward, two tugs remain with the vessel until approaching Kalvsundet.

Tug's lines may be used.

Berthing is starboard side to on both the Main and West Quays.

Draft and Navigation Restrictions: Maximum draft on the berths is 10.2 m.

Density is 1002.

Large vessels are not taken in or out of the port in darkness, but moving between berths is permitted.

All movements are at the discretion of the Pilots.

Vessels of up to 200 m. LOA have entered the port.

Ice is not usual, but can be experienced in hard Winters.

Heroya: Heroya is a large factory complex handling compound fertilisers, ammonia and chlorine in bulk.

Main Quay: Well fendered and well fitted with mooring bollards. The apron of the quay for about 200 m. from the N.W. end is approximately 1 m. wider than the remainder, and the face of the quay is tapered over approximately 10.0 m.

A cooling water outlet discharges under the quay about 200 m. from the N.W. end, pushing the vessel off whilst berthing.

The bulk cargo loader on this quay has a nominal air draft of 12.0 m., but it was able to work over the top of side opening hatch covers, 0.5 m. from the ship's side, with an air draft of 13.06 m.

The loader has an outreach of about 16.0 m., and the trimming spout was able to make a reasonable stow on this vessel (31.0 m. beam), although a level stow was not achieved.

Loading rate for 8,000 tonnes of calcium nitrate was 302.3 tonnes/hr.

Stowage factor 0.9 to 0.93 cu.m./ton.

West Quay: Fendered and fitted as the Main Quay.

This vessel (188.4 m. length) berthed overhanging the quay at the after end by about 10.0 m., and stern lines were run to bollards ashore some 60 m. from the face of the quay.

No air draft was quoted for the bulk loader on this quay, but it was estimated at about 15.0 m., with an outreach of about 25.0 m. and capable of giving a level stow to any vessel which can enter the port.

The loading rate for 27,000 tonnes of NPK fertiliser was 463.86 tonnes/hr. (gross) and 483.76 tonnes/hr. (nett).

This vessel was taking the last of this grade available, so the loading rate was slow at the finish. Early loading was at about 570 tonnes/hr.

Stowage factor 0.87 to 1.05 cu.m./ton.

Loading: The bulk loaders at both quays are used on a 24 hour basis.

At West Quay, moving the loader between holds takes from 5 minutes to 10 minutes.

Holds not being loaded should be covered as the cargo is very liable to moisture damage.

On completion of each hold, the crew are required to cover the surface of the cargo with plastic sheeting to protect the cargo during transit. The necessary sheeting tape and wooden spikes are supplied by the shippers.

Clearance: Carried out by the Agent.

Customs officials may board during the vessel's stay, and a full search of the vessel, including accommodation, may be carried out using sniffer dogs.

Agents: Norsk Hydro (Agency Department), P.O.Box 1043, N-3902 Porsgrunn, Norway. Tel: 4735-564086 (Mobile 47-031-05260). Telex: 21368 Hydro N. Cables: Hydrosped Porsgrunn. VHF Channel 14. Fax: 4735-553655.

The Agents are a department of Norsk Hydro, who are the operators of the complex, as well as being the shippers of the cargo.

There is an Agency office on the Main Quay. Office hours are 0800 hrs. – 1600 hrs., but they are available 24 hours by telephone.

The Loading Foreman will assist if any difficulties are experienced in contacting the Agents.

AUTHORITY: Grenland Havnevesen, P.O.Box 20, 3951 Brevik, Norway. *Tel:* (03) 35571200. *FAX:* (03) 35571703. *Contact:* Torjus Johnsen, Port Director.

HORTEN (on West Side - Oslo Fjord): 59.24 N. 10.28 E.

DOCUMENTS: Health Certificate, Provisions List, etc., all forms obtainable from Customs Officer boarding on arrival. Ship's Register and 2 copies of Manifest (with or without freight).

PILOTAGE: Compulsory for foreign ships over 50 g.r.t. Pilot station at Hvasser (Sandosund) outer Oslofjord, Tel: Hvasser 178 via Tjome Radio, VHF Channel 16 and RT 2182 kHz. Cutter or motor cruiser at Faerder Lighthouse bearing 3 miles N.N.E. White hulls with word LOS in black letters. Pilot usually ordered through Agent. Inner Harbour, Horten, compulsory Harbour Pilot ordered through Agent.

ANCHORAGE: Langgrunn outside Horten, any size vessel.

RESTRICTIONS: No restrictions night entry, but Inner Harbour at Horten only entered with Harbour Pilot on board.

MAX. SIZE: Ships up to max. length 900 ft. (anchored moorings outside jetty). Deep-water Wharf, length of N.E. side 530 ft. Draft 28 ft.

HEALTH: See "Documents". Advise Agent if suspect any disease or fever.

RADIO: Cable Agent giving ETA via Tjoeme Radio. Local Harbour Master's Office can be contacted by VHF Channels 16 and 12.

TUGS: Tugs if required use ship's line. Tugs ordered through Agent.

BERTHING: Max. draft alongside quay 28 ft.

STEVEDORES: Ordered by Agents.

MEDICAL: No special notice required, but preferred if urgent. Local hospital-Horten Sykehus Tel: 43191.

DENSITY: About 1022.

FRESH WATER: Available at most berths and from lighter.

FUEL: All grades. Direct from Installation and also by lighter. If large quantities, give earliest possible notice.

FIRE PRECAUTIONS: Usual restrictions and no smoking inside Cleaning Installation gate.

CONSULS: Only Finnish Consul in Horten Tel: 33042189, but most Consulates in Tonsberg – 18 km. distant. British Vice-Consul, Tonsberg Tel: 33311605, Netherlands Vice-Consulate Tel: 33313224.

REPAIRS: Any kind can be carried out.

DRY DOCKS: Dry docks for vessels up to about 60,000 d.w.t.. at Horten Shipyard. Tel: 33047700.

GANGWAY/DECK WATCHMEN: Available, not compulsory.

OPENING/CLOSING HATCHES: Usually opened/closed by vessel's crew.

CERTIFICATES: Ship's Register and usual certificates.

CUSTOMS ALLOWANCES: Tobacco, 200 cigarettes or 250 grammes tobacco, 200 cigarette papers for persons over 15 years only. Wine and/or Spirit, Spirit of max. 60% 1 bottle (1 litre) and 1 litre wine (1.25 bottle) – 2 litres of wine if no spirits and 2 litres of beer (for persons over 21 years only).
CARGO GEAR: No additional requirements except when extra heavy lifts (20 tons).
REPATRIATION: Crew changes, etc., can be arranged.
AIRPORT: Nearest international Airport is Oslo Airport (Fornebu) and Torp Airport (Sandefjord). Charter flights may be arranged to and from Sandefjord Airport – any size of plane. Distance to Sandefjord about 30 km.
TIME: GMT plus 1 hour. GMT plus 2 hours in Summer.
HOLIDAYS: New Year's Day; Thursday before Good Friday; Good Friday; Easter Monday: 1st May; Ascension Day; 17th May; Whit Monday; Christmas Day; 26th December. 24th December is half holiday – work stops at noon or 1300 hrs.
POLICE/AMBULANCE/FIRE: Fire 111, Police 112 and Ambulance 113.
TELEPHONES: Can be placed on board at Deepwater Wharf, the Cleaning Installation and the Dockyard at comparatively cheap rates.
SERVICES: Adjusting of all kinds of ship's instruments.
SHORE LEAVE: Crew members are allowed on shore.
IDENTIFICATION CARDS: Not needed.
REGULATIONS: Compulsory harbour Pilot when calling at Inner Harbour.
GENERAL: Important Electronic Industry.
DEVELOPMENTS: Committee at present working with plans for building more berths for ferries and traffic.
AUTHORITY: Borre Havnevesen, Post Box 167, N-3191 Horten, Norway. *Tel:* 33041021. *FAX:* 33044727. *Contact:* Kjell Fjellin, Harbour Master.

HOYANGER: 61.10 N. 06.04 E.

LOCATION: Hoyanger Aluminium Works located North of Bergen in outer part of Sognefiord. Lat. 61° 10′ 18″ N., Long. 6° 04′ 07″ E.
DOCUMENTS: See "Bergen".
PILOTAGE: Compulsory. Belonging to Bergen Customs District and unless otherwise arranged beforehand vessels from abroad must call Bergen for inward clearance.
BERTHING: Length of Quay: 600 ft. (approx.) Depth alongside: 36 ft. Cranes. Ice free.
GARBAGE DISPOSAL: Not available.
WASTE OIL DISPOSAL: Not available.
SEAMAN'S CLUBS: None.
AUTHORITY: Hydro Aluminium, Hoyanger Verk, Postboks 114, N-5900 Hoyanger, Norway. *Tel:* 57715260. *Telex:* 42584 hoal n. *FAX:* 57715262. *Contact:* Torfinn Laegreid, Transport Manager.

HUSNES: 59.52 N. 05.46 E. (See Plan)

DOCUMENTS:
3 Crew Lists.
2 Passenger Lists.
2 Bills of Lading
2 Manifests.
PILOTAGE: No pilotage in port. Sea Pilots in stations at Skudesnes (59° 05′ N., 05° 19′ E.), Kvitsoy (or Kopervik) and Utsira.
ANCHORAGE: Lat. 59° 53′ N., Long. 05° 45′ E. in 20 m.
MAX. SIZE: 70,000 tons.
HEALTH: Customs Authorities in Bergen to be advised on entrance.
RADIO: Best radio stations: Rogaland Radio. ETA to Receiver's cable address: "Soeraluminium, Husnes".
VHF: Vessels may contact harbour on Channel 9.
TUGS: Normally not necessary. If wanted, can be ordered from Bergen or Haugesund.
BERTHING: 240 m. Depth alongside: South 10 m., North 17 m. 2 cranes, on quay, each 8 tons at 20 m. and 1 pneumatic gear for discharging alumina. Capacity 5,000 tons per 24 hours.
STEVEDORES: Normal working time: Monday-Friday 0700 – 1500 hrs.
MEDICAL: Hospital at Stord (about 1 hour by ferry and car). Doctor at factory during daytime (0800 hrs. – 1500 hrs.).
TANKERS: Discharging line 9 in.
FRESH WATER: Available, direct from quay to ship.
FUEL: Not available.
CONSULS: None.
REPAIRS: Only small workshops.
DRY DOCKS: None.
GANGWAY/DECK WATCHMEN: Crew.
OPENING/CLOSING HATCHES: To be carried out by crew.
CARGO GEAR: Per Norwegian safety regulations for loading and discharging.
REPATRIATION: No facilities for obtaining new crew (Haugesund or Bergen).
AIRPORT: Bergen-Flesland. 2 hours – 2.5 hours from Husnes to Bergen by hydrofoil, and 0.5 hours by plane. Haugesund Airport 3 hours by car from Husnes.
POLICE/AMBULANCE/FIRE: Police 002; Ambulance 003; Fire 001.
TELEPHONES: Agent has one telephone in office on quay.
SERVICES: No services at quay. Tank cleaning at Bergen, compass adjusting at Haugesund.
SHORE LEAVE: Permitted. Crew required proceed direct from quay to gate of plant.
IDENTIFICATION CARDS: Crew need cards signed by Master.
GARBAGE DISPOSAL: No facilities.
WASTE OIL DISPOSAL: No facilities.
SEAMAN'S CLUBS: None.
CURRENCY: Norwegian Kroner.

SHIPMASTER'S REPORT: September 1979 (Type "Panamax").
Tugs: For large ore carriers 2 tugs ordered for arrival, and 1 tug on departure by Sor-Norge Aluminium A/S.
Stevedores: Normal working time for alumina carriers from Monday 0600 hrs. – Saturday 0600 hrs.
Fresh Water: Flat charge of Nkr. 800 for all water taken. Smaller vessels Nkr. 400.
Discharge Rate: The discharge rate for alumina is still in the region of 5,000 tonnes per day despite the reduction in working hours.

AUTHORITY: *Shippers/Receivers:* Sor-Norge Aluminium a/s.
AGENT: Sor-Norge Aluminium A/S P.O.Box 85, 5460-Husnes, Norway. Tel: 47-53-475093. Telex: 42420. FAX: 47-53-475015. Contact: Mr.A. Solbakken, after hours Tel: 53-471193.

KARSTO (Kaarstoe): 59.16 N. 05.30 E. (See Plan)

DOCUMENTS:
Quarantine:
Completed Declaration of Health.
Valid Derating Certificate.
International Vaccination Certificates.
Customs:
Crew's Effects Declaration (RG-223).
Ship's Stores Declaration (RG-104).
General Declaration (RG-110).
Crew List.
Passenger List.
APPROACHES: From Boknfjorden to Falkeidflaeet. The main entrance to Karsto is situated between Flate Rova and Austreflu marked by light beacons. In addition the entrance is marked with green leading lights situated on Ognekalven.
PILOTAGE: Compulsory. The sea pilot, also acting as harbour pilot, will board arriving vessels off Kvitsoey Lighthouse in position 59° 05′ N., 05° 19′ E. The pilot boat normally operates on VHF Channels 16 and 13 and medium wave radio telephone 2182 kHz.

Once the Pilot is onboard, he should immediately contact "Karsto Harbour Office" on VHF Channel 11, informing them that the vessel is underway to Karsto Harbour. Karsto Harbour Office will promptly advise whether the vessel is to be berthed or be anchored on arrival. The vessel will also be advised of any events at the Terminal, which might prevent or delay the vessel's loading of products.
ANCHORAGES: Vessels awaiting berth will be anchored at Falkeidflaeet or the Hervik Fjord. The place will be considered jointly between the pilot and the Terminal.
RESTRICTIONS: Normally no restrictions on berthing at night time.
Safety Zone: The Terminal is surrounded by a Safety Zone, both landward and seaward (See "Plan"). No vessel, regardless of size, is permitted to move inside the seaward Safety Zone, unless authorised by the Terminal. Safety Zone and specially designated seaward areas with limitations are established and marked with leading marks on Norwegian Chart No. 18.
MAX. SIZE: *LPG/Naphtha Jetty:* Max. length 210 m., max. draft 11.3 m.
HEALTH: Completed Declaration of Health and International Vaccination Certificates required.
RADIO: Rogaland Radio.
Pre-Arrival Information: LPG Carriers/Product Tankers: The Master shall send ETA via ship's Agent at least 72 hours prior to arrival. ETA shall be confirmed 48 hours, 24 hours and 12 hours prior to arrival. The Master shall thereafter advise of any changes in the ETA.
Coasting Vessels: The Master shall send ETA via ship's Agent 24 hours in advance, if possible. Master shall thereafter contact Karsto Harbour Office on VHF Channel 11 no later than 30 minutes prior to arrival, for further berthing instructions.
VHF: Channel 11 for communication with the Terminal.
TUGS: Two tugs, each with 3,000 h.p. and bollard pull of 42 tonnes, are stationed at Karsto Harbour.

In general, all ships will be assisted by 2 tugs. The Terminal reserves the right to impose use of additional tugs, in the event of adverse weather conditions, where uncontrolled drift of the vessel may represent a hazard to the quays. Tugs' rendezvous will be at the main entrance to Karsto Harbour, about 1.5 nautical miles off the harbour.
BERTHING: The Terminal berthing facilities consist of two "T" product quays for handling LPG products, natural gasoline and condensate, and one dry cargo quay for handling general cargoes.
Water Depths:
Product Quays No. 1 and 2: 13.5 m.
Coaster Jetty: 7.7 m.
Ro-Ro Jetty: 7.5 m.
Tide: Difference between high and low water is small in the area, maximum 1.0 m., normally 0.6 m.

Current: Currents in the vicinity of the jetties vary in direction according to wind and tides. Measurements indicate average current of 0.4 knots at 5.0 m. depth. Maximum recorded current is 1.7 knots setting S.E. However, mariners are warned that surface flow of current exceeding this value may be expected during strong gales.

Wind:

Prevailing winds March-August: North-Northwesterly.

Prevailing winds September-February: Southeasterly.

Coaster/Ro-Ro Quay: *Arrival/Departure Procedures:* Mariners shall follow the guidelines and regulations laid down in Karsto Harbour Regulations and Information Handbook.

These regulations apply to all ships arriving at and departing from Karsto Harbour area.

Karsto Terminal enforces a Traffic Control Plan which requires clearance for all ships arriving and departing Karsto Harbour area. No vessel, regardless of size, is permitted to enter or leave the restricted area, unless authorised by Karsto Terminal.

Pre-Arrival Information: If possible, coasters shall send ETA 24 hours in advance, and they shall contact Karsto Harbour Office for berthing instructions on VHF Channel 11, no later than 30 minutes prior to arrival.

Vessel Alongside: It is of utmost importance for safe operations that the vessel is securely moored and maintained in the desired position at all times.

Loading/discharging shall take place only when weather conditions are considered safe.

Departure: Vessels ready for departure shall contact Karsto Harbour Office on VHF Channel 11 for clearance outward.

Also see "Tankers".

MEDICAL: No advance notice except in case of serious illness to be included in arrival cable. Hospital facilities available.

TANKERS: Product Quay No. 1:

Vessel Size: Minimum 2,500 cu.m. and LOA 80 m. Maximum LOA 210 m. Maximum draft 11.3 m.

Note: Vessels exceeding above stated maximum LOA must obtain special berthing permission from the Terminal, in advance.

Manifold Elevations: The minimum (loaded condition) and maximum (ballast condition) manifold elevations above waterline are:

Product	*Minimum*	*Maximum*
Propane/N-Butane	4.0 m.	19.8 m.
Iso-Butane	2.0 m.	19.8 m.
Naphtha	2.0 m.	12.3 m.
Condensate	2.0 m.	12.3 m.

Minimum Normal Loading Rate: In order to prevent excessive loading time, the following minimum loading rates are utilised at the Terminal:

LPG Vessels:

Vessel Size (cu.m.)	*Propane/N-Butane*	*Iso-Butane*
2,500 – 5,000	300 cu.m./hr.	300 cu.m./hr.
5,000 – 10,000	600 cu.m./hr.	600 cu.m./hr.
10,000 – 20,000	850 cu.m./hr.	850 cu.m./hr.
20,000 – 40,000	1,400 cu.m./hr.	1,400 cu.m./hr.
40,000 – 60,000	1,800 cu.m./hr.	1,500 cu.m./hr.

Oil Tankers:

Vessel Size (d.w.t.)	*Nat. Gasoline*	*Condensate*
5,000 – 10,000	450 tonnes/hr.	450 tonnes/hr.
10,000 – 20,000	700 tonnes/hr.	700 tonnes/hr.
20,000 – 40,000	1,300 tonnes/hr.	1,300 tonnes/hr.

Loading Arm Flange Sizes, Pressure Ratings: The Terminal's Product Quay No. 1 is equipped with following arms:

Arm Designation	*Product*	*Flange*	*Operating Pressure*
47 MU 102	N.Gasoline/Conden.	10 in. ANSI 150	1 – 8.6 bar
47 MU 103	Propane liquid	12 in. ANSI 150	1 – 8.0 bar
46 MV 103	Propane vapour	10 in. ANSI 150	0.7 bar (approx.)
47 MU 104	N-Butane liquid	10 in. ANSI 150	1 – 8.0 bar
46 MV 104	N-Butane vapour	8 in. ANSI 150	0.7 bar (approx.)
47 MU 105	I-Butane liquid	8 in. ANSI 150	1 – 8.0 bar
47 MV 105	I-Butane vapour	8 in. ANSI 150	0.7 bar (approx.)

Custody Metering by Dynamic Measurement: Custody transfer of all products loaded will be on the basis of onshore measurement and sampling. Each NGL product will be measured by its separate turbine flow meter station. The meter stations are calibrated using stationary meter provers. Primary means of measurement for products loaded aboard vessel is by the shore metering system.

The metering equipment is designed in accordance with the requirements and guidelines from the Norwegian Petroleum Directorate.

Product Loading: All NGL products are stored at near atmospheric pressure. Propane, iso-butane and normal butane are stored in fully refrigerated conditions. Loading of two products simultaneously is possible. At the Product Quay No. 1, there are separate vapour arms for propane, iso-butane and normal butane products. At the the Product Quay No. 2, vapour return arm is installed for propane only.

Such loading arms system can possibly cause delays for vessels which are not in a fully refrigerated condition on arrival. Therefore, the shippers shall endeavour to ensure that vessels arrive in fully refrigerated condition.

	Propane	*I-Butane*	*N-Butane*	*Natural Gasoline*	*Condensate*
Max. loading rate (cu.m./hr.)	3,500	1,500	2,500	2,000	2,400
Min. loading rate (cu.m./hr.)	100	100	100	100	300
Gasoline return capacity (cu.m./hr.)	11,500	4,200	6,300	N/A	N/A

The content of impurities in vapours that are to be returned from ship's tank to the shore tanks must not exceed the current measured concentration of impurities present in the vapour phase of the shore product tanks for the product concerned. Vapours not fulfilling this requirement are to be routed to flare.

Loading Arrangement: Minimum distance between liquid and vapour manifolds hooked up onboard vessel must be 1.50 m.

Product Quay No. 2: *Vessel Size:* See Product Quay No. 1.

Manifold Elevations: The minimum (loaded condition) and maximum (ballast condition) manifold elevations above waterline are:

Product	*Minimum*	*Maximum*
Propane	4.2 m.	19.8 m.
Butane	4.2 m.	19.8 m.
Naphtha	4.2 m.	19.8 m.
Condensate	4.2 m.	19.8 m.

Minimum Normal Loading Rate: In order to prevent excessive loading time, the following minimum loading rates are utilised at the Terminal:

LPG Vessels:

Vessel Size (cu.m.)	*Propane/N-Butane*	*Iso-Butane*
2,500 – 5,000	300 cu.m./hr.	300 cu.m./hr.
5,000 – 10,000	600 cu.m./hr.	600 cu.m./hr.
10,000 – 20,000	850 cu.m./hr.	850 cu.m./hr.
20,000 – 40,000	1,400 cu.m./hr.	1,400 cu.m./hr.
40,000 – 60,000	1,800 cu.m./hr.	1,500 cu.m./hr.

Oil Tankers:

Vessel Size (d.w.t.)	*Nat. Gasoline*	*Condensate*
5,000 – 10,000	450 tonnes/hr.	450 tonnes/hr.
10,000 – 20,000	700 tonnes/hr.	700 tonnes/hr.
20,000 – 40,000	1,300 tonnes/hr.	1,300 tonnes/hr.
40,000 – 60,000	1,300 tonnes/hr.	1,300 tonnes/hr.

Loading Arm Flange Sizes, Pressure Ratings: The Terminal's Product Quay No. 2 is equipped with following arms:

Product	Flange	Operating Pressure
Conden./Nat.Gasoline	12 in. ANSI 150	1 – 9.0 bar
Conden./Nat.Gasoline	12 in. ANSI 150	1 – 9.0 bar
Propane liquid	12 in. ANSI 300	1 – 8.0 bar
Propane vapour	12 in. ANSI 300	0.7 bar (approx.)
Butane liquid	12 in. ANSI 300	1 – 8.0 bar

Custody Metering by Dynamic Measurement: See Product Quay No. 1.

Product Loading: All NGL products are stored at the Terminal at near atmospheric pressure. Propane, iso-butane and normal butane are stored in fully refrigerated conditions. At the Product Quay No. 2, loading of two products simultaneously is possible. However, attention should be paid to vessels which are not in a fully refrigerated condition on arrival.

Butane vessels arriving with warm tanks will be alloted berthing at Product Quay No. 1 as Quay No. 2 is not equipped with sufficient vapour return arms.

	Propane	*I-Butane*	*N-Butane*	*Natural Gasoline*	*Condensate*
Max. loading rate (cu.m./hr.)	3,500	1,500	2,500	2,000	6,000
Min. loading rate (cu.m./hr.)	100	100	100	100	300
Vapour return capacity (cu.m./hr.)	11,500			N/A	N/A

Loading Arrangement: Minimum distance between liquid and vapour manifolds hooked up onboard vessel must be 1.50 m.

DENSITY: 1025.

FRESH WATER: Available.

FUEL: Bunkers are not obtainable at the Terminal. Marine lubricants can be obtained through supplier. Possible to supply bunkers in the area.

CONSULS: Denmark, Finland, Germany, Iceland, Sweden and United Kingdom.

REPAIRS: Hot work is forbidden. Any repair or maintenance work which may immobilise the vessel is prohibited unless approved by Terminal Manager.

DRY DOCKS: Available at Haugesund. Max. docking capacity 150,000 d.w.t. Max. LOA 283 m. Beam 45.3 m.

SURVEYORS: Lloyd's Agents: Bergesen d.y. A/S, N-4001 Stavanger.

(1) Cargo Inspectors: T.G.Soundings, Caleb Brett, SGS.

(2) Norske Veritas, Lloyd's Register.

WATCHMEN: Ship's crew.

CUSTOMS ALLOWANCES: Tobacco and cigarette paper may be freely supplied for consumption on board for up to 10 days as follows:

Master of vessel: 400 cigarettes or 400 grammes of other tobacco goods and 200 cigarette papers.

Other crew members: 200 cigarettes or 250 grammes of other tobacco goods and 200 cigarette papers.

Spirits – of which the volume percentages of alcohol must not exceed 60% – and wine may be freely supplied for consumption on board as follows:

Master of vessel: 2 litre altogether.

Other crew members: 1 litre of spirits and 1 litre of wine.

REPATRIATION: Crew changes and repatriation possible.

AIRPORT: Helganes Airport, Haugesund is located 45 km. from Karsto with several domestic flights daily.

TIME: GMT plus 1 hour. GMT plus 2 hours in Summer.

EMERGENCY CO-ORDINATION CENTRE: Terminal: Local emergency number 100.

SERVICES: Compass adjusting, radar repairs, R/T repairs, gyro compass repairs, all types electronic equipment repairs. Divers available for surveys and underwater repairs.

SHIP SUPPLY SERVICE: Several ship chandlers in the area.

SHORE LEAVE: Ship's crew and visitors will only be allowed to pass through the Terminal area from the jetty to the main gate when escorted by Terminal personnel.

CREW IDENTIFICATION CARDS: Not required.

HARBOUR REGULATIONS: The following are part of the regulations.

Traffic Regulations: No vessel, regardless of size, is permitted to enter the Karsto Harbour area, unless authorised by the Terminal. During arrival/departure, manoeuvring of product vessels is always of first priority. No vessel movements are permitted inside the seaward Safety Zone, until said vessel is either safely moored alongside the quay, or is unmoored and has left the Safety Zone outward-bound.

Mooring Arrangement: Vessel will normally berth starboard side to Product Quay No. 1 and port side to Product Quay No. 2.

Note: Arrangements must be made through the Harbour Office on each occasion in case of deviation from above stated mooring plan.

Both Product Quays have identical dimensions.

The Product Quays are equipped with quick release mooring hooks, which can be operated either from the Harbour Office or locally from the harbour area. Mooring arrangements on both Product Quays are identical, and consist of 16×100 tons (nominal) mooring hooks arranged in 10 bollard positions.

Mooring: It is of utmost importance for safe operations that ships are securely moored and maintained in the desired position at all times. The Master shall ensure that all the vessel's moorings are closely monitored and tended regularly to prevent undue movement of the vessel, and that all moorings on self-tensioning winches are secured with winch brakes in locked position. Use of self-tensioning winches in automatic position is strictly forbidden.

All mooring wires shall have rope-tail ends. All vessels, while secured alongside the Product Quay must provide and rig towing wires with sufficient length and strength on seaward bow and quarter, with eyes maintained just above the water level ready for emergency towing. The wires must be securely fastened to the ship's bollards.

Gangway Facilities: Following guidelines are accepted by the Terminal as suitable for vessel's use of the Products Quays fixed installed gangway arrangement:

Vessel size above 5,000 cu.m.: Gangway facilities available on request.

Vessel size less than 5,000 cu.m.: Gangway facilities not available.

Use of the Terminal's fixed installed gangway facilities will be considered in each individual case by the Terminal.

Condition of Pre-Acceptance: Vessel must have been properly cleared and accepted by Statoil in accordance with the appropriate nomination procedures.

Pre-Operational Procedures: Before operations commence, a pre-operations meeting shall take place between the representative from the Terminal and the Master or the officer-in-charge of the cargo operations.

They will jointly:

Complete and sign the Ship/Shore Safety Check List.

Evaluate any deficiencies revealed by the Check List and decide whether additional precautions are required. The Terminal reserves the right to refuse to load a vessel if the requirements are not met.

Check vessel's loading/discharging records of the 3 previous cargoes and any tank purging/washing operations that have taken place during voyage.

Evaluate and agree upon which ship samples are required. The Terminal reserves the right to draw any tank samples considered necessary prior to, during and after loading. Loading will not commence if oxygen content in tanks exceed 2% by volume (LPG ships only).

Evaluate and agree upon a loading/discharging programme, including:

(a) Quantities and grades to be loaded/discharged including deballasting.
(b) Loading/discharging rate.
(c) Products temperature/pressure on shore and on board.
(d) Emergency procedures for shut-down of operations.
(e) Discuss and agree upon the means of communication to be used during operations.
(f) Connecting/disconnecting procedures.
(g) Purging requirement.
(h) Use of vapour return/flare system.
(i) Emergency procedures.

Third Party Independent Surveyor: The Terminal reserves the right to employ a third party independent surveyor for the sampling and measuring of cargo.

Cargo Handling Requirement: All operations shall generally be conducted in accordance with International Chamber of Shipping Tanker Safety Guide for Liquified Petroleum Gases and the International Maritime Dangerous Goods Code.

Chemist's Certificate: The Terminal reserves the right to have an independent surveyor to check the condition of the vessel's tanks or the quality of the contents of the tanks.

Emergency Shut-Down System: In order to protect loading arms and pipelines from dangerous stresses/surge pressure, the Terminal's shut-down system should be used, when necessary. The vessel's emergency shut-down system should not be activated except in extreme emergencies.

Operational Procedures: Loading/discharging will not commence until all the safety checks have been carried out and approved by the Terminal.

Before any operation is carried out, the ship is to be earthed. Vessels equipped with an electrical cathodic protection system must switch off the system one hour before the earthing cable is connected.

Connection of loading arms is undertaken by the operating personnel. Representative from the operating personnel and the responsible officer of the vessel are to agree that systems are correctly lined up before operations start. The quay loading arms will be pressure tested by nitrogen with minimum 8 bar and vapour return arms with minimum 2 bar.

Vapour return arms will be connected before operations commence to enable vessel to return vapour to flare. Charging of vapour return to flare will be at the ship's expense. Vapour return to storage tanks will only be permitted subject to quality of vapour being acceptable to the Terminal's standard.

Vapour return arms must always be used when loading Propane or when loading Butane (if vessel's tanks are "warm" or inerted). These vessels will be alloted berthing at Product Quay No. 1, which has a vapour return system for all LPG products.

Operating personnel will remain in quay area at all times during loading or discharging.

Responsible crew member with a good command of Scandinavian or English language must remain on deck at all times during loading and discharging.

The ship must give at least 10 minutes notice if it is necessary to stop or start pumping, unless in an emergency.

Operating personnel will clear the loading arms before disconnecting.

The cargo loaded will primarily be calculated according to the shore metering system.

An independent surveyor or representative from the Terminal will witness the ship's dip/ullage, and obtain from the Master the quantity loaded according to the ship's figures.

Rules to be Observed During Operations: During operations, adequate crew must remain onboard under continuous supervision of a responsible and experienced officer, in order to deal with routine operations and any emergency situation which may arise.

In addition, during operations, vessel should comply with the following rules:

A vessel shall by day fly Flag "B" of the International Signal Code, and by night exhibit a red light visible all round the horizon, situated above upper level of the superstructure.

All doors, portholes and openings leading from the main deck to accommodation or machinery spaces shall be kept closed. This applies to portholes and openings at any deck level above the main deck which overlooks the main deck.

All ventilators through which gas can enter shall be suitably trimmed, and mechanical ventilation and air conditioning units shall be stopped if a possibility exists of gas being drawn into the accommodation.

The venting of the vessel's tanks shall take place only through the vessel's fixed venting system (pressure/vacuum system) (Naphtha/Condensate tankers only).

Sighting and ullage ports must be kept closed when not in use. These may however be opened momentarily for taking samples or ullage/temperature in the event of failure of remote tank gauging equipment (Naphtha/Condensate tankers only).

If for any reason there is an unusual evolution of gas, loading shall be stopped or the loading rate into a particular tank or tanks reduced at the discretion of either the operating personnel or the responsible ship's officer (Naphtha/Condensate tankers only).

Overboard suction and discharge valves connected to the cargo or bilge system shall be sealed on arrival at the Product Quay by the operating personnel.

Except in an emergency, seals may be removed only with the approval of the operating personnel and in their presence.

The responsible officer-in-charge shall notify the operating personnel to commence the discharge of segregated ballast and again when this operation has been completed.

All vessels at the quay must be maintained in a state of readiness for vacating a berth at short notice, except in cases of approved repair work.

Ship's radio station transmission equipment, except low energy transmitters such as used for satellite and VHF communication, shall not be used at the quay and aerials shall be earthed.

The safety of loading operations requires that the operating personnel shall take into consideration whether loading of Naphtha/Condensate should be stopped under conditions of thunder or other unfavourable weather.

All cargo tank lids shall be kept closed and secured, and all cargo and bunker hose connections shall be blanked and fully bolted when not in use.

Wind Limitations: Master and Terminal should pay attention to the following wind limitations as given below as a guideline only. The given wind criteria do not limit the responsibility of the Master or the Terminal for safe and effective conduct during arrival, loading and departure operations. Assessment of smaller vessels from 2,500 cu.m. and over, which can be affected by environmental factors such as onshore wind, must be taken into consideration, to prevent undue movement while such vessels are at the quay.

Vessels up to 15,000 cu.m. are not allowed to go alongside the quay when the wind force exceeds 18 m./sec., or when the wave height exceed 1.0 m.

Vessels from 15,000 cu.m. to 28,000 cu.m. are not allowed to go alongside the quay when the wind force exceeds 16 m./sec., or when the wave height exceeds 1.0 m.

Vessels from 28,000 cu.m. to 54,000 cu.m. are not allowed to go alongside the quay when the wind force exceeds 14 m./sec., or when the wave height exceeds 1.5 m.

Vessels over 54,000 cu.m. will only be permitted to go alongside the quay in daylight with maximum wind force 10 m./sec. See "Tugs" regarding possibility to call for a third tug. Departure by night shall take place only when the weather conditions are considered to be safe.

Loading operations are to be stopped for all vessels when the wind force exceeds 22 m./sec. and wave height exceeds 1.5 m. The loading arms will be disconnected if weather conditions increase more than the above stated values. If necessary, the vessel will be prepared for departure or be secured alongside the quay with extra mooring ropes.

Inspection: The Terminal representative shall, at any time, have permission to board the vessel to ensure that Harbour Regulations are being complied with, and that cargo equipment is in good working order.

A special inspection will take place on LPG ships, prior to their first arrival at Karsto, in order to "pre-qualify" the ship.

This inspection must be repeated within 2 years after the first arrival. Further information can be obtained from the Terminal or the Agent.

Fully Pressurised Vessels: All requirements and implementation of measures concerning fully pressurised vessels will be considered in each individual case by the Harbour Office, based on information provided by the owner of the vessel.

Product Oil Tankers Equipped with Fixed Inert Gas System (IGS): Product oil tankers destined to load Naphtha or Condensate at the gas terminal at Karsto shall be aware that said tankers on arrival at the Terminal with oxygen contents exceeding 8% in the cargo tanks will not be granted permission to load. This regulation applies to vessels subject to IMO's regulations concerning oil tankers equipped with fixed inert gas system (IGS) onboard.

Prior to commencement of loading, spot checks will be taken from the cargo tanks to confirm that the oxygen content does not exceed 8%.

In the event that the vessel does not comply with the above stated regulations, she will be required to vacate the Terminal and return to sea until an assurance can be given that the required level has been achieved. Prior to re-entering the Terminal, Notice of Readiness will have to be re-tendered. All relevant expenses due to vessel not being ready to load shall be for the account of the vessel.

Purging and Venting: Purging and venting from vessel's tanks/system into the atmosphere is not permitted at the quay. Oxygen content above 2% by volume will not be permitted to flare.

CO_2 inert gas is not permitted through the Terminal's flare system. If the LPG vessel is inerted on arrival with inert gas other than nitrogen, the ship has to load Coolant and do the purging in the open sea or at the anchorage.

Portable Instruments: The Terminal reserves the right to require intrinsically safe portable instruments to be placed on board during loading and discharging.

SAFETY REGULATIONS: The following are part of the regulations.

Repairs and Maintenance: Repair work involving either hot work or cold work or the use of naked flames is prohibited, unless the permission of the Terminal has been requested and granted in writing.

Repair work includes, but is not restricted to boiler tube cleaning, chipping and scraping, hull painting, testing or servicing of electrical equipment.

If permission is granted to undertake repairs, a list of specified repairs and a list of shore workmen to be employed on the vessel must be forwarded to the Terminal before work commences.

Repairs and other work, which might immobilise the vessel, should not be commenced without written prior approval from the Terminal.

Tank Cleaning/Gas-Freeing/Purging: Tank cleaning, cool down and gas-freeing will not be permitted while ships are alongside the Product Quays.

LPG vessels, arriving at the gas terminal at Karsto with only air contents in the cargo compartments, will not be granted permission to load.

However, an inerted vessel will be instructed to load sufficient coolant according to additional separate documents issued beforehand in accordance with the shipper's instructions.

According to above stated condition, vessels will then be required to vacate the Product Quay without delay to perform cool down operation in open sea.

Note: Under special circumstances, the Terminal may grant dispensation concerning cool down operation, provided that such an operation alongside the quay or at the anchorage does not cause any berthing delay for other vessels arriving at the gas terminal on schedule.

Intoxicated Persons: Persons apparently intoxicated will not be allowed into the Terminal area unless special permission is granted by the Terminal.

Movement of Craft/Tugs: During operations, no vessel, regardless of size, shall be allowed to come either alongside the quay, or closer than 150 m. to a vessel alongside the Product Quays, unless so authorised by the Terminal.

The vessel's funnel(s) shall be equipped with effective spark arrester. When tugs are alongside assisting a vessel, all cargo system openings must be closed and loading stopped.

POLLUTION: *Pollution:* Utmost care must be exercised when handling cargo, ballast and bunkers in order to avoid spills into the sea. Any pumping from bilges is prohibited.

Emission of smoke, including soot blowing is prohibited. Throwing any kind of waste/rubbish overboard is prohibited.

If, inspite of precautions, an oil spill should occur, this must be immediately reported to the Terminal, and measures to recover or limit the spill must be taken. Use of spill dispergents is forbidden unless authorised by Norwegian authorities. Assistance will be rendered from the Terminal with available equipment and manpower.

The Terminal will also report to the proper Norwegian authorities and request further assistance, if needed.

Violation of the Norwegian Pollution Regulations may result in heavy fines, both for responsible officers and ship.

In addition, the cost of the recovery/cleaning operation will be charged to the ship's account.

Ballast Water/Slops: Only clean ballast water contained in segregated ballast tanks will be permitted to be discharged into the sea at the Terminal harbour area.

Slops and contaminated ballast water, defined as such according to Norwegian Law, will not be permitted to be pumped overboard, but will have to be pumped ashore, to the Terminal's receiving tanks. All received slops will be on the vessel's account.

A request for discharging contaminated water ballast should, if possible, be sent together with the 72 hours ETA.

Tank Temperature: Notice of Readiness (NOR) will be accepted with "warm" tanks when the minimum normal loading rate is achieved.

Waste: No waste of any sort, either liquid or solid, shall be discharged overboard from a vessel, but shall be retained in suitable receptacles on board.

Arrangements for disposal of such garbage can be made before arrival, through the Agent. Disposal of oil, noxious liquid substances, marine pollutants in package form and some non-polluting liquids as defined or listed in annexes of the IMO Convention, is prohibited in this waste reception facility.

Rubbish, declared as food waste, but not for wood products, large tins and drums, must be disposed of in sealed plastic bags. Food waste bags must then be placed by the ship's crew in the waste container located on the quay.

Note: It is strictly forbidden to leave the harbour with remaining food waste bags on board.

GENERAL: *Transport to/from Gate/Ship:* No personnel, crew or visitors are allowed to proceed unaccompanied between gate and ship. Transport is arranged by the operating personnel or the gate security guard upon request.

The transport is free of charge.

Visitors are not allowed onboard vessels without permission from the Terminal and the Master of the vessel.

Passes: A pass system is in force, and boarding passes for ship's personnel will be supplied to the Master by the Agent or the Terminal.

Crew List: The Master shall provide the Terminal with list of crew members and a list of expected visitors.

Stores Handling: Stores must preferably be handled before or after cargo operations. Only small hand-carried items of ship's stores may be taken onboard during cargo operations. Drums, steel plates and any other heavy metal parts, capable of causing a spark, shall always be handled before or after cargo/ballasting operations.

Customs: Customs clearance is performed by the ship's Agent.

Launch Services: Request for launch service, if any, should be applied for via the ship's Agent.

TELEPHONE NUMBERS: The harbour will be continuously manned by operating personnel when vessels are moored at the quay. Communication between vessel and Terminal during loading should be maintained on UHF by calling "Karsto Control".

All vessels at anchorage or underway to or from the Terminal should contact "Karsto Harbour Office" within office hours (0800 hrs. to 1600 hrs.) on VHF Channel 11.

Outside normal office hours, vessels should call "Karsto Control" on same VHF channel.

Bill of Lading.
Ship's Certificates.

PILOTAGE: If vessel is due to call at Kirkenes Harbour at any time, Pilot *must* be ordered through the Pilot's Head Office in Loddingen. Pilot must be ordered at least 1 week prior to arrival.

Pilot boards vessel at Oksebaasen, and to be contacted over Channel 16 VHF. Pilot vessel carries white flag "H".

Pilot Station Lodingen, P.O.Box 183, 8551 Lodingen, Norway. Tel: 769-31104, 800-31082. Fax: 769-31289.

Pilots at Kirkenes: Mr.Eilert Moe, Tel: 789-92686 (Private). Reidulf Pettersen, Tel: 789-92244 (Private). Pilot Boat, Tel: 948-99383 (On board), and VHF Channel 16.

ANCHORAGE: As directed by Pilot.

MAX. SIZE: Oil carriers 20,000 d.w.t., draft 33 ft. Iron ore carriers 120,000 d.w.t., max. sailing draft 51 ft. under optimal conditions.

Max. draft at Import Quay is 27 ft. at L.W.

HEALTH: If any contagious sickness quarantine to be informed by radio.

RADIO: Vardo Radio.

TUGS: One tug "Kraft Johansen" with 2,500 h.p. and 25 tons bollard pull. One tug "Hans Oscar" with 4,000 h.p. and 42 tons bollard pull. Tugs join vessel within harbour basin. Ship's lines to be used during towage.

BERTHING: In the harbour of Kirkenes, following quays are available:
No. 1: Jakobsnes Quay belongs to the community.
No. 2: Prestoya Quay belongs to the community.
No. 3: Kirkenes Trelast A/S belongs to a private owner.
No. 4: Kirkenes Byggcenter A/S belongs to a private owner.
No. 5: Kaerner Kimek A/S belongs to the shipyard and is also privately owned.
No. 6: A/S Sydvaranger belongs to a private owner.

No. 1 Jakobsnes Quay: This quay belongs to Sor-Varanger community and is made of steel reinforced concrete. In connection with the quay there is an industrial area with a storage capacity of 15 ha.

Any vessel which is going to call at this quay will have to announce its arrival to the Harbour Master between 0730 hrs. and 1500 hrs., Monday through Friday on Tel: 789-91601, ext. 102. Outside these hours, please contact the Fire Brigade on Tel: 789-91941, or your local Agent.

Technical Data:

Length of quay	40 m.
Breadth	50 m.
Water depth at quay front on L.W.	7.0 m.
Height of the quay from above L.W.	5.0 m.
Useful load evenly distributed	4 tons/sq.m.
Point load	70 tons/sq.m.
Axial load	100 tons/sq.m.
Horizontal load	25 tons/sq.m. of quay front
Bollards (6 pieces)	50 tons

If water supply is needed, notify the Fire Brigade or local Agent. Fuel truck is available from Esso, Shell or Statoil. Notify your Agent or direct to the oil company.

Disposal of garbage: Notify Rognmos Renovasjon by telephone in advance.

No. 2 Prestoya Quay: This quay belongs to the Sor-Varanger community and is constructed of steel reinforced concrete.

Any vessel which is going to call at this quay will have to announce its arrival to the Harbour Master between 0730 hrs. and 1500 hrs., Monday through Friday on Tel: 789-91601, ext. 102.

Outside these hours, please contact the Fire Brigade at Tel: 789-91941, or your local Agent.

Technical Data:

Length of quay	104 m.
Breadth	11 m.
Water depth at quay front on L.W.	7.0 m.
Height of the quay from above L.W.	5.0 m.
Useful load evenly distributed	4 tons/sq.m.
Point load	70 tons/sq.m.
Axial load	100 tons/sq.m.
Horizontal load	25 tons/sq.m. of quay front
Bollards	50 tons

If water supply is needed, notify the Fire Brigade or your local Agent. Fuel truck is available from Esso, Shell or Statoil. Notify your Agent or direct to the oil company.

Disposal of garbage: Notify Rognmos Renovasjon by telephone in advance.

No. 3 Kirkenes Trelast Quay: (Private Owner). This quay is constructed of timber with concrete cover. Any vessel which is going to call at this quay will have to announce its arrival to Kirkenes Trelast, attn. Mr.Hans M. Mollersen, between 0730 hrs. and 1600 hrs. daily, on Tel: 789-91731, or private 789-98358. After hours, please call Tel: 789-98358, or Fire Brigade Tel: 789-91941.

Technical Data:

Length of quay	10 m.
Breadth	15 m.
Water depth at quay front on L.W.	4.2 m.
Height of the quay from above L.W.	4.0 m.
Useful load evenly distributed	1.5 tons/sq.m.
Point load (0.4 m. × 0.4 m.)	7 tons/sq.m.
Axial load	7 tons/sq.m.
Bollards, 2 pieces	Normal

Water supply is available, notify Owner. After hours, notify Fire Brigade. Fuel truck is available from Esso, Shell or Statoil. Notify Agent, Owner or oil company direct.

Disposal of garbage: Notify Rognmos Renovasjon at least 24 hours in advance.

No. 4 Byggcenter Kirkenes A/S: Private Owner. This quay is constructed of timber. Any vessel which is going to call at this quay will have to announce its arrival to Kirkenes Byggcenter A/S, to the Owner, Mr. Martin Lund, between 0730 hrs. and 1500 hrs. daily on Tel: 789-91595 or private 789-98382. After hours, please call Tel: 789-98382 or Fire Brigade Tel: 789-91941.

Technical Data:

Length of quay	50 m.
Breadth	10 m.
Water depth at quay front on L.W.	6.0 m.
Height of the quay from above L.W.	4.5 m.
Useful load evenly distributed	1.5 tons/sq.m.
Point load	1.5 tons/sq.m.
Axial load	1.5 tons/sq.m.
Bollards, 4 pieces	Normal

Water supply is available, notify Owner in advance. Fuel truck is available from Esso, Shell or Statoil. Notify Agent, Owner or oil company direct.

Disposal of garbage: Notify Rognmos Renovasjon at least 24 hours in advance.

No. 5 Kvaerner Kimek A/S Shipyard: Private Owner. Kvaerner Kimek A/S has two quays, one made out of concrete and one of timber. Any vessel which is going to the shipyard or one of the docks will have to announce its arrival to Kvaerner Kimek A/S, between 0730 hrs. and 1600 hrs. daily on Tel: 789-91955. After hours, please telephone private Tel: 789-98220/789-92062.

Technical Data: The concrete quay:

Length of quay	60 m.
Breadth	16.5 m.
Water depth at quay front on L.W.	4.7 m.
Height of the quay from above L.W.	5.0 m.
Useful load evenly distributed	5 tons/sq.m.
Point load	5 tons/sq.m.
Axial load	Unknown
Bollards, 3 pieces	Normal

Water supply is available with advance notice. Fuel truck is available from Esso, Shell or Statoil. Notify Owner or Agent in advance.

For water supply, fuel or disposal of garbage notify Owner in advance, day or night.

Technical Data: The timber quay:

Length of quay	110 m.
Breadth	16.5 m. and 30 m.
Water depth at quay front on L.W.	4.9 m.
Height of the quay from above L.W.	5.0 m.
Useful load evenly distributed	1 tons/sq.m.
Point load	1.5 tons/sq.m.
Axial load	Unknown
Bollards, 8 pieces	Normal

Water supply, fuel and garbage as mentioned above.

No. 6 A/S Sydvaranger: Private Owner.

Export Dock: This quay is made of concrete and can accommodate ships up to 140,000 tons. Any vessel which is going to call at this quay will have to announce its arrival to A/S Sydvaranger on Tel: 789-94500 in office hours between 0730 hrs. and 1600 hrs. After office hours Tel: 789-98295 or 789-91116.

Pilot is required for ships which is enroute to A/S Sydvaranger. If you are due to call at Kirkenes outer harbour, Pilot *must* be ordered through Loddingen Pilot Station, Tel: 769-31104 or 800-31082, one week prior to arrival at Kirkenes. Local Pilot is also available, and can be reached on the following telephone numbers:

Pilot boat:	Tel: 948-99383 mobile.
Pilot (Private):	Tel: 789-92686.
Pilot (Private):	Tel: 789-92244.

Technical Data:

Length of quay	177 m.
Breadth	6.0 m. to 37 m.
Water depth at quay front on L.W.	13.1 m.
Water depth at quay front on H.W.	15.5 m.
Height of the quay from above L.W.	5.0 m.
Useful load evenly distributed	2 tons/sq.m.
Point load	12 tons/sq.m.
Axial load	Unknown
Horizontal load tons at quay front with max.	2.0 m. excentricity
Bollards, 5 pieces, alternative 1	100 tons horizontal
alternative 2	50 tons horizontal and 87 tons vertical

Water supply is available. Notify Owner.

Fuel is available from Esso, Shell and Statoil.

Disposal of garbage is possible, notify Owner.

No. 7 A/S Sydvaranger: Private Owner.

Import Dock: This dock usually accommodates dry cargo, heavy lifts and bulk cargo. The dock is made of concrete. Other information, please check information under Export Dock (No. 6 Berth).

Technical Data:

Length of quay	110 m.
Breadth	35 m. to 40 m.
Water depth at quay front on L.W.	9.0 m.
Height of the quay from above L.W.	5.0 m.
Useful load evenly distributed	4 tons/sq.m.
Point load	70 tons/sq.m.
Axial load	100 tons/sq.m.
Horizontal load, same as Export Dock	
Bollards, 4 pieces, alternative 1	100 tons horizontal
alternative 2	50 tons horizontal 87 tons vertical
Loading crane capacity	20 tons

Water, fuel supply and garbage disposal: See information under Export Dock.

No. 8 A/S Sydvaranger: Private Owner.

Stand-by/Tug Quay: This dock usually accommodates tugs and pilot boats. The dock is made of timber. Other information, please check information under Export/Import Dock (Berths No. 6 and 7).

Technical Data:

Length of quay	59.5 m.
Breadth	13 m.
Water depth at quay front on L.W.	9.0 m.
Height of the quay from above L.W.	5.0 m.
Useful load evenly distributed	2 tons/sq.m.
Point load	Unknown
Axial load	Unknown
Horizontal load, Inwards/Outwards	2.5 tons
Alongside the quay	2.0 tons
Bollards, 4 pieces,	
3 pieces at quay front	50 tons
1 piece at rear of quay front	50 tons

Water, fuel and garbage disposal: See information under Export/Import Dock.

CRANES: Mobile crane of 50 tons capacity available.

MEDICAL: Agents to receive advance notice of required medical attention. Hospital facilities available.

TANKERS: Diameter of load/discharge lines 8 in. Max. draft 33 ft.

DENSITY: Specific weight of water at 17.5 centrigrades = 1.026 – 1.011 (varies very much with time of year).

FRESH WATER: Available, delivered through pipes from quay.

FUEL: Heavy fuel to be ordered at least 1 week in advance from Shell in Oslo.

Suppliers:

Esso Norway A/S, Egne-hjemsvey 42, 9910 Bjornevatn, Norway. Contact: Mr. Kjell Thoresen, Tel: 789-99222 (Work), 948-02179 (Private/Mobile).

Norske Shell A/S, P.O.Box 199, 9901 Kirkenes, Norway. Contact: Mr. Hans Hakonsen, Tel: 789-92336 (Work), 789-99018 (Private). Fax: 789-92900 (Office).

Statoil, Norway A/S, Elvenes, 9900 Kirkenes, Norway. Contact: Mr. Bjornar Gjertmundsen, Tel: 789-90814 (Office), 789-92233 (Private). Fax: 789-90891 (Office).

Also see "Berthing".

CONSULS: Finland, Germany, Russia and Sweden.
REPAIRS: Repairs possible.
DRY DOCKS: Floating dock with capacity 8,500 tons.
GANGWAY/DECK WATCHMEN: Not necessary.
OPENING/CLOSING HATCHES: Must be carried out by crew.
CUSTOMS ALLOWANCES: *Tobacco and cigarette paper:* May be freely disposed of for use on board for up to 10 days as follows:

Master of the vessel: 400 cigarettes or 400 grammes of other tobacco goods and 200 cigarette papers.

Other crew members: 200 cigarettes or 250 grammes of other tobacco goods and 200 cigarette papers.

Spirits: of which the volume percentages of alcohol must not exceed 60% – and *Wine* may be freely disposed of for use on board as follows:

Master of the vessel: 2 litres altogether.

Other crew members: 1 litre of spirits and 1 litre of wine.

Quantities above those specified must be deposited in the care of the Master and on his responsibility stored in a locked room. Other forms of storage are punishable under the Customs and Excise Act.

If according to regulations governing exemption from duty for travel equipment and luggage a member of the crew brings goods ashore without payment of duty or fees, a corresponding reduction shall be made in the quantity of goods which he may dispose of freely for use on board according to the provisions above.

CARGO GEAR: 2 cranes, 20 tons and 75 tons.
REPATRIATION: Facilities exist for crew changing, but normally no crew available. Arranging repatriation possible.
AIRPORT: Distance to airport 16 km. Airport served by regular airlines, 2 flights per day.
TIME: GMT plus 1 hour. GMT plus 2 hours in Summer.
HOLIDAYS: January 1st, Easter Day, Whitsun Day, May 1st, May 17th, December 25th and 26th. Work carried out if permission given by the authorities.
POLICE/AMBULANCE/FIRE: Fire alarm 91942; Ambulance 91701; Police 91151.
TELEPHONES: Ship's telephone connections not available.
SHORE LEAVE: Crew members allowed ashore.
IDENTIFICATION CARDS: Not needed.
GARBAGE DISPOSAL: Containers for disposal of garbage can be ordered from Rognmos Renovasjon, Amtmann Graffsgt. 14, N-9900 Kirkenes. Contact: Bjorn Erik Rognmo. Tel: 789-91480 (Office/Private). Garbage Truck No. 1 – Mobile 948-69832. Garbage Truck No. 2 – Mobile 948-04743.

Bjorn Erik Rognmo will be available at home before 0600 hrs. and after 1700 hrs. Outside these hours, the mobile telephone numbers are to be used. Disposal of garbage must be ordered the day before arrival at the quay. If arrival is on Saturday or Sunday, ordering must be done on Friday at the latest.

DEVELOPMENTS: An additional berth (Length 119 m., width 40 m. and depth 10.0 m.) will be available early 1995.
AUTHORITY: Municipality of Sor-Varanger, Radhusplassen 3, P.O.Box 406, N-9901 Kirkenes, Norway. *Tel:* +47 789-91601, ext. 102. *FAX:* +47 789-92212. *Contact:* Harbour Master.

KOPERVIK: 59.17 N. 05.19 E.
SKUDENESHAVN: 59.08 N. 05.16 E.

DEVELOPMENTS: Devoldholmen Terminal to be extended by late 1994 to form an unbroken quay line of 202 m. with depth of 27 ft. The Ro-Ro ramp is 16.0 m. wide, and can take a load of 5 tons per square meter. There will be 8,000 sq.m. of storage area and reefer points of 380 Volts.
AUTHORITY: Kristiansund Havnevesen, Havnefogden, Kaibakken 1, 6500 Kristiansund N., Norway. *Tel:* 716-74333. *FAX:* 716-78710. *Contact:* Jan Westad-Olsen, Harbour Master.

LARVIK: 59.03 N. 10.02 E. **(See Plan)**

PORT LIMITS: The official port limits for the Port of Larvik is a line from Sandefjord in the East to Porsgrunn in the West. Notices of Readiness for loading or discharging, however, will be accepted when the vessel is anchored in any of the anchorages in inner Larvik Fjord.
DOCUMENTS:
General Declaration.
Maritime Declaration of Health (vessels arriving from ports outside Scandinavia only).
Tolliste, i.e. Tobacco and Curio List, Crew List and Crew Effects List for total number of crew.
Varefortegnelse med Proviantliste, i.e. Cargo and Ship's Stores Declaration.
Fartoys Anmeldelse, i.e. Notice of vessel's arrival.
3 Ship's Manifest.
3 Bills of Lading.
Customs Officer will accept Tobacco and Curio Lists, also Provision Lists filled in on foreign forms, if all goods correctly stated.
PILOTAGE:

1. Vessels approaching from the sea and desiring a Pilot shall order the Pilot at 24 hours' notice insofar as possible and confirm arrival at pilot station at 2 hours' notice:
   (a) by telephone or telegram from ship to the pilot office concerned or sea pilot station over an official coastal radio station.
   (b) by telephone or telegram from broker/shipowner to the pilot office concerned or sea pilot station.
2. For direct connection between ships desiring Pilot and the pilot service, VHF-radio telephone Channel 16 (156.8 MHz) shall be used for calling and reply, and a VHF-radio telephone ship-to-ship Channel or harbour Channel shall be used for conversations. Ships not equipped with VHF-radio telephone may use the distress and calling frequency 2182 kHz for calling pilot vessel, but both the ship desiring Pilot and the pilot vessel shall in such cases immediately turn to ship-to-ship frequency. At such connections minimum transmission effect shall be used.
3. Vessels lying in port and desiring Pilot will order the Pilot from the nearest pilot office during its office hours and if possible at 2 hours' notice.
4. Vessels approaching from the sea as well as vessels lying in port shall, when making an advance order, state the name and destination of the vessel.
5. The Pilots will on the whole be despatched to the ships in accordance with the advance orders, and vessels are therefore requested to comply with the foregoing rules as far as possible in order to avoid having to wait for Pilot.

6. The international provisions for summoning Pilots by signal flags or blue lights, etc., are still in force but should in future be used as a supplement to the radio communications or as the sole communication in emergencies.
7. These provisions came into force on the 1st April, 1984.

Description of pilot boat: White painted, orange wheelhouse, 2 masts, "Los" on both sides of bow. The pilot vessel is situated in Langesund Harbour on watch 24 hours every day. Pilot boards ships S.E. of Langoytangen lighthouse (58° 59.4′ N., 9° 45.8′ E.).

The Agent must in general order Pilot before 1200 hrs. and before 1530 hrs. Friday when Pilot is required before Monday morning.

ANCHORAGES: Safe anchorages at end of fjord, West side. Masters should consult Pilots and/or charts before anchoring. Ample water and good holding ground for all sizes of vessels.

MAX.SIZE: Largest vessel berthed at Larvik Canal Quay, LOA 644 ft. 8 in., breadth 83 ft. 3 in., max. draft 32 ft. 6 in.

HEALTH: Advise Agents of any suspected disease or fever on board by radio or telephone before entering. Vessel will then anchor in anchorage and be boarded by state doctor. When vessel is healthy, Customs Officer will grant Pratique.

RADIO: Tjome Radio LGT, Rogaland Radio LGQ.

TUGS: No tugs at Larvik. Tugs to be ordered via ship's Agents from Fredrikstad or Porsgrunn. If tugs required by vessel or demanded by Pilot, Agents should be given 12 to 24 hours' notice. Tugs join vessel in fjord off harbour breakwater. Extra charges for use of tug's lines.

BERTHING: Insignificant tidal variances.

Revquay West: General cargo. Length 118 m. Depth alongside 9 m.

Warehouse 1,600 sq.m. and 10,000 sq.m. outside asphalted storage area. Also Ro-Ro ramp with berthing alongside dolphins. Max. length 170 m., depth 8.0 m.

Revquay South (Revkaia Syd): Length 70 m., depth alongside 10.0 m. Storage area measuring 52,000 sq.m. partly asphalted. One portal electric crane with capacity 50 tons.

Kanalquay (Kanalkaia): Kanalquay North – Length 335 m. Depth. 10 m. Kanalquay West – Length 120 m. Depth 6 m. Kanalquay South – Length 90 m. Depth 5 m.

Facilities at Kanalkai North: Railway tracks. 3 portable cranes, capacities 6 tons – 50 tons. Warehouse. Grain discharging plant, capacity 85,000 tons. Outdoor storage 20,000 sq.m.

East Pier (Ostre Brygge): Length 130 m. Depth 8 m. New Ferry quay with Roll-on/Roll-off facilities. Car park for 560 cars or 52 lorries/trailers 18 m. Passenger terminal. Customs.

West Pier (Vestre Brygge): West side for visiting yachts.

Ferry quay with Roll-on/Roll-off facilities on West side. Good parking.

Private Wharves: Treschow-Fitzoe Pulp Quays – West side: Length 50 m. Depth alongside 5 m. East side: Length 90 m. Depth alongside 6.3 m. 1 portable electric crane capacity 5 tons.

STEVEDORES: Gangs to be ordered before 1600 hrs. and cranes before 1500 hrs. for following day. During office hours 2 hours' notice required.

MEDICAL: No advance notice required, unless in urgent medical cases and when ambulance needed. No particular inoculations required.

TANKERS: For larger oil-tankers for asphalt works, 8 in. connections required; for coasting vessels, 6 in. connections used. No slop tanks. one berth for tankers. Max. draft in berth 32 ft. 6 in.

DENSITY: Salt water, brackish at times.

FRESH WATER: Delivered by hose from quays. Cost Nkr. 5.0/ton plus handling charge.

FUEL: Fuel oil, gas oil, diesel oil, delivery rate by tank lorry 20 t.p.h.

FIRE PRECAUTIONS: Any vessel discharging benzine must have city fireguard on watch. 30 m. clearance required to next vessel.

Ships loading explosives require fireguards on watch on board.

CONSULS: Danish and French Vice-Consulates Tel: 33182030. Netherlands Vice-Consulate Tel: 33187800. Finnish Consulate Tel: 33181917. Swedish Consulate Tel: 33182090.

REPAIRS: Minor deck and engine repairs only.

GANGWAY/DECK WATCHMEN: Not compulsory, but recommended for larger overseas vessels.

OPENING/CLOSING HATCHES: Usually done by ship's crew.

CERTIFICATES: Vessels must have all usual International Certificates, no special certificates required.

CUSTOMS ALLOWANCES: Every crew member allowed one bottle wine or spirits, and 200 cigarettes out of bond for use in port. This allowance is for 10 days. After this period new tobacco allowance is granted, but no new spirit issue.

CARGO GEAR: No additional requirements.

REPATRIATION: Facilities for effecting crew changes and necessary repatriation by railway, continental ferry and by air.

AIRPORT: Distances from the port to international airports at Oslo 130 km. and Sandefjord 40 km.

Private airport open for small aircraft at Larvik.

TIME: GMT plus 1 hour. GMT plus 2 hours in Summer.

HOLIDAYS: New Year's Day; Maundy Thursday, Good Friday; Easter Monday; May 1st & 17th; June 24th; Ascension Day; Whit Monday; Christmas Day; Boxing Day.

POLICE/AMBULANCE/FIRE: Tel: Police 112, Fire 111, Ambulance 113.

TELEPHONES: Onboard telephones not available.

IDENTIFICATION CARDS: Not required.

GARBAGE DISPOSAL: For garbage disposal Tel: 11130320.

WASTE OIL DISPOSAL: For waste oil disposal Tel: 11130320.

SEAMAN'S CLUBS: None.

CURRENCY: Norwegian Kroner (NKr.). U.S.$ 1.00 = NKr. 7.50 (10.3.94).

CURRENCY: Norwegian Kroner (NKr.).
AUTHORITY: Mandal Havnevesen, P.O.Box 57, 4501 Mandal, Norway. *Tel:* 382-62011. *Cables:* Mandal Havnevesen. *FAX:* 382-63476. *Contact:* Captain A.O. Johannessen, Harbour Master.

MO-I-RANA: 66.19 N. 14.08 E.

PORT LIMITS: The vessel is considered to be an "arrived vessel" when within the Hauknes Port Lighthouse – about 2 nautical miles from the port.
DOCUMENTS:
1 Cargo List.
1 Stores List.
1 Sealing Certificate.
1 Health Certificate.
2 Crew Lists.
2 Passenger Lists.
(All Forms obtainable from Agent by clearance on board).
PILOTAGE: Asvaer Pilot Station Lat. 66° 17′ N., Long. 12° 09′ E. (lighthouse). Order preferably through Agent or direct to station 24 hours before arrival. Tel. 769-91104. 1 boat "L/K 083" painted white with red top. "LOS 083" painted in black on both sides. VHF Channel 16.

Pilots embark at Asvaer Lighthouse. Pilots advise alternative place or anchorage if necessary. Pilot compulsory unless vessel ballasting for loading at another port in Norway.
ANCHORAGE: In the fjord at Nesna or at Utskarpen Bay to be advised by Sea Pilot. Anchorage in the inner harbour to be advised by the Harbour Pilot.
HEALTH: See "Documents". No animals allowed on shore.
RADIO: From South; Rogaland Radio/LGQ, LGW, LGB. Within 24 hours off; Rorvik Radio/LGD. From North; Vadso/LGV or Hammerfest/LGI or Tromso/LGE or Bodoe Radio/LGP.
VHF: At Harbour Office call sign. "Mo Port Radio" Channels 16 and 12. At Rana Industriterminal A/S call sign. "Rana Industriterminal" Channel 9.
TUGS: Available and recommended for vessels above 10,000 d.w.t. 24 hours' notice to be given. Ships' lines used.
BERTHING: Harbour Pilot recommended but not compulsory for small vessels. Details given through Pilot/Harbour Pilot.

Rana Gruber A/S	
Iron Ore	37 ft. depth alongside
Bulkterminalen	36 ft. depth alongside
Town Pier (Toraneskaia)	25 ft. depth alongside
Rana Industriterminal A/S	26 ft. depth alongside
Andfiskaa Pier	23 ft. depth alongside

CARGO HANDLING FACILITIES: The harbour has the following facilities for handling cargoes:

Rana Gruber A/S depth 37 ft. Shiploader for loading of Iron Ore only, vessels up to 80,000 d.w.t.

Bulkterminalen depth 36 ft.; length 427 ft. and 295 ft., North and South side handling following cargoes: ore, coal, coke and oil.

Rana Industriterminal A/S: handling ore, coke, steel products and general cargoes. Length of quay, 823 ft.; depth 25 ft.

A/S Bleivassli Gruber Pier, length 115 ft.; depth 23 ft. Has equipment and elevator for handling pyrites – fast loading.

The Town Quay (Harbour Board Quay), length 823 ft. and depth 18 ft. to 26 ft., handling general cargoes of all kind, with up to 15 ton lifts.
STEVEDORES: Ordered by Agents preferably in office hours 0900 – 1600 hrs. Exact time for commencement of work to be arranged with Agent. Vessels to pay for waiting hours for workers if delay not reported. If such report after office hours, vessel to pay for 2 hours.
MEDICAL: If in need of doctor/dentist preferably inform Agent from sea if vessel stays only 1 day.
FRESH WATER: Available at all piers from shore installations.
FUEL: All types available.
GANGWAY/DECK WATCHMAN: Available but not compulsory.
OPENING/CLOSING HATCHES: Crew allowed to open/close.
CUSTOMS ALLOWANCES: Per 10 days in Norway per crew member – 200 cigarettes or 200 gm. tobacco and 2 packages cigarette paper, and 1 bottle spirits.
CARGO GEAR: Winchmen from shore required.
REPAIRS: Small repairs only.
AIRPORT: 12 km. to local airport "Rana Airport" connection with Bodoe (North) twice per day and Trondheim (South) twice per day.
TIME: GMT plus 1 hour. GMT plus 2 hours in Summer.
HOLIDAYS: New Year's Day; Thursday before Good Friday; Good Friday; Easter Monday; Labour Day; National Day (17th May); Ascension Day; Whit Monday; Christmas Day and Second Christmas Day. No work can be arranged on any of these days.

TELEPHONES: Accidents/hospital: 51233; Ambulance: 51510; Fire: 51222 and Police: 51122.

Box 8123, Oslo-Dep., Oslo, Norway. Before this date Certificates issued by Denmark, Sweden and U.K. covering non-Convention registered ships, will be recognised.
PILOTAGE: Compulsory. Pilots listen on VHF Channels 13 and 16. Vessels will be berthed/unberthed by Pilots from Fedje Pilot Station (Position Lat. 60° 51′ N., Long. 04° 39′ E.). Contact Pilots on VHF Channel 16, 2 – 3 hours notice required.
ANCHORAGE: N.W. of refinery area. However, not well sheltered and holding ground not good. No anchorage for VLCCs.
MAX. SIZE:

Jetty (No.)	*Ship Size* (d.w.t.)
1	15,000 – 300,000
2	3,000 – 35,000
3	Up to 5,000
4	5,000 (Pet Coke) 6,500 cu.m. (LPG)
7	40,000 – 180,000
9	5,000 – 50,000
10	Up to 10,000

HEALTH: International procedure followed to obtain Pratique. In case of suspected disease or fever on board, the Port Authorities to be informed in advance.
RADIO: Cable Agent ETA, cash, bunkers, personnel, bonded stores, or other special requirement. For the refinery's guidance also cable flange dimensions on ships' headers, cargo quantities acceptable and order of loading, quantity of clean ballast and estimated time for discharge, size of cargo to be discharged and max. pumping rates, max. acceptable loading rates, quantity of tank washings and estimated time for discharge.
TUGS: Two tugs of 4,259 b.h.p. each (bollard pull 54 tons) situated at the refinery. Additional tugs available from Bergen.
BERTHING:
Berth No. 1 (Crude): Draft limitation 22 m., min. length 124 m., depth 125 ft.
Berth No. 2 (Products): Draft limitation 38 ft., min. length 69 m., depth 59 ft.
Berth No. 3 (Products/Coasters): Draft limitation 6.5 m., min. length 36.5 m., depth 25 ft.
Berth No. 4 (Pet. coke & LPG): Draft limitation 6.7 m., min. length 50 m.
Berth No. 7 (Crude): Draft limitation 19.7 m., min. length 120 m.
Berth No. 9 (Products: Draft limitation 16.4 m., min. length 80 m.
Berth No. 10 (Module Jetty): Draft limitation 10.3 m. at Ro/Ro part of jetty.
Berth No.10 (Module Jetty): Draft limitation 4.9 m. at general cargo part of jetty, min. length 114 m.
CARGO HANDLING FACILITIES:
Berth No. 1: 4×16 in. plus 2×16 in./10 in. Woodfield Autoflow booms.
Berth No. 2: 4×10 in. plus 2×8 in. Autoflowbooms.
Berth No. 3: 2×8 in. plus 2×6 in. Autoflowbooms.
Jetty No. 4: 1×6 in. LPG Loading Arm.
Jetty No. 7: 4×16 in. and 1×10 in. Emco-Wheaton autoflow booms.
Jetty No. 9: 3×12 in. and 2×8 in. Emco-Wheaton autoflow booms.
BALLAST: Deballasting facilities available at Jetties No. 1, 2, 3, 7 and 9. Tankage capacity 99,999 cu.m. All ballast except SBT to be discharged ashore.
MEDICAL: Medical attention available. Hospital facilities at Bergen.
DENSITY: Salt water.
FRESH WATER: Available from all jetties except Jetty No. 10. Cost per ton Nkr. 2.50.
FUEL: All grades available.
FIRE PRECAUTIONS: Special safety regulation forms given when berthed.
CONSULS: Consuls available at Bergen from the following countries: Austria; Belgium, Brazil, Denmark, Finland, France, Germany, Greece, Iceland, Italy, The Netherlands, Panama, Peru, Portugal, Spain, Sweden, Switzerland, Turkey, United Kingdom, Uruguay.
REPAIRS: Repair shop facilities available. Repair work must not be commenced without the agreement of the Port Captain.
SURVEYORS: The following Classification Societies represented by Surveyor at Bergen: American Bureau of Shipping, Bureau Veritas, Det Norske Veritas, Germanisher Lloyd and Lloyd's Register of Shipping.

NARVIK: 68.25 N. 17.24 E. (See Plan)

The following information applies mainly to vessels arriving to load ore cargoes.

LOCATION: The Port of Narvik is located in position: Lat. 68° 25′ 30″ N., Long. 17° 24′ 00″ E.

DOCUMENTS: All ships arriving from a foreign port will be boarded by Customs.

The following documents should be completed prior to arrival:
Maritime Declaration of Health Form 1 – 1012.
General Declaration IMO Form 1 in quadruplicate.
Ship's Stores Declaration IMO Form 3 in triplicate.
Crew's Effect Declaration IMO Form 4 in triplicate.
Crew List in triplicate.
The above forms will be supplied by mail on request.

PILOTAGE: *Sea Pilot:* Sea Pilot will embark off Tranoy Pilot Station. Location: Lat. 68° 11′ N., Long. 15° 34′ E.

Distance from Tranoy to Narvik 46 nautical miles.

Note: Vessels bound for Narvik will have to pass through Restricted Area. It is compulsory for all foreign non-military vessels of not more than 50 g.r.t. to have a Norwegian State Pilot on board when approaching Restricted Areas in Norwegian Waters.

The Sea Pilot will assist during undocking and leave the vessel off Tranoy Pilot Station.

Harbour Pilot: The use of Harbour Pilot is compulsory during docking. When docking on arrival, the Harbour Pilot will board the vessel inside the harbour limits.

Ordering of Pilots: Vessels approaching from the sea shall order the Pilot at 24 hours' notice in so far as possible and confirm arrival at pilot station at 2 hours' notice.

Provisions for Advance Reports in Connection with the Ordering of Pilots:

Issued by the Director of Pilotage, 10th May, 1963, amended 1st January, 1971.

1. Vessels approaching from the sea and desiring a Pilot shall order the Pilot at 24 hours' notice in so far as possible and confirm arrival at pilot station at 2 hours' notice:
    (a) By telephone or telegram from ship to the pilot office concerned or sea pilot station over a coastal radio station.
    (b) By telephone or telegram from Broker/Shipowner to the pilot office concerned or sea pilot station.
2. For direct connection between ships desiring Pilot and the Pilot Service, VHF radio-telephone Channel 16 (156.8 MHz) shall be used for calling and reply, and a VHF radio-telephone ship-to-ship channel or harbour channel shall be used for conversations. Ships not equipped with VHF radio-telephone may use the distress and calling frequency 2182 kHz for calling pilot vessel, but both the ship desiring Pilot and the pilot vessel shall in such cases immediately turn to ship-to-ship frequency. At such connections minimum transmission effect shall be used.
3. Vessels lying in port and desiring Pilot will order the Pilot from the nearest pilot office during its office hours and if possible at 4 hours' notice.
4. Vessels approaching from the sea as well as vessels lying in port shall, when making an advance order, state the name and destination of the vessel and whether 1 or 2 Pilots are desired.
5. The Pilots will on the whole be despatched to the ships in accordance with the advance orders, and vessels are therefore requested to comply with the foregoing rules as far as possible in order to avoid having to wait for Pilot.
6. The international provisions for summoning Pilots by signal flags or blue lights, etc. are still in force, but should in future be used as a supplement to the radio communications or as the sole communication in emergencies.
7. These provisions come into force on 1st January, 1971.

Vessels in Port: Luossavaara-Kiirunavaara AB will notify the Sea Pilot in due time before completion of loading. LKAB will also arrange for Harbour Pilot to assist during docking or when otherwise required by vessel's Master.

ANCHORAGES: Anchoring must take place in the recommended areas as advised by the Pilot, i.e. inside the harbour basin or West of "Framnesodden".

Warning: The bottom usually gives good anchorage but vessels are requested to keep continuous watch while at anchor. Frequent anchor bearings must be taken during adverse weather conditions.

Vessels at anchor inside the harbour basin are especially exposed to gusting winds from S.E. (locally named "Beisfjord-winds").

HEALTH: The Master of a ship arriving from a foreign port, must hand to the Customs Officers a Maritime Declaration of Health form signed by the Master. If there is a ship's Surgeon on board, the declaration to be countersigned by this person.

A valid Derat Certificate to be presented to the Customs on request.

RADIO: *ETA Notices:*

1. Please cable ETA to Malmexport Stockholm 6 days prior to arrival at loading port and to MALMEXPORT NARVIK as follows:

Sailing from last port and 48 hours and 24 hours before arrival.

If any change in ETA of more than 1 hour occurs after transmission of the 24 hour ETA, the vessel must send a corrected ETA.

2. Following should be included in the 48 hours ETA notice:
   a. Tonnage of cargo required and quantity in each hold.
   b. Cash advance requirement.
   c. Order for repairs, bunkers, stores, charts, etc.
   d. In case of repatriation, please state name of crew member(s) to be repatriated, destination and date of departure preferred.
3. Docking instructions – prospects.

Request for docking instructions, loading time, etc. should preferably be included in the 48 hours ETA.

Docking instructions will also be advised by Pilot on arrival Tranoy Pilot Station.

4. Estimated time for ballast pumping after arrival should be advised with the 24 hours ETA.

Other Vessels: Cable Agents giving ETA, draft and cash required. Radio station: Rogaland Radio/LGB but other stations can be used.

VHF: Contact with LKAB can be obtained by VHF (Channel 14) on a 24 hour basis. Vessels at anchor are requested to keep continuous VHF watch. It is also advisable for vessels alongside to have the VHF switched on. Messages to the Agent should be given by VHF.

Local and long distance calls can be ordered via Bodo Radio on VHF Channel 65.

Other Vessels: Local and long-distance calls may be ordered through Bodo Radio on Channel 16 or 65.

Port frequency is Channel 14, on which vessels may communicate with the port ferry launch and Agent (ore-loading vessels).

TUGS: Tug service is compulsory at LKAB's Ore Berths.

Luossavaara-Kiirunavaara AB reserve the right to order the number of tugs (maximum 3) which they consider necessary to ensure safe mooring and unmooring of a vessel.

Vessels above approximately 70,000 d.w.t. will normally be assisted by 3 tugs.

Main particulars of tugs available: M/V "Svarta Bjorn", g.r.t. 277, b.h.p. 1,640, bollard pull 23 tons, 11 knots. Fluid couplings and single reduction gearing. Reverse gear to screwshaft.

M/V "Rallaren", g.r.t. 435, b.h.p. 3,800, bollard pull 43 tons, 12.4 knots. Two Voith-Schneider directional propellers.

M/V "Rombak" g.r.t. 440, b.h.p. 4,000, bollard pull 47 tons, 12.5 knots. Two Voith-Schneider directional propellers.

Tugowners: A/S Bukserbater, Narvik.

Towing lines will be provided from the tugs.

Normal communication between tugs and Pilot is by VHF. Operating Channel 6 (156.3 mHz.).

Bilge Pumps: The tugs M/V "Rallaren" and M/V "Rombak" are equipped with 2 transportable bilge pumps. Average pumping capacity of each pump: 2,000 litres per minute.

Fire Fighting: Tugs M/V "Rallaren" and M/V "Rombak" are equipped with foam/water guns for fire fighting.

Other Vessels: Must be employed for tankers, 3 tugs available, capable of assisting vessels up to 250,000 d.w.t.

LOADING:

Docking Data for Ore Berths: (Measurements in metres, unless otherwise stated).

	Berth No. 3	*Berth No. 4*	*Berth No. 5*
Building completed (year)	1950 (Caisson in 1967)		1977
Type	Concrete Pier		Concrete Caisson Berth
Length	214.00	214.00	208.00
Breadth	13.50	13.50	Min. 8.25, Max. 18.00
Depth alongside at LWOST	*13.50	13.00	27.50
Height under shiploader (Airdraft) on HWOST	13.00	11.00	26.00
Max. outreach of shiploader from fender line	15.00	11.00	43.00 When perpendicular to wharf
Number of shiploaders	2	2	1
Suitable ship's size in d.w.t. (approx.)	40-75,000	5-45,000	70-250,000
Max. ship's size in d.w.t. depending on type and construction	90-100,000	45-50,000	over 300,000
Limitation of ship's length from bow (bulb) to aftermost loadpoint	200.00	175.00	No limitation
Max. length between ship's foremost and aftermost loadpoint loadable without warping	152.00	152.00	220.00

*Note: Maximum guaranteed draft at Berth No. 3 is 13 m. on LWOST (minimum 0.5 m. under-keel clearance required).

Loading to draft exceeding 13 m. may take place during favourable tide and weather conditions.

Iron Ore Qualities/Average Stowage Factors:

Apatite	1.50	0.667	0.043	23.5

Weighing: The ore is weighed continuously during loading by electronic belt scales.

Margin of error maximum ±0.25%.

All weights as well as quantities issued in the Bills of Lading are expressed in metric tonnes (1,000 kg.).

Load Line Zones:

Winter: 1st November – 31st March.

Summer: 1st April – 31st October.

BERTHING:

General Description: The Ore Berths, hereinafter described as Berth Nos. 3, 4 and 5, allow 3 ships to be berthed simultaneously.

The ore is transported from the stockyards to the shiploaders on conveyor belts. Both stockpiling and loading is automatically directed from a central control station. On the way to the pier belts, the ore is transferred via sampling stations which also include computer controlled screen analysis for pellets.

After having passed the sampling station, the ore is weighed by electronic belt scales with a very high degree of accuracy.

Mooring: Ships usually berth:

Starboard side to Berth No. 3.

Port side to Berth No. 4.

Starboard side to Berth No. 5.

It is the responsibility of the Ship's Master to provide for and make sure that his ship has sufficient mooring ropes and wires ashore at all times, and that the moorings are properly and evenly tightened.

Ships berthing at Berth No. 5 should preferably use floating mooring ropes (nylon, polypropylene or similar) for head- and sternlines.

Berth Nos. 3 and 4: Consists of a slender reinforced concrete pier, supported by 13 heavy concrete pillars resting on steel piles which are rammed through clay and silt to solid rock some 30 m. – 35 m. below the pier deck, above which the superstructure, carrying the conveyor belts, rises about another 15 m.

The outer end of the concrete pier deck is based on a caisson, placed on a reinforced concrete foundation slab, resting on steel piles driven to rock base.

The caisson as well as the pier itself is equipped with heavy rubber fenders of Seibu type and with heavy rubber tyre fenders.

Shiploaders: There are 2 travelling boom loaders on each side of the pier with a working area of approximately 150 m.

If 2 ships are loaded simultaneously, only 1 shiploader can be used on each side.

Designed capacity of each shiploader is 4,500 tonnes/p.h., but the average capacity should be calculated between 3,000 tonnes/p.h. and 2,000 tonnes/p.h. depending on the kind of ore being loaded.

Berth No. 4 – Olivine discharge: A construction consisting of 2 discharging bins connected to a conveyor belt system allowing self-discharging vessels to discharge bulk cargoes at a max. rate of about 700 t.p.h. is mounted on Berth No. 4. The unloading facilities are intended for olivine which is being used in the pellet production (KPBO), but the discharging system can also be used for other bulk cargoes.

Berth No. 5: Is a concrete caisson berth, parallel to the shoreline.

The basement of the berth consists of 5 cylindric caissons resting on foundations connected to solid rock.

The face of the berth is fitted with heavy Seibu fenders, dimensioned to obtain pressure of a 40% ballasted ship of about 350,000 d.w.t., approaching at a speed of 0.15 m. per second.

The Shiploader: Is of a linear slewing type, turnable around a fixed point in the rear. The loader travels on rails along the berth in a length of 140 m. The shiploader boom can be elevated to any suitable height over a vessel's hatch coamings. Maximum horizontal loading range is 220 m.

Designed capacity is maximum 11,000 tonnes/p.h. for lumpy ore and fines, and approximately 7,500 tonnes of pellets per hour.

Apatite Berth: The berth is located between Berth No. 5 (East side) and shore. Minimum depth 12 m. Vessels up to approx. 10,000 d.w.t. can load Apatite in bulk at this berth. One shiploader with designed capacity 800 metric t.p.h. The cargo is stored in a silo of 7,035 cu.m., containing about 11,000 tonnes apatite.

Loading takes place via a closed and dust free system through special openings in vessel's hatchcovers.

Fagerneskaien: There is a deepwater quay, "Fagerneskaien", located to the South of the harbour.

Length of quay 280 m.

Depth alongside on LW 15 m.

The quay has easy access from the shore side and suitable for ships taking onboard heavy goods and provisions as well as for ships carrying out repairs.

The quay is directly connected to the main railway.

Fresh water is available with connections conveniently located.

STEVEDORES: Ordered by Agent. Not necessary to contact stevedores.

Working Hours: Ordinary working hours 24 running hours, except Saturday 2200 hrs. to Sunday 0600 hrs.

CRANES: Fixed crane, SWL 5 tons, is available at Fagerneskaien (deep-sea wharf), and mobile cranes can be hired from local companies.

DENSITY: 1022.

FRESH WATER: Can be supplied from all berths. Connections are conveniently located with hoses available on the dock.

Fresh water can also be delivered by tugs. An extra fee will then be charged.

Capacity per delivery: M.V. "Rallaren" 93 cu.m.
M.V. "Rombak" 112 cu.m.

FUEL: Bunkers are available on an emergency basis only. Orders for fuel and diesel should preferably be given in due time directly to the supplier. Fuel oil can only be supplied from coastal-tankers.

Diesel oil can be delivered by the tug M.V. "Rombak" at the daily market rate and from the supplier used by the tugboat company.

Capacity per delivery about 100 cu.m.

An extra fee will be charged for the tug per delivery.

It is also possible to supply diesel oil by tank wagons. Capacity per delivery about 10 cu.m. – 12 cu.m.

Lubricants: Can be procured, but due notice must be given as all types are not kept in stock.

CONSULS: See "Telephone Numbers".

REPAIRS: Minor repairs can be effected by local repair firms.

SURVEYORS: Lloyd's representative and surveyor are available at the port.

DRY DOCKS: None.

GANGWAY/DECK WATCHMAN: Not available.

OPENING/CLOSING HATCHES: May be handled by ship's crew.

CUSTOMS ALLOWANCES: 200 cigarettes or 250 gm. tobacco and 1 litre spirits and 1 litre wine (or 2 litres wine only). Any excess of this quantity to be declared on Custom's List.

AIRPORT: Narvik Airport, 5 minutes by taxi from the port. Local commuter service with connection to the nearest major airports.

Evenes Airport, 1.5 hours by bus from Narvik. Regular service to Oslo (Fornebu Airport) and other major Norwegian airports.

REPATRIATION: Facilities exist for crew change and necessary repatriation.

TIME: GMT plus 1 hour. GMT plus 2 hours in Summer.

HOLIDAYS: New Year's Day; May 1st; May 17th; Easter; Christmas Day; December 26th. Also see "Customs of the Port".

POLICE/AMBULANCE/FIRE: Police 76923400; Hospital 76944044; immediate help 4300 (only at night time); Ambulance 76943600; Fire 76942555 or 111.

TELEPHONES: Vessels at berth may hire a telephone. A telephone watch should then be kept on board.

LAUNCHES: The Agent will supply a time table and tickets on arrival. If a launch is required, the "B" flag or red light should be displayed from the signal mast.

SERVICES: Compass adjusting can be arranged when necessary.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Shore passes to be used when passing the LKAB gate will be supplied by ship's Agent.

GARBAGE DISPOSAL: Garbage disposal containers available on quay. Ship's agent or Port Authority should be contacted when disposal is required.

WASTE OIL DISPOSAL: Upon request, tanker trucks from Harstad (about 120 km. distant) will collect waste oil disposal direct from vessel. Due to transport distance, request for such disposal should be forwarded to ship's agent/Port Authority, prior to arrival.

SEAMAN'S CLUBS: Svenska Sjomanskyrkan (International Seaman's Centre), P.O. Box 145, N-8501 Narvik. Tel: 769-41414/43030.

CUSTOMS OF THE PORT:

1. The ships will generally be loaded in regular turn, providing they present with starting hatches opened and holds properly cleaned and do not have ballast pumping which will exceed expected loading time.

2. For establishing turn of vessels a ship will be considered "Arrived" at the time of passing a line between the S.W. point of "Framnesodden" and "Batberget", or if anchored outside the Harbour limit, at the time of anchoring.

3. The time of arrival stated in the Notice of Readiness shall be the time when a ship has moored alongside loading berth, (finished with engines) or when loading berth is not available, at the time of anchoring.

4. Notice of Readiness shall be given by the Master on arrival whether in berth or not any time SHINC with the exception of certain holidays.

5. Loading plans, duly dated and signed, stating quantity in each hatch and rotation of loading, must be presented to the Agent on arrival and to the loading foreman as soon as the ship has moored.

6. All weights shown on the Bill of Lading will be the same as recorded on the weighing facilities of Luossavaara – Kiirunavaara AB. The weights will be given in tonnes of 1,000 kilogrammes (metric tonnes).

7. Pilots and tugs will be ordered in due time before loading is finished. The ship must leave the pier upon completion of loading when the cargo documents have been received. If any delays occur in preparing the cargo documents, or on occasion of missing crew members, or in case of any dispute or otherwise, the ship must leave the pier immediately when so ordered by the shippers, and matters will be settled while the ship is waiting in the roads.

8. Ore – Oil and OBO vessels will not be accepted for loading unless gas-free certificate has been obtained.

9. *Working Hours:*

Ordinary working hours 24 running hours.

Loading does not take place on the following holidays:

December 24th	1300 hrs.	–	December 26th	2200 hrs.
December 31st	1300 hrs.	–	January 1st	2200 hrs.
Maundy Thursday	1400 hrs.	–	Easter Monday	2200 hrs.
Whitsun Eve	1400 hrs.	–	Whit Monday	2200 hrs.
April 30th	2200 hrs.	–	May 1st	2200 hrs.
May 16th	2200 hrs.	–	May 17th	2200 hrs.

Note: The above stipulated working hours are subject to alteration without notice.

GENERAL:

Tide:	Range of tide:	Maximum approximately	4.50 m.
		Minimum approximately	0.50 m.
		Average	1.75 m.

Currents: The existing currents are mainly caused by tide water. The average speed of the current varies from 1 knot – 3 knots.

During May – June there is a constant Northwesterly flood-current setting out from "Beisfjorden" (a narrow fjord to the South of the harbour).

This current reaches an estimated speed of 4 knots – 5 knots when it coincides with the fall of the tide.

The direction of the current in the harbour basin is exposed to seasonal and local variations owing to snow-melting and changes in water temperature.

It is important that the Ship's Masters are aware of the fact that the existence of variable currents in the harbour may affect the manoeuverability and bring vessels at anchorage in the bay to turn in dissimilar directions.

Winds: The local fall winds from Southeast occur suddenly and unexpectedly but are most frequent and strongest during the Winter season, when winds force 30 sec./m. have been measured.

Harbour Charts: Norwegian Chart No. 461 and British Admiralty Chart No. 3753.

Garbage: Trucks will remove garbage from vessels at berth on request. Garbage can also be removed by lighter if necessary from ships at anchor.

Launch Service: A regular launch service is operated and administrated by the Harbour Authorities.

Port Passenger Ferry Service: Until further notice is given, the Narvik Port Authority's passenger ferry service to/from all vessels anchored on the inner/outer roads is scheduled as follows:

INNER ROADS

Weekdays: Departure Ferryquay: 0715 – 0800 – 0900 – 1000 – 1200 – 1300 – 1400 – 1600 – 1800 – 2000 – 2200 – 2400.

Saturdays, Sundays and Holidays: Departure Ferryquay: 0800 – 1000 – 1200 – 1400 – 1600 – 1800 – 2000 – 2200 – 2400.

OUTER ROADS (outside Framnesodden)

Every day: Departure Ferryquay: 0800 – 1000 – 1200 – 1400 – 1600 – 1800 – 2000 – 2200 – 2400.

The ferryboat will call at your vessel *only* if passengers are to be put on board, *or* if the ship by means of proper signals indicates that ferry service is required.

The proper "ferryboat requested" signals are:

In daylight: A red flag hoisted at the yardarm.
In darkness: A well visible red light.

Pilot Ladders/Gangways: For safe embarkation/disembarkation of passengers to/from any vessel anchored on the roads, the following regulations should be observed:

1. Either pilot ladder or gangway to be rigged on the leeward side of the vessel. In rough weather, both a pilot ladder and a gangway must be arranged on the leeward side in such a way that the ladder can be reached from the embarking/disembarking platform of the gangway when lowered to the sea surface.

2. The pilot ladder is – when rigged – to be safely secured on the main deck, and extend to the sea surface. In order to prevent capsizing, every 4th rung of the ladder should be extended.

3. Properly secured on deck, 2 strong holding ropes should be arranged close to the pilot ladder, 1 on each side, and extend to the sea surface.

During darkness, proper lights to be rigged above ladder/gangway, so that embarkation/disembarkation may be carried out in a safe way.

4. The vessel's watchman should stand by the ladder/gangway during embarkation/disembarkation, in order to assist the passengers when necessary.

General: During unfavourable weather conditions, when the sea is rough, the captain of the ferryboat may have to cancel one or more scheduled calls at your vessel, until conditions have improved.

You may communicate with the ferryboat on VHF Channel 14.

With reference to the above regarding Ferryboat service, we regret that the last ferry from shore leaves at 2400 hrs.

Transport to the ship in the Roads between 2400 hrs. and 0715 hrs., respectively 0800 hrs. on Saturdays, Sundays and Holidays, can only be arranged in case of absolute emergency.

Officers and crew members on ordinary shore leave who miss the last ferry at 2400 hrs., will have to wait until the first ferry the following morning.

Provisions and Stores Available: Advance notice preferred.
Ship's Laundry: Can be taken care of.
Agency: Luossavaara-Kiirunavaara AB (LKAB) will handle the Agency and perform all normal service functions at this port. Tel: 769-41020. Cable address: "Malmexport Narvik". Telex: 64022. Answerback code: lkabn N. VHF (24 hour basis) calling Channel 14, Working Channels 12 and 14. Call sign: LKAB.

Advance funds sufficient to cover estimated compulsory port expenses and additional outlays, such as cash to Master, must be remitted prior to vessel's arrival.

Bank remittances should be sent to LKAB's account No. 6370.05.01045 with Christiania Bank og Kreditkasse Narvik. Cable address: "Kreditkassen Narvik". Telex: 64081. Answerback code: Cbknk n.

AUTHORITY: Narvik Havnevesen, P.O.Box 627, 8501 Narvik, Norway. *Tel:* 769-22372. *FAX:* 769-42981. *Contact:* G. Berntsen, Port Manager. K. Heggelund, Asst. Port Manager.

OSLO: 59.54 N. 10.43 E. (See Plan)

DOCUMENTS:
Maritime Declaration of Health.
Sealing Certificate.
2 Crew Lists.
2 Passenger Lists.
2 Lists Crew Personal Effects.
Provisions List.
3 Cargo Manifests.
Certificate of Tonnage.
Dangerous Cargo List.

PILOTAGE: Compulsory. Pilot boards at Faerder Lighthouse, 57 miles from docks. Give 24 hours notice "Faerder Pilot". Pilot station on VHF Channel 13.

ANCHORAGE: Good sheltered anchorage in Western and Eastern Harbour Basins, depths up to 20 m.

RESTRICTIONS: Vessels may enter at any time, except tankers with draft over 30 ft., which may only enter in daytime. Tankers over 35,000 d.w.t. are not allowed to enter the harbour. No tide or current.

MAX. SIZE: Vessels up to 31 ft. draft may berth at Filjstad Quay and 34 ft. at Sjursoya Quay.

Tankers: Up to 36 ft. draft at Oslo, or 38 ft. draft at Fagerstrand.

HEALTH: International procedure followed to obtain Pratique. In case of suspected disease or fever on board, inform the Harbour Master's Office in advance. When arriving from a Norwegian port, Pratique is automatic.

RADIO: Communicate through Tjome Radio, call sign LGO. Harbour Master's Office equipped with VHF Channels 16 and 12.

TUGS: Sufficient tugs available for all requirements.

BERTHING: Instructions given from Harbour Master. Masters of ships are requested to send their ETA to the Harbour Master's Office through Oslo Havne Radio, VHF Channel 12, one hour prior to arrival.
Filipstad Quay: Up to 10 m. depth alongside.
Sjursoya Quays: Up to 11 m. depth alongside.
Vippetangen: Up to 8 m. depth alongside.
Pipervika: Up to 11 m. depth at Akershus Pier.
Bjorvika: Up to 7 m. depth at Lang Quay, and up to 10 m. depth at Revier Quay.
Bispevika: Up to 10 m. depth at Sorenga Pier.
Gronlia: Up to 8 m. depth alongside.
Kongshavn Quays: Up to 8 m. depth alongside.
Bekkelaget: Up to 10 m. depth alongside.
Ormsund: Up to 9.0 m. depth alongside.

BULK CARGO FACILITIES: Container traffic handled at Filipstad and Ormsund.

Sorenga Pier equipped for palletised cargo handling and Ro/Ro.

15 berths for Ro/Ro traffic. 3 Container cranes for 20 ft., 30 ft. and 40 ft. units, up to 35 tons (net) and container handling equipment, quay cranes and mobile cranes and floating Ro/Ro ramp.
Sjursoya North: Cement, phosphate, grain and molasses.
Sjursoya South: Gasoline and oil and propane gas.
Bekkelaget North: Molasses, general cargo and oil.
Filipstad: General cargo and containers.
Sorenga: General cargo and Ro/Ro.
Kongshavn: Building material.
Ormsund: Containers.

STEVEDORES: Arranged by Agents. Working hours 0700-1600 hrs., Saturdays overtime is voluntary.

MEDICAL: All facilities available. Masters to advise by radio prior to arrival if medical attendance required on board.

TANKERS: Also see "Slagen".
Oslo: Oil pier at Sjursoya, depth alongside 15 m. or more. A tug required to stand by during discharge for tankers over 6,000 d.w.t.
Fagerstrand: Terminal operated by Norske Braendselolje A/S situated in Oslo fjord, 12 miles South of Oslo. 1 berth for tankers up to 30 ft. draft.

One berth for tankers up to 38 ft. draft.

DENSITY: Salt water, 1025.

FRESH WATER Available by pipeline from all quays.

FUEL: All grades available, ex-wharf at many quays. Can be delivered by barge.

FIRE PRECAUTIONS: 2 boats fully equipped with fire-fighting equipment.

CONSULS: Following countries are represented at Oslo:
Albania
Argentina
Australia
Austria
Bahamas
Bangladesh
Belgium
Benin
Botswana
Brazil
Bulgaria
Canada
Chile
China
Colombia
Cook Islands
Costa Rica
Cyprus

REPAIRS: All types of machinery repairs can be effected.

CUSTOMS ALLOWANCES: 200 cigarettes allowed weekly, 1 litre of wine and 1 litre of spirit weekly, for each man.

CARGO GEAR: International Safety Regulations to be observed.

REPATRIATION: All facilities available without restrictions.

AIRPORT: Fornebu Airport situated 8 km. from city centre. Regular services to Europe, South America, Far East and U.S.A.

TIME: GMT plus 1 hour. GMT plus 2 hours in Summer.

HOLIDAYS: January 1st; Good Thursday; Good Friday; Easter Monday; May 1st; May 17th; Whit Monday; Christmas Day; Boxing Day.

No cargo work normally on Saturday, Sunday and Holidays.

POLICE/FIRE/AMBULANCE: Police, Tel: 669050 or 002; Fire, Tel: 114455 or 001; Ambulance, Tel: 117080 or 003.

TELEPHONES: Can be placed on board vessels at most quays.

SHORE LEAVE: No restrictions.

IDENTIFICATION CARDS: Not required.

DEVELOPMENTS: Extensions of the land areas in the port by approx. 200,000 sq.m. Quay extensions of 1,000 m. Storage halls in hills, 100,000 sq.m. or more, sheds and service buildings.

AUTHORITY: Oslo Port Authority, Vippetangen, N-0150 Oslo. Postal address: P. O. Box 230, Sentrum, 0103 Oslo 1. *Tel:* (22) 416860. *FAX:* (22) 416751, (22) 429528. *Cables:* Osloport. *Contact:* Per Mauritz Hanssen, Port Director.

RISOR: 58.43 N. 09.14 E.

DOCUMENTS:
3 Crew Lists.
3 Customs Lists.
Ship's Register.
Bill of Lading.

PILOTAGE: Contact Arendal Pilot.

ANCHORAGE: In 15 fathoms depth.

MAX. SIZE: 10,000 d.w.t., draft 28 ft.

RADIO: Farsund and Tjomoy Radio. VHF Channel 16. No radar.

TUGS: No tugs for berthing.

STEVEDORES: Available. 24 hours notice of ETA required.

FRESH WATER: Available by pipeline at berth.

FUEL: Not available.

CONSULS: French and Swedish.

REPAIRS: No shipyard.

GANGWAY/DECK WATCHMEN: Not necessary.

OPENING/CLOSING HATCHES: May be performed by ship's crew.

CUSTOMS ALLOWANCES: Tobacco: Wine/Spirits: 200 cigarettes per crew member for 10 days. 3 bottles spirit for ship's Master only for 10 days.

AIRPORT: 10 miles; every day service.

TIME: GMT plus 1 hour. GMT plus 2 hours in Summer.

HOLIDAYS: Work can be arranged by 100% overtime.

TELEPHONES: Can be arranged on board.

IDENTIFICATION CARDS: Not needed.

AUTHORITY: Risor Radmannskontor, 4950 Risor, Norway. *Tel:* 370-50500. *Cables:* Havnekontoret, Risor. *FAX:* 370-50058. *Contact:* Kjell Skarheim, Harbour Master.

SARPSBORG: 59.17 N. 11.07 E.

Note: On 1st January 1993, the ports of Sarpsborg and Fredrikstad amalgamated under the name of Borg.

DOCUMENTS:
2 Crew Lists.
2 Passenger Lists.
1 Health Certificate.
3 Manifests.
1 Bill of Lading.
2 Tobacco/spirit Lists.

PILOTAGE: Pilot ordered by Faerder Losstasjon or Herfol Losstasjon via Tjome Radio. Harbour Office can be contacted by VHF.

Pilotage compulsory for all vessels of 100 g.r.t. and over above Huidstonodden Lt. (59° 16′ N., 11° 03.7′ E.).

ANCHORAGE: Between Struten Light and Stromtangen Light.

MAX. SIZE: 24 ft. draft.

HEALTH: No particular action necessary, but Agent to be informed.

RADIO: Tjome Radio.

VHF: Harbour Master's Office (Tel: 943-18061), Channels 16 and 12. Day and night service.

TUGS: Small harbour tug available.

BERTHING: A Roll-on/Roll-off berth has been built to handle vessels of up to 6,000 tons gross. Depth alongside 24 ft. Vessels will moor alongside the old Alvim Pier enabling them to work through the side doors and stern doors.

STEVEDORES: Ordered through Agent.

MEDICAL: If medical attention necessary Agent must be informed in advance.

FRESH WATER: Only at Alvim Kai, average 15 t.p.h.

FUEL: Fuel obtained only with tank cars.

CONSULS: Denmark, Finland, Iceland, Sweden and Greece have vice-consulates.

REPAIRS: Deck and engine repairs possible.

DRY DOCKS: None.

GANGWAY/DECK WATCHMEN: No gangways from shore. Watchman can be obtained.

OPENING/CLOSING HATCHES: Carried out by crew.

CUSTOMS ALLOWANCES: 100 gm. tobacco or 200 cigarettes per crew member. Wine 1 litre per member or 1 bottle of spirit.

REPATRIATION: Facilities available.

AIRPORT: Fornebu Airport 110 km. from Sarpsborg. Served by regular airlines.

TIME: GMT plus 1 hour. GMT plus 2 hours in Summer.

HOLIDAYS: 1st January; 1st May; 17th May; 25th/26th December. No work on these days.

POLICE/AMBULANCE/FIRE: Police 112; Ambulance 113; Fire 111.

TELEPHONES: No arrangements exist for placing telephones on board.

SHORE LEAVE: No restriction.

IDENTIFICATION CARDS: Have to be used for Melloes Quay only.

GARBAGE DISPOSAL: Garbage containers placed on all quays. Disposal free of charge. Emptied when required.

WASTE OIL DISPOSAL: No waste oil disposal.

SEAMAN'S CLUBS: Seaman's club operating in Fredrikstad.

CURRENCY: Norwegian Kroner (NKr.).

AUTHORITY: See "Fredrikstad".

SAUDA: 59.40 N. 06.22 E. (See Plan)

DOCUMENTS:
Health Certificate.
Crew List.
Derat Certificate.
Ship's Register.

PILOTAGE: Skudefjorden Pilot Station, Tel: 047-58337 (or pilot boat "Skudefjord" on VHF). Kvitsoy, position Lat. 59° 05′ N., Long. 05° 20′ E.

ANCHORAGES: Safe anchorages everywhere in Sauda Harbour area.

RESTRICTIONS: No restrictions on night entry – but Sea Pilots usually refuse to take in vessels over 10,000 d.w.t. between 1800 hrs. and 0600 hrs. during Winter time, October-March.

MAX. SIZE: *Sauda Smelteverk A/S* (Private Quays): Draft 30 ft. – but vessels over 30 ft. are allowed to get alongside at owner's own risk. Length no restriction. Breadth, 75 ft.

Official Quays: Length of quays – 230 ft. and 200 ft. Max. draft 13 ft.

RADIO: Cable Agents giving ETA, draft and cash requirement via Rogaland Radio.

VHF: VHF installed in Agents office, Channels 16 and 9.

TUGS: Not necessary.

BERTHING: May take place at any time provided quay available.

(1) Import Quay: 250 m. long. 2 unloading towers with a capacity of about 3,500 tons ore per day.

(2) Export Quay: 115 m. long. 2 loading cranes with a capacity of about 1,600 tons ferro alloys per day. One loading machine with capacity 400 t.p.h.

STEVEDORES: Ordered by Agents. Normal working hours 0700 – 2300. Saturdays and Sundays – No work.

MEDICAL: Masters to advise by radio prior arrival if medical attendance required aboard. Modern hospital.

DENSITY: Brackish in port area, average salinity 2.39%.

FRESH WATER: Good fresh water available, delivery irrespective of quantity.

FUEL: No fuel available at Sauda, must be ordered from Stavanger.

CONSULS: No consulates at Sauda. Nearest in Stavanger.

REPAIRS: Minor repairs possible.

DRY DOCKS: No dry dock at Sauda. Nearest in Stavanger and Haugesund.

GANGWAY/DECK WATCHMEN: Available, but not compulsory.

OPENING/CLOSING HATCHES: Crew allowed to open and close.

CERTIFICATES: Registered Tonnage Certificate required.

CUSTOMS ALLOWANCES: Master: 400 cigarettes or 400 gm. tobacco, 2 litres spirits/wine.

Crew: 200 cigarettes or 250 gm. tobacco, 1 litre spirits and 1 litre wine.

CARGO GEAR: No additional requirement.

REPATRIATION: Repatriation may take place.

AIRPORT: Stavanger and Haugesund.

TIME: GMT plus 1 hour. GMT plus 2 hours in Summer.

HOLIDAYS: New Year's Day; Maundy Thursday; Good Friday; Easter Monday; Labour Day (May 1st); National Day (May 17th); Ascension Day; Whit Monday; Christmas Day; Second Christmas Day (December 26th) (no work on these days).

POLICE/AMBULANCE/FIRE: Police 04-783266; Ambulance 04-782811 or 04-782511; Fire 04-783222

TELEPHONE: Not available to vessels.

IDENTIFICATION CARDS: Not necessary. Crew List at gate.

REGULATIONS: Strictly prohibited to throw wastes or garbage into sea within port area, fjords and on Norwegian coast.

DELAYS: All vessels loaded/unloaded in turn, very seldom any congestion in port.

AUTHORITY: Sauda Havnevesen, Raadhusgaten, N-4201 Sauda, Norway. *Tel:* 04-782585. *Contact:* John Henning Hansen, Harbour Master.

SKIEN (including Menstad and Vollsfjorden): 59.12 N. 09.38 E.

DOCUMENTS:
Clearance documents, forms obtainable from Customs Officers on arrival.
Derat Certificate.
Bill of Lading.
Manifests.
2 Crew Lists.
Ship's Register.

PILOTAGE: Ship's Agent gives ETA pilot station 24 hours before arrival and direct to Pilots 2 hours before arrival. Telegraphic address: Pilot station, Langesund. VHF Channel 16 to be used when contacting Pilots. Pilot boards at Steingrunnen light buoy, Langesund Bay, (58° 55′ N., 09° 44′ E.). Flag, sound and morse signal "G". Pilotage compulsory for all foreign vessels but dispensation can be obtained for smaller Scandinavian vessels.

MAX. SIZE: Between Porsgrunn and Skien, Norsk Hydro have loading place, Menstad, for vessels up to 425 ft. length and max. draft 18.5 ft. Between Menstad and Skien Grain Silo for vessels with max. length 425 ft. and max. draft 18 ft. 06 in. At Skien vessel's length must not exceed 280 ft., breadth 46 ft. and max. draft 17 ft.

Dispensation can be obtained for vessels with a breadth of less than 46 ft.

RESTRICTIONS: No restrictions on night entry for vessels of above mentioned sizes.

BRIDGES: On passage from sea, vessels pass Porsgrunn where there is a lifting bridge with breadth 30 m. Signals for passing bridge inward: 1 long and 2 short sound signals. Outward signals, 1 long and 1 short sound. There is also a bridge at Brevik: Max. height 45 m.

RADIO: Tjome Radio/LGT or Farsund Radio/LGZ.

TUGS: Modern tugs available.

BERTHING: Also see "Max. Size".

Vollsforden:

Bridges: From sea vessels pass Brevik Bridge, max. height 45 m.

Overhead Cable: At Kjeoya there is an overhead cable which permits an airdraft of max. 37 m. Dispensation for airdraft up to 40 m. can be obtained for daytime entry.

Tugs: A number of modern tugs are available.

Berthing: 2 quays. No. 1: Length 135 m., depth from 8.5 m. to 11 m. No. 2: Length of quay 165 m. but open to sea with mooring pillar at 250 m. from Ro/Ro ramp. This quay has Ro/Ro facilities with ramp of 30 m. breadth, and depth of 11 m. for full length.

Cranes and Ro/Ro Materials: 2 stationary cranes of 6 tons capacity, any size of mobile crane and floating cranes up to 250 tons available. Container truck of 30 tons and 22 tons lift/capacity, 2 Tugmasters of 21 tons towing power, Forklifts from 3 – 6 tons, Warehouse 9,200 sq.m. Unlimited open space.

Density: Practically fresh water.

MEDICAL: All medical assistance to be arranged via Agents.

STEVEDORES: Ordered by Agents.

DENSITY: At Menstad and Skien practically fresh water.

FRESH WATER: Obtainable.

CONSULS: Belgium, Netherlands, Sweden, Germany, Finland.

REPAIRS: All repairs possible. Dry dock: Lifting capacity: 2,000 tons. Radar/radio services can be arranged through Agents.

GANGWAY/DECK WATCHMEN: Available but not compulsory.

OPENING/CLOSING HATCHES: By crew or stevedores.

CUSTOMS ALLOWANCES: 400 cigarettes and 4 bottles spirit for the Master. 200 cigarettes and half a bottle spirit for each crew member.

REPATRIATION: Facilities exist for effecting crew changes and repatriation.

AIRPORT: International at Oslo and Skien airport.

TIME: GMT plus 1 hour. GMT plus 2 hours in Summer.

HOLIDAYS: New Year's Day; Maundy Thursday; Good Friday; Easter Eve (half day); Easter Monday; Labour Day (1st May); Ascension Day; National Holiday (17th May); Whit Monday; Christmas Eve (half day); Christmas Day; (26th December), New Year's Eve (half day).
AUTHORITY: Skien Havnevesen, Postboks 2634, 3701 Skien, Norway. *Tel:* 03-593184, 03-593160. *Mobile telephone:* (094) 50439. *FAX:* 03-593250. *Contact:* T. Holtan, Harbour Master.

SLAGEN: 59.20 N. 10.31 E. (See Plan)

LOCATION: Esso Norge a.s., Slagen Refinery is located on the West coast of the Oslo Fjord near Tonsberg, about 20 miles from the Ferder Lighthouse. The Marine Terminal, a finger pier, is located at Slagentangen, near the refinery.
DOCUMENTS:

Ship's Register (Certificate)	(For Customs examination)
SBT Certificate	(For Customs examination)
Derat Certificate	(For Customs examination)
Health Declaration	(For Customs examination)
Cargo Manifest	(For Consignee)
Provision List, original and 1 copy	(For Customs information)
3 Copies Crew List	(For Customs and terminal information)
Personal Effects List, original and 1 copy	(For Customs information)

NOTE: Crew List to show date and place of birth for each crew member.
APPROACHES: The approaches to the Oslo Fjord via the Skagerrak are free of any particular navigational dangers and there is deep water close to the Norwegian coast.

Tankers of 40,000 d.w.t. or larger are requested to keep a minimum distance of 15 nautical miles off the Norwegian coast until entrance to the Oslo Fjord, where traffic separation scheme is in force inside territorial waters.

There are no particular navigational difficulties in the Oslo Fjord, all depths of less than 35 m. (115 ft.) can be easily avoided. Laden crude and black-oil vessels above 20,000 d.w.t. bound for or leaving Slagen, will be escorted by a tug while navigating in the Oslofjord, due to safety and environment risks.
Navigation Aids: Esso Norge a.s. has provided two leading light/marks, one on the jetty itself and one on shore at Stubrekk. These lights when in line bear 309°(T) and mark a deep approach (least depth 25 m., 82 ft.) between Lysboye and the Slagen Terminal Jetty.
PILOTAGE: Pilotage is compulsory for all foreign flag ships. The pilot service is provided by the Norwegian Government. Request for Pilot minimum 24 hours in advance through Agent or direct to Hvasser Pilot Station. Tel: 33393178 or Telex: 70304. The pilot boats lay in a harbour on Hvasser Island from where a radar and VHF watch is kept. The pilot station listens out on Maritime Channel 16 and 13 and when your ship is about 2 hours from Ferder Island (Store Faerder) contact should be made. You will be given instructions as to where and how the Pilot will board. The Pilot boards East of Ferder Island from a 20 m. long white boat marked "LOS" and capable of doing 18 knots. In bad weather, ships of less than 10,000 d.w.t. may have to proceed in as far as Fulehuk before a Pilot can board.

Choice Pilots are employed for berthing vessels of 20,000 d.w.t. or above and/or when tug assistance is required.
ANCHORAGE: North of pier head. Particulars regarding anchorage will be given by Pilot or by Slagen Harbour Office on VHF Channel 14.
MAX. SIZE: Tankers up to 350 m. length and 66 ft. draft can be berthed. Berth No.1 designed for vessels 250,000 d.w.t. Depth of water alongside 69 ft.
HEALTH: Clearance is effected on arrival. International procedure followed to obtain Pratique. In case suspected disease or fever on board inform port authorities in advance.
RADIO: 72 hours prior to arrival at pilot station, radio Agent ETA, cash, bunkers, dirty ballast, personnel, bonded stores, or other special requirements. ETA should be repeated 48, 24 and 12 hours prior arrival pilot station. When Pilot has embarked, contact should be established with Slagen Harbour Office via VHF Channel 16 or 14 for exchange of information prior to berthing, such as berth availability, current, wind, draft, ballast to be discharged, etc.
TUGS: A total of 8 tugs ranging from 1,100 to 5,200 b.p.h. can be made available to shipping at Slagen. However, none of the tugs are normally stationed at the terminal, except when a vessel of 20,000 d.w.t. or larger is discharging or loading. On such occasions one or two tugs will be kept on stand by at the terminal. If additional tugs are required they must be ordered from Horten or Oslo.

The number of tugs required for berthing are ordered by the Agent in accordance with the berthing Pilot's advice. All tugs are diesel powered, single screw, single rudder and suitable for towing on the hook or alongside. When on the hook, ship's towlines are used.

The tugs are normally made fast en route between the Slagentangen light buoy and the terminal.
Communications: All communications between Pilot, tugs and terminal should be on VHF Channel 14. Should there be any breakdown, ship's whistle will be used. It is very important that communications within the ship between bridge, forecastle head and poop be good, particularly on the larger ships.
BERTHING: The main effect on ship handling in the berth approaches comes from the current, which for most of the time sets S.E. across the jetty which is aligned North-South. Ships berthing on the West side of the jetty (Berth Nos. 2 and 3) will tend to set down onto the berth. The marine terminal has a current speed and direction meter and advises the Pilot.

A submersible oil boom enclosing the pier is anchored on the sea bed, and the boom and its system of anchorage will be damaged if vessel's anchors are dropped in the shaded area on "Plan". *Except in emergency situations anchors should not be used within the shaded area.* Manoeuvres to and from the berths should be discussed with the Harbour Office which will give you information on currents.

Ice affects navigation at the terminal about every 6 years, and Pilots use special manoeuvres to deal with ice situations.
The Terminal: The terminal consists of a finger pier. On the East side (Berth No. 1) the water depth is 21 m. (69 ft.) and vessels with max. length 350 m. (1,148 ft.) and max. draft 20.1 m. (66 ft.) can be accommodated. On the West side (Berth Nos. 2 and 3) there is a water depth of 11.5 m. (37 ft. 9 in.). The West side is mainly used for coasters and barges, but vessels up to a max. length of 175 m. (574 ft.) with max. draft 10.3 m. (34 ft.) can also be accommodated on this side of the pier.
Fendering: On Berth No. 1, the breasting face is protected with timber-faced gravity fenders and timber-faced panels backed by laminated rubber units. Berth Nos. 2 and 3 are fendered with timber-faced panels backed by rubber tubing.
Limitation on Berthing Speeds/Angles: On Berth No. 1, the *maximum* speed of approach ranges from 8.15 m. (26.5 ft.) per minute for a fully loaded 100,000 d.w.t. tanker to 5.19 m. (17 ft.) per minute for a fully loaded 250,000 d.w.t. tanker. (See "Plan"). For the larger tankers, the target should be 1 m. (3 ft.) per minute. The speed of approach is monitored by Doppler Radar and the Pilot is kept frequently informed of the speed. The angle of approach should be as small as possible, a parallel landing being the target.
Berthing: Tankers for Berth No. 1 are usually berthed port side to, by paying off the bow to starboard and having tugs push the ship bodily, against the prevailing current, on to the berth. Headlines are usually run out first to the Northern-most dolphin.

The larger ships berthing on Berths No. 2 and 3 usually go port side to berth with tugs on the hook holding the ship off against the current. The approach to Berth Nos. 2 and 3 is normally facilitated by the fendered sliding front.
Moorings: Moorings are taken ashore by mooring boats and lifted onto dolphin/jetty by power capstans.
Shore Moorings Used: On Berth No. 1 a 48 mm. (1.875 in.) diameter shore-based mooring wire is placed on board large tankers as an extra aft back spring. The wire has an eye which is put over the bitts after being taken on board by rope messenger. No shore moorings are used on Berths No. 2 and 3.
Gangway: At Berth No. 1, near the Southern end of the breasting island, there is a telescopic hydraulic operated gangway reaching a deck height of about 22 m. above sea level. Also a portable gangway is available to accommodate handy size vessels. Whenever the latter one or when the vessel's own gangway is used, the vessel shall provide a safety net under the gangway, and a lifebuoy with not less than 15 fathoms of line attached should be positioned near the gangway for use in an emergency.
Cautionary Advice, Mooring Supervision: Breast moorings at the jetty have a scope of only 25 m. (82 ft.). The offsetting current at Berth No. 1 makes the tending of moorings during the discharge of a tanker with large light freeboard a very important operation and should only be done under the supervision of a ship's officer.

The area dredged to 21 m. is limited, and a VLCC needs to take care that it does not get too far to the South. When in position, there is 25 m. (82 ft.) clearance between the stern and the edge of the dredged area. It is for this reason a shore wire backspring is provided.

It is of the utmost importance that large vessels, in particular, are moored adequately and that moorings are carefully tended.

Before hard arms are connected, the ship's moorings and the mooring equipment are checked by the terminal personnel.
Special Regulations: If the wind speed reaches 20 knots or offsetting current reaches 0.6 knots, the discharge of a VLCC is stopped and the arms drained. All tank lids and ullage plugs must be closed and a tug will be ordered to stand by.

If the wind speed reaches 25 knots or offsetting current reaches 0.7 knots, the arms will be disconnected and the ship ordered to stand by for possible departure.

Weather forecasts in addition to actual current and wind velocity readings are available from the terminal office.
Preparation of Manifold Area: All crude ships should arrive with manifold stripped to the outboard 12 in. flange. All derricks, stays, radio aerials, etc. should be removed from the vicinity of the manifold to be used.
Ullaging, temperatures, water finding, etc.: On arrival ullages, temperatures and water dips should be taken by ship's personnel in co-operation with terminal representative. Vessel equipped with an inert gas system will be requested to depressurise tanks sufficiently to allow for sampling, ullaging, temperature and water dipping on arrival, and for checking of oil and residues left on board after completion of discharge.
Deballasting Facilities: All ballast must be pumped ashore unless from segregated tanks. Maximum quantity receivable, if advanced notice given, is 8,500 cu.m.; any quantity greater than this will cause delays.

Ballast/slops, etc. mixed with any chemicals to be tested by the Refinery before discharge.

Any ballast/slops, etc. not accepted have to be discharged for owner's account. Advance notice to be given.
Restriction on concurrent loading, discharging, ballasting, deballasting. Max. back pressure at ship's manifold:

No concurrent loading, discharging, ballasting, deballasting is allowed unless the two systems are entirely separate. Should a discharging ship require to reduce her freeboard due to weather or hard arm/hose limitation, she will be required to stop all cargo operations while ballast is taken on. The responsibility for ensuring remaining cargo is not contaminated by water rests with the ship. Maximum back pressure at ship's manifold is 10.55 kg./sq.cm. (150 p.s.i.).
HOSES:
Grades of Cargo, Bunkers Handled, Connections and Lines:

Crude oil and most grades of clean and dirty products and pressurised LPG are handled at the terminal.

Berth No. 1: Crude oil is received/shipped via 4×12 in. fully counterbalanced hard arms with 12 in. ASA flanges. Maximum pressure at ship's rail 12 kg./sq. cm. (170 p.s.i.). The berth is also used for loading dirty products and reception of ballast water.

Clean products are handled through 3×10 in., dirty products and bunkers through 1×8 in. all fully counterbalanced hard arms. The 8 in. bunker arm can also be used for loading dirty products. LPG is handled through 1×4 in. hard arm.

Berth No. 2: Dirty products are handled through 1×10 in. and 1×6 in., clean products through 2×8 in. all half hose half metal arms.

Berth No. 3: (Coaster berth). Dirty products are handled through 1×6 in., clean products through 1×6 in. and 1×4 in. half metal arm. LPG is handled through 3 in. hose connection, or through 1×4 in. hard arm.

All flanges are to ASA Standard.

There is no vapour return.

There are no check (non-return) valves in the import lines; and, therefore, the contents of shore tanks which are situated on high ground will flow back into ship if allowed to do so.

The crude oil discharge rate is up to 10,000 t.p.h.

MEDICAL: Medical attention and hospital facilities available.

DENSITY: 1017 – 1020.

FRESH WATER: Fresh water is available ex-jetty at a rate of 30 cu.m. an hour. Water is supplied by 2 in. hose and is metered. Cost is $1 per ton. Quality is good. Quantity required must be included in arrival cable.

Distilled Water: Distilled water is not normally available and can only be supplied with great difficulty. Maximum notice must be given. It is expensive.

FUEL: All main grades of bunkers, lubricants and hydraulic oils are available. Quantities and specification required must be included in the cable of advice of ETA. Lubricants and hydraulic oil are available in bulk as well as barrels.

FIRE PRECAUTIONS: Special safety regulation forms given when berthed.

CONSULS: Denmark, Finland, France, Netherlands, Spain, Sweden and U.K. have representatives in Tonsberg. German Consul in Sandefjord. Most countries represented in Oslo.

REPAIRS: All kinds of ship repairs can be undertaken by nearby ship yards. Service for radio, gyro, radar, echo sounder, data bridge, etc. available.

No ship may immobilise its engines, steering gear, etc. while alongside the Slagen jetty.

DRY DOCKS: Available at Horten about 5 miles from Slagen, max. size is about 60,000 d.w.t.

SURVEYORS: S.G.S., Caleb Brett, N.V., Lloyd's Register and A.B.S.

GANGWAY/DECK WATCHMEN: Oil Pollution/Safety Inspector placed on board all vessels over 20,000 d.w.t.

CUSTOMS ALLOWANCES: 200 cigarettes or 200 gm. tobacco and 1 litre spirits and 1 litre wine for each man.

REPATRIATION: Changes of crew are available. Transportation by train and plane from Oslo (about 100 km. from Slagen), passenger lines from Oslo. Hotel accommodation available at Tonsberg (10 km. from Slagen).

TIME: GMT plus 1 hour. GMT plus 2 hours in Summer.

HOLIDAYS: New Year's Day; Maundy Thursday; Good Friday; Easter Monday; Labour Day (1st May) 17th May; Ascension Day; Whit Sunday and Whit Monday; Christmas 25th and 26th: Discharging/loading all days.

POLICE/AMBULANCE/FIRE: Ambulance/Fire local at the refinery. Police Tonsberg 13355.

TELEPHONES: Ship to shore connections available.

SHORE LEAVE: Shore passes are issued on board on arrival and each crew member must be in possession of a shore pass before he goes ashore.

GARBAGE DISPOSAL: Disposal of garbage into containers at berth, free of charge. Large amounts taken ashore by small boat. Manpower and boat hire for vessel's account.

WASTE OIL DISPOSAL: Waste oil not accepted by refinery ballast recovery. To be delivered into small boat either in drums or in bulk. Transportation and destruction for vessel's account. Advance notice for agent or Essoship on quantity and grade of oil.

SEAMAN'S CLUBS: None.

CURRENCY: Norwegian Kroner (NKr.). U.S.$ 1.00 = NKr.7.50 (2.94).

GENERAL: *Safety:* A safety inspector will attend the vessel upon arrival and complete a Safety Check List.

Oil Pollution, Clean-Up Facilities: A very serious view is taken of oil pollution of Norwegian coastal waters and every effort must be made to prevent it.

Should oil pollution occur, it must be reported and tackled at once.

The terminal has supplies of oil dispersant, spill booms, sawdust and two mechanical removal devices. These will be used to combat any oil pollution and costs will be billed to the ship if the ship is responsible for the pollution.

Firefighting Facilities: The terminal is equipped with comprehensive fire fighting facilities including an 800 cu. m./hour fire pump, a supply of foam compound, remote-controlled elevated foam cannons and other fire hydrants, hoses, etc. A tug which stands by the terminal has fire fighting facilities and other fire fighting tugs can be summoned in an emergency.

Shore Steam, Shore Electricity: Normally not available.

Stores: All regular ship's stores, laundry and other similar facilities can be supplied by local ship's chandlers.

Tank Cleaning: Tank cleaning and gas freeing are not allowed alongside.

AGENCY: Several shipbroker firms are established in Tonsberg and may be called upon as acting Agents for owners and/or charterers. Esso Norge a.s., S & T Dept. act as general Agent for all Exxon owned tonnage, cable address "Essoship" Tonsberg.

AUTHORITY: Esso Norge a.s., P.O.Box 2001, Postterminalen, N-3103 Tonsberg, Norway. *Tel:* 47-33377300 (Switchboard); 47-33377557 (Harbour Office). *Telex:* 70558 ERAFF N. *Cables:* Essoship. *FAX:* 47-33377558 (Direct line). *Contact:* Sigard Erdal, Harbour Master.

SOLA (Tananger): 58.55 N. 05.35 E. (See Plan)

LOCATION: A/S Norske Shell's Sola Refinery is situated at Risavika Bay, on the West coast of Norway just West of Stavanger.

The Refinery, which was started up in 1968, has a capacity of about 2,500,000 tons a year of crude oil.

The Refinery's berthing facilities consist of a "T" head jetty situated in the following position: Lat. 58° 55′ 28″ N., Long. 5° 34′ 45″ E. The area is covered by a special issue of Norwegian Coast Chart No. 475.

There is another jetty in Risavika Bay at Shell's Tananger Depot in position: Lat. 58° 55′ 42″ N., Long. 5° 36′ 10″ E. This jetty is used for loading G.P.'s when Refinery Berth is occupied.

DOCUMENTS: One Crew List. Agent supplies Customs Forms on arrival.

READINESS: *International Transport Federation – Blue Card:* A ITF or bonafide certificate must be presented. Notice of readiness will not be accepted until such a document has been presented to Shell Refinery.

ACCEPTANCE: *Conditions of Pre-Acceptance:* Vessels must have been properly cleared and accepted by Shell in accordance with the appropriate nomination procedures.

Vessels must be able to receive/discharge cargo at bulk rates as laid down in the existing sale contract.

Ballast water to be discharged ashore must not exceed 30% of the quantity of cargo to be loaded.

Failure to meet the above conditions, due to the vessel's condition or equipment, will be accounted for and adjustments made accordingly to any demurrage claims.

All vessels nominated to load/discharge must be either subscribing members of "TOVALOP" (Tanker Owners Voluntary Agreement Concerning Liability for Oil Pollution) and "CRISTAL" (Contract Regarding and Interim Settlement to Tanker Liability for Oil Pollution) or have confirmed some equivalent form of insurance.

All crew must be covered by an ITF (International Transport Federation) agreement or a bonafide trade union agreement acceptable to ITF.

APPROACHING: *Additional signals to be exhibited and sound signals to be used by certain tankers navigating in waters outside Risavika off Stavanger:* Tankers of 40,000 d.w.t. or above when navigating within the territorial waters to and from Risavika shall in accordance with Rule 28 of the International Regulations for Prevention of Collision at Sea show:

By Night:

In addition to the lights prescribed in Rule 23 of the International Regulations for Preventing Collisions at Sea, and when these lights are exhibited, three red lights in a vertical line one over the other so that the upper and the lower lights shall be at the same distance from and not less than 2 m. above or below the middle light.

The lights shall be carried where they can best be seen and visible all round the horizon at a distance of at least 2 nautical miles.

By Day:

A black cylinder of not less than 0.6 m. in diameter and a length of not less that twice the diameter where it can best be seen.

In addition to the above signals these vessels may, whether by day or night, use a sound signal consisting of one long blast followed by two short blasts.

The above lights, shape and sound signal indicate that the vessel using them is hampered in her ability to comply with the Steering and Safety Rules of the Regulations and that other vessels must not impede her safe navigation.

PILOTAGE: Use of pilot on vessels to and from Risavika Bay, carrying dangerous or polluting cargo, is compulsory by law for all non Norwegian (non Norwegian Flag) registered vessels of 50 gross registered tons and above.

A combination of accommodation ladder and pilot ladder must be used. Pilot hoists are not acceptable, and the Pilot may refuse to board if one is offered.

The Sea Pilot, who also acts as a Harbour Pilot, will board arriving vessels off Feistein Lighthouse in position: Lat. 58° 50′ N., Long. 5′ 26′ 30″ E.

The pilot vessel is painted white with orange superstructure and marked "LOS".

The Kvitsoy Pilot Station maintains a 24 hours watch on VHF Channel 16. The working frequency is Channel 13. Tel: 04-515397.

Feistein Pilot Cutter also operates on VHF Channel 16, with Channel 13 as a working frequency. Tel: 04-699170, or mobile Tel: 090-41511.

The Pilot, whilst serving on board incoming and departing ships, carries a walkie talkie, operating on VHF Channel 11. With this he maintains communications with mooring boats, refinery jetty supervisor and tugs.

The pilots require 24 hours, 4 hours and 2 hours notice of arrival.

For vessel's departure, the pilots require 2 hours notice.

ANCHORAGE: Vessels awaiting berth must anchor at one of the following anchorages:

Kalsmedgrunnen, South and North of the island of Roth, West of Oksefotskjaer in Risavika Bay or Amoyfjord, depending on the weather conditions and the ship's size. Pilot will give instructions on VHF.

RESTRICTIONS: Vessels over 40,000 d.w.t. normally berth and unberth during daylight hours only. The depth of water off the jetty is 16.5 m. (54 ft.). At Tananger Depot Jetty depth is 11.6 m. (38 ft.).

MAX. SIZE: Max. d.w.t. 240,000 tons. Max. draft 15.8 m. (52 ft.). Max. LOA 1,100 ft. Max. draft at Tananger Jetty is 10.5 m. (34 ft. 05 in.).

RADIO: Whilst engaged in Scandinavian coastal trade Masters are requested to keep the Agent well advised of changes in ETD/ETA.

All wireless/radio telephone messages are transmitted via Rogaland Radio (Tel: 04-67 30 11). Traffic lists being sent at following times (GMT). 0705, 1105, 1505, 1905 and 2305 hrs. This list is also sent out on VHF Channel 16. Working frequency of the radio telephone is 1729 kHz.

While the vessel is moored, the main transmitter may not be used.

Pre-Arrival Information: The Master shall via the ship's Agent send ETA at least 72 hours in advance of arrival. The 72 hours ETA shall be confirmed by 48 hours and 24 hours ETAs. The Master shall thereafter advise of any changes in the ETA:

The 72 hours ETA (local time and date) shall contain the following information:

(a) Ship's Name and Call Sign.
(b) Flag.
(c) Owner's Flag.
(d) S.D.W.T. and G.R.T.
(e) Last Port of Call.
(f) Arrival drafts, forward and aft.
(g) Manifold configuration.
(h) Cargo loading rates and loading sequences for the different cargoes.
(i) Quantities of ballast/slops to be discharged ashore and expected time of discharging.
Also whether ballast/slops water contains any chemicals at all, and if so, the type of chemical(s) present.
(j) Quantity of cargo to be discharged and expected discharging rates.
(k) Tank washing needs and time.
(l) Whether the inert gas system is operable with tanks inerted to a maximum 8% volume oxygen content.

VHF: Refinery VHF radio station: Risavika Port Radio. Calling: Channel 16, working: 11 – 12. The vessel can maintain communication with Rogaland Radio during stay in port over VHF radio.

Also see "Pilotage" and "Radio".

TUGS: Tugs are normally available. Tugs up to 2,700 b.h.p. (35 tons bollard pull) are normally available for larger vessels. The tugs are stationed in Stavanger and must be ordered in advance by the ship's Agent.

One or two mooring boats will be provided for both arrival and departure operations together with portable VHF and radio sets to enable radio links to be maintained between the ship, mooring boats, tugs, Pilot and Jetty Supervisor.

BERTHING: Vessels normally berth port side to, if weather permits them to turn on arrival. The decision on this matter will be taken by the Master after consultation with the Pilot.

For product carriers the decision on which side to berth to, should also be based on consideration of matching of vessel's and shore loading and bunkering arrangement. It is therefore important that all information regarding cargo and bunker connections are sent to the refinery prior to arrival.

At Tananger Depot jetty, vessels normally berth starboard side to, depending upon weather condition and loading pattern.

MOORING: It is of utmost importance for the safe operations that ships are securely moored and maintained in the desired position at all times in accordance with recommendations laid down in the OCIMF "Mooring Equipment Guide Lines" (1st Edition 1992).

Mooring lines should be kept tight and fore and aft springs doubled to prevent any undue movement at berth caused by changes in wind strength or direction, current or tidal stream flow or surging action created by a ship passing the berth. Any undue movement in berth, or breaking away, may result in the rupture of cargo arms, manifold fitting or loading arm and cause spillage of oil and serious fire hazard.

Excess strain on moorings resulting from variations in level between ship's deck and shore mooring point due to vertical movement caused by tide and cargo handling shall be adjusted at regular intervals to avoid damage to the fender system of the jetty.

Note particularly the vertical movement of the Yokohama fenders which must be adjusted from time to time to avoid the above mentioned damage.

The Master shall ensure that all moorings on self-tensioning winches are secured with winch brakes in locked position. Use of self-tensioning winches in automatic position is strictly forbidden.

All mooring wires shall have rope-tails connected with the proper mooring link. Wires and ropes shall not be mixed in the same service. All vessels, while secured alongside at the jetty, must provide towing wires with sufficient length and strength on seaward bow and quarter, with eyes maintained just above the water level, ready for emergency towing. The wires shall be securely fastened to the ship's bollards.

All vessels must, in addition to the normal number of mooring lines, have 2 extra lines forward and aft as spare.

Recommended Moorings: For ships of about 120,000 d.w.t., normally 4-2-2 at both ends is required. Vessels of 30,000 d.w.t. normally need 2-2-1.

Ships above 40,000 d.w.t. are recommended to use wire moorings. If polypropylene tails are used, the same size and type should be used on all lines run out in the same service (spring, breast, head lines, etc.).

If wire ropes are used, fibre ropes may be used as additional moorings, as long as it is realised that the fibres will not add to the final restaining capacity of the system.

Immobilisation of Engines: While alongside the vessel must be able if required to move under its own power. Permission to immobilise ship's boilers, main engine, steering machinery and other equipment essential for manoeuvring should be requested from the refinery beforehand, and if granted, would be given on the conditions that emergency towing wires are correctly positioned forward and aft and a suitable tug is on stand-by in Tananger Harbour or within Risavika Bay.

CARGO OPERATIONS: *Pre-Operational Procedures:* Before operations commence, a pre-operational meeting shall take place between the Company Representative and the Master or the Officer-in-Charge of the cargo operations.

They will jointly:

(a) Complete and sign the ship/shore check list for crude, product or LPG.
(b) Evaluate possible deficiencies revealed by the check lists and agree additional precautions required. The Company reserves the right to refuse to load/discharge a vessel if the requirements are not met.
(c) The vessel shall provide the loading/discharging records of the 3 latest cargoes and of any purging/washing that has taken place during passage.
(d) Evaluate and agree the ship samples that are required. The Company reserves the right to draw any tank samples, considered necessary prior to, during and after, loading.
(e) Evaluate and agree a loading/discharging programme including:
   1. Quantities and grades to be loaded/discharged.
   2. Loading/discharging rates, initial loading rates according to IMO Regulations.
   3. The contents of vessel's slop tanks may be discharged to ashore tankage, subject to agreement with the Company Representative.
   4. Product temperatures onshore and on the vessel.
   5. Procedure for emergency shut down of operations.
   6. Discuss and agree on procedures for controlling the segregated ballast water tanks and taking inert gas samples.
(f) Evaluate and agree the means of communications to be used during the operation.
(g) Evaluate and agree:
   1. Connecting/disconnecting procedures.
   2. Purging/washing requirements.
   3. Crude oil washing.
   4. Use of vapour return/flare system (LPG). Max. O_2 content of 2 vol %.
   5. Emergency procedures.

Third Party Independent Survey: The Company reserves the right to inspect the ship's tanks and loading systems, or anything that may influence the quality or the quantity measurement of the cargo. The inspection may be performed by Shell or an independent surveyor.

Closed Loading Requirement: All vessels loading products from Shell Refinery shall be equipped with a closed loading system.

Closed loading is defined according to International Safety guide for oil tanker and terminals (ISGOTT) Chapter 7.6.3 as follows:

Unless the vessel's design dictates otherwise, the cargo must be loaded with the ullage, sounding and sighting ports securely closed. The gas displaced by the incoming cargo should be vented to the atmosphere via the vent stack and through high and constant velocity valves, either of which will ensure that gases are taken clear of the cargo deck.

Devices fitted to vent stacks to prevent the passage and flame must be regularly checked to confirm that they are clean, in good condition and correctly installed.

Vessels, which do not satisfy the above regulations, will be given a statement of temporary exception, after inspection and depending upon type of cargo.

Loading/Discharging Arms: All flanges are ASA flanges, 150 p.s.i. series. Arm No. 9 is the seawardmost arm.

Arm No. 1	(12 in.)	Fuel oil, crude oil, dirty ballast.
Arm No. 2	(12 in.)	Fuel oil, crude oil, dirty ballast.
Hose	(4 in.)	Bunker gas oil.
Arm No. 3	(12 in.)	Fuel oil, crude oil, dirty ballast.
Arm No. 4	(12 in.)	Fuel oil, crude oil, dirty ballast.
Arm No. 5	(8 in.)	Bunker F.O., fuel oil, dirty ballast.
LPG	(3 in.)	Vapour return connection.
Arm No. 6	(8 in.)	Gas oil.
Arm No. 7	(8 in.)	Mogas (unleaded).
Arm No. 8	(8 in.)	Mogas (leaded), ballast (white oil ships only).
Arm No. 9	(8 in.)	Jet A-1 Kero.

Connecting of Loading Arms: The connection of the loading arms is undertaken by the vessel's personnel. The Company Representative and the responsible officer of the vessel will agree that systems are correctly lined up before operations start. Crude oil vessels should arrive with 4×12 in. ASA manifolds for cargo and 1×8 in. ASA for bunkers ready for connection to the loading arms. The LPG jetty loading arm will be leak tested with nitrogen.

Product vessels should arrive with a 8 in. ASA manifold for white products and a 12 in. ASA manifold for fuel oil loading.

The jetty is equipped with all metal loading arms. It should be noted that the arms cannot be crossed. Simultaneous loading of different products and/or bunkering will often depend on the matching of ship's and shore's line-up. This matter should be studied before vessel is berthed, as in some cases reversal of the side of berthing may facilitate efficient handling. Vessels are recommended to discuss this matter over the radio with the refinery before planning the berthing operation.

A Jetty Operator will remain in jetty area at all times during loading/discharging. A responsible crew member with a good command of Norwegian or English must remain on main deck at all times during connecting/disconnecting/loading/discharging.

The vessels shall give a minimum of 10 minutes notice of the requirements to start/stop pumping, unless there is an emergency. The Jetty Operator will clear the loading arms before disconnecting. The cargo loaded/discharged will be calculated according to the shore metering system.

Vessels which are equipped with Inert Gas systems shall have the system tested and in operation during loading/discharging. The Company will enforce the IMO regulations with respect to the Inert Gas systems.

White and black products are blended in the pump stations of the refinery directly into the ships.

Crude oil is received into underground storage or, about 20% of the time, into a tank above ground.

Ship's crew will be responsible for hose/arm coupling duties. Jetty operator will present the hoses or arms to the ship so that connection may be made to manifold, but it is emphasised that labour beyond this point, will not be available from the shore.

Leakage of oil or vapour from unused cargo/bunker connections constitutes a hazard and all such connections on ship and on shore should be properly blanked.

Tank Temperature: Notice of Readiness (NOR) will not be accepted with "warm" tanks when the temperature of the remaining liquid is in excess of 10°C above atmospheric boiling point of the liquid products to be loaded. It is not the policy of the Company to permit inerting while alongside the berth, and in most cases the vessel will not be permitted to berth or will be requested to leave the jetty if moored.

Loading/Discharging Rates: Max. receiving rate for crude is 14,000 cu.m.p.h. Max. loading rate for fuel is 2,000 cu.m.p.h., White products 800 – 1,200 cu.m.p.h. and LPG 400 cu.m.p.h.

De-Ballasting: The ballast tank ashore is sometimes limited in the quantity it can receive. For this reason and in order to minimise the de-ballasting time Masters are requested to arrive with the minimum quantity of ballast on board consistant with weather conditions prevailing.

De-Ballasting into the harbour is prohibited.

Max. ballast receiving rate is 1,500 cu.m.p.h. Max. back pressure 150 p.s.i. Max. ballast receiving capacity 16,000 cu.m.

Cargo Handling: When discharging or loading the vessel should fly signal flag "B" from sunrise to sunset, and from sunset to sunrise show an all round red light.

The Master must take all necessary precautions to prevent the vessel's tanks from overflowing during loading/tank transfers. The Master will be held responsible for damages incurred when an oil spill may be traced back to his vessel.

A refinery operator will supervise jetty/ship operations and should maintain contact with the Officer nominated by the Master to supervise the ship operations. Safe and efficient operations will depend on good co-operation at this working level, if it fails both the ship and shore are entitled to suspend operations until the situation is corrected.

Ship-to-Ship Transfers: In ship-to-ship transfers, both tankers should comply fully with the safety precautions required for the normal cargo operation.

If the safety precautions are not being observed on either vessel, the operations should not be started, or should be stopped.

Description of the safety aspects of this transfer operation must be in accordance with ICS/OCIMF (Ship-to-Ship Transfer Guide – Petroleum) to which reference should be made before starting the transfer.

POLLUTION: The refinery is located in an area which is very sensitive to pollution matters. Waters are confined and used by fishermen for keeping live fish and lobster, and any emission of smoke is visible over a wide range.

The utmost care must be exercised in handling cargo, ballast and bunkers in order to avoid oil spilling into the sea. Deck is not to be washed down during stay in port.

Scuppers must be plugged.

Scrubbing of the ship's underwater hull is not allowed.

Discharge of ballast or contents of bilges into the harbour is prohibited. Contaminated water should be retained on board or discharged into the shore de-ballasting system.

Sea valves to be shut and sealed during loading/discharging.

Emission of smoke must be kept at a minimum by proper combustion control.

Soot blowing of boilers is prohibited.

Disposal of garbage into the sea is prohibited.

In case an oil spill occurs the refinery should be notified immediately.

Violation of Norwegian Regulations on Pollution is likely to result in prompt action from local Authorities.

Oil Spills: Oil spills caused by ships moored alongside refinery jetty will be *the ship's* responsibility, but the refinery will take action as if the spill had been caused by the refinery, and the refinery personel will immediately start trying to limit the spill, and start cleaning up. All such work will be for the ship's account.

If an oil spill occurs while alongside the Tananger Depot jetty, the refinery will give assistance if asked by the person in charge of the Depot.

Several contractors will be available with manpower, in case refinery duty personnel and maintenance crew are insufficient.

The following equipment is available at refinery and Depot:

1 × 25 ft. boat with tank for oil. This boat can be used for setting of oil booms, towing, etc.

2 × 14 ft. boats.

1 vacuum truck at refinery.

Boats, barges and vacuum trucks are available from contractors.

1 aluminum raft.

1 Komara skimmer.

1 Skimmy skimmer.

Pumps and ejectors.

1,600 m. oil booms.

EXPANDI, WSA and T.T.

Oil absorbent.

Oil dispersents are available but will *not* be used without special permission from the Norwegian Authorities.

MEDICAL: Hospital at Stavanger, 16 km. away.

DENSITY: Average density off the jetty is 1028.

FRESH WATER: Available at jetty (2.5 in. flange).

FUEL: All grades of gas oil, diesel oil, heavy fuel oil, and lubricating oil available, at the jetty.

Notify agent of requirement with original ETA.

REPAIRS: Hot work such as welding, burning etc. is only allowed on board if covered by a written permit issued by the refinery.

SURVEYORS: *Cargo Inspectors:* Caleb Brett Tel: 51697922; SGS Tel: 51690340, 51871104; Saybolt Tel: (095) 46-31540610 (Sweden).

Classification Societies: Det Norske Veritas Tel: 51535030 (after hours 51418553, 51699566, 94672466. Lloyd's (at Bergen) 51122002.

AIRPORT: International airport at Sola, 3 km. away.

GANGWAY: Upon arrival and when securely moored alongside refinery jetty, a gangway will be provided to tankers.

The gangway which is fasten to the gangway tower (on dolphin S.2) will be adjusted according to the vessel's height and deck space available.

For small ships where deck space is limited, a small gangway will be provided. This gangway will be landed on jetty deck and vessel's rail.

A safety net must be provided by vessel for the gangway. Also a small stepladder from vessel's rail to deck should be provided by the vessel.

EMERGENCY CO-ORDINATION CENTRE: At Sola Airport.

TIME: GMT plus 1 hour. GMT plus 2 hours in Summer.

POLICE/AMBULANCE/FIRE: Police Tel: 51899000, Emergency 112. Ambulance Tel: 51533333, Emergency 113.

TELEPHONES: For personal calls, a coin operated telephone connected to Stavanger exchange is placed in a kiosk at the refinery gate.

If requested by the ship, a telephone (No. 51696769) is available to be placed onboard. The Agent reads the meter and charges the ship. Before departure the ship's crew must place the telephone in the jetty house.

The jetty operator will keep contact with the control room by means of walkie talkie.

Also see "General".

SHORE LEAVE: See "General" – "Shore Transportation/Regulations".

GARBAGE DISPOSAL: Garbage container service at most berths provided by jetty owners. If special service required, containers (size 3.0 cu.m. – 10.0 cu.m.) can be hired at a fixed price of NOK.700 (delivery/collection included). Price based on daytime service. Company name: System-Transport, Stavanger. Tel: 51894020, after hours 94671383. Special containers of 15 cu.m. – 30 cu.m. available on request.

WASTE OIL DISPOSAL: Shore tank max. capacity 2,000 cu.m. Boat max. capacity 70 cu.m. Truck max. capacity 16.0 cu.m.

Rates for boat hire: NOK.650/hr. (daytime), NOK.830/hr. (evening), NOK.1,010/hr. (night). Rates for truck hire: NOK.390/hr. (daytime), NOK.480/hr. (evening), NOK.570/hr. (night). Disposal fee: NOK.600/cu.m. based on engine slop (no chemicals).

Special fee on request for tank cleaning water (mostly dirty water).

Company name: Henriksen Oljetransport, Stavanger. Tel: 51-531190, 94-532220 (mobile). Fax: 524332 (The Company has a private berth with draft 5.5 m.).

SEAMAN'S CLUBS: No Seamen's Club in the Stavanger area.

CURRENCY: Norwegian Kroner (NOK.). U.S.$ 1.00 = NOK.7.50. U.K.£ 1.00 = NOK.11.00 (March 1994). No local currency restrictions placed upon seafarers.

GENERAL: *Stores:* It should be noted that all deliveries to the ship while handling cargo is limited by restrictions against approach by both powered road vehicles and powered boats, suitable arrangements for alternative transport, manpower, etc. must be made in advance.

Ship Stores Handling: Stores must preferably be handled before or after cargo operations. Only small items of the ship's stores, if carried by hand, may be taken on board during cargo operations. Cranes can be used during discharging if the ship has an inert gas system in operation.

Drums, steel plates and any other heavy metal parts likely to cause a spark, shall always be handled before or after cargo/ballasting operations.

Shore Transport/Regulations: Ship's crew will only be allowed to pass through the refinery area when possessing a pass. The pass will be handed to the Master by the Agent on arrival for issue by the Master. Photography in the refinery is prohibited.

Unauthorised or intoxicated persons are not to be admitted onboard. Such persons may be ordered from the jetty. Vessels are expected to undertake their own precautions in respect of intoxicated persons appearing on deck. Ship's personnel are not allowed to walk through refinery.

For taxi see "Useful Telephone Numbers".

Visitors are not allowed on board vessels, except with permission from the Shift Manager and the Master of the vessel.

Motorised road traffic on the jetty and powered boats are not allowed to approach the vessel nearer than 50 m. (distance measured from the loading manifold and/or open hatches of ship's tanks into which oil is loaded/discharged) while cargo operations are in progress.

Launch Service: Whilst at anchor in the roads no launch service is available. In an emergency the Master can contact the pilot station or the pilot vessel, for transport to the shore.

In emergency, helicopter transport is available.

Services: Services such as stores, laundry, doctor, etc. should be ordered in advance through the Agent. It should be noted that all deliveries to the ship, while handling cargo, is limited by restrictions against approach by both powered road vehicles and powered boats. Suitable arrangements for alternative transport, manpower, etc., must be made in advance.

Steam and compressed air are not available at the jetty.

Current: Risavika being confined waters, currents are usually small, however influenced by strong winds. Highest measured velocity 0.7 knots in entrance of bay, setting to the North.

Tide: The average tidal range is 0.7 m. (2 ft. 3 in.). Highest observed level +1.6 m. and lowest −0.11 m.

Wind Directions: Prevailing winds are: April – October: Northwesterly. October – April: Southwesterly.

Emergencies: From the "Bird's nest telephone" fire/emergency can be reported by dialling 188 (Control Room). On the "railing" is attached a press button for remote stopping of all refinery's loading pumps, particularly intended for quick stoppage of loading operations in case of emergency onboard.

Fire: The refinery is equipped with fixed and wheeled equipment for applying foam, water and dry powder to fight fires. Floating firefighting equipment is normally not readily available, but some tugs and supply vessels are equipped with water pumps, monitors and foam making equipment and may be called in on short notice.

Safety: No loading/discharging to take place between the refinery and a tanker berthed at the jetty, if another tanker comes alongside for transfer of cargo.

The refinery representative will when boarding the ship bring the safety check list for joint examination with the ship's Officer in Charge.

Useful Telephone Numbers:

Taxi: Tananger Drosjeholdeplass:	51-69 96 00

Tananger Pilot Sation:	51-69 91 70
A/S Norske Shell	51-69 30 00

Long distance and international calls must be arranged on the ship's VHF radio via Rogaland Radio, or on telephone supplied by Agent upon request.

AUTHORITY: A/S Norske Shell, Postboks 144, N-4051 Sola, Norway. *Tel:* Stavanger 47-51-693000. *Telex:* 33091 Sraff N. *FAX:* 47-51-693805. *Contact:* Line Geheb, Port Captain.

STAVANGER: 58.58 N. 05.44 E. (See Plan)

DOCUMENTS:

Declaration of Health, 1 copy.

List of Goods, including stores, 1 copy.

Crew's Lists of Goods liable to duty, 1 copy.

List of Goods, 2 copies for each port of discharge. All Bills of Lading to be entered with marks, numbers, weight and quantity.

General List of Goods, 1 copy.

A form for entering ports of call where discharging will take place.

PILOTAGE: Vessels approaching from sea and desiring a Pilot should order at least 24 hours' notice in so far as possible and confirm arrival at pilot station at 2 hours' notice. Advance order can be sent in following manners:

(a) From ships at sea over radio direct to Sea Pilot watch or over VHF radio-telephone calling Channels 16 and 13.

(b) From ships at sea over coastal radio station to pilot station or pilot office.

(c) From broker or shipowner over telephone to sea pilot station or to any pilot office which will immediately convey report to sea pilot station.

Vessels lying in port and desiring Pilot will order Pilot from nearest pilot office during its office hours and if possible at 4 hours notice.

Vessels approaching from sea as well as vessels lying in port shall when making an advance order state name and destination of vessel and whether 1 or 2 Pilots are desired.

Pilot will be despatched to ships in accordance with advance orders, and vessels are therefore requested to comply with foregoing rules as far as possible in order to avoid having to wait for Pilot.

International provisions for summoning Pilots by signal flags or blue lights, etc., are still in force, but should in future be used as a supplement to radio communications or as sole communication in emergencies.

Pilots are taken on board at:

A. *Feistein Lighthouse,* 19 miles South of Stavanger, or in bad weather 6 miles North of lighthouse under the lee of Rott.

B. *Skudefjorden,* 18 miles N.W. of Stavanger. In bad weather under the lee of Karmoy or Kvitsoy, as weather permits.

Pilot boats are stationed at Tananger and Skudesneshavn. No boats are out cruising.

ANCHORAGE: Found in the Byfjord, 3 nautical miles North of Stavanger. Pilots recommended when anchoring.

MAX. SIZE: Greatest depth alongside goods and passenger quays is 30 ft. Also see "Berthing" and "Tankers".

RADAR/VHF: Radar service for inner harbour.

TUGS: Normally used.

BERTHING: The port has a total quay length of approximately 3,400 m. The coasting and the foreign trade is located in the East and West harbour, comprising the 3 main quays namely the Bekhus Quay, the Skagen Quay and the Strand Quay. These quays measure 2,000 m. with depth alongside 24 ft. – 30 ft.

Cranes: 1×50 tons, 1×28 tons and 1×3 tons travelling cranes, 3×20-70 tons mobile cranes and 1×100 tons floating crane.

Grain: Rogaland Felleskjop: Capacity for storing 72,000 tons quay length 190 m., depth alongside 48 ft. Discharging capacity 200 t.p.h. Stavanger Havnesilo: Storing capacity 140,000 tons, quay length 170 m., depth alongside 51 ft. Discharging capacity 500 t.p.h.

Roll-on/Roll-off: Traffic is offered by a ferry berth constructed for ships up to 10,000 g.r.t., depth alongside 30 ft.

Containers: Sandvika Container Quay. Length 170 m., depth alongside 40 ft., also fitted with Ro/Ro facilities for vessels up to 20,000 g.r.t.

Offshore oil-exploration bases: Aker-Norsco A/S at Risavik, Tananger, North Sea Exploration Services A/S, Dusavik, Stavanger.

STEVEDORES: No particular ETA advices required.

MEDICAL: Agents should get advance notice to secure speedy service. Hospital facilities available.

TANKERS: *Esso Norske:* 3 nautical miles South of central harbour, depth alongside 45 ft.

Norske Shell A/S: See "Sola".

Norske Braendselolje A/S: 7 nautical miles South of the central harbour.

Texaco Oil: 1 nautical mile from central harbour, depth alongside 25 ft.

A/S Kulimport: Coal and coke. Length of wharf 116 m., depth alongside 27 ft.

DENSITY: 1025, no change in relation to state of tide.

FRESH WATER: Delivered from quay or from water boat.

FUEL: Normal grades available without advance notice.

CONSULS:

	Tel. No.		*Tel. No.*
Belgium	555334	Greece	525030
Denmark	57001	Iceland	532025
Finland	532030	Netherlands	520080
France	527500	Sweden	527500
Germany	522594	United Kingdom	525801

REPAIRS: All kinds of repairs available.

DRY DOCKS: One, 545 by 75 by 24 ft. Marine slipway up to 1,500 d.w.t.

GANGWAY/DECK WATCHMEN: Not required.

OPENING/CLOSING HATCHES: Usually carried out by crew.

CUSTOMS ALLOWANCES: Tobacco: 20 cigarettes per day. Wine and/or Spirit: 2 bottles of wine or 1 bottle of brandy.

AIRPORT: 10 km. from port. Airlines to Continent, U.S.A. and U.K.

TIME: GMT plus 1 hour in Winter. Summertime GMT plus 2 hours.

HOLIDAYS: 1st January; Maundy Thursday; Good Friday; Easter Monday; 1st May; 17th May; Whit Monday; Christmas Day and Boxing Day.

POLICE/AMBULANCE/FIRE: Police Tel. 534000; Ambulance 531000; Fire 522111.

TELEPHONES: There are arrangements for placing telephones on board.

SHORE LEAVE: No restrictions.

AUTHORITY: Stavanger Interkommunale Havnevesen, Nedre Strandtg. 51, 4005 Stavanger, Norway. *Tel:* 51-507800. *Cables:* Stavanger Havnevesen. *FAX:* 51-507822. *Contact:* O.M. Odland, General Manager. Edgard Bergsvik, Harbour Master.

STURE: 60.37 N. 04.51 E. (See Plan)

LOCATION: The Sture Crude Oil Terminal is located at Hjeltefjorden on the East side of Alvoy in the position Lat. 60° 37.2′ N., Long. 04° 51.5′ E.

The terminal is owned by a consortium of companies, and is operated by Norsk Hydro a.s.

The Sture harbour area is defined as the terminal's jetties with facilities, and the total sea area inside the seaward safety zone.

DOCUMENTS: See "Mongstad".

APPROACHES: Two approach channels with very deep water, give good access to the Sture Terminal. The main approach is through Fedjeosen, South of Fedje. The other approach is North of Holmengra.

The approaches to the pilot area and the Sture Terminal are covered by Norwegian Chart No. 120.

PILOTAGE: Pilotage is compulsory for all vessels calling at the terminal. The pilot will embark in the vicinity of Fedje or Holmengra.

The terminal recommends that all Norwegian and NIS vessels also use a pilot.

ANCHORAGE: There is no safe anchorage in the vicinity of the terminal. If the jetties are occupied, arriving vessels must wait outside the pilot area. Further particulars may be obtained from the pilot station.

RESTRICTIONS: Berthing and unberthing day and night, weather permitting.

All ships shall comply with IMO and Terminal Regulations. All ships calling at the terminal must confirm that they are fully I.T.F. approved and members of Tovalop.

The following ship types can be accepted:

1. Conventional tankers and product/crude combination carriers in the range from 30,000 d.w.t. to 300,000 d.w.t.
2. OBO/OO Carriers are subject to prequalification according to the Terminal's "Procedures for Approval of OBO/OO Carriers", valid from 1st March 1992.

The vessel shall be able to accept a minimum bulk loading rate per hour:

For vessels of up to 89,999 tons s.d.w.t.: 7.5% of s.d.w.t. per hour.

For vessels of between 90,000 tons s.d.w.t. and 179,999 tons s.d.w.t.: 6.6% of s.d.w.t. per hour.

For vessels of 180,000 tons s.d.w.t. and above: 5.8% of s.d.w.t. per hour.

Prior to any vessel's first acceptance for loading at Sture, the "Questionnaire For Crude Oil Tankers" must be filled out by the owners/operators of the vessel and sent to the terminal. Incorrect information given in the questionnaire may result in rejection of the vessel.

Traffic Regulations: No vessel, regardless of size, is permitted to move inside the Sture Harbour Area, unless authorised by the terminal.

Wind Limitations: Vessels up to 180,000 d.w.t. will not be allowed to go alongside when the wind force exceeds 14 m./sec. (10 min. average) from unfavourable directions. For vessels from 180,000 d.w.t. – 300,000 d.w.t., the wind limitation is 12 m./sec. (10 min. average).

In the period from 1st October till 31st March only vessels up to a maximum of 200,000 d.w.t. will be accepted at Sture.

MAX. SIZE: The terminal's berthing facilities consist of 2 jetties for handling of crude oil.

Jetty No. 1:	DWT min/max:	30,000 d.w.t. – 300,000 d.w.t.
	Depth alongside:	26 m.
	Max. allowed draft:	23 m.
Jetty No. 2:	DWT min/max:	50,000 d.w.t. – 150,000 d.w.t.
	Depth alongside:	26 m.
	Max. allowed draft:	23 m.

HEALTH: See "Mongstad".

RADIO: An arriving vessel must give proper notice through the agent or directly to the terminal by cable or telex.

The vessel must have received approval from the terminal to proceed inside Fedjeosen or Holmengra to the dedicated jetty.

Vessels proceeding inwards should communicate with the terminal on VHF Channel 9.

During berthing operations, the vessel is in contact with the Shift Supervisor on VHF Channel 72 9 through the pilot's radio.

Pre-Arrival Information: 72 hours before arrival, the Master shall inform the terminal about the following, either via his Agent or direct to the terminal on Telex No. 40314, or Fax. No. 56-389420.

A. Ship's name (and ex-name), call sign and Official Number.
B. Flag/nationality.
C. Name of Master.
D. Owners.
E. Gross Registered Tonnage.
F. Summer Deadweight.
G. Draft, fore and aft.
H. Last port of call.
I. Confirm ETA (local time and date).
J. Whether loaded/part loaded or in ballast. If loaded, nature and quantity of cargo. If ballasted, type (segregated/oily) and quantity to be discharged ashore and estimated deballasting time.
K. Quantity of cargo to be loaded, and requested loading rate.
L. Length overall and beam, number, size, distance from bow to connections and position (above water line and from ship's side) of vessel's manifold connections.
M. Defects in vessel or equipment affecting the safe operation of the ship.
N. Confirmation that an inert gas system is fully operational, and that the oxygen content of all tanks does not exceed 8% by volume.
O. Last three cargoes.
P. Mooring equipment.
Q. OBO/OO Carriers:
   Confirm tightness of cargo tank covers and tank pressure minimum 500 mm./wg. on arrival.
   Confirm common tank venting system and capacity of same.
   Confirm that segregated ballast is clean.
R. Is vessel equipped with Bow Thrusters? (Y/N)
   Bow . . . . . Stern . . . . .

Also see "VHF".

VHF: The Sture Crude Oil Terminal will be manned 24 hours a day and can be contacted on VHF Channel 9.

V.T.S. in operation on Channel 9.

When moored alongside the jetty, a vessel shall communicate with the terminal by means of a UHF radio handset provided by the terminal.

The Agent can supply mobile telephone if required.

Each jetty is equipped with two telephones for internal use.

Communications: A portable radio hand set will be supplied by the terminal to the vessel for use during loading operation. A receipt will be required for the radio hand set. The radio will be used for contact with the Jetty Operator during normal loading operations and for notification of an emergency condition. The radio must be returned to the terminal operator when the documents are delivered onboard.

TUGS: The use of tug boat escort is compulsory for all tankers calling at the terminal.

There are 2×50 tons and 1×35 tons bollard pull tugs available for handling berthing/unberthing operations at all times. Under normal circumstances, tugs towing hawsers will be used. Tugs have fire fighting and oil recovery equipment.

Two mooring boats are available for handling of mooring lines.

BERTHING: *Mooring Facilities:* The loading platforms and mooring dolphins are equipped with mooring hooks and pulleys. The hooks and pulleys have quick release facilities and capstans to haul in mooring lines. The release can be done locally or remotely from the control room.

The jetties are equipped with monitoring systems comprising:

(a) Wind and sea current sensors, detecting speed and direction.
(b) Berthing aid system, monitoring the tanker's approach velocity, distance to jetty and angle of approach during the final stage of berthing.
   Approach velocity max. 0.10 m./sec.
   Approach angle max. 7°.
(c) Sensor in the mooring gear to detect mooring line loads.
(d) Measurement of tanker surge movements and sway, when the loading arms are connected.
(e) Closed circuit television cameras.
(f) Area radar display.
(g) VHF/UHF radios.

All data from the monitoring systems are displayed in the control room.

The berthing aid data are available when the ship is at a distance of approximately 100 m. from the jetty.

Mooring Arrangements: It is of the utmost importance for safe operation that ships are securely moored and always kept in the correct position. Minimum requirement is 16 mooring lines, of which at least 10 mooring lines must be permanently installed on mooring winches/drums.

Vessels must be equipped with 2 wire spring lines at each end.

For vessels over 200,000 d.w.t., a minimum of 14 moorings on winches/drums is required.

The Master of the vessel shall ensure that his vessel's moorings are closely watched to prevent undue movement of the vessel. Ensure that all moorings on self-tension winches are secured with winch brakes in locked position. Use of self-tension winches in automatic position is strictly forbidden.

All mooring lines leading in the same direction shall be of the same type and have the same working strength.

All mooring wires shall have rope tail ends, with minimum the same working strength as the wires.

Mooring diagrams for small, medium and large size vessels are shown in the "Plan Section".

Safety Towing Wires: Vessels, while secured alongside the jetty, must provide and rig towing wires with sufficient length and strength on seaward bow and quarter, with eyes maintained just above the water level, ready for emergency towing.

The wires must be securely fastened to the ship's bollards.

LOADING: *Jetty Details:* Each jetty has 4 loading arms which can be either locally operated from a fixed jetty head console or from a portable remote control panel.

Each loading arm is equipped with the following facilities:

(a) Loading arm stripping pump with 30 cu.m.p.h. design capacity.
(b) Hydraulically operated valves, couplings and quick release ("PERC") arrangements.

Loading Arms Flange Sizes and Safe Working Ranges:

Loading arms are equipped with adjustable flanges in the range of 12 in. – 16 in.

Ship's manifold connection must meet loading arm envelope configuration and must provide space and support on which to place loading arm support legs.

	Min.	*Max.*
Distance from ship's side:	1.145 m.	8.145 m.
Height of centreline to deck or suitable working platform:	1.3 m.	2.4 m.

Min./Max. Loading Rates:

Loading rates:	Min.	800 cu.m.p.h.
	Max.	15,000 cu.m.p.h.
Loading arm design capacity:		3,750 cu.m.p.h.

Also see "Restrictions".

Pre-Operational Meeting and Inspection: Before any operations commence, a Pre-operational Meeting will take place between the terminal representative and the Master or the officer-in-charge of cargo operations. They will:

(a) Complete and sign the Ship/Shore Safety Check List.
(b) Discuss any deficiencies shown up by the above Check List and agree on any additional precautions required.
   The terminal reserves the right to refuse to load a vessel if the requirements are not met.
(c) Discuss and agree on procedures for taking ballast tank samples (See "Ballast"), and inert gas samples (See "Inert Gas Systems").
(d) Agree on a loading/discharging programme that includes:
   Quantities of cargo to be loaded.
   Loading rates.
   Deballasting procedures and rates.
   Procedures for emergency shut-down of operation.
(e) Discuss and agree on the means of communication to be used during the operation.
(f) Discuss and agree on connecting/disconnecting procedures.
(g) Discuss actions to be taken in the event of an emergency. This should include both communication and emergency procedures.

Operational Procedures: Loading/discharging will not commence until all the safety checks have been carried out to the satisfaction of the terminal representative and the Master or the officer-in-charge.

(a) Before any operation is carried out, the ship will be earthed.
(b) The jetty operator will be responsible for connecting the loading arms to the vessel's manifold as indicated by the officer-in-charge.
(c) The jetty operator and the ship's officer-in-charge must agree that systems are correctly lined up before operations can begin.
(d) Loading operations will be closely watched from the terminal control room.
(e) The vessel must give at least 10 minutes notice if required to stop or start any operation, unless under emergency conditions.
(f) The jetty operators will empty the loading arms onboard before disconnecting.
(g) A representative from the terminal and/or independent surveyors will witness the ship's dip/ullage/water dip/temperature/samples and quantity loaded according to ship figures.
(h) Preferably the ship must give notice to the terminal control room before any shut down operation is carried out.

Cargo Quantity Calculations: The cargo loaded will primarily be calculated according to the shore metering system, and the same figures will be entered on cargo documents.

Emergency Shut-down: If the vessel is loading, and it becomes necessary to manually initiate an emergency shut-down, the jetty system should, if possible, be used.

In the event of an emergency, jetty personnel should immediately be alerted to the situation, and the emergency stop, which is placed on the gangway, activated.

Manifold valves should not be closed until so advised by jetty personnel.

Inert Gas Systems: All vessels must have a fully operational Inert Gas System. Prior to arrival, the vessel must confirm that all empty cargo tanks and those containing dirty ballast have been fully inerted and have an oxygen content of 8% or less by volume.

If the vessel does not comply with these regulations, she will have to leave the berth without delay and return to sea in order to complete the inerting of tanks.

In such an event, Notice of Readiness will have to be re-tendered prior to re-entering the port.

Weather Precautions: Operations shall be stopped during severe electrical storms and all cargo valves and valves in the gas line riser shall be closed.

During periods of high winds above 18 m./sec., cargo operations shall be stopped and loading arms disconnected.

BALLAST: Only clean ballast water contained in segregated ballast tanks will be permitted to be discharged into the waters in the terminal area. Random samples can be taken from segregated ballast tanks.

Ballast water carried in vessel's cargo tanks has to be pumped ashore to the terminal ballast water storage.

In order to minimise the de-ballasting time, Masters are requested to arrive with minimum ballast on board for safe navigation. For safety reasons, vessels are not allowed to exceed their arrival freeboard.

Ballast water and slops containing any oil or product other than crude oil residues (such as engine sludge, hydraulic oil, luboil, solvents or other chemicals) are not permitted to be pumped into the shore storage, but have to be considered as MARPOL waste, and will be handled separately on vessel's own account. Arrangements for the discharge and reception of above referred effluents are to be made by vessel's agent.

MEDICAL: Medical requirements for ship's personnel should be arranged through the vessel's agent prior to arrival. Emergency medical services while berthed at the terminal may be arranged through either the vessel's agent or terminal operating personnel.

DENSITY: 1025.

FRESH WATER: Potable water can be delivered at a rate of 30 tonnes p.h. Ship's hoses are to be used.

FUEL: No bunkers of any kind are obtainable at the terminal and bunker barges are not permitted to deliver bunkers at Sture.

FIRE PRECAUTIONS: In case of fire on board, the ship's responsible officer should:

1. Activate the ship's fire alarm.
2. Notify the terminal by UHF/VHF or other established line of communication.
3. Make a signal in the form of a series of prolonged blasts on the vessel's whistle.

In case of fire on the jetty or the terminal, the jetty operator will inform the ship's responsible officer accordingly.

In all events of fire, whether on board or onshore, all jetty operations will cease and loading arms be prepared for disconnection.

Fire Fighting Equipment on Jetties: Each jetty is equipped with 4 infra-red detectors which will automatically stop loading pumps on the outbreak of fire. Additionally each jetty is equipped with 4 remotely controlled fire foam/water monitors. These monitors are electrically powered and remotely controlled, either from the main jetty fire fighting control panel, or a local control panel located on the jetty causeway.

On each jetty you will also find the following equipment:

Two fire hydrants for water and foam.
Fire hoses.
200 litres of foam.
Powder extinguishers of 12 kilos and 56 kilos.
International ship/shore connection.

CONSULS: At Bergen, 60 km.

REPAIRS: Hot work or any other repair work including tube cleaning, chipping and scraping, hull painting, testing or servicing of electrical equipment (including radar, radio and domestic electrical equipment), is prohibited on the vessel unless a written application, specifying the repair work to be carried out, has been submitted to the Terminal Manager and written permission granted.

If permission is granted, a list of specific repairs and a list of shore workmen employed on the vessel, must be given to the Terminal Manager before work commences.

Repairs and other work which may immobilise the vessel, must not be commenced without prior approval, in writing, from the Terminal Manager.

In all cases, adequate fire fighting equipment should be ready for immediate use.

SURVEYORS: S.G.S. Surveyor based at the terminal.

CUSTOMS ALLOWANCES: See "Mongstad".

REPATRIATION: Possible.

AIRPORT: Bergen, 60 km.

TIME: Norway uses Central European Time, therefore local time is one hour ahead of coordinated universal time (UTC). During the Summer period Norway uses local Summer time, which is 2 hours ahead of UTC.

STORING: Stores must be handled before or after cargo operations. Only small items of ship's stores, if carried by hand, may be taken on board during cargo operations.

Vehicles will only be allowed on the jetty approach roadway or jetty head after permission from the terminal.

Close to the jetties there are designated parking areas for visiting vehicles.

SHORE LEAVE: Permitted.

GARBAGE DISPOSAL: Garbage container placed on jetties. – See "General" – "Garbage".

WASTE OIL DISPOSAL: Facilities available, contact Agent.

SEAMAN'S CLUBS: Nearest clubs are at Bergen, 60 km.

WEATHER: *Tides:* Tide is semi-diurnal.

Normal tidal variance is of the order 0.9 m. – 1.0 m.

Max. astronomical tidal difference is in the order of 1.6 m.

Highest difference between extreme high and extreme low water is 2.6 m.

Tidal Currents: Tidal-generated currents in Hjeltefjorden have a maximum rate of 1.2 knots. The average rate is 0.4 knots. The dominant directions of the current are from South-Southeast and North-Northwest.

Wind: Prevailing winds are from South-Southeast and North-Northwest.

GENERAL:

Movement of Tugs and Other Craft: During operations, no vessel or small craft shall be allowed alongside the vessel unless authorised by the Terminal Manager or Shift Supervisor and agreed by the Master.

When tugs or authorised craft are alongside or assisting a vessel, all cargo system openings must be closed unless all tanks are gas free.

Garbage: No garbage and materials, either solid or fluid, shall be discharged overboard from a vessel.

Garbage from vessels' galley and other non-hazardous waste are to be disposed of into containers placed on the jetties.

Hazardous garbage/waste, such as:

Oil products
Solvents
Paint, thinner, alcohol products, tar, etc.
Products containing mercury, cadmium (batteries)
Acid, caustic and other corrosive products
Any other products classified as hazardous to health and environment
All waste contaminated by above material

must be properly and separately packed and labled. The above materials are to be placed in dedicated containers on the jetties. Before any landing of hazardous waste, the Terminal Shift Supervisor must be notified.

SHIPMASTER'S REPORT: June 1990 (Updated 1994).

Operator: Norsk Hydro A/S.

Documents:

3 copies Crew List.
1 copy Crew Manifest (only the amount in excess of allowances to be shown).
2 copies Stores/Bond List.
1 copy Health Declaration.

Agents and Customs board and check ship's papers. No crew are taken ashore and there is no port clearance.

Cargo Manifest and Bills of Lading completed by the terminal.

Pilotage: Compulsory. Pilot boards South of Fedje Island (one mile S.E. of Hellisoy Lighthouse) or if weather does not permit, to the North of Holmengra.

Anchorages: None. Vessels must drift if berth is occupied.

Radio: Communications: ETAs to be sent 7 days, 3 days, 2 days and 1 day in advance to the Agent, or terminal direct (Telex 40314 Hydro N), who also require the following pre-arrival information before permission is granted to enter.

1. Ship's Name and Call Sign.
2. Flag/Nationality.
3. Master's Name.
4. Owner/Charterer.
5. Shipper of Cargo.
6. Voyage Number.
7. Gross Register Tons.
8. Summer Deadweight.
9. Draft forward and aft (Arrival/Departure).
10. Last Port of Call.
11. Loaded or in ballast condition; if in ballast, type segregated/dirty and quantity to be discharged ashore (dirty ballast facilities available). If loaded, type and quantity of cargo.
12. Estimated deballasting time required (usually 2 connections).
13. Quantity of cargo to be loaded and required rate of loading.
14. Length overall; beam; number of connections and size, distance from bow to manifold; height above water line of manifold; distance from rail to manifold.
15. Any defects in equipment affecting cargo work and navigation, etc.
16. Confirm IG system is fully operational, and all cargo tanks are under 8% oxygen content.
17. Last 3 cargoes carried.
18. Mooring arrangements/equipment.
19. Confirm ETA.

Tugs: Two stern drive type tugs available with bollard pull of 50 tons. Tugs have fire fighting and oil recovery equipment onboard.

Harbour Regulations require that a tug escorts the vessel at all times whilst in the pilotage area, arranged by terminal.

Berthing: Always head to wind at time of berthing. 3 tugs used, tug lines. No mixed moorings allowed in same direction and mooring wires must have rope tails. 4 head/stern lines, 2 breast lines and 2 back springs are the usual requirements. Jetty well fendered. Tower type shore gangway used.

Berths: There are 2 jetties, both have depths of 26 m. alongside and max. allowed draft of 23 m. Each jetty has 4 loading arms with adjustable flanges from 12 in. to 16 in. and designed loading capacity of 3,750 cu.m/hr. Jetty No. 1 to North is for tankers of 30,000 d.w.t. to 300,000 d.w.t. and Jetty No. 2 is for 50,000 d.w.t. to 150,000 d.w.t.

Tankers: Conventional tankers and product/crude combination carriers from 30,000 d.w.t. to 300,000 d.w.t. can be accepted.

Vessels are expected to be able to accept a minimum bulk loading rate of Summer d.w.t. per hour:

For vessels up to 89,999 s.d.w.t. – 7.5% of s.d.w.t. per hour.
For vessels between 90,000 s.d.w.t. – 179,999 s.d.w.t. – 6.6% of s.d.w.t. per hour.
For vessels of 180,000 s.d.w.t. and above – 5.8% of s.w.d.t. per hour.

Vessels must have onboard at all times approximately 33% of Summer d.w.t., so vessels first load this amount of cargo before loading is stopped. Once this amount of cargo is aboard, vessel is allowed to deballast ashore from cargo tanks. On completion of deballasting, loading is resumed. During the deballasting, stores from quay are allowed to be taken, using the shore crane if required. Any stores can be carried up the gangway at any time. No stores allowed onboard by crane during the loading operation.

Cargo: Osberg Blend – API 34.1. Density 0.8542. Loading temperature about 8°C – 9°C.

Medical: Terminal will arrange on an emergency basis only. Agent needs plenty of notice to arrange a doctor, 24 hours if possible.

Fresh Water: Available from shore by ship's hose, rate 30 t.p.h.

Fuel: No bunkers are available.

Fire Precautions: As per terminal instructions and usual safety regulations.

Consuls: At Bergen.

Surveyors: At Bergen and Mongstad.

Watchmen: Not required.

Repatriation: All facilities available via Bergen.

Time: GMT plus 1 hour in Winter and GMT plus 2 hours in Summer.
Telephone: Agent supplies a mobile telephone on request for ship. Telephone also on quay in terminal office.
Stores: Available from ship chandlers in Bergen and locally through Agent.
Shore Leave: Shore passes supplied by terminal. Distance to Bergen about 60 km. (1.5 hours by car).
Agent: We used Ole R. Olsen, P.O.Box 65, N-5330 Tjeldstoe, Norway. Telex: 40610. Telephone (56) 389430. Mobile Telephone: 946-83530. (The Head Office is in Bergen).

AUTHORITY: Sture Crude Oil Terminal, 5330 Tjelsto, Norway. *Tel:* (56) 386000, Main Control Room (56) 386111, Shift Supervisor (56) 386222, Emergency (56) 386333. *Telex:* 40314 and 40192 Hydro N. *FAX:* (56) 389420, (56) 389409. *Contact:* T. Aagotnes, Terminal Manager. H. Schutt, Marine Superintendent.

SUNNDALSORA: 62.41 N. 08.36 E.

DOCUMENTS:
2 Crew Lists
2 Passenger Lists
Declaration of Health
General Declaration
Cargo List
Cargo Manifest
Personal Effects List

PILOTAGE: Telegraphic address of Pilot Station: "Grip Pilot". Description of Pilot Boat: White hull, orange wheelhouse, length 43 ft., speed 18 knots. The Pilot has to be taken on board 1 nautical mile East of Grip Lighthouse (Lat. 63° 14′ N., and Long. 07° 37′ E.), no alternative area. No anchorage for vessel awaiting Pilot.
ANCHORAGE: Poor conditions in the Sunndalsfjord. Possible to anchor at Freifjord and Bolgsvaet West of Kristiansund.
RESTRICTIONS: No restrictions.
MAX. SIZE: Max. draft 33 ft.
HEALTH: "Declaration of Health" to be issued before arrival.
RADIO: Rogaland Radio and (20–30 hrs. before arrival) Alesund Radio.
VHF: For inner harbour on Channel 16 (normally in use when mooring).
RADAR: No Port Radar Service.
TUGS: Not available in Sunndalsora. Nearest Alesund, steaming time about 12 hours. Tugs only required when Pilot/Master find it necessary.
BERTHING: Length of quay: 1,007 ft. Max. draft 33 ft. Load/discharge by shore equipment.
CRANES: 1×15 tons and 1×25 tons.
BULK CARGO FACILITIES: 1 grab crane 400 t.p.h.
SPECIALISED CARGO HANDLING FACILITIES: None.
BRIDGES: None.
STEVEDORES: No notice required.
MEDICAL: Doctors available in Sunndalsora. Nearest hospital: Kristiansund or Molde (60 miles from Sunndalsora).
TANKERS: The usual rules for tankers to be complied with.
DENSITY: Average density of the port 1019 – 1020.
FRESH WATER: Available.
FUEL: Available in smaller quantities (from Mobil and BP).
FIRE PRECAUTIONS: No specific precautions.
CONSULS: None. Nearest at Kristiansund: Denmark, Finland, France, Germany, Netherlands, Portugal, Sweden and United Kingdom.
REPAIRS: Only small repairs can be carried out.
DRY DOCKS: None.
SURVEYORS: Nearest Kristiansund (Norske Veritas) and Bergen (Lloyd's).
GANGWAY/DECK WATCHMEN: Not required.
HATCHES: Opening/closing to be carried out by crew.
CUSTOMS ALLOWANCES: Quantity permitted for each Crew member to be held out of bond: 200 cigarettes or 200 gm. tobacco, 1 bottle spirit and 1 bottle of wine.
CARGO GEAR: Load /discharge effected by shore gear.
REPATRIATION: Crew changes and repatriation possible.
AIRPORT: Kvernberget (Kristiansund) and Aro (Molde), both at 60 miles distance and with regular air service.
TIME: GMT plus 1 hour. GMT plus 2 hours in Summer.
HOLIDAYS: May 1st and May 17th. No cargo work can be arranged on those days.
POLICE/AMBULANCE/FIRE: Police Tel.: 91166, Ambulance (doctor) 91346, Fire 001, Lifeguard 91933.
TELEPHONE: In harbour office.
SERVICES: Not available. Nearest Kristiansund or Molde.
SHORE LEAVE: Crew members allowed ashore.
IDENTIFICATION CARDS: Sunndal Verk a.s. demands identification cards, obtained from Dock Master.
GARBAGE DISPOSAL: Service available. Garbage must be divided between burnable and non-burnable. Two small containers on the quay, free of charge.
WASTE OIL DISPOSAL: Not available.
SEAMAN'S CLUBS: None.
CURRENCY: Norwegian Kroner.
REGULATIONS: Forbidden to take photographs within boundaries of Hydro Aluminium Sunndal A/S property.
DELAYS: Usually no delay if notice of arrival given to Agent in good time.
GENERAL: No cargo on Saturday and Sunday.
AUTHORITY: Hydro Aluminium Sunndal A/S, 6600 Sunndalsora, Norway. *Tel:* 716-93000/93453. *Telex:* 15222 Sual N. *FAX:* 716-93607. *Cables:* H.A.Sunndal, Sunndalsora. *Contact:* Port Manager (Tel: 716-93453) or Quay Foreman (Tel: 716-93332).

SVOLVAER: 68.14 N. 14.35 E.

DOCUMENTS:
2 Crew Lists.
2 Passenger Lists.
Custom Documents.
Stores List.
Manifest.
Bill of Lading.
Ship's Papers.
Valid Derat Exemption Certificate.

Ships arriving from Finland, Denmark, and Sweden need Customs permit from last port.
PILOTAGE: Vessel approaching Svolvaer may call Bodo Radio, 2182 kHz. by radio asking for Svolvaer harbour pilot. Telegraph ETA Svolvaer 24 hours before arrival. All communication with harbour pilot boat on VHF Channels 16 and 12. Exact position for pilot boat is Lat. 68° 11′ 13″ N., Long. 14° 36′ 00″ E. Different types of pilot boats are used, but usually the pilot boat flies pilot flag. No special requirements for boarding, except usual pilot ladder.
ANCHORAGES: Boundaries for safe anchorage Lat. 68° 13′ 36″ N., Long. 14° 37′ 00″ E.; Lat. 68° 13′ 48″ N., Long. 14° 36′ 12″ E. Depth in area about 25 fathoms.
MAX. SIZE: Max. permissible length 520 ft., draft 30 ft. in the Oil Harbour.
HEALTH: Pratique is automatic, given by radio. Vessel only required fly yellow flag. In event of any suspected disease or fever on board call Svolvaer Harbour Master by telephone via Bodo Radio (2182 kHz).
RADIO: Call Bodo Radio by R/T 2182 kHz or VHF-Channel 16. Svolvaer Harbour office VHF-Channel 16/12.
TUGS: Small tugs available.
STEVEDORES: All information regarding gangs, loading and discharging rates can be obtained by calling ship's Agent in Svolvaer via Bodo Radio.
MEDICAL: Hospital facilities available.
TANKERS: There are discharging berths for oil carriers in Svolvaer. Diameter of lines at berth 6 in. and 8 in.
DENSITY: Density in port is 1025.
FRESH WATER: Delivered from piers by hose with a rate of about 20 t.p.h.
FUEL: All kinds of fuel oil are available.
CONSULS: Swedish and Italian Consulates.
REPAIRS: Nearly all types of engine and deck repairs. Both for internal combustion and turbine engines.
DRY DOCKS: No dry docks in port, only slipways for ships up to 240 ft.
GANGWAY/DECK WATCHMEN: Not necessary.
OPENING/CLOSING HATCHES: Normally done by ship's crew but can also be done by stevedores.
CERTIFICATES: Ship's Register.
CUSTOMS ALLOWANCES: Tobacco: Quantity for each crew member is 20 cigarettes or 20 gm. tobacco and 20 leaves cigarette papers per day. Wine and/or Spirit: For crew members 1 bottle spirit or wine (0.75 litre) and for each passenger 0.25 litre.
REPATRIATION: Facilities for effecting crew changes are available.
AIRPORT: 4 km. from town. Nearest main airport is Bodo.
TIME: GMT plus 1 hour. GMT plus 2 hours in Summer.
HOLIDAYS: Official holidays stated by Norwegian Government.
POLICE/AMBULANCE/FIRE: Tel. 70177.
TELEPHONES: Telephones on pier.
SERVICES: Compass adjusting.
IDENTIFICATION CARDS: Not required.
GENERAL: Svolvaer is the main port in Lofoten Island, and a typical fishing harbour. Radar, Decca, Radio and VHF service, and all other electrical services can be executed.
AUTHORITY: Vagan Havnevesen, P.O.Box 121, 8301 Svolvaer, Norway. *Tel:* 088-71011. *Cables:* Harbourmaster. *Contact:* Eilif Mosand, Harbour Master.

THAMSHAVN (Thamshamn): 63.20 N. 09.52 E.

DOCUMENTS:
Health Certificate.
Crew List.
Passenger List.
Stores List.
Bill of Lading.
3 Manifests.

PILOTAGE: 24 hours prior arrival Grip, Pilots can be ordered by cable to "Loskontoret, Kristiansund N." or by telephoning Kristiansund Pilot Office, tel. 74333 during office hours, and 74595 private. Pilots can also be ordered by radio through Kristiansund Radio or through Agents. Use Channel 16 for VHF., contact to Kristiansund Pilot Office, or pilot boat. Pilot boat equipped with radio telephone 2182, carries red and white flag during day and white and red light during night.
ANCHORAGES: Vessels should anchor 150 m. off piers where depth between 26 m. and 30 m. Anchoring between piers and buoys is not permitted.
MAX. SIZE: Depth at Import Quay 24 ft. MLW. Max. LOA 200 m. Max. Beam 23 m.
RADIO: Vessel should route ETA cables to Agent through Rogaland Radio or Aalesund Radio.
TUGS: No tugs needed or available.
BERTHING: Berthing only between 0700 hrs. and 2300 hrs.

CARGO HANDLING: 1 berth is specially equipped for handling of concentrates in bulk. Ships of 28 ft. draft can load at the pyrites quay. Loading by conveyor. There are no berths equipped for containers or Ro/Ro traffic, nor berths handling liquid chemicals or LPG carriers.
STEVEDORES: Arranged by Agent. No ETA to stevedores necessary.
MEDICAL: Hospital facilities available.
FRESH WATER: Available, delivered at berth.
FUEL: No fuel supplies available. Nearest port for such supplies is Trondheim.
CONSULS: Nearest consul available in Trondheim.
REPAIRS: Only small repairs can be carried out.
DRY DOCKS: None.
GANGWAY/DECK WATCHMEN: Not compulsory, and this service is left to the discretion of the Master.
OPENING/CLOSING HATCHES: By crew.
CERTIFICATES: Ship's Register.
CUSTOMS ALLOWANCES: Each crew member allowed 20 cigarettes on shore. When leaving ship, 200 cigarettes and 1 bottle of wine and 1 bottle of spirit permitted.
AIRPORT: Nearest airport, Vaernes, 62 miles N.E. Served by regular airlines with several flights per day.
TIME: GMT plus 1 hour. GMT plus 2 hours in Summer.
HOLIDAYS: January 1st; Easter Holidays; Ascension Day; Whit Monday; 1st and 17th of May; December 25th and 26th.
POLICE/AMBULANCE/FIRE: All mentioned services obtained through Agent or by contacting local telephone exchange.
TELEPHONES: No facilities for placing telephones onboard ships.
SERVICES: Provisions available.
BANKS: Forretningsbanken A/S, 7300 Orkanger, Norway.
SHORE LEAVE: Permitted.
IDENTIFICATION CARDS: Not required.
AUTHORITY: (Private Wharves): Thamshavn Verk A/S and Co., P.O.Box 10, 7301 Orkanger, Norway. *Tel:* (074) 80400. *Telex:* 55628. *FAX:* (074) 81930. *Cables:* Thavn, Orkanger. *Contact:* Arne Lauritzsen, Shipping Manager.

TONSBERG: 59.16 N. 10.25 E.

DOCUMENTS:
Ship's Register.
Crew Lists.
Customs Manifest for each crew member (cigarettes, spirits, etc.).
Stores List. Cargo Papers. Health Certificate.
PILOTAGE: Sea Pilots obtainable from Ferder Pilot Station. Pilots normally take vessels to berth.
ANCHORAGES: Good anchorages at Byfjorden and Traela; anchorages for large vessels are found in Narverodbukten and Husoyflaker.
MAX. SIZE: 18 ft. draft for East entrance and 24 ft. draft for West entrance. Up to 30,000 tons in ballast.
RADIO: Cable ETA via Tjome Radio prior arrival.
TUGS: Available.
BRIDGE: 1 bascule bridge over East entrance. Working days open 0730 to 2000 hrs., holidays 0900 to 1700 hrs. Signal 1 long and 2 short to open bridge. Opening can also be arranged by VHF Channel 12. Horizontal clearance 88 ft., depth 22 ft.
MEDICAL: Medical, dental and hospital facilities available.
DENSITY: Occasionally brackish.
FRESH WATER: Available from hydrants at quays.
FUEL: Delivered by lorry.
CONSULS: (Vice-Consuls) France, Netherlands, Finland, Denmark, Sweden and Spain.
REPAIRS: All types of repairs available.
DRY DOCKS: At Kaldnesmek, a shipyard for total length of 515 ft. The shipyard is building ships up to about 50,000 d.w.t.
GANGWAY/DECK WATCHMEN: Available on request.
CUSTOMS ALLOWANCES: 200 cigarettes or tobacco and 1 bottle spirits, for each man.
REPATRIATION: Possible. Regular flights from Torp (5-7 flights daily) to Copenhagen, Stavanger, Bergen and Trondheim.
AIRPORT: Torp, 20 km.
TIME: GMT plus 1 hour. GMT plus 2 hours in Summer.
HOLIDAYS: New Year's Day; Maundy Thursday; Good Friday; Easter Monday; Labour Day (1st May); 17th May; Ascension Day; Whit Monday, Christmas (25th and 26th December). Mostly no working.
POLICE/AMBULANCE/FIRE: Police 112; Ambulance 113; Fire 111.
TELEPHONE: Lines available on board vessel.
SERVICE: Mostly all services or equipment available from Tonsberg or Oslo. Inform prior arrival.
SHORE LEAVE: Crew members allowed to go ashore.
DELAYS: Ice during January and February, but port kept open by ice breakers.
AUTHORITY: Tonsberg Havnevesen, Nedre Langgate 36 B, N-3100 Tonsberg, Norway. *Tel:* 33348850. *Cables:* Tonsberg Havnekontor. *FAX:* 33319917. *Contact:* Per Svennar, Harbour Master.

TROMSO: 69.39 N. 18.58 E. (See Plan)

DOCUMENTS:
Trade Certificate.
Tonnage Certificate.
Certificate of Nationality.
Number of Crew and Passenger Lists.
Customs and Health Documents.
Manifest and Bills of Lading.
PILOTAGE: Pilot Station maintains 24 hours watch. Booking during daytime to Tel: 47-77682245. Outside office hours contact can be made via Bodo Radio or Vardo Radio. Telegraphic address of pilot station is "Tromso Pilot Station". Order latest 12 hours before arrival.
ANCHORAGES: Depth at anchorage is 15 m. – 35 m.
RESTRICTIONS: No restrictions on night entry.
RADIO: Bodo Radio, all VHF Channels.
VHF: Harbour Office Channel 16 and 12 throughout 24 hours (except 0700 hrs. – 2300 hrs. on Sunday). 20 miles from town.
TUGS: If necessary, join vessel North or South end of harbour. Tugs up to 1,500 h.p. available.
BERTHING:
1,300 m. of quay with depth 4.5 m. – 7.5 m.
210 m. of quay with depth 10.5 m.
100 m. of quay with depth 11.0 m.
All depths are at low water.
Containers: Handled at Breivika Terminal. Container park for 1,000 units and reefer plugs of 380 Volts.
CRANES: 9 mobile cranes with capacity up to 40 tonnes.
BRIDGES: Tromso Bridge, 60 m. wide, 36.5 m. high.
Sandnessundet Bridge, 120 m. wide, 41 m. high, min. dredged depth 10.4 m.
STEVEDORES: Ordered by Agent. No ETA to stevedores necessary.
MEDICAL: Master to advise by radio prior to arrival if medical attention required aboard. Hospitals in town (University).
TANKERS: There are 4 oil berths:
Norol – 20 ft. depth.
Mobil Oil – 21 ft. depth.
Esso – 31 ft. depth.
Shell – 39 ft. depth.
FRESH WATER: Most berths supplied by pipeline.
FUEL: All grades available.
FIRE PRECAUTIONS: Ordinary restrictions.
CONSULS:

Belgium	77 68 15 93	Iceland	77 68 30 24
Finland	77 68 20 60	Netherlands	77 68 45 50
France	77 68 76 47	U.K.	77 68 48 00
Germany	77 68 55 50		

Note: When calling from abroad, please dial +47 before dialling the above numbers.
REPAIRS: All engine and instrument repairs. Shipbuilders' yard.
DRY DOCKS: 4 slipways 80 ft. – 222 ft. 1 small dock.
SURVEYORS: Lloyd's, N.V.
GANGWAY/DECK WATCHMEN: Available but not compulsory.
OPENING/CLOSING HATCHES: Crew allowed to open and close.
CUSTOMS ALLOWANCES: Crew members 200 cigarettes or 20 cigars or 100 gm. tobacco, and 1 bottle spirits.
AIRPORT: 5 km. from town.
TIME: GMT plus 1 hour. GMT plus 2 hours in Summer.
HOLIDAYS: No work on New Year's Day and Christmas Day.
POLICE/AMBULANCE/FIRE: Police 112; Ambulance 113; Fire 111.
SERVICES: Compass adjusting, stores, etc.
SHORE LEAVE: Permitted.
IDENTIFICATION CARDS: Not required. Seaman's Book.
GARBAGE DISPOSAL: Service available using containers alongside. Contact Tel: 776-82537/75824 for further details.
Charges: 8 cu.m. = NKR 700.
WASTE OIL DISPOSAL: Contact Shell Fuel Station. Tel: 776-30811.
SEAMAN'S CLUBS: None.
CURRENCY: Norwegian Kroner (NKR).
REGULATIONS: Max. speed in port waters 6 knots. Ships size passing Tromso Bridge max. 5,000 tons displacement.
DELAYS: Minor delays only.
AUTHORITY: Tromso Havnevesen, P.O.Box 392, Kirkegt. 1, 9001 Tromso, Norway. *Tel:* 776-81191-83374. *FAX:* 776-58529. *Contact:* Captain Knut A. Mortensen, Harbour Master.

TRONDHEIM: 63.25 N. 10.24 E. (See Plan)

DOCUMENTS: See "Bergen".
PILOTAGE: Pilotage is compulsory for all foreign flag ships. The pilot boats lie in Kristiansund Harbour, where a VHF watch is kept. The pilot station listens on Channel 16. When vessel is about 10 miles from Grip Lighthouse, contact should be made. Vessel will be given instructions as to where and how the Pilot will board. The Pilot boards from a 20 m. long, white boat marked 'LOS', capable of doing 10 knots. In bad weather vessel will be advised by VHF regarding Pilot procedures. The pilotage service is provided by the Norwegian Government. All the Pilots are recruited from the Norwegian Merchant Navy after they have obtained a 1st Mate's Licence.

Note: When approaching Trondheim from the North, ship will be in coastal trade with Pilot on board. Vessel will enter the Trondheim Fjord East of Halten Lighthouse.

RESTRICTIONS: The fjord is very deep and easy to enter. The channel is clear and ice-free throughout the year.

There are no speed limitations from Grip to Trondheim, but consideration should be given to small ships and the narrow water.

MAX. SIZE: Controlled by depth at berth.

HEALTH: Free Pratique arranged by Agent.

RADIO: Orlandet Radio (also VHF).

VHF: Harbour Pilot: Havne Kontoret, Tel: 528015 or VHF Channel 16.

TUGS: Arranged by Agent.

BERTHING:

Pier 1: Ro/Ro Berth: Length 442 ft., depth 26 ft. New Quay: Length 460 ft., depth 26 ft.

Pier II-River Harbour	Quays	4–15	Depth alongside up to 26 ft.
Outer Harbour	Quays	17–18	Depth alongside up to 18 ft.
Inner Harbour	Quays	19–24	Depth alongside up to 20 ft.
Ilha Pier	Quays	26–32	Depth alongside up to 34 ft.
Pier I	Quays	1– 2	Depth alongside up to 27 ft.
Ladehammer Quay	Length	760 ft.	Depth alongside up to 16.5 ft.
Strandvei Quay	Length	1190 ft.	Depth alongside up to 16.5 ft.
Transit Quay	Length	780 ft.	Depth alongside up to 26 ft.
Coal Crane Pier	Length	700 ft.	Depth alongside up to 26 ft.
Cruise Ship Terminal	Length	320 ft.	Depth alongside up to 43 ft.

BRIDGES: Skansen Bridge, Jernbanebrua, and Brattor Bridge divide Inner Harbour and Nidelven Bridge divides the river harbour.

STEVEDORES: Available.

MEDICAL: All facilities available.

TANKERS: Berth depth 9 m. – 12 m. Total length of quays 270 m. easy access. Mobil, Esso, Norsk Olje (Norol) and Shell installations.

Berth Approaches: The main effect on ship handling in the berth approaches comes from the current, which always sets along the jetty. Current direction depends on the tide.

Berthing: All tankers usually berth with port side alongside and with tugs on the hook. An anchor may be used under unfavourable conditions. With wind Force 8 and above from an Easterly direction, vessels will not be allowed to go alongside due to risk of damage to ship and jetty.

FRESH WATER: By hose from quay.

FUEL: Available.

CONSULS:

Belgium	Tel: 73 959600	Italy	Tel: 73 532080
Denmark	Tel: 73 581500	Netherlands	Tel: 73 524560

France	Tel: 73 532600	U.K.	Tel: 73 968211
Germany	Tel: 73 521120		

REPAIRS: All types of deck and engine repairs are possible.

DRY DOCK: 113 m. × 20 m. × 8.0 m.

CUSTOMS ALLOWANCES: 200 cigarettes and 1 bottle spirit, 1 bottle wine allowed each man.

REPATRIATION: Can be arranged.

AIRPORT: 35 km. away from port. Regular airlines.

TIME: GMT plus 1 hour. GMT plus 2 hours in Summer.

HOLIDAYS: Christmas (2 days); Easter, (4 days); 17th May; Ascension Day; Whitsun, (2 days).

POLICE/AMBULANCE/FIRE: Police 73 899090 or 002; Ambulance 003; Fire 73 547600 or 001.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Required.

GARBAGE DISPOSAL: Collection service available (Tel: 73-547037).

(1) Alongside dock: Containers.
(2) At anchor: Barge.
(3) Telephone: 07-547037.
(4) Charge and collection: Container: Transport 460 NOK plus 435 NOK per ton plus 20%.
(5) Collection time: Monday – Friday, 0700 hrs. – 1500 hrs.

WASTE OIL DISPOSAL: Service by tanker trucks at any berth. Contact Borstad Transport, P.B. 204, 7501 Stjorda. Tel: 74-827700. Fax: 74-827743.

SEAMAN'S CLUBS: None.

CURRENCY: Norwegian Kroner.

DEVELOPMENTS: Plans for reconstruction of Outer Basin with new bridges planned.

AUTHORITY: Trondheim Havn, Pir-Senteret, N-7005 Trondheim, Norway. *Tel:* 73-528015. *FAX:* 73-509480. *Contact:* Kurt Saether, Harbour Master.

VADSO: 70.04 N. 29.45 E. (See Plan)

DOCUMENTS:

Trade Certificate.
Tonnage Certificate.
Certificate of Nationality.
Number of Crew and Passenger Lists.
Customs and Health Documents.
Manifests and Bills of Lading.

PILOTAGE: Vessels approaching from sea and desiring Pilot should order at 24 hours' notice and confirm arrival to Pilot Office, Vadso, at 2 hours' notice. The advance order can be sent over Coastal Radio Station Vardo to Vadso Pilot/Harbour Master in Vadso, Tel: 789-51318. Vadso Harbour Pilot on VHF Channel 16, working Channel 12.

The Harbour Pilot usually boards vessels within 0.5 miles of the harbour entrance, in fine weather conditions.

ANCHORAGE: West of harbour between Vadsoya and Lille-Vadsoy in depths of 16 m. – 20 m. The holding ground is good.

APPROACHES: *New Entrance:* Entrance from the West is between 2 breakwaters 180 m. apart.

A 475 m. long, 180 m. wide and 6.5 m. (21 ft.) L.L.W.S. deep dredged and lighted channel leads from outer to inner harbour.

RADIO: Call via Vardo Coastal Radio Station.

VHF: Harbour Master's Office on Channel 16, working Channel 12, during working hours (0800 hrs. – 1500 hrs. local time).

TUGS: 1×6 ton bollard pull. Larger tugs can be ordered if necessary.

BERTHING: Traffic/Cargo Quay: Length 250 m., depth alongside 7.0 m.

Fishing Port: 4 quays, length 65 m. – 105 m. Depth alongside 5.5 m. – 6.5 m.

STEVEDORES: Vadso Skipsekspedisjon A/S, 9800 Vadso. Tel: 789-51395 or 789-51137, Telex: 64222, Fax: 789-51314. Stevedores arranged by vessel's Agent.

TANKERS: There is a discharge berth for tankers. Max. size 2,500 g.r.t. Length of jetty 125 m. Depth of water 18 ft.

FRESH WATER: Fresh water is available at the Traffic Quay, rate 100 t.p.h. Water is also available at the fishing port (Quay No. 1) at a rate of 30 t.p.h. at the fuel berth. No water barge available.

FUEL: Fuel oil, gas oil and diesel oil available direct from oil-installation of Norske Shell A/S at Vadsoya. Tel: 789-51869.

CONSULS: Finnish Vice-Consul in Vadso. Tel: 789-51225.

REPAIRS: Minor deck and engine repairs possible. No dry docks or slipways available.

GANGWAY/DECK WATCHMEN: Watchmen not necessary. If required, the Master may use ship's crew as gangway and deck watchmen.

CUSTOMS ALLOWANCES: Allowance for 10 days: 200 cigarettes or 200 gm. tobacco and 0.25 litres of spirits per crew member.

AIRPORT: Vadso Airport is 4 km. from the Traffic Quay and Vadso town centre. There are 4 flights a day to Oslo.

TIME: GMT plus 1 hour. GMT plus 2 hours in Summer.

POLICE/AMBULANCE/FIRE: Police, Tel: 002 or 789-50500. Ambulance, Tel: 789-51999. Hospital, Tel: 789-51691. Fire, Tel: 001 or 789-51554.

SERVICES: Ship chandlers are available for supply of provisions and arranging laundry. If service required for vessels instruments, this can be arranged by contacting Varanger Skipselektronikk A/S, Tel: 789-52290.

GARBAGE DISPOSAL: Garbage disposal is available when ships are alongside.

WASTE OIL DISPOSAL: Waste oil disposal service is available.

SEAMAN'S CLUBS: Velferds Klubben, Tel: 085-52290.

CURRENCY: Norwegian Kroner (NKr.).

AUTHORITY: Vadso Havnevesen, P.O.Box 39, 9801 Vadso, Norway. *Tel:* 789-61318. *FAX:* 789-54310. *Contact:* Kare Roald Nilsen, Port Director.

NOTES

Please also advise Shipping Guides Ltd.

Sultanate of Oman

GENERAL:

ANCHORING:
Notice to Mariners No. 1/84:

All vessels anchoring South of Latitude 24° parallel and within the territorial waters of Sultanate of Oman (12 miles), for the purpose of waiting for orders or in order to carry out engine repairs, should anchor within Lat. 23° 40′ N., and Long. 58° 10′ E. and Long. 58° 27′ E.

No vessel shall anchor in any other part of Mina-Al-Fahal except when actually loading/discharging on SBM buoys. All cargo ships should call at Port Sultan Qaboos when handling cargo or at anchorage West of Fahal.

Signed: Superintendent General Maritime and Ports Affairs.

Notice: Received from ship's Agent.

Vessels can anchor within Lat. 23° 53′ N. and the coastline of Oman and between the meridians of Long. 58° 10′ E. and Long. 58° 28.5′ E., which is West of Fahal Island. On arrival contact Mina Qaboos Port Control on VHF Channel 16 or 14 for reporting arrival and request anchoring position giving vessel's particulars. Vessel not permitted to lower life-boat or unauthorised boats to lie alongside. Agent requires 5 copies Crew List, 1 Stores List, 1 Crew Declaration List and 1 Vaccination List. Distance to anchorage being such we have to commute by tugboat hired at O.R. 55/– per hour or part thereof. Launch service possible only during daylight hours and weather permitting. Following particulars of vessel should be furnished in advance:

1. Flag/port of registry.
2. D.w.t./g.r.t./n.r.t./call sign.
3. Ports of call including last port and next port.
4. Nationality of Master and Crew.
5. Whether any dangerous/hazardous cargo on board.

Vessels on arrival should be cleared through Immigration, Customs and Health by an Agent.

MINA-AL-FAHAL: 23.40 N. 58.30 E. (See Plan)

DOCUMENTS: Required on arrival (provided by vessel):

6 copies Crew List (2 copies required by Berthing Master).
2 copies of Vaccination List.
2 copies Stores List.
1 copy Bonded Stores List.
1 copy Personal Effects List.

All other necessary papers will be supplied on arrival by the Berthing Master.

P.D.O. employ the "Early Departure Procedure" for completion of cargo documentation.

PILOTAGE: The Berthing Master will board the vessel off Fahal Fairway Buoy as directed by VHF. The portside derrick should be rigged and crew standing-by ready to lift hose securing equipment from the launch when Berthing Master and Assistant come on board. Harbour steaming is deemed to start at this point.

The pilot access should be in good condition, clean and ready on the leeward side. The Pilot will board by accommodation ladder only unless the vessel's freeboard makes the use of a combination accommodation ladder and pilot ladder necessary, or the vessel is advised otherwise. The use of a pilot hoist is not permitted.

The Berthing Master's Assistant, acting as shore representative, stays on board vessels at the SBMs. Vessels are requested to provide him with proper accommodation and meals. As Oman is a Muslim country the appropriate type of food, i.e. no pork or pork products, should be supplied. Any failure to comply with this request may result in delays to the vessel and complications with the local authorities.

Also see "Ship Supply Service".

ANCHORAGES: *Tankers:* Before anchoring tankers should contact "Fahal Control" on VHF Channel 12 for a designated anchorage.

In all cases tankers are required to anchor at least 2 miles West of Fahal Island and at least 2 miles clear of the Omani coastline.

Ships proceeding to an anchorage within the Port Area should pass North of Fahal Island and under no circumstances enter the prohibited area unless instructed to or accompanied by a Mina-al-Fahal Berthing Master.

Note: The following positions are foul due to lost anchors and cables:

1. Fahal Island Light 121°×2.95 miles.
2. Fahal Island Light 150°×3.4 miles.
3. Fahal Island Light 126°×1.16 miles.
4. Fahal Island Light 144°×2.5 miles.

Anchors: In order to prevent damage to SBM moorings and submerged pipelines, anchors are to be secured in the seagoing condition before the ship enters the Restricted Area. Under no circumstances is the seagoing security of the anchors to be altered whilst the vessel is moored to the SBM.

RESTRICTIONS: Open sea approaches.

All tankers calling at Mina-al-Fahal must be equipped with inert gas system in good working order and arrive with all cargo tanks fully inerted.

Arrival Draft: All vessels scheduled to berth at an SBM must arrive with the propeller fully immersed. The forward draft should be deep enough in order to:

(a) Allow safe handling of the ship in all operational weather conditions for the area.
(b) Prevent the bow riding above the fendering on the SBM.
(c) Allow connection of the mooring hawser, whilst maintaining a safe distance from the SBM.

An example of a safe arrival ballast draft for a vessel of 250,000 tonnes loaded displacement is:

Forward	7.00 m.
Aft	11.00 m.

MAX. SIZE:

Berth	*Max. d.w.t.* (tonnes)	*Max. Draft* (m.)
SBM No. 1	350,000	19.5
SBM No. 2	600,000	N/A
SBM No. 3	100,000 *	14.0

There is no LOA or beam restriction.

* Max. loaded displacement 125,000 tonnes.

Also see "Berthing".

RADIO/VHF: Initial ETA should be sent 72 hours before arrival and confirmed 48 hours and 24 hours before arrival. ETA messages should be sent to "Petromar Muscat" (Telex No. 5212 ON; Fax: 675150), or via Muscat Radio (call sign A4M). If no contact can be established with Muscat Radio, the message should be sent through an alternative coast station such as Bahrain Radio.

The message should contain the following information.

(a) ETA in local time and date in plain language.
(b) Confirmation that vessel is fully inerted.
(c) Last port of call.
(d) Quantity of cargo required.
(e) Time required for deballasting prior to loading.
(f) Maximum loading rate.
(g) Maximum draft on arrival and trim.
(h) Maximum draft on departure.
(i) Type, number and SWL of bow stoppers for securing SBM mooring chains.
(j) Hose handling derrrick or crane SWL.
(k) Confirmation that manifolds to OCIMF standard.
(l) Confirmation that vessel has pollution insurance coverage.
(m) Arrival displacement.
(n) Main engine power in BHP.
(o) Vessel's Flag of Registry.
(p) Master's name.

VHF communications should be established as soon as possible, and at least 2 hours prior to arrival, with "Fahal Control" on Channel 12. A 24 hour watch is maintained on Channel 12 only. The range of the station is approximately 50 miles, but may be reduced to 20 miles when approaching from the Eastwards due to the screening effect of the mountains. This station may call ships on Channel 16, but a watch will not be maintained on Channel 16. All vessels when in port or laying off Mina-al-Fahal should keep watch on Channel 12. The mooring launches are also equipped with Channel 12.

HEALTH: When advising ETA, include in message whether any sickness on board.

Port Health Officer, Immigration and Customs board with Agent; Port Officer will carry out any necessary vaccinations. 'Q' flag to be flown until Pratique granted.

TUGS: None available and not required.

BERTH DESCRIPTION: 3 single buoy moorings with floating hose strings. SBM lights are Iso.W.

SBM No. I: Crude export and Long Residue.

This buoy is served by 2×30 in. submarine crude lines each 3,139 m. long.

The floating crude hoses are 2×265 m. long × 20 in. reduced to 16 in. for manifold connection.

SBM No II: For crude and bunker export and is served by 1×40 in. submarine crude line and 2×10 in. submarine fuel oil lines each 4,261 m. long. The floating crude hoses are approx. 2×302 m. long × 20 in. reduced to 16 in. at manifold connection. Bunkering is by a single 12 in.×311 m. floating hose.

SBM No. III: Products imports only (Gas Oil, Mogas, Jet-A1) served by 2×10 in. submarine pipelines, length 2,439 m. Floating hoses are 201 m. in length with 8 in. manifold connections.

Unless instructions are given to the contrary, both mooring ropes are to be used.

Loading/Discharge Rates:

Crude oil export by gravity only; maximum rate 8,000 cu.m./hr.

Long residue export by gravity only; maximum rate 3,000 cu.m./hr. (SBM 1).

Bunker fuel export by pump; maximum rate 500 cu.m./hr.
White product import (SBM 3); maximum rate 500 cu.m./hr.
White product export (SBM 3); maximum rate 350 cu.m./hr.

Coastal Tanker Mooring:

There are also 2 inshore berths for coastal tankers.

The maximum draft permissible is 4.5 m. Vessels moor using both anchors forward and ropes to a buoy on each quarter. The hose is usually connected to the vessel's stern discharge line.

Approximate density of water: 1026.

Coastal tankers should approach the berths from Westward of Fahal Island.

BERTHING: Vessels berth head on to a single buoy mooring system comprising 2 nylon grommet-type mooring lines which terminate with chafe chains for securing on board using the vessel's bow chain stoppers. Vessels which are not fitted with approved tongue or hinge-type bow stoppers will not be accepted for loading operations at Mina-al-Fahal Terminal. A suitable messenger of 25 mm. minimum diameter should be provided by the ship to lift the end of the 200 m. × 80 mm. diameter polypropylene pick-up rope from the mooring boat. It is advisable to have 2 good mooring lines available forward. No moorings are used aft. A Berthing Master and one assistant board the vessel for mooring and will advise the details of the mooring procedure.

HOSE CONNECTIONS: Hose connections will be made on the port side amidships. Crude loading ships should fit 2 × 16 in. reducers. The derrick should be rigged with equipment in good condition and have a minimum SWL of 10 tonnes.

Hose connection and disconnection is carried out by the ship's crew with advice from the Berthing Master's Assistant.

LOADING: Every 2 hours ship-shore check has to be made via the Loading Master.

Private radio channels in the UHF band are used for ship/shore/launch communication during all operations.

BALLAST: No facilities for reception of dirty ballast.

Tankers should arrive with clean ballast, lines and pumps and no oil should be released into the sea.

MEDICAL: Medical and dental treatment can be arranged via local agent. Radio advise with details 24 hours before arrival. Patients are taken ashore through Port Sultan Qaboos.

Patients should be able to speak Arabic/English/Dutch or be accompanied by a competent interpreter and should bring their passport. To avoid delay to patients, a form containing the following information must be sent in triplicate with every patient:

Name, address and telex address of ship's owners.
Name of ship.
Rank and name of patient.
Nature of complaint (in general terms).

DENSITY: Approximately 1026.

FRESH WATER/FUEL: Fresh water and gas oil available by barge "Nizwa", arranged via vessel's agent. 24 hours notice required. Barge capacity, fresh water 280 tonnes, minimum quantity 100 tonnes. Gas oil 270 tonnes.

Marine fuel oil is available at SBM 2. Gas oil is available at SBM 3 (60 cu.m./hr.). Marine lubricants are available, supplied in drums.

A wide range of marine lubricants is available and is supplied in drums. At least 24 hours' notice is required for supplying lubricants.

Also see "Shipmaster's Report".

REPATRIATION: Crew changes are possible at Mina-al-Fahal provided the Agent receives at least 7 days' notice giving full particulars of embarking/disembarking crew, such as full name, nationality, place and date of birth, Passport/Seaman's Book number with date and place of issue and expiry date, and also destination for repatriation of disembarking crew members, to enable Agents to obtain necessary permits (visas) and arrange air passages.

Notice for crew change to be given as soon as possible as the issue of N.O.C's. (Non Objection Certificates) can take up to 7 days.

N.B. If the information required as above is received on a Thursday or a day preceding a holiday, the time mentioned of 72 hours will not be sufficient as no permits can be obtained from the Authorities during holidays.

REPAIRS: It is not permitted to immobilise main engines whilst moored to the SBMs. Engines are required to be maintained at 15-20 minutes notice whilst vessels are berthed. Under no circumstances should the propeller be turned in the ahead direction.

TIME: GMT plus 4 hours all year round.

SERVICES: There are 24-hour laundry facilities. Stores (fresh, frozen and bonded) are available, but at least 24 hours notice is required.

SHORE LEAVE: Not possible.

SHIP SUPPLY SERVICE: The Port of Mina-al-Fahal is operated by Petroleum Development Oman, and they have 3 launches, 2 of which are on 24 hours' duty every day. These launches would assist in a marine emergency, but are normally used for ships loading at Mina-al-Fahal. Mina-al-Fahal Pilots keep watch on VHF Channel 12.

NOTICES: *Circular No. 9/85:* Prohibited Area Off Mina-al-Fahal.

All vessels leaving or entering Port Sultan Qaboos should stay well clear of the prohibited area off Mina-al-Fahal.

Masters are required to pass at least 1 nautical mile to the Eastward of the Mina-al-Fahal Fairway Buoy on arrival and departure.

Charts affected: B.A. 3522, 2851, 2869.

Signed: Acting Superintendent General, Maritime and Ports Affairs.

REGULATIONS: The import of liquor or alcohol of any sort into the Sultanate is strictly prohibited. Therefore nobody is permitted to bring any liquor ashore from vessels in the port, and under no circumstances should liquor, or other items, be traded with local fishermen in exchange for fresh fish, under penalty of suspension of operations and removal from the buoy.

The ship's main transmitter and radar must not be used while the vessel is moored to the SBM.

The Sultanate of Oman is one of the countries subscribing to the Israeli Boycott.

SAFETY REGULATIONS: During approach to the berth, the Berthing Master's assistant will test two cargo tanks to ensure that oxygen content is below 8%, using vessel's equipment.

"In-Port" safety regulations apply as per ISGOTT, and as per the Safety Check List.

Two suitable fire-wires should be prepared, one forward standing-by on deck to avoid fouling the SBM, and one aft rigged from the starboard side poop deck and hanging 1.0 m. above the water.

SHIPMASTER'S REPORT: October 1987.

Fresh Water: Available by waterboat at a cost of Rial 2/ton. Minimum quantity 50 tons, maximum 250 tons, to be ordered 24 hours beforehand if possible. No transportation cost charged. Delivery possible 7 days a week. The quality of the water is very good.

Fuel: Gas oil is available by barge. Minimum order, 50 tons.

AUTHORITY: Petroleum Development Oman L.L.C., P.O.Box 81, Muscat, Sultanate of Oman. *Tel:* 677230, 677231, 677232. *Telex:* 5212 On Muscat. *Cables:* Petro Muscat. *Contact:* Captain P. Branton, Port Captain, or Duty Berthing Master.

AGENT: See "Port Sultan Qaboos" (Mutrah).

PORT RAYSUT (Salalah): 16.56 N. 54.01 E. (See Plan)

PORT LIMITS: Going on the level of HW, the water limits of the port are bounded by:

1. Crossing of coastline with Long. 54° 04′ E.
2. Then in the True South direction to Lat. 16° 55′ N.
3. And to the West the limits, follows the coastline interception with Lat. 16° 55′ N., and along the coast to the starting point.

DOCUMENTS:

5 copies of Crew Lists and Passenger List (if any).
2 copies of List of Personal Effects of crew and passengers.
2 copies of Ship's Stores List.
Valid Vaccination Certificate.
Valid Derat Certificate.
Last Port of Clearance.
Customs Documents.
5 copies of Manifest.
Ship's Papers and Ship's Certificates.
2 copies of Stowage Plans.
2 copies of Hatch List.
2 copies of List of Dangerous/Hazardous Cargo for Discharge.
2 copies of List of Dangerous/Hazardous Cargo in Transit.
2 copies of List of Heavy Cargo which requires special equipment.
2 copies of List of any Wine, Spirits and Narcotics or cargo of such nature on the vessel and its location or, in the absence of which, a nil return.
A Declaration of Type of Reefer Cargo.
An Application for Discharge Permit.

PILOTAGE: Compulsory for vessels of more than 150 n.r.t., except Port Authority craft and naval ships of Oman. Pilots wait near the East Breakwater, vessels are to proceed to the entrance of the harbour on request either from Pilot or Harbour Control. Pilot boat has a green hull with white superstructure and an Oman National Flag on the mast. Boats keep VHF radio watch on Channel 12. The entrance of the harbour is marked with a Buoy-Flashing Green light for a duration of 1 second in every 5 seconds.

ANCHORAGES: The Roads of Raysut offer an open sea anchorage with a sandy bottom. The depth at the Entrance Buoy is 13 m. and North-Eastward it increases, however anchorage position at present is given to all vessels upon reporting by VHF radio. Anchorage positions are set with 0.5 miles between each ship in a minimum of 10 m. of water for large vessels, less depth of water as required for coasters.

Anchorage Area:

1. Lat. 16° 57′ N., Long. 54° 04′ E.
2. Lat. 16° 55′ N., Long. 54° 04′ E.
3. Lat. 16° 55′ N., Long. 54° 02′ E.
4. Lat. 16° 57′ N., Long. 54° 02′ E.

RESTRICTIONS: Berthing and unberthing throughout 24 hours.

Prohibited Area: Within 2 square miles in front of the Royal Palace towards the sea is a prohibited area either for entry or for anchorage.

MAX. SIZE: Max. draft for cargo vessels is 9.5 m. and tankers about 12 m. Vessels will be brought to the berths regardless of the tide conditions since the port operates as a year round all weather port.

HEALTH: Quarantine procedures are followed and all ships upon arriving must fly flag "Q" until completion of quarantine procedures. Public Health requires certificates of vaccination for cholera and yellow fever. Derat Certificate also required.

RADIO: Muscat Radio or Bahrain Radio.

VHF: For advance ETA data the Harbour Control listens on 2182 kHz and works on 2023.5 kHz. VHF watch is kept on Channel 16 and other Channels available are 12, 10 and 6. The service is available around the clock. Area weather available on request.

Radio Muscat on Channels 16, 26 and 27.

RADAR: None available at present.

TUGS: Join vessels with the Pilots. 2 powerful tug boats (1,700 h.p. and 2,250 h.p.) of harbour/ocean going type, fitted with fire fighting facility, also 2 small mooring tugs equipped with 2 engines: 120 h.p and 220 h.p. respectively.

BERTHING: The harbour provides a quay of 522 m. with a depth of water 10 m. Also available: 200 m. length with 8 m. depth and 460 m. length with 4 m. depth. An oil terminal, dolphin type, 130 m. length with 12 m. depth. 1 ramp for small landing craft.

Berth No.	*Length (m.)*	*Depth (m.)*	*Permissible Draft (m.)*
1	173	10.0	9.5
2	173	10.0	9.5
3	173	10.0	9.5
4	200	8.0	7.5

CRANES:

2×15 ton capacity fixed quay-side cranes.

2×6 ton capacity fixed quay-side cranes. (Operated on Berths No. 1, 2 and 3).

1×35 ton capacity gantry crane for containers – operated on Berths No. 1 and 2.

1×150 ton rated mobile crane.

9 mobile cranes, rated capacities 12 tons – 58 tons.

1 forklift truck (container handling), capacity 35 tons.

23 forklift trucks, capacities 3 tons – 10 tons.

BARGES: 350 d.w.t. barge is available.

SPECIALISED FACILITIES: Ro/Ro services are carried out in the port. Such vessels must meet the standard requirements for entry to the berth. There are no bulk handling facilities.

BRIDGES: None.

STEVEDORES: Arrangements must be made through the Agent for maximum notification of arrival to arrange gangs. Minimum notification 24 hours. Normal working hours from Saturday to Wednesday 0700 hrs. – 1530 hrs., 1530 hrs. – 2330 hrs., 2330 hrs. – 0700 hrs. Thursday and Friday 0700 hrs. – 1200 hrs. and 1400 hrs. – 1900 hrs. (work could be extended up to 2300 hrs. subject to prior notice).

Notes:

1. The above hours are subject to change during the month of Ramadan.
2. Overtime is applicable after 1530 hrs.
3. Friday and Public Holiday working shall be at special overtime rate.
4. Port Authority reserve the right both to allocate the gangs to vessels at their discretion and decide the extent of overtime to be worked.

MEDICAL: Agents handle all medical matters. A hospital is available in the town of Salalah (17 miles away). Also see "Health".

TANKERS: Tankers up to 35,000 d.w.t. are accommodated at the Oil Pier which is 130 m. in length and about 12 m. in depth. 2×6 in. Chicksan arms available.

FRESH WATER: For vessels at berths, fresh water is available ex-pipeline.

FUEL: Available to ships at the berth by tank truck, must be arranged by the Agent.

FIRE PRECAUTIONS: Fire hydrants available alongside berths.

CONSULS: None available.

REPAIRS: No facilities.

DRY DOCKS: None available.

SURVEYORS: Lloyd's representative is Oman United Agencies in Salalah.

GANGWAY/DECK WATCHMEN: Not required except as deemed necessary by the Master of the vessel and then he must supply his own.

HATCHES: Opening and closing hatches is normally done by the crew but arrangements may be made with the port for provision of this service. Agents can advise.

CUSTOMS ALLOWANCES: 200 cigarettes or 50 cigars or 250 gm. of tobacco. 1 bottle (1 litre) alcoholic spirit. 1 bottle (1 litre) wine. 24 cans of beer and various used personal effects such as radios, cameras, etc.

CERTIFICATES:

Construction Certificate.
Registration Certificate.
Classification Certificate.
Safety Equipment Certificate.
Radio Safety Certificate.
Load Line Certificate.
Cargo Gear Book.
Israel Boycott Declaration.

CARGO GEAR: Normally handled by shore equipment and shore gear. Any special lifting equipment required must be provided by the vessel. Ships in the anchorage are normally expected to supply all gear required. The port has rental gear for those vessels requiring same.

REPATRIATION: Permitted, arrangements may be made by the Agent for this service. Crew changes may be effected at this port.

AIRPORT: Salalah International Airport. Distance 25 km.

TIME: Time local is GMT plus 4 hours.

HOLIDAYS: All Muslim holidays are observed. Working hours are reduced during the period of Ramadan. Special National days celebration is held on 18th November each year. Working of overtime may be arranged during most of the holiday periods, Agents can advise.

POLICE/AMBULANCE/FIRE: The port has Police available at the port at all times. Ambulance service is also available at the port. The port has the only telephone service and the Police located within the port also maintain telephone service. Required numbers are familiar to all persons in these two areas.

A complete fire fighting system is installed in the Port with 20 fire hydrants (4 in.) distributed through the jetty capable of handling all kinds of fire. The new tug boats are fitted with fire fighting facilities.

TELEPHONES: For any long distance calls G.T.O. maintains office and card telephone cabins everywhere in Raysut and Salalah where calls may be placed and paid for. For local calls the port will permit the use of Port phone on a limited basis.

SERVICES: None available.

SHORE LEAVE: Master, First Officer and Chief Engineer are permitted restricted shore leave but all other members of the crew are restricted to the ship or port area.

IDENTIFICATION CARDS: Seaman's Book or Passport are sufficient for those persons going ashore.

GARBAGE DISPOSAL: Collection service is available by port truck every morning. The charges are R.O. 2.250/day. Contact Tel: 219002.

WASTE OIL DISPOSAL: Not available.

SEAMAN'S CLUBS: None.

CURRENCY: Rial Omani (R.O.).

REGULATIONS: No vessel shall enter the port area unless authorised by the Harbour Master. The Harbour Master may at his discretion refuse to allow vessels, with the exception of vessels in distress, to enter the port, and may order from the port any vessel with the exception of vessels unfit for sea, which does not have business within the port, or is in breach of these Regulations.

No vessel shall anchor, or weigh anchor or move within the port area except when and where required by the Harbour Master.

No unclean water ballast which is not free from oil or other harmful contaminants, shall be discharged into the waters of the port area. In case of the pumping of bilges or pollution by oil or harmful contaminants into the waters of the port area, the vessel will be responsible for any fines imposed by the Port Authority and any compensation or other damages according to Port Rules and Regulations.

Should fire break out aboard any vessel the Master should make an immediate signal either by a continuous sounding of long or short blasts on the ship's whistle or siren or by ringing of a fire bell.

In cases of adverse weather it is the sole responsibility of the Harbour Master to decide whether the sea conditions are suitable for handling cargo with barges in the Anchorage or whether the day will be declared a "Weather non-working day".

Masters shall be responsible for the adequate provisions of safety equipment and lights on board whilst cargo is being handled.

Conveyance of alcoholic liquor, other than manifested cargo under Customs supervision, from any vessel to the shore or from one vessel to another is prohibited.

No unauthorised person may enter the port area. Visitors to vessels are prohibited except by permission of the Harbour Master.

Ship's personnel and passengers are not permitted ashore except by permission of the Immigration Authorities and the Harbour Master.

Every merchant vessel in port shall fly her national flag, and the national flag of Sultanate of Oman, between sunrise and sunset.

GENERAL: The port operates on a year round basis with the exception of vessels requiring barging. All barging is closed from mid-June to late September depending on the sea state.

DEVELOPMENTS: Feasibility study is taking place for more facilities for transhipment cargo.

SHIPMASTER'S REPORT: 1978 (updated 1994).

Radio: Send ETA, draft, LOA, g.r.t., n.r.t., cargo to discharge, last port, to: General Manager, Port Raysut, Salalah, Sultanate of Oman, giving 48 hours', 36 hours', 24 hours' notice.

Labour: A gang consists of 10 men.

Fresh Water: Available on all berths. Not available at anchorage.

Provisions: Supplied by Agent.

Airport: Daily flight to Muscat.

Telex-Telephone-Cable-Posts: Available by "Cable & Wireless" offices.

Hospital: Very good.

Workshop: Not available.

Fuel Oil: Not available.

REPORT: September 1985.

Approach Procedure: Vessels approaching Port Raysut should advise Agent of their ETA at least 96 hours in advance confirming same 24 hours prior to arrival. The first ETA message should also include LOA, draft, g.r.t., n.r.t. and details of cargo distribution.

No quarantine message need be sent if the vessel has a clean bill of health but if there is illness on board the Master should advise Agent Salalah in his ETA message.

Pilotage: Pilotage is compulsory. Vessels arriving at the anchorage should request an anchorage position from the Harbour Master prior to anchoring.

Quarantine: It is recommended that crew members should have valid certificates of innoculation against Cholera, which is sometimes necessary, if there has been an outbreak in the area.

Extension of Derat/Exemption Certificates are not possible and vessels arriving with expired certificates are liable to a fine of RO 50,000.

Gangways: Vessels at the anchorage should rig a safe and efficient accommodation ladder on the lee side. During rough weather a good pilot ladder should be ready for use on the lee side. When berthed a safe and efficient accommodation ladder must be rigged at all times.

Readiness: Notice of Readiness to be handed to Agents Representative, to be presented to Receivers in accordance with Charter Party terms and conditions.

Priority: Vessels on liner voyages normally obtain discharge priority over charter vessels.

Turn: Subject to 'priority' above vessels are worked on a "first come first served" basis.

Customs: Bonded and other goods will be placed under Customs seal, on arrival in port. Allowances for consumption during stay in port will be provided. See "Customs Circular".

Dangerous and Inflammable Cargo: Details of all dangerous cargo on board should be included in the vessels ETA message, as this information has to be furnished to the Port Authority.

General Regulations: No liquor may be brought ashore or sold to shore staff. Ship's crews, except the Master, Chief Officer and Chief Engineer are not permitted ashore. Other normal port regulations apply.

Air Services: There are daily flights from Salalah to Seeb Airport, Muscat where international flight connections can be arranged.

Ballast: Oily ballast must not be discharged within 50 miles of "Oman" coastline.

Banks: International banking facilities are available in Salalah. The local currency is the Rial Omani which is subdivided into one thousand baizas.

Bunkers and Lubricants: Limited supplies of gas oil and lubricants can be obtained for vessels berthed alongside only. No IFO available and no facilities for supply at anchorage.

Buoys: There are no mooring buoys for vessels.

Cranes: Usage of the 4 quayside cranes is optional.

Heavy Lifts: Heavy Lifts must be discharged with the vessel's own gear and should be taken delivery of direct from vessel. Lifts in excess of 30 tons should not be accepted without prior reference to Agent.

Hotels: There is one hotel of international standard and accommodation is normally not difficult to obtain. There are also 3 other private hotels.

Labour: All labour is supplied to vessels by the Port Authority, and the vessel must provide drinking water and toilet facilities for the labour, while discharging operations are in progress.

Launch Hire: Port Launch can be hired for visiting vessels at anchor.

Laundry Facilities: Laundry facilities can be arranged by Agent, but minimum delivery time 48 hours.

Lighterage: Barge of 350 tons capacity available at the port.

Passport and Visas: All persons entering Oman require a valid Passport and Visa/Non Objection Certificate. Omani visas can be obtained from a Sultanate of Oman Embassy subject to receipt by that office of a Non Objection Certificate from Sultanate of Oman. Non Objection Certificate can be obtained from Agent in Muscat, these usually take between 3 and 4 weeks to obtain.

Post and Telegraphs: Airmail letters usually take 5 to 7 days from Europe and 7/8 days from the USA. There are telephone, telegraph and telex links with all parts of the world via satellite.

Reefer Cargo: There are 28 units of reefer container facilities available. For larger consignments, arrangements are usually made to discharge as late as possible in the evening, enabling delivery to consignees transport with least possible lapse of time from cargo leaving ship's cool room to reaching consignees freezers.

Refuse/Rat Guard: Vessels should not dump refuse at the anchorage. There are compulsory shore facilities for the landing of refuse for vessels which have berthed, at a charge of RO 2.250 per day. Rat guards are compulsory.

Roads: Road connections with outside territories are available but are usable by non-Arab nationals only with permission from the Royal Oman Police.

Ship Chandler: Available.

Spare Parts: Can be forwarded by air to Salalah. Agent should be advised in advanced of Airway Bill No. and flight details, etc.

Stores and Provisions: Most provisions and fresh vegetables are available. Engine stores can be arranged if prior notice is given.

Surveyors: there are no classification surveyors at Salalah. Lloyd's Surveyors are available at Muscat, but costs for their services at Salalah, to be borne by the vessel.

Transhipment: Transhipment of cargo is allowed.

Water: Fresh water is available to vessels which can berth. No facilities available for the supply of water at anchorage.

Notice: Royal Oman Police – Customs Department, Dhofar Customs Salalah to all Shipping Agents

Customs Control – Port Raysut: With effect from 1st May, 1980, under instructions from Director General of Customs.

stituted On arrival in the Port, Ship's Master will be required to produce to the Customs boarding Officer the following documents:–

1. A copy of the cargo manifest.
2. A declaration made by members of the crew stating the dutiable goods in their possession.
3. A list, signed by the Captain, of the dutiable Ship's stores on Board.

Vessels will no longer be permitted to have free use of their stores (Tobacco goods, Alchohol etc) whilst in the confines of the Port.

On arrival in Port, an allowance will be given by the Customs Boarding Officer and the surplus stores will then be placed under Customs seal. The allowance will be:

1. 200 cigarettes or 50 cigars or 250 gms. tobacco.
2. One bottle (1 litre) alcoholic spirit.
3. One bottle (1 litre) wine.
4. 24 cans beer, and
5. Various used personal effects such as radios, cameras, etc.

Should a vessel remain in Port for more than 4 days, an issue of stores will be given upon request being made to the Customs Authorities. It is hoped that in the initial stages of these changes any inconvenience will be kept to a minimum and your co-operation is requested.

May I suggest that you acquaint any vessels you visit in the near future with details of the forthcoming changes.

Shipping Agents are reminded that their representatives should not board a vessel in advance of the Customs Boarding Officer.

Signed: Officer in Charge, Dhofar Customs.

AUTHORITY: Directorate General of Ports and Maritime Affairs – Port Raysut, P.O.Box 369, Salalah, Sultanate of Oman. *Tel:* 219295. *Telex:* 7640 (M Raysut On). *FAX:* 219279. *Contact:* Port Manager, Port Raysut.

AGENT: Gulf Agency Co. (Oman) L.L.C., P.O.Box 1346, Salalah 211, Sultanate of Oman. Tel: 294662, 290405, after hours 292003. Telex: 7647 ("GAC SAL ON"). Cables: "Confidence", Muscat or Salalah.

PORT SULTAN QABOOS (Mutrah):

23.37 N. 58.34 E. **(See Plan)**

Muscat has ceased to be a commercial port and instead vessels now call at Port Sultan Qaboos.

PORT LIMITS: From the level of HWS at a point near Ras Kab at Long. 58° 33′ 12″ E. on a line due North to Lat. 23° 41′ N.;

Thence due East to Long. 58° 35′ 36″ E.;

Thence due South to Jazirat Muscat;

Thence in a generally Southerly direction by the line of H.W.S. on the Western side of Jazirat Muscat to Pinnacle Rock;

The anchorage area between coast line of Oman and Lat. 23° 53′ N. and between the Longitudes 58° 10′ E. and 58° 38.5′ E.

Thence South-West to the West to the Easternmost point of Siraz al Gharbiyah

Thence by the line of H.W.S. to the point of commencement.

DOCUMENTS:

Required on Arrival:

Clearance from Last Port.

4 copies Crew List.

1 copy Maritime Health Declaration form with ports of call from commencement of voyage.

3 copies of Crew Personal Declaration List.

3 copies of Ship's Bonded Stores List.

2 copies Vaccination List.

6 copies Passenger List.

3 copies In-Transit Passenger List.

To be Airmailed in Advance:

3 copies Hatch List, and other details of vessel (Flag, Draft, LOA, Last Port, Next Port, G.R.T., etc.).

3 Hazardous Cargo Lists.

3 Heavy Lift Lists.

5 copies Cargo Stowage Plans.

9 copies Cargo Manifest.

1 copy Freight Manifest.

2 copies Bills of Lading.

Customs and Immigration Requirements for Vessels Entering and Leaving Ports: 24 hours' advance notice, Cargo Manifest, Passenger List and Crew Personal Declaration. No cargo vessel is allowed to discharge until health, customs and immigration formalities are completed.

APPROACH: Port Sultan Qaboos has a very open approach with a deep water anchorage. The hilly coast is radar conspicuous. Lights on Fahal Is., Jazirat Muscat and the Breakwater make night navigation fairly simple. There is no appreciable current once inside the bay.

Shipmasters calling at Port Sultan Qaboos are advised that vessels navigating under their charge and approaching Port Sultan Qaboos whether from East or West must first pass 5 cables Eastwards of Mina-al-Fahal Fairway Buoy before making final approach to Port Sultan Qaboos Anchorage or Breakwater Head for picking up Pilot.

Prohibited Entry Area: The whole of the bay of Khawr Muscat, South of a line between Ras Kalbuh and Ras Muscat.

PILOTAGE: Compulsory for vessels other than exempted vessels as defined in Port Rules and Regulations and Port Tariff.

Arrival notice requirements: ETA, LOA, draft 72 hours, 48 hours, 24 hours before arrival. Berthing and unberthing – 24 hours a day.

ANCHORAGES: Vessels should anchor Northwest of the breakwater within the area enclosed by the following perimeters:

1. A line extending 060° (T) from Port Sultan Qaboos Breakwater.
2. The Westernmost extremity of Port Sultan Qaboos.
3. A line extending 325° (T) from Muscat Forward Leading Light after crossing perimeter (1).

All areas described above are clearly defined in the current edition Admiralty Chart No. 2869.

Temporary Anchorage West of Fahal: See "Laying-Up" before "Shipmaster's Reports".

Prohibited Anchorage Area: The area enclosed by the following perimeters is a Prohibited Anchorage Area:

North Boundary:	The parallel of Lat. 23° 41′ 00″ N.
East Boundary:	The meridian of Long. 58° 36′ 00″ E.
South Boundary:	Sultanate of Oman coastline.
West Boundary:	Muscat Forward Leading Light bearing 145° (T) from seaward and Port Sultan Qaboos Breakwater Light bearing 240° (T) from seaward.

Severe penalties are imposed for vessels infringing the above prohibited area.

MAX. SIZE: Depth of entrance channel 10.4 m. at LAT. Also see "Berthing".

Present maximum length allowed is 785 ft.

Berths No. 1 and 2: Multi-purpose/Container Terminal by end of 1994. After port development completed, depth 13.0 m.

Berths No. 4 and 5: Container Terminal, present depth 9.1 m. After development and hydrographic survey, depth data will be announced.

For your guidance only, vessels with good engines and extra manoeuvrability powers of bow thrust and stern thrust will be given clearance.

HEALTH: International Health Regulations apply. Pratique may be granted by the Port Health on receipt of following information:

1. All Cholera vaccinations valid.
2. Valid Derat Certificate.
3. No sickness on board.
4. No sickness at last Port.
5. Country of origin and date of departure.

Port Health normally board alongside and issue Health Form. They require:

1 Crew List.

1 Vaccination List.

Valid Derat Certificate.

Last Port Clearance.

RADIO: Port Control can be contacted on VHF Channel 16 or 14. 24 hour operation, including Fridays and holidays.

Notice of Arrival: Vessels should advise their Agents of their ETA, LOA and draft. The Agents will in turn inform Port Services Corporation SAOG. ETA from Masters of vessels should also be cabled direct to Harbour Master, Port Services Corporation SAOG (Telex No. 5233 ON) 72, 48 and 24 hours in advance of arrival.

Three hours prior to arrival off the port, vessels should contact Port Sultan Qaboos Signal Station on VHF Channel 16 and working Channel 14 and request berthing instructions, etc.

VHF: Muscat Radio on Channels 1, 3, 4, 16, 26 and 27. Coast Guard on Channel 11.

Also see "Radio"

BERTHING: There are 9 deep water berths, 3 coaster berths and 1 berth for launches. The berths vary in length from 76 m. to 228 m. and are sheltered by a breakwater on one side and cliffs on the other.

Supporting the berths are 4 modern transit sheds facing broad uncluttered aprons, providing both covered and open storage space and 1×6,000 sq.m. shed for C.F.S. Two berths make up a container terminal front directly on to a large container yard ideally suited for rapid discharge of containers. The container yard has an area of 4.7 hectares, holding 1,044 dry and 192 reefer ground slots, plus a new area has been converted as multi-purpose berth and a 14 hectares storage area reclaimed from the sea holding 1,206 ground slots.

Berth	*Length*		*Depth at LAT*		*Max. draft*	
No.	(ft.)	(m.)	(ft.)	(m.)	(ft.)	
1	900	275	34	10.4	34	Multi-purpose
2	600	183	34	10.4	34	
3	750	228	32	9.8	31.5	
4	600	183	30	9.1	30	Container Terminal
5	600	183	30	9.1	30	
6	650	198	30	9.1	30	
7	600	183	30	9.1	29.5	
8	600	183	30	9.1	28	
9	400	122	13	4.0	13	
10	600	183	13	4.0	13	
11	600	183	30	9.1	30	
12	250	76	10	3.1	10	
13	500	152	7	2.2	7	

Berths No. 1 and 2, 4 and 5, 7 and 8 are "in line", therefore larger vessels can occupy part of a second berth when necessary.

Area of the Port:

Transit sheds – total area 27,000 sq.m.

Open storage area – total area 143,000 sq.m.

Cold Storage Warehouse (Oman National Fisheries Co.): Capacity 3,000 tons with cold rooms, blast freezing and ice making facilities. The Port provides reefer cargo facilities.

Fish processing plant belonging to Oman National Fisheries Co. (S.A.O.G.) is in the immediate vicinity of the Port.

TUGS: Four tugs available, including two Voith Schneider propulsion tugs of 3,000 h.p. each. Tugs normally join vessel 1 mile N.N.W. off breakwater light.

SPECIAL HANDLING FACILITIES: *Grain Silos:* Capacity 120,000 tons supplied by quayside underground conveyor from the berth. In conjunction, 2 km. from the port, a highly automated mill produces various flour and animal feed products for local consumption and export.

Containers: The port has modern container and Ro-Ro handling equipment, including a Mafi-type roll trailer system, backed up by 9×35 ton forklifts, and 2×25 ton Ro-Ro forklifts.

The container terminal is equipped with 2 highly sophisticated 35 ton gantry cranes supported by 9 heavy duty forklifts and 7 empty container handlers. The terminal has a large storage yard to accommodate about 1,236 slots and 1,206 slots at Shutaify Bay. As from July 1994, the container handling system will change to chaises system, backed by 8 rubber tyre gantry cranes (transtainers) in the yard, and 2 additional new quayside gantry cranes.

Containers are also accepted from self-sufficient vessels. Containers are transported by trailers and handled in stacking area by mobile crane or forklift truck. Reliance Mercury Tractors of 160 b.h.p. with Mafi-type trailers are available for Ro/Ro vessels. LASH and BACAT service.

Bitumen Storage: Capacity 2,000 tons.

CRANES:
2×41 tons gantry cranes.
2×35 tons gantry cranes.
8 RIG transtainers.
27 Prime movers.
35 trailers.
1×150 tons (rated) mobile crane.
1×70 tons (rated) mobile crane.
12 mobile cranes, capacity 3 tons – 25 tons.
9 forklift trucks (container handling), capacity 35 tons – 42 tons.
55 forklift trucks, capacity 3 tons – 7 tons.
7 forklift trucks, capacity 7.5 tons (empty container handling).
12 tractors
Ro-Ro
39 trailers
2 Ro-Ro forklifts, capacity 25 tons.

STEVEDORES: Large pool of deligent, disciplined and skilled labour is employed by the Port. Requests for labour for vessels should be made daily by Agents to Director General (Operations and Traffic).

Landing rates: Bagged cargo 500/700 tons (3 gangs, 16 hours); general cargo 400/600 tons (3 gangs, 16 hours); timber 700/1,000 tons (3 gangs, 16 hours) during fair weather provided no congestion on jetty and if cargo stowed in more than 3 hatches.

Working Hours – Conventional:

1st Shift	Saturday-Wednesday:	0700 – 1500 hrs. (with half-hour break, which will be adjusted amongst the gangs).
	Thursday:	0700 – 1400 hrs. (without any break).
2nd Shift	Saturday-Wednesday:	1500 – 2300 hrs. (with half-hour break, which will be adjusted amongst the gangs). 2300 – 0300 hrs. (overtime if required).
	Thursday:	1400 – 0100 hrs. (overtime if required).
	Fridays/Public Holidays:	Overtime (subject to availability of labour).

Container Terminal:

Day Shift	Saturday-Wednesday:	0700 – 1500 hrs. (with half-hour break, which will be adjusted amongst the gangs). 1500 – 1900 hrs. (overtime if required).
	Thursday:	0700 – 1400 hrs. (without any break). 1400 – 1900 hrs. (overtime if required).
Night Shift	Saturday-Thursday:	2000 – 0600 hrs. (with half-hour break, which will be adjusted amongst the gangs).
	Fridays/Public Holidays:	Overtime (subject to the confirmed arrival of container vessels).

Deliveries of Cargo – Conventional:

1st Shift	Saturday-Wednesday:	0700 – 1500 hrs.
2nd Shift		1500 – 2300 hrs.
1st Shift	Thursday:	0700 – 1400 hrs.
2nd Shift	Thursday:	1400 – 2100 (overtime if required).
	Fridays/Public Holidays:	Overtime (subject to availability of labour).

Container Terminal:

Saturday-Thursday: 0700 hrs. – 1900 hrs.

Note: Direct delivery of cargo will be as usual, on request.

MEDICAL: Port Clinic and Government hospitals available.

FRESH WATER: Available at all berths and at the anchorage, 72 hours' notice required for barge supply (capacity 250 tons).

FUEL: Diesel oil available at Berths No. 6, 7, 8, 9, 10 and 11 at the anchorage by bunker barge of 250 tons capacity owned by the port, 72 hours' notice required. Other fuels can be supplied by arrangement with Owner's Agent. Marine lubricating oils available.

AIRPORT: Seeb International Airport is located 45 km. from the Port.

GANGWAY/DECK WATCHMEN: To be provided by vessel.

Security: Port Security is undertaken by the Royal Oman Police. Port Services Corporation provides watchmen on 24 hour patrol. Watchmen can also be supplied to vessels.

REPATRIATION: Is now possible if Masters give full particulars of the seamen to be repatriated by telegram at least 72 hours earlier. This also applies to embarking crew members. The 72 hours' notice is not enough in the case of a Friday, or any other holiday which falls in between.

Also see "Laying-Up".

CUSTOMS ALLOWANCES: Vessels will no longer be permitted to have free use of their stores (Tobacco goods, Alcohol, etc.) whilst in the confines of the port.

On arrival in port, an allowance will be given by the Customs Boarding Officer and the surplus stores will then be placed under Customs Seal.

The allowance will be:
200 cigarettes or 50 cigars or 250 gm. tobacco.
One bottle (1 litre) alcoholic spirit.
One bottle (1 litre) wine.
24 cans beer.
Various used personal effects such as radios, cameras, etc.

Should a vessel remain in port for more than 4 days, an issue of stores will be given upon request being made to the Customs Authorities.

These Regulations also apply to ships at the Anchorage.

SERVICES: Fresh and dry provisions from chandler. Limited availability of ship and engine room stores. Radio, radar and electrical repairs possible.

SHORE LEAVE: Crews are only allowed ashore between the hours of 0700 – 1900.

GARBAGE DISPOSAL: Skips are provided at berth. Collection of garbage is done every day by Muscat cleaning contractor appointed by Port Services.

Port Services to be contacted for any service required from the cleaning contractor. Charge: R.O.3.0/per skip per day.

WASTE OIL DISPOSAL: Not provided by port, but road tankers can be arranged through Agents on request.

SEAMAN'S CLUBS: None.

CURRENCY: Baizas 0.388 = U.S.$ 1.00.

GENERAL:

Ships Arriving at Port Sultan Qaboos:

Ships may approach Port Sultan Qaboos without a Pilot as far as the perimeter of the limits of the port. No ship shall proceed through the entrance to or from the port without the permission of the President or the Harbour Master.

All ships, other than expected ships, shall be under the pilotage of a Pilot appointed by the Port Authority when underway within the limits of the port. The ship shall have rigged and ready for use a pilot ladder of modern pattern, in good repair and provided with reliable manropes. Such pilot ladder shall be well illuminated between dusk and daybreak.

No ship shall enter or leave Port Sultan Qaboos unless her draft marks are correctly shown and clearly visible.

Every ship shall at all times when entering, navigating in or leaving the port have both anchors ready for immediate use.

Ships proceeding to berth at the port premises shall have no list and shall be trimmed upright.

Before entering Port Sultan Qaboos every ship shall hoist the following flags: The ship's signal letters. The "Q" flag, International Code, unless the Port Health Officer has previously given Pratique. The "H" flag, International Code, denoting that a Pilot is on board. The "I" flag, International Code, if the ship is carrying passengers.

Until Pratique has been granted communication between ship and shore shall be made by: Flag hoist, using the International Code of Signals, Morse Code, by signal light, or radio-telephone on approved frequencies, which will be promulgated for use for such purpose.

Conduct: The Master or Owner of every ship shall be held directly responsible for the proper conduct and behaviour of the crew of such ship while in the port and for strict observance of the laws of the Sultanate of Oman, particularly those laws concerning the sale, transference or consumption of any narcotic or alcoholic or intoxicating drink of any kind.

Flags: Every merchant ship within Port Sultan Qaboos between the hours of sunrise and sunset shall fly her national flag and the national flag of the Sultanate of Oman.

Repairs: The Master of any ship wishing to carry out major engine repairs or adjustments, which will affect the mobility of the ship whilst in the port shall make written application to the Harbour Master to do so. The Harbour Master shall give his permission or otherwise in writing.

Safety of Ships and Persons: The Master of every ship anchored or moored in the port or berthed at the port premises shall, unless the Harbour Master concede some relaxation in this port rule, at all times retain on board sufficient crew to work or move the ship.

Ships Berthed or Anchored Within Port Limits: No person shall swim from any ship berthed at the port premises.

No person shall make fast or anchor any country craft or boat of any kind at any quay, wharf, pier or landing place or at any steps provided thereat in the port premises except with the prior permission of the Harbour Master.

Pollution: It shall be unlawful for any person, or corporation to deposit, place, or discharge into the waterways of Port Sultan Qaboos, either directly or through private or public sewers, any sanitary sewage, butcher's offal, garbage, dead animals, gaseous liquid or solid matter, oil, gasoline, residium of gas, calcium chloride, trade waste, tar or refuse or any other matter, which is capable of producing floating matter or scum on the surface of the water, sediment in the bottom of the waterways, or the odours and gases of putrefaction.

Vessels discharging ballast, oil from bilges or tanks or solid matter into the waters of Port Sultan Qaboos will be reported to the Pollution Control Officer and be subject to a fine of R.O. 500.00 for each offence, imposed by and payable to Port Sultan Qaboos. Such fine shall be in addition to any other fines, which may be levied for the same offence by the Sultanate of Oman.

Hygiene: The port provides garbage bins at various points for use by vessels. The use of these bins is compulsory and a charge for this facility will be made whilst the vessel is alongside.

Rat Guards: The use of rat guards on all mooring ropes and wires is compulsory whilst vessels are alongside. Vessels without their own rat guards will be required to hire from the Corporation.

Ships Leaving Port Sultan Qaboos: Port Rules applying to ships arriving at Port Sultan Qaboos apply equally, in so far as they are relevant, to ships leaving the port.

Merchant ships shall fly the "P" flag International Code, for 24 hours before sailing from the port.

The Port Authority may refuse to give the Master of any ship Outward Clearance, unless and until all charges due in respect of the ship and any penalties, to which the ship or her Master are due, have been paid or secured to the satisfaction of the Port Authority.

Transhipment: Due to the advantageous geographical location of Port Sultan Qaboos outside the War Zone it provides very appropriate transhipment base for most shipping companies. Many international shipping lines are using Port Sultan Qaboos as a base for their transhipment operation to the Arabian Gulf, Karachi and the Indian sub-continent.

Working of Cargo at Port Sultan Qaboos: Ships may be permitted to discharge or load cargo in the anchorage if a berth is not available at the port premises or if in the opinion of the Port Authority the ship's cargo is more suitable for handling to or from barges or lighters.

The Master or Owner of any ship shall be held responsible for any loss or damage arising from careless or improper slinging of cargo onboard such ship.

Any cargo, cargo-handling equipment or ship's gear, which may be dropped overboard shall at once be reported by the Master or appointed Officer to the Port Authority and shall be immediately recovered by the ship's personnel if it is reasonably possible so to do. Failing this, it may be recovered by the Port Authority at the ship's expense. The Port Authority shall not be responsible for any damage to or loss of cargo, equipment or gear so recovered.

The Master of every ship discharging or loading cargo in the port, whether at anchor or berthed alongside shall provide drinking water for all cargo handling labour and all other persons appointed and directed to be on board such ship in connection with the discharge or loading of cargo.

If the labour or transport allocated or engaged for the purpose of landing, loading or transhipping cargo from or to any ship is not fullycontinuously employed by reason of a fault or action attributable to such ship, the expenses incurred thereby shall be paid by such ship.

In the event of any accumulation of cargo or goods upon the quay or jetty or in a lighter for any cause that may appear reasonable to them, the Port Authority may require the ship discharging such cargo or goods to suspend or reduce the rate of discharge of such cargo or goods.

The Port Authority may refuse to permit cargo to be landed from any ship until suitable shed or open storage space or other accommodation is or becomes available for such cargo.

Delivery of cargo or goods shall not be deemed to have been made to the Port Authority until such cargo or goods have been brought into the port premises and until the Port Authority accepted delivery of such cargo or goods and have issued an official receipt therefor to the Master of the ship discharging such cargo or goods or to the ship's Agent or to any other person duly authorised so to do, conveying such cargo or goods to the port premises.

LAYING-UP: Vessels can anchor within the limit Lat. 23° 53′ N. and the coastline of Oman and between the parallels of Long. 58° 10′ E. and 58° 28.5′ E.

Port dues of 1.0 Baisa per g.r.t. per period of 1 month or part thereof is payable for lay-up anchorage at West of Fahal. Vessels on arrival should be cleared through Immigration, Customs and Health by an appointed Agent. Distance being such that Agents have to commute by hired tugboat (minimum 4 hours required for a trip and back). Launch service permitted only during daylight hours and weather permitting.

No vessel shall temporarily lay-up in the "Waiting Anchorage" for more than 3 months without the permission of the Harbour Master, Port Sultan Qaboos.

No vessel shall temporarily lay-up without its full complement of crew and sufficient power to handle any emergency.

Crew Change: While anchored within Omani Territorial Waters crew changes can be effected through Port Sultan Qaboos only and not from any other neighbouring country. Vessels are also not permitted to lower lifeboat or allow unauthorised boats to lie alongside.

For purpose of effecting crew changes Passport or Seaman's Book particulars should be furnished in advance for obtaining Visas for crew to join/leave vessel. Issuance of Visas will take minimum 7-10 days. Particulars required are as follows:

Full Name.
Nationality.
Passport or Seaman's Book Number.
Date of Issue.
Date of Expiry.

And only after obtaining confirmation that Visas are obtained can crew be sent to Muscat failing which they will not be permitted to land and will be deported at Owner's expense.

Mail/spare parts/provisions, etc. can be delivered to vessels at anchorage. Invoices should be attached along with spare parts arriving by air and consigned to: Master (vessel's name), c/o Agent, "Ship's Spares in Transit".

DEVELOPMENTS: *Planned Project of Comprehensive Development:* To upgrade the facilities to meet increasing cargo movements based on demand forecasts upto the year 1995 and beyond, comprehensive development of Port Sultan Qaboos was initiated through feasibility study performed by a consultant in 1988. The recommendations of the study were again reviewed by consultants in 1990.

The proposed development involves the following:

(i) Conversion of Berths No. 1 and 2 into container berths and providing 2 additional gantry cranes.
(ii) Dredging of entrance channel and basin to the depth of 13 m. chart datum.
(iii) Reclamation and development of Shutaify Bay, adjacent to Port Sultan Qaboos, by using the dredged material and blasting of mountains to provide storage area of 15 hectares for containers.
(iv) Procurement of rubber tyred gantry cranes, tractors, trailers,low-mast forklifts, etc.
(v) Re-allocation of available space by dismantling/re-erecting sheds, container freight station, terminal offices and other buildings, including cold storage for upgrading the existing facilities.
(vi) Develop entry/exit gates, provide additional road communication within Port Sultan Qaboos, etc.

Procurement of the following additional cargo handling equipment for which tenders will be invited soon is envisaged in the project:

2 container gantry cranes.
8 rubber tyred gantry cranes.
27 tractors.
19 trailers.
11 low mast forklifts.

The entire project is likely to be completed by end of 1994.

SHIPMASTER'S REPORT: January 1986.

Vessel awaiting orders: Authorities require vessel to drift or anchor at least 12 miles from coast. Good anchorage 12.5 miles to N.W. of the port using 7 shackles.

SHIPMASTER'S REPORT: December 1988.

Pilotage: Inward pilot boards from a tug. The pilot ladder must be 2.0 m. from the water. According to local Regulations, the vessel's freeboard should not be greater than 8.0 m. if pilot ladder only is to be utilised. If the freeboard is greater than 8.0 m., the gangway should be rigged in conjunction with the pilot ladder.

Shore Leave: If ship's crew are granted permission to leave the port area (this permission is not automatically given) in order to visit the town or city, this permission is restricted to the hours between 0700 hrs. – 1900 hrs. These times are strictly enforced.

Each individual officer and rating must present himself, with passport, at the Immigration/Police desk in the Port Quarantine Office, for written approval to issue a pass. This initial authority can cover more than one person.

The Authority for Approval is then taken to a Marine Police Station at the main gate, where the Authority of Approval and passports are handed over and the crew member is given a Royal Oman Police Coast Guard Pass to complete. This pass is retained by the crew member until the day of departure and must be stamped and signed at the main gate, each day before leaving the port. All passports are retained by the police until such time as an individual makes his final return to the vessel from ashore, at which time the pass is exchanged for the passport.

If individuals are unable to leave the vessel to exchange their passports for the Gate Passes the agent will usually do this on their behalf.

The wearing of shorts of any description (i.e. showing bare legs) is not permitted outside the port enclosure.

Smoking is not permitted in any area where cargo is worked either ashore or aboard vessels.

Crew members are not permitted to wear "Seaman's Knives" whilst on deck.

Stevedores: The official cargo working hours are 0700 hrs. – 1500 hrs., with a 1 hour break for a meal, not always taken, and 1500 hrs. – 2300 hrs.

Telephones: Not placed on board.

Departure Pilotage: The Pilot requires 2 hours Notice of Departure via the vessel's agent. Vessel is to call pilot 30 minutes prior to departure on VHF Channel 16/14. At this time the pilot will wish to know the vessel's Outward Customs Clearance Number.

AUTHORITY: Port Services Corporation S.A.O.G., P.O.Box 133, Muscat, Sultanate of Oman. *Tel:* 714000-6. *Telex:* 5203 Opsco On, 5233 Mqaboos On. *FAX:* 714007. *Contact:* Awad Bin Salim Al Shanfari, The President. NOTES

Please also advise Shipping Guides Ltd.

Pakistan

KARACHI: 24.49 N. 66.59 E.

DOCUMENTS:

Required Before Vessel's Arrival:

2 copies Freight Manifest.
2 sets Bills of Lading.
3 copies Stowage Plan.
2 copies Passenger Manifest.
3 copies Cargo Manifest.
3 copies Hatch Lists.
1 copy Exception Lists.
6 copies Passenger Lists.

With Vessel:

2 copies Cargo Manifest.
Last Port Clearance Certificate.
6 copies each Passenger List, disembarking and transit.
2 copies List of favour parcels.

The following special Pakistan forms are brought on board by Agent for completion on arrival:

2 Customs Arrival Reports.
2 Opium and Dangerous Cargo Certificates.
2 Ship's Currency Lists.
6 Deck Cargo Certificates.
1 Company's Arrival Report.
1 Ship's Crew Advance (if required).
1 Expiry date of Ship's Certificate.
1 Same Bottom or In Transit Cargo.
1 Water Indent.
10 Crew Lists.
3 Stores Lists.
3 Crew Effects Lists (including cameras, radios, etc.)
7 Cargo Gear Information Forms.

Metric weights and measures to be used on Particulars of Cargo, Tonnage Certificates, Stevedoring Bills, Manifests and Bills of Lading.

Immigration:

(i) Masters should ensure that all crew are in possession of valid health documents.
(ii) All nationals, other than those holding British Passports, require visas for entry into Pakistan. Ship's crew can enter and leave Pakistan on Seaman's documents for purposes of joining vessel and/or on repatriation.
(iii) Seaman Books/Passports are required to be collected from Immigration authorities prior to sailing of vessel on surrender of the shore passes.
(iv) Taiwan and Israel nationals are not allowed shore leave facilities.

PILOTAGE: Pilotage is compulsory for vessels of 200 n.r.t. and upwards. Pilot boards at the Outer Anchorage.

Vessels are piloted day and night, subject to tides, length and draft, to berths lying on the East and West of the fairway, which is 4.27 miles long. Pilotage distance is about 5 to 6 miles.

ANCHORAGES: Outer Anchorage where ships await berth safe except during the S.W. monsoon from mid-May to September. During monsoon no anchorage is recommended. Vessels should anchor a safe distance outside the breakwater within Lighthouse bearings 045° and 025°. Depth of water at the anchorage is about 9 fathoms.

RESTRICTIONS: Datum depth is 30 ft. Dry cargo vessels with a draft in excess of 32 ft. are not permitted to enter Karachi due to dredged depths at berths.

Berthing can be done at any time during day/night, except vessels over 560 ft. in length having bridge aft, which are permitted in daylight only.

Berthing of tankers at Oil Berths is done during daylight only.

MAX. SIZE:	*Length*	*Draft*
Bulk carriers and general cargo (dry cargo)	945 ft.	32 ft.
Bulk oil tankers, white oil products	750 ft.	35 ft.
Bulk oil tankers, black oils	750 ft.	35 ft.
New Oil Pier No. 4, crude oil	850 ft.	39 ft.

HEALTH: The Port Health Authorities give automatic clearance on receipt of a "clean" standard quarantine message and this will be conveyed by the Pilot. However, ships from Yellow Fever areas must be cleared during daylight hours by the Port Health Officer on arrival alongside. On sailing to ports outside India and Pakistan, a medical inspection takes place on the day before sailing. It is, in theory, necessary for a member of the crew to be present at this inspection, although usually the inspection is only a formality. All vessels required obtain Immigration Clearance on arrival.

All vessels which have touched any port or ports between Port Sudan and Durban, on the East Coast of Africa, including these ports, are considered "suspected" vessels on account of Yellow Fever and Jigger and may not have communication with the shore till cleared at berth by the Port Health Officer, who attends only between sunrise and sunset, except in special circumstances. The incubation period for Yellow Fever under the rules is given as 9 days, but vessels arriving later than 9 days are still not free from quarantine because there is no incubation period for Jigger.

RADIO/VHF: Port Authorities equipped with VHF radio-telephone, calling Channel 16, working Channel 12. Control Station call sign "Manora Pilot Control".

Vessels should establish radio contact with control station as soon as they are within VHF range.

Use of Channel 12 is restricted to the following: Ships while entering harbour are to maintain watch on Channel 12 as soon as Pilot boards. Ships in harbour scheduled to sail are to keep a listening watch half an hour before sailing till their clearance from the port.

"Intercommunication with the ships, other than Pilot Control, at Outer Anchorage or ships in harbour on Channels 12 and 16 is strictly prohibited. The Manora Pilot Control Station is equipped with multi-channel VHF Radio Telephone sets which are operating on International Maritime Channels 8, 9, 11, 12 and 16 subject to above restrictions."

Vessel's Registration: All vessels calling at Karachi Port, upon arrival at anchorage are required to make immediate contact with Port Control (Manora Station) by Aldis Lamp and notify arrival time, vessel's name, flag, cargo, and position. Also vessel is to make contact on VHF repeating all of the above information, declaring readiness of vessel to berth, and the time noted by Port Control by light is taken as the time of arrival off the Port, both for berthing turn and also serving NOR (in case of Charter Vessel) to receivers/charterers.

TUGS: There are 8 diesel tugs owned by Port Trust. Four tugs have bollard pull varying from 10 tons to 18 tons, 2 tugs have 27 tons bollard pull and 2 (Voith Schneider) tugs have 35 tons bollard pull.

Towage inside the harbour is rendered by Port Trust on signal from Pilot. Towage is not provided outside the breakwater except in very special circumstances at the discretion of the Deputy Conservator, subject to weather permitting and availability of tugs on special terms and conditions.

BERTHING: There are 17 berths at East Wharves, total quayage 8,622 ft. Berth Nos. 1 to 17 are on a concrete quay wall of the latest type. All berths are rail-served. Berth lengths vary from 470 ft. to 550 ft. Available depths vary from 28 ft. to 32 ft. There are 13 berths at West Wharf and their length varies from 550 ft. to 700 ft. Depths available vary from 30 ft. to 32 ft.

There are 3 Bulk Oil Piers which can accommodate tankers of overall length between 525 ft. and 850 ft. Also see "Tankers".

Moorings: Three moorings of 700 ft. each and one LASH mooring of 1,000 ft. have been laid and are commissioned for accommodating the vessels of sizes between 600 ft. and 850 ft. respectively.

Bulk Wheat: Discharged by bulk evacuators at Berth No. 17.

Passenger Vessels: Berth No. 24.

Fertiliser: Discharge at Berth No. 22. Bagging machines installed.

Vessels with LOA 900 ft. and over berth at Nos. 16 and 17.

CRANES: All berths except Nos. 5, 6, 7, 17, 25, 26, 27 and 28 are equipped with electric cranes. Floating crane available up to 100 tons S.W.L.

STEVEDORES: Working Hours: Monday through Thursday and Saturday, day shift: 0730 – 1130 and 1230 – 1630 hrs. On Fridays day shift: 0730 – 1230 and 1400 – 1630 hrs. Mondays through Saturday, night shift: 1900 – 2300 and 2330 – 0330 hrs. next day.

Overtime periods: 0330 – 0630, 1130 – 1230, 1630 – 1830 hrs.

TANKERS: Mineral oils discharged at the Bulk Oil Pier, 3 berths, and at West Wharf Berth No. 20. Heavy grades may be discharged at the steamer wharves but dangerous petroleum only at the Oil Piers.

Vegetable oils are handled at both the terminals mentioned above.

Oil Pier No. 4: Max. LOA 850 ft., max. beam 130 ft., max. loaded draft 39 ft., max. size 75,000 d.w.t. and 95,000 tons, max. gross displacement.

New Oil Pier No. 5: Report: July 1994.

When fully operational, OP-5 will be capable of accommodating vessels with the following parameters:

Maximum draft	35 ft. (10.67 m.)
LOA	850 ft. (259.08 m.)
Beam	130 ft. (39.62 m.)
Deadweight	65,000 tonnes

In May 1994, a deep draft tanker carrying 62,745 tonnes of gas oil docked, drawing about 35 ft.

OP-5 has a main jetty platform, housed with 9 loading arms, manually operated by quick universal connect couplers. The terminal can handle 8 million tons of liquid bulk cargo a year, consisting of all major products being imported into and exported from Pakistan.

Apart from loading arms which connect direct to ship's manifolds, there are various pipelines which have jetty manifolds for connection with ship's manifolds by using flexible hoses. The loading arms and other manifolds on the jetty are connected to shore manifolds, which provide connections to all common users.

The pipelines from jetty platform to shore are given below:

No.	*Diameter* (in.)	*Product*	*Connection*
1	30	Crude oil	via loading arm.
1	20	Furnace oil	via loading arm
1	18	Deballasting	via loading arm
1	12	Lubes and additives	via hose connection/ piggable
3	8	(SS) chemicals of all types	via hose connection/ piggable
1	24	Naphtha	via hose connection
1	20	POL white products	via loading arm
1	24	Gas/diesel oil	via loading arm
4	24	Molasses	via loading arm interchangeable/piggable
6	16	Edible oil/fats/tallow	via loading arm interchangeable/piggable
2	8	Bunker supply to vessel	via hose connection
1	8	Fresh water to vessel	via hose connection

Slop Reception Facilities: Available at Oil Pier No. 4 only.

Also see "Berthing".

FRESH WATER: Available alongside by pipeline at all shipping berths. Also available alongside and at outer anchorage by private barges.

At times due to water shortage vessels are required to arrive with sufficient water for duration of stay.

FUEL: In addition to coal, 3 grades of petroleum are available – furnace oil, light diesel oil and high speed diesel oil. Furnace oil can be supplied by pipeline at all berths. Light diesel only at Berth Nos. 1 to 4. Large quantities can be supplied by pipeline at the Bulk Oil Pier only.

DRY DOCKS: The Karachi Shipyard and Engineering Works Ltd. have 2 dry docks. One of 609 ft. × 90 ft. × 18 ft. above keel blocks which can accommodate vessels up to 25,000 d.w.t. and the second dry dock measuring 560 ft. × 80 ft. × 16 ft. above keel blocks and can dock vessels up to 18,000 d.w.t. Prior booking of the dry dock is essential.

REPAIRS: Repairs can be carried out at the anchorage except in the monsoon season. 2 ship repair jetties are available in the port. In addition, Karachi Shipyard and Engineering Works Ltd. provide all kinds of repair and ship-building facilities.

Immobilisation of Main Engine: Requests for immobilisation must be included by the Master of the vessel in their arrival messages so that the permission of the Deputy Conservator, Karachi Port Trust may be obtained for the period required to carry out maintenance and necessary repairs. Oil tankers are not permitted to immobilise engines, particularly at oil pier berths.

CARGO GEAR: *Cargo Gear Certificate:* The Dock Labour Safety Officer (Government Department) is very strict and requires all gear/ derricks/ winches and accessories to have valid certificates. In the event their certificates are out of date, delays will be incurred before cargo discharge operations are allowed to commence.

AIRPORT: Karachi Airport, 7 miles from city. International connections to all parts of the world.

TIME: GMT plus 5 hours all year round.

HOLIDAYS: Eid-ul-Azha; Muharram; Republic Day (23rd March); Eid e Miland un Nabi; Independence Day (14th August) Defence of Pakistan Day (6th September); Jamat-ul-Wida; Eid-ul-Fitr; Anniversary of Death of Quaid-e-Azam; Allama/Iqbal Day (9th November); Christmas Day and Birthday of Qaid-e-Azam (25th December).

SHIP SUPPLY SERVICE: There are privately operated services for transportation of personnel and some essential stores, etc., for ships lying at Outer Anchorage to inside the port. These services are of a small scale and carried out by small launches, only during good weather. In bad weather such as monsoon season these services are suspended.

SERVICES: Brokers, Stevedores Bagging and Lighterage Contractor. Contact: Seatrade Private Ltd., 71 Al-Badar, Kokan Muslim Housing Society, Hayder Ali Road, Karachi. Tel: (9221) 4931362/4937370/ 4933501. Mobile telephone 0321-331002, 0321-223322. Fax: (9221) 4938007. Telex: 24839 Cargo Pk. Cables: Cargohook Karachi.

SHORE LEAVE: Shore passes are granted by Immigration Authorities when they first go on board and must be returned on departure of the vessel. These passes permit entry/exit to the docks until 2200 hrs.

Indian crew are not allowed ashore except in emergency. An Immigration Policeman will remain on board in port where Indian crew are carried. This policeman will ask for some sort of accommodation. This need only be given if it does not cause inconvenience to the ship.

GARBAGE DISPOSAL: This service is privately arranged by ship's agent through licenced contractors.

WASTE OIL DISPOSAL: This service is privately arranged by ship's agent through licenced contractors. The waste oil is collected in drums and removed outside the port area for disposal.

SEAMAN'S CLUBS: None.

CURRENCY: Pakistani Rupee (P.Rp.).

GENERAL: The Karachi Port Authorities advise that in order to avoid delays to ships requiring abreast berths for working cargo, it has been decided not to berth more than 1 vessel for receiving supplies of fresh water and bunkers. Ships due to call at Karachi are therefore *recommended to arrive with sufficient fresh water and bunkers to last for 2 or 3 weeks from the date of arrival at the Outer Anchorage.*

DEVELOPMENTS: Modern integrated container terminal for third generation vessels to be built. Initially 2×900 ft. berths with depth of 42 ft. are planned.

One container crane already commissioned at Berth No. 23.

4 general cargo berths completed and commissioned at Juna Bunder (Berth Nos. 25 – 28), depth alongside 30 ft.

2 modern sea-going pilot boats under construction.

SHIPMASTER'S REPORT: January 1980: Survey Vessel.

Approaches/Pilotage: There were a large number of ships anchored in the approaches – even in the "Prohibited Anchorage Zone".

Port Control System: Contact must first be made by Aldis lamp, and a vessel's arrival is not acknowledged until this has been done. On our first visit we had some trouble as the actual Signal Station is not at the position marked "Signal Station" but at Lat. 24° 48.8′ N., Long. 66° 57.0′ E. marked F.S. on the Chart. I was politely informed on the VHF that unless I contacted them by Morse lamp, they would not be able to speak to me on the VHF.

The Pilot boards 2 miles S.W. of the breakwater – if vessel comes closer it will be sent out again. Manropes are required for the ladder.

Quarantine: The normal message should be sent 24 hours before arrival. A doctor boarded on arrival alongside, and required Vaccination Lists, together with the Maritime Declaration.

Port Officials: Immigration/Docks/Customs: A vessel bound for Karachi would do well to get a set of local forms from the Agent in advance.

The main Customs Declaration is very detailed.

Ship's own Personal Effect Declaration Lists showing, in addition, beer, watches, cameras, and foreign currency, were accepted.

At least 12 copies of the Crew List on arrival are required, plus 2 Sailing Crew Lists.

When all other Officials have finished, the Customs seal up the Bond.

Special Warning: Pakistan is a Muslim country. Notices should be displayed warning that it is prohibited:

1. To use cameras.
2. Give alcohol to locals.
3. Change money without obtaining a proper receipt.

Berths: We called at Karachi twice, and each time, in spite of a very full port, Agent managed to obtain a berth alongside.

Explosives: Loaded ex-barge, whilst alongside. No problems. Shore stevedore gang used.

Bunkers: Ex-road wagon, well organised and quick.

Water: Ex-quay. Good rate. Good quality.

Lub Oils: Received 2 drums of Stern Tube Oil, which we had not been able to obtain elsewhere.

Divers: The services of a diver were used to clear fouling from engine cooling water intakes.

Ship Chandler: Only fresh vegetables and some chickens were purchased, but these were good quality.

Laundry: Good and fast.

Watchmen: Supplied by shipwrights. With the rise and fall of tide in Karachi, the gangway needed constant attention. Nothing was reported stolen.

Repatriation: Possible.

SHIPMASTER'S REPORT: May 1989.

Documents: When the Pilot boards the ship he will provide the Master with two forms to be filled in. The total cargo on deck is requested, as well as the cargo on deck for Karachi and the cargo on deck in transit, both in measurement tons.

Agent:

2 copies Crew List.
5 forms stating the amount of deck cargo.
1 form stating: (a) Number of passengers.
(b) Amount of ship's foreign currency.
(c) Number of favour parcels on board.
(d) No opium nor dangerous drugs on board.

2 forms stating: Names of the officers, together with their Seaman's Book number, their Certificate of Competency number and date and place of issue.

2 copies Arrival Reports.

2 copies Vessel Stores Lists, stating amount of explosives and rockets.

The Agent will provide all the forms.

Customs:

5 copies Crew List.

2 copies Personal Effects List, showing crew's currency and ship's currency.

2 copies Stores List (make sure the figures are correct as the Customs Officer will actually count everything in the bonded stores).

All cameras should be placed in the bonded stores.

Quarantine:

1 copy Maritime Declaration of Health.
1 copy Crew List.

Immigration:

5 copies Crew List.

VHF: When making a VHF telephone call through Karachi Radio, they require permission from the Agent, so have the telephone number of the Agent ready.

Shore Leave: Shore passes are obligatory and shore leave is prohibited between 2200 hrs. and 0600 hrs.

OPERATOR'S REPORT: September 1991.

Karachi has 2 oil berths presently in use, these being Bulk Oil Pier No. 1 (OP 1) and Bulk Oil Pier No. 4 (OP 4). The former Bulk Oil Piers No. 2 and 3 are being demolished and a new berth Bulk Oil Pier No. 5 (OP 5) will be constructed on the site.

The oil berths are situated within the entrance to Karachi Port on the East Breakwater. The entrance channel is narrow and movement of shipping is controlled to avoid vessels passing in the channel. There is a turning basin off the oil berths. The oil berths are adjacent to the Keamari District of Karachi which contains the petro-chemical and vegetable oil storage tank installations.

Berthing of tankers to the berths is restricted by tidal conditions, and larger tankers, as well as those with bridge aft, are berthed during daylight hours only.

Bulk Oil Pier No. 1: This berth is the Southern finger of the 'T' Jetty formed with OP 2, which in turn was connected to OP 3. The face of the jetty is parallel to the main channel.

The maximum size of vessel that the jetty can accommodate is 35,000 d.w.t. or 50,000 tons loaded displacement, and this figure is strictly adhered to. There is a draft limitation of 35 ft. (10.66 m.).

The jetty is used for the handling of white oil products, base oils, chemicals as well as vegetable oils. It was reported that there are 67 lines on the jetty to accommodate all products for the various receivers in the area.

It was not possible to determine the exact number of lines available for white oil products (although reported to be 12), as there are common lines, as well as company owned lines. In addition there are lines dedicated to an oil product as well as lines that are water flushed between grades. Flexible tanker rail hoses are provided by the installation receiving the product, and it was reported that all are stored on the jetty head.

The condition of the jetty was very poor, with a noticeable 'sagging' of the jetty at the jetty head. The pipelines as seen were in a very poor condition and with apparent little order to pipe siting on the support racks. Welded repairs over a flange were noted as well as corrosion and leakage from others.

The jetty is owned by the Karachi Port Trust, but the lines are owned by the various receivers.

Bulk Oil Pier No. 4: This pier is adjacent to and situated South of OP 1. It is a 'T' jetty configuration designed to handle larger vessels carrying crude oil and petroleum products only.

The maximum size vessel permitted on the jetty is 75,000 d.w.t. or 95,000 gross displacement tons. As for OP 1 this figure is strictly adhered to. The maximum permissible draft is 39 ft. (11.9 m.).

The jetty is equipped with Chicksan arms for connection to the ship's manifold, and in addition to the crude oil lines it has a 20 in. fuel oil line and a 20 in. white oil line. The white oil line has a 'pigging' facility and can be used for multigrade white products.

This jetty was in apparent good condition, although the fendering required attention.

Bulk Oil Pier No. 5: Construction of this berth has commenced and it is estimated that it will take 2 years to complete.

A crane barge was working in the vicinity of the oil jetties OP 2 and OP 3. It was reported that this was the commencement of the work by a contracting company in removing the remains of the old oil jetties prior to constructing OP 5 on the same location.

It was not ascertained whether the new jetty would be an extension of OP 1, and hence utilise the lines at the jetty head of OP 1, or if it would be a completely new 'T' jetty having new lines directly to the shore. It was reported that initially it would be provided with lines for petroleum products only, but other users would be permitted to construct lines for their own facilities.

The jetty is being designed to accommodate vessels of up to 75,000 d.w.t. but the draft restriction was not specified.

Berth Utilisation: Both berths in Karachi are suffering from over utilisation, and as a result essential maintenance is not being carried out.

OP 1: Berth used for such wide ranging products as vegetable oils, chemicals, base oils as well as black and white petroleum products is in constant use. The Deputy Conservator of the Karachi Port Trust advised that priority is given to tankers carrying petroleum products. Tankers carrying vegetable oils were suffering berthing delays of up to 14 days.

The delays to vessels on OP 1 are a result of the restrictions in the reception facilities in the tank farms, as well as poor standard of vessels that use the port. Both contributing to the extended port turnaround times. This was particularly true of the vegetable oil trade. Similarly, delays are compounded by the restrictions imposed by the port authority in timing the berthing of vessels to suit the tide as well as daylight hours.

The Port Authority were very concerned about the utilisation of the berth and delays to vessels, but believed that the commissioning of OP 5 would alleviate the problem.

The oil companies were less concerned about the congestion caused by the number of vessels using OP 1 as they relied on their influence to ensure that petroleum oil tankers had priority. Despite this, petroleum product tankers do suffer delays awaiting berth, up to 5 days being recorded.

OP 4: This berth does not suffer congestion to the same degree, although berth occupancy was believed to be in excess of 60%, and may be as high as 80%. The Port Authority advised that there are approximately 7 crude oil imports per month through the jetty, and allowing a 2 day turnaround per vessel this gives approximately 50% occupancy. Added to that are the imports of fuel oil and gasoil, which gives credence to an estimated occupancy rate approaching 80%.

This berth is the sole import facility for crude oil, and crude oil tankers have priority in the berthing programme. It was noted that product vessels have discharged part cargoes at both Berth OP 4 and then moved to OP 1.

Pipelines: The oil pipeline network in both cases lead from the jetty heads to the shoreline on pipe racks mounted on the jetties. From the end of the jetty they pass beneath the road at OP 1 (the jetty end of OP 4 was not seen) and from there run down open pipe trenches alongside roads into the network of tankfarms in the Keamari District.

AUTHORITY: Karachi Port Trust, (P.O.Box 4725), Eduljee Dinshaw Road, Karachi 2. *Tel:* 201787. *Telex:* 2739 Kpt Pk. *Cables:* Portrust, Karachi. *FAX:* 2415567. *Contact:* Commodore S.N.A. Shah, General Manager – Operations.

AGENT: G.A.C. Shipping (Pvt.) Pakistan Ltd., 4th Floor, K.D.L.B. Building, 58 West Wharf Road, Karachi, Pakistan. Tel: (92-21) 2310704, 2310648. After hours: (92-321) 335039. Telex: 28809 GAC Pk. Fax: (92-21) 2310714. Cables: Gacshipping, Karachi.

PORT MUHAMMAD BIN QASIM: 24.46 N. 67.21 E.

(See Plan)

PORT LIMITS: Seaward Boundaries: Area enclosed within the following geographical co-ordinates:

(a)	Lat. 24° 35′ N.	Long. 67° 00′ E.
(b)	Lat. 24° 35′ N.	Long. 67° 02′ E.
(c)	Lat. 24° 32′ N.	Long. 67° 00′ E.
(d)	Lat. 24° 32′ N.	Long. 67° 02′ E.

DOCUMENTS:

1. Freight Manifest (4 copies).
2. Bills of Lading (4 copies).
3. Stowage Plan (4 copies).
4. Passenger Manifest (4 copies).
5. Cargo Manifest (4 copies).
6. Hatch Lists (4 copies).
7. Exception Lists (4 copies).
8. Passenger Lists (4 copies).

With vessel:

9. Cargo Manifest (4 copies).
10. Last Port Clearance Certificate (4 copies).
11. Passenger List, Disembarking and Transit (4 copies).
12. List of Favour Parcels (4 copies).

The following special Pakistan forms are brought on board by Agent for completion on arrival:

13. Customs Arrival Reports (4 copies).
14. Opium and Dangerous Cargo Certificate (4 copies).
15. Ship's Currency Lists (4 copies).
16. Deck Cargo Certificates (4 copies).
17. Company's Arrival Report (4 copies).
18. Ship's Crew Advance, (if required), (4 copies).
19. Expiry date of Ship's Certificates (4 copies).
20. Bottom or In-Transit Cargo (4 copies).
21. Crew Lists (4 copies).
22. Stores Lists (4 copies).
23. Property Lists (4 copies).
24. Cargo Gear Information Forms (4 copies).
25. Advance Arrival Note (4 copies).
26. Application to enter port (4 copies).
27. Permission to enter and berth (4 copies).
28. Ship's Documents Check List (4 copies).
29. Officers – Certificates of Competency.
    Ratings – Proficiency Certificates.

PILOTAGE: Compulsory. Pilot boards about 1.5 miles S.W. of Fairway Buoy. Give 48 hours' notice to Port Qasim Control by cable and later contact them by VHF Channel 16, about 6 hours before arrival.

ANCHORAGES: Outer anchorage is bounded by limits mentioned in "Port Limits".

Holding ground is good but during S.W. monsoon heavy swell persists and it is advisable to anchor in Western part of the outer anchorage and pay out extra cable.

RESTRICTIONS: Channel is well marked but night pilotage is not provided at present. Vessels must dock before dark and sail out in sufficient time to clear the channel before dark.

MAX. SIZE:

Periods	*Berths*	*Max. Draft* (m.)	*Max. LOA* (m.)	*Max. Beam* (m.)
(i) Monsoon				
15th May to 15th September	IOC Berth	10.5	201.0	25.3
	MW Berths			
	1 to 4	10.0	183.0	25.0
	5 to 7	10.5	183.0	25.0
(ii) Non-Monsoon				
16th September to 14th May	IOC Berth	12.0	225.0	32.0
	MW Berths			
	1 to 4	10.0	183.0	25.0
	5 to 7	11.0	183.0	25.0

Note: 1. Draft is subject to change monthly and without any notice.
2. Minor deviation permissible at the discretion of Port Qasim Authority on submission of Indemnity.
3. Maximum permissible draft/dimensions are promulgated through Notices to Mariner. Normally ships up to 50,000 d.w.t. can be handled during non-monsoon period and 25,000 d.w.t. during monsoon period.

Also see "Shipmaster's Report" dated October 1985.

Notice:

Notice to Mariners: 173(T) – Port Muhammed Bin Qasim – Permissible Draft from 1st October 1988 – 31st December 1988.

Maximum permissible drafts for ships calling at Port Muhammed Bin Qasim between 1st October 1988 and 31st December 1988 will be as follows:-

Period	*Berths*	*Max. Draft* (m.)	*Max. LOA* (m.)	*Max. Beam* (m.)
1st October 1988 to 31st December 1988.	IOC Berth	11.0	225.0	32.2
	M.W. Berth 1	9.5	183.0	25.0
	M.W. Berth 2 – 4	10.0	183.0	25.0
	M.W. Berth 5 – 7	10.5	183.0	25.0

2. Ships on arrival at outer anchorage to intimate drafts and specification of the vessel.
3. Cancel PNM No. 150(T)/88 on 30th September 1988.

WARNING: In July 1994, the maximum draft declared by the Port Authority was 9.5 m.

All Owners and Operators should check draft limitation with Port Authority before vessels are loaded.

HEALTH: Pratique granted only after berthing.

RADIO: Send all messages via Karachi Radio, call sign ASK,MF 500 kHz, 466 kHz, 484 kHz, HF 8644 kHz, 1302 kHz, 3024 kHz, 8361.2 kHz, 12541.8 kHz and 8658 kHz.

Karachi Radio can also be contacted on Radio telephony on following frequencies:

Channel	*MHz*
16	158.80 VHF
10	156.50 VHF
07	160.95 VHF
02	160.70 VHF
05	160.85 VHF

VHF: Contact should be made with Port Qasim Control as soon as within VHF range and ETA transmitted. Berthing and boarding of Pilot instructions are given on VHF by Port Qasim Control on following Channel/Frequencies:

Channel	*MHz*
16	156.800 VHF
10	156.500 VHF

Round the clock watch on above Channels is maintained.

RADAR: No port radar service available.

TUGS: 3 tugs namely "Chara", "Gharo" and "Kadiro" assist vessels and they join the vessel about 1.5 miles off the jetty. Each tug 3,500 b.h.p., bollard pull approximately 40 tons. In addition two light tugs each 1,000 b.h.p. are available. Ship's lines are usually used.

BERTHING: There are 7 multi-purpose berths for handling general and bulk cargo along a 1,400 m. long wharf for ships drawing 10.0 m. – 11.0 m. draft. Iron Ore and Coal Berth 279 m. long is used for importing bulk raw material for PAK Steel for ships drawing 10.0 m. – 12.0 m. draft. Also see maximum permissible draft information under "Max. Size".

Two permanent fixed mooring systems were established during the period from November 1989 to May 1991 for 25,000 d.w.t. and 50,000 d.w.t. vessels respectively within the Port limits. A fixed mooring for 25,000 d.w.t. vessels was established near Iron Ore and Coal Berth in the Gharo Creek on the Western bank of the Channel, and the other fixed mooring for 50,000 d.w.t. vessels was established in the Channel at Phitti Creek opposite Buoys No. "P-2" and "P-4".

CRANES: 2 grab gantry cranes with a capacity to discharge about 500 t.p.h. each at Iron Ore and Coal Berth. Mobile cranes with lifting capacity up to 35 tons are available and can be provided upon request.

BULK CARGO FACILITIES: *Grain:* 2 automatic unloading and bagging plants with a total capacity of 4,000 tons per day are available.

Also see "Berthing" and "Cranes".

SPECIALISED CARGO HANDLING FACILITIES: None at present.

BRIDGES: None.

STEVEDORES: 3 cargo handling companies appointed by the Port work as terminal operators for handling the cargo at multipurpose berths. Average handling rate per hook hour for following commodities is:

Rice	:	43.0 tonnes
Pig Iron	:	38.0 tonnes
Cotton	:	12.0 tonnes
General Cargo	:	10.0 tonnes
Wheat	:	25 – 50 tonnes

12 hours' advance notice to be served in order to arrange gangs.

Working Hours: 0800 – 1600, 1600 – 2400, 2400 – 0800.

MEDICAL: Medical centre with first aid facilities is available round the clock in the port area. Adequate medical facilities and hospitals are available in Karachi, (the nearest one within 20 km.). Medical facilities can be arranged by the Ship's Agent on Master's request.

TANKERS: Marginal Wharf No. 1 temporarily converted into tanker berth. Diameter of discharge line 18 in. Rate of discharge 1,000 t.p.h.

Also see "Operator's Report" dated September 1991.

DENSITY: Average density of water is 1025.

FRESH WATER: Available through shore connection and by barge.

FUEL: Arranged by Agent and available through local oil companies, delivered by oil barge or road tankers.

FIRE PRECAUTIONS: Normal fire precautions, fire hydrants are located at Marginal Wharf and IOC Berth. Port has two fire tenders (water and foam) plus 5 fire trailers (heavy duty) with water and foam to fight fires.

CONSULS: Available at Karachi.

REPAIRS: All types of repairs can be carried out through private contractors of which prior notice, with details, must be given to Agent in good time. Repairs are subject to Port Authority's permission, keeping in view availability of berth, other safety precautions, prevailing rules, etc.

DRY DOCKS: None at Port Qasim, however, available at Karachi Port.

SURVEYORS: Cargo Surveyors available, services if required can be arranged through local Agents; also Classification Surveyors of various societies such as Lloyd's Register, American Bureau, Bureau Veritas, etc., have local offices in Karachi.

GANGWAY/DECK WATCHMEN: Advisable, but at Master's discretion.

HATCHES: Opening and closing by ship's crew.

CUSTOMS ALLOWANCES: 200 cigarettes and 6 ozs. of spirits (for non-Muslims only) per week.

CARGO GEAR: Heavy lift cargo and normal loading/discharging carried out by ship's gear. Mobile cranes available for hire on request.

REPATRIATION: Possible. Advisable to give prior notice to Agents to complete formalities.

AIRPORT: Karachi International Airport is approximately 30 km. from Port Qasim and is served by regular national and international airlines.

TIME: GMT plus 5 hours throughout the year.

HOLIDAYS: As declared by Government of Pakistan. Cargo work can be arranged on holidays except on Eid Ul Fitr, Eid Ul Azha, Muharram, Defence Day of Pakistan (6th September), Eid Milad Un Nabi, Independence Day (14th August), Pakistan Day (23rd March), Jumatul Vida, Quaid-E-Azam Birthday (25th December), Quaid-E-Azam Death Anniversary (11th September) and any other days so declared by Government of Pakistan or Port Qasim Authority.

POLICE/FIRE/AMBULANCE: Can be contacted through Port's PABX telephone exchange 719700 (10 lines).

EMERGENCY CO-ORDINATION CENTRE: Pakistan Navy frequencies – 500 and 8364 kHz. on HF and 282 and 243 MHz. on VHF.

TELEPHONES: Facilities for installing telephones on board available on request, telephone calls can also be made from telephones in the C.H.C. offices, located on jetties.

SERVICES: All facilities such as compass adjusting, radio and radar repairs, tank cleaning, etc., can be arranged through respective shipping Agents.

BANKS: 4 local banks are available.

STORING: See "Prelims".

1. Yes.
2. Yes, except when disallowed for safety reasons.
3. Yes.
4. Yes.
5. Prevailing Customs rules are to be observed.
6. Can be arranged through ship's Agent.

SHORE LEAVE: Allowed. Shore passes issued by Immigration Authority to ship's crew.

IDENTIFICATION CARDS:. Only valid shore passes used as identification.

GARBAGE DISPOSAL: The Port does not provide any garbage disposal service. However, if the vessel desires to dispose of garbage, the same may be communicated to the vessel's local Agent, who will arrange disposal with private labour after approval from the Port Authority.

WASTE OIL DISPOSAL: At present there is no service provided.

SEAMAN'S CLUBS: None.

CURRENCY: Rupee.

REGULATIONS: As per Gazette of Pakistan notification No. S.R.O. 42 (KE)/81 dated: 17th October, 1981 – Part IV (Safety Regulations).

DELAYS: None.

DEVELOPMENTS: Establishment of integrated Container Terminal and Oil Tanker Terminal are in hand.

SHIPMASTER'S REPORT: September 1982 (Updated 1988).

Port Limits: A vessel is considered to be an arrived ship when she is in the anchorage marked on the chart West of Fairway Buoy. Vessel must register with Port Bin Qasim Control as an arrived ship and only when same confirmed by the port can the Master tender notice of readiness. Pilot boards about 1 nautical mile off Fairway Buoy.

Documents: Same as for Karachi. Keep extra Crew Lists at hand. Private property declaration must contain serial numbers, make, etc., wherever possible. All currency must be declared.

Pilotage: Give 48 hours' and 24 hours' notice to Bin Qasim Pilot Control by cable and later contact them by VHF Channel 16, about 12 hours before arrival.

Anchorage: Outer anchorage is in area bounded by positions A, B, C and D. See "Port Limits".

Holding ground is good but during S.W. monsoons heavy swell persists and it is advisable to anchor near Western proximity and pay out extra cable.

Restrictions: No night pilotage. Vessel must dock before dark and similarly must sail out in sufficient time to clear the channel before dark. Draft restrictions as per tide. Heavy swell/tide runs across the channel at S.W. monsoons.

Max. Size: Presently max. size is 50,000 d.w.t. but main limiting factor is the depth of water in the channel which varies with the tide.

Health: Pratique granted only after berthing. Radio Pratique not possible.

Radio: Send all messages via Karachi Radio. Contact should be made with Bin Qasim Port Control as soon as within VHF range on Channel 16 and ETA given. Berthing instructions are given on VHF.

Tugs: Port has 3 tugs and they join the vessel about 1.5 miles from the jetty. Usually ship's lines are used for tugs.

Berthing: Iron ore and coal jetty owned by Pakistan Steel Mills for importing coal and iron ore for the steel plant. Jetty is 900 ft. long, 12.80 m. depth alongside.

Cranes: Two cranes with grabs each weighing about 11 tons. Together they can discharge bulk coal at approximately 15,000 tonnes per day of 24 hours. Cargo is carried directly to the steel mill by conveyor belt – about 2 miles long.

Bridges: None.

Stevedores: Pakistan Steel Mills personnel.

Medical: No facilities exist in Bin Qasim. All medical facilities in Karachi.

Density: Salt water.

Fresh Water: Available by shore connection. Costs about Pak. Rs.45/– per ton.

Fuel: Not available.

Consuls: At Karachi.

Repairs: Only very minor repairs possible by workshops from Karachi. Prior notice with details must be given to Agents in good time.

Dry Docks: None.

Surveyors: Available from Karachi.

Gangway/Deck Watchmen: Not necessary.

Hatches: Opening/closing carried out by crew.

Customs Allowances: One bottle spirits and 200 cigarettes per week. Before arrival Master must collect all cameras to be placed under seal by Customs.

Cargo Gear: Shore gear is used.

Repatriation: Possible. Advisable to give prior notice to Agents to complete all formalities prior arrival.

Airport: Karachi International airport is about 35 miles from Port Bin Qasim.

Time: GMT plus 5 hours throughout the year.

Telephone: Available on jetty only.

Shore Leave: Shore passes issued by Immigration and crew allowed ashore.

Delays: Usually none.

General: All the information above is for Iron Ore and Coal Jetty at Port Bin Qasim only.

I called at this port on 25th with 27,100 tonnes of coal in bulk from Newcastle (N.S.W.) and sailed out on 27th.

I was asked to arrive at a maximum draft of 10.00 m. For deep drafted vessels Pilot normally boards about 2.5 hours before HW so that vessel docks alongside at HW. The channel (about 25 miles) is dredged to 11.30 m., while alongside berth and in the turning basin off the berth the depth is 12.80 m. However, in my case the Pilot boarded about 2 hours after HW and by the time vessel tied up alongside it was almost LW. All along the channel I noticed that there was at least 2 m. clearance under the keel at all times.

SHIPMASTER'S REPORT: October 1985.

Max. Size: In October the following maximum drafts and sizes were permitted for vessels calling at Port Bin Qasim:

Pakistan Steel Mills Wharf (IOC berth): Draft 11 m., LOA 223 m., beam 31.1 m.

Main Wharf, Berths No. 1 to 4: Draft 10 m., LOA 183 m., beam 25 m.

Main Wharf, Berths No. 5 to 7: Draft 11 m., LOA 183 m., beam 25 m.

Health: All crew to have valid cholera vaccination.

Shore Leave: All crew should be back on board by 2200 hrs.

Provisions: Delivery by trucks alongside main wharf but extra charges for transportation as everything has to come from Karachi, 75 km. away.

Fresh Water: Available by shore connection at all berths. Delivery rate 15 to 20 t.p.h. Good quality.

Bulk Cargo Handling (Main Wharf): Bulk grain discharged by vacuators into bagging machines. No elevators.

General Cargo Handling: All cargo normally handled by ship's gear. Some mobile cranes available in emergency, SWL not known. Containers not normally handled at Bin Qasim. This port is mainly used for large consigments of bulk grains and bagged rice for export.

Stevedores: Normally round-the-clock basis with only 3 meal breaks. Loading rate of bagged rice: Up to 1,000 tonnes per hatch per 24 hours.

SHIPMASTER'S REPORT: March 1986.
Chart: No. 1284.
Pilotage: Compulsory. Pilot boards in vicinity of Fairway Buoy 24° 33′ N., 67° 03′ E. and likes to disembark from outgoing vessels between Buoys No. 7 and 8. Vessels handled during daylight hours only. Pilot boat "Lahoot" steel motor boat, equipped with Radar and VHF. Distance from Fairway Buoy to berths 24 miles.
Anchorage: In vicinity of Fairway Buoy or Quarantine Anchorage close by, good holding ground.
Drafts: For iron ore and coal berths (4 berths), 10 m. For multi-purpose berths (7 berths), 11 m.
Radio: Karachi Radio ASK (a very busy station). Port Qasim Control maintains continuous VHF watch on Channel 16, working 10, can be contacted from a great distance and advises vessels for berthing. It is a very helpful station.
Tugs: There are 3 well equipped sea going tugs of 3,500 b.h.p. with a bollard pull of 40 tons to assist vessels for berthing/unberthing. Ship's lines always used.
Cranes: Loading/discharging carried out by ship's gear. Mobile cranes of 24 tons lifting capacity available at extra cost.
Specialised Cargo Handling Facilities: Bulk unloading facilities for iron ore and coal. Mechanised bulk wheat handling facilities.
Bunkering: Available through local oil companies, delivered ex-barge or truck, ample time required for stemming bunkers.
Classification: Surveyors for Classification and cargo available (from Karachi).
Airport: Karachi International Airport situated approx. 30 km. from Port Qasim.
Consuls: None at Port Qasim, all reside in Karachi approx. 65 km.
Fresh Water: Available at all berths. Good quality. Supplied through Port Authorities on very short notice. Stevedores usually take care of it.
Tides: Approximately 1 m.
Future Development: Future dredging of the Channel in order to take vessels fully laden up to 75,000 d.w.t. Also plans for navigating the channel day and night.
Rice Cargoes: Vessels loading rice (which is the main export cargo in this port) are inspected at Fairway Buoy prior to berthing by a total of five Government Inspectors who issue relevant Certificate.

OPERATOR'S REPORT: September 1991.

Port Qasim opened in 1980 with imports of bulk iron ore and coal at the IOC berth (iron ore and coal). The port was fully commissioned with an additional 7 dry cargo berths by 1983.

There is no tanker berth in the port, but a temporary discharge facility has been built at one of the dry cargo berths (Marginal Wharf No. 1) in order to supply fuel oil to the local power station.

Plans have been drawn up for the construction of a tanker jetty and it was reported that preliminary tests have been made to assess the suitability of the proposed site. It is not anticipated that the jetty will be available prior to 1995.

Marginal Wharf No. 1: The temporary tanker discharge facility has been constructed at the most Easterly of the dry cargo wharves, Berth No. 1. This has been achieved by laying an 18 in. line to the power station tank farm, a distance of approximately 2.5 km., and the construction of a manifold arrangement on the jetty. Flexible hoses are used for connection to the vessel's manifold, although it was not determined how many are used.

It was reported that the designed receiving rate was in excess of 1,000 tonnes/hr., but the average rate achieved by vessels has been in the region of 600 tonnes/hr. This gives a turnaround time for optimum size tankers of 2 days.

The maximum size of vessel permitted is 30,000 d.w.t., but draft is the major limitation and at present is restricted to 9.5 m. on the berth. Dredging is being carried out and in time the maximum permissible draft will be 10.0 m.

Berthing is carried out in daylight only.

Tankers have priority at this berth and there is therefore very little time awaiting berth.

Oil Storage Facilities: The sole receiver of the fuel oil in Port Qasim is K.E.S.C. (Karachi Electricity Supply Company) for use in the power station.

The tank farm consists of 6 tanks, 4 of which were reported to be of approximately 20,000 – 25,000 tonnes capacity, and 2 smaller tanks which were used as settling tanks. Of the larger tanks it was reported that only 2 have been calibrated and as a result only these are used for receipt of imported oil.

The oil at present is being supplied in 20,000 tonne parcels, approximately 5 shipments per month, this being the optimum size tanker that can enter the port.

Oil Berth Information:
Berth: Marginal Wharf No. 1.

Berth Operator and/or User:	Port Qasim Authority/Karachi Electricity Supply Company (K.E.S.C.).
Maximum LOA:	183 m.
Max. beam:	Not specified.
Maximum Summer deadweight or displacement:	30,000 d.w.t. (approx.).
Max. draft:	9.5 m. (temporary) will be dredged to 10.0 m.
Minimum depth at berth:	10.5 m.
Underkeel clearance required: ..	1.0 m.
Water density:	1025
Night berthing/unberthing:	Not possible.
Bunkers:	By truck or barge.
Fresh water:	From jetty or by barge.
Limitations on freeboard:	None.
Type of berth:	General cargo wharf.
Minimum size of vessel:	No restriction.
Lighterage:	Not possible.
Grades of cargo handles:	Fuel oil.
Dirty ballast facilities:	None.
Tugs:	3×3,500 h.p. (40 tonne bollard pull).
Airdraft restrictions caused by bridges, etc.:	None.
Pilot boarding areas:	Off the Fairway Buoy in good weather. Off Buddo Island in heavy swell.

AUTHORITY: Port Qasim Authority, P.O. Port Bin Qasim, Karachi-48, Pakistan. *Tel:* 7737601-20. *Telex:* 2633 Qasim Pk. *Cables:* Port Qaty. *Contact:* Rear Admiral Syed Wasi Haider H.I., Chairman. Captain Khalid Ali Khan, General Manager (Operations); Captain M. Mohsin Khan, Deputy Conservator. Captain N. A. Shamsi, Harbour Master.

AGENT: See "Karachi".

NOTES

Please also advise Shipping Guides Ltd.

Republic of Panama

AGUADULCE: 08.14 N. 80.30 W. (See Plan)

LOCATION: The Port of Aguadulce is located 7 km. from the coast on the Palo Blanco inlet in the Bay of Parita, Pacific coast of Panama.

The port consists of a single quay 70 m. long used mainly for shipment of bulk sugar and molasses to ports in the U.S..

DOCUMENTS: The same documents are required and the same procedures are followed as for Almirante, Puerto Armuelles and Bahia Las Minas. See "Almirante".

PILOTAGE: There is an official pilotage service with Pilots available 24 hours a day. Pilotage is compulsory for all vessels greater than 150 g.r.t., wishing to enter and leave the port. To request the Pilot, the vessel's Agent must make arrangements with the National Port Authority. The pilot station is in Aguadulce. Vessels can also ask for Pilot by calling the National Port Authority on Channel 12 VHF.

ANCHORAGE: Vessels must await the Pilot at the anchorage located near the sea buoy which is painted white with a white light flashing every 2 seconds. Position of the buoy is Lat. 08° 13′ N., Long. 80° 25′ W. Depth of water at the buoy's location is 7.4 m. (22 ft.), average low tide, and in places 1 mile to the N.E. it increases to 10.14 m. (30 ft.).

RESTRICTIONS: The port is on an inlet. It has an access channel 13 km. long from the sea buoy. The width of the channel varies from 200 m. in its widest part down to 75 m. at its narrowest.

The channel is marked by buoys which are lit and coming from the sea the buoys on the starboard side are red with even numbers and red lights and those on the port side are green with odd numbers and green lights.

The port is tidal and vessels may only enter and leave on the high tide. At low water the access channel has depths of less than 1 m. (3 ft.) for which reason the maximum draft permitted in the port is 6.4 m. (19 ft.) with 6.1 m. (18 ft.) high tides. Furthermore, inside the inlet there are fairly sharp curves which do not permit entry of vessels greater than 100 m. overall length and 2,500 g.r.t. In the future it is planned to dredge the access channel to provide minimum depths of 3.3 m. (10 ft.) at low tide.

HEALTH: As with other Panamanian ports, the doctor boards the vessel with the other officials of the reception commission. If there is any infectious illness on board, the Master must communicate this to the Port Authority by VHF Channel 12.

VHF: The Port Authority has VHF equipment. Call on Channel 12. It operates throughout the day.

TUGS: None available.

BERTHING: There is a main quay 70 m. long with an average low water depth of 3 3 m. (10 ft.) There is also a small quay 30 m. long which is not used. The quay has a fender system. There is also a dolphin type quay for shipment of molasses with depth 2.7 m., and a 50 m. berth for sugar carriers, which has automatic sugar loaders, depth 2.7 m.

No loading equipment available. Unloading must be by ship's gear. There are belt type sugar loaders. Mobile cranes can be contracted in Aguadulce.

There are two storage tanks for molasses of 1,000,000 and 500,000 gallons capacity respectively.

There are also open air facilities for storage of general cargo.

STEVEDORES: Loading and unloading work is carried out by a gang of local workmen contracted by the ship's Agent, via their representative.

MEDICAL: Hospital in Aguadulce.

DENSITY: Approximately 0.9971 gm./c.c. at 85°F.

FRESH WATER: Available via tanker lorries. No supply via pipes.

FUEL: Not available.

CONSULS: None; the nearest are in Panama City, 193 km. from the port by road.

REPAIRS: No facilities.

CUSTOMS ALLOWANCES: See "Almirante".

PROVISIONS: Supplies available in Aguadulce.

COMMUNICATIONS: The port is connected to the town of Aguadulce by an asphalt highway 5 km. long.

Aguadulce is connected to Panama City by road, the capital being 193 km. distant.

REPATRIATION: There are Immigration Officials on the quay. Repatriation presents no difficulty.

AIRPORT: At Aguadulce there is a small airstrip. There is an airport at Chitre 60 km. from Aguadulce and where a local airline effects two trips between this town and the airport of Paitilla in Panama.

TIME: GMT minus 5 hours.

POLICE/AMBULANCE/FIRE: Available in Aguadulce 5 km. from the port.

TELEPHONES: Telephone communication from the port by public telephone by micro-wave to any part of the world. No facilities for phones on board vessels.

SHORE LEAVE: No restrictions.

AUTHORITY: National Port Authority, Apartado 8062, Panama 7, Panama. *Tel:* 23-3997, 64-4021. *Telex:* 2765. *FAX:* 69-6992, 69-7432. *Contact:* Jerry Salazar, Director General.

National Ports Authority – Aguadulce, Carretera del Puerto, Aguadulce, Provincia de Cocle, Panama. *Tel:* 97-4264. *Contact:* The Port Administrator.

ALMIRANTE (Bocas del Toro): 09.18 N. 82.23 W. (See Plan)

LOCATION: Located in Almirante (Bocas del Toro) Bay, on the N.E. end of the Atlantic coast of Panama.

The Port of Almirante consists of a pier 204.5 m. long used for loading bananas. The port is used principally by reefer vessels coming from Europe and bound for European ports.

The port was built by the United Brands Company and later transferred to the Government. Currently, it is rented by United Brands but is administered by the National Port Authority.

DOCUMENTS:

1 General Declaration.
1 Clearance from Last Port.
5 Cargo Manifests, or Declaration that no cargo is carried.
4 Crew Lists.
3 Passenger Lists, or Declaration that no passengers are carried.
3 Stores Lists.
2 Crew Personal Effects Declarations.
1 Maritime Health Declaration.
1 Mail List.

The above documents must be presented in Spanish language by the Master of the vessel, when the National Port Authority boards the ship.

Once the National Port Authority finds the documents correct, Free Pratique is given, enabling the vessel to commence operations.

PILOTAGE: Pilotage is compulsory for vessels entering Almirante.

The service is provided by a private Pilot who has his station in the town of Bocas del Toro. To request his services, the Agent must make arrangements with the Port Administration. Vessels using Almirante frequently take the Pilot on board in the Bay of Almirante, in front of the town of Bocas del Toro. The pilot cutter is blue with white superstructure, and has VHF radio. To communicate with the cutter, call up on VHF Channel 12 and Channel 16, with SSB fitment.

The Port Authority has established an official pilotage service, and all arrangements for the services of the Pilot must be made with the Port Authority. For vessels arriving for the first time in Almirante, they must anchor outside the entrance of Bocas del Toro aligned at 150° to 180° to Toro Point and 8 cables off. At this point, they must await the Pilot.

ANCHORAGES: Within the Bay of Almirante there are good locations with depths up to 27.4 m.

In front of the quay there is space to anchor with depths of 15.2 m. – 18.3 m.

RESTRICTIONS: The entrance channel has a minimum depth of 9.2 m. and is marked by buoys and light floats as indicated on the Port Nautical Charts. Also see "Developments".

Shipmaster's Report: The water depths on passing Bocas del Toro are greater than 9.2 m. as you follow the charted course lines.

Proceeding at a reduced speed consisting of "dead slow" and "stop", with enough manoeuvrability, to minimise the vessel's pitching, you can enter or leave the Bocas del Toro with a draft of 7.9 m. without any difficulties.

On entering and leaving I was forced by cargo circumstances to berth with a 7.9 m. deepest draft, and never had less than 3.05 m. below my vessel's keel (deepest section), at low water.

MAX. SIZE: There are no restrictions as to beam and size of vessel; but as far as draft is concerned this must not exceed 9.2 m.

Bocas del Toro can be entered and left with drafts of 8.84 m. without difficulty.

HEALTH: The doctor on boarding the vessel with the Reception Commission receives his documents and declares Free Pratique.

In the event of illness on board, Agent must be advised by VHF radio and this will be passed on to the doctor.

RADIO: Cables for and from the Agent are sent by radio operated by Tropical Radio Telegraph Co. The Port Authority has VHF and SSB equipment. The SSB equipment operates on the call-up frequency of 7447.5 kHz.

VHF: VHF communications can be made on Channel 12 at a distance of 30 miles from the port. Furthermore, United Brands Co. has VHF equipment which receives calls on Channel 16.

TUGS: None available.

BERTHING: A banana quay 204.5 m. long with a single mooring frontage and with 4 automatic banana loaders. It is recommended that vessels moor on the starboard side. Also there is a general cargo quay 103.05 m. long which has pipes for discharge of refined oil. The depth at the quay is 7.3 m. – 9.7 m.

Equipment: 4×4 tonne forklift trucks, 1×5 tonne mobile crane.

STEVEDORES: Loading work is carried out by the local Workers Union. The Agent must make contact with United Brands Co. for these workers.

MEDICAL: A modern hospital is available in Changuinola 20 km. from Almirante. Almirante also has a small hospital.

TANKERS: Quay No. 2 fitted with pipes for discharge of refined products.

DENSITY: 1022.

FRESH WATER: Available throughout the year. The pumping capacity is 2–3 t.p.h.

FUEL: Not available.

CONSULS: Costa Rica, El Salvador, Honduras, Nicaragua.

REPAIRS: No facilities for repairs to vessels.

OPENING/CLOSING HATCHES: Carried out by stevedores.

CUSTOMS ALLOWANCES: The Customs offices are in the port vicinity. Permitted quantities are 2 packs of cigarettes of 20 packets each per crew member and 2 bottles of whisky or other alcoholic drink per crew member for consumption on board.

REPATRIATION: Can be effected without difficulty.

AIRPORT: There is a small airport at Changuinola 21 km. from Almirante, which connects the province of Bocas del Toro with the rest of the Republic. There are 2 flights a day between the airport of Changuinola and Tocumen in Panama City. Changuinola is connected with Almirante by railway.

TIME: GMT minus 5 hours.
POLICE/AMBULANCE/FIRE: Available in Almirante.
TELEPHONE: There is a micro-wave telephone service to Panama and other places in America. The Port Authority has telephones in their offices, but there are none available for installation on vessels.
PROVISIONS: Obtainable in the local market; but it is preferable for provisions to be obtained in Colon.
SHORE LEAVE: No restrictions.
DEVELOPMENTS: It is planned to reposition the buoys marking the port entrance channel for the purpose of obtaining a minimum depth of 9.7 m. along the whole of the port access channel.
AUTHORITY: National Port Authority, Apartado 8062, Panama 7, Panama. *Tel:* 23-3997, 64-4021. *Telex:* 2765. *FAX:* 69-6992, 69-7432. *Contact:* Jerry Salazar, Director General.

National Port Authority, Entrega General, Almirante, Changuinola, Bocas del Toro, Panama. *Tel:* 78-3711. *Contact:* Port Administrator.

BAHIA LAS MINAS : 09.24 N. 79.49 W. (See Plan)

LOCATION: Situated 11 km. to the East of the entrance of the Panama Canal on the North Coast.
DOCUMENTS:

2 General Declarations.
1 Clearance Certificate from last port of call.
5 Cargo Manifests, or Declaration to the effect that no cargo is carried.
4 Passenger Lists, or Declaration that no passengers are onboard.
2 Supply Lists, or Declaration that no supplies are carried.
2 Lists of Crew's Personal Effects, or Declaration that none carried.
1 Maritime Health Declaration.
2 Mail Lists or Declaration that no mail is carried.
2 Crew Lists.

PILOTAGE: Compulsory for all vessels entering the port and is offered by the Pilots of the Marine Department of the Refineria Panama S.A.

Vessels must await the Pilot beyond Buoy No. 1 painted white, with a flashing white light every 3 seconds. The best position for anchoring is near Buoy No. 1 in position Lat. 09° 25′ 30″ N. Long. 79° 40′ 35″ W. where there is a depth of 63 ft. to 66 ft.

Vessels wishing to enter the port may call up the Port Authority on VHF Channel 12 or Refineria Panama on VHF Channel 16.

The Pilot craft has a black hull and white superstructure. When weather conditions are bad, a tug is used for boarding vessels.

The boarding ladder is placed in accordance with conditions of the sea.

Vessels may also ask for a Pilot via their Agents who will communicate the request to Refineria Panama. In this case, they must give an ETA 12 hours in advance.

RESTRICTIONS: The Port of Bahia Las Minas is mainly an oil port, specialised in importing crude oil and exporting refined products, being operated from an oil aspect by Refineria Panama S.A., and administered by the National Port Authority.

Apart from the tanker quays, there is a small quay for handling general cargo, length 90 m. This quay is administered and operated by the National Port Authority. The access channel to the port has a width varying from 300 m. in its widest part to 100 m. in its narrowest part, and a minimum depth of 40 ft. at the tanker quays. However, the general cargo quay can only take vessels of up to 23 draft. Tidal variation in this port is less than 1 ft., and so there are no restrictions for entry and leaving relating to tides.

MAX. SIZE: The port can be used by vessels up to 240 m. LOA at its tanker installations and their draft may not exceed 40 ft.

The general cargo quay can be used by vessels up to 152 m. LOA and 23 ft. draft. However, restrictions in vessels' lengths vary when the quay is used by Ro/Ro vessels which tie up by the bow or the stern, and in this case vessels up to 600 ft. length are permitted.

HEALTH: When a vessel arrives it must hoist the yellow flag of the International Signalling Code. Free Pratique will be granted by the Reception Commission after handing over of documents (See "Documents"). In the case of illness on board, this must be communicated to the vessel's Agent so that he may pass on the information to the Authorities. The vessel may not moor or carry out any operations until the doctor has come on board and verified that the illness does not constitute any danger.

RADIO: Vessels may communicate via the coastal station of the Panama Canal. Generally speaking, the same ships' agencies operating in the Canal are those who represent vessels arriving at Bahia Las Minas.

VHF: The Port Authority has VHF equipment at Colon which operates 24 hours a day on Channels 12 and 16.

For calls to the Port Authority, Channel 12 must be used. Refineria Panama also has VHF radio equipment and calls must be made via Channel 16.

RADAR: There is no radar service.
TUGS: Refineria Panama S.A. supplies this service to vessels which may require it. There are 4 tugs available. Generally, tugs work at the bow and stern of the ship, and lines must be fixed by the vessel's crew.
BERTHING:

Quay	*Length*	*Depth (Average low tide)*
Tanker quay	140 m.	40 ft.
2 lighter quays (refined products)	75 m. each	20 ft.
General cargo quay	90 m.	23 ft.

CRANES: There is no cargo handling equipment on the general cargo quay. All unloading must be by ship's gear.
SPECIAL CARGO FACILITIES: The dry cargo quay is used by Ro/Ro vessels making regular trips between Miami and Panama. The port offers unloading and loading services to these vessels.

The oil quays have special equipment for unloading and loading oil and its derivates.

STEVEDORES: These are provided by the Colon Port Workers' Union, and must be contracted by the ship's Agent. Working hours: 0700 – 1500 hrs. and 1700 – 0100 hrs.
MEDICAL: Hospital available in the town of Colon 15 minutes from the port.
DENSITY: 1.0212 grams per cu.cm. at 85°F.
FRESH WATER: Available.
FUEL: Pipe-lines are available at all oil quays, but no such facility is available at the general cargo quay.
CONSULS: Denmark, Finland. Norway, South Africa, Sweden, U.K.,
REPAIRS: Refineria Panama S.A. has a machine shop for minor repairs.
PROVISIONS: These can be obtained in the town of Colon via local suppliers, the Agent making the necessary arrangements.
REPATRIATION: This can be done without difficulty via the Immigration offices.
AIRPORT: There is a small runway at Colon. At Panama, 90 km. from Colon, is Tocumen Airport, which is an international airport, served by the main world airlines.
TIME: Local time is GMT minus 5 hours.
HOLIDAYS: 1st January, 9th January, Mardi Gras, 1st May, 11th October, 2nd and 3rd November, 4th November, 8th and 25th December.
POLICE/AMBULANCE/FIRE: Available in Colon. Refineria Panama has a small fire brigade, and also in the town of Colon, 15 km. away, there is a fire brigade.
TELEPHONE: None available for connection to vessels. Available in the Port Authority offices. Tel: 42-1658.
SERVICES: No special services offered. In the ports of the Canal it is possible to have compass adjustments, laundry, chemicals, etc.
SHORE LEAVE: No restrictions; but due to the distance between the port and Colon, a taxi service must be used.

SHIPMASTER'S REPORT: November 1989.
Chart: B.A. Chart No. 1300.
Documents:

2 copies Crew Manifest.
2 copies Stores List.
6 copies Crew List.
6 copies Cargo Manifest.

Officials: Port officials boarded the vessel one hour after berthing, due to local holiday. All formalities were carried out quickly.

Pilotage: The pilot boards at the Fairway Buoy from a launch with a black hull and white superstructure. The pilot office is near the root of the South tanker jetty and can be contacted on VHF Channel 16, working on Channels 10, 12 and 14.

Approaches: The port is 5 miles to the West of Cristobal and is identifiable by the silver coloured tanks on the shore and ships anchored off the port.

Buoys: See plan of Bahia Las Minas on B.A. Chart No. 1300.

The following changes were observed:

A. Buoy No. 1 is painted white and has been reclassified as the Fairway Buoy.
B. Buoy No. 3 has been renumbered No. 1 – the light and colour are as charted.
C. Buoy No. 5 has been renumbered No. 3 – the light and colour are as charted.
D. Buoy No. 7 has been renumbered No. 5 – the light and colour are as charted.
E. Buoy No. 9 has been renumbered No. 7 – the light and colour are as charted.
F. Buoy No. 11 has been renumbered No. 7B – the light and colour are as charted.
G. Buoy No. 10 has been repositioned in position Lat. 09° 23.85′ N., Long. 49° 21′ W.
H. There is a new buoy, No. 7A, Fl.W. (painted black) in position Lat. 09° 23.7′ N., Long. 79° 49.0′ W.

All other buoys are as charted.

Anchorages: The anchorages are in the vicinity of the Fairway Buoy in a depth of 10 fathoms. there is a small ground swell running.

Tugs: There are 3 U.S. type tugs available and one small tug. The small tug is quite suitable for small vessels. The tugs tie up alongside in the standard "U.S. method".

Berthing: There are 2 tanker berths, one barge dock and one dry cargo berth available. The tanker berths are standard "T" type jetties with mooring dolphins at each end and are connected to the shore by catwalks. Both berths are orientated 163°/343°. The original (South) jetty has a 24 m. straight face with large vertical wooden fendering. The platform is about 5 m. above chart datum. This berth handles all products, including the LPG and small crude tankers.

The newer berth, which was constructed in about 1977, is 0.25 miles North of the original berth. Crude oil imports only are handled at this berth by a 16 in. Chicksan arm.

There are currents running at the berth after heavy rain when the outflow from the Alejandro River has an effect. This also causes silting at the berth. In the dry season there is little or no current running.

The pilot advises with the maximum draft is 39 ft. and the depth alongside 45 ft. We found the least depth in the channel at chart datum to be 40 ft., except off the Southern tanker berth where 31 ft. was found in position Lat. 09° 23.6′ N., Long. 79° 49.05′ W.

The depth alongside the Southern tanker jetty was found to be 44 ft. at chart datum. The tidal range was about 1.5 ft. The maximum size vessel that can be accepted at the berth is 750 ft. LOA and 100 ft. beam.

Vessels berth port side alongside with the bow to seaward. Small vessels use 2 head lines and 2 stern lines and one spring forward and aft.

Oil pollution booms were sited but were not used.

The shore gangway (bridal type) is available at the South berth.

Cargo Operations: Only ambient Butane is received into the Horton Sphere and 5 horizontal cylinders. The total capacity is 20,000 bbls. The maximum shore back pressure is 100 p.s.i. (7 Bar). We pumped at our maximum rate of 700 bbls./hr. The hoses which were connected and disconnected by shore personnel are 4 in. – 300 ASA (liquid and vapour).

The Surveyor boards the vessel after the vessel is cleared inwards. Samples are taken and cargo operations cannot commence until analysis has been completed.

Fuel: Bunkers are available at both berths and by barge, which is owned by the refinery, at the anchorage. IFO is also available on the North berth.

At the time of our visit bunkers were not available at Cristobal, either alongside or at the inner anchorage, this was however only a temporary restriction.

Fresh Water: Available at the South Tanker Pier.

General: It is about 5 miles to Colon/Cristobal and the taxi charge is U.S.$5.0. It is possible to telephone for a taxi from the dock office.

U.S. Dollars are the only currency used and are obtainable from the agent with prior notice.

The local radio station is "Intelmar Panama". A good VHF service is in operation but is expensive and long delays with connections can be expected.

AUTHORITY: National Port Authority, P.O.Box 8062, Panama 7, Republic of Panama. *Tel:* 23-3997, 64-4021. *Telex:* 2765. *FAX:* 69-6992, 69-7432. *Contact:* Jerry Salazar, Director General.

National Port Authority, Bahia Las Minas, Colon, Republic of Panama. *Tel:* 42-1658, 47-9181. *Contact:* Port Administrator.

BALBOA: 08.58 N. 79.34 W. (See Plan)

(N.B. For items not listed below, see "Panama Canal".)

DOCUMENTS: See "Panama Canal".

PILOTAGE: Pilotage in the Port of Balboa is compulsory, and is effected by Pilots of the Canal Commission.

Vessels arriving for the purpose of using the port area in order to make use of a port facility must also pay for the pilotage service, which will be requested by the Agent.

Vessels of 65 ft. or less do not require a Pilot.

When due to "force majeure" a vessel may have to enter the waters of the port area, this may be done without using a Pilot.

With regard to pilotage, furthermore, the vessel must comply with the 4 points in the Notice to Shipping which appear under the heading "Pilotage" in the port of Cristobal.

Also see "Cristobal".

ANCHORAGES: Vessels must anchor in the various allocated areas for the port.

(a) *Anchorage for Merchant Vessels:*

This area is limited by the following co-ordinates:

Lat. 8° 51′ 50″ North, Long. 79° 30′ 00″ West
Lat. 8° 54′ 30″ North, Long. 79° 30′ 46″ West
Lat. 8° 54′ 46″ North, Long. 79° 30′ 00″ West
Lat. 8° 53′ 26″ North, Long. 79° 31′ 22″ West
and continuing out to sea.

(b) *Prohibited Anchorage Area:*

This is limited by the following co-ordinates:

Lat. 8° 51′ 50″ North, Long. 79° 30′ 00″ West
Lat. 8° 52′ 47″ North, Long. 79° 31′ 38″ West
Lat. 8° 52′ 58″ North, Long. 79° 32′ 31″ West
Lat. 8° 54′ 15″ North, Long. 79° 33′ 36″ West
Lat. 8° 55′ 12″ North, Long. 79° 32′ 25″ West
Lat. 8° 54′ 17″ North, Long. 79° 30′ 52″ West
Lat. 8° 53′ 26″ North, Long. 79° 31′ 22″ West
and from here to the initial point.

(c) *Anchorage Area for Vessels Carrying Explosives:*

This area is defined by the following co-ordinates:

Lat. 8° 52′ 47″ North, Long. 79° 31′ 38″ West
Lat. 8° 51′ 52″ North, Long. 79° 31′ 38″ West
Lat. 8° 51′ 52″ North, Long. 79° 33′ 00″ West
Lat. 8° 52′ 36″ North, Long. 79° 32′ 31″ West
and from here to the initial point.

RESTRICTIONS: Port open throughout 24 hours.

MAX. SIZE: Harbour limitations generally unrestricted as to length and beam. Depth about 40 ft. low water. Vessels in excess of 38 ft. 6 in. draft not handled during period 2.5 hours before and 2 hours after low water. Average tide 3.97 m. (13 ft.).

Tankers working cargo restricted to 700 ft. length and 36 ft. salt water draft.

Berth No.	*Max.Draft** (m.)	*Max.LOA* (m.)	*Berth* No.	*Max.Draft** (m.)	*Max.LOA* (m.)
6 A	8.3	213	15 C	9.2	305
7 A	9.2	259	16 B	9.1	183
7 B	9.0		18 A	9.75	152
8	8.3	162	18 B	8.1	152
14 A + B	9.6	236	18 C	11.1	152
15 A	10.1	305	18 D	9.3	137
15 B	9.4	305	18 E	7.8	58

* Max. draft with 0.9 m. U.K.C.

VHF: Vessels must make contact with the Port Entry Coordinator via VHF Channel 12. Commercial telephone calls and messages to Agents must be made via Panama Radio or Intel Mar Radio on VHF Channel 16.

TUGS: Available and assigned for berthing by Pilot. Tug's lines used at no extra charge.

BERTHING: No specific requirements as to arrival times. Nine berths available.

(Pleasure yachts, under 65 ft. length, may be permitted to dock at Panama Canal Yacht Club or Balboa Yacht Club after clearance by Boarding Officer and after Master has received permission from Port Captain, Customs Authorities and Yacht Club Officials concerned. Chief Customs Inspector shall have authority to grant or deny such permission at his discretion.)

Rodman Naval Station: Piers can accommodate vessels of 700 ft. length and up to 39 ft. draft for oil discharge, bunkers or stores.

NPA Dock:

Berth No.	*Length* (m.)	*Average Depth at MLWS* (m.)	*Use*
6 A	226	9.2	Passenger/Bunkering.
7 A	322	10.1	Breakbulk, Chemicals,
7 B		9.9	Passenger, Bunkering.
8	143	9.2	Shipyard
14 A + B	236	10.5	Container, Breakbulk (ship's gear only), Bunkers.
15 A	349	11.0	Containers, Bunkering.
15 B		10.3	
15 C		10.1	
16 A	226	10.4	Container, Breakbulk (ship's gear only), Bunkers.
16 B		10.0	
18 A	152	10.65	General Cargo, Bunkering.
18 B	152	9.0	Tuna Fishing Vessels, Bunkering.
18 C	152	12.0	General Cargo, Passenger and Bunkering.
18 D	152	10.2	
18 E	61	8.7	Tuna Fishing Vessels and Bunkering.

STEVEDORES: In Balboa there are 7 ship gangs and 4 shore gangs, who are available every day of the year, 24 hours a day.

Endeavour to arrange arrival to avoid cost of "stand by" as Agent arranges gangs for 0700 hrs. or 1700 hrs. commencement. Working Hours: 0700 –1500 hrs., 1700 – 0100 hrs. Overtime possible between 1500 – 1700 hrs. and 0100 – 0700 hrs.

CARGO HANDLING EQUIPMENT: The Port of Balboa has various equipment for handling cargo. To handle general cargo and containers, there are cranes with capacities of 2, 4, 10, 15, 30 and 40 tons, chassis, internal lorries, tractors of the agricultural towing type, roller platforms. Bulk cargo handling is by conveyors and suction pumps.

CRANES: Dock 15 has a container crane with 32.5 tons' capacity. The crane is owned by the National Port Authority. Mobile cranes of 10 tonnes and 18 tonnes available.

The Dry Dock Department has 4 cranes: A "D-4", steam crane, with max. capacity of 50 tons, and a "D-19" diesel electric crane with max. capacity of 30 tons. These 2 cranes run on rails alongside Dry Dock No. 1, and along Docks 8 and 13, also providing service to Docks 2 and 3.

Apart from cranes "D-4" and "D-19", the Dry Dock Department has two petrol-electric portable cranes with max. 5 ton capacity.

MEDICAL: Medical attention on arrival at the port of Balboa can be immediate, since there is a First Aid Clinic with a doctor and nurse on duty by day. At night there is a nurse on duty.

TANKERS: Max. draft 36 ft. (Under certain conditions 40 ft. draft can be accommodated). Tankers receive preferential treatment at Dock 6, and at Quays 1, 2 and 3 of the Rodman Naval Station.

DENSITY: The density of the water in the anchorages in the Port of Balboa is 1.01219 gm./cu.m., at a temperature of 85°F (63.87 lbs./cu.ft. at 85°F).

FRESH WATER: Available at Docks 6, 7, 14, 15, 16 and 18.

FUEL: Bunker "C", marine diesel, petrol, light diesel, paraffin, HDO, LDO and FO are available at Quays 6, 7, 14, 15, 16, 17 and 18. At some of these quays, only certain of the mentioned products are available.

Rate of discharge of fuel is 2,000 – 4,000 bbls./p.h. Crew members are required to connect and disconnect fuel lines on board vessels. The vessel provides the accessories for necessary coupling adjustment to U.S. standard of 4 in. and 6 in. 150 lb. flanges.

A bunkering area has been established in the Pacific Anchorage.

REPAIRS: Emergency repairs possible. The most current repairs are: Machinery in general, welding, different kinds of painting, hull cleaning and sand blasting.

International Repair Services S.A., Balboa. Tel: (507) 69-5834, 69-5097, 69-5201. Telex: 2515, 3415. Fax: 69-5679.

INREPSA represents Alaska Diesel Electric Inc., Lugger Marine Engines (60 h.p. – 1,300 h.p.) and Northern Lights Marine Generators (5 kW – 75 kW), and services/repairs this equipment on board vessels transiting the Panama Canal.

DRY DOCK: There are 3 docks, of which the main one is Dry Dock No. 1 (60,000 d.w.t.). Characteristics of Dock Nos. 1, 2 and 3 are:

Dry Dock	*Total Length* (m.)	*Width* (m.)	*Depth Max.* (m.)	*Depth Av.* (m.)	*Depth Min.* (m.)
No. 1	318.21	33.59	12.77	8.88	8.35
No. 2	111.56	28.04	8.05	4.09	3.62
No. 3	71.73	14.94	5.76	1.87	1.31

AIRPORT: Tocument International Airport is located 32 km. (approx.) by road. This airport has flights to different parts of the world.

POLICE/AMBULANCE/FIRE: All quays have special connections for water to be used in fire-fighting.

The telephone numbers of the departments of police, ambulance and fire brigade which are nearest to the port are:

Police	Tel: 104
Ambulance	64-3871 (Social Security)
Hospital Santo Tomas	25-1436
Red Cross	28-2786 and 28-2787
Fire Brigade	52-2592 (Balboa)

TELEPHONES: Telephone services can be installed on board by arrangement between the Master and the Port Administrator.

SHORE LEAVE: Generally permitted, landing card required.

CUSTOMS: Customs and Immigration Inspection Service available Monday to Saturday from 0700 to 1700 hrs. Charges for such service after hours and on Sundays and holidays. Number of Inspectors required will be determined by Chief Customs and Immigration Inspector of port.

GARBAGE DISPOSAL: There is a daily collection service from 0600 to 1400 hrs., when needed, by the local sanitation department (DIMA). Tanks of 4, 6, 8 cu.yd. are provided alongside the vessel at a cost of $ 3.50/cu.yd. DIMA's Tel: 32-5918.

WASTE OIL DISPOSAL: Collection service is performed by Environmental Protection Services, using two barges, one of 90,500 gals. capacity and the other of 136,000 gals. capacity, or a 8,000 gals. tanker truck, or a 3,000 gals. vacuum truck. Barging fee is $ 1,000 plus a minimum of 2,000 gals. at $ 0.20/gal. of oily water and $ 0.42/gal. for sludge. The trucking fee is $ 250.00/trip. Contact: EPS. Tel: 63-9533. Fax: 63-9493/9495.

SEAMAN'S CLUBS: None.

CURRENCY: Panamanian Balboa ($). U.S.$ 1.00 = $ 1.00.

DELAYS: Delays in berthing, load or discharge or bunkering are minimal and infrequent. Eight hours is considered excessive.

AUTHORITY: National Port Authority, Apartado 8062, Panama 7, Panama. *Tel:* 69-5442, 32-5574. *Telex:* 2765. *FAX:* 32567. *Contact:* Jerry Salazar, Director General; Jose A. Reyes, Director of Operations. Mariano Sosa, Port Administrator. Angel M. Solano, Deputy Administrator.

Balboa Port Administrator. *Tel:* 32-5442.

AGENT: C. Fernie & Co., S.A. Apartado (P.O.Box) 212, Balboa, Ancon, Republic of Panama. Cable Address: "Fernie Balboa". Telephone Nos.: 62-1372, 62-2018, 62-2019 or 62-2021. After office hours telephone numbers: 50-0030 or 34-1401. VHF: Standby Channels 16 and 12.

All communications should be directed to Cristobal, Republic of Panama.

CHIRIQUI GRANDE: 08.56 N. 82.07 W. (See Plan)

LOCATION: The Petroterminal Transhipment Terminal is located in the Laguna de Chiriqui on the Western side of the village of Chiriqui Grande in approximate position Lat. 8° 56′ N., Long. 82° 07′ W.

The Terminal is linked by pipeline to Puerto Armuelles Oil Terminal in the Pacific. Oil flow is one way only from the Pacific to the Atlantic Terminus.

DOCUMENTS: The following documents are required:

2 General Declarations.
1 Clearance from Previous Port.
5 Cargo Manifests or Declaration that no cargo is carried.
3 Crew Lists.
4 Passenger Lists or Declaration that no passengers are carried.
2 Supplies Declarations (Stores Lists) for Crew or Declaration that there are no supplies.
2 Crew Personal Effects Declarations.
1 Maritime Health Declaration.
2 Mail Lists.
1 Bill of Lading.

Also see "Health".

APPROACHES:

Laguna de Chiriqui: Laguna de Chiriqui deep-water bay, about 30 miles long, in an East/West direction, and about 10 miles wide, is bound on the East by Peninsula Valiente, on the South and West by the mainland, and on the North by Isla Popa, Cayo Agua, and the adjacent islands and reefs. Canal del Tigre, which lies between Peninsula Valiente and Cayo Agua, is the main access channel into the lagoon.

The North side of the lagoon, including the entrance is fringed by detached shoals. These lie up to about 5 miles South of the entrance and along the East shore of the lagoon. The West end of the lagoon South of the fringing reefs is almost entirely clear of dangers.

The low shores of the lagoon are indented by numerous small bays and rivers and marked by several villages.

Canal del Tigre (Tiger Channel): The North approach to Canal del Tigre lies between Roca Tigre and the S.E. side of Cayos Zapatilla to the West.

Punta Valiente (Lat. 9° 11′ N., Long. 81° 55′ W.) a bold densely wooded point, rises to an elevation of 152.4 m. to 182.9 m. (500 ft. to 600 ft.) on the East side of the East entrance to Laguna de Chiriqui. Foul ground extends about 1.25 miles West from the point and continues South about 1.75 miles to the entrance to Bluefield Creek. Cayos Valiente, a group of islets extending about 0.25 miles in an East and West direction lie on the North part of this reef. Virginia Rocks lie on the West edge of the reef about 1.25 miles W.S.W. of Punta Valiente, and Bluefield Rock, 9.8 m. (32 ft.) high, stands on the South edge about 1.5 miles South of the point.

Valiente Peak (Lat. 9° 10′ N., Long. 81° 55′ W.), a conspicuous 231 m. (758 ft.) hill, stands about 1 mile South of Punta Valiente.

Cayos Tigres (Tiger Cays), several islets lying in an East and West direction for about 1 mile, stand about 1.75 miles North of Punta Valiente. Roca Tigre, a detached 8.5 m. (28 ft.) rock marked by a white beacon, stands about 2.5 miles N.N.W. of the same point. Tiger Breakers, over which the sea breaks heavily, together with several shoal patches, lie on a bank within about 0.75 miles N.W. of Roca Tigre.

Canal del Tigre leads into Laguna de Chiriqui, this channel is buoyed (See "Navigation").

PILOTAGE: *Pilotage for Canal del Tigre:* Pilotage for the channel leading into the Laguna de Chiriqui is optional.

Masters requesting a Pilot for the passage into the lagoon should follow the procedure outlined under "Anchorage".

The Master will act as Pilot for those vessels wishing to proceed directly to the inner (lagoon) anchorage, without taking a Pilot, and will observe all applicable Navigation Rules.

Vessels arriving and intending to proceed through the Canal del Tigre to anchor are requested to give outbound vessels priority in the use of the buoyed channel.

In sending arrival times, it should be remembered that the pilot boat requires about 1 hour to travel from the base at Chiriqui Grande to the pilot station (see "Pilot Station" below).

Pilotage/mooring/unmooring to the SBMs is available on a 24 hour basis and supplied by the Terminal on terms set out in the Terminal's Pilotage/Towage contract, which must be signed by all Masters.

Pilot Station: For arriving vessels which require a Pilot, the pilot station is in position Lat. 9° 12′ N., Long. 81° 59′ W. For ships arriving, the ladder will normally be rigged on port side (heading S.W.) approximately 4 ft. from the water and for ships departing, on starboard side approximately 4 ft. from water. Pilot ladders to be in good condition and conform to international standards.

Vessels with a freeboard of 30 ft. or more shall provide a suitable accommodation ladder in addition to pilot ladder. This ladder must be rigged on the starboard side to avoid interference with the cargo hose connection. Vessels rigged in this manner may have to turn N.E. to make a proper lee for boarding the Pilot.

The Master remains responsible for the proper navigation of his vessel throughout the time his vessel is attending this facility. The Pilot remains on board throughout vessel's stay.

Pilot Boats: Pilot boats are 36 ft. in length, with blue hull, white deckhouse with "Pilots" on either side. The boats are equipped with VHF Channels 16, 14, 13, 12, 11 and radar.

Also see "Mooring".

ANCHORAGES: All vessels at anchor awaiting turn at the SBMs should maintain a radio watch with the terminal ("Rambala Control") on VHF Channel 16 calling (working Channel 14).

Vessels Not Berthing on Arrival: Pilot will be available to bring vessel into lagoon anchorage, if requested by the Master (call on Channel 16 or 14).

If Pilot is not available, vessel should anchor outside the lagoon and maintain a listening watch on VHF Channel 16. The terminal will advise vessel of docking time sufficiently in advance to make necessary preparations.

Outside: Vessels may anchor on the coastal shelf outside the lagoon. Suggested anchorage location in area Lat. 9° 12′ N., Long. 82° 00′ W. where the mud bottom provides good holding ground.

At the Master's option, the vessel may proceed to the lagoon anchorage. Vessels inbound are requested to make a VHF traffic call before entering the channel, and give priority to vessels outbound.

In Lagoon: The area to the East of the SBMs is probably the most convenient area for anchoring. The bottom of the lagoon is reported to be soft mud. Vessels should keep at least 2 miles clear of SBM if at anchorage. Suggested anchorage location between Latitudes 8° 59′ N. and 9° 00′ N. and Longitudes 82° 00′ W. and 82° 04′ W.

RESTRICTIONS: Depth at SBM 72 ft. Depth in approach channel 120 ft.

MAX. SIZE: 150,000 d.w.t.

NAVIGATION: Approach to the Terminal is from approximately N.E.

The controlling depth for the port is 72 ft. (at the SBMs). There is deeper water in the approach.

There are 4 principal navigation aids available to mariners:

1. Roca Tigre Light.
2. Roca Tigre Racon.
3. Canal del Tigre buoys.
4. Terminal leading lights and daymarks.

SBMs: The SBMs are fitted with flashing white lights, and the hoses with white winker lights (Fl.W. ev. 1 sec.).

SBM No. 1 (North) Lat. 8° 58′ 04″ N., Long. 82° 06′ 27″ W.
SBM No. 2 (South) Lat. 8° 57′ 28″ N., Long. 82° 06′ 06″ W.

Terminal Leading Lights and Daymarks: Lights in line 212° – 032° (T).

Front Fl.W. ev. 1 sec.(0.3 sec. on, 0.7 sec. off)
Lat. 8° 56′ 29.8″ N., Long. 82° 06′ 47.9″ W.
Rear Oc.W. ev. 4 sec.(3.7 sec. on, 0.3 sec. off)
Lat. 8° 56′ 28.9″ N., Long. 82° 06′ 48.5″ W.

These lights are cylinder lights visible approximately 10° each side of transit line.

Daymarks: White panels 24 ft. in height, 12 ft. wide with 4 ft. vertical black stripe in centre.

Canal del Tigre – Channel Marking Buoys:

No. 9	Lat.	9° 04′ 33″ N.	Fl.G. 4 sec.
	Long.	82° 00′ 16″ W.	

All buoys are equipped with a solar panel and radar reflector built into the tower structure of the buoy.

Roca Tigre: Light exhibited from steel tower 50 m. above sea level. (Beacon on chart). Lat. 9° 13′ 02″ N., Long. 82° 56′ 28″ W. Flash ev. 5 sec. (1.5 sec. on, 3.5 sec. off). Visible 35 miles on a clear night.

Racon: Frequency range – 9500 MHz (3 cm.) swept frequency type.

Azimuth coverage 360°

Nominal range 18 miles.

Sweep period – 70 sec.

Transmission – 24 hours.

This Racon operates in the marine radar band, being actuated by the ship's radar in the course of normal operation. It gives the observer his range and bearing from the position of the beacon.

The Racon signal appears as narrow flash/letter "P" (· – – ·) or lengthened echo superimposed on the radar screen on the bearing of the Racon, commencing at a point just beyond the Racon position and continuing radially outwards, away from the vessel.

The Racon sweeps the frequency band 9300/9500 MHz once every 70 seconds approximately, and the flash will appear on the screen for a few radar trace revolutions.

The number of successive flashes seen will depend on the distance of the ship from the Racon site and will be fewest at maximum distance.

Range measured to the point where the flash begins will be about 60 m. greater than the range of the Racon.

If interference with the normal radar display is experienced from the Racon signal, it may be reduced by suitable adjustment of the differentiator or anti-clutter controls on the ship's radar set.

Terminal Lights: It is reported that the yellow lights on the crude oil tanks, located at Lat. 8° 56.6′ N., Long. 82° 08.3′ W., elevation 200 m., can be seen at a great distance on a clear night.

The red communications tower light, located 200 m. East of the crude oil tanks, and elevation of 250 m. can be similarly observed.

The white working lights within the terminal are also reported to be conspicuous.

HEALTH: *Quarantine/Pratique/Documentation:* The Port Officials will board the vessel after mooring or at the anchorage within the lagoon as the case may be.

The ship's Agent will advise the Master of the anticipated boarding time sufficiently in advance.

RADIO: Notices/Time of Arrival:

A. ETAs:

ETAs may be sent via ship's Agents who will notify the Terminal. All communications with Chiriqui Grande should be in local time (ZD+5).

ETAs at the pilot station should be received by the Terminal at least 72 hours prior to the vessel's arrival and any variation of more than 4 hours advised.

B. ETAs should include:

1. Vessel's name.
2. ETA pilot station (local time).
3. Quantity of oil required.
4. Any condition that will affect loading operations, including estimated quantity of ballast to be discharged ashore.
5. Deviations from the recommended fittings.

In practice the Terminal is notified by the customer what cargo is required and the Terminal has the data on all vessels that have already visited Petroterminal.

In giving arrival times, it should be noted that the Terminal is interested in the time the vessel will arrive at the pilot station (not when the ship made "end of passage").

Notice of Readiness: Notice of Readiness is considered to be received by the Terminal when the vessel arrives at the pilot station or, if going to anchorage, when the vessel anchors.

VHF: *Radio Communications:*

Frequency Allocation

Channel	*Use*
13	Cargo handling only.
11	Alternative cargo frequency. (Use only on instruction from "Rambala Control").
14	Pilots' and boats' working Channel.
16	Calling. All vessels at anchor maintain a listening watch on this Channel.

General: Vessels at anchor within the lagoon are requested to refrain from using VHF Channel 13; since a persistent FM "Duct" causes interference with cargo operations at the other PTP Terminal at Puerto Armuelles. Channel 14 use should be minimised for the same reason.

Always identify calling vessel and vessel being called.

Vessels approaching the Terminal should establish VHF communications as soon as they are within range (about 50 miles).

The Terminal maintains a continuous listening watch on Channel 16.

Call sign for the Terminal is "Rambala Control".

Call sign for the Pilots is "Chiriqui Grande Pilots".

Vessels at anchor should maintain a listening watch on Channel 16.

Most Terminal radios are equipped with Channels 11, 13, 14 and 16.

Communications While at SBM: All communications while at the SBM will be conducted in the English language.

Deballasting and loading operations will be controlled by VHF radio communication between the vessels at the SBM and "Rambala Control" on VHF Channel 13.

The Berthing Master will bring 2 portable VHF radio units on board at the time the ship begins its approach to the SBM. One of these radios will be assigned to the person in charge of ballast and cargo operations. The person in charge must maintain this radio in his possession *at all times.* This radio must not be changed to any other channel unless instructed to do so by "Rambala Control".

All cargo communications will be identified by ship's name.

Communications Failure: In the event of a complete communications failure, vessels at the SBM will indicate their inability to make VHF contact by sounding 5 long blasts on the ship's whistle or siren. At night, the vessel's signal searchlight or Aldis lamp may be used to alert control room personnel (at the base of the pier).

(It may not be possible for a vessel at the North SBM to see the Control Room while lying West of the buoy).

Agency Communications: Agents wishing to contact ships will call "Rambala Control" on VHF Channel 16 and request the operator on duty to so advise the ship.

Ships may call their Agent on Channel 16. Ship/agency business cannot be communicated on Channel 13.

Ships must use their bridge VHF, on LOW POWER, when communicating with Agents, to avoid interference with cargo communications.

The cargo operations radio must not be used for agency traffic, or changed from Channel 13 unless so directed by "Rambala Control".

TUGS: *Floating Equipment:* 2×36 ft. Mon Ark Pilot Boats, equipped with radar and echo sounder. 2×6V-71 GM engines.

2×42 ft. Mooring Launches (Damen). 1×8V-71 GM engine.

1 Work Barge equipped with 40 ton crane 120 ft.×40 ft.

1×30 ft. Marco Oil Skimmer Boat.

Various small boats powered by outboard engines.

SBMs: The catenary anchor leg mooring buoys are designated "South SBM" and "North SBM". A double channel rotating head on the turntable allows two completely segregated flow streams to be routed through the buoy. The rotating head can be connected with the tanker through 2×12 in. hose strings. 2×20 in. manually operated ball valves act as block valves between the rotating head and each 12 in. hose with a third 20 in. manually operated ball valve mounted in a by-pass between the two. This allows diversion of the fluids to the ballast or crude oil lines.

Battery driven navigation lights are installed in accordance with marine regulations.

EQUIPMENT: Strops and shackles will be held by the Terminal for use in the event a vessel does not have this equipment.

The vessel to have the following equipment:

On Forecastle Head:

1. 2 Ship's mooring ropes with 12 ft. tails of 3.5 in. – 4 in. circumference lashings to make fast to pick-up rope. These two mooring ropes must be married together using one of the 12 in. tails before approaching the buoy.
2. 3 stoppers of 3.5 in. – 4 in. circumference and 12 ft. long.
3. Fire axe.
4. 100 ft.×3.5 in. – 4 in. messenger rope.

Anchors to be ready for use but in *stowed* position in hawsepipe.

Bow Chocks of Vessel: Should be of suitable size (approx. 24 in.×18 in.) to take the 3 in. chafe chain approximately 16 in. × 8 in. for the rope rig (13 in. circumference rope eye).

If Smit or other type brackets are fitted, they should be in accordance with OCIMF publication "Standards for Equipment Employed in the Mooring of Vessels at SBM".

Manifold Area:

1. 2×12 in. reducers in place on the manifolds to be used for discharging ballast and loading cargo.
2. Cargo boom – SWL 5 tons. Plumbed 2 ft. – 3 ft. inboard and midway between two manifolds.
3. 1 handy-billy (small 2 and 1 block and tackle).
4. 2 nylon hose slings (wide).
5. 1 small come-along (approx. 1.5 tons).
6. 1 heaving line.
7. 3 bolts long enough to bolt hose/manifold flange.
8. 2×3.5 in. – 4 in. circumference rope slings approximately 8 ft. length.
9. 2×3.5 in. – 4 in. circumference rope approximately 60 ft. length (eye in one end).
10. 1 boat hook or chain hook.
11. 4×12 in. gaskets.

At Stern of Vessel: One mooring rope – eye lowered to water level and made fast on bitts. This will enable launch to pull vessel away from buoy.

Note: It may be requested that the vessel leave steam cracked open on astern turbine to avoid vessel riding up on buoy.

Petroterminal launch will carry:

1. Sufficient "O" rings for Camlocks.
2. 2×6 ft. chain stoppers with 3 in. circumference nylon tails 8 ft. long.
3. Spare rope slings.

MOORING: *Mooring Gang/Hose Gang:* As the vessel approaches the SBM the Terminal Mooring Gang of approximately 5 persons will board the vessel by pilot ladder and/or accommodation ladder. The same ladder used by the Pilot will suffice.

If there is additional gear to be put aboard the vessel, the boom at the port side manifold should be manned and the hook lowered to lift the bucket of gear.

Winch/Capstan/Windlass Operators: The ship will provide personnel to operate all deck machinery and assist the Petroterminal mooring gang. On completion of hose connection the gang will leave the vessel.

The Pilot/Berthing Master: Remains aboard the vessel whilst the ship is at the SBM. A cabin should be provided for his use.

A Berthing Master will assist and advise in the connection and disconnection of hoses/moorings, etc. During deballasting and loading operations he will be available to assist and advise on procedures. In cases of oil spill or other emergencies, he will advise the Master.

The Berthing Master will be the Terminal's Representative on board the vessel and will have the authority to stop all operations if regulations or required procedures are not observed.

Where any disagreement arises between the vessel personnel and the Berthing Master regarding some aspect of the SBM procedure, the procedure to be followed will be that which provides closest compliance with guidelines established by the latest edition of International Safety Guide for Oil Tankers and Terminals, published by the International Chamber of Shipping, Oil Companies International Marine Forum.

Mooring to SBM: The ship will approach the buoy from downwind maintaining the wind exactly ahead. (Adequate ballast should be retained to maintain manoeuvrability).

From the stem chock, or a port bow chock close to the stem, lead a mooring rope (eye-end) and lower the eye to the waiting launch.

(For the Smit Bracket, a chock approximately 24 in. × 18 in. will be required.)

The launch will take the ship's mooring rope and secure it to the buoy approach rope. This approach rope (480 ft.×10 in. plaited polypropylene) is hove aboard with the ship's windlass, heaving the vessel toward the buoy. Made fast to the end of the buoy approach rope is a 45 ft. × 13 in. circumference stable braid strop with a 5 ft. eye. The eye of this strop should either be placed on the bitts or made fast by means of a short strop and shackle.

Vessels equipped with a Smit bracket will secure the buoy rig to the bracket using a pear link and shackle.

ALTERNATIVE RIG: See "Plan".

From the port bow or centre chock, a mooring rope (with eye in end) is lowered through a fairlead sufficiently large to permit the entry of chain chafing cable and steel triangular plate 9 in. × 7 in.

The launch will take this rope and secure it to the buoy approach rope. This approach rope (480 ft. of 10 in. plaited polypropylene) is hove aboard first, heaving the vessel toward the buoy.

Prior to heaving the buoy rope aboard, a heavy wire strop will have been placed on the port side of the forecastle, onto suitably placed bitts, with 50 ton shackles in readiness.

This shackle is secured both to the wire strop and the triangular plate. Once the shackle is fast, the weight is released from the approach rope and allowed to come onto the wire strop. The chafing chain tail and buoy rope are then cast off the windlass.

Strops and shackles will be available from the terminal for use in the event a ship does not have this equipment.

The approach rope is made fast to the bitts.

If required additional back-up is needed, ropes can be made fast to the other links in the chafing chain. This should not be necessary with the good weather conditions of Chiriqui Lagoon.

HOSES: *Connection of Hoses:* Once the vessel is safely secured at the buoy, the launch which had been holding the hoses clear during this operation will tow them to the port side of the vessel and they will be connected.

The hoses will be 2×12 in. and will be fitted with short spool Camlock couplings. Forward 12 in. hose will be lifted first.

1. The vessel's boom will be plumbed so that it is approximately 2 ft. – 3 ft. inboard of port side and midway between the manifolds to be used.
2. The forward hose will be lifted first by the eye attached to the hose blank.
3. Hose will be lifted clear of water and level with ship's deck. Snubbing chain will then be brought on deck before hoisting hose any higher.
4. Once hose is at correct height above deck, snubbing chain will be made fast to bitts, hose lowered so weight is taken by snubbing chain. Hose will bend over to face ship's manifold. After the hose end blank has been removed, the hose will be connected to the ship's manifold with camlock couplings. "Come alongs" or handy billies may be used for positioning hoses. After securing the connection, check each camlock fitting to ensure that the ratchets are engaged.
5. The same procedure is followed for second hose.
6. When both hoses have been connected, the boom will be plumbed over the hoses and bar and webbing straps used to support hose, throughout transfer operations.
7. If Camlocks alone will not provide a leak-free connection it may be necessary to use bolts to tighten the connection.

Camlock couplings at hose end: Pipe size, 12 in.; flange OD, 19 in.; flange thickness, 1.25 in.; seal ID, 13.375 in.; number of cams, 4; minimum locking range, 1 in.; maximum, 1.5 in.

Disconnection of Hoses: Once cargo operations have been completed, a reverse of the connection procedure is followed and the hoses lowered over the side, but made fast to the ship's side until the ship slips from the buoy or are towed clear by the launch – the reason for not immediately releasing the hoses is to keep them clear of the vessel's propeller.

Weight of Hose Strings for Single Buoy Moorings: The following table gives the approximate weights of hose strings in tonnes (including fittings, floats and pick-up buoy) with all hoses full of crude oil of S.G. 0.850. The assumed total lift is 7.5 m. (25 ft.) above deck level, with the tanker on light draft.

Size of Tanker	*12 in. I.D. Hose*
270,000	6.5
200,000	6.2
100,000	5.4
70,000	5.1
50,000	4.9
35,000	4.7
18,000	4.3

Information taken from International Safety Guide for Oil Tankers and Terminals manual.

Hose Information – Petroterminal:

	Tanker Rail Hose 12 in. (Barbel type)	Floating Hose 12 in.
Length	9.25 m.	12.19 m.
Weight	890 kilograms	1,940 kilograms
Electrically	Discontinuous	Continuous
Built-in fitting type	ASA 150	ASA 150
Ancillary equipment weight (flanges)	317 kilograms	—
Bend radius	1.85 m.	—

Hose make: Kleber (France).

BALLAST: Within the lagoon, ballast should be handled by type, as per international convention, as follows:

Segregated: All ballast in segregated ballast tanks should be visually inspected prior to discharge. After inspection, segregated ballast may be discharged overboard according to standard shipboard procedure.

Dedicated Clean: All ballast in dedicated clean ballast tanks should be visually inspected prior to discharge. After inspection, dedicated clean ballast tanks may be discharged overboard in accordance with IMO Regulations.

Treated: Ballast water which has been chemically treated (with detergents, emulsifiers, etc.) must be retained on board.

Others: All other ballast water will be pumped ashore prior to loading. The Terminal has 3×120,000 barrel tanks for the reception of dirty ballast. The ship will advise the Terminal of the quantity of ballast to be discharged ashore prior to commencing discharge.

Crude Oil Washing (C.O.W.): As vessels will be loading only, we do not anticipate any crude oil washing requests. Should the necessity arise, the Terminal should be advised.

LOADING: *Safety Check List:* Prior to start of operations, the Berthing Master and responsible Officer will complete the Safety Check List and also agree:

(A) Designated Smoking Areas.
(B) Galley and Appliance Limitations.
(C) Emergency Assistance.
(D) Vessel will be ready to move under her own power at all times whilst moored to SBM.

Pre-Transfer Conference: A Pre-Transfer Conference will be held between Berthing Master and responsible Officer prior to commencement of operations. (IOTTSG Chapter 5) to agree on procedures for deballasting and loading, including:

1. Communications between ship/shore/Berthing Master.
2. Deballasting procedures.
3. Cargo start-up procedure.
4. Any deviations from normal procedures.
5. Loading rates, initial, maximum and topping off.
6. Notice times required to change rates and shutdown procedure.
7. Emergency shutdown, moorings failure, oil spill, etc.
8. Any ship's deficiencies to be made known.
9. Any Terminal deficiencies to be made known.
10. Completion of loading.
11. Emergency assistance.
12. Vessel will be ready to move under her own power at all times
13. while moored at the SBM.
14. Prior to the start of operations, the Berthing Master and responsible officer will complete the Safety Check List.
    Designated smoking areas.
    Galley and appliance limitations.

Flow Rates: The tanker loading system is designed to be able to load a tanker at each SBM simultaneously. Each system has a maximum loading capacity of 50,000 bbls.p.h. using 2 × 12 in. hoses or 60,000 bbls.p.h. using 3×12 in. hoses. The third 12 in. hose is not currently fitted.

Deballasting of tankers is also handled through the same hose as used for loading, at a designed rate of 30,000 bbls.p.h.

Pressures:

Maximum crude oil static pressure on shoreside manifold 339 p.s.i.g.

Maximum allowed static pressure on buoy system 275 p.s.i.g.

Maximum allowable static pressure at ship's manifold to be determined by the ship's Master and communicated to the Berthing Master.

All vessel operations in connection with deballasting/loading, switching of tanks, topping off, must be directly supervised by a responsible officer.

Deballasting/Loading: Upon being informed by the responsible officer that the vessel is ready in all respects to commence operations, the Berthing Master will request that deballasting or loading operations proceed according to previously agreed plans as discussed at the pre-transfer conference.

Deballasting procedures are conducted in the following sequence:

1. After the 2×12 in. hoses are connected, Terminal personnel will line-up the buoy valves, prior to vessel opening manifold valves.
2. Vessel will be notified when Terminal is ready to receive ballast.
3. Vessel will be instructed to commence deballasting at approximately 11,000 bbls.p.h.
   Rambala Control will advise when the discharge rate can be increased to the required tanker rail pressure to attain a 30,000 bbls.p.h. deballasting rate (111 – 120 p.s.i.g.).
4. The vessel will advise when deballasting is completed and shut down at manifolds.
5. The terminal will secure ballast system ashore.

Loading Operations:

Loading procedure will follow the sequence below:

1. The Terminal will change from ballast to cargo piping alignment at buoy (because of piping arrangement, ship can expect to receive about 280 barrels of dirty ballast at start of cargo loading).
2. The vessel aligns its piping to load cargo.
3. The vessel opens manifold and advises "Rambala Control".
4. The shore valves will be slowly opened to pressurise the system.
5. The vessel confirms that cargo is being received into tanks.
6. The Terminal will advise vessel hourly of loading rate. This routine also provides a radio check. If the ship does not receive its hourly rate check at the expected time, it should attempt to contact "Rambala Control".

Topping off/Completing: When topping off, the following procedures will be observed:

1. The vessel advises shore prior to start, topping off, and requests desired flow rate.
2. Using shoreside flow/pressure control valves, give vessel loading rate required.
3. When vessel indicates "Stop" the flow/pressure shoreside valve will be closed.
4. When flow has stopped ashore, "Rambala Control" will notify the ship to secure its manifold valves.
5. The vessel closes ship's manifold valves.

Stripping:

1. Shoreside stripping pumps will be started to clear the hose ends of crude oil. (Vent valves at ship's manifold should be opened.)
2. SBM and shore tank valves will be shut. Close vent valves.

Disconnection of Hoses: Once cargo operations have been completed, the procedure for disconnecting hoses is a reverse of the connection procedure. Hoses are then lowered over the side, but made fast to the ship's side until the ship slips from the buoy or the hoses are towed clear by the launch.

The reason for not immediately releasing the hoses is to keep them clear of the vessel's propeller.

Emergency Shutdown: In the event of an oil spill, line rupture or other cause which requires immediate shutdown, the vessel will advise the control to "Stop Stop Stop" and the flow/pressure control valves will be immediately shut. Simultaneously the vessel will close its manifold valves.

The ship will be advised immediately these valves have closed.

Oil Type:

Alaskan North – Slope Crude.
API Gravity 26.7° – 26.9°.
Sulphur 1.05.
Flash Point 0°F.
Reid Vapour Pressure 3.8 at 100°F.
Viscosity 60°F, 68 centistoke seconds.
Viscosity 100°F, 22 centistoke seconds.
Approximate loading temperature 80°F to 90°F.

EMERGENCY PROCEDURES:

Oil Spillages: Should an oil spillage occur from a vessel, from SBM, or from sea lines, "Rambala Control" is to be advised immediately and all shore and ship valves closed in the shutdown sequence.

The Berthing Master will be informed and will initiate action to counter oil spill following procedures as outlined in terminal oil spill manual.

Ship's crew will recover spilled oil from ship's deck.

Fire: In case of fire aboard a vessel, in addition to the internal shipboard alarms, Masters are requested to sound a prolonged blast on the main siren or whistle.

If deballasting or loading, the vessel should:

1. Immediately cease all operations. If loading, call Control Room for emergency shutdown.
2. Initiate fire fighting procedures.
3. Be prepared to disconnect hoses and unberth.

Any other vessel at SBM should also shut down operation and be prepared to unberth.

Loss of Communication: Vessel to sound 5 long blasts on whistle or siren. All operations will be shut down immediately and remain so until communications have been restored.

UNMOORING:

Unmooring from the SBM: To unmoor from the buoy, the approach rope is taken to the windlass and the weight taken whilst the shackle is released from the Triangular Plate or Open Link.

The rope is slacked into the water as the ship goes slowly astern.

At this time, the hoses are also slipped from the ship's rails if they have not previously been slipped and towed clear by the launch.

EARLY DEPARTURE PROCEDURE: All loading vessels are requested to use an Early Departure Procedure (E.D.P.).

(A) If the Master of vessel consents to use the E.D.P. it will be implemented in the following manner:

1. The Master will sign a letter agreeing the use of E.D.P.
2. The cargo documents and other relevant forms will be put aboard the vessel.
3. On completion of loading, the vessel's tanks will be gauged by the Cargo Inspector.
4. The vessel will sail.
5. The terminal will transmit Bill of Lading figures to the vessel by VHF radio. The cargo documents are to be completed by the Master.
6. Written confirmation of these figures will be provided by the vessel's Agent.

(B) If the Master of a vessel does not agree to use E.D.P. the vessel will be unberthed immediately after loading. Terminal's representative will bring completed cargo papers by launch.

MEDICAL: There are no medical or dental services available. Emergency medical requests will be handled by the vessel's Agent.

DENSITY: 1018 (approx.).

FRESH WATER: Not available.

FUEL: Not available.

SURVEYORS: *Petroleum Inspection:* Vessels will be inspected by inspectors from Caleb Brett, Saybolt or S.G.S. Inspection Companies.

These inspectors will follow the procedures laid down by Sohio, Exxon, Arco, etc. as the case may be.

REPATRIATION: Possible using daylight airstrip (length 1,120 m.).

TIME: GMT minus 5 hours.

SERVICES:

Chandlers: None.

SHIP SUPPLY SERVICE: Launches also available and helicopters are easily hired.

SHORE LEAVE: See "General".

WEATHER:

Wind: The normal seasonal wind regime occurring at the lagoon is as follows:

November – March: Wind speeds greater than 19 m.p.h. occur 20.4% of the time in February. The predominant directions are from N. and N.E. (72.2%, occurrence in February). This is the primary windy season. February is the windiest month.

April – June: Wind speeds exceed 19 m.p.h. 3.3% of the time in June. The predominant directions are N., N.E., and E. (58.3% occurrence in June). This season is the secondary calm season.

July – August: Wind speeds exceed 19 m.p.h. 8.8% of the time in July. The predominant directions are N., N.E., and E. (71.2% occurrence in July). This season is the secondary windy season.

September – October: Wind speeds exceed 19 m.p.h. 2.3% of the time in October. Predominant wind directions are N. and N.E. (28.4% occurrence in October), and S. and S.W. (27.6% occurrence in October). This season is the primary calm season.

Waves: The seasonal wave height is:

November – March: Significant wave height exceeds 1.9 ft. 36.2% of the time in February N. and N.E. wave directions predominate, occurring 72.2% of the time in February. This is the roughest season. February is the roughest month.

April – June: Significant wave height exceeds 1.9 ft. 7.8% of the time in June. N., N.E. and E. wave directions predominate, occurring 58.3% of the time in June. This is the secondary calm season.

July – August: Significant wave height exceeds 1.9 ft. 19.7% of the time in July. N., N.E. and E. wave directions predominate, occurring 71.2% of the time in July. This is the secondary rough season.

September – October: Significant wave height exceeds 1.9 ft. 3.9% of the time in October. N. and N.E. wave directions, occur 28.4% of the time, and S. wave directions occur 14.6% of the time in October. This is the primary calm season.

Rain: Rain squalls with strong winds of short duration may be expected from time to time, being more prevalent from November through March.

GENERAL:

Charts: U.S.H.O. (Defence Mapping Agency) 28042 and 28041. British Admiralty 1793.

Sailing Directions: U.S.H.O. Publication – Pub. 144 – Sailing directions for Caribbean Sea and British Admiralty Pilot No. 7A.

Tides: The maximum tidal range is 2.1 ft. The Mean Range is 0.8 ft. The tidal flow in the Lagoon is weak.

Currents: Cross currents of varying velocity have been observed entering Canal del Tigre.

At the offshore anchorage prevailing currents are predicted to be from the E.N.E.

Launch Service: The terminal launches are for terminal use only. Crew members are not permitted aboard these launches.

The launch attending the vessel will be available to the cargo officer of a vessel loading/discharging for the purpose of reading the vessel's draft.

Shore Leave: The terminal will not provide a launch service for shore leave and crew members may not use the launches.

Smoking Regulations: Smoking is prohibited in the following locations:

1. Entire terminal crude tank area.
2. Aboard launches within 0.5 miles of the vessel.
3. In motor vehicles in crude tank area, also in area of ballast tanks except inside designated buildings.
4. On ships except in places designated by the Master and agreed by the terminal's representative.

In accordance with IOTTSG; 2 locations only will be established in the after end of the vessel.

N.B. If an oil spill occurs on jetty or ship, all smoking will be prohibited until the spill has been removed.

OPERATOR: Petroterminal de Panama, S.A., Apartado 901, David, Chiriqui, Republic of Panama. *Tel:* 75-6513, 75-6573. *FAX:* 75-4958. *Contact:* J. Perez, Operations Superintendent – Atlantic Terminal.

AGENT: Fernie (Puerto Armuelles) S.A. VHF: Standby Channel 16. See "Puerto Armuelles".

COCO SOLO NORTH: 09.22 N. 79.53 W.

(See Plan)

LOCATION: The port is located on the Atlantic Coast in Manzanillo Bay, 2 miles N.E. of Colon.

DOCUMENTS: See "Bahia Las Minas".

PILOTAGE: Private Pilot available.

ANCHORAGES: See "Panama Canal".

MAX. SIZE: Max. LOA 140 m., max. draft 5.0 m.

BERTHING:

Pier No.	*Length* (m.)	*Depth** (m.)	*Use*
1 A	175	7.0	General and Timber
1 B	175	9.0	Containers
1 C	175	7.0	Timber
2 A	150	6.0	General Cargo
2 B	150	6.0	General Cargo
3 A	150	6.0	General Cargo
3 B	150	6.0	General Cargo
4 A	120	6.0	Vehicles and Containers
4 B	160	9.0	Vehicles and Containers

* Depths given are for a distance of 10.0 m. from pier.

FRESH WATER: Available at Piers No. 1 and 4.

FUEL: Available at all piers.

SERVICES: Pilotage, tugs, launch service, bunker supply, ship chandlers, repairs, etc., all available from private companies.

AUTHORITY: National Port Authority, P.O.Box 8062, Panama, Republic of Panama. *Tel:* 23-3997, 64-4021. *FAX:* 69-6992, 64-7432. *Contact:* Jerry Salazar, Director General.

COLON: 09.21 N. 79.55 W. (See Plan)

LOCATION: Located in the Bay of Limon, the port of Colon constitutes Quay No. 3 in the area of Fort Lesseps.
DOCUMENTS: The same documents are required and the same procedures are followed as at Bahia Las Minas.
PILOTAGE: No pilotage service at Colon. Vessels berth and unmoor under the orders of their Masters.
RESTRICTIONS: The port is restricted to vessels of length not greater than 100 m. due to the size of the quays. Draft at the berths varies from 2.6 m. to 6.1 m., which also restricts the size of vessels.
Aids to Navigation: The port entrance channel has no aids of its own for navigation. Maritime accesses are however marked clearly by the Panama Canal Commission.
HEALTH: Same as Bahia Las Minas.
RADIO: Vessels can communicate with the Port Administration on Channel 12 VHF.
TUGS: None at Quay No. 3, but they may be contracted in the Canal.
BERTHING:

Berth	*Length*	*Depth (average low tide)*
Quay 2	75 m.	4.9 m.
Quay 3	58 m.	2.05 m.

MEDICAL: In the town of Colon.
STEVEDORES: All loading and unloading operations are carried out by the Union of Port Workers of Colon. The ship's Agent must make the necessary arrangements.
CRANES: None.
DENSITY: 1.0212 grams cu.cm. at 85°F.
FRESH WATER: Available.
FUEL: Available at the quay by pipeline. Also Refineria Panama supplies fuel in the Bay of Colon by means of lighters.
CONSULS: Denmark, Finland, Norway, Sweden, U.K.
PROVISIONS: Available in Colon.
TIME: GMT minus 5 hours.
POLICE/AMBULANCE/FIRE: Available in Colon.
TELEPHONE: Available in the offices of the National Port Authority. Tel: 47-9181.
GENERAL:
Shelter: All the quays are protected from the sea by the breakwater which protects the canal entrance in the Atlantic sector.
General Description: The Port of Colon (Quay No. 3) is used by small vessels of length not greater than 100 m. engaged in coasting trade between Colon and Bocas del Toro, and international trade between Colombia and Panama.
Port Maritime Access: The Colon port access is the same as that which leads to the port of Cristobal in the Canal.
Nature of Bottom: Soft mud and clay.
AUTHORITY: National Port Authority, Apartado 8062, Panama 7, Panama. *Tel:* 23-3997, 64-4021. *Telex:* 2765. *FAX:* 69-6992, 69-7432. *Contact:* Jerry Salazar, Director General.

CRISTOBAL: 09.21 N. 79.55 W. (See Plan)

(N.B. For items not listed, see "Panama Canal".)
PORT LIMITS: Ship's arrival time is normally determined by their passage between the breakwater lights. Those that anchor outside the breakwater by arrangement with the Port Captain are timed as arrived when they drop anchor.
DOCUMENTS:
(a) Documents are to be presented by vessels in transit; who do not embark or disembark passengers; or handle cargo, to the Canal Commission.

General Declaration Form: 2 copies
Crew List: 3 copies
List of Passengers: 2 copies
Local Cargo Manifest: 1 copy
Stores or Supply List: 1 copy
Mail List: 1 copy
Clearance Outwards Certificate from last port visited: 2 copies

(b) Documents which vessels must present when they embark or disembark passengers, or handle cargo, to the National Port Authority.

General Declaration Form: 2 copies
Local Cargo Manifest: 4 copies
Crew List: 3 Copies
List of Passengers: 4 copies
Stores or Supply List: 2 copies
Crew Effects List: 2 copies
Maritime Health Declaration: 1 copy
Mail List: 1 copy

PILOTAGE (Also see "Panama Canal"): Pilotage into Cristobal not compulsory, although services of Pilot outside breakwater are available on request.

Vessels arriving outside Cristobal Breakwater who have requested an outside Pilot are required to *heave to and make a good lee.*

A pilot ladder rigged with appropriate spreaders and well illuminated at night to be provided by vessel. Accommodation ladders not acceptable for embarking Pilots outside breakwater.

Notice to Shipping:

1. A vessel shall, weather permitting, have both an accommodation ladder and a pilot ladder rigged and ready for use upon arrival in Canal Waters.
2. The pilot ladder shall conform to Regulations of the International Convention for the Safety of Life at Sea (SOLAS) and to all additional recommendations of the International Maritime Organisation (IMO).
3. The accommodation ladder may be turned in and secured after the Pilot has boarded the vessel in the anchorage, provided the freeboard does not exceed 9 m. (30 ft.). If the freeboard exceeds 9 m., the accommodation ladder may not be turned in until the last Panama Canal employee boards prior to arrival at the locks.
4. A pilot hoist may be used provided the design and construction of the hoist and ancillary equipment are of such a standard as to ensure an effective and safe means of embarkation and disembarkation. The pilot hoist should only be used when:
   (a) A conventional pilot ladder is rigged and ready for immediate use but triced up well clear of the hoist;
   (b) A lifeline attached to a safety stop and a lifebuoy fitted with a self-igniting light are ready for immediate use.

ANCHORAGES: Vessels will ordinarily proceed to anchorage area according to length and draft unless otherwise directed. Arriving vessels expected to anchor as far to South and inward from main channel in their anchorage area as is consistent with safety. Vessels anchoring in non-designated areas may be required to move.

Anchorage Area "A". For all ships with a deep salt-water draft of not less than 10.4 m.(34 ft.) and not in excess of 11.9 m. (39 ft.). Minimum charted depth is 42 ft. MLW.

This area starting at	Lat. 9° 23′ 21″ N.,	Long. 79° 55′ 21″ W.,
thence to	Lat. 9° 22′ 48″ N.,	Long. 79° 56′ 15″ W.,
thence to	Lat. 9° 22′ 14″ N.,	Long. 79° 56′ 15″ W.,
thence to	Lat. 9° 21′ 56″ N.,	Long. 79° 55′ 48″ W.,
thence to	Lat. 9° 21′ 25″ N.,	Long. 79° 55′ 48″ W.,
thence to	Lat. 9° 21′ 25″ N.,	Long. 79° 55′ 21″ W.,

thence due North to starting-point. However, restricted area North and West of Buoy 2, as charted, must be observed. Explosive sector charted in this area to be avoided whenever possible.

Anchorage Area "B". For all ships with salt-water draft under 9.7 m. (32 ft.) Minimum depth is 32 ft. MLW. Explosive sector restricted to vessels carrying explosives or specially designated vessels. All ships of such length are under no circumstances swing into Anchorage Area "A".

This area starting at	Lat. 9° 22′ 48″ N.,	Long. 79° 56′ 15″ W.,
thence to	Lat. 9° 22′ 32″ N.,	Long. 79° 56′ 41″ W.,
thence to	Lat. 9° 21′ 42″ N.,	Long. 79° 56′ 41″ W.,
thence to	Lat. 9° 21′ 52″ N.,	Long. 79° 56′ 00″ W.,
thence to	Lat. 9° 21′ 25″ N.,	Long. 79° 56′ 00″ W.,
thence to	Lat. 9° 21′ 25″ N.,	Long. 79° 55′ 48″ W.,
thence to	Lat. 9° 21′ 56″ N.,	Long. 79° 55′ 48″ W.,
thence to	Lat. 9° 22′ 14″ N.,	Long. 79° 56′ 15″ W.,

thence due North to starting-point.

Anchorage Area "C". Required pilotage waters for inbound vessels. Minimum depth 42 ft. MLW.

This area starting at	Lat. 9° 21′ 25″ N.,	Long. 79° 55′ 21″ W.,
thence to	Lat. 9° 21′ 25″ N.,	Long. 79° 56′ 00″ W.,
thence to	Lat. 9° 20′ 48″ N.,	Long. 79° 55′ 57″ W.,
thence to	Lat. 9° 20′ 27″ N.,	Long. 79° 55′ 27″ W.,

thence due North to starting-point. Restricted area East and South of Buoy 2, as charted, must be observed.

Anchorage Area "D". For all ships of over 106.7 m. (350 ft.) in length. Minimum depth 35 ft. MLW.

This area starting at	Lat. 9° 23′ 19″ N.,	Long. 79° 55′ 15″ W.,
thence to	Lat. 9° 22′ 55″ N.,	Long. 79° 54′ 21″ W.,
thence to	Lat. 9° 22′ 22″ N.,	Long. 79° 54′ 21″ W.,
thence to	Lat. 9° 22′ 02″ N.,	Long. 79° 54′ 55″ W.,
thence to	Lat. 9° 22′ 02″ N.,	Long. 79° 55′ 15″ W.,

thence due North to starting-point.

Anchorage Area "E". For all ships less than 106.7 m. (350 ft.) and small craft. Minimum charted depth of water is 7.3 m. (24 ft.)

This area starting at	Lat. 9° 22′ 55″ N.,	Long. 79° 54′ 21″ W.,
thence to	Lat. 9° 22′ 27″ N.,	Long. 79° 53′ 54″ W.,
thence to	Lat. 9° 22′ 22″ N.,	Long. 79° 53′ 54″ W.,
thence to	Lat. 9° 22′ 22″ N.,	Long. 79° 54′ 21″ W.,

thence due North to starting-point.

Anchorage Area "F". For small craft and yachts. Pilotage for this area will be decided by Cristobal Port Captain, based on merit of each individual case. Under no circumstances may a vessel proceed to this area prior to being cleared by Boarding Officials. (Bounded by Channel Buoy "3" by a direct line through Buoys "A," "B," "C," "L4," "L2" and return to Buoy "3".)

Outer Anchorage Area. Established N.W. of Cristobal breakwater has the following co-ordinates: Commencing at Lat. 09° 23′ 14″ N., Long. 79° 55′ 21″ W. (West breakwater light); thence to Lat. 09° 24′ 40″ N., Long. 79° 56′ 00″ W. (Buoy "A", whistle sea buoy); thence to Lat. 09° 24′ 40″ N., Long. 79° 57′ 00″ W.; thence to Lat. 09° 23′ 14″ N., Long. 79° 57′ 00″ W.; thence due East to starting point.

During periods of harbour congestion, large, deep-draft vessels and/or any vessel so directed may anchor outside the breakwater in the approved area. Such vessels must advise Cristobal Signal Station, by VHF Channel 12, the time of passing sea buoy, in order to establish order of transit. Masters will be given a definite time to enter the breakwater, where the vessel will be met by transit Pilot(s) and Boarding Officials.

Vessels must strictly adhere to the breakwater entry times as given, in order that transit schedule can be maintained.

Prohibited Anchorage. Eastern side of channel, Canal waters South of Lat. 9° 22′ 02″ N. to Mole Buoy in order to give clear access to Colon Harbour. Also, no vessel or craft may proceed South of Lat. 9° 21′ 25″ N. prior to being cleared by Boarding Officials. No vessel may anchor with any part of the vessel in the main channel or closer than 274 m. (900 ft.) to either East or West breakwater lights.

In cases due to harbour congestion, any vessel may be directed to anchor to Westward outside breakwater entrance and given an order as to the time it is to pass through the breakwater entrance.

RESTRICTIONS: Port open throughout 24 hours.
MAX. SIZE: Harbour limitations generally unrestricted as to length and beam. Draft 12.2 m. (40 ft.).

HEALTH: The Official who comes on board has to verify that the vessel complies with the requirements of the Republic of Panama as far as International Health, Animal and Agricultural Health, Migration and Customs are concerned. If there is any violation, non-fulfilment or omission in respect of any of the International or National requirements concerning human, agricultural health and Customs, the granting of Free Pratique will be suspended until the Competent Authority has been informed and has finally decided as to whether or not Free Pratique can be granted. Also, the respective Authority has to inform the authorities of the circumstances, evidence or a reasonable indication that on board the vessel there is danger to human, animal and vegetable life.

RADIO/VHF: The Port Captain (Port Entry Coordinator) may be contacted via VHF Channel 12. Commercial telephone calls and messages to Agents may be made via Panama Radio, VHF Channel 16.

TUGS: Available and assigned for berthing by Pilot. Tug's lines used at no extra charge.

BERTHING: No specific requirements as to arrival times. Fifteen cargo and bunkering berths. No limitation on beam.

Dock	Berth	*Usable Length* (m.)	*Depth M.L.W.* (m.)	*Max. Lgth. of Ship at Max. Draft* (m.)	*Total Lgth. Avail. of Dock Face* (m.)	*Remarks*

16	E	140.0	9.8	91.4	139.6	Water, Gasoil, Gasoline, Diesel, Clinker, Cars

STEVEDORES: Endeavour arrange arrival to avoid cost of "stand-by" as Agent arranges gangs for 0700 hrs. or 1700 hrs. commencement.

CARGO HANDLING EQUIPMENT: The Port has all kinds of equipment for handling cargo arriving at the quays.

To handle container and other types of cargo, there are 2×40 ton gantry cranes, dock lorries, chassis, forklift trucks of varying capacities (4, 8, 10, 15, 30, 35, 40 tons), agricultural type towing tractors, rolling platforms, and other smaller aids.

CRANES: The only crane in the port is at the pier end of Quay No.8 at Berth A. It has a steel arm capable of lifting 40 tons to a height of 90 ft.

MEDICAL: Medical attention on arriving in the Port of Cristobal can be immediate, since the port contains a first aid clinic in which a doctor and a nurse are present during the day, and a nurse at night. In the town of Colon there are hospitals and private clinics.

TANKERS: Four berths available.

FRESH WATER: Available from piers.

FUEL: Bunker "C", diesel, light fuel and light diesel available at Government wharves from commercial companies. Rate of delivery 2,000 bbls. per hour.

The Southern part of Anchorage C, Cristobal Harbour, has been designated a limited bunkering area for vessels whose draft is too great to use the East breakwater bunkering area.

Pilotage is compulsory out and into this area for vessels and bunkering barges.

Also see "Balboa".

REPAIRS: Emergency repairs possible.

DRY DOCK: (Not available for commercial activities). Length 117.6 m. (386 ft.), breadth 18.3 m. (60 ft.), depth over blocks 6.2 m. (20 ft. 6 in.) MLW.

POLICE/AMBULANCE/FIRE: Police 104, Fire 103.

TELEPHONES: May be placed aboard through arrangement with Agent.

SHORE LEAVE: Generally permitted.

CUSTOMS: Customs and Immigration Inspection Service available Monday to Saturday from 0700 hrs. to 1700 hrs. Charges for such service after hours and on Sundays and holidays. Number of inspectors required will be determined by Chief Customs and Immigration Inspector of port.

DELAYS: Delays in berthing, load or discharge or bunkering are minimal and infrequent. 8 hours is considered excessive.

AUTHORITY: National Port Authority, Apartado 8062, Panama 7, Panama. *Tel:* 23-3997, 64-4021. *Telex:* 2765. *FAX:* 69-6992, 69-7432. *Contact:* Jerry Salazar, Director General.

Cristobal Port Administrator: *Tel:* 41-4848 (Ext. 112).

AGENT: C. Fernie & Co., S.A. Apartado (P.O.Box) 5042, Cristobal, Republic of Panama. Tel: 45-1133 (5 lines). After Hours Tel: 42-1424, 41-4246, 35-4389, 42-3150 or 45-2278. Telex: 8520, 8542, 8814 or 9211. Fax: 41-4168. Cable Address: "Fernie Cristobal". VHF: Standby Channels 12 and 16.

PANAMA CANAL (entering **Cristobal** or **Balboa**) (See Plan)

§ Indicates Panama Canal – Code of Federal Regulations Number (Title 35).

REGULATIONS: The following are some of the important Canal Regulations.

§101.1 Signal Stations at the Canal entrances:

The Panama Canal Commission maintains established signal stations at both the Atlantic and Pacific entrances of the Canal. A vessel arriving at the Canal must communicate with the signal station which is located at the entrance of the Canal at which that vessel arrives. Vessels required to be equipped with a radiotelephone pursuant to Part 123 of this subchapter must, upon arrival, communicate with the appropriate signal station on Channel 12, 156.600 MHz. All other vessels may use International Code and flashing light. Such stations are also utilised to assist and coordinate vessel movements within the Pacific and Atlantic Anchorages.

5. The cross reference which follows *§101.1* is revised as follows:

Cross Reference: See Part 123 for provisions respecting radio communication by vessels prior to arrival and while they are in Panama Canal waters.

§101.2 Boarding of arriving vessels:

(a) Unless otherwise directed, all arriving vessels will anchor in designated anchorages to await Boarding Officers. No person other than Boarding Officers of the Panama Canal Commission and the Republic of Panama may go on board or leave any vessel until such vessel has been entered by the Commission and, where applicable, by the Republic of Panama.

(b) Arriving vessels that are subject to inspection for compliance with Panama Canal shipping and navigation regulations will normally be boarded upon arrival inside the breakwater at the Atlantic entrance of the Canal or off the seaward end of the dredged, marked channel at the Pacific entrance. When such vessels are not boarded immediately upon arrival, they shall anchor in a designated anchorage area and await the Boarding Official. Weather and sea conditions permitting, the boarding of vessels may take place outside of these areas. Boarding will be performed by a Commission Boarding Official in accordance with the procedures established under this part.

(c) Admeasurement functions shall be performed on arriving vessels either while at anchor or during transit.

§101.3 Definitions and functions of the Boarding Officer:

(a) Boarding Officer means any official or employee of the Panama Canal Commission who is duly assigned the functions of a Boarding Officer, including admeasurement and sanitation.

(b) The Commission Boarding Officer shall perform the functions of admeasurer for the purpose of determining Panama Canal tolls and shall make inspection for the purpose of insuring compliance with Panama Canal shipping, navigation and sanitation regulations.

§101.4 Measurement of vessel making maiden transit:

A vessel that arrives after 2000 hrs. and is to make her maiden transit will normally be admeasured on the following day.

§103.4 Load and trim:

(a) A vessel shall not be permitted to transit the Canal if she:

(1) Has a list of more than 10 degrees; (2) Is so tender or otherwise so loaded as to dangerously affect her stability or manoeuvrability; or (3) Is so trimmed as to dangerously affect her manoeuvrability.

(b) A vessel having a list of between 3 degrees and 10 degrees, or which is so loaded or so trimmed as to adversely affect her manoeuvrability, may be permitted to transit at the discretion of the Canal Operations Captain or his designee. If such vessel is allowed to transit, however, it may do so only at its own risk and, to the extent and in the proportion that such failure to meet the requirements of this section proximately causes or contributes to a casualty and resulting damages, the Master of such vessel on behalf of said vessel, her Owners, Operators, or any other persons having any interest in her, and for himself, will be considered to have released the Panama Canal Commission and the United States from, and to have indemnified them against, any loss, damage, or liability incurred by the Commission, or the United States under or in respect to:

(1) Sections 1411 – 1416, inclusive, of Pub. L. 96 – 70, 93 Stat. 485 – 87.

(2) Property of the Panama Canal Commission or the United States;

(3) Panama Canal Commission employees under the Federal Employees' Compensation Act, 5 U.S.C. 8101, *et seq.*, or any other employee compensation system.

The Master of the vessel that fails to meet the requirements of this section may be required to execute, in the presence of a Commission official, a form undertaking to release the Panama Canal Commission and the United States from liability in case of an accident and to indemnify the Commission and the United States for any damages sustained. The failure of the Master of a vessel to sign such a form, however, will not relieve the vessel, her Owners, or any other person having an interest in her from liability incurred as a result of the vessel's failure to meet the requirements of this section.

(c) Nothing shall be done, or permitted to be done, by the Master or any member of the crew, which would alter the trim or draft of a vessel while transiting the Canal, without the prior, express approval of the Pilot.

§103.7 Temporary holding of vessels:

The Canal authorities may hold a vessel for the purpose of investigating a marine accident under Parts 115 or 117. A vessel may also be denied transit until, in the opinion of the Canal Authorities, its tenderness, trim, list, cargo, hull, machinery, and equipment have been put into such condition as will make the vessel reasonably safe for her passage through the Canal. No claim for damages shall be allowed or considered because of any such temporary holding of vessels.

§103.8 Preference in the transit schedule; Order of transiting of vessels:

(a) *General:* Except as provided in §103.9 of this part, and subject to the limitations imposed by Article III of the 1901 Treaty to Facilitate the

Construction of a Ship Canal, entered into by the United States and Great Britain, and by Articles II and VI of the 1977 Treaty Concerning the Permanent Neutrality and Operation of the Panama Canal, between the United States and the Republic of Panama, vessels arriving for transit of the Canal will be placed in the transit schedule in accordance with the rules in this section.

(b) *Definitions:* As used in this section:

(1) *Booked for transit* means that a vessel has been assigned a date on which it will be moved through the Panama Canal.

(2) *Regular transit* means the movement through the Canal of a vessel that has not been booked for transit.

(c) *Transit bookings:* There will be two periods during which bookings may be made for a given date. In the first period, a limited number of bookings (not to exceed 7) will be available between 21 days and 4 days prior to the date of intended transit. In the second period, an additional number of bookings (not to exceed 9), plus any first-period bookings not taken or any bookings which have been cancelled, will be available on the third and second days prior to the date of transit. The Canal authorities may cease accepting requests for bookings during times of high traffic congestion at the Canal. If there is a loss in Canal capacity, the number of bookings available may be reduced. The specific order of transit will be determined by the Canal authorities. Except as provided herein, a vessel may not transit prior to the date for which it has been booked, unless the Canal authorities determine that an early transit would promote efficiency of the Canal and would not result in delay for any regular transits. In the event that a vessel transits prior to the date for which it is booked, the fee will be retained by the Commission. Substitution of booked transits will be permitted under conditions specified by the Canal authorities.

(d) *Preference:* If, on any day during the first period, or on either day of the second period, requests exceed the number of bookings remaining available, preference for the remaining bookings will be given in the following order:

(1) First, vessels carrying primarily perishable cargoes, in the order of frequency of transit during a specified period;

(2) Second, all other vessels in the order of frequency of booked transits during a specified period.

(3) If two or more vessels are found to have equal number of booked transits under the procedure above, then preference will be given in the order of frequency of transit during a specified period.

(4) If two or more vessels are still found to have equal number of transits under the procedures above, then preference will be given to the vessel having transited most recently.

(e) *Fees:* The fee for booking shall be $0.23 per Panama Canal Gross Ton. The minimum fee for any vessel is $1,500.

(f) *Penalties:* (1) When a vessel that is subject to transit restrictions (e.g. clear-cut; clear-cut daylight), has been booked for transit and does not arrive at a terminus of the Canal by 0200 hrs. of the day of the transit, the booking fee will be forfeited. Similarly, the fee will be forfeited if a booked vessel, that is not subject to such transit restrictions, does not arrive by 1300 hrs. on the day of the transit. In either case, upon arrival, the vessel will be placed in the regular transit schedule. This forfeiture will not occur if late arrival is due to humanitarian reasons or a natural event of major proportions, which is not caused by the intervention of man, and which could not be reasonably predicted in advance. The booking fee will also be forfeited if the vessel arrives on time but cannot or, at the operator's election, does not, transit as scheduled when the agency is ready to proceed. In these latter cases, the Canal authorities shall have discretion to waive the forfeiture where it is established that the delay was due to external causes that the vessel operator could not reasonable have anticipated.

(2) Failure to provide complete and accurate information on the request form may result in rejection of the booking and forfeiture of the fee.

(3) If the vessel does not begin its transit on the day for which it has been booked due to a decision by the Canal authorities, its operator thereafter, at any time prior to the day that the vessel has subsequently been scheduled to make a delayed transit, may elect to receive a refund of the fee, in which case the vessel will be listed on the regular transit schedule. In the alternative, the operator may elect to have the Commission retain the fee, in which case the vessel will be transited on a preferred basis.

(4) When a vessel booked for transit is delayed by a decision of the Canal authorities, and that delay could result in the vessel's failure to arrive on time for a subsequent transit which was booked before the delay was encountered, the vessel's Agent may, within 24 hours of completion of the delayed transit request:

(i) Change of the second booking to another date (if bookings are available on the requested date); or

(ii) Cancellation of the second booking, without charge, and inclusion in the regular schedule.

(5) A vessel will be deemed to have transited the Canal on the day for which it has been booked if it arrived at the first set of locks prior to 2400 hrs. that day and its in-transit time (ITT) is 18 hours or less. In-transit time begins when the vessel enters the first set of locks at either terminus of the Canal, and ends when the vessel departs the last set of locks at the opposite terminus. The booking fee will be refunded whenever ITT, through no fault of the vessel, exceeds 18 hours.

(g) *Cancellation:* A transit that is booked may be cancelled if notice of cancellation is received by the Canal authorities prior to the required arrival time. A charge will be assessed for such cancellations, however, in accordance with the following schedule.

Date of cancellation	*Cancellation charge (the greater of)*
Over 10 days prior to transit	20% of booking fee or $500.
10 to 7 days prior to transit	40% of booking fee or $750.
6 to 2 days prior to transit	60% of booking fee or $1,000.
1 day or less	80% of booking fee or $1,250.

Failure to cancel prior to scheduled arrival time on the date of intended transit will result in forfeiture of the booking fee.

(h) *Regular Transits:* Vessels which are not booked for transit will be dispatched through the Canal in the order determined by the Canal authorities. Priority of arrival at a terminal port does not give a vessel the right to pass through the Canal ahead of another that may arrive later; however, the time of arrival will be a consideration in fixing the order of passage. Generally, regular transits will equal or exceed one-half of the total number of vessels moved through the Canal on any given day.

(i) *Suspension:* The Canal authorities may suspend or discontinue, in whole or in part, the transit booking system established by this section if they determine that its continuation may adversely affect the safe or efficient operation of the Canal.

§103.10 Vessels required to be equipped with certain indicators:

(a) All vessels in excess of 150 ft. in length shall be equipped with properly operating rudder-angle and engine-revolution indicators in the wheelhouse so located and illuminated as to be readily visible to a Pilot.

(b) All vessels with beams in excess of 80 ft. shall be equipped with properly operating rudder-angle and engine-revolution indicators in the wheelhouse and on each bridge wing so located and illuminated as to be readily visible to a Pilot.

(c) All vessels in excess of 150 ft. in length which are equipped with variable pitch propellers shall have properly operating pitch indicators in the wheelhouse so located and illuminated as to be readily visible to a Pilot.

(d) All vessels with beams in excess of 80 ft. which are equipped with variable pitch propellers shall have properly operating pitch indicators in the wheelhouse and on each bridge wing so located and illuminated as to be readily visible to a Pilot.

(e) Any vessel which fails to meet the requirements of this section may be denied transit. If the Canal authorities decide that a vessel can be handled without undue danger to equipment or to personnel, notwithstanding her failure to comply with other requirements of this section, and permit her to transit, such vessel may do so only at its own risk and, to the extent and in the proportion that such failure to meet the requirements of this section proximately causes or contributes to a casualty and resulting damages, the Master of such vessel, on behalf of said vessel, her Owners, Operators or any other persons having any interest in her, and for himself, will be considered to have released the Panama Canal Commission and the United States from, and to have indemnified them against any loss, damage or liability incurred by Panama Canal Commission or the United States under, or in respect to:

(1) Sections 1411 – 1416, inclusive, of Pub. L. 96 – 70, 93 Stat. 485 – 87;

(2) Property of the Panama Canal Commission or the United States;

(3) Panama Canal Commission employees under the Federal Employees' Compensation Act, 5 U.S.C. 8101, *et seq.*, or any other employee compensation system.

The Master of the vessel that fails to meet the requirements of this section may be required to execute, in the presence of a Commission official, a form undertaking to release the Panama Canal Commission and the United States from liability in case of an accident and to indemnify the Commission and the United States for damages sustained. The failure of the Master of a vessel to sign such a form, however, will not relieve the vessel, her Owners, or any other person having an interest in her from liability incurred as a result of vessel's failure to meet the requirements of this section.

§103.27 Clear view forward from the bridge and steering light requirement for certain vessels:

(a) A vessel may not be navigated in Canal waters unless there is a clear, unobstructed view from the bridge.

(b) All vessels over 100 m. (328 ft.) in length shall have installed at or near the stem, a steering range equipped with a fixed blue light which shall be clearly visible from the bridge along the centerline. If said range and light so placed would be partially or completely obstructed, then two such ranges and lights must be installed at an equal distance from the centerline and shall be clearly visible from the bridge along lines parallel to the keel.

(c) Naval or military vessels exempted from the requirements of Part 111 of this chapter shall also be exempt from the requirements of paragraphs (b), (d) and (e) of this section.

(d) The light required by this section shall be capable of being illuminated and extinguished by a suitable control switch located either on the navigation bridge or on the forecastle deck, or both.

(e) The use of this steering light shall be at the discretion of the Panama Canal pilot who has control of the navigation and movement of the vessel.

§109.5 Ship's gear to be ready during transit; test:

Before beginning transit of the Canal, a vessel shall have hawsers, lines and fenders ready for passing through the locks, for warping, towing, or mooring as the case may be; and shall have both anchors ready for letting go. The Master shall assure himself, by actual test, of the readiness of the vessel's main engines, steering gear, engine room telegraphs, whistle, rudder-angle and engine-revolution indicators, and anchors. During the transit, at all times while a vessel is underway or moored against the lock walls, her deck winches, capstans, and other power equipment for handling lines, as well as her mooring bitts, chocks, cleats, hawse pipes, etc., shall be ready for handling the vessel, to the exclusion of all other work.

DOCUMENTS: *§101.10* (a) *Documents for Commission Boarding Officer.* All documents listed below shall be ready for immediate delivery to the Boarding Officer when he boards the vessel upon each arrival of the vessel at the Canal.

Documents Required

1. Ship's Information and Quarantine Declaration (Panama Canal Form 4398) – 1 copy.
2. Cargo Declaration (Panama Canal Form 4363) – 1 copy.*
3. Crew List (Panama Canal Form 1509) – 1 copy.
4. Passenger List (Panama Canal Form 20) 1 copy.
5. Dangerous Cargo Manifest – 1 copy.†
6. Loading Plan – 1 copy.‡
7. Panama Canal Tonnage Certificate – 1 copy.*

8. Ship's Plans (general arrangement, engine room, capacity, midship, etc.) – 1 copy.*

*Required only if vessel transits Canal.
†Required only if vessel is carrying packaged, dangerous goods.
‡Required only if vessel is carrying dangerous cargo in bulk.

(b) *Documents for Examination Only.* The following documents shall be available for inspection by the Commission Boarding Officer:

1. Ship's log,
2. All ship's documents pertaining to cargo, classification, construction, load lines, equipment, safety, sanitation, and tonnage,
3. SOLAS Certificate, for ships carrying dangerous cargo in bulk,
4. An International Oil Pollution Certificate, for ships carrying dangerous cargo in bulk, and
5. Certificate showing compliance with the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers, 1978 (STCW), if the nation of registry has implemented the conventions standards. If the nation of registry has not implemented the STCW convention, then certifications issued or accepted by the registry nation attesting to the qualifications of officers and crew will be accepted by the agency. Certification requirements will apply only to officers and crew responsible for the safe handling of the vessel.

(c) *Crew List.* For the purposes of additional identification of crew members, the Crew List required by this section shall include for each seaman the serial number of his certificate of identification, continuous Discharge Book, Passport or other satisfactory identifying documentation. In addition, the given name and middle initial, as well as the family name, shall be shown for all seamen.

(d) *Passenger List.* The Passenger List required by this section shall be in accurate and legible form and shall be delivered to the boarding officer. The list shall show passengers in alphabetical order.

(e) *Dangerous Cargo Manifest.* The Dangerous Cargo Manifest for vessels carrying packaged dangerous goods, as defined in *§113.2*(m) see below, of this title, shall show the correct technical name, United Nations number, International Maritime Organisation class, storage location, and quantity for each packaged dangerous goods carried as cargo.

(f) *Loading Plan.* The Loading Plan for vessels carrying dangerous cargoes in bulk, as defined in *§113.2*(f) see below, of this title, shall show the location of cargo tanks or holds and the correct technical name, United Nations number, International Maritime Organisation class, and quantity of dangerous cargo carried in each cargo tank or hold.

§113.2(f) "*Dangerous Cargo in Bulk*" means any dangerous substance, carried without any intermediate form of containment, in a tank or cargo space which is a structural part of a vessel or in a tank permanently fixed in or on a vessel.

(m) "*Packaged Dangerous Goods*" means any dangerous cargo contained in a receptacle, portable tank, freight container or vehicle. The term includes an empty receptacle, portable tank or tank vehicle which has previously been used for the carriage of a dangerous substance unless such receptacle or tank has been cleaned and dried, or when the nature of the former contents permits transport with safety.

Documents Required for Maiden Transit:
Please Provide the Following for Panama Canal Admeasurer:

1. National Register.
2. Panama Canal Tonnage Certificate.
3. Suez Canal Tonnage Certificate (if available).
4. International Load Line Certificate.
5. International Tonnage Certificate.
6. General Arrangement Plan.
7. Capacity Plan.
8. Engine Room Plans.
9. Midship Section Plan.
10. Tank Sounding Tables for L.O. & F.O. tanks.
11. Lines Plan.

PILOTAGE: *§105.4 Pilotage Charges:* Pilotage for vessels in transit through the Canal is free, but whenever any vessel requires a Pilot for other than transit, it is liable for the applicable pilotage charge.

§105.5 Pilotage Beyond Atlantic Breakwater

Should a vessel desire a Pilot to meet it outside the Atlantic breakwaters, such vessel shall remain there and make signal to that effect.

§105.6 Status and Function of Pilot

The Pilot assigned to a vessel shall have control of the navigation and movement of such vessel.

§105.1 Pilots Required

(a) Except as provided by *§105.2* and *§105.3*, or by paragraph (c) of this section, no vessel shall pass through, enter or leave the Canal or manoeuvre in the Canal or waters adjacent thereto, including the ports of Cristobal and Balboa, without having a Panama Canal Pilot on board.

(b) Normally, a vessel will, unless advised to the contrary by the Canal Operations Captain or his designee, be boarded by the Panama Canal Pilot inside the breakwater at a point North of the Mole Beacon at the Atlantic entrance and in the Merchant Vessel Anchorage to seaward of Buoys 1 and 2 at the Pacific entrance.

(c) In conformity with past practice, vessels anchored in Anchorage Area C and Anchorage Area F, as shown in the Pilot Handbook, Limon Bay Chart, may proceed to sea without a Panama Canal Pilot on board. All such vessels, prior to getting underway, must obtain permission to depart from the Cristobal Signal Station.

(d) Whenever the Administrator finds there is a critical shortage of Certified Panama Canal Pilots available for movement of vessels in Canal waters, he may suspend the rule on compulsory pilotage set out in paragraph (a) of this section. The Administrator shall impose such conditions upon the suspension of the rule, with respect to any given vessel, as are reasonable and appropriate to protect human life and property and to safeguard the facilities of the Panama Canal.

§103.19 Requirements for Pilot Platforms and Shelters on Certain Vessels

(a) Suitable platforms and shelters, port and starboard, must be provided by certain vessels for assisting pilots. Vessels with extreme beam of 30.48 m. (100 ft.) or more and a length of 190.5 m. (625 ft.) overall or more, may require more than 2 pilots when transitting the locks of the Panama Canal:

(1) Vessels with the bridge in the extreme afterpart of the vessel (assisting pilot and platforms will be forward).

(2) Vessels with the bridge in the extreme forepart of the vessel (assisting pilot and platform will be aft).

(b) Platforms must afford shelter suitable to protect assisting pilots from rain and sun. A sketch of a simplified pilot platform acceptable to the Panama Canal Commission can be seen in the "Plan Section".

(c) Each platform is to be erected directly over the furthest point forward of the extreme beam at the waterline, and not more than 6 in. inboard from the outside of the vertical plane of the shell plating. For vessels where the bridge is located forward, these pilot platform shelters will be required to be erected directly over that position, which is the furthest point aft of the extreme beam at the waterline, and not more than 6 in. inboard from the outside surface of the vertical plane of the shell plating.

(d) In addition, all vessels whose extreme beam is 24.38 m. (80 ft.) or more, are required to provide bridgewing shelter platforms for the protection of control pilots. A sketch of a bridgewing shelter platform acceptable to the Panama Canal Commission can be seen in the "Plan Section". Alternate arrangements, including portable shelters, which provide equivalent or better protection and visibility, may be acceptable.

(e) The awning indicated in the "Plan Section" is to be made of suitable material to provide shelter from the sun and rain. The deck of the pilot's platform is to be made of wood or other material with non-skid surface, sufficient to provide dry footing at all times. Overhead awing should be rigged to avoid spilling water inside the framework of the shelter during rain.

(f) Further inquiries on this subject should be directed to the Canal Operations Captain.

§103.18 Pilot Ladders, Hoists and Side Ports

(a) A vessel shall, weather permitting, have both an accommodation ladder and a pilot ladder rigged and ready for use upon arrival in Canal waters.

(b) The pilot ladder shall be constructed and rigged in accordance with Regulation 17, Chapter V, International Convention for Safety of Life at Sea, 1974, TIAS 9700, except that;

(c) When the distance from the water line to the point of access of the vessel exceeds 9 m. or 30 ft., a combination pilot ladder and short brow accommodation ladder must be provided for boarding purposes.

(d) A mechanical pilot hoist may be used for Boarding Officials and Pilots only at their discretion, and provided that the design and construction of the hoist and ancillary equipment are in accordance with Regulation 17, Chapter V, International Convention for Safety of Life at Sea, 1974.

(e) When a mechanical pilot hoist is used, a ring buoy fitted with a lifeline and self-igniting light shall be available and ready for immediate use. The pilot ladder required by *§103.18* (a) shall be in close proximity to the pilot hoist, ready for immediate use but lashed up so as not to interfere with the pilot hoist.

(f) When the side ports are used for boarding, the minimum vertical distance between the waterline and the bottom of the side port at any draft shall be 6 ft.

ANCHORAGES: No vessel shall anchor within the navigable waters of the Canal in other than a designated anchorage, except in an emergency, and no craft shall tie up to any aid-to-navigation in Canal waters.

§ 101.8 Vessel Anchorage Areas

The following areas are designated as authorised anchorages within Canal waters.

(a) *Atlantic Entrance.* – (1) *Merchant-Vessel Anchorage:* An area to the West of the Canal channel bounded as follows: Starting at a point "A", located in position 9° 21′ 25″ N., 79° 55′ 31″ W., and marked by lighted Buoy No. 2, thence 900 yards 270° True to a point "B" located in position 9° 21′ 25″ N., 79° 55′ 58″ W., thence to lighted Buoy "I", thence to lighted Buoy "H", thence due North to a point "C" located in position 9° 22′ 07″ N., 79° 56′ 41″ W., thence 2,800 yards 59° True to a point "D" located in position 9° 22′ 50″ N., 79° 55′ 29″ W., and thence to the starting point. The line extending due West from the Cristobal Mole through lighted Beacon No. 1 and lighted Buoy No. 2 (9° 21′ 25″ N.) marks the southern limit of the anchorage area. Except as provided by *§105.3*, no vessel shall pass this line without having been passed by the boarding officer and without having a Canal Pilot on board.

(2) *Outside Explosive Anchorage.* An area bounded by a line from Point A at position 9° 23′ 53″ N., 79° 56′ 29″ W. thence to Point B at position 9° 24′ 40″ N., 79° 56′ 29″ W. thence to Point C at position 9° 24′ 40″ N., 79° 57′ 00″ W. thence to Point D at position 9° 23′ 53″ N., 79° 57′ 00″ W. thence to Point A.

(3) *Inside Explosive Anchorage.* The area included in a rectangle 1,000 yards wide immediately South of the West breakwater, the rectangle extending 2,000 yards along the West breakwater from a point on the West breakwater 1,000 yards from the West breakwater light.

(4) *Small-Craft Anchorage.* An area to the East of the Canal channel bounded as follows: Starting at Buoy "A", a flashing amber Buoy located in position 9° 20′ 43″ N., 79° 55′ 10″ W., thence 1,075 yards 066° True, through fixed amber lighted Buoy "B" to fixed amber lighted Buoy "C", thence 375 yards 143° True, thence 1,760 yards 233° True to the East prism of the Canal channel, thence due North 410 yards to flashing special anchorage Buoy "3", thence 525 yards 023° True to the starting point at Buoy "A".

(b) *Gatun Lake Anchorage:* An area immediately East of the Canal channel line, bounded by a line extending from the South end of the East wing-wall of Gatun Locks, thence 450 yards 120° True, thence 676 yards 146° True to flashing special anchorage Buoy "A", thence 1,415 yards 078° True to flashing special anchorage Buoy "1", thence 1,199 yards 155° True to flashing special anchorage Buoy "3", thence 2,314 yards 225° True through special anchorage Buoy "5" to special anchorage Buoy "7", thence 901 yards 220° True to special anchorage

Buoy "9", thence 952 yards 205° True to the Canal channel line at flashing Buoy "11", the channel prism line being the Westerly boundary line of the anchorage area.

(c) *Pacific Entrance* – (1) *Merchant-Vessel Anchorage:* An area bounded as follows: Beginning at a point in position 8° 51′ 50″ N., 79° 30′ 00″ W., marked by a lighted, whistle buoy which is painted with alternating black and white vertical stripes and which shows short-long flashing white light every 8 seconds, (i.e. light 0.4 seconds, eclipse 0.4 seconds, light 1.6 seconds, eclipse 5.6 seconds), thence due East to Long. 79° 28′ 00″ W.; thence due North to 8° 54′ 31″ N., thence due West toward Flamenco Island Light to a point 8° 54′ 31″ N., 79° 30′ 46″ W.; thence Southwestward touching the Northwest corner of San Jose Rock to position 8° 53′ 27″ N., 79° 31′ 23″ W., marked by canal-entrance lighted Buoy No. 2, thence Southwestward to the point of beginning.

(2) *Explosive Anchorage.* An area South of Naos Island bounded on the East by a line drawn South (True) from canal-entrance lighted Buoy No. 1; on the South by a line drawn East (True) from Tortolita Island, and in the North and West by the curve of 30 ft. depth.

(d) If there are any discrepancies between the designated anchorage areas as described in this section and the anchorage areas described in paragraph 4 of Annex A of the Agreement in implementation of Article III of the Panama Canal Treaty of 1977 and the attachments thereto, the description in the treaty documents shall govern.

Also see "Cristobal" and "Balboa".

MAX. SIZE/RESTRICTIONS:

§103.6 Size and Draft Limitations of Vessels

Panama Canal Commission:

Marine Director's Notice to Shipping No. N-1-94 (Dated 1st January 1994).

To: Steamship Agents, Owners, Operator

Subject: Vessel Requirements

Editor's Note: Not all subjects have been included, so the full text of this notice should be obtained from your Owner, Operator or Agent.

Purpose and Scope:

The purpose of this document is to inform the shipping community of the procedures and amplifications found necessary to implement the Panama Canal Regulations published in Title 35, Code of Federal Regulations (35 CFR). *Non-compliance with Canal rules and regulations may subject vessels to unnecessary delays or denial to transit.* Deviations from these rules may be ordered by appropriate Canal authority if special circumstances so warrant.

Effective Date and Cancellation:

(a) This notice cancels Marine Director's Notice to Shipping No. N-1-93, N-1-93 errata (Ps.17-18), and is effective on the date of issue.

(b) A revised notice will be issued in January of each year or when otherwise required.

Organisation and Responsibility:

(a) The Marine Bureau (Telephone 52-4500, Fax: 52-3892) under the direction of the Marine Director is the organisational unit of the Panama Canal Commission responsible for the control of maritime traffic through the Canal and its terminal ports, and through which all Commission services to shipping are handled. Following is a summary of Marine Bureau units which, due to their function, often require contact with Agents, Operators and Owners:

(1) Admeasurement Division (Tel: 52-4567, Fax: 52-7901) headed by the Director of Admeasurement, is responsible for ascertaining the correct Panama Canal tonnage of vessels transiting the Canal, boarding and clearing of vessels for medical surveillance, gathering information for the Ship Data Bank and generating billing invoices for transits and related services.

(2) Board of Local Inspectors (Tel: 52-3403, Fax: 52-3548) headed by the Chairman, Boad of Local Inspectors, is responsible for the official inquiry and examination into the circumstances surrounding marine accidents which occur in the Canal operating area, harbours, Canal anchorages and areas adjacent thereto, involving Commission personnel and/or equipment, and the certification of marine credentials of Commission employees.

(3) Canal Operations Unit (Tel: 52-4211, Fax: 52-7688) headed by the Canal Operations Captain, is responsible for the immediate direction of daily maritime operations, maritime emergency reaction and recovery, supervision and enforcement of rules and regulations governing the navigation of the Canal, approval of new construction including chocks and bitts, boarding facilities, wheelhouse design features and visibility requirements and for ensuring that vessels arriving for transit are properly equipped. The Canal Operations Captain's responsibilities are exercised through the Duty Operations Captain and the Canal Port Captain.

(4) Marine Safety Unit (Tel: 52-4243, Fax: 52-3015) headed by the Special Assistant to the Director for Marine Safety, is responsible for matters involving the safety aspects of vessel traffic flow and control, vessel material conditions and inspections, hazardous cargo, Canal physical conditions, marine personnel qualification, marine environmental protection and industrial health, and certification of Commission floating equipment.

(5) Traffic Management Division (Tel: 52-4220, Fax: 52-3976) headed by the Chief, Traffic Management Division, is responsible for processing ETA information, preparation of the daily transit schedule, monitoring and coordinating all vessel movements within Canal operating areas and administration of the Panama Canal Transit Booking System.

(b) Transit of vessels is a joint effort. In addition to the responsibilities outlined above, vessel Owners, Operators, Agents, officers and crew are responsible for compliance with Canal rules and regulations. The cooperation of all concerned parties is necessary to ensure safe and efficient transit.

Communications: Direct communications with Marine Bureau units may be established by the following means:

(a) Mail – address to:	Panama Canal Commission (Name of Division) Unit 2300 APO AA 34011-2300 U.S.A.
(b) Telex – address to:	(Name of Unit) 3023 PCCMTCC PG
(c) Fax:	(Name of Unit) (Fax number listed above by unit)
(d) Telephone:	(Telephone number listed above by unit)
(e) International access code (for fax and telephone):	(507)

Notice to Shipping No. N-1-94
Vessel Requirements

1. Definitions

(a) *Barge:* A flat-bottomed vessel of full body and heavy construction without installed means of propulsion.

(b) *Commercial Vessel:* A self-propelled vessel other than a naval, military or other public vessel.

(c) *Dangerous Cargo:* Any material which is explosive, flammable, radioactive or toxic to humans or the environment.

(d) *Integrated Tug-Barge Combination:* A barge that is specifically configured to receive a tug and with the tug becomes, for navigational purposes, a single self-propelled unit with normal ship characteristics, that meets all PCC regulations for transit, and can operate under all conditions in which a ship of equivalent size can operate.

(e) *Maximum Authorised Transit Draft:* Deepest point of immersion in TFW of a particular vessel permitted at anytime, Gatun Lake level and Canal restrictions permitting.

(f) *Maximum Beam:* The maximum breadth (width) of the hull between the outside surfaces of the shell plating.

(g) *Maximum Length:* The distance between the forward and after extremities of a vessel, including the bulbous bow and protrusions (also length overall – LOA).

(h) *Maximum Width:* The extreme width of a vessel, including protrusions, at its widest point.

(i) *Non-Self-Propelled Vessel:* A vessel which either does not have an installed means of propulsion, or has an installed means of propulsion which is not functioning during transit. Also referred to as dead tow.

(j) *Protrusion:* Anything that extends beyond any portion of the hull of a vessel, whether it is permanent or temporary.

(k) *Published TFW Maximum Draft:* Deepest point of immersion in Gatun Lake waters as promulgated by the Marine Director, taking into account the water level of Gatun Lake and other limitations deemed necessary because of restrictions in the Canal.

(l) *Tropical Fresh Water (TFW):* Tropical fresh water of Gatun Lake, density 0.9954 gms./cc. at 85°F (Transition to fresh water frequently alters the trim of large vessels 7.5 cm. to 10 cm. (3 in. to 4 in.) by the head).

2. Size and Draft Limitations of Vessels

(a) *Maximum Length:*

(1) The maximum length overall including bulbous bow for commercial or non-commercial vessels acceptable for regular transit is 289.56 m. (950 ft.), except passenger and container ships which may be 294.13 m. (965 ft.) in overall length. Vessels transiting the Canal for the first time at an overall length exceeding 274.32 m. (900 ft.), whether newly-constructed or newly-modified, are subject to the requirements of inspection and prior review and approval of vessel plans. Vessels not receiving advance approval and/or not complying with Canal requirements, may be denied transit.

(2) The maximum length for integrated tug-barge combination acceptable for regular transit is 274.32 m. (900 ft.) overall, including the tug. A tug-barge combination must transit together as one unit with the tug supplying the propelling power.

(3) The maximum aggregate overall length for non-self-propelled vessels acceptable for transit is 259.08 m. (850 ft.), including accompanying tugs. Accompanying tugs must lock through with the non-self-propelled vessel. One-time only transits, that exceed these limitations, may be permitted on a case-by-case basis with prior approval of the Canal Operations Captain and subject to requirements listed in paragraph 2(k) of this section.

(b) *Maximum Beam:*

(1) The maximum beam for commercial or non-commercial vessels and the integrated tug-barge combination acceptable for regular transit is 32.31 m. (106 ft.).

(2) Wider commercial vessels including integrated tug-barge combination up to a beam of 32.61 m. (107 ft.) may be permitted, with prior approval of the Canal Operations Captain or his designee, to transit on a one-time delivery basis only if the deepest point of immersion does not exceed 11.28 m. (37 ft.) TFW.

(3) The maximum beam for non-self-propelled vessels (other than integrated tug-barge combinations) acceptable for transit is 30.48 m. (100 ft.). One-time transit of wider vessels may be permitted with prior approval of the Canal Operations Captain and subject to requirements listed in paragraph 2.(k) of this section.

(c) *Maximum Width:*

(1) No vessel with a maximum width exceeding its maximum beam may transit the Canal without prior review and approval of vessel plans. Vessels not receiving advance approval and/or not complying with Canal requirements, may be denied transit.

(2) Vessels which carry cargo within 2.5 cm. (1 in.) or less of the extreme beam must have approved provisions, such as rubbing bands, to protect the cargo, should the vessel rest alongside the wall while in the chamber. The maximum beam of 32.31 m. (106 ft.) should not be exceeded by the cargo protection method. This is brought about by the large number of container vessels which are designed to load containers virtually to the extreme beam. If the ship lands on the wall in a heeled condition or where the locks' wall fendering, or the miter gate fendering protrudes, damage may occur.

(d) *Protrusions:*

(1) Anything which extends beyond a vessel's hull shall be considered a protrusion and subject to all applicable laws and limitations.

(2) The Commission is not responsible for damages to protrusions whether permanent or temporary.

(3) Vessels with protrusions may be permitted to transit, provided that such protrusions will not interfere with the safe transit of the vessel, or present a hazard to Canal structures as determined by the Canal Operations Captain. In either case, before transit is permitted, Masters of vessels will be required to execute a form undertaking to release the Panama Canal Commission from liability in case of accident and to indemnify the Commission for damages sustained to or as a result of protrusion.

(4) Vessels with permanent protrusions must, prior to proceeding to the Canal, furnish detailed information about the protrusion(s), including plans, and request authorisation for transit. Advance information will minimise the possibility that transit may be delayed or denied. For detailed information contact the Canal Operations Captain.

(5) Vessels with protrusions extending beyond the maximum length and beam limitations specified in paragraphs 2.(a) and 2.(b) above, may, on a case-by-case basis, be permitted transit, provided that approval is obtained in advance from the Canal Operations Captain, that protrusions do not present a hazard or interfere with lock structures, equipment and/or operation, and the Master executes a form releasing the Panama Canal Commission from liability (See paragraph 6.6).

(e) *Maximum Height:* The allowable height for any vessel transiting the Canal or entering the Port of Balboa at any state of the tide is 57.91 m. (190 ft.), measured from the waterline to its highest point. With prior permission from the Canal Operations Captain, height may be permitted to 62.48 m. (205 ft.) on a case-by-case basis with passage at low water (MLWS at Balboa). Maximum Height Restrictions are due to the tide and the unpredictable upward movement of water from swells, surges, waves, etc., and the maintenance equipment suspended beneath the bridge at Balboa.

(f) *Draft:*

(1) The maximum permissible draft for Panama Canal transits has been set at 12.04 m. (39 ft.06 in.), Tropical Fresh Water (TFW) at Gatun Lake level 24.84 m. (81 ft. 06 in.) or higher. This provides a safe navigational margin of at least 1.50 m. (5 ft.) over critical elevations in the Canal proper, and a clearance over the South sill of Pedro Miguel Locks of 0.52 m. (1 ft. 08 in.) at Miraflores Lake level 16.61 m. (54 ft. 06 in.).

(2) Prior to the initial transit of a vessel whose transit draft will exceed 10.82 m. (35 ft. 06 in.), Owners, Operators, or Agents must supply in full the information required in 35 CFR 103.6, and request the maximum authorised transit draft for the vessel (deepest point of immersion TFW) from the Canal Operations Captain not later than two weeks prior to the loading of the vessel. This request will be returned with the approved maximum authorised transit draft stamped thereon.

(3) The initial transit is permitted at or under the approved maximum authorised transit draft. After the initial transit, unless the vessel's Agent or Owner is notified of any restrictions imposed by Canal authorities, this maximum authorised transit draft will remain in effect.

(4) All vessels transiting the Canal should have sufficient ballast to permit safe handling during transit.

(5) A vessel whose ballast draft does not meet the minimum draft requirements established by this section may be accepted for transit on a regular basis, provided the vessel operator is granted permission after submitting the following information to the Canal Operations Captain.

(a) Principal dimensions of the vessel.
(b) Deepest attainable minimum draft (fore and aft).
(c) Limitations on visibility fore and aft from the navigation bridge.
(d) Necessary excerpts from the vessel's plans, drawings and manoeuvring data that relate to the vessel's suitability for transit.

(6) Table 1 provides the minimum salt water drafts for vessels anticipating transit. Drag must not adversely affect manoeuvrability.

Table 1 – Minimum Salt Water Drafts:

Length	*Minimum Drafts*
Up to 129.54 m. (425 ft.)	Trimmed so Pilot can see the ranges over the forecastle from centre of navigation bridge.
Over 129.54 m. (425 ft.)	2.44 m. (8 ft.) forward, 4.27 m. (14 ft.) aft, TSW
Over 144.78 m. (425 ft.)	5.49 m. (18 ft.) forward, 6.10 m. (20 ft.) aft, TSW
Over 160.02 m. (525 ft.)	6.10 m. (20 ft.) forward, 6.71 m. (22 ft.) aft, TSW
Over 176.78 m. (580 ft.)	6.71 m. (22 ft.) forward, 7.31 m. (24 ft.) aft, TSW
Over 190.50 m. (625 ft.)	7.31 m. (24 ft.) forward, 7.92 m. (26 ft.) aft, TSW

(7) Figure 1 (See "Plan Section") provides the limiting drafts due to bilge radius. On an off-centre lockage with the vessel touching the lock wall, the turn of the bilge will clear the locks wall batters at the most critical point as shown in the table.

(8) A vessel having received permission to transit at less than the minimum required draft will be inspected by Canal authorities upon its first visit under ballast conditions. If the vessel is acceptable for transit at less than the prescribed minimum draft, the Operator will be notified that transit on a regular basis is authorised, provided the vessel meets the special minimum draft specified in that notification, and the Master executes a form releasing the Panama Canal Commission from liability.

(9) If the vessel is found not to be acceptable for transit on a regular basis, a single transit may be authorised, at the discretion of the Canal Operations Captain, subject to imposition of special conditions that may be required for reasons of safety or continuance of regular Canal Operations.

(10) Vessels are expected to arrive at the Panama Canal properly trimmed and with a draft which, when in fresh water, its deepest point of immersion will not exceed either the published TSW Draft, the Maximum Authorised Transit Draft established by PCC for that particular vessel, or the maximum allowable draft established by classification society, whichever is less.

(11) Vessels with drafts exceeding these figures, when in Miraflores Lake, are subject to denial of transit. Northbound vessels found by actual reading to be overdraft would be required to turn around and proceed back to sea. That transit would be considered completed. Southbound vessel will be held in the Gatun Anchorage. The transit will be reinitiated only after the Canal Operations Captain considers it is safe to proceed.

(g) *Potential Seasonal Draft Restrictions:*

(1) In the event of an unusually dry season (nominally, 1 out of 10 years), draft restrictions might become necessary.

(2) During the rainy season (May – December), Gatun Lake and Madden Lake, the upstream reservoir for the Canal and the municipal water supply of Panama are filled to capacity. During the dry season (December – May), the Madden Lake reserve is drawn off to keep Gatun Lake at an optimum level. In an unusually dry season, the Madden Lake reserve is exhausted and the Gatun Lake level continues to decrease. As the Gatun Lake level is depleted below 24.84 m. (81.5 ft.), it becomes necessary to reduce the maximum allowable draft to preserve the safe navigation margin. The reductions are made in 15 cm. (6 in.) decrements, with 3 week advance notice where possible, based on computer-assisted lake level and precipitation forecasts made by the Commission's hydrologist and meteorologists. Ships already loaded to a prevailing draft limitation at the time of promulgation of a new draft restriction are waived for transit, subject to overriding safety considerations. Ships loading after promulgation of a new draft restriction are held to a tolerance of not more than 15 cm. (6 in.) above that restriction and may be required to trim ship or offload to achieve safe transit draft.

(h) *Release from liability:*

(1) Masters of vessels will, prior to transit, be required to execute a form undertaking to release the Panama Canal Commission from liability in case of accident and to indemnify the Commission for damages sustained in the following instances:
(a) When a vessel transits at less than the minimum drafts in paragraph 2.(f), has a list in excess of 3°, or is so loaded or trimmed that manoeuvrability is adversely affected.
(b) When a vessel has protrusions.
(c) When visibility from the navigation bridge of a vessel presents a hazard, as determined by the Canal Operations Captain (See Section 4).
(d) When the vessel's chocks, bitts or other equipment does not meet Panama Canal requirements as determined by the Canal Operations Captain (See Section 8).
(e) When a vessel transits on a one-time delivery basis with extreme beam exceeding 32.31 m. (106 ft.).

(2) Master of vessel will be required to execute a form undertaking to release the Panama Canal Commission from liability in case of accident for the identified problem when a vessel is to be docked, dry docked, or berthed by a Panama Canal Commission Pilot. This requirement is due to the conditions of the Inner Harbour areas of the Port of Balboa and inadequate fendering or lighting in the Piers of Balboa and Cristobal. Pilots are requested to have the Master of the vessel sign the form prior to docking vessels exceeding 10.97 m. (36 ft.) draft, or when a vessel is to be berthed on a pier that has inadequate or absent fendering and/or lighting.

(3) A refusal to sign such release may result in a delay of transit.

(i) *Approval of Plans and Delivery Transits:*

(1) Vessel plans for new construction or newly modified vessels should be submitted to the Office of the Canal Operations Captain for review prior to modification or construction. Failure to do so may result in delay or denial of transit because of unsuitable or unsafe features.

(2) The numerous constraints affecting the transit schedules of vessels and tows make it important that information provided in advance of the initial transit of the vessel include a capacity plan, general arrangement plans, engine room plans and, whenever possible, photostatic copies of its National Register, Loadline Certificate and Panama Canal Tonnage Certificate. This advance information will minimise the possibility that transit might be denied due to non-compliance with Canal regulations. For detailed information contact the Canal Operations Captain.

(j) *Denial of Transit:* The Canal authorities may deny any vessel passage through the Canal when the character or condition of the cargo, hull, or machinery is such as to endanger the structures pertaining to the Canal or which might render the vessel liable to obstruct the Canal, or whose draft at any part of the vessel exceeds the maximum allowable draft in the Canal as designated from time to time by Canal authorities. Other specific circumstances under which a vessel shall be denied transit are:

(1) When the vessel's maximum point of immersion exceeds its maximum authorised draft as determined by its bilge keel radius.

(2) When the vessel's maximum point of immersion exceeds the published TFW maximum draft then in effect.

(3) When the vessel's mean draft exceeds the maximum allowable mean draft as provided by the most current Loadline Certificate.

(4) When the length overall including bulbous bow exceeds that stated in paragraph 2.(a) above.

(5) When the maximum width or extreme beam exceeds that stated in Section 2.(b) above by any amount, unless the vessel was approved for regular transit prior to 10th March 1981.

(6) When a vessel has protrusions which will interfere with the safe transit of the vessel or present a hazard to Canal structures as determined by the Canal Operations Captain.

(7) When the vessel has a list of 10° or more.

(8) Unusual vessels requiring both lock lanes simultaneously.

(9) When visibility from the navigation bridge of a vessel does not meet minimum requirements as stated in paragraph 4.(e), and/ or when in the judgement of the Canal Operations Captain, transit would present an extreme hazard.

(10) Vessels whose list, trim or handling characteristics are such as to endanger themselves, Panama Canal appurtenances and/or a third party, may have such further limitations placed on them as Canal authorities deem necessary to insure reasonable safety.

3. Requirement for Pilot Platforms and Shelters on Certain Vessels

(a) As required by 35 CFR 103.19, suitable platforms and shelters must be provided by certain vessels for assisting Pilots. Based on current operating experience, the following vessels with extreme beam of 30.48 m. (100 ft.) or more, and a length of 190.5 m. (625 ft.) overall or more, may require more than 2 Pilots when transiting the locks of the Panama Canal:

(1) Vessels with the bridge in the extreme afterpart of the vessel (assisting Pilot and platforms will be forward).

(2) Vessels with the bridge in the extreme forepart of the vessel (assisting Pilot and platforms will be aft).

(b) Platforms must afford shelter suitable to protect assisting Pilots from rain and sun. Figure 2 (See "Plan Section") is a sketch of a simplified pilot platform acceptable to the Panama Canal Commission.

(c) Each platform is to be erected directly over the furthest point forward of the extreme beam at the waterline and not more than 6 in. inboard from the outside of the vertical plane of the shell plating. For vessels where the bridge is located forward, these pilot platform shelters will be required to be erected directly over that position which is the furthest point aft of the extreme beam at the waterline and not more than 6 in. inboard from the outside surface of the vertical plane of the shell plating.

(d) In addition, all vessels whose extreme beam is 24.38 m. (80 ft.) or more, are required to provide bridgewing shelter platforms for the protection of control pilots at conning positions No. 4 and 5. Figure 3 (See "Plan Section") is a sketch of a bridgewing shelter platform acceptable to the Panama Canal Commission. Alternate arrangements, including portable shelters, which provide equivalent or better protection and visibility may be acceptable.

(e) The awning indicated in the sketches in Figures No. 2 and 3 of this section is to be made of suitable material to provide shelter from the sun and rain. The deck of pilot platforms shall be made of wood or other material with non-skid surface, sufficient to keep a dry footing at all times. Overhead awning should be rigged to avoid spilling water inside the framework of the shelter during rain.

(f) Further inquiries on this subject should be directed to the Canal Operations Captain.

4. Navigation Bridge Features Required of Transiting Vessels

(a) *Authority:* The following vessel bridge design rules are issued under Authority of Title 35, Code of Federal Regulations sections 103.2, 103.10, 103.27 and 123.3. Vessels not meeting the requirements of these rules after 1st January 1980 may, at the discretion of the Canal authorities, be allowed transit after execution of an undertaking and release. This undertaking and release is to be made on behalf of the Owners, Operators, Masters, and all other persons having an interest in the vessel, and shall provide that in case of damage of any sort proximately resulting from non-compliance with these rules, the Panama Canal will be released from any liability, and will be indemnified for any damage or expense incurred.

(b) *Wheelhouse:* Wheelhouse windows shall be:

(1) Of sufficient size and number to provide a clear view.

(2) Of clear safety glass. Tinted windows must be removable.

(3) Arranged so as to include a centre window.

(4) Equipped with efficient mechanically operated rain wiper blades on windows at normal bridge conning positions as described in paragraph 4.(d).

(c) *Bridgewings:* Bridgewings shall extend to the maximum beam of the vessel and shall provide a clear, unobstructed passage along their forward portions from the wheelhouse doors to the extreme ends of the bridgewings. If it is impossible to extend these bridgewings the full breadth of the vessel, they shall extend as far as possible and swing-out or portable platforms shall be provided as follows:

(1) Extending to the maximum beam of the vessel.

(2) Of adequate size, strength, and rigidity to hold 2 persons.

(3) Equipped with horizontal safety handrails and a toe board around the deck, 4 in. high minimum.

(4) Platforms shall be safe and secure and maintained in good condition.

(d) *Normal Conning Positions:* (See Figure 4 in "Plan Section")

(1) Conning Position No. 1 is located directly behind and close to the forward centre wheelhouse window.

(2) Conning Position No. 2 is located to port of Conning Position No. 1 directly behind and close to the nearest window thereto that provides a clear unobstructed view ahead.

(3) Conning Position No. 3 is located to starboard of Conning Position No. 1 directly behind and close to the nearest window thereto that provides a clear unobstructed view ahead.

(4) Conning Position No. 4 is located at the extreme end of the port bridgewing and must provide a clear and unobstructed view fore and aft of the vessel's port side.

(5) Conning Position No. 5 is located at the extreme end of the starboard bridgewing and must provide a clear and unobstructed view fore and aft of the vessel's starboard side.

(6) No equipment or instrumentation shall block the close approach to the forward windows and the forward and after portions of the bridgewing ends. Bridgewing controls shall be positioned so that the operator does not interfere with the pilot visibility.

(e) *Minimum Visibility Requirements:*

(1) If the vessel is laden, objects on the surface of the water shall be visible from the navigation bridge (Conning Positions No. 1, 2 and 3) a minimum distance of one ship length forward in all conditions of trim (See Figure 4).
NOTE: Vessels billed at the laden rate are considered laden for the purposes of this requirement.

(2) If the vessel is in ballast, objects on the surface of the water shall be visible from the navigation bridge (Conning Positions No. 1, 2 and 3) a minimum distance of one and one-half ship lengths forward in all conditions of trim (See Figure 4).

(3) If visibility from normal conning positions is obscured by cargo gear or other permanent obstructions forward of the beam, the total arc of obstructed visibility from Conning Position No. 1 shall not exceed 15°.

(4) The side hull plating at the vessel's waterline, fore and aft, shall be visible from bridgewing conning positions.

(5) Vessels shall be required to execute an undertaking and release if visibility from the bridge is considered by the Canal authorities to present a hazard.

(f) *Indicators:* All vessels over 45.72 m. (150 ft.) in length shall be provided with:

(1) Rudder Angle Indicators as follows:

(a) On vessels less than 24.38 m. (80 ft.) in beam, at least one of such design that it can be easily read by day or night from all normal conning positions and from the steering station.

(b) If of 24.38 m. (80 ft.) or more in beam, at least one inside the wheelhouse and one on each bridgewing of such design and placement so that at least one can be easily read by day or night from each conning position and from the steering station.

(c) They shall show in degrees clearly and accurately the position and direction of the rudder or rudders.

(2) Propeller Revolution Tachometers or Variable Pitch Propeller Indicators as follows:

(a) On vessels less than 24.38 m. (80 ft.) in beam, at least one for each propeller, of such design as to be easily read by day or night from all normal conning positions.

(b) If of 24.38 m. (80 ft.) or more in beam, at least one for each propeller, located inside the wheelhouse and one for each propeller located on each bridewing, of such design and placement so that at least one can be easily read, by day or night, from each conning position.

(c) Indicators shall show revolutions per minute clearly and shall accurately indicate the direction of the propeller or propellers.

(d) All vessels with variable pitch control indicators will have them so located as required in (a) and (b) of this subsection.

(3) Indicators must be operational: Vessels with missing or broken indicators may expect delays in transit.

(g) *Very High Frequency (VHF) Radio:* Every power-driven vessel of 300 gross tons or over, every power-driven vessel of 100 gross tons or over carrying one or more passengers for hire, and every commercial towing vessel of 7.92 m. (26 m.) in length or over shall be equipped with at least one VHF transceiver as follows:

(1) Must be operable from the navigational bridge.

(2) Must be equipped with International Channels 12 (156.00 MHz), 13 (156.650 MHz) and 16 (156.800 MHz).

(h) *Whistle Controls:* Vessels shall be provided with whistle controls as follows:

(1) On all vessels, one within easy reach on the navigational bridge from Conning Positions No. 1, 2 and 3 as described in paragraph 4.(d).

(2) If the beam of the vessel is over 15 m. (49.2 ft.), additional controls shall be provided at the extreme end of bridgewings, at Conning Positions No. 4 and 5.

(3) Controls shall make it possible to regulate precisely any required whistle signal.

(i) *Steering Light:*
   (1) All vessels over 100 m. (328 ft.) in length shall have installed, at or near the stem, a steering range equipped with a fixed blue light which shall be clearly visible from the bridge along the centreline. If said range and light so placed would be partially or completely obstructed, then two such ranges and lights must be installed at an equal distance from the centreline and shall be clearly visible from the bridge along lines parallel to the keel.
   (2) Naval or military vessels exempted from the requirements of 72 COLREGS (See 35 CFR Section 111.1) shall also be exempt from the requirements of this section.
   (3) The light required shall be capable of being illuminated and extinguished by a suitable control switch located either on the navigation bridge or on the forecastle deck, or both.
   (4) The use of this steering light shall be at the discretion of the Panama Canal Pilot who has control of the navigation and movement of the vessel.

(j) *Bow/Stern Thrusters:* Vessels equipped with bow/stern thrusters should provide controls located at the extreme ends of the bridgewings, as well as inside the wheelhouse.

(k) *Compass:* A magnetic compass (properly compensated at least in the previous 12 months) or properly functioning gyro compass shall be positioned where it can be easily read from Conning Position No. 1. Vessels not complying with this requirement should expect transit delays during periods of fog or inclement weather, a common occurrence in Panama coincidental with the rainy season (May to December).

(l) *Course Recorders:* Vessels fitted with devices for recording engine orders and responses, movement of the rudders, and changes in ship's heading, shall have them operating while navigating in Canal waters.

5. Requirements for Non-Self Propelled Vessels

(a) Non-self-propelled vessels, other than integrated tug-barge combinations, will be accepted only on an individual basis; advance permission for initial transit as a non-self-propelled vessel is required. Displacement of these vessels is limited to 35,000 tons and the draft requirements of paragraph 2.(f) of this document are applicable.

(b) The draft of non-self-propelled barges 167.64 m. (550 ft.) or more in length may be limited, when in the opinion of Canal authorities such limit is necessary to insure reasonable safety.

(c) Upon arrival, the tug will break up the tow and secure the bridle, so no part of it extends below the surface of the water.

(d) Tows should have the capability of anchoring.

(e) All tows will be inspected before being scheduled for transit. For safety reasons and to ensure that important details are not overlooked, inspections will normally by performed in the inner harbour and during daytime.

(f) Agents, Operators and/or Owners will be responsible to make any required alterations or additions to equipment or stowage.

(g) Boarding facilities will comply with Regulation No. 17, Chapter V, International Convention for Safety of Life at Sea (SOLAS) and Section 10 of this Notice.

(h) For tows with freeboards of 9.1 m. (30 ft.) or more, this also includes provisions for a 9 m. rig as described in paragraph 10(3)(b). There must be a clear passage, free of obstructions, from the boarding facility to all working areas, otherwise catwalks with handrails and steps must be provided. Figure 5 is a sketch of a catwalk and ladder acceptable to the Panama Canal Commission (See Section 10 – see "Plan Section").

(i) The working area near chocks and bitts on all dead tows must be clear of obstructions and fitted with safety rails or lines at the vessel's sides.

(j) Towns must provide a pilot shelter with a clear view forward, on the centreline, about midway between the bow and stern. This shelter may be permanent or portable, but must protect the pilot from the elements. All tows with beam in excess of 24.35 m. (79 ft.) shall provide pilot shelters, at the extreme beams from which the pilots may readily view the vessel's sides.

(k) Dead tows must be equipped with the chocks and bitts as set forth in 35 CFR 109.6.

(l) Tows must provide mooring and heaving lines, in good condition, and have mooring arrangements, and bitts or cleats for securing tugs that do not interfere with those chocks and bitts required for locomotive wires.

(m) All barges will be fitted so that a pusher tug can be secured with its stem held firmly to the centreline of the barge. Pushing tugs are to be equipped with wire cable snubbers and springs.

(n) Barges with poor visibility forward will be assigned additional tug assistance for their transit. The commercial tug may be placed in the notch or on a hawser at the discretion of the Canal Operations Captain. The determination of what constitutes poor visibility will be made by the Canal Operations Captain. The suitability of additional commercial tugs used in the transit will also be determined by the Canal Operations Captain.

(o) Riding crews must be provided in sufficient numbers as required by the Canal Operations Captain, to safely handle tows' lines and boarding ladders, and to assist in mooring. While underway in Canal waters, anchors shall be manned and ready to be dropped in case of emergency.

(p) Agents, Operators and Owners of dead tows are urged to contact the Canal Operations Captain as early as possible but not later than 48 hours prior to ETA, so that particular requirements essential to planned transits can be met without delay.

6. Deckload Cargo

(a) As provided in 35 CFR 103.5, a vessel carrying a deckload shall have it so stowed as to be sufficiently clear to provide safe working space around all chocks, bitts, and other gear used in transiting, and so arranged as not to obstruct any direct lead from chock to bitts.

(b) Deck cargo shall so stowed to provide safe passage to and from necessary working areas. If access to working spaces is necessary over a deckload, as with lumber, a catwalk will normally be required, unless a level, continuous surface free of encumbrances such as lashings is already provided. When catwalks are required, they shall be at least 0.90 m. (3 ft.) in width and provided with adequate guard rails. Where the deck cargo is sufficiently level for gangway purposes without a catwalk, the guard rails, or life lines, spaced not more than 30 cm. (12 in.) apart vertically, must be provided on each side of the deck cargo to a height of at least 1.20 m. (4 ft.) above the cargo.

(c) If deck access is provided on deck adjacent to deck cargo, a level continuous passage at least 0.90 m. (3 ft.) in width shall be provided. This access shall be unencumbered by shoring, lashings or other obstacles deemed hazardous to normal passage. Height over passageway may not be less than 2.10 m. (7 ft.).

(d) When personnel are required to traverse over deck cargo, ladders adequate for safe access must be provided between the deck and top of deck cargo. Such ladder must be provided with guard rails or safety lines as previously described for catwalks.

(e) Deck cargo shall be stowed securely to prevent any shifting or displacement during access to working spaces by personnel.

(f) Vessels may transit with deck cargo protruding over one side only not to exceed 4.57 m. (15 ft.), but the maximum beam, including protrusions, must not exceed 25.90 m. (85 ft.).

(g) An adequate bulwark or railing shall be provided between deck cargo and ship's side.

(h) All sharp edges and projections on deck cargo adjacent to normal accesses shall be adequately protected to prevent injury to personnel.

(i) Sufficient lighting shall be provided by the vessel to illuminate deck accesses and working spaces during hours of darkness.

(j) Figure 5 (See "Plan Section") is a sketch of a catwalk and ladder acceptable to the Panama Canal Commission.

7. Sanitary Facilities

(a) Vessels which transit the Canal should have suitable sanitary facilities for the pilot(s). This is particularly important for barges, handlines and other vessels which are not normally so equipped and whose progress is slow.

(b) If a transiting ship does not have adequate sanitary facilities, the interval for which each pilot is assigned will be shortened, and significant delays could result.

8. Construction, Number and Location of Chocks and Bitts

(a) A vessel passing through the locks shall normally be assisted by electric towing locomotives using steel towing wires. At the discretion of the Canal Operations Captain, certain vessels, usually those under 38.10 m. (125 ft.) in length, may be handled with their own lines either against the lock wall or from both walls in the centre of the chamber. Vessels transiting the Canal are required to have chocks and bitts as follows:
   (1) All chocks for towing wires shall be of heavy closed construction and shall have a convex bearing surface with a radius of not less than 180 mm. (7 in.). The convex surface shall extend so that a wire from the bitt, or from the towing locomotive through the chock, shall be tangent to the 180 mm. (7 in.) radius at any angle up to 90° with respect to a straight line through the chock.
   (2) No part of the vessel which may be contacted by the towing wires, at any angle, shall have less than a 180 mm. (7 in.) radius.
   (3) Chocks designated as single chocks shall have a throat opening of not less than 650 sq.cm. (100 sq.in.) in area – preferred dimensions are 305 mm. × 230 mm. (12 in. × 9 in.) – and shall be capable of withstanding a strain of 45,000 kg. (100,000 lbs.) on a towing wire from any direction.
   (4) Chocks designated as double chocks shall have a throat opening of not less than 900 sq.cm. (140 sq.in.) in area – preferred dimensions are 355 mm. × 255 mm. (14 in. × 10 in.) – and shall be capable of withstanding a strain of 64,000 kg. (140,000 lbs.) on the towing wires from any direction.
   (5) Use of existing roller chocks is permissible provided they are not less than 15 m. (49 ft.) above the waterline at the vessel's maximum Panama Canal draft and provided they are in good condition, meet all of the requirements for solid chocks as specified in paragraphs 8.(a)(1), 8.(a)(2), 8.(a)(3) and 8.(a)(4) of this section, as the case may be, and are so fitted that transition from the rollers to the chock body will prevent damage to towing wires. *Starting 1st January 1994, roller chocks will not be accepted in drawings of new constructions submitted for approval as per paragraph 2.(i) of this Notice.*
   (6) Each single chock shall have an accompanying bitt capable of withstanding a strain of 45,000 kg. (100,000 lbs.).
   (7) Each double chock located at the stem and at the stern, in accordance with paragraph 8.(a)(8) of this section, shall have two pairs of accompanying heavy bitts with each bitt of each pair capable of withstanding a strain of 45,000 kg. (100,000 lbs.). Other double chocks shall have a pair of accompanying heavy bitts with each bitt capable of withstanding a strain of 45,000 kg. (100,000 lbs.).

(8) All vessels, except vessels not requiring locomotives, shall be fitted with a double chock set athwartships right in the stem and another double chock set athwartships right in the stern, except that on vessels of less than 22.86 m. (75 ft.) beam, 2 single chocks may be substituted for each double chock required by this subsection; on vessels of over 22.86 m. (75 ft.) beam, two double chocks may be substituted. If such substitution is made, the chocks shall be placed port and starboard not more than 2.50 m. (8 ft.) abaft the stem or 3 m. (10 ft.) forward of the stern, provided that these chocks are not more than 3 m. (10 ft.) from the centreline of the vessel.

(9) Vessels under 60.96 m. (200 ft.) in length and not exceeding 9.14 m. (30 ft.) in beam shall have a double chock or 2 single chocks at the stem and stern. If the vessel is equipped with the 2 single chocks they shall be placed, port and starboard, not more than 2.50 m. (10 ft.) off the centreline (See Figure 6 – see "Plan Section").

(10) Vessels 60.96 m. to 121.92 m. (200 ft. to 400 ft.) in length and not exceeding 22.86 m. (75 ft.) in beam, shall have a double chock at the stem and at the stern or 2 single chocks at the bow and stern, port and starboard, not more than 2.50 m. (8 ft.) abaft the stem or 3 m. (10 ft.) forward of the stern and not more than 3 m. (10 ft.) off the centreline, and shall have 2 additional single chocks, port and starboard, 9 m. to 16 m. (30 ft. to 50 ft.) abaft the stem and 9 m. to 16 m. (30 ft. to 50 ft.) forward of the stern (See Figure 6 – see "Plan Section").

(11) Vessels 121.92 m. to 173.74 m. (400 ft. to 570 ft.) long and not more than 22.86 m. (75 ft.) in beam, shall have a double chock at the stem and stern or 2 single chocks at the bow and stern, port and starboard, and in addition shall have a double chock port and starboard, 12 m. to 16 m. (40 ft. to 50 ft.) abaft the stem, a single chock port and starboard, 24 m. to 28 m. (80 ft. to 90 ft.) abaft the stem, and a single chock port and starboard, 12 m. to 16 m. (40 ft. to 50 ft.) forward of the stern (See Figure 6 – see "Plan Section").

(12) Vessels over 173.74 m. (570 ft.) long or 22.86 m. (75 ft.) in beam or over, shall have a double chock at the stem and stern, a double chock port and starboard, 12 m. to 16 m. (40 ft. to 50 ft.) abaft the stem, a single chock port and starboard, 24 m. to 28 m. (80 ft. to 90 ft.) abaft the stem, a double chock port and starboard, 12 m. to 16 m. (40 ft. to 50 ft.) forward of the stern and a single chock port and starboard, 24 m. to 28 m. (80 ft. to 90 ft.) forward of the stern.

(13) Vessels with large flared bows or unusually high freeboard such as container vessels or vehicle carriers will be required to provide single chocks located further aft than those required in paragraph 8.(a)(12) of this section for correct positioning of assisting tugs or may be required to fit recessed tug bollards into the hull, so that tugs can work without coming in contact with the bow flare or without requiring extra long lines and/or inefficient leads (See Figure 6 – see "Plan Section").

(14) Where recessed hull bitts are installed in the hull, they shall be installed not less than 3.7 m. (12 ft.) nor more than 4.6 m. (15 ft.) above the vessel's waterline. Vessels which have an appreciable variation in draft may be required to install 2 sets of recessed hull bitts, so that one bitt is located over the other bitt. Also, the recessed hull bitts are to be installed in the hull as far forward as possible, both port and starboard sides, where the bow flare does not exceed 25° as measured from the vertical line of the vessel's side. This position may require locating the chocks and bitts further aft than 24 m. to 28 m. (80 ft. to 90 ft.) abaft the stem as in paragraph 8.(a)(11) above. This position will allow PCC tugs to work safely under the bow flare without the tug's mast or pilothouse coming in contact with the vessel's hull.

(15) A vessel not requiring locomotives shall have a chock arrangement similar to that described in paragraph 8.(a)(9) of this section, except that the chocks need only be single chocks or, if approved by the Canal authorities, of lesser strength.

(16) Any vessel which fails to meet these requirements may be denied transit. If the Marine Director or his representative decides that the vessel can be handled without undue danger to equipment or to personnel, notwithstanding her failure to comply with other requirements of this section, the vessel may be allowed to transit after executing a release. The Master of the vessel must sign an undertaking for said vessel, her Owners, Operators, or any other persons having any interest in her, and for himself, releasing the Panama Canal Commission from and indemnifying it against, any loss, damage or liability incurred by the Panama Canal Commission to the extent and in the proportion that such failure to meet the requirements of this section proximately causes or contributes to the casualty and resulting damages.

(17) For further information contact the Canal Operations Captain.

9. Mooring Lines

(a) Vessels are required to have on deck 3 manila or synthetic mooring lines forward and 3 aft prior to commencing transit. The size and strength suitable for the vessel to dock, moor at a lock approach wall or secure in a lock chamber are the vessel's responsibility. Master shall inform the Boarding Officer whether or not the vessel complies with the above, so that he may advise Marine Traffic Control. Wire ropes, and ropes composed of both wire and fibre or filament, are not acceptable for Canal operations.

(b) These lines are required to be on deck prior to commencing transit and ready for immediate use. The lines should be in good condition. Each line should have an eye of 1.50 m. (5 ft.) or more in length spliced into each end. On each end of the vessel there must be 5 available eyes, each with 75 m. (250 ft.) of usable line. Wire rope or wire laid rope is not acceptable for mooring use.

10. Boarding Facilities

(a) The Panama Canal Commission considers proper boarding facilities to be an absolute necessity to insure that safety of our operating personnel and others using these facilities in Panama Canal waters. Poorly constructed, installed, maintained, or operated boarding facilities are not acceptable for use in Panama Canal waters. Requirements for boarding facilities are defined in Part 103.18 of Title 35 of the Code of Federal Regulations. Vessels with unsafe or inadequate boarding facilities will be required to correct such deficiencies before transit. Lengthy delays may result. Figure 7 (not reproduced) is a pictorial representation of acceptable boarding facilities which comply with Panama Canal standards.

(b) Safe boarding facilities should be available through full transit for Pilots and Linehandlers. Improper accommodation ladder may require use of a tug to hold the vessel dead while boarding or disembarking. This is considered a vessel deficiency, therefore tug will be charged to the vessel.

(c) Boarding facilities of vessels arriving the Panama Canal shall comply with the requirements shown below, which conform with Regulation 17, Chapter V, International Convention for Safety of Life at Sea (SOLAS).

(1) *Pilot Ladders:*

(a) The ladder shall be efficient for the purpose of enabling the pilots to embark and disembark safely, kept clean and in good order and may be used by officals and other persons while a ship is arriving or leaving a port.

(b) The ladder shall be secured in a position so that it is clear from any possible discharges from the ship, that each step rests firmly against the ship's side, that it is clear so far as is practicable of the finer lines of the ship, and that the pilot can gain safe and convenient access to the ship after climbing not less than 1.50 m. (5 ft.) and not more than 9 m. (30 ft.). A single length of ladder shall be used, capable of reaching the water from the point of access to the ship; in providing for this, due allowance shall be made for all conditions of loading and trim of the ship and for an adverse list of 15°. Whenever the distance from sea level to the point of access to the ship is more than 9 m. (30 ft.), access from the pilot ladder to the ship shall be by means of an accommodation ladder or other equally safe and convenient means.

(c) The steps of the pilot ladder shall be:

Of hardwood, or other material of equivalent properties, made in one piece free of knots, having an efficient non-slip surface; the four lowest steps may be made of rubber of sufficient strength and stiffness or other suitable material of equivalent characteristics. Steps shall not be painted an opaque colour or with high gloss paint. The grain and character of the step shall be visible in order that any cracks or defects may be readily visible to the person using the ladder.

Not less than 480 mm. (19 in.) long, 115 mm. (4.5 in.) wide, and 25 mm. (1 in.) in depth, excluding any non-slip device.

Equally spaced not less than 300 mm. (12 in.), nor more than 380 mm. (15 in.) apart, and be secured in such a manner that they will remain horizontal.

(d) No pilot ladder shall have more than 2 replacement steps which are secured in position by a method different from that used in the original construction of the ladder and any steps so secured shall be replaced as soon as reasonably practicable, by steps secured at position by the method used in the original construction of the ladder. When any replacement step secured to the side ropes of the ladder by means of grooves in the sides of the steps, such grooves shall be in the longer sides of the steps.

(e) The side ropes of the ladder shall consist of 2 uncovered manila ropes not less than 60 mm. (2.25 in.) in circumference on each side. Each rope shall be continuous with no joints below the top step. 2 manropes properly secured to the ship and not less than 65 mm. (2.5 in.) in circumference and a safety line shall be kept at hand ready for use required.

(f) Battens made of hardwood, or other material of equivalent properties, in one piece and not less than 1.80 m. (6 ft.) long, shall be provided at such intervals as will prevent the pilot ladder from twisting. The lowest batten shall be on the fifth step from the bottom of the ladder, and the interval between any batten and the next shall not exceed 9 steps.

(g) Means shall be provided to ensure safe and convenient passage onto or into and off the ship between the head of the pilot ladder or of any accommodation ladder or other appliance provided. Where such passage is by means of a gateway in the rails or bulwark, adequate hand holds shall be provided. Where such passage is by means of a bulwark ladder, such ladder shall be securely attached to the bulwark rail or platform and 2 handhold stanchions shall be fitted at the point of boarding or leaving the ship not less than 0.70 m. (2 ft.03 in.) and no more than 0.80 m. (2 ft.07 in.) apart. Each stanchion shall be rigidly secured to the ship structure at or near its base and also at a higher point, shall not be less than 4.0 cm. (1.5 in.) and no more than 5.0 cm. (2 in.) in diameter, and shall extend not less than 1.20 m. (4 ft.) above the top of the bulwark.

(h) Handholds and handhold stanchions should be free of protrusions, such as loops, welded bars or padeyes, and designed to allow the human hand to grasp any portion and slide up and down, as necessary, without removing the hand or releasing the grip.

(i) Lighting shall be provided at night such that both the pilot ladder overside and also the position where the pilot boards the ship shall be adequately lit. *A lifebuoy equipped with an igniting light* shall be kept at hand ready for use. *A heaving line* shall be kept at hand ready for use if required. *A responsible officer* of the vessel with direct communication to the navigation bridge shall stand-by at the top of the ladder when boarding or disembarking in in progress.

(j) Means shall be provided to enable the pilot ladder to be used on either side of the ship.

(k) The rigging of the ladder and the embarkation and disembarkation of a pilot shall be supervised by a responsible officer of the ship.

(l) Where on any ship constructional features such as rubbing bands would prevent the implementation of any of these provisions, special arrangements shall be made to the satisfaction of the Commission to ensure that persons are able to embark and disembark safely.

(2) *Mechanical Pilot Hoists:*

(a) A mechanical pilot hoist, if provided, and its ancillary equipment shall be of a type approved by the Commission. It shall be of such design and construction as to ensure that the pilot can be embarked and disembarked in a safe manner, including a safe access from the hoist to the deck and vice versa.

(b) A pilot ladder complying with the provisions of paragraph 10.(c)(1) shall be kept on deck adjacent to the hoist and available for immediate use.

(3) *Accommodation Ladders:*

(a) Accommodation ladders should lead aft, that is, with the lower platform at the after end. Accommodation ladders which lead forward or which do not rest firmly against the vessel's side are not considered safe for use by Panama Canal Commission employees. The lower end of the accommodation ladder must be within the parallel mid-body of the vessel, not near the bow or stern. Safety stanchions and rails or lines shall be rigged. The lower platform of the accommodation ladder shall be kept in a horizontal position, with vertical stanchions installed and it should be held at a distance above the water equal to the deck of the boarding launch. The boat spar shall be extended. The upper platform shall also have vertical stanchions and safety lines in place.

(b) An accommodation ladder used in combination with a pilot ladder should have a maximum slope of 55°. The pilot ladder and the accommodation ladder must be close together and secured together at the edge of the lower platform with the pilot ladder hanging vertically. The lower platform must be held at a level to allow for the height of the launch deck, plus the height of a person standing on the deck, plus the rise and fall due to swell; normally 7 m. (23 ft.) above the water is sufficient.

(c) When an accommodation ladder is in use, provisions of paragraph 10.(c)(1)(h) concerning safety equipment and personnel shall be observed.

11. Deck Loaded Containers on Ships not Purpose-Built for Container Carriage

(a) *General:* Transits with deck-loaded containers by ships not designed for container trade have become more frequent in recent years. Many of these ships are smaller general purpose, breakbulk, liquid or dry bulk carriers. When such a ship carries deck-loaded containers well forward or aft of the bridge, the Pilots's view can be obstructed, tug and locomotive sound signals can be blanketed, and risk of damage to the ship and Canal structure and equipment is increased. Failure to meet minimum visibility requirements can disrupt overall Canal operations, and can delay the vessel's transit by a day or more.

(b) *Approval for Transits:* In some cases, ships not meeting minimum visibility requirements may, at the discretion of Canal authorities, be allowed the instant transit after execution of a proper release that relieves the Panama Canal Commission from liability, and indemnifies the Commission for damage or expense incurred, in case of damage of any sort immediately resulting from non-compliance with the visibility requirements. Additional tugs may also be assigned at the vessel's expense. Permanent waivers cannot be granted, and any future transits are expected to be in compliance with visibility requirements.

(c) *Advance Notice and Inspection:*

(1) Ships not container-designed but carrying deck-loaded containers are requested to include in their Canal ETA messages information on the number and location of deck-loaded containers. As a minimum, ships should provide location of deck-loaded containers by hatch or tank; the number of containers loaded abeam, fore and aft, and how high they are stacked; and whether containers are oriented athwartship or longitudinally.

(2) Such ships transited for the first time or that only transit occasionally with deck-loaded containers will be checked by boarding officers or Port Captains, or both, to determine the need for visibility waivers.

(3) Such ships transiting regularly with deck-loaded containers will be advised of any limitations on the number and configuration of deck-loaded containers necessary to satisfy minimum shipboard visibility requirements.

12. Dangerous Cargo Requirements

(a) *General:* Panama Canal Commission regulations require a minimum of 48 hours notice of intent to transit with dangerous cargo (35 CFR 123.4). The specific characteristics of the dangerous cargo, whether in bulk or packaged, are the primary factors which determine what, if any, precautionary measures shall be taken by Canal authorities. Cooperation in this matter will help in applying PCC resources for the benefit of all customers, and assure appropriate levels of safety for all vessels in transit.

(b) *Test of Equipment on Board:* Vessels carrying dangerous materials are also required to test all dangerous cargo alarms, safety devices, and fire fighting equipment as specified in 35 CFR 113 4. An entry shall be made in the ship's log stating that such tests were conducted and that the systems were found in proper working condition or, if not in proper order, a detailed listing of discrepancies shall be included within the log.

(c) *Holding due Non-Compliance:* Vessels are also reminded that a dangerous cargo hold ("H") will be imposed on vessels not providing the required advance dangerous cargo information, and that continuing non-compliance will result in not scheduling the vessels for transit until cleared by a PCC Boarding Officer. This can result in delay to the ship.

(d) *Tankers Claiming Cargo Tanks as "Gas Free" or "Inert":* In order to standardise the term "gas free" for applicability of 35 CFR 113, Dangerous Cargoes, and its interpretation when used by tankers in item GOLF of the pre-arrival radio message to Marine Traffic Control required by 35 CFR 123.4, the following policy is established:

(1) The term "gas free" is widely used within the shipping industry and the level of being gas free has several values depending on the application. For PCC dangerous cargo regulations, the definition of "gas free" requires that all cargo tanks, including cargo slop tanks, be free from dangerous concentrations of flammable or toxic gases. The goal is to have a vessel which, while in transit or at dock, is safe enough to endure a collision and not risk an explosion.

(2) To bring this definition to a working application for transiting or docking vessels, empty tanks shall be tested by the crew and verified safe for entry and hot work. When applicable, Masters will report in GOLF of their pre-arrival radio message the following: *"All cargo tanks and cargo slop tanks are gas free and considered safe for entry and safe for hot work"*.

(3) Vessels with inert gas systems on board shall provide the following information in paragraph GOLF of their pre-arrival radio message:

(a) If cargo tanks have been stripped of cargo and are inert.

(b) If inert gas system is operational.

(c) The last cargo carried.

(e) *Reporting Shipments of Direct Reduced Iron:*

(1) Vessels transporting Direct Reduced Iron (DRI) in any of its forms, hot or cold moulded briquettes, lumps or pellets, are required to report the shipment by its correct technical name and International Maritime Organisation (IMO) number of the Traffic Management Divison in vessel's advance radio messages.

(2) DRI has been classified by IMO as belonging to the "Materials Hazardous only in Bulk, MHB" class and is listed in the IMO "Code for Safe Practice for Solid Bulk Cargoes (BC), Appendix B". The IMO number for cold moulded briquettes, lumps or pellets is "BC No. 15" and for hot moulded briquettes is "BC No. 16".

(3) Additionally, the following advance information should be provided to the Marine Safety Unit (MRRM):

(a) Copy of Certification that DRI is suitable for loading.

(b) Copy of Certification that DRI conforms to IMO requirements.

(c) Statement from Master or Shipper that IMO precautions as listed in the IMO "Code of Safety Practices for Solid Bulk Cargoes" for cold or hot moulded briquettes have been followed.

(d) Copy of procedures to be followed by the ship to ensure safety of ship and cargo in the event the cargo gets wet.

(e) Copy of current U.S. Coast Guard permit, if issued.

(f) *Precautionary Measures due to Dangerous Cargo:*

(1) The Commission takes precautionary measures for vessels carrying dangerous cargo, which vary depending on the ship and other factors. The specific characteristics of the cargo, and whether in bulk or packaged, are the primary factors which determine what, if any, precautionary measures shall be taken.

(2) Information on dangerous cargo on board shall be provided by the vessel no less than 48 hours in advance of arrival, and verified by the Commission Boarding Officer upon arrival.

(3) Based on this information, a Precaution Designator (PD) is assigned to the vessel. "PDs" are numbers (1, 2, 3, 4, 5, 6 or 0) or letters ("N" or "H"), where "PD-1" is the most hazardous, and "PD-0" the least. "PD-N" means no dangerous cargo is aboard.

(4) When a vessel does not provide the necessary information as required by the regulation, an "H" or "HOLD" is assigned. This means that the vessel will not be scheduled for transit or docking until the cargo information is made available.

(5) The "PD" assigned to each vessel sets forth the imposed precautionary measures due to cargo that will be taken for that vessel while in Canal waters, which include actions such as the level of pilot assignment; docking, clear-cut or channel restrictions; special precautions while at the locks, or whether or not a fire truck will stand-by at the locks during lockage.

(6) While the precautionary measures taken by the Commission are internal actions to ensure a safe transit or docking to every vessel, it is important that Masters provide exact and timely information as there is a direct relationship between the type of cargo and the way the vessel is scheduled for transit or for docking at Cristobal or Balboa.

(7) *Failure to provide proper information could result in delays to the vessel.*

13. Transit Requirements for Manning of Stations aboard Vessels

Vessels Agents and their principals are requested to remind ships' personnel that sufficient personnel must be available for a safe operation while in Canal waters. This includes:

(1) A full watch on deck and in the engine room while underway in Canal waters.

(2) Sufficient officers and crew forward and aft to handle lines expeditiously when approaching a lock, while moored temporarily to a lock or wall, when in a lock chamber, or when so requested by the pilot.

(3) Sufficient seamen to receive and let go of tug lines.

(4) As otherwise required by 35 CFR 107.

HEALTH: Application for Radio Pratique is available to all vessels arriving in Panama Canal waters. Radio Pratique is a quarantine clearance by radio, based upon information from the vessel prior to its arrival at Balboa or Cristobal and past experience with the vessel and its personnel. A limited number of vessels will be sampled for compliance with the required standards of health and sanitation on board. The sampling will generally be done on a random basis and will provide a measure of the success of the programme.

It should be emphasised that Radio Pratique applies only to the quarantine section of the required forms and documents for the Panama Canal. All vessels must still complete the required boarding forms, and in most cases, be prepared to receive the Panama Canal Boarding Inspector on arrival in Canal waters. Such forms as crew and passenger lists, ship's information forms, and the cargo declaration must always be completed for presentation to the Panama Canal officials.

Attached is a listing of the items to be reported prior to arrival in the Canal waters. The information is similar to that now required of vessels requesting Radio Pratique in U.S. ports. In addition, there are some special circumstances that make additional information necessary.

The manner of reporting the information required should be clear and orderly as specified in 35 CFR, section 123.4, listing information required in advance. The request for Radio Pratique should originate from the Master and can be submitted directly by radio or through the vessel's local Agent. The local Agent should submit his request with all the required information to the Admeasurement Office at the port of arrival of the vessel. The local Agent will be notified when Radio Pratique is granted or refused and the Agent will communicate this information to the ship.

It is hoped that vessels will take advantage of Radio Pratique when arriving for transit and that in as many instances as possible it may be able to grant this time saving privilege.

Radio Pratique Programme

1. *General*

(a) The granting of Radio Pratique is an Office of Health and Safety responsibility designated to the Occupational Health Division. (35 CFR 61.264) see below.

§61.264 Radio Pratique; vessels only.

The Medical Officer in charge may grant Pratique by radio to a vessel upon the basis of information regarding the vessel, its cargo and persons aboard, received prior to arrival of the vessel, when in his judgement, and in accordance with instructions by the Chief, Occupational Health Division, the entry of the vessel will not result in the introduction, transmission or spread of communicable diseases.

(b) In order to process the details of this programme more expeditiously, communication may be held between the quarantine offices and the ship's Steamship Agent representing the vessel hereinafter called local Agent.

(c) All vessels coming to the Panama Canal may request Radio Pratique by means of the ETA radio message or through the ship's local Agent.

(d) Requests for Radio Pratique must be submitted to the Admeasurement Office at the port of arrival not less than 48 hours in advance.

2. *Specific Requirement for Each Voyage*

(a) The vessel will be maintained free from rats and vermin.

(b) The Derat Certificate or Derat Exemption Certificate must be valid (i.e. date of issue not more than 180 days prior to date of arrival at the Panama Canal).

(c) Vessels arriving within 15 days from the ports designated in the Aedes Aegypti Indices Bulletins must be disinfected with the aerosol described in the Aedes Aegypti Indices Bulletin No. 8, 1970.

(d) The restrictions imposed in 61.281 through 61.302, "Importation of Certain Things", Title 35 CFR, must be strictly adhered to and followed.

3. *Action taken by the Medical Officer in Charge**

(a) Radio Pratique *may* be granted by the Admeasurement Office upon request from the vessel or through the ship's local Agent representing the vessel provided it is documented by ship's radio.

(1) If the information requested in the Appendix hereto is complete; *and,*

(2) If the Medical Officer in charge* is of the opinion that the vessel is reasonably free from any condition either from a health or sanitation standpoint that might introduce illness into the Canal.

(b) Radio Pratique may be denied by the Medical Officer in charge:

(1) If the requested information is incomplete; or,

(2) If the Medical Officer in charge* feels that medical or sanitary reasons prevail requiring careful inspection upon arrival of the vessel.

*Or designated representative.

4. *For Sampling and Surveillance of Compliance Purposes*

After the information supplied by the Shipmaster has been reviewed the Medical Officer in charge* will advise the ship's local Agent concerned whether Radio Pratique has been granted or denied and if any restrictions or limitations have been imposed. He will also inform the Marine Traffic Controller.

*Or designated representative.

5. *Action taken by Ship's Local Agent*

(a) The ship's local Agent may submit requests for Radio Pratique to the Admeasurement Office if the vessel has not done so by radio. The information required is listed in the Appendix hereto. Such requests should be submitted, properly documented by ship's radio, not later than 24 hours before the vessel is scheduled to arrive nor earlier than 48 hours before the expected arrival of the vessel.

(b) The ship's local Agent will advise the vessel which he represents whether Radio Pratique has been granted or denied; and any restrictions or limitation imposed.

6. *Action taken by Panama Canal Commission Boarding Inspectors*

On vessels that have been granted Radio Pratique, the Panama Canal Commission Boarding Inspector will:

(a) Ascertain that the Ship's Master has completed the Ship's Information and Quarantine Declaration (Form 4398) *except* the "quarantine data" portion at the bottom of the form; and,

(b) Otherwise process the vessel (e.g. for Admeasurement, and any other non-quarantine requirements) and any further questioning on quarantine matters. This processing will be in the bay. Passengers that are disembarking from vessels may be processed by the Panamanian Authorities at the docks.

(c) Vessels that are denied Radio Pratique or have failed to request Radio Pratique, will be cleared through Quarantine by the Panama Canal Commission Boarding Inspector in the prescribed routine manner.

7. *Action taken by Shipmasters*

(a) Shipmasters should request Radio Pratique directly by radio or through the Agent representing them in the Panama Canal and supply the information requested in the Appendix hereto.

(b) Shipmasters should take cognizance of the requirements listed in paragraph 2, "Specific requirement for each voyage", above.

(1) If granted Radio Pratique, they may enter the anchorage area flying the quarantine flag; they must however comply with any restrictions or limitations imposed by the Medical Officer in charge.

(2) Vessels *must* await boarding by a representative of the Panama Canal authority.

(3) If denied Radio Pratique, vessels must be cleared for Quarantine in the prescribed routine manner; that is enter the Canal waters flying the quarantine flag and must await processing by the Panama Canal Commission Boarding Inspector.

(4) It is important that the Shipmasters remember that in all instances all forms regularly required are to be completed prior to arrival for presentation to the Boarding Inspector.

Appendix

Information required by Quarantine Officer in Charge from Shipmaster requesting Radio Pratique through ship Agency representing him at the Panama Canal.

Full name of vessel.

Country of registry.

International radio call letters.

Estimated date of arrival and port.

Whether docking at Balboa or Cristobal and reason therefor.

List of ports of call within past *15* days prior arrival.

Report any illness or communicable diseases on board.

Report any death occurring on board since departure from last port and cause, if known or suspected.

Report the number of passengers to be disembarked and port of disembarking (e.g. Cristobal or Balboa).

Report the date of the Derat Certificate or Derat Exemption Certificate.

Record the number, kind, and origin of all animals aboard and if any are scheduled for disembarking.

Report the origin or source of the meat in the ship's stores.

Only vessels in the following categories need still be subject to "on board" public health clearance upon arrival:

A. Vessels which, during the 15 days prior to arrival in the Canal ports, have or have had on board passenger or crews with any of the following conditions or symptoms of illness:

1. Temperature of 100° F (38° C) or greater *(a)* which persisted for 2 days or more: or *(b)* which was accompanied or followed by any one or all of the following: rash, jaundice, glandular swelling; *or*
2. Prolonged diarrhoea (lasting 1 full day or more).

B. Occurrence of death on board for any reason.

C. Vessels which have been in a country infected with plague in the 60 days prior to arrival in the Canal.

RADIO: Balboa Naval Radio NBA.

Signal Stations: (a) Visual-signal stations established for communication on arrival Canal approaches by International Code and/or flashing light, at top of Building 1105, Cristobal, and on Flamenco Island at Pacific entrance.

(b) Flamenco Island and Cristobal Signal Station also contactable on VHF Channel 12 frequency 156.6 MHz, and R/T 2182, 2638 and 2846 kHz – call letters WHC.

(c) Vessels awaiting transit at Balboa anchorage should keep VHF radio watch on Channel 12 for transit orders.

(d) Arriving ships may communicate with Port Captain's Office, Cristobal through Cristobal Signal Station. Radio communication is maintained on international maritime VHF Channel 12 (156.6 MHz) through "Cristobal Radio".

§123.4 Advance information required by radio from vessels approaching Canal: (a) Vessels approaching the Panama Canal shall communicate by radio to the Traffic Management Division not less than 48 hours in advance of arrival at the Canal (or earlier if radio communication is practicable at an earlier time), the information required by this section unless this information has been previously communicated to the Canal Authorities by other means. Symbols of the phonetic alphabet shall be used to identify each item and the word "NEGAT" shall be used after the items that can be answered "no", "none", or "not applicable". The following information shall be provided: ALFA – The Panama Canal Identification Number of the vessel.

BRAVO – Estimated date and time of arrival, port of arrival and request for Canal transit if desired.

CHARLIE – Estimated draft upon arrival, in feet and inches (fore and aft), in tropical fresh water.

DELTA – Any changes in the vessel's name, country of registry, structure, or use of tanks that have occurred since the vessel last called in Panama Canal waters.

ECHO – Will the vessel dock at Balboa or Cristobal? What is the reason for docking? If it is for cargo operations, fuel or water, give the tonnage involved in each case. Is there any other reason the vessel will not be ready to transit upon arrival? What is the reason?

FOXTROT – The nature and tonnage of any deck cargo.

GOLF – If the vessel is carrying any explosives or dangerous cargoes as classified in 113.3, state the correct technical name, quantity (in long tons), United Nations Number, and the International Maritime Organisation class and division (including compatibility group for explosives only), and the stowage for each dangerous cargo carried. If the vessel is a tanker in ballast condition and not gas free, state the technical name, United Nations number, and International Maritime Organisation class and division of the previously carried cargo. Tankers reporting "Golf:Negat" shall, in addition, state the technical names of non-dangerous cargoes carried.

HOTEL – If the vessel is carrying any packaged dangerous goods (as classified in 113.3) other than explosives state the International Maritime Organisation class and division and the total quantity (in long tons) within each class.

INDIA – Quarantine and Immigration information:

(1) Is Radio Pratique desired?

(2) State the ports at which the vessel has called within 15 days preceding its arrival at the Canal.

(3) State all cases of communicable disease aboard and the nature of the disease or diseases, if known.

(4) The number of deaths which have occurred since departure from the last port and the cause of each death, if known.

(5) The number of passengers disembarking and their port of disembarkation.

(6) The number of ports of origin of any stowaway and a brief description of the identity papers of each stowaway.

(7) The number, kind and country of origin of any animals aboard. Are any animals to be landed?

(8) The country of origin of all meat, whether carried as cargo or as ship's stores.

(9) Has the vessel called at a port in any country, infected with foot-and-mouth disease or rinderpest during its present voyage? Countries considered to be infected are:

(a) All countries East of the 30th Meridian West longitude and West of the International Date Line except Australia, Channel Islands, Fiji, Greenland, Iceland, Japan, New Zealand, Northern Ireland, Norway, Republic of Ireland.

(b) All countries of South America;

(c) Curacao;

(d) Cuba;

(e) Martinique;

(f) Guadeloupe.

(10) Specify whether the vessel has a valid Derat Certificate or a Derat Exemption Certificate issued 180 days prior to arrival.

The following additional information shall be transmitted via radio to the Port Captain from all vessels as applicable:

(1) Vessels approaching from the Pacific shall report actual time of passing Cape Mala, or the latitude of Cape Mala, and the vessel's speed.

(2) Vessels approaching from the Atlantic shall report 12 hours prior to arrival at Cristobal any change of 1 hour or more in the expected time of arrival.

(3) Any other matters of importance and interest.

Timely receipt of the above information will facilitate the transit or docking of arriving vessels. Failure to comply with these reporting requirements may subject a vessel to delay since vessels which do comply will receive priority of service and handling over those which do not.

VHF: *§123.3 Radiotelephones required.*

(a) Except for vessels operated by the Panama Canal Commission or another agency of the United States, the following vessels shall comply with the requirements of this section:

(b) A vessel of a type described in paragraph (a) of this section shall be equipped with a radiotelephone which can be operated from the navigation bridge and which can be used to communicate on the following Channels in the 156 – 162 MHz frequency band:

(1) Channel 12, 156.600 MHz;
(2) Channel 13, 156.650 MHz;
(3) Channel 16, 156.800 MHz.

(c) A vessel of a type described in paragraph (a) of this section, which has notified the Canal Operations Captain or his designee that it is ready to transit or otherwise navigate in Panama Canal waters and requires a Panama Canal Pilot, shall, until a Pilot boards the vessel, maintain a continuous watch on Channel 12. Channel 12 will be used for notification to vessels of their transit time and for advisory harbour control communication in Limon Bay.

(d) A vessel of a type described in paragraph (a) of this section shall maintain a continuous watch on Channel 13 when underway in Panama Canal waters without a Panama Canal Pilot aboard, and shall use Channel 13 only for ship-to-ship or ship-to-coast navigational communications. When such vessels have a Panama Canal Pilot aboard, Channel 13 may be used only by the Pilot or at his direction for navigational communications.

(e) The signal stations on Flamenco Island and in Cristobal may be called on Channels 12 and 16. Channel 16 may also be used by all vessels for ship-to-coast communications with steamship Agents or other commercial businesses.

VTS: Vessel Traffic Management System in operation.

TANKERS: *Transit Restrictions:* Vessels carrying combustible liquids in bulk having a flash point above 61°C (141°F.) are not considered to be dangerous by virtue of their fire hazard.

Special rules apply to vessels carrying dangerous cargo or not gas free. These rules concern the conduct of navigation in the Canal and in the approaches to the locks. Generally it may be assumed that vessels carrying a dangerous cargo shall:

(a) Not overtake.
(b) Not be overtaken.
(c) Meet oncoming vessels at a safe speed.
(d) Avoid meeting oncoming traffic at turns.
(e) If required to anchor, anchor well clear of the channel and other vessels.
(f) Take a tug at locks and Gaillard Cut if required by the Pilot.

DANGEROUS CARGO REQUIREMENTS:

(a) *General:* Panama Canal Commission Regulations require a minimum of 48 hours notice of intent to transit with dangerous cargo (35 CFR 123.4). The specific characteristics of the dangerous cargo, whether in bulk or packaged, are the primary factors which determine what, if any, precautionary measures shall be taken by Canal authorities. Cooperation in this matter will help in applying PCC resources for the benefit of all customers, and assure appropriate levels of safety for all vessels in transit.

(b) *Test of Equipment on Board:* Vessels carrying dangerous materials are also required to test all dangerous cargo alarms, safety devices, and fire fighting equipment as specified in 35 CFR 113.4. An entry shall be made in the ship's log stating that such tests were conducted and that the systems were found in proper working condition or, if not in proper order, a detailed listing of discrepancies shall be included within the log.

(c) *Holding due Non-Compliance:* Vessels are also reminded that a dangerous cargo hold ("H") will be imposed on vessels not providing the required advance dangerous cargo information, and that continuing non-compliance will result in not scheduling the vessels for transit until cleared by a PCC Boarding Officer. This can result in delay to the ship.

(d) *Tankers Claiming Cargo Tanks as "Gas Free" or "Inert":* In order to standardise the term "gas free" for applicability of 35 CFR 113, Dangerous Cargoes, and its interpretation when used by tankers in item "Golf" of the pre-arrival radio message to Marine Traffic Control required by 35 CFR 123.4, the following policy is established:

(1) The term "gas free" is widely used within the shipping industry and the level of being gas free has several values depending on the application. For PCC dangerous cargo regulations, the definition of "gas free" requires that all cargo tanks, including cargo slop tanks, are free from dangerous concentrations of flammable or toxic gases.

(2) To bring this definition to a working application for transiting vessels, the Master must report in "Golf" of their pre-arrival radio message the following: "All cargo tanks and cargo slop tanks are gas free and considered safe for entry and safe for hot work".

(3) Vessels with inert gas systems on board shall provide the following information in paragraph "Golf" of their pre-arrival radio message:

(a) If cargo tanks have been stripped of cargo and are inert.
(b) If inert gas system is operational.
(c) The last cargo carried.

(e) *Reporting Shipments of Direct Reduced Iron:*

(1) Vessels transporting Direct Reduced Iron (DRI) in any of its forms, hot or cold moulded briquettes, lumps or pellets, are required to report the shipment by its correct technical name and International Maritime Organisation (IMO) number to the Traffic Management Division in vessel's advance radio messages.

(2) DRI has been classified by IMO as belonging to the "Materials Hazardous only in Bulk, MHB" class and is listed in the IMO "Code for Safe Practice for Solid Bulk Cargoes (BC), Appendix B". The IMO number for cold moulded briquettes, lumps or pellets is "BC No. 15" and for hot moulded briquettes is "BC No. 16".

(3) Additionally, the following advance information should be provided to the Marine Safety Unit (MRRM):

(a) Copy of Certification that DRI is suitable for loading.
(b) Copy of Certification that DRI conforms to IMO requirements.
(c) Statement from Master or Shipper that IMO precautions as listed in the IMO "Code of Safety Practices for Solid Bulk Cargoes" for cold or hot moulded briquettes have been followed.
(d) Copy of procedures to be followed by the ship to ensure safety of ship and cargo in the event the cargo gets wet.
(e) Copy of current U.S. Coast Guard permit, if issued.

DENSITY: On several occasions vessels arriving for transit have been found to be over authorised draft after entering Gatun Lake. Overdrafts in these instances have been caused, it is believed, by assuming fresh water densities different from what actually exists in Canal.

Using distilled water as 1.000 at 3.98° C, water densities have been determined to be as follows:

	Density	
Location	*Gm./cc. 85° F*	*Lb./cu.ft 85° F*
(a) Gatun Lake	0.9954	62.21
(b) Miraflores Lake	0.9971	62.32
(c) Balboa Anchorage	1.0219	63.87
(d) Cristobal	1.0212	63.76

FRESH WATER: Available at Balboa or Cristobal.

BOILER WATER: May be taken without charge from Gatun Lake subject Pilot's permission and draft.

CONSULS: (Colon or Panama City).
Argentina, Australia, Austria, Belgium, Bolivia, Brazil, Canada, Chile, China, Colombia, Costa Rica, Cuba, Cyprus, Denmark, Dominican Republic, Ecuador, Egypt, El Salvador, Finland, France, Germany, Greece, Guatemala, Haiti, Honduras, India, Israel, Italy, Jamaica, Japan, Korea (South), Libya, Malta, Mexico, Netherlands, Nicaragua, Norway, Paraguay, Peru, Philippines, Portugal, Spain, South Africa, Sweden, Switzerland, Thailand, Turkey, U.K., U.S.A., Uruguay, Vatican, Venezuela, Yugoslavia.

CERTIFICATES: See "Documents".

CUSTOMS: Allowances: Tobacco, Wine and/or Spirits at Master's discretion sufficient for immediate consumption. Alcohol not permitted to be taken ashore.

REPATRIATION: Possible. Advise Agent in ample time in order to prepare necessary documentation.

AIRPORT: Tocumen International Airport is located outside Panama City, 18 miles from Balboa; 48 miles from Cristobal, served by all major scheduled international airlines operating in Southern hemisphere.

TIME: EST. No alterations to clocks necessary throughout the year.

HOLIDAYS: January 1st; January 9th; Good Friday; Carnival Tuesday (day before Ash Wednesday); May 1st; August 15th (Pacific side only); October 12th; November 3rd; November 5th (Atlantic side only); November 28th; December 8th; December 25th.

LOCKS: Gatun Locks (Atlantic side) raise and lower vessels 85 ft., Miraflores (nearest to Pacific) 54 ft. and Pedro Miguel (Pacific side) 31 ft.

SHIPMASTER'S REPORT: (Southbound) November 1991.
Charts: B.A. Charts No. 3111, 1300 and 1299.
Approaches: A strong Easterly flowing current was encountered when approaching Cristobal. The Racon on Cristobal East Breakwater was conspicuous. The breakwaters and vessels at the Atlantic anchorages showed up well on the radar.
Signal Station: Vessels should call "Cristobal Signal" on VHF Channel 12.
Anchorages: Depending on the size of the vessel and if the vessel is carrying dangerous cargo, vessels either anchor outside the breakwaters in the Atlantic anchorages or inside the breakwaters in the Areas A, B or D and generally without a Pilot. The Signal Station will advise which area to use. The Pilot is available at an extra charge and the anchorages are often very crowded.
Canal Transit: The standard draft for transit is 39 ft.6 in. in tropical fresh water (density 0.9954). This is decreased in the very dry season but this is normally only once every 10 years. Transit time is about 10 hours.

Moderate sized vessels normally take one Pilot for the transit and vessels arriving before 1100 hrs. generally transit on the same day. It usually takes about 20 minutes to pass through each lock but time for transitting Gatum Lock is about 1 hour as it has 3 chambers. Occasionally vessels have to anchor in Gatum Lake if there are large vessels transitting Northbound.

Our vessel's d.w.t. is 12,750 tonnes and we used 4 locomotives in each lock (2 either side). The lock crews handle all wires.

An officer and crew members should standby forward from Gamboa until clear of the Canal.

Officials: The Agent and Boarding Officer boarded the vessel at the inside anchorage soon after anchoring. They will not board if the vessel is outside the breakwaters.

All documentation is completed on standard canal forms and is generally undertaken very quickly.

Repatriation: Crew changes are possible through the international airport at Panama, no particular problems reported.
Shore Leave: Shore leave was not advised at the time of our visit.

SHIPMASTER'S REPORT: (Southbound) April 1992.

The following observations were made for the passage through the Panama Canal on 3rd March 1992 on Panamax size vessel with max. draft of 39 ft. 06 in. (TFW) from Cristobal to Balboa.
Approach: Anchoring instructions were given only when the vessel was 5 miles off the breakwater.
Anchorage: Though the chart and other sources of information indicate a pilot boarding ground just inside of the breakwater at Cristobal, the vessel was not provided with a pilot and was asked to anchor without a pilot in Anchorage Area ("A").

It is a difficult place to anchor for a Panamax sized vessel as the anchorage area is very small, and due to very little underkeel clearance, it is difficult to turn around to face the strong winds from the Atlantic. The vessel needs to be turned practically through 180°.

Our vessel arrived around 0900 hrs. local time. The anchorage area had only two other vessels, but later in the evening the anchorage became quite crowded and it was observed that other ships had difficulty in manoeuvering into the anchorage. A tanker loaded to maximum draft, trying to get into the Explosives Anchorage took more than 1.5 hours to manoeuvre into position and turn around in the Explosives Anchorage.

The practice of not providing pilots for vessels coming into the anchorage seemed to be highly dangerous. A lot of confusion and anxious conversations were overheard throughout the day with ships of different nationalities unable to communicate effectively.
Panama Canal Inspection: The Panama Canal inspection went off smoothly and the inspectors were very cordial. In the locks, drafts were carefully checked.
Customs: The bond locker was not sealed.
Health: Radio Pratique was applied for by the vessel.
Provisions: Fresh vegetables and fruits were found to be reasonably priced and of satisfactory quality.
Passage through Canal: The passage was without any difficulties but a shortage of tugs for some vessels was observed. A Panamax sized vessel following had to wait for tugs from our vessel.

The vessel was asked to anchor in the Explosives Anchorage for bunkering.

The depths in the Explosives Anchorage marked on B.A. Chart No. 1299 being insufficient, the vessel anchored in position S.W. of Fairway Buoy, about 1.5 miles off.

AUTHORITY: Panama Canal Commission, Balboa, Republic of Panama. Postal Address: Panama Canal Commission, Canal/Operations Unit, Unit 2300, APO AA 34011-2300, U.S.A. *Tel:* 52-4500 (Marine Bureau), 52-4211 (Canal Operations Unit), 52-4220 (Traffic Management Division). *Telex:* 3023 PCCMTCC PG. *FAX:* 52-3892 (Marine Bureau), 52-7688 (Canal Operations Unit), 52-3976 (Traffic Management Division). *Contact:* Captain George T. Hull, Marine Director. Carlos A. Alvarado, Deputy Marine Director. Captain G.A. Markham, Canal Operations (Fax: 52-7688, Telex: 3023, 3028).
AGENT: See "Cristobal".

PEDREGAL: 08.23 N. 82.26 W. (See Plan)

LOCATION: The Port of Pedregal is 7 km. to the South of the City of David, Chiriqui Province, in the West part of the Pacific coast of the Republic of Panama. The port is at the head of an estuary of the River Garibaldo.
DOCUMENTS:
General Declaration, 2 copies.
Cargo Manifest, 5 copies.
Crew List, 3 copies.
Passenger or Negative Passenger Declaration, 4 copies.
Stores or Supplies List, 4 copies.
Crew Personal Effects, 3 copies.
Health Documents, 1 copy.
Maritime Health Declaration.
Derat Certificate.
Crew Vaccination Cards.
PILOTAGE: There is no official Pilot in the port. The pilotage service is covered by persons who are duly licensed and who have much experience, since they work full time on ships in this area. When their services are requested, they ask permission of their employers if it is during normal working hours (private undertakings). They obtain a launch which has no means of communication at all with the port.
ANCHORAGE: Vessels intending to enter the port must anchor near the Fairway Buoy installed at the Port Entrance at San Pedro Mouth. Around this buoy are depths of 70 ft. and 80 ft.
RESTRICTIONS: All vessels entering port must do so on high tide. Vessels are not allowed to enter or leave the port area at night. Entry and departure is only allowed if a Pilot is on board. Vessels must advise their local Agents 48 hours in advance of their intended arrival.
MAX. SIZE: The length of the quay is 86 m. and the width is 6 m. at the part where there is a buoy, with 4.2 m. along the rest of it. The max. depth of water for a vessel entering the port is 18 ft.; but the draft of the vessel must not exceed 15 ft.
HEALTH: The vessel is boarded by a Quarantine Inspector, who will inspect the entire vessel, and if there is no suspicion of illness or contamination, and all health stipulations as covered by Panamanian Laws are met, Free Pratique is granted. If there is any suspicion of illness or contamination, the vessel is immediately fumigated far from the quay, with the crew being forbidden to come ashore.
VHF: There is a radio unit for VHF communication and calls are made on Channel 16, passing then to another available channel. This equipment receives calls on frequency 156.8 MHz.
TUGS: None available.
BERTHING: The port consists of a single marginal quay 86 m. long, made of reinforced concrete (both surface and uprights).

The quay has depths of 3.35 m. (11 ft.) and 4.27 m. (14 ft.) at its ends, and in the centre 5.18 m. (17 ft.).

To one side of the quay is a building of reinforced steel covered with sheets of corrugated zinc with an area of 360 cu.m. and a free internal height of 6 m.
CARGO HANDLING: For handling purposes, there are only a few hand trucks, and vessels are obliged to utilise their own resources.
Cranes: Loading and discharge is by the ship's own gear, excluding shipment of sugar which is done by land-based equipment.
STEVEDORES: There is a stevedores' syndicate which is independent of the National Port Authority.
MEDICAL: There is no doctor in the port; but there is a medical centre not far away.
FRESH WATER: There are water installations available for supplies to ships.
FUEL: There are no pipelines. Oil is supplied by road tankers.
FIRE PRECAUTIONS: None.
REPAIRS: No repairs are carried out on ships.
AIRPORT: The National Airport of David is some 5 km. away on the road between Pedregal and David. It has commercial flights only at national level.
POLICE/AMBULANCE/FIRE: In the port there are no services; 5 km. away in the City of David there are services, and their telephone numbers are: Police 75-1446 or 75-2210. Fire Brigade and Ambulance 75-4216.
SHORE LEAVE: Allowed.
DELAYS: Any delays are caused by the tides, another vessel occupying the quay or arrival at night.
GENERAL:
Observations: The quay of the Port of Pedregal is in a bad state in every respect, both the top surface and the water side supports, and some of the piles need to be repaired.
Shelter: The Port of Pedregal, being at the head of an estuary, is not affected by the sea or swell.
Tides: The average tidal difference (average tide) in the port is 2.5 m. (8.2 ft.) and the average Spring tide is 3.05 m. (10 ft.).
Common Operations in the Port: Pedregal is a port whose operations are on a small scale, handling cargo such as fertilisers, general cargo, bulk commodities, and local fishing. International vessels arrive at the port very sporadically, due to the reduced depth of water and the poor state of the quay.
AUTHORITY: National Port Authority, Apartado 8062, Panama 7, Panama. *Tel:* 23-3997, 64-4021. *Telex:* 2765. *FAX:* 69-6992, 69-7432. *Contact:* Jerry Salazar, Director General.

PUERTO ARMUELLES: 08.17 N. 82.52 W. (See Plan)

SECTION A: GENERAL CARGO PORT.
SECTION B: OIL TERMINAL.

SECTION A: GENERAL CARGO PORT.

LOCATION: Puerto Armuelles is located on the Pacific coast of the Republic of Panama.

Puerto Armuelles is a port solely used for the export of bananas, it is operated by United Brands Co., and administered by the National Port Authority of Panama.

DOCUMENTS: Same documents and the same procedure as Almirante.

PILOTAGE: United Brands Company has a Pilot who is available 24 hours of the day. Pilotage consists in mooring the vessel at the quay from the anchorage, for which the vessel must position a ladder on the port side. The pilot launch is white and has no VHF radio. The mooring operation is fairly complicated and United Brands provide a gang of men who board the vessel and manipulate the cables used in the mooring process. Mooring at the quay is always done on the starboard side of the vessel and the bow must be pointing out to sea.

The Pilot must be contacted by the ship's Agent and requested by the vessel by VHF radio on Channel 12 to the Port Authority or Channel 16 to United Brands Co.

ANCHORAGE: Vessels may anchor half a mile from the pier, where there are depths of 36.6 m. (120 ft.). However, due to the great depth of water in front of the quay, care must be taken in letting out the anchor, it being necessary to find places where the water is not so deep.

It is recommended that for Masters of vessels arriving for the first time in the port ask for the Pilot when anchoring.

There are no aids to navigation indicating the best place to anchor.

RESTRICTIONS: Puerto Armuelles is located in the Bay of Charco Azul, where there are great depths making it unnecessary to have aids to navigation. Access to the port is free of sandbanks or any other obstruction to navigation. There are therefore no restrictions for vessels wishing to enter the port, except on the quay itself.

On the quay proper, restrictions are as follows: Ships are not to be moored during bad weather and mooring is permitted in daytime only, unless there is an emergency. Bad weather usually prevents securing and mooring cannot be performed.

HEALTH: The vessel is boarded by the doctor in the operation of clearance. In the event of illness on board, the Port Authority must be advised on VHF Channel 12 and the vessel must wait at the anchorage for the doctor's visit.

RADIO: A radio service exists via telegraphic cables operated by Tropical Radio Telegraph Co. The Port Authority has VHF/FM equipment which receives calls on Channel 12. United Brands Co. also has VHF and receives calls on Channel 16. The range of these stations is 50 nautical miles. The Port Authority also has SSB equipment which takes calls on frequency 7447.5 kHz.

TUGS: None available.

BERTHING: The quay consists of a pier with a single berth 137 m. long and 12.2 m. (40 ft.) minimum depth. Vessels must moor on the starboard side.

The quay has 4 banana loaders with a loading capacity of 42 boxes of bananas per minute, each weighing 42 pounds. There is no other type of loading equipment.

Since the quay is located in a position open to the sea a set of 3 mooring buoys is used to keep vessels away from the N.E. side of the pier.

CRANES: 1×5 ton rail mounted crane.

STEVEDORES: Loading and discharging work is carried out by the Union of Port Workers. The vessel's Agent must contract the services of the workers via United Brands Co.

MEDICAL: There is a modern hospital in Armuelles.

DENSITY: 1.0219 gm./c.c. at 85°F.

FRESH WATER: Supplied at the rate of 2 t.p.h.

FUEL: Not available.

CONSULS: Colombia, Costa Rica, Nicaragua.

REPAIRS: Facilities for painting, cleaning, ship and machinery repairs are available.

OPENING/CLOSING HATCHES: Carried out by port workers.

CUSTOMS ALLOWANCES: See "Almirante".

PROVISIONS: Shipchandler facilities available. Can be obtained locally or in the town of David 100 km. away.

REPATRIATION: Can be effected without difficulty.

AIRPORT: Armuelles has a small airstrip for light aircraft. However, the town of David 100 km. away by road from Armuelles has a larger airport. There are 2 daily flights by local commercial lines between David and Tocumen in Panama; thus repatriation can be effected without difficulties.

TIME: GMT minus 5 hours.

POLICE/AMBULANCE/FIRE: Available in Armuelles.

TELEPHONE: Micro-wave connects Armuelles with any country in America or Europe. No facilities for telephones on board vessels.

SHORE LEAVE: No restrictions.

AUTHORITY: National Port Authority, Apartado 8062, Panama 7, Panama. *Tel:* 23-3997, 64-4021. *Telex:* 2765. *FAX:* 69-6992, 69-7432. *Contact:* Jerry Salazar, Director General.

Puerto Armuelles Port Administrator: *Tel:* 75-1230.

AGENT: See "Section B".

SECTION B: OIL TERMINAL.

LOCATION: The PTP transhipment Terminal is located on the Western side of Bahia de Charco Azul in position Lat. 8° 12.5′ N., Long. 82° 53′ W., on the Eastern side of the Burica Peninsula, approximately 8.5 miles North of Punta Balsa and 3.5 miles South of Puerto Armuelles.

DOCUMENTS: The following documents are required for entry and clearance:

2 copies General Declaration.
1 copy Clearance from Previous Port.
5 copies Cargo Manifests or Declaration that no cargo is carried.
3 copies Crew List.
4 copies Passenger List or Declaration that no passengers are carried.
2 copies Stores List or Declaration that there are no supplies.
2 copies Crew Personal Effects Declaration.
1 copy Maritime Health Declaration.
2 copies Mail List.
1 copy Bill of Lading.

APPROACHES: Approaches to the Terminal are from the South to the S.E. (See "Plans").

Lights:

1. Isla Burica Lat. 08° 01.5′ N., Long. 82° 52.5′ W., flashing every 10 secs., 12 miles, white light exhibited from a metal framework tower which is 34 m. high and solar powered.
2. Puerto Armuelles (Banana Pier) Lat. 08° 16′ N., Long. 82° 52′ W. An occulting light is exhibited from the head of the pier in combination with a fixed red light.
3. At the Terminal, flashing lights are exhibited from the extremities of the berths.

No. 1 Berth: Flashing red every second.
No. 2 Berth: Flashing red every second.

There are no leading lights.

PILOTAGE: Pilotage to and from the Terminal Jetties is compulsory and is available on a 24 hour basis.

Vessels should not approach the immediate vicinity of the Terminal without being authorised.

The outgoing or unberthing vessel will have priority over the incoming vessel providing the normal rules of navigation are not infringed.

For discharging vessels, pilot station is 3.5 miles S.E. of Jetty No. 2. For loading vessels, pilot station is 3 miles East of Jetty No. 1.

Ships should make a lee for the Pilot and the ladder should conform to normal international standards. Discharging vessels should place the ladder on the starboard side when on Northerly heading. Loading vessels should place ladder on the starboard side when on a Westerly heading.

Vessels with a freeboard of 30 ft. or more shall provide suitable accommodation ladder, in addition to pilot ladder.

Vessels shall have both anchors ready for use.

Masters will advise Terminal, before berthing, of any damage or disability to his vessel.

ANCHORAGE: The area immediately to the East of the Terminal is very deep.

The North East area of the Bahia Charco Azul is believed to be the appropriate area to anchor. The holding ground is reported to be good.

Radio contact should be maintained with the Terminal via VHF Channel 16.

MAX. SIZE: 265,000 d.w.t.

HEALTH: In accordance with standard international practice, ships are required to display International Code Signals for vessels requiring Free Pratique and these should be displayed until Pratique has been granted.

N.B. The Autoridad Portuario Nacional (A.P.N.) permits employees of P.T.P. to board vessels (before the ship receives Free Pratique) for the purposes of setting loading arms. Discharge of ballast may commence in case of a vessel with ballast. Discharge of cargo *is not* permitted. Employees of P.T.P. are not permitted in ship's accommodation areas before clearance.

RADIO: *Notices/Time of Arrival:*

ETAs: All communications should be in local time. ETAs should be received by the Terminal at least 72 hours prior to arrival and any variation of more than 4 hours should be advised.

ETAs should be sent via ship's Agents who will notify the Terminal. The ETA cables should include the following:

1. Name of vessel.
2. ETA Puerto Armuelles.
3. Draft on arrival, fore and aft.
4. For discharging vessels: B/L, gross and net barrels of oil to nearest barrel.
   For loading vessels: ballast for discharge ashore to nearest 1,000 barrels.
5. Any conditions which will affect loading or unloading operations.
6. Deviations from the recommended deck fittings. (See "Berthing/Loading").
7. Water request, if any.

Notice of Readiness: Notice of Readiness is considered to be received by the Terminal if either:

1. Vessel tenders the Notice of Readiness to load or discharge upon arrival at the Pilot Station.
2. When a berth is not available and a vessel elects not to close the port, it may tender its Notice of Readiness at a distance of 15 miles from the Terminal. In this case notice is considered received at this time *plus 2 hours*.

Nothing in these rules will interfere with any business arrangements made by P.T.P. and the user in respect of lay-time, demurrage, and other contractual obligations.

VHF: Vessels approaching the Terminal should establish VHF communication as soon as they are within range (about 50 miles).

The Terminal keeps a listening watch on Channel 16; call sign "Petroterminal Control". Vessels which have to lay-off the Terminal should maintain a listening watch on Channel 16.

The Terminal also uses Channels 11, 12, 13, 14.

The Terminal tug boats and line handling boats are also equipped with Channels 11, 12, 13 and 14.

The Terminal radio monitors Channels 11, 13, 14, 16 at all times.

Also see "Chiriqui Grande" – re-skip.

Frequency Allocation:

Channel	*Use*
13	Cargo handling ONLY.
14	Tugs and berthing.
(11)	(Alternate channel for cargo).
16	Call-up channel. Vessels at anchor maintain listening watch.

Always identify calling vessel and station being called.

Communication with Agents: Vessels may contact their Agents by using Channel No. 16 (using the bridge set) and shifting to a working channel other than Nos. 11, 13 or 14.

Do not use the cargo radio for any ship's business except cargo operations.

Communications While at Dock: The Terminal will provide a portable radio for the use of the vessel's Person-in-Charge of petroleum and ballast transfer operations.

The Person-in-Charge must maintain the radio in his possession at all times, and it must not be changed to any other channel unless instructed to do so by "Petroterminal Control".

The dock-hand is equipped with a portable radio on the cargo working channel.

A third radio is permanently installed in the dock shed.

All communications are conducted in English.

TUGS: 3 tugs of more than 4,200 h.p. are available and usually will make fast alongside. Tug's lines are used for making fast to vessel.

When working tugs alongside, ullage plugs shall be closed.

Tugs available throughout 24 hours.

BERTHING/LOADING: Also see "Table" overleaf.

The Terminal Representative will direct where and when a vessel is to berth.

A. Mooring & Connecting

1. *Mooring Pattern:* At both Berth No. 1 and No. 2 the normal mooring pattern will be:

FORWARD	AFT
3 Head Lines	3 Stern Lines
3 Breast Lines	3 Breast Lines
2 Spring Lines	2 Spring Lines

Discharging vessels will normally berth with port side to Berth No. 1. Loading vessels will normally berth port side to No. 1 or No. 3, and starboard side to No. 2 Berth. Any variation will be advised by the Berthing Master and Masters should advise any preference prior to arrival.

Mixed moorings are undesirable, e.g. a wire and fibre rope in parallel service is undesirable due to unequal elasticity. All moorings must be arranged so that loss of effect cannot occur when slacking off or heaving in on one line, as required, due to the rise or fall of the vessel during loading or discharge operations.

It is imperative that spring lines be adequate to maintain a minimum fore and aft movement of the vessel to remain within the limitation of movement of the loading arms.

Wire ropes may be used and are preferred for spring lines.

Marine Manager's Notice to Mariners: Our experience has shown that vessels using synthetic tails on the end of their wire mooring lines have considerably reduced their mooring time at this Terminal.

If your vessel's wires are not already fitted with tails we request they be fitted for your next visit to our Terminal.

Some vessels fitted with 'End Less' tails at the end of their wires do not have the two parts lashed together at the shackle, the tail is then free to pull through the shackle, this also causes difficulties with mooring.

The diagram (See "Plan") shows type of shackle we have found most suitable, also length of synthetic tail required.

Your attention to this matter would be appreciated.

Pre-Transfer Conference: The Pre-Transfer Conference will be held between the Control Room/Supervisor and responsible Officer prior to commencement of operations. (IOTTSG Chapter No. 5) to agree on procedures for deballasting and loading, including:

1. Communications between ship/shore/Control Room/Supervisor.
2. Deballasting procedures.
3. Cargo start-up procedures.
4. Any deviations from normal procedures.
5. Loading rates, initial, maximum, and topping off.
6. Notice times required to change rates and shutdown procedure.
7. Emergency shutdown, moorings failure, oil spill, etc.
8. Any ship's deficiencies to be made known.
9. Any Terminal deficiencies to be made known.
10. Completion of loading.
11. Designated smoking area.
12. Galley and appliance limitations.
13. Emergency assistance.
14. Vessel will be ready to move under her own power at all times while moored at the SBM.

Prior to the start of operations, the Supervisor and responsible Officer will complete the Safety Check List.

Where any disagreement arises between the vessel personnel and the Berthing Master regarding some aspect of Terminal procedure, the procedure to be followed will be that which provides closest compliance with guidelines established by the latest edition of International Safety Guide for Oil Tankers and Terminal, published by the International Chamber of Shipping, Oil Companies International Marine Forum.

Flow Rates: Terminal can receive crude oil at 100,000 b.p.h. or more. Berth No. 1, individually, can receive approximately 60,000 b.p.h. Terminal can receive ballast water at 30,000 b.p.h. or more. Discharge pressure of 125 p.s.i.g. at ship's rail is permitted. The crude oil loading rate is 48,000 b.p.h. by pumping. Higher rates can be given on request.

Cargo operations shall not commence until the Master or Mate has informed the Port Representative that all necessary valves are opened and the vessel is ready to discharge or receive cargo and regulations being complied with.

In the event of a vessel requesting a shore-stop, Masters should understand that Petroterminal accepts no responsibility for any errors in quantity.

Loading Arm Connections: (See also Section B and C).

Bonding cable shall be secured to a clean surface before loading arm connection.

Ship's crew must be available to assist in connection and disconnecting loading arms to the manifold of the ship.

a. Preferred connections at Berth No. 1 for discharging vessels are 4×16 in. ANSI 150# Weldneck flanges on the port side (3×16 in. at Berth No. 2). *Standard flanges are required.*

(1) Non-standard flange thicknesses and/or non-standard outside diameters may prevent loading arm couplings from functioning.

(2) At least 8 in. of straight pipe (free of supports, lugs, or reducer) is required behind the flange for coupling clearance.

(3) The preferred flange spacing fore and aft is 3.0 m. – 3.0 m. – 3.0 m. (10 ft. – 10 ft. – 10 ft.), or less between centres. In no case can the distance be less than 1.6 m. (5 ft 3 in.), 1.1 m. (3 ft. 7 in.), 1.6 m. (5 ft. 3 in.).

b. Preferred connections for loading vessels are 4 each 12 in. ANSI 150# Weldneck flanges on the starboard side. *Standard flanges are required.*

(1) Non-standard flanges thicknesses and/or non-standard outside diameters may prevent loading arm couplings from functioning.

(2) At least 8 in. of straight pipe (free of supports, lugs, or reducers) is required behind the flange for coupling clearance.

(3) The preferred flange spacing fore and aft is 3.0 m. – 3.0 m. – 3.0 m. (10 ft. – 10 ft. – 10 ft.), or less between centres. In no case can the distance be less than 1.6 m. (5 ft 3 in.), 1.1 m. (3 ft. 7 in.), 1.6 m. (5 ft. 3 in.).

(4) Disconnection of loading arms: Once cargo transfer is complete the loading arms will be drained and then disconnected by shore personnel.

B. Berth No. 1 (See Plan).

Berth No. 1 is designed for discharging or loading vessels of 28,000 to 265,000 d.w.t., without draft restrictions. Least depth alongside is 80 ft. Jetty head is connected to shore by trestle.

Gangway: Hydraulically operated telescoping gangway from loading platform to ship's deck is provided.

Loading Arms: 4 Mannesmann 16 in. size fully powered loading arms are installed. They are fitted with positive locking hydraulic couplers for 16 in., 14 in. and 12 in. standard flanges. All arms are capable of transfer of crude oil and ballast water.

Crane: A 1 ton capacity crane for handling of supplies, etc., is installed.

Breasting Dolphins: Four single steel tube breasting dolphins equipped with pivoting timber-faced fenders are installed. The two outer dolphins are spaced approximately 380 ft. apart and are equipped with double quick release hooks and power capstans. The two inner dolphins are spaced approximately 260 ft. apart and are similarly equipped.

Mooring Dolphins: There are four mooring dolphins. All are equipped with 3 quick release hooks and power capstans.

C. Berth No. 2 (See Plan).

Berth No. 2 is designed for discharging or loading vessels of 28,000-270,000 d.w.t. without draft restriction. Least depth alongside is 77 ft. Jetty head is connected to shore by a trestle.

Gangway: A hydraulically operated telescoping gangway from loading platform to ship's deck is installed.

Loading Arms: 3 Mannesmann 16 in. size fully powered loading arms are installed. They are fitted with positive locking hydraulic couplers for 16 in., 12 in. and 10 in. standard flanges.

Crane: A 1 ton hydraulic crane for supplies, etc., is installed.

Breasting Dolphins: 4 each single steel tube breasting dolphins equipped with pivoting timber faced fenders are installed. The distance between dolphins is 375 ft. Each dolphin is equipped with two quick release hooks and a powered capstan.

Mooring Dolphins: There are four mooring dolphins, all are equipped with 3 quick release hooks and power capstans.

BALLAST: When alongside, ballast should be handled by type, as per international convention, as follows:

1. *Segregated:* All ballast in segregated ballast tanks should be visually inspected prior to discharge. After inspection, segregated ballast may be discharged overboard according to standard shipboard procedure.

2. *Dedicated Clean:* All ballast in dedicated clean ballast tanks should be visually inspected prior to discharge. After inspection, dedicated clean ballast tanks may be discharged overboard in accordance with IMO Regulations.

3. *Treated:* Ballast water which has been chemically treated (with detergents, emulsifiers, etc.) must be retained on board.

4. *Others:* All other ballast water will be pumped ashore prior to loading. The Terminal has 3×120,000 barrel tanks for the reception of dirty ballast. The ship will advise the Terminal of the quantity of ballast to be discharged ashore prior to commencing discharge.

Ballasting: Before ballasting, the cargo lines shall be drained back into cargo tank. Ballast pumps shall be started before sea valves are opened.

CRUDE OIL WASHING: Crude oil washing may be done during discharge if this does not cause delay to other vessels awaiting berth.

The Terminal should be kept fully advised of any extra time required in order to comply with IMO Regulations.

MEDICAL: Doctor will only board vessel in cases of emergency. There are limited medical and dental services available. Treatment should, when possible, be arranged via Ship's Agent in advance.

DENSITY: Offshore salinity is 1.025. Salinity (Specific Gravity), due to river run-off, is about 1.010 close to the shore during the rainy season (July-November/December). During this period, substantial changes may occur.

Sea temperature varies between 80° and 83°F.

Petroterminal – Berth Description:

	Berth No. 1	*Berth No. 2*
Vessel size (design)	28,000 – 270,000 d.w.t.	28,000 – 275,000 d.w.t.
Type of berth	Fixed loading platform	Fixed loading platform
Deck level of berth	40 ft. MLLW	40 ft. MLLW
Depth alongside at MLLW	80 ft.	77 ft.
Loading arms (number and size)	4×16 in. also 14 in. and 12 in. adapters	3×16 in. also 14 in. and 12 in. adapters
Max. rate loading	48,000 bbls.p.h. plus	48,000 bbls.p.h. plus
Max. design flow rate (per berth)	100,000 bbls.p.h.	90,000 bbls.p.h.
Loading arm spacing on operating dock/minimum ship manifold spacing	9 ft. 4 in. (4)	9 ft. 4 in. (3)
Quick disconnect coupling size (QDC)	16 in.	16 in.
Manifold size range acceptable to QDC (#1)	16 in., 14 in. and 12 in.	16 in., 14 in. and 12 in.
Max. ship manifold pressure	PSIG – not to exceed 125	PSIG – not to exceed 125
Emergency shutdown	Can be initiated by berth operator or by Control Room. Shutdown complete within 6 seconds after initiation.	Can be initiated by berth operator or by Control Room. Shutdown complete within 6 seconds after initiation.
Access to ship	69 ft. aluminium gangway	69 ft. aluminium gangway
No. of mooring dolphins	4	4
No. of breasting dolphins	4	4
Mooring/breasting hooks	1 triple hook per mooring dolphin/4 double hooks per breasting dolphin	1 triple hook per mooring dolphin/1 double hook per breasting dolphin
Potable water	Limited	Limited
Bunker facilities	None	None
Public telephone	None available	None available

Notes:

1. Although all berths are designed to handle vessels in the 25,000 d.w.t. size, loading arm size requires ship's manifolds to be a minimum of 12 in. in diameter for Berths No. 1 and 2.
2. Vessels in the 250,000 d.w.t. range will be acceptable only if dock/deck machinery and mooring leads allow an efficient bow and stern mooring line pattern plus bow to manifold distance.
3. Preferred flange spacing fore and aft is 10 ft. – 10 ft. – 10 ft. (or less) between centres, however, in no case can the distance be less than 5 ft. 3 in. – 3 ft. 7 in. – 5 ft. 3 in.

ANSI No. 150 Weldneck Flanges.

FRESH WATER: Fresh water can be supplied, as available, via the jetty connections. Prior notice is requested. Maximum delivery is 200 tons.

FUEL: There are no bunkers available.

EARLY DEPARTURE PROCEDURE: All loading vessels are requested to use an Early Departure Procedure. (E.D.P.).

(A) If the Master of a vessel consents to use the E.D.P. it will be implemented in the following manner:

1. The Master will sign a letter agreeing to the use of E.D.P.
2. The cargo documents and other relevant forms will be placed aboard the vessel.
3. On completion of loading, the vessel's tanks will be gauged by the vessel's appointed cargo inspector, whose inspection is expected to be completed prior to sailing.
4. The vessel will sail.
5. The Terminal will transmit Bill of Lading figures to the vessel by VHF radio. The cargo documents are to be completed by the Master.
6. Written confirmation of these figures will be provided by the vessel's Agent in the Canal Zone.

(B) If the Master of a vessel does not agree to use E.D.P. the vessel will be unberthed immediately after loading and should proceed to the pilot station. Terminal's Representative will bring papers by launch or tug.

(C) Vessels will be requested to unberth once loading arms have been disconnected regardless of the time set on the sailing board. A terminal launch will be available for returning crew to vessel.

(D) If a vessel fails to vacate its berth upon completion of operations or causes delay to cargo operations because of mechanical breakdown, inadequate loading/discharging rates, lack of adequate crew, non-compliance with these rules, the vessel will be responsible for:

1. Jetty demurrage at the applicable rates.
2. Hold P.T.P. harmless against demurrage detention or loss of any nature incurred as a result of other vessels awaiting berth.
3. Cost of tugs requested to stand-by the vessel by the Terminal Representative if, in his opinion, he considers it necessary.

TIME: GMT minus 5 hours.

INSPECTION: *Petroleum/Tank Inspection:* This will be carried out by Inspectors appointed by the User (SGS Redwood or Saybolt).

Valdez – Crude Oil Characteristics:

Specific Gravity	0.888 @ 60°F
API Gravity @ 60°F	26.6°
Pour Point	+15°F
Viscosity	7.3 SSU @ 100°F (22 centistoke) 160 SSU @ 60°F (68 centistoke)
Reid Vapour Pressure	3.8 at 100°F
Sulphur Content	0.99% by weight
Waxing	85 – 117°F (begins to precipitate) 50 – 55°F (bulk of wax begins to come out of solution)
Mercaptan Sulphur	Approximately 20 p.p.m.

SAFETY: No dangerous cargo shall be permitted to be shipped or landed at the jetties. Whilst petroleum loading/discharging operations are being carried out, no other cargo will be handled without permission of the Terminal Representative.

No welding, cutting, etc., is permitted on any vessel in the Terminal.

Blowing or cleaning of boiler tubes in vicinity of the Terminal is prohibited.

Smoking Regulations: Smoking is PROHIBITED in the following locations:

1. Entire Terminal area.
2. Aboard Launches.
3. On Jetties and in motor vehicles inside the Terminal, except inside designated buildings.
4. On ships except in places designated by the Master and agreed by the Terminal's Representative. In accordance with IOTTSG, two locations only will be established in the after end of the vessel.

N.B. If an oil spill occurs on Jetty or ship, all smoking will be PROHIBITED until the spill has been removed.

Emergency Procedure: For cases of fire on vessel, in addition to the normal ship's alarms, Masters are requested to sound a prolonged blast on the main whistle of not less than 10 seconds duration. If the vessel is discharging or deballasting it should:

1. Immediately cease operations.
2. Initiate fire fighting procedures.
3. Be prepared to unberth at short notice.

If loading cargo, the Terminal will, on hearing the signal, immediately stop all operations and:

- (i) Initiate fire fighting procedures from Jetty.
- (ii) Put Terminal emergency plan into effect.
- (iii) Disconnect loading arms.
- (iv) Order tugs to vessel and make preparations for unberthing.

Vessels at other berths should also cease operations and be prepared to put to sea.

Fire Protection System: Each jetty is equipped with:

1. Water spray system underneath.
2. Hydrant system on platform.
3. Two 500 g.p.m. remote operated monitors. These are connected to discharge with either water or foam.

The plant water supply is by diesel driven pumps at two locations and the total water flow is 7,000 g.p.m.

SHIP SUPPLY SERVICE: 3 large tugs and launches available to assist with transportation of stores and crew, on an emergency basis only.

Helicopter can easily be hired.

SHORE LEAVE: *Launch Service:* The launches at the Terminal are intended for Terminal use only. They may be hired by prior notice, depending on operational requirements. Crew members and visitors use the launches at their own risk.

Shore Leave: Shore leave is permitted by the local authorities. Crew members should check in at the Customs Gatehouse leaving and returning to the Terminal area. Masters should take reasonable steps to ensure no alcoholic drinks, drugs, etc. are supplied or conveyed to any unauthorised person.

GENERAL: *Charts and Publications:* Charts Ref. USHO 21580, 21581, 21584 and 1018 and BA 1928.

Sailing Directions: USHO PUB 153. B.A.N.P. No. 8 Pacific Coasts of Central America and United States Pilot.

Tides: The maximum tidal range is 12 ft. The mean range is 7.6 ft. The tidal flow in this area is, at present, ill defined.

Strong tides in North-South direction have been experienced close to the docks. At times these are unpredictable.

Currents: Currents in the area are not well defined.

Weather Conditions in Bahia de Charco Azul:

(A) Wind: The seasonal normal wind regime occurring in the Bahia de Charco Azul is:

1. December-March: Wind speeds greater than 14 m.p.h. occur approximately 8% of the time in January. The predominant directions are from W., N.W., N. and N.E. Winds are W., N.W., N. and N.E. approximately 70% of the time in January.
2. December-April: Is considered to be dry season.
3. April-May: Winds exceed 14 m.p.h. 6% of the time in April. The predominant wind directions are S. and S.W., and N. and N.W. Winds are S. and S.W., and N. and N.W. approximately 60% of the time in April.
4. June-August: Wind speeds exceed 14 m.p.h. approximately 13% of the time in July. The predominant directions are S., S.W., and W. (approximately 60% occurrence) in July.

5. June-November: Is considered to be the rainy season.

6. September-November: Winds exceed 14 m.p.h. approximately 22% of the time in October. Predominant wind directions are S., S.W., W. and N.W. Winds are S., S.W., and W. and N.W. approximately 86% of the time in October.

(B) Waves: The seasonal wave height is:

1. December-March: Significant wave height exceeds 3.9 ft. 1% of the time in January N.E., E. and S.E. wave directions predominate, occurring 84.9% of the time in December.

2. April-May: Significant wave height exceeds 3.9 ft. 1.6% of the time in April. N.E., E. and S.E. wave directions predominate, occurring 85.5% of the time in April.

3. June-August: Significant wave height exceeds 3.9 ft. 6.4% of the time in July. N.E., E. and S.E. wave directions predominate, occurring 82.9% of the time in July.

4. September-November: Significant wave height exceeds 3.9 ft. 11.3% of the time in October. N.E., E. and S.E. wave directions predominate, occurring 81.0% of the time in October.

Flag: Every vessel shall fly her national flag and the flag of the Republic of Panama between sunrise and sunset.

Rubbish: The dumping of trash and other garbage is prohibited. Any trash or garbage so dumped will be removed and the expenses involved for the vessel's account.

AUTHORITY: Petroterminal de Panama, S.A., Apartado 8-179, Panama 8, Republic of Panama. *Tel:* 64-2655, 64-2246, 63-7777. *FAX:* 63-9949.
Contact: Luis Roquebert, Operations Manager.

Puerto Armuelles: P.O.Box 26. *Tel:* 70-7246, 70-7261. *Fax:* (Area code 507) 75-4958 or 75-6993.

AGENT: Fernie (Puerto Armuelles), S.A., Apartado (P.O.Box) 22, Puerto Armuelles, Chiriqui, Republic of Panama. VHF: Standby Channel 16. Telephone: 70-7301. After hours Tel: 70-8993. Cables: "Fernie Puerto Armuelles". Fax: 70-7403.

With the exception of times vessels are actually in or approaching Puerto Armuelles (i.e. within V.H.F. range) all other communications should be directed to "Fernie Cristobal".

VACAMONTE: 08.51 N. 79.40 W. (See Plan)

LOCATION: The fishing port of Vacamonte is located 27 km. S.W. of Panama City, in Arraijan District, Province of Panama.

DOCUMENTS:

Voyage Documents:
General Declaration (1 original and 5 copies)
Cargo Manifest (4 copies)
Crew List (4 copies)
Passenger List (4 copies)
Stores/Supplies List (4 copies)
Crew Effects List (2 copies)
Maritime Health Declaration (Derat) (1 copy)
Mail List (1 copy)

Ship's Documents:
Certificate of Registration
Certificate of Civil Security
Certificate of Radio Safety
Oil Record Book
Safety Construction Certificate
Civil Responsibility Insurance Certificate
Radio Licence Certificate (date of expiry)

Documents Requested from Tuna Vessels:
General Declaration (obligatory)
Crew List (obligatory)
Cargo List (if available)
Clearance from Last Port (obligatory)
List of Stores/Supplies (if available)
Derat Certificate (obligatory)

Documents Required from National Shrimp Vessels:
Clearance from Last Port of Call
Consular and Vessel Clearance Certificate
Monthly Invoice or Last Invoice for Marine Resources
Clearance Documents from the main Treasury Office

APPROACHES: *Disposal Area:* There is a dumping site approximately 1.5 km. from the port access channel (to the S.W.). The average depth in the dump is 6.1 m. at MLWS (varies from 5.5 m. to 7.0 m.). It is located in position:

1.	Lat. 08° 50′ 04″ N.	Long. 79° 39′ 17″ W.
2.	Lat. 08° 49′ 50″ N.	Long. 79° 38′ 48″ W.
3.	Lat. 08° 49′ 43″ N.	Long. 79° 38′ 51″ W.
4.	Lat. 08° 49′ 57″ N.	Long. 79° 39′ 21″ W.

PILOTAGE: Pilot is compulsory for any vessel greater than 150 g.r.t. that enters or leaves the Port. Pilot can be contacted on VHF Channel 15.

ANCHORAGE: Located in Lat. 08° 50′ 14″ N., Long. 79° 38′ 45″ W. in the area of the Fairway Buoy near Melones Island.

MAX. SIZE: The Port can receive vessels up to 3,000 tons with maximum length of the vessel of 120 m. and with draft of 7 m. Access channel dredged to 6.0 m. in 1992. Average tide variation 3.96 m.

HEALTH: When vessels arrive in port, they are received by a Health Official who comes on board to examine documents. The Quarantine Officials inspect stores and store rooms and these are sealed in the event of any anomaly (foodstuffs in poor condition, meats which originate in countries with outbreaks of aphthous fever, etc.).

In the event of illness on board, this must be communicated to the Ship's Agent, who will transmit the information to the Authorities. The vessel must not be moved until the doctor determines whether or not the illness represents a danger for persons on land.

RADIO: S.S.B. with the following frequencies:
2182.00 – Channel 1   4139.50 – Channel 4
2638.00 – Channel 2   4358.80 – Channel 5
2738.00 – Channel 3   7447.50 – Channel 6

For calling use Channel 1.

VHF: Station has 55 channels. Calling use Channel 15 (156.750 MHz). Station in operation throughout 24 hours.

TUGS: 2 tugs of 700 h.p. each.

BERTHING:

Tuna Fleet Facilities: Pier: Head-length 132 m. Width of pier 12.5 m. 2 inside berths each 60 m. The "T" head pier can accommodate 4 tuna vessels at the same time. Depth at Pier A-3 is 8.4 m., and depth at Pier A-4 is 6.4 m.

Potable water and fuel obtainable at the pier.

Shrimp Fleet Facilities: 2 piers which are able to receive 8 vessels at any one time, depth 4.5 m. Fuel and potable water available.

There are 2 additional piers where vessels are able to undertake repair operations.

Fresh Fish Market: 1 marginal pier which is able to accommodate 8 vessels at one time, depth 4.2 m. – 5.3 m. Adjacent to the pier is a fish cleaning station and 2 cold rooms.

Freight Elevators: 1 freight elevator of 10 tons capacity. 10 freight elevators of 2 tons capacity.

EQUIPMENT: 4 fixed cranes (shrimp quays) × 1.5 tons. 12 × 2 ton fork lift trucks. Cold storage for 3,000 tons of tuna.

STEVEDORES: The National Port Authority does not offer a stevedoring service in the port. In case of need, the Ship's Agent is able to contract one or more private gangs to carry out the work.

MEDICAL: There is a doctor in the port for first aid treatment. There is also an ambulance to transport urgent cases to the nearest medical centre.

FRESH WATER: The NPA offers a service of water supply to vessels requiring it. The port has a water tank with a capacity of 600,000 gallons which meets all the needs of the port.

FUEL: For supplies to vessels, the port has a modern fuel pumping system and two tanks of good capacity.

FIRE PRECAUTIONS: The port has its own corps of fire fighters and a modern fire engine. The aqueduct system for drinking water has numerous hydrants spread throughout the port area.

REPAIRS: Vacamonte has a modern yard for repairs to vessels, including a synchro-lift with 200 tons capacity, and berths for repairing 20 vessels engaged in the national fishing industry, covering an area of 18,000 sq.m. which includes future space for four additional construction berths. There is also a vessel repair workshop with an area of 700 sq.m., and vessel repair offices and shops with an area of 1,000 sq.m.

WATCHMEN: The NPA has a complete security corps working throughout 24 hours and permanently guarding the port entrance.

AIRPORT: Vacamonte is only 25 minutes from Panama City and 25 minutes from there is Tocumen International Airport.

POLICE/AMBULANCE/FIRE: Police 510360; Fire Brigade 51-2550; Ambulance Tel: Port Authority.

SERVICES: In the port is a ship chandler, an electricity system capable of generating 4,687 kVA, Ships' Agents' Offices, Post Office, Defence Force Member, Customs, Ministry of Health, Warehouse (marine hardware, materials, and accessories) and Banks.

SHORE LEAVE: Officials of the Migration Authority grant a provisional card for coming ashore, including leaving the port area.

DEVELOPMENTS: The NPA has 100 hectares of land adjacent to the port for industrial development. Here the industrial area will have plots of land from 2,000 sq.m. upwards for installations. The plots of land will be obtained by concession and those in Industrial Area No. 1 have already been acquired.

AUTHORITY: National Ports Authority, Apartado 8062, Panama 7, Panama. *Tel:* 23-3997, 64-4021. *Telex:* 2765. *FAX:* 69-6992, 69-7432.
Contact: Jerry Salazar, Director General.

Papua New Guinea

GENERAL:

APPLICABLE TO ALL PORTS IN PAPUA NEW GUINEA

(See also details under individual ports) **(See Plan)**

NOTICE: The following Notice to Mariners No. 36/90 issued by the Government of Papua New Guinea is quoted in its entirety:

Overseas vessels are advised to stand clear of the Islands of Bougainville and Buka, and to remain outside Territorial Waters, extending 12 nautical miles from the coast of Bougainville, and immediately adjacent Islands, but excluding Solomon Islands territory, and excluding the groups of Islands or Atolls known as Feni, Green, Nuguria, Carteret, Mortlock and Tasman. Any vessel entering the waters adjacent to Bougainville or Buka will be subject to stop and search powers. This Notice to Mariners is effective immediately (22 May 1990 EST) in respect to overseas shipping. Papua New Guinea coastal vessels will be restricted as of midnight local time 20 May 1990.

Restrictions will continue for an indefinite period.

Charts affected: B.A. 214, B.A. 2766, B.A. 3419, B.A. 3420, B.A. 3830, B.A. 3994, I.N.T. 604 and Aus 4604.

Issuing Authority: Department of Transport, Port Moresby, Papua New Guinea.

DOCUMENTS: International conditions i.e. at the first port of call in Papua New Guinea the following inward Customs documents are required to be handed to Customs within 24 hours of ship's arrival.

3 copies Inward Passenger List.
7 copies Inwards Customs Manifest.
3 copies List of Crew.
3 copies Articles in private possession of officers and crew, Form 5.
3 copies Stores List.
2 copies Immigration Restriction Ordinance List (Form 6) being complete list of passengers disembarking and in transit.

If other than first port of call:

3 copies Inward Passenger List.
7 copies Inwards Customs Manifest.
Outward Customs Clearance from last port of call.

PILOTAGE: *Coastal Pilotage:* Pilotage services through China Strait, Raven Channel, Goschen and Ward Hunt Straits are conducted by pilots of the Queensland Coastal Pilot Service Pty.Ltd. and the Queensland Coast and Torres Strait Pilot Service. See "Australia" – "Torres Strait" for details.

RESTRICTIONS: Night berthing is not recommended, but is subject to weather conditions in Lae, Rabaul and Port Moresby.

HEALTH: (a) Vessels arriving directly from Australia. Pratique is given by radio to vessels which voyage directly from Australia to a Papua New Guinea port, Master of vessel notifies Quarantine Officer at the port of entry to which he is proceeding of ETA, the number of passengers and crew and whether there is any sickness aboard. This notification from Master is sent not longer than 24 hours and not less than 12 hours of ETA. If there is no sickness aboard a reply is sent stating that Pratique is granted, and when a vessel arrives the actual pratique form is delivered to Master of vessel or to Collector of Customs to hand to Master. Full Pratique is given.

(b) Vessels arriving from a Foreign Port. All vessels which arrive from a foreign port must anchor in the designated position and await arrival of a Quarantine Officer who boards the vessel by himself – no other person (except a Pilot) is to be allowed on board vessel until Pratique has been granted. If a Pilot is on board he must remain on board until Pratique is granted.

Cholera: All passengers and crew are required to be inoculated against cholera if the vessel is expected to arrive at a port in the country within 7 days of leaving an area where cholera is either endemic or is present.

Note: The presence on board of a qualified doctor will normally assist in the granting of Pratique.

VHF: VHF services are available at:

Port Moresby	– Channel 16 and 12 Call Sign "Moresby Harbour Control"
Lae	– Channel 16 and 12 Call Sign "Lae Harbour Control"
Rabaul	– Channel 16 and 12 Call Sign "Rabaul Harbour Control"
Kieta	– Channel 16 and 12 Call Sign "Kieta Harbour Control"
Madang	– Channel 16 and 12 Call Sign "Madang Harbour Control"
Anewa Bay	– Channel 6, 12 and 15 Call Sign "Anewa Bay Pilots"
Kimbe	– Channel 16 and 12 Call Sign "Kimbe Harbour Control"
Alotau	– Channel 16 and 12 Call Sign "Alotau Harbour Control"
Vanimo	– Channel 16 and 12 Call Sign "Vanimo Harbour Control"
Wewak	– Channel 16 and 12 Call Sign "Wewak Harbour Control"
Oro Bay	– Channel 16 and 12 Call Sign "Oro Bay Harbour Control"
Kavieng	– Channel 16 and 12 Call Sign "Kavieng Harbour Control"
Daru	– Channel 16 and 12 Call Sign "Daru Harbour Control"
Buka	– Channel 16 and 12 Call Sign "Buka Harbour Control"

Normal working hours are 0800 till 1621 hrs. local time, except for Anewa Bay where hours are 0700 till 2300 hrs. local time.

RADIO: 2 radio stations are available.

(a) Port Moresby Radio – Call sign P2M operating between the hours of 2100 – 1000 hrs. GMT.

(b) Rabaul Radio – Call sign P2R operating 24 hours per day.

These stations are generally used for all contact with agents or Government Departments, etc.

RADAR: No port radar services exist in Papua New Guinea.

TUGS: Berthing. Tugs are available in Port Moresby, Lae and Anewa Bay.

CRANES: There are no wharf mounted cranes in Papua New Guinea, however, mobile cranes are available in most main ports capable of lifting up to 20 tonne containers. Shippers are advised though to check this before shipping and with heavier loads prior advice and approval must be sought from the relevant Port Authority.

BULK CARGO FACILITIES: Except for Anewa Bay (copper concentrate) and the Jant Wharf at Madang (Woodchip), no bulk cargo facilities exist in Papua New Guinea. (Details of the above are given in the appropriate port summaries).

MEDICAL: Medical attention is available in most Papua New Guinea Ports, however as much advance notice as possible should be given by contacting the nearest radio station.

CONSULS: The following Consulate and Commission services are available.

	Tel.
American Consulate General, P.O.Box 3492, Port Moresby.	21-1447
Australian Consulate General, P.O.Box 1180, Lae.	42-3000
Australian High Commission, P.O.Box 9129, Hohola.	25-9333
Austrian Honorary Consul, P.O.Box 850 Port Moresby.	21-2588
British High Commission, P.O.Box 739, Port Moresby.	21-2500
People's Republic of China Embassy, P.O.Box 1351, Boroko	25-9856
French Embassy, P.O.Box 1155, Port Moresby.	25-3740/25-1323
German Honorary Consulate, P.O.Box 1549, Boroko.	25-6311
Indonesian Embassy, P.O.Box 7165, Boroko.	25-3116
Italian Consulate, P.O.Box 276, Lae.	42-3987

DRY DOCK: No dry dock or major repair facilities exist in Papua New Guinea.

GANGWAY/DECK WATCHMEN: Not usually necessary.

HATCHES: Opening/closing usually carried out by crew.

CUSTOMS ALLOWANCES: Entry regulations permit 200 cigarettes or 1lb. of tobacco, and 40 oz. of wines or spirits.

Crew members may hold 200 cigarettes and 1 carton of beer (or 1 bottle of spirits) out of bond per week.

CARGO GEAR: Wharf equipment supplied by stevedores, load/discharge by ship's gear.

REPATRIATION: Possible, frequent scheduled air services to Australia, Hong Kong, Manila, Singapore and USA via Guam.

TIME: Local time in all ports is 10 hours ahead of GMT.

HOLIDAYS: The only days on which cargo cannot officially be worked are Good Friday and Christmas Day.

TELEPHONES: Not available at present for ship to shore connection.

SHORE LEAVE: Crew members are allowed ashore.

IDENTIFICATION CARDS: Generally a Seaman's Book is held at the main entrance to the port. Individual passes are not normally required for crew.

BERTH RESERVATIONS: A berth reservation system applies for all overseas vessels at all Papua New Guinea Harbours Board ports.

Samarai does not handle overseas traffic.

AUTHORITY: Papua New Guinea Harbours Board, P.O.Box 671, Stanley Esplanade, Port Moresby, Papua New Guinea. *Tel:* 21 1400 (8 lines) *Telex:* NE 22243 (A/B Harbours). *FAX:* 211546. *Cables:* Harbours, Port Moresby. *Contact:* The Managing Director.

AITAPE: 03.08 S. 142.21 E. **(See Plan)**

(See General section on Papua New Guinea ports).

PILOTAGE: Not compulsory.

Pilot Boarding Place: Lat. 3° 08.25′ S., Long. 142° 23.9′ E.

TUGS: Not available.

RADIO: Communications not available.

BERTHING: Position of wharf, Lat. 03° 08.51′ S., Long. 142° 21.24′ E. Length of berthing head 18.3 m. (60 ft.). Width 6.2 m. (20.3 ft.). Height of deck above LAT 2.5 m. (8.3 ft.). Minimum depth of water at LAT at wharf head 4.3 m. (14 ft.) – subject to seasonal change. Maximum tidal range 1.4 m. (4.6 ft.)

STEVEDORES: *Working Hours:* 0700 – 1200 hrs., 1300 – 1800 hrs.

MEDICAL: Hospital facilities 3 miles from port can attend to minor cases.

FRESH WATER: Not available to ships.

FUEL: Available in 200 litre drums.

CUSTOMS ALLOWANCES: 200 cigarettes or 250 grams tobacco. 1 litre of spirits or 1 litre of wine or 6 beers (total 4.5 litres) for each 7 days. Aitape is not a port of entry.

AIRPORT: Distance 1 mile, daily flights to Wewak and Vanimo.

GENERAL: *Chart:* AUS 652

AUTHORITY: Papua New Guinea Harbours Board, P.O.Box 3, Aitape, Sandaun Province, Papua New Guinea. *Tel:* 872044, 872052 (after hours). *Cables:* Portman, Aitape. *FAX:* 872125. *Contact:* Robert Parer, General Manager, W. & R. Parer Pty. Ltd., Agent for P.N.G. Harbours Board.

ALOTAU: 10.19 S. 150.27 E. (See Plan)

(See General Section on Papua New Guinea Ports)

PORT LIMITS: Seaward Boundary: From a position in Lat. 10° 20′ S., Long. 150° 26′ E. bounded on the West by a straight line due North to the coastline. From the same point bounded on the South by a straight line due East to a position in Lat. 10° 20′ S., Long. 150° 28′ E. thence bounded on the East by a straight line due North to the coastline.

DOCUMENTS:
Customs:
- Crew Declaration.
- Last Port Clearance.
- Inward Ship's Stores List.
- Inward Cargo Manifest.
- Crew Personal Effects List.
- Crew List.
- Passenger List.
- First Aid List.

Health:
- Pratique Request.
- Ports of Call List.
- Declaration of Health of all on board, with details of any sickness and whether all vaccinated.

PILOTAGE: Pilotage is not compulsory. There are no pilots stationed at Alotau but a pilot will attend from Port Moresby given 48 hours notice of the ship's estimated time of arrival.

Pilot boarding ground: Lat. 10°19.2′ S., Long. 150° 26.75′ E.

ETA to be sent not less than 12 hours prior to arrival via Port Moresby Radio (P2M) and to be confirmed not more than 5 hours and not less than 4 hours prior to arrival.

ANCHORAGE: There are no recommended anchorage areas for large vessels in the vicinity of Alotau. There is a safe anchorage in the harbour.
RESTRICTIONS: There are no restrictions.
MAX. SIZE: LOA about 130 m., with max. draft 20 ft.
HEALTH: Quarantine Officer Tel: 61 1049. Health Officer Tel: 61 1164.
RADIO: None.
VHF: "Alotau Harbour Control" on Channels 16, 12 and 8 during working hours and when vessels are expected during non-working hours.
RADAR: Not available.
TUGS: Not available.
BERTHING: Overseas Wharf is 93 m. long and 18.0 m wide, height of deck above L.A.T. 2.4 m., minimum depth of water at face at L.A.T. 10.0 m.

Vessels may berth either port or starboard side to at the discretion of the Port Authority.

Coastal Wharf: Length 55.8 m. (183 ft.) Width 9.8 m. Minimum depth of water 4.9 m. (16 ft.). Height of deck above L.A.T. 2.1 m.

Barge Ramp available.

Load/discharge is by ship's own gear (except under special arrangement).

CRANES: Vessels are required to use their own gear, as no cranes available on the Overseas and Coastal Wharves.
BULK CARGO FACILITIES: Only at Overseas Berth, where copra in bags is handled, these are cut open onboard vessels using ship's gear.
SPECIALISED CARGO HANDLING FACILITIES: Overseas Berth handles containers and could handle Ro/Ro Traffic.
BRIDGES: None.
STEVEDORES: 72 hours notice preferred, but a minimum of 24 hours required.
MEDICAL: At least 48 hours notice required by Agent to arrange for medical attention at the General Hospital. Dental facilities also available at the General Hospital.
TANKERS: Facilities for tankers at Coastal Wharf with draft of 14 ft. maximum.
DENSITY: 1010.
FRESH WATER: Available in limited quantities and restricted during periods of the year. Prior application to be made to the Port Manager.
FUEL: Available by road tanker. Supplier: B.P. Also through pipeline. Arrangements through Reno Pty. Ltd. Tel. 61-1159.
FIRE PRECAUTIONS: None, other than the usual non-smoking precautions, etc.
CONSULS: None.
REPAIRS: No facilities available.
DRY DOCKS: No dry docks available at Alotau.
SURVEYORS: Not available in Alotau.
GANGWAY/DECK WATCHMEN: Usually ship's crew/ ship's gangway.
HATCHES: Opening/closing of hatches by ship's crew preferred.
CUSTOMS ALLOWANCES: 200 cigarettes, 1 litre spirit or wine for 7 days. Tobacco should be equivalent to 200 cigarettes for 7 days.
CARGO GEAR: Load/discharge effected by ship's gear.
REPATRIATION: No facilities exist at Alotau for effecting crew changes or necessary repatriation.
AIRPORT: Gurney Airport approximately 20 km. away from Alotau town is served regularly but not daily.
TIME: GMT plus 10 hours.
HOLIDAYS: Christmas/Boxing Day, New Year's Day, Good Friday, Queen's Birthday, Independence Day. Cargo work can be arranged on these days except on Christmas Day.
POLICE/AMBULANCE/FIRE: Police: 61 1222. Hospital (No separate ambulance): 61 1308 and Fire: 61 1055.
EMERGENCY CO-ORDINATION CENTRE: Not available.
SERVICES: None available.
BANKS: Westpac Bank, P.O.Box 135, Alotau. Tel: 61 1003.

PNG Banking Corporation, P.O.Box 260, Alotau. Tel: 61 1197.

STORING: No facilities available.
SHIP SUPPLY SERVICE: Not available.
SHORE LEAVE: No restrictions.
IDENTIFICATION CARDS: Not required.
REGULATIONS: Berthing Applications and Indemnity to be submitted to the Port Authority 48 hours prior to berthing of vessel.
DELAYS: Delays at Alotau are most unlikely.
GENERAL: *Storage:* Covered Storage Area for Overseas Cargo – 1,874 sq.m. Open Storage Area – 7,640 sq.m.
Chart: AUS 629.
DEVELOPMENTS; Proposed Palm Oil mill to the North of Overseas Berth, no fixed dates set for commencement or completion.
AUTHORITY: Papua New Guinea Harbours Board, P.O.Box 42, Alotau, Papua New Guinea. *Tel:* 61 1276. *Telex:* NE 22243. *Cables:* Portman Harbours, Alotau. *Contact:* Port Manager.

ANEWA BAY: 06.11 S. 155.33 E. (See Plan)

PORT AND MINE CLOSED LATE 1989 AND NOT LIKELY TO OPEN AGAIN IN NEAR FUTURE.

(See General Section on Papua New Guinea Ports).

PORT LIMITS: Seaward Boundary – a line joining the Southern end of Takanupe Island and Karikiberia Shoal.
DOCUMENTS: Crew List – 4 copies; Ship's Store's List – 2 copies (P.N.G. forms); Crew Declaration Form – 2 copies of P.N.G. Form 5; Vaccination Certificates of all crew members for sighting; International Declaration of Health.
PILOTAGE: Compulsory. Boarding station 06° 07′ S., 155° 35.3′ E., from a tug 'Masthead' or a launch 'Kuruki', normally between the hours of 0600 and 2200, or in certain circumstances, as per arrangement. ETA advices 72, 48 and 24 hours in advance via Rabaul Radio or Port Moresby Radio to Boucop Loloho NE95812; when in close vicinity, VHF Channel 12.
ANCHORAGE: Available at Port Authorities advice, but safe anchorage exists 1 mile N.E. of Dakome Pt. in 30 fathoms of water.
APPROACHES: 3 km. wide channel runs in a Southerly direction between Kuruki Reef and Banaru Reef, to between Takanupei Island and Karikiberia Shoal. The depth of this channel is in excess of 180 m. After crossing the 180 m. line, depths exceed 35 m. until adjacent to the wharf. The only hazard near the approach is Bara Shoal, 1.6 km. Southward of Takanupei Island.
MAX. SIZE: Maximum draft permitted alongside is 12 m. (40 ft). The longest vessel yet to have berthed measured 270 m. (partly loaded tanker). It is envisaged that vessel to load copper concentrate should ensure that, on berthing, hatch coamings are not more than 11.5 m. (38 ft.) above water line, to enable ship loader to be positioned on board.
HEALTH: Vaccination Certificates required. Quarantine Officer boards either with Pilot or at the berth. When anchoring, Free Pratique will be granted then. Code of signals 'Q' flag should be exhibited on arrival off Port. Pratique is automatic for vessels arriving from other P.N.G. ports, New Zealand and Australia. In certain circumstances Radio Pratique may be granted (check with local Agent).
RADIO: ETAs are best routed through either Rabaul Radio, Port Moresby Radio or Sydney Radio, who in turn will relay to Pilots and Agents.
VHF: The Port Control operates Channels 6, 12 and 16, but normally, messages between Vessels, Pilots, Port Control, Tug and Lines Boat are relayed on Channel 12. Therefore a vessel should use this channel when approaching. VHF services are available between 0700 hrs. and 2300 hrs. daily.
TUGS: 'Masthead' – 28 tons bollard pull – 1600 b.h.p., equipped with hydraulic warping winch and fire fighting equipment. Pilot may join incoming vessels from tug. It is common to use the tug's lines. Charges, etc. on application.
BERTHING: Wharf (Position Lat. 06° 11.1′ S., Long. 155° 32.7′ E.) is 77 m. long with mooring dolphins located 59 m. and 107 m. Eastward and 59 m. Westward of main wharf. Maximum draft is 12 m. This berth is used for all vessels and normally starboard side alongside. Loading/discharge of general cargo, containers, etc., by ship's own gear.
CRANES: 127 tonnes mobile crane can be made available if required.
BULK CARGO FACILITIES: Bulk loading gantry for copper concentrate situated just Eastward of the main berth. Nett loading rate approximately 800 – 1,200 tonnes/p.h. Please note that gantry is a fixture and vessels are required to shift to facilitate loading.
SPECIALISED CARGO HANDLING FACILITIES: 2 × 25 ton forklifts available for handling of containers. Berth has proved suitable for certain Roll-on/Roll-off traffic. Westward of berth are provisions for discharge of white oils, black oil, and M.I.B.C. Small L.P.G. carriers anchor in position Lat. 06° 11.4′ S., Long. 155° 32.7′ E., and by way of hoses connected up to shore facilities.
STEVEDORES: The Port Authority (Bougainville Copper Limited) operates its own stevedoring function. Working Hours: from 0700 – 1500 and 1500 – 2300 hrs., 7 days a week. ETA advices as per "Pilots".
MEDICAL: Hospital facilities and medical clinic exist.
TANKERS: Heavy oils: 2×30 cm. marine connections to a 56 cm. main discharge line, giving a maximum discharge rate of 4,000 tonnes/p.h.

Light oils: 1×25 cm. marine connection to a 20 cm. discharge line giving a maximum discharge rate of 700 tonnes/p.h.

FRESH WATER: Available, but limited at times.
FUEL: Only small quantities of gas oil by road tanker.
CONSULS: None.
REPAIRS: Not available.
CUSTOMS: As per P.N.G. Regulations.
AIRPORT: Aropa Airport, 34 km. distant. Regular services to other P.N.G. centres, connecting to overseas centres.
TIME: GMT plus 10 hours.
HOLIDAYS: *Local Holidays:* As for Papua New Guinea. Port is normally closed Christmas Day and Good Friday.
POLICE/AMBULANCE/FIRE: Initially B.C.L. controlled within Port area, otherwise 95 1222 (Police), 951333 (Fire), 951666 (Ambulance).
DELAYS: Estimated and advised as per weekly shipping schedule.
GENERAL: *Chart:* Aus. 683.
Provisions: Small quantities generally available through local Agents.

SHIPMASTER'S REPORT: 1975 (updated 1988).

Documents:

Crew List. (2 Copies of Papua & New Guinea forms to be filled in on arrival at pilot station).

Ship's Stores List. (2 copies of P.N.G. forms to be filled in on arrival at pilot station).

Crew Declaration Form: – (2 copies of P.N.G. Form 5 – Articles in Private Possession of Officers & Crew to be filled in on arrival at pilot station).

Vaccination Certificates of all crew members for sighting.

International Declaration of Health.

Pilotage: Two Pilots, employees of the Bougainville Copper Company Ltd., are available 24 hours a day. Pilot boards in position Lat. 06° 07′ S., Long. 155° 35′ 18″ E. Pilot vessel is a tug called the "Masthead", which has a dark blue hull and white superstructure or launch "Kuruki". Pilots listen on VHF Channels 12 and 16. ETA's will have been passed to the Pilots by the ship's Agents, as per charter party, but pilot boat should be advised by VHF when vessel is 2 hours and 1 hour respectively from pilot station. Channel 12 is monitored by Pilots daily 0700–2300 hrs. and when vessels are expected. Pilotage is compulsory.

Max. Size: Restriction mainly on draft. Least water on berth is 40 ft. Although the problem has not as yet arisen, max. length is also restricted to about 885 ft.

Pratique: Immigration Officer boards as vessel berths. International Code of Signals "Q" flag should be exhibited on arrival off port. Same officer deals with customs clearance.

Radio: ETA's to Pilots are best routed through Rabaul Radio, call sign P2R, who will pass the message direct to the Pilot Office. Port Moresby Radio may also be used for messages to the ship's Agents.

Tugs: Only one tug, the "Masthead", 28 tonnes bollard pull, is available, Tug's line always used.

Berthing: Only one berth in the port, with a least depth of 40 ft. alongside. The berth is used for the loading of copper concentrates and the discharge of general cargo and containers. Vessels intending to load copper concentrates should ensure that their hatch coamings are not more than 38 ft. above the water line on arrival, to enable the loader to be positioned over her holds. In some cases ballast hatches may have to be left filled until after loading has commenced. The berth is approached at an angle of 45° and a mooring boat will take one head rope ashore first. The back spring should be sent ashore by heaving line as soon as possible. All vessels berth starboard side to the quay. The berth itself is 250 ft. long. Dolphins stand 175 ft. Westward and 135 ft. and 310 ft. Eastward of the ends of the wharf. The ore loader is not a movable fixture, and vessels are required to shift up and down the wharf to facilitate loading concentrates at the requisite hatches. When leaving the wharf the vessel is sprung off, using one head rope and the backspring.

Stevedores: Normal cargo hours for vessels loading are 0600 – 2300 hrs. but in cases where required cargo will be worked 24 hours a day. Stevedores are employees of the Bougainville Copper Company. Approx. loading rate for concentrates 750/1,000 t.p.h. Stevedores will render all possible assistance in shifting ship. For vessels discharging, mobile cranes capable of lifting up to 127 tonnes are available. Shore gangway is normally used.

Medical: There are good hospital facilities in nearby Arawa. Advanced notice of required medical attention not normally necessary.

Tankers: Tankers are also discharged at Anewa Bay's only wharf. As with other vessels, draft is restricted to 40 ft., and length to about 885 ft.

Density: Varies between 1022 and 1025 according to season and amount of rainfall recently experienced.

Fresh Water: Available on the wharf except during periods of drought. Supplied by 3 in. hose at approximately 60 t.p.h. Can only be supplied at main wharf (not at Dolphins) and it is therefore sometimes necessary when loading concentrates to wait until after hatches are being loaded before hose can be put aboard.

Fuel: Only small quantities of MDO (Gas Oil) by road tanker.

Repairs: No facilities.

Dry Docks: None close by.

Surveyors: None.

Hatches: Steel hatch covers to be opened and closed by crew.

Customs Allowances: 200 cigarettes and 1 bottle spirits or 12 bottles of beer (4.5 litres) per person.

Repatriation: Regular flights from Kieta Airport (34 km. distant) to Port Moresby, where possible to link up with international flights. Repatriation can therefore easily be arranged from this port. Also possible via Honiara.

Time: GMT plus 10 hours.

Shore Leave: All crew members are allowed ashore. No shore passes required.

Delays: No delays normally experienced, but possible up to 24 hours max.

General: Berth very exposed to S.E'ly winds. Moderate ground swell experienced on berth at times. Considerable rain experienced throughout the year, mainly during the night and early morning.

AUTHORITY: Bougainville Copper Limited, P.O.Box 155, Arawa, N.S.P., Papua New Guinea. *Tel:* 972100. *Telex:* NE95812. *FAX:* 972180. *Cables:* Boucop, Loloho. *Contact:* Captain H. KAVIENG: 02.35 S. 150.48 E. (See Plan)

(See General Section on Papua New Guinea Ports)

PORT LIMITS: Seaward Boundary.

Large vessels should approach from the Nusa Channel where the port limits are as follows:

From the beacon on Cape Siwusat by a straight line 220° (T) to the extreme North point of Usien Island thence by a straight line due West to position in Lat. 2° 37.87′ S., Long. 150° 44.57′ E., thence by a straight line due North to the Western extremity of Edmago Island. From the Eastern extremity of Edmago Island the line of the port limit crosses the Eickstedt Passage in the direction 253° (T) to the Southern extremity of Nago Island.

PILOTAGE: Pilotage is not compulsory but a Pilot will attend from Rabaul given 48 hours notice of the ship's estimated time of arrival.

Pilot Boarding Ground: Within 300 m. radius of a position with Eastern extremity of Edmago Island bearing due North 900 m.

ETA to be sent not less than 12 hours prior to arrival via Rabaul Radio (P2R) and to be confirmed not more than 5 hours and not less than 4 hours prior to arrival again via Rabaul Radio (P2R).

ANCHORAGE: Anchorage may be obtained in sand with depth 20 m. in a position East Reef Light structure bearing 042° (T) distant 890 m.

HEALTH: Quarantine Officer Tel: 942243. Health Officer Tel: 942179.

VHF: Call Kavieng Port Control on Channels 16, 12 and 6. Listening watch maintained during working hours and when ships are expected during non-working hours.

TUGS: Not available.

BERTHING: Overseas Wharf is 93.8 m. long, height of deck above LAT 2.7 m., minimum depth of water at face at LAT 7.0 m. Tidal range 1.2 m.

Vessels may berth port or starboard side to at the discretion of the Port Authority.

Load/discharge is by ship's own gear.

STEVEDORES: 72 hours notice preferred, but a minimum of 24 hours required. Working hours: Day shift: 0800 – 1200 hrs., 1300 – 2000 hrs. and 2100 – 2400 hrs. Gang shift: 0800 – 1200 hrs. and 1300 – 1600 hrs. (day shift), 1600 – 2000 hrs. and 2100 – 2400 hrs. (evening shift).

Licensed Stevedores: Buntings Stevedores. Tel: 942125. Telex: 91905. Fax: 942041.

MEDICAL: Kavieng Hospital – Tel: 942040.

Advise agents at least 24 hours in advance if medical attention is required.

Dental facilities available.

FRESH WATER: Available in limited quantities, provided prior application made with the Port Manager.

FUEL: Diesel available through pipelines at the wharf. Suppliers: Shell, Mobil and B.P.

REPAIRS: No facilities available.

CUSTOMS: Port of Entry. Office, Tel: 942163. Residence, Tel: 942130.

AIRPORT: Kavieng Airport is some 2.8 km. from the wharf and is served by Air Nugini and Talair.

POLICE/AMBULANCE/FIRE: Police: 942222. Ambulance: 942040. Fire: 942000.

BANKS: Papua New Guinea Banking Corporation, Kavieng. Tel: 942084.

Westpac Bank, Kavieng. Tel: 942180.

Banks are 1.25 km. from the wharf.

GARBAGE DISPOSAL: The port authority does not provide this service, but can provide garbage cans on request.

WASTE OIL DISPOSAL: Not available.

SEAMAN'S CLUBS: None.

CURRENCY: Papua New Guinea Kina (K).

DELAYS: Delays at Kavieng are most unlikely.

GENERAL: *Storage:* Covered Storage Area: 750 sq.m. Open Storage Area: 3,000 sq.m.

Chart: Aus. 667.

DEVELOPMENTS: A new wharf has been proposed on which the feasibility studies are being carried out. (See "Plan").

KIETA: 06.13 S. 155.38 E. **(See Plan)**

(See General Section on Papua New Guinea Ports).

PORT LIMITS: Seaward Boundary

By a straight line bearing 328° (T) from a point in Lat. 6° 10′ S., Long. 155° 42.3′ E., on the seaward edge of Gero Reef to a point in Lat. 6° 07.1′ S., Long. 155° 40.4′ E., thence due West to a point at the Northern most extremity of Banaru Reef.

PILOTAGE: Compulsory – Pilot service available 24 hours. (Pilot, Tel: 956049 (office), 956308 (residence).

Pilot boarding ground: Within 400 m. radius of Lat. 6° 07.6′ S., Long. 155° 40.3′ E.

ETA pilot boarding ground not less than 12 hours prior to arrival via Port Moresby Radio (P2M) or Rabaul Radio (P2R). Confirm or amend ETA not more than 5 hours but not less than 4 hours prior to arrival again via Port Moresby or Rabaul.

ANCHORAGE: There are 2 recommended anchorages for large vessels in Kieta Harbour.

HEALTH: Quarantine Officer, Tel: 956073. Health Officer, Tel: 921266.

VHF: Call: Kieta Port Control on VHF Channels 16, 12, 8 and 6. Listening watch maintained during working hours and when ships are expected during non-working hours.

TUGS: Tug "Boroko" 1,200 b.h.p. and 450 b.h.p. Tugs available for hire from Bougainville Copper Pty. Ltd., at Anewa Bay.

BERTHING: Overseas Wharf 122 m. long, height of deck above LAT 3.0 m., minimum depth of water at face at LAT 8.5 m. Tidal range 1.7 m.

Vessels may berth either port or starboard side to at the discretion of the Port Authority.

Berth No. 2 (coastal): Length 58 m., depth at LAT 4.8 m.

Berth No. 3 (coastal): Length 58 m., depth at LAT 4.8 m.

STEVEDORES: 72 hours notice preferred, but a minimum of 24 hours required. Working hours: Day shift 0800 – 1200 hrs., 1300 – 1600 hrs. Evening shift 1600 – 1900 hrs., 2000 – 2400 hrs.

Licensed Stevedores: North Solomons Stevedoring Co., P.O.Box 37, Kieta. Tel: 956350.

TANKERS: Discharge carried out at Anewa Bay.

FRESH WATER: Not available to overseas vessels. Coastal vessels may be supplied depending on availability and following prior arrangement with Port Manager.

FUEL: Diesel available from road tankers. Suppliers: Shell and Mobil.

CUSTOMS: Port of Entry. Collector of Customs, Tel: 956067.

AIRPORT: Aropa Airport is some 19 km. from the port and is served daily by Air Nuigini.

POLICE/AMBULANCE/FIRE: Police Tel: 956222. Ambulance Tel: 951266. Fire Tel: 951333.

DELAYS: Delays rarely occur at Kieta but if so are of fairly short duration, rarely exceeding 48 hours.

GENERAL: *Storage:* Covered Storage: 2,780 sq.m. Open Storage: 14,720 sq.m.

Chart: Aus. 683.

AUTHORITY: Papua New Guinea Harbours Board, P.O.Box 149, Kieta, North Solomons Province, Papua New Guinea. *Tel:* 956066, 956063, 956447. *Telex:* Harbours NE 95905. *Cables:* Portman, Kieta. *Contact:* Karo Karo Ilo, Regional Port Manager.

KIMBE: 05.33 S. 150.09 E. **(See Plan)**

(See General Section on Papua New Guinea Ports)

PORT LIMITS: *Seaward Boundary:* Commencing at a point Latitude 5° 30′ S., Longitude 150° 6′ 24″ E., thence in direction 079° to Grabo Reef light beacon, thence in a direction 100.5° to a point in Latitude 5° 30′ S., Longitude 150° 20′ E., then following the meridian to the point 10 miles East then following the meridian to the point 10 miles perpendicular distant landward.

PILOTAGE: Pilotage is compulsory with 4 hours' notice of ETA and 6 hours' notice of ETD and amend at least 2 hours before both for Kimbe and Buluma – SBLC log port some 11 nautical miles East of Kimbe port.

Pilot boarding ground: Lat. 5° 30.5′ S., Long. 150° 13.5′ E.

ANCHORAGE: There are no recommended anchorage areas for large overseas vessels outside the compulsory pilotage area.

HEALTH: Health Officer, Tel: 935142. Quarantine Officer, Tel: 935002.

VHF: Call Kimbe Port Control on VHF Channels 16, 12 and 6. Listening watch maintained during working hours and when ships are expected during non-working hours depending on advance notice given by the respective shipping agents.

TUGS: Not available.

BERTHING: Overseas Wharf is 116 m. long, height of deck above LAT 3.1 m., min. depth of water at outer face at LAT 15.0 m. Tidal range 1.2 m.

Vessels may berth either port or starboard side to at the discretion of the resident Pilot depending on the wind or current.

Load/Discharge is by ship's own gear.

STEVEDORES: 72 hours notice preferred, but a minimum of 24 hours required. Working Hours: 0800 – 1200 hrs., 1300 – 1800 hrs., 1900 – 2400 hrs. (If handling large quantity of bulk cargo stevedores may by request in writing to the Port Manager grant permission to work around the clock to complete).

Licensed Stevedores: I. S. O'Hanlon, P.O.Box 27, Kimbe. Tel: 935107.

Meto Investments, P.O.Box 108, Kimbe. Tel: 935399, 935369.

FRESH WATER: Available.

FUEL: Diesel is available by road tanker. Suppliers: Shell and B.P.

CUSTOMS: Port of Entry. Collector of Customs, Tel: 935056.

AIRPORT: Hoskins Airport is approx. 50 km. distant and is served by Air Nuigini and Talair several times a week.

POLICE/AMBULANCE/FIRE: Police: 935022. Ambulance: 935142. Fire: 935411.

GENERAL: The town shopping centre and banking facilities are 0.5 km. from the port.

Storage: Covered Storage: 1,490 sq.m.

Open Storage: 12,025 sq.m.

Chart: Aus. 674.

DEVELOPMENTS: A new port at Bialla is in use to cater for large oil tankers to load palm oil. Bialla is some 100 km. by road East of Kimbe.

AUTHORITY: Papua New Guinea Harbours Board, P.O.Box 65, Kimbe, Papua New Guinea. *Tel:* 935134, 935355. *Telex:* NE 93144. *Cables:* Portman, Kimbe. *FAX:* 935609. *Contact:* K.Kent Tausi, Port Manager.

KUMUL MARINE TERMINAL (Kutubu): 08.06 S. 144.34 E. **(See Plan)**

LOCATION: The Kumul Marine Terminal consists of one single point mooring berth and one operations platform.

The location of the berth is off the South coast of Papua New Guinea (Gulf of Papua) in position Lat. 08° 06′ 00″ S., Long. 144° 33′ 49″ E.

The area within a radius of 1 nautical mile from the buoy must not be entered without a Chevron Niugini Pty.Limited Mooring Master on board.

Kumul Marine Terminal is the export crude facility of the Kutubu joint venture. Chevron Niugini Pty. Limited is the operator of the project on behalf of the joint venture participants.

Crude oil from various onshore fields is transferred to export tankers berthed on the export SPM (Single Point Mooring).

DOCUMENTS: See "Shipmaster's Report".

PILOTAGE: The Mooring Master boarding area for the terminal is 1.5 nautical miles South of the SPM.

Use of a Mooring Master is compulsory. Masters of tankers are reminded to comply with statutory rules and are requested to comply with the following:

The officer responsible for the embarkation or disembarkation of the Mooring Master is to be a watch-keeping officer.

The access ladder is properly secured.

The access ladder and immediate areas are adequately illuminated at night.

Means are to be provided to enable the Mooring Master to pass safely and conveniently from the head of the ladder into the ship and onto the ship's deck. Portable stanchions, if used, should be independently secured to the rail or deck, one on each side of the ladder.

The ladder is in good condition and its treads remain horizontal throughout the embarking or disembarking. Tread to have a non-slip surface.

The length of the ladder should not exceed 30 ft. Whenever the distance from sea level to the point of access is more than 30 ft., a combination accommodation ladder/pilot ladder or other equally safe and convenient means for embarking or disembarking the Mooring Master is to be used.

The pilot ladder will be rigged in such a manner that each step rests firmly on the ship's side.

Spreaders are to be positioned at intervals of no more than 10 ft. apart.

Also see "Australia" – "Torres Strait".

NAVIGATION AIDS: *SPM:* The SPM berth is fitted with a yellow light flashing every 15 seconds. Range 5 nautical miles, characteristic 'U' and a foghorn with a range of 2 nautical miles, characteristic 'U'.

Operations Platform: This is a conspicuous steel structure 31 m. high in position Lat. 08° 03′ 47″ S., Long. 144° 33′ 35″ E.

The platform is in a water depth of 20 m. and 2.0 nautical miles N.W. of the SPM, and provides the crude flow control facilities for the SPM berth. A helideck is located on this structure.

The platform is fitted with white lights flashing 'U' every 30 seconds, visible at a distance of 10 nautical miles and a foghorn, characteristic 'U', range 2 nautical miles. There is also a Racon fitted.

ANCHORAGES: The recommended area is South of the SPM and is centred on a position Lat. 08° 08′ 00″ S., Long. 144° 33′ 49″ E.

Anchorage within the terminal limits (within 1 nautical mile radius of the SPM) is strictly prohibited.

APPROACHES: *Approach to the Anchorage/Mooring Master Boarding Area:* When within VHF communication range, Masters of export tankers should ascertain berthing prospects from the terminal.

Tankers in ballast should approach the terminal from the South.

Should it be necessary to anchor, then the tanker should proceed to the recommended tanker anchorage area, which is approximately 3.5 nautical miles South of the platform (See "Anchorages").

Tanker Masters are reminded, that when passing through the Torres Strait, local pilots are compulsory.

Arrival at Anchorage/Boarding Area: A safe means of access to the tanker should be provided in accordance with the requirements of SOLAS, and early advice will be given by the Chevron Mooring Master, indicating the side of the vessel, that access should be provided.

During night operations, the access area shall be adequately illuminated to allow the safe approach and boarding of the Chevron Mooring Masters and Government officials.

The conditions of entry into and use of the Kumul Marine Terminal form will be presented to the Master of the tanker, and shall be signed prior to commencement of berthing operations.

The Notice of Readiness will only be accepted provided the Chevron Mooring Master is satisfied that the tanker is in all respects ready to berth and load.

Notice of Readiness will not be accepted during a period when the terminal is closed due to adverse weather.

The foregoing paragraph notwithstanding, in no event shall a Notice of Readiness, whether previously accepted or not, be valid or binding on the terminal unless the tanker, her tanks and equipment, are in fact in every respect ready to receive cargo.

TERMINAL ACCEPTANCE:

MINIMUM STANDARD OF ACCEPTANCE:

Size: Maximum 150,000 d.w.t. (displacement 186,000 tons).

Maximum distance bow to centre manifold 146.3 m. (480 ft.).

Loading tankers must comply with latest SOLAS and MARPOL conventions and protocols. Tankers found to be seriously deficient and substandard in any safety requirements will be refused to berth and load.

Inert Gas System: All tankers must be equipped with an inert gas system conforming to the SOLAS Regulations (Tanks 8% or less by volume, line supply 5% or less, ref. SOLAS Regulation 62). This must be operable throughout the tanker's operations at Kumul Marine Terminal. Tanks are to be monitored by the tanker crew to ensure the correct atmosphere is maintained. The terminal will check the condition of the tanks on arrival and throughout the operations. In the event of failure of the system or, when the tank atmospheres depart from industry accepted limits, the tanker will be removed from the berth. The Mooring Master will check oxygen content of cargo tanks.

Air Conditioning: Due to the climatic conditions of the area, tankers not fitted with a working air conditioning system, pose a threat to the safety of loading operations. Only in exceptional circumstances, when a tanker has demonstrated its ability to comply with all conditions of the ISGOTT safety check list, will a tanker without air conditioning be accepted for loading.

Crew: Tanker crew must be qualified to the requirements of the International Convention on Standards of Training Certification and Watchkeeping for Seafarers 1978. If any infringement of safety regulations or the inability of the tanker's crew to operate safely and efficiently is noticed, then the tanker will be removed from the berth.

Insurance: The owner of the vessel or bareboat charterer is to be a party to TOVALOP and have insurance covering liabilities under the International Convention of Civil Liabilities for Oil Pollution Damage 1969 (C.L.C.); the cargo to be loaded will be covered by CRISTAL and/or the International Convention on the Establishment of International Fund for Compensation for Oil Pollution Damage 1971 (C.L.C.).

RESTRICTIONS: The Kumul Marine Terminal will operate 24 hours a day, 7 days a week. Tankers will be berthed at any time, day or night, provided conditions are favourable.

MAX. SIZE: The berth is designed to accommodate fully loaded vessels up to 150,000 d.w.t. in a minimum water depth of 25 m. at LWS under normal operational conditions. Maximum draft is restricted to 17.1 m.

RADIO/VHF: Tankers bound for Kumul Marine Terminal are required to advise their ETA to Chevron Niugini Pty.Limited (To be advised on receipt of approval permits from PNG). These messages are to be sent on departure from their last port of call and 72 hours, 48 hours and 24 hours prior to arrival at the Terminal, and should initially contain the following information:

Name of vessel.
ETA in local time (GMT + 10), at the Anchorage Area.
Name of Master.
Estimated arrival draft, fore and aft.
Cargo requirements, and destination of cargo.
Any anticipated delays.
Last port of call.
Confirm that vessel has a clean Bill of Health.
If there is any sickness on board, give all available information as to the possible type of sickness.
Distance in feet from the bow to the tankers' loading manifold.
Confirmation that cargo tanks are inerted to 8% or less by volume and IGS is operational.

A 24 hour watch is maintained on VHF Channel 16 (Channel 74 – working) at the Operations Platform, and tankers should make contact on this channel at a distance of 20 – 40 miles on the seaward side of the platform. VHF channel (to be advised after approval) is used for internal terminal traffic and berthing operations.

Messages should be sent to Chevron Niugini Pty. Limited, P.O.Box 842, Port Moresby, Papua New Guinea. Tel: 211088. Telex: NE 22305. Fax: 675-225588; and to Kumul Marine Terminal. Fax: (675) 596173, Inmarsat 872-155-3233. Telex: 578-155-3232.

TUGS: Support craft available. Also see "Shipmaster's Report".

BERTHING: *Order of Berthing:* Tankers will normally berth in order of arrival with due regard to nominated date ranges.

Mooring Procedure: The Mooring Master will board tankers at either the anchorage area or an agreed location. The Mooring Master will advise the tanker's Master on approach to the SPM, mooring and unmooring, connecting and disconnecting hoses, and all other operations within the terminal area, including all manoeuvring of the tanker. The Master must be on the bridge at all times while the tanker is being manoeuvered.

Support vessels assist in mooring tankers. These are under the direct control and supervision of the Mooring Master. Any service and/or facilities provided by the terminal including, but not limited to, the services of Mooring Master, support vessels or other services and facilities, shall not be construed to be, or give rise to, a personal contract.

Tankers not fitted with OCIMF standard chain stoppers, commensurate with the vessel size, will not be permitted to berth.

The Mooring Master will normally board tankers from the support vessel, which also serves as a tug throughout the loading operation. Immediately after the Mooring Master has boarded, the support vessel will proceed to the port side derrick area of the tanker, where mooring and hose connection equipment will be lifted on board. Sufficient crew must be available on deck to transfer the equipment, as no shore mooring/hose connection gang is supplied.

From time to time, the Mooring Master and Government officials may board by helicopter, in which case the International Guide to Helicopter/Ship Operations should be adhered to.

The following equipment, provided by the tanker, shall be ready for use when the Mooring Master boards:

Forward at forecastle: 1×10 in. circumference 220 m. long mooring rope of polypropylene or other man-made fibre (nylon or any rope which does not float is unacceptable); 1 messenger line of 1 in. diameter × 600 ft. of polypropylene or other man-made fibre.

Aft at stern: 1×10 in. circumference 220 m. long mooring rope of polypropylene or other man-made fibre and one messenger.

At manifold area on port side: A selection of shackles, chain blocks, wire and rope strops and hammers.

During the approach of the tanker towards the SPM berth, the tanker's crew, with the advice of the Mooring Master, will prepare the forecastle for the mooring operation. This will include passing the 1 in. messenger line through the centre bow fairlead, taking the end to the after port corner of the forecastle and, from this point, lowering the end to sea level.

Upon the close approach of the tanker's bow, the support vessel manoeuvres alongside the starboard shoulder, and attaches the mooring pick-up rope to the tanker's messenger line. The tanker will then heave up the messenger and pick-up rope, carefully picking up the slack as the tanker approaches the SPM. The unsecured support vessel will now be stationed at the end of the floating hose string in order to tow the hoses clear of the tanker's approach.

The pick-up rope (10 in. circumference) should be continually hove in as the tanker nears the SPM, until the mooring hawser chafe chain is brought on board. Once the chafe chain is onboard, it will be made fast by closing the chain stopper.

After the connection to the mooring is made, it may be necessary to run the engines astern to ensure the tanker does not contact the SPM. The Mooring Master will then advise the tug to be made fast at the stern of the tanker with a tug's line.

At no time during the tanker's stay at the terminal shall the tanker's engines be immobilised.

Vessels should make every endeavour to arrive with propeller and rudder fully submerged, and trim should not exceed 10% of the aft draft. Masters should note that in the event of arrival with excessive trim or too light in draft, Notice of Readiness will not be accepted, and berthing will be refused.

Unmooring Procedure: Immediately after the loading hose is disconnected and transferred to the custody of the support craft, unmooring of the tanker will commence. The support vessel/tug at the stern of the tanker will be released, but will remain on location to assist if required. On advice from the Mooring Master, the mooring hawser will be hove in by the tanker, the chain stopper will be released and the chafe chain and hawser is then lowered to the sea. In some cases it may be necessary to steam the tanker ahead to relieve the weight on the moorings.

As soon as the moorings are released, the tanker's engines will be ordered astern and the tanker will back away from the SPM. During the move astern, the mooring hawser and pick-up rope will be lowered into the water.

When the tanker is safely clear from the SPM, all terminal mooring equipment will be transferred from the tanker to the support boat.

Any cargo calculations and paperwork will be completed before the tanker sails. When such paperwork is completed, the Mooring Master will disembark, and the tanker is cleared to proceed to sea.

LOADING: Tankers loading at the Kumul Marine Terminal must comply with the latest SOLAS and MARPOL protocols. Tankers which are found to be seriously deficient in any way will be refused permission to berth or load.

Cargo Information: Oil loaded at the Kumul Marine Terminal is Kutubu Light Crude with an average API gravity of 44.2°. The loading temperature will be approximately 80° – 85°F, pour point 36°F, BS&W less than 0.5%, viscosity 2.0 cst at 77°F, minimum vapour pressure 8 p.s.i. at 80°F.

The loading rate will vary from 80,000 bbls. per day up to 205,000 bbls. per day. Average daily rate 150,000 bbls.

1 × 12 in. floating hose string will be connected to the tanker manifold by Camlock coupling.

Hose Connection: Upon completion of the mooring operations, the loading hoses will be connected to the tanker's port side manifold, which must have been prepared to accept 1 × 12 in. 150 ASA flange prior to berthing.

Depending on the freeboard of the tanker, the weight of the hose to be lifted could approach 10 tonnes, and all tankers calling at Kumul Marine Terminal must have a derrick or crane with 15 tonnes S.W.L. (Safe Working Load) capacity.

A support vessel will tow the tanker end of the hose to a position below the manifold area and connect the tanker's cargo runner to the hose pick-up chain. The hose will then be lifted to a position above the main deck so that the hang-off chain can be made fast to the hose bitts in such a way that the hose flange will closely align with the required manifold flange. The hose end will then be lowered to the deck for the blind flange to be removed. The hose flange will be connected to the manifold by a Camlock coupling.

When the hoses are connected, the length between the tanker manifold and rail will remain supported on 2 slings by the tanker's derrick. This is to ensure that there is no undue strain on any part.

Hose connection will be made by the tanker's crew, who must be under the supervision of a responsible deck officer. The Mooring Master will advise on the correct procedures to be adopted.

Manifold reducers to suit the above 12 in. connection should be supplied by the tanker.

Cargo Operations: The Chevron Mooring Master will remain on the tanker throughout the transfer operation, and will co-ordinate all activities on the tanker with the terminal.

When the Officer-in-charge on board the tanker has declared the tanker ready to load, with all necessary valves open, the hose and butterfly valve will be opened, and the Mooring Master will instruct the terminal to commence loading at a slow rate. The loading rate will not be increased until the tanker has confirmed that the hose connections are tight, that cargo is being received in the selected tanks and that no leakage is taking place through the sea valves. Thereafter the loading rate will be increased, on request by the tanker, to the max. rate available.

Throughout the loading, a responsible deck officer shall be in charge of operations on the tanker, either on deck, or in the cargo control-room. In addition, an efficient deck watch in constant contact with the cargo control-room must be maintained at all times. Additionally, one crew man must be stationed on the forecastle at all times to observe and report on the mooring conditions, i.e. the state of moorings and the distance and attitude of the tanker relative to the SPM.

At any time during the loading operations, the rates can be reduced on request. Except in an emergency, 10 minutes notice should be given to the terminal when rate reduction is required. *As is normal tanker practice, valves must not be closed against the oil flow without permission from the terminal.*

If, for any reason, radio communications between tanker and terminal are lost, the terminal will stop the loading until communication is re-established.

In the absence of radio contact, oil flow can also be stopped by the tanker blowing her whistle to attract the attention of tug astern. The tug will then call the terminal to stop loading.

The volume of oil loaded is accurately available at all times from the terminal, and periodic comparisons should be made between tanker and terminal readings.

The question of tanker or terminal responsibility to stop cargo on loading the required quantity will be discussed and agreed before loading commences. Request for the terminal to stop the flow of cargo at a pre-determined volume must be in writing. The request must include a statement by the tanker's Master that the terminal cannot be held responsible to any error, and that in the case of a tanker being overloaded, the excess cargo cannot be pumped back to the terminal. The tanker's Master will also be held responsible for any spills caused by this request.

It is recommended that every tanker should be equipped with a marine VHF set in the cargo control-room.

In order to minimise rolling in the berth, the tanker should endeavour to load only 2 tanks at any one time, thereby keeping free surface effect to a minimum.

Hose Disconnection: On completion of loading, and when the tanker is informed by the terminal that all flow has ceased, the hose end butterfly valves will be closed first, followed by the tanker's manifold valve.

The hose will then be disconnected from the manifold (sufficient drip trays must be available to contain any oil remaining in the spool pieces) and the blind flange will be replaced on the hose. The weight of the hose will be taken on the derrick and pick-up chain to allow the hang-off chain to be disconnected from the hose bitts.

The hose will then be lowered to the water, where a support vessel will be in attendance to remove the cargo hook and tow the hoses clear.

Inspection: Immediately upon completion of loading, the official Bill of Lading quantity will be relayed by radio to the Master via the Mooring Master. In the event of dispute, the tanker will be requested to recheck the measurement and calculations of the quantity. After both ship and shore figures have been verified, should an appreciable difference still exist, receipt of a Letter of Protest will be acknowledged by the Mooring Master.

Notes of Protest, if any, should be handed to he Mooring Master for further delivery to Chevron Niugini Pty. Limited. Please note that the Mooring Master will acknowledge receipt only of the Note of Protest, and is not authorised to accept such letters.

From time to time owners, charterers, consignees or other interested parties may appoint third party oil inspectors to survey the loading operations on their behalf. Any delays caused by oil inspectors shall be considered "tanker delays".

Cargo Documentation and Inspection: Documents such as Bills of Lading, Certificate of Quality, Certificate of Quantity, Certificate of Origin, Cargo Manifest, Harbour Report (Time Sheet), Receipt for Samples, Receipt for Documents, etc., are prepared at Kumul Marine Terminal when the tanker has been loaded. The documents will be completed and taken aboard the tanker for the Master's signature. Signing of these documents by the Master will take place at the same time final departure clearance formalities are being carried out.

Early Departure Procedure (EDP): Provided the tanker's Master is agreeable, an Early Departure Procedure is available, under which the following documents shall be transmitted to the consignee via the tanker's Master:

One copy Master's Request for EDP.

One incomplete non-negotiable copy of the Bill of Lading placed on board for Master's completion from radio shore figures plus one non-negotiable copy for consignee.

Samples and Receipt for Samples, one copy each Master and consignee.

Certificate of Authenticity, one copy each Master and consignee.

Time Sheet (Harbour Report), one copy each Master and consignee.

Master's Receipt for Documents, one copy each Master and consignee.

Certificate of Ullage, one copy each Master and consignee.

Certificate of Tank Inspection, one copy each Master and consignee.

BALLAST: There are no ballast or slop reception facilities at Kumul Marine Terminal, therefore all tankers must arrive with clean ballast suitable for discharging directly into the sea in accordance with the standards set by the International Conventions. Tankers arriving with ballast unsuitable for discharge to the sea will be rejected for loading. Any tanker rejected because of contaminated ballast or sea pollution will automatically invalidate her Notice of Readiness and will lose any priority of loading. Tankers discharging contaminated ballast to the sea will be subject to the anti-pollution laws of Papua New Guinea.

Tankers arriving at Kumul Marine Terminal should have sufficient ballast to ensure safe handling and manoeuvering in the prevailing weather and sea conditions and in accordance with good seamanship practice.

Any tanker unable to maintain 30% deadweight ballast condition during loading will not be accepted at the terminal. Alternatively a tanker may be allowed to load-deballast-load in order to maintain the 30% deadweight requirement. Tankers requiring to deballast prior to loading will be rejected by the terminal.

Shippers are required to reasonably endeavour to utilise tankers with segregated ballast tanks.

MEDICAL: Medical assistance is only available in an extreme emergency.

FRESH WATER: Not available.

FUEL: Not available.

REPAIRS: No facilities available.

REPATRIATION: See "Shore Leave".

SHORE LEAVE: Due to the exposed location of this terminal, Masters are advised that shore leave is not permitted. Masters and Owners are advised that crew changes are only permitted in emergency situations, and when personnel involved hold all necessary valid certificates and documents.

SAFETY: *Safety Check List:* On completion of berthing and prior to the commencement of cargo loading, the Kumul Marine Terminal safety check list will be completed following a joint inspection by the Mooring Master and a responsible tanker officer. The Chevron Niugini Pty.Limited safety check list is based on the recommendations of the "International Safety Guide for Oil Tankers and Terminals" (ISGOTT).

Inert Gas System: Should it be necessary for tanks to be inspected, then it should only be done on a tank-by-tank basis. The system shall be maintained at a pressure of about 200 mm. water gauge, except for the individual tank to be opened which, if possible, is to be isolated from the system and the sighting port opened with care. On completion of inspection, the tank shall be secured and re-pressurised. The next tank is not to be isolated and opened until the preceding tank is secured and open to the I.G. system.

All gauging, sampling, water dips and temperatures will be taken either through special fittings provided; or if it is necessary, to open up tanks for this purpose, then this will be done one tank at a time as described above.

Conditions during Transfer/Deballasting: A responsible, English speaking ship's officer, is required to be on deck or in the control-room at all times. A continuous deck watch is to be maintained to ensure moorings are carefully tended and cargo hoses are under observation at all times.

Towing-off wires shall be made fast to bitts as far forward and aft as possible on the starboard side. The wires shall be in good condition, at least 1.125 in. (28 mm.) diameter, and secured with at least 5 turns or have the eye on the bitts. The outboard eye shall be maintained at a height of between 1.0 m. and 2.0 m. above the water at all times using a small diameter heaving line for this purpose.

WEATHER: The terminal is situated between two opposing seasonal prevailing winds, the N.W. monsoon and the S.E. trades. The N.W. monsoon usually lasts 3 months, from December to March, and the S.E. trades dominate from May to October. The two seasons are separated by brief periods of 4 – 6 weeks, when light variable winds are characteristic, and poor weather conditions are common.

The Kumul Marine Terminal is an open unsheltered mooring. On occasions there may be circumstances which may preclude mooring operations. In these circumstances, good judgement should be used by the tanker's Master, in conjunction with the Mooring Master's advice as to what action to take.

Currents: During N.W. monsoon, set is towards the E.S.E. at up to 1.5 knots and during S.E. trades, set is towards the N.W. at up to 2.0 knots (currents affected by tides and outflow from Aird Delta).

GENERAL: *Flag:* The national flag of Papua New Guinea shall be permanently displayed by tankers while at the terminal.

Charts: Australian Chart No. 378 and B.A. Chart No. 1039.

Stores: Not available.

Accommodation: The Mooring Master will stay on board throughout the loading. The accommodation provided should therefore be commensurate with that of a senior officer.

Agency: Suggested Shipping Agencies:

Century Shipping Agencies, Musgrage Street, P.O.Box 1403, Port Moresby, Papua New Guinea. Tel: 229264. Telex: 22116. Fax: 229201.

Steamships Shipping Agencies, Stanley Esplanade, P.O.Box 634, Port Moresby, Papua New Guinea. Tel: 220370. Telex: 22198. Fax: 211174.

SHIPMASTER'S REPORT: July/August 1992 (Updated 1994).

The Terminal comprises one single point mooring buoy, and one operations platform. Communication is by helicopter from the platform to Kopi Camp, thence by helicopter to Kikori Airport, and from there by light aircraft to Port Moresby, which lies about 180 miles to the Southeast.

Port Limits: None are defined, either on the chart (Aus. 378) or in the Kutubu Marine Terminal Handbook (KMTH).

Documents: Customs and Quarantine Officers, with an Agency representative, will normally board at anchor before berthing, to clear the vessel inward. A tug or support vessel brings them from the Terminal platform out to the anchorage. In our case, bad weather prevented them boarding from the tug, and the following documents and details were subsequently collected by support boat and delivered to the platform:

6 copies List of Crew.
1 copy Crew Declaration of Personal Effects.
1 copy Ship's Stores List.
Clearance from previous port.
Maritime Declaration of Health.
Valid Derat/Exemption Certificate (details).
Vaccination List.
Voyage Memo (List of previous Ports of Call/dates).
Summary of Vessel's Principal Particulars.

Pilotage: No pilot is required for anchoring on arrival. Two Mooring Masters board the vessel from the Terminal platform by tug or supply boat to berth the vessel at the SPM Buoy, and remain on board until the vessel sails. Call the Terminal when within VHF range to confirm ETA, anchoring position and berthing prospects.

Anchorage: Vessels should anchor in the designated anchorage, which is of one mile radius, centred on the position 08° 08′ S., 144° 33.8′ E., just over 2.0 miles South of the SPM. It is a rather small anchorage, but vessels may anchor further East or West of the anchorage limits, provided they remain at least one mile clear of the SPM, but check with the Terminal first. The depth of water in the anchorage and adjacent water varies from 15 to 20 fathoms, but the bottom consists of heavy mud, and is good holding ground.

Restrictions: Vessels are berthed around the clock, day or night, 7 days a week, subject only to weather conditions. The present limiting criteria is wind speeds in excess of 30 – 35 knots, and a swell height greater than 4.0 m. – 4.5 m. at the SPM.

Health: Radio Pratique is available via Agent.

Radio: The vessel's Agents should be instructed to keep the Terminal and Chevron Niugini advised of the vessel's ETA.

VHF: The Terminal platform listens on Channels 16, 72 and 74. During our prolonged stay, the working channel was 74.

Radar: There is no port radar service or V.T.S., nor any necessity for either at this time.

Approaches: B.A. Chart No. 1039, Aus. No. 378.

There is a clear deep water approach from E.S.E. through South to S.S.W. with no navigational hazards. The Terminal platform is equipped with a Racon, which we detected when some 8 – 10 miles to the Southeast.

Tugs: There is one twin-engined 9,600 h.p. tug, said to have a bollard pull of some 94 tonnes, named "Nakari Tide". In addition, there is one support boat in attendance, "Kikori Tide".

Berth: The berth consists of one single point mooring buoy, which can accommodate vessels up to 150,000 tons d.w.t. It is equipped with a single 20 in. hawser of 200 tons S.W.L. and a breaking strain of 500 tons. Maximum draft is 17.1 m. Engines may not be immobilised while the vessel is secured to the SPM. There is one 12 in. hose string only, and the average loading rate is 150,000 barrels per day of Kutubu Light crude oil, averaging 44.0° API gravity, and a loading temperature of 80°F. – 85°F. The prevailing wind is S.E.'ly from May to October, and N.W.'ly from December to March. There is a strong tidal current with a rate of 2 – 3 knots at Springs, which may be markedly affected by the outflow from the Aird River Delta.

Medical: Medical services are not available, except in emergency.

Density: 1025 during the flood, dropping to 1017 in the ebb stream.

Stores/Fresh Water/Fuel: Not available.

Services: There are no repair facilities available at the Terminal. The attendance of Cargo and Class Surveyors can be arranged in advance, normally via Port Moresby.

Customs Allowances: These were not specified. Because of bad weather, the Customs did not attend on board until the day before the vessel's departure, to issue the Outward Clearance, and the Bond was not sealed at that time. During a stay of 24 days, prolonged mainly by bad weather, which prevented berthing, permission was obtained by radio from the Customs Officer on the Terminal platform to make an interim bond issue.

Repatriation: Possible only in exceptional circumstances, and subject to the following tariff:

(1) Helicopter from Terminal platform (or possibly the vessel) to Kopi Camp U.S.$ 1,400.00.
(2) Helicopter from Kopi Camp to Kikori Airport U.S.$ 100.00.
(3) Cessna charter flight from Kikori Airport to Port Moresby International Airport U.S.$ 1,300.00.

Port Moresby connections: To Singapore – twice weekly, To Hong Kong – once a week, To Manila – once a week.

There are also daily Qantas flights to either Brisbane or Cairns.

Emergency Co-Ordination Centre: Contact Kumul Marine Terminal Operations Platform.

Berthing/Unberthing Procedures: The approach to the SPM Buoy begins at a distance of about one mile, after lining up the vessel to stem the predominating tidal stream or weather. One Mooring Master is stationed on the bridge to manoeuvre the vessel into close proximity with the SPM Buoy, and the other is stationed on the fo'c's'le head, and they work together in the approach. When sight of the SPM has been lost from the bridge under the bow, the Mooring Master forward takes the con and conveys engine and helm orders to his colleague on the bridge for the final approach. At this stage, a support boat comes in to the starboard shoulder with a 10 in. buoyant polyprop pick-up line, which is attached to the SPM hawser. The ship's crew lower into the support boat a similar 10 in. polyprop, with a shackle for bending it on to the buoy pick-up line. When the connection is made, both the ship's line and buoy pick-up line are hove up and stowed on a previously cleared winch-spool, while the vessel is brought ever closer to the buoy, until finally the chafing chain of the SPM hawser is brought on board and secured in the bow stopper. Astern engine movements may then prove necessary until the tug is made fast on a centre lead aft. The tug remains fast until the vessel leaves the SPM and is used to keep the vessel from riding up on the buoy, and for changing the vessel's head into the swell as required, in order to prevent rolling in the berth.

During our two periods in the berth, there was a coincidence of a strong steady wind, which generated and sustained a swell up to 3.0 m. – 4.0 m. in height, and a tidal current estimated at 2 – 3 knots. The wind direction stayed S.E.'ly throughout, while the tidal stream flooded and ebbed in roughly N.W.'ly and S.E.'ly directions respectively. The exact direction of the tidal/current stream was undetermined, and as it changed direction between ebb and flood, the vessel regularly settled on a heading, which put the swell on or near the beam. Rolling inevitably followed to an extent which varied with the height and period of the swell, on one occasion reaching 15° either side of the vertical and imposing high snatch loads on the buoy hawser. During the first of the two periods in the berth, a support boat was secured aft, instead of a tug, to keep the vessel clear of the SPM, and haul the stern round as required, to realign the vessel heading into the swell. However, it lacked the power to accomplish this, and when rolling reached 10° – 12°, loading was stopped and the hose disconnected, so that the vessel was ready to leave the berth, if conditions persisted or worsened. We had one stoppage and hose disconnection during the first loading period, and then subsequently had to leave the berth because of the weather and the support boat's inadequacy as a substitute tug. Following repairs, the Terminal tug was available for the second period in the berth and successfully kept the vessel in position. This coincided with much improved weather, and loading was completed without further incident. The Mooring Masters worked a 6 hour watch system. If the vessel started to roll or ride up on the buoy after a change of tide, a man was required on the bridge to pass compass headings to the duty Mooring Master on the bow, and on occasions to run the main engine as necessary, while the stern tug realigned the vessel as directed.

The Mooring Masters specified the following equipment requirements for the berthing operation, which differ slightly from those prescribed in the KMT Handbook, viz:

1. One 10 in. buoyant polyprop rope, with a connecting shackle.
2. One 3 in. nylon messenger, minimum 300 ft. in length. This was not needed, but must be ready in case the pick-up using the ship's rope fails.
3. One crowbar.
4. Grease to lubricate the chafing chain where it passes through the vessel's fairlead.

Except for the crowbar, the same requirements apply aft, for picking up the stern tug's tow line.

The unberthing procedure is straightforward and brief. First, the hose is disconnected and lowered into the water, leaving the hose messenger rope secured on board. The SPM pick-up rope on the winch spool is then hove up to take the weight off the buoy hawser chafing chain, using a kick ahead on the engines, if necessary. After releasing the chain from the bow stopper, the buoy pick-up rope is paid out until the shackle connecting it to the ship's rope comes clear. The buoy pick-up rope is then stoppered off to disconnect the shackle, before finally letting it go. The stern tug is then cast-off, and comes round to pick up the hose messenger line and tow the hose string clear of the vessel and the bow. Engines are then run astern until the vessel is well clear of the SPM.

Hose Connection Procedures: In addition, the Mooring Masters' equipment requirements for this operation are as follows:

1. Crane of 15 tons S.W.L. ready on the portside, topped to position the hook midway between the rail and the manifold, and lined up with the ship's hose connection.
2. Three half ton chain blocks.
3. Three rope and three wire strops.
4. Two large adjustable spanners.
5. One large hammer.
6. Two C-clamps.

Miscellaneous Requirements: For the embarkation of the Mooring Masters, a combination accommodation ladder/pilot ladder is required, about 1.5 m. above the water. A good lee is required, if there is either a strong wind or a heavy swell, or both.

Both Mooring Masters remain on board from the time of boarding the vessel at the anchorage until the vessel sails. Accommodation may also be required for an independent cargo surveyor, but no other representatives or port officials live on board the vessel. The Mooring Masters will monitor cargo operations to ensure that closed loading is maintained, and that the oxygen content of the cargo tanks is less than 8%.

Summary of Vessel's Movements and Delays: The vessel arrived and was anchored in the Kumul Marine Terminal designated anchorage at 1106 hrs. on 13th July 1992. Notice of Readiness to load was tendered at 0001 hrs. on 15th July. The SPM Buoy was occupied by another vessel for periods interrupted by bad weather and the failure of the buoy's main hawser, until the morning of 25th July.

Two Mooring Masters boarded at 0940 hrs. on 25th July, but because of bad weather, an attempt to berth the vessel did not begin until 1526 hrs., and was then abandoned at 1742 hrs., when the SPM hawser was found to be foul.

Conditions for berthing were not judged suitable again until 1000 hrs. on 26th July, when the vessel weighed anchor. She was secured to the SPM Buoy at 1236 hrs., but hose connection was postponed until 1500 hrs., because the vessel was rolling in a beam swell. Loading began at 1518 hrs. and was stopped from 2308 hrs. to 0336 hrs. on 27th July, because the vessel began to roll heavily in the berth, and the support vessel "Pacific Hawk", acting as a stern tug, was unable to turn the vessel out of the beam swell, or keep it clear of the SPM Buoy. Loading was again stopped at 1106 hrs. on 27th July, and the vessel was taken off the buoy at 1135 hrs., because of heavy rolling in the berth, and the ineffectiveness of the stern tug. The vessel was then anchored at 1216 hrs. to await an improvement in the weather.

The weather had improved on 30th July, but no tug was available that day or the next day, when the weather had again deteriorated. On 1st August, the weather was suitable, and the vessel left the anchorage at 0912 hrs. when the 9,600 h.p. tug "Nakari Tide" became available, although with only one of two engines operational. The vessel was secured to the SPM Buoy at 1124 hrs., and loading recommenced at 1300 hrs. The weather remained good throughout the remainder of the loading operation, which was completed at 0600 hrs. on 5th August. The vessel left the berth at 0819 hrs., then lay off until 1133 hrs., awaiting delivery of the cargo documents, and finally sailed at 1212 hrs.

We were the fourth vessel to load at the Terminal since it was commissioned. The prolonged delays were mainly a result of adverse weather, complemented by various operational teething problems and equipment breakdowns or failures.

AUTHORITY: *Operator:* Chevron Niugini Pty.Ltd., P.O.Box 842, Port Moresby, Papua New Guinea. *Tel:* 211088. *Telex:* NE 22308. *FAX:* (675) 225588.

Kumul Marine Terminal: *Tel:* (675) 596171-2. *Telex:* 578-155-3232. *FAX:* (675) 596173. *Contact:* Marine Terminal Superintendent.

LAE: 06.44 S. 146.59 E. (See Plan)

(See General Section on Papua New Guinea Ports)

LOCATION: Port is located at the N.W. end of Huon Gulf, approximately 1 km. East of the Markham river mouth.
PORT LIMITS: West of a line drawn between Voco Point and the N.E. point of Salamaua Peninsular.
DOCUMENTS: Basic Customs documents for entry:

1 copy Cargo Manifest.
1 copy Passenger Manifest.
1 copy Disembarking Passenger Manifest.
1 copy Embarking Passenger Manifest.
1 copy Crew Manifest.
1 copy Stores List.
1 copy Customs Declaration (Ship).
1 copy Customs Declaration (Crew).
1 copy Customs Declaration (Passenger).
1 copy Health Declaration.

Also see "General" before first port.

PILOTAGE: Compulsory. Pilotage service operated by Port Authority (Papua New Guinea Harbours Board). Notice of ETA must be given at least 12 hours in advance. Pilot boarding ground is in position Lat. 6° 44′ 50″ S., Long. 147° 00′ 33″ E. Pilot launch is fitted with VHF radio and operates on Channels 12 and 16.

Coastal Pilotage: Pilotage services through the Great North East Channel to Torres Strait, through China Strait to Rabaul, and through China Strait and Raven Channel to Lae are conducted by pilots of the Queensland Coastal Pilot Service Pty.Ltd. and the Queensland Coast and Torres Strait Pilot Service. See Australia – "Torres Strait" for details.

Pilotage recommendation: The Great North East Channel is covered by a recommendation on pilotage by IMO. See Australia – "Torres Strait" for details.

ANCHORAGE: In a position Lat. 6° 47.83′ S., Long. 146° 58.1′ E. Depth of water 27 m.
RESTRICTIONS: Berthing and sailing are normally restricted to between 0600 hrs. and 2200 hrs.
MAX. SIZE: The largest vessel to use th port and berth was the "Queen Elizabeth 2". Vessels with length overall in excess of 200 m. regularly use the port.
HEALTH: Quarantine Tel: 42 4199. Health Tel: 42 2033.
RADIO/VHF: Arrival information to Agents can best be routed through either Rabaul Radio or Port Moresby Radio. The port is equipped with VHF radio and may be contacted by calling Port Control on Channel 16. Working channel is Channel 12, or is allocated by Port Control. A listening watch is maintained during normal working hours and when ships are expected outside normal hours.
TUGS: One tug of 780 h.p. is available, and the use of a tug is mandatory for all vessels of 75 m. LOA and over when berthing.
BERTHING: A wharf 466 m. in length with a minimum depth alongside of 11.00 m. In addition, 2 coastal wharves of 54 m. and 35 m. in length with depths alongside of 4.90 m. and 2.70 m. respectively. A dedicated liquid bulk facility 100 m. in length, having a wharf face of 33 m. and a minimum depth alongside of 14.10 m., is situated 100 m. to the East of the Main Wharf. This facility is used by tankers and LPG tankers.

There are no facilities specially equipped for handling Ro-Ro traffic.

Storage: Covered storage totalling 14,890 sq.m. and open storage totalling 63,500 sq.m. is available for use.

CRANES: There are no cranes available at any of the wharves, and all vessels using the facilities must be self-sustaining.
STEVEDORES: Stevedoring is carried out by private contractors who are licenced by the Board. Normal working hours are from 0800 hrs. to 1600 hrs., Monday to Friday. However, stevedoring operations can continue outside normal hours by arrangement with the stevedoring contractor concerned. At least 24 hours notice must be given to the stevedoring contractor to arrange labour.
MEDICAL: Maximum possible notice should be given so that full arrangements can be made with regard to hospitalisation, etc. Full hospital facilities are available approximately 2.5 miles from the wharf.
TANKERS: New tanker berth with depth 14.0 m. completed. The berth will accommodate vessels of 40,000 d.w.t.

Discharge and bunkering facilities are available for all ship requirements.

FRESH WATER: Available, rate of 30 t.p.h.
FUEL: Diesel and distillate available by road tanker.
REPAIRS: No repair facilities available.
SURVEYORS: Lloyd's Agent.
CUSTOMS: Port of Entry. Collector of Customs, Tel: 424899.
AIRPORT: Lae Airport at Nadzab is approximately 40 km. distant. Serviced daily by Air Niugini flights.
HOLIDAYS: The port is closed to normal work on Christmas Day and Good Friday. The port is also subject to closure unofficially on New Year's Day, Independence Day and Provincial Days, depending on the willingness, or otherwise if the Waterside Workers and Seamen's Union work on these days.
POLICE/AMBULANCE/FIRE: Police: 422222. Ambulance: 426095. Fire: 424333.

Fire alarms are connected to the Gatehouse which has a direct telephone link to the Police station for emergency purposes.

BANKS: Papua New Guinea Banking Corporation, Coronation Drive, Lae. Tel: 42-2244.

Westpac Bank – PNG Limited, P.O.Box 325, Lae. Tel: 21-1066. Fax: 42-6421.

ANZ Bank, ANZ House, Central Avenue, Lae. Tel: 42-4655. Fax: 42-6135.

Bank of South Pacific Limited, 6th Street, Lae. Tel: 42-1944. Fax: 42-2701.

CURRENCY: Currency unit is Kina. 1 Kina = U.S.$1.0402 (9.3.94).
DELAYS: Lae is the largest and busiest of the country's ports and at times delays for up to 48 hours can be expected.
GENERAL: *Chart:* AUS 574. BA 2054.

SHIPMASTER'S REPORT: 1978 (Updated 1988).
Approaches: No difficulties were encountered either approaching or leaving. There is deep water close to the shore. Muddy water from the outflow of the Markham River is encountered off the port, but is of no navigational significance.
Wharf: Modern, well-fendered and convenient. Currents and tides alongside are irregular and unpredictable, being almost entirely influenced by the discharge from the Markham River. A tanker berth, consisting of concrete dolphins, is under construction close Eastwards of the main wharf and a pile-driving barge is operating. When berthing, some vessels use the off-shore anchor but under normal conditions this appears to be unnecessary and can in fact be something of an embarrassment when leaving. We did not use either anchor or tugs, weather conditions being good. Powered line boats are available and were used. There is a depth of water alongside of about 11 m.
Anchorage: The usual anchorage is as described in Pacific Islands Pilot Vol. 1, 9th Edition and Supplement No. 5 of 1976. We lay quietly to the port anchor in 30 m. of water, with 4.5 shackles in the water, in position with the Northern of the 2 beacons shown on Chart Aus. 385 bearing 268°(T) distant 2.1 miles approximately.

It is not customary to take a Pilot for the anchorage.

Pilotage: Compulsory when berthing and unberthing.
Tugs: There are 3 in the port, privately owned. As most of their income is derived from sources other than berthing and unberthing ships, their availability is uncertain. No doubt a vessel requiring a tug or tugs would be able to make advance arrangements.
Communications: Vessel came from Gladstone, Queensland, and our advices were sent through P2M, Port Moresby Radio, no difficulties being encountered.

Pilots and Harbour Control are available on Channel 16 VHF, when shipping movements are expected.

Documents Required:

5 Passenger Lists.
5 Crew Lists.
7 Inward Customs Manifests.
3 Lists of Crew Effects.
3 Stores Lists.
2 Arms and Ammunition Lists.

We were able to obtain local forms prior to arrival, and experienced no problems. Also see 'Pratique'.

Officials: The Bond and Beer Rooms are sealed on arrival. The Customs stuck rigidly to the rules and confiscated any undeclared goods, particularly alcohol, cigarettes and what they judged to be pornographic literature. No fines were levied nor charges brought.

The Port Authority allocates berths and decides priorities for vessels.

During our stay, and for a considerable period prior to then, the port had been very busy.

Depending upon the nature of her cargo and the rate of discharge, it is possible for a vessel to reserve a berth in advance.

Because such a vessel arrived when we were alongside and neither our cargo nor our rate of discharge brought us into the berth reservation category, we were obliged to go out to anchor until a berth again became available.

Cargo Working: Our cargo for Lae consisted of 1,524 tonnes of bulk wheat in No. 1 hatch and 9 containers, the heaviest of which was 19.76 tonnes, on No. 2 hatch. The containers were discharged in 3 hours 20 minutes by ship's gear, no problems being encountered.

Our grain cargo was discharged in 36 hours, including time taken rigging and unrigging the sucker and adjusting the length of the suction pipe. Thus, an average rate of 42.3 m/t.p.h. was achieved.

Grain is discharged by means of a portable sucker, weighing approximately 3.5 tonnes, placed on the hatch lids, where it stays throughout discharge. From the sucker, the grain is transferred to a hopper ashore and from there to lorries that transport it to the Mill, about 1 km. away. No significant delays on account of a lack of transport were encountered.

Working Hours: The standard working day is from 0800 hrs. to 2400 hrs. On 2 occasions, once successfully, attempts were made by receivers to start work at 0700 hrs.

The vessel being on Voyage Charter, receivers made strenuous efforts to arrange for discharge after midnight, but without success. They are also investigating making grain discharge an all-weather operation. This could easily be achieved by rigging a tent over the sucker and open portion of the hatch, but whether Union and/or Government Rules would permit this is another matter.

Pratique: If coming from Australia or New Zealand, Pratique is not required, nor is a Health Declaration. Nevertheless, Radio Pratique was requested but no reply was received.

Provisions: Available but very expensive. We stocked up prior to departure Gladstone and this proved to be a wise decision.

Fresh Water: Available from the wharf, at a rate of 25 t.p.h. – 30 t.p.h. This is well water and not used by the local residents, who collect the rainwater off their roofs. To be on the safe side it was treated with Chloride of Lime.

Repairs: Only minor repairs can be undertaken. We called in a local firm for some non-urgent burning and welding work, but they were unable to do anything due to a products tanker discharging astern of us. The Chief Engineer reports that appearances suggest that competent work would be done, but that prices would be rather high.

Weather: Was hot and humid, with temperatures ranging from 23.2°C to 28.2°C. During the afternoons a South-Easterly breeze, about Force 2-3 usually came up, dying away in the evenings. Rain showers were prevalent, night and morning.

Health: Local residents confirmed that malaria is present at Lae and the usual precautions were taken on board.

AUTHORITY: Papua New Guinea Harbours Board, P.O.Box 671, Port Moresby, Papua New Guinea. *Tel:* (675) 211400. *FAX:* (675) 211546.

Regional Port Manager, P.O.Box 563, Lae, Papua New Guinea. *Tel:* (675) 42-2477. *FAX:* (675) 42-2543.

LORENGAU: 02.01 S. 147.16 E. (See Plan)

(See General Section on Papua New Guinea Ports)

PORT LIMITS: Seaward Boundary.

From the Eastern extremity of Hauwei Island by a straight line due North for 2,050 m., thence by a straight line due East for 2,920 m., thence by a straight line due South for 2,000 m. to the Old Light House on Ndrilo Island.

PILOTAGE: Pilotage is not compulsory but a Pilot will attend from Madang given 48 hours notice of the ship's intention to call at Lorengau.

Advice from an officer of the PNG Defence Force may be obtained for ships proceeding to Lombrum Naval Base.

Pilot Boarding Ground: Lat. 01° 56.6′ S., Long. 147° 18.3′ E.

ETA to be sent not less than 12 hours prior to arrival via Port Moresby Radio (P2M) or Rabaul Radio (P2R) and to be confirmed at not more than 5 hours and not less than 4 hours prior to arrival. No VHF facility.

ANCHORAGE: Anchorage may be obtained in soft mud in depths of about 30 m. anywhere in Seeadler Harbour but an anchorage in position Bear Point 210° (T) 2,600 m. is recommended.

HEALTH: Contact Port Manager if Quarantine Office or Health Officer required.

TUGS: Not available.

BERTHING: Nabu Wharf is now regarded as a run down wharf as it has been ruled as unsafe for working cargo – break bulk, containers, etc, with the exception of Bulk Fuel products.

Coastal vessels still use the facility for handling of seafarers only.

Salasia Wharf is 40 m. long and 20 m. wide. Height above deck is 1.5 m., minimum depth of water below LAT is 1.4 m. The facility caters for all coastal ships. Overseas vessels rarely utilise the facility.

STEVEDORES: 72 hours notice preferred, but a minimum of 24 hours required.

R. L. & V. J. Knight, P.O.Box 108, Lorengau. Tel: 409159

FRESH WATER: Not available.

FUEL: Diesel available by road tanker at Salasia Wharf. Suppliers: Shell Agencies.

CUSTOMS: Port of Entry. Collector of Customs Tel: 409034.

AIRPORT: Momote Airport is some 45 km. from Lorengau and is served by Air Nuigini but not daily.

POLICE/AMBULANCE/FIRE: Police and Fire: Lorengau 409122. Ambulance: 409055.

DELAYS: Delays at Lorengau are most unlikely.

GENERAL: *Storage:* Covered: None. Open: 1,000 sq.m.

Chart: AUS 662.

DEVELOPMENTS: Salasia Wharf has an open storage area of 1,000 sq.m., and a transit shed with 100 sq.m. storage space.

Future redevelopment of the Salasia Wharf will consist of resheeting of sheet piling and possible sealing of wharf apron.

AUTHORITY: Port Manager, P.O.Box 21, Lorengau, Papua New Guinea. *Tel:* 409078. *Cables:* Portman, Lorengau. *Contact:* R.C.Ruhuwamo, Port Manager.

MADANG: 05.13 S. 145.49 E. (See Plan)

(See General Section on Papua New Guinea Ports)

PORT LIMITS: Seaward Boundary is 2.0 km. East of entrance to Dalman Passage.

DOCUMENTS: Basic Customs documents for entry:

1 copy Cargo Manifest.
1 copy Passenger Manifest.
1 copy Disembarking Passenger Manifest.
1 copy Embarking Passenger Manifest.
1 copy Crew Manifest.
1 copy Stores List.
1 copy Customs Declaration (Ship).
1 copy Customs Declaration (Crew).
1 copy Customs Declaration (Passengers).
1 copy Health Declaration.

Also see "General" before first port.

PILOTAGE: Compulsory. Pilotage service operated by Port Authority (Papua New Guinea Harbours Board). Notice of ETA must be given at least 12 hours in advance. Pilot boarding ground is in position Lat. 5° 13.6′ S., Long. 147° 50.6′ E. Pilot launch is fitted with VHF radio and operates on Channels 12 and 16.

ANCHORAGE: In a position Lat. 5° 12.35′ S., Long. 145° 48.8′ E. Depth of water 43 m.

RESTRICTIONS: Berthing and sailing are normally restricted to between 0600 hrs. and 2200 hrs.

MAX. SIZE: The largest vessel to berth at the port's facilities was the "Statendam" with an LOA 220 m.

HEALTH: Quarantine clearance compulsory on arrival from foreign ports. Routine inspection carried out on arrival from local ports (Plants/Animals).

Quarantine Officer Tel: 82 2193. Health Officer Tel: 82 2224.

RADIO/VHF: Arrival information to Agents can best be routed through either Rabaul Radio or Port Moresby Radio. The port is equipped with VHF and may be contacted by calling Port Control on Channel 16. Working channel is Channel 12, or as allocated by Port Control. A listening watch is maintained during normal working hours and outside normal hours when ships are expected.

TUGS: None available.

BERTHING: Overseas Wharf (Berth No. 1) 137.1 m. long, height of deck above LAT 3.1 m., minimum depth of water at face at LAT 10.1 m. Tidal range 1.2 m.

Berth No. 2 for coastal vessels has a length of 52 m. and depth 5.0 m.

Vessels may berth either port or starboard side to at the discretion of the Port Authority.

Load/discharge is by ship's own gear (except under special arrangement).

A separate facility to serve woodchip vessels and Caltex tankers only is situated within Binnen Harbour West of the main wharf facilities.

STEVEDORES: Stevedoring is carried out by private contractors licensed by the Board. Normal working hours are from 0800 hrs. to 1600 hrs., Monday to Friday. However, stevedoring operations can continue outside normal hours by arrangement with the stevedoring contractor concerned. At least 24 hours notice must be given to stevedoring contractor to arrange labour.

TANKERS: Discharge at main wharf for both Shell and Mobil. Caltex discharge by floating pipeline while moored at the Jant woodchip facility.

FRESH WATER: Limited supply available.

FUEL: Diesel and distillate are available from road tankers. Suppliers: Shell, Mobil and Caltex.

REPAIRS: A coastal slipway at Madang but only minor deck repairs P.O.Box 605, Madang.

AIRPORT: Madang Airport is 6 km. from the port and is served daily by Air Nuigini.

CUSTOMS: Port of Entry. Collector of Customs Tel: 82 2253.

POLICE/AMBULANCE/FIRE: Police: 82 2222. Ambulance: 82 2022. Fire: 82 2777.

HOLIDAYS: The port is closed to normal work on Christmas Day and Good Friday. The port is subject to closure unofficially on New Year's Day, Independence Day and Provincial Days, depending on the willingness, or otherwise if the Waterside Workers and Seaman's Union to work on these days.

BANKS: Papua New Guinea Banking Corporation, P.O.Box 448, Madang. Tel: 82-2477.

Westpac Bank – PNG Limited, Nuna St., Madang. Tel: 82-2479. Fax: 82-2917.

ANZ Bank, Coast Watchers Drive, Madang. Tel: 82-22866. Fax: 82-24408.

CURRENCY: Currency unit is Kina. 1 Kina = U.S.$1.0402 (9.3.94).

DELAYS: Although there is only one overseas berth at the main wharf, Madang delays are not common and are of short duration when they do occur.

DEVELOPMENTS: When traffic justifies expenditure an extension of the overseas wharf Eastward will be undertaken.

GENERAL: *Storage:* Covered Storage: 2,700 sq.m. Open storage: 8,800 sq.m.

Chart: AUS 648.

AUTHORITY: Papua New Guinea Harbours Board, P.O.Box 671, Port Moresby, Papua New Guinea. *Tel:* (675) 211400. *FAX:* (675) 211546.

Regional Port Manager, P.O.Box 273, Madang, Papua New Guinea. *Tel:* (675) 822352. *FAX:* (675) 823097.

ORO BAY: 08.54 S. 148.29 E. (See Plan)

(See General Section on Papua New Guinea Ports)

PORT LIMITS: Seaward Boundary.

From the extreme North point of the mainland on the South side of the entrance to Port Harvey by a straight line due North for 2,935 m. thence by a straight line due West for 2,760 m. to the coastline.

PILOTAGE: Pilotage is not compulsory but a Pilot will attend from Port Moresby given 48 hours notice of the ship's intention to call at Oro Bay.

Pilot Boarding Ground: Within 300 m. radius of a position with the North corner of Oro Bay wharf bearing 225° (T) distant 1,850 m.

ETA to be sent not less than 12 hours prior to arrival via Port Moresby Radio (P2M) and to be confirmed not more than 5 hours and not less than 4 hours prior to arrival.

ANCHORAGE: In sand and mud at 15 m. depth may be obtained on the leading marks 239° (T) distant 400 m. from the North corner of the wharf.

VHF: Call Oro Bay Port Control on VHF 16, 12 and 6. Listening watch maintained during working hours and when ships are expected during non-working hours.

TUGS: None available at present. Arrangements may be possible via Kamusi Timber if tugs required.

BERTHING: Wharf is 60.3 m. long, height of deck above LAT 2.5 m., minimum depth of water at outer face at LAT 11.4 m. Tidal range 1.3 m.

Vessels may berth either port or starboard side to at the discretion of the Port Authority.

Load/discharge is by ship's own gear (except under special arrangement).

Berthing may be delayed during the N.W. season, December – March.

STEVEDORES: 72 hours notice preferred, but a minimum of 24 hours required.

Licensed Stevedores: New Guinea Forwarding Agencies: P.O.Box 77, Popondetta Tel: 297050/297268. Carnell Carriers: P.O.Box 151, Popondetta Tel: 29 7095, 297257.

FRESH WATER: Not available.

FUEL: Diesel is available by road tankers. Suppliers: Shell and Mobil.

AIRPORT: Popondetta Airport is 40 km. from the port and is served by Air Nuigini daily.

POLICE/AMBULANCE/FIRE: Police: 29 7122. Ambulance: No service available. Fire: 29 7144.

DELAYS: Delays at Oro Bay are most unlikely.

GENERAL: *Storage:* Covered Storage: 739 sq.m. Open Storage: 4,645 sq.m.

Chart: AUS 520.

DEVELOPMENTS: The area around Popondetta is being developed as major palm oil plantations. Overseas Wharf to be lengthened.

On completion, palm oil tankers and general cargo vessels of 40,000 d.w.t. will be handled.

AUTHORITY: Papua New Guinea Harbours Board, P.O.Box 160, Popondetta, Papua New Guinea. *Tel:* 29 7295. *Cables:* Portman, Popondetta. *Contact:* Port Manager.

PORT MORESBY: 09.29 S. 147.09 E. (See Plan)

(See General Section on Papua New Guinea Ports)

PORT LIMITS: Seaward Boundary of port limits is the entrance to Basilisk Passage.

DOCUMENTS: Basic Customs documents for entry:

1 copy Cargo Manifest.
1 copy Passenger Manifest.
1 copy Disembarking Passenger Manifest.
1 copy Embarking Passenger Manifest.
1 copy Crew Manifest.
1 copy Stores List.
1 copy Customs Declaration (Ship).
1 copy Customs Declaration (Crew).
1 copy Customs Declaration (Passengers).
1 copy Health Declaration.

Also see "General" before first port.

PILOTAGE: Compulsory. Pilotage service operated by Port Authority (Papua New Guinea Harbours Board). Notice of ETA must be given at least 12 hours in advance. Pilot boarding ground is in a position with Basilisk Beacon bearing 065°(T), distant 1,500 m. Alternative boarding ground in bad weather is in a position with Basilisk Beacon bearing 220°(T), distant 950 m. Pilot launch is fitted with VHF radio and operates on Channels 12 and 16.

Coastal Pilotage: Pilotage services through the Great North East Channel to Torres Strait, through China Strait to Rabaul, and through China Strait and Raven Channel to Lae are conducted by pilots of the Queensland Coastal Pilot Service Pty.Ltd. and the Queensland Coast and Torres Strait Pilot Service. See Australia – "Torres Strait" for details.

Pilotage Recommendation: The Great North East Channel is covered by a recommendation on pilotage by IMO. See Australia – "Torres Strait" for details.

APPROACHES: The outer entrance lies through a gap in the barrier reef which has a navigable width of 600 m.

ANCHORAGE: In a position Lat. 9° 30.5′ S., Long. 147° 9.5′ E. Depth of water 26 m.

RESTRICTIONS: Berthing and sailing are normally restricted to between 0600 hrs. and 2200 hrs.

MAX. SIZE: The largest vessel to berth at the port's facilities was the "Rotterdam" with a length overall of 229 m.

HEALTH: Health Officer Tel: 255566. Quarantine Officer Tel: 211475.

RADIO/VHF: Arrival information to Agents can be routed through either Port Moresby Radio or Rabaul Radio. The port is equipped with VHF and may be contacted by calling Port Control on Channel 16. Working channel is Channel 12, or as allocated by Port Control. A listening watch is maintained during normal working hours and outside normal hours when ships are expected.

TUGS: Two tugs of between 550 b.h.p. and 750 b.h.p. are available for hire from private operator.

BERTHING: Old Port:

	Length (m.)	Width (m.)	Water Depth Below LAT (m.)	Deck Height Above LAT (m.)
Berth 1 (Main Wharf):	106	18.2	8.5	4.4
Berth 2 (Main Wharf):	107	18.2	8.5	4.4
Berth 3A (Coastal):	67	18.2	3.8	4.4
Berth 3B (Coastal):	113	18.2	4.5	4.4

Barge Ramp 1: Width 6 m. Grade 1 in 8
Barge Ramp 2: Width 9 m. Grade 1 in 8

Storage: Shed 1: 1,790 sq.m. (73.2 m. × 24.4 m.)
Shed 2: 1,790 sq.m. (73.2 m. × 24.4 m.)
Shed 3: 1,110 sq.m. (30.4 m. × 36.5 m.)
Coastal Shed: 650 sq.m. (36 m. × 18 m.)
Open (Old Port): 3,100 sq.m.
Open (APC): 3,250 sq.m.

New Port:

	Length (m.)	*Width* (m.)	*Water Depth Below LAT* (m.)	*Deck Height Above LAT* (m.)
Berth 4A (Container):	125	25.3	10.0	3.6
OK Tedi Jetty: (Berth 4B)	25	5.0	3.0	2.0

Storage: Shed 4: 5,110 sq.m. (140 m. × 36.5 m.)
Open: 28,400 sq.m.

Load/discharge is by ship's own gear.

STEVEDORES: Stevedoring is carried out by private contractors licensed by the Board. Normal working hours are from 0800 hrs. to 1600 hrs., Monday to Friday. However, stevedoring operations can continue outside normal hours by arrangement with the stevedoring contractor concerned.

At least 24 hours notice must be given to stevedoring contractor to arrange labour, but 72 hours notice preferred.

TANKERS: Tankers mainly use mooring buoys N.W of the wharf area, max. draft 13 m. The discharge is through submarine pipelines. Tankers also discharge at Berth 4A.

FRESH WATER: Available at all berths.

FUEL: Diesel and distillate can be supplied by road tanker, pipeline or mini-barge (100 tonnes). Suppliers are Shell, Mobil and B.P.

REPAIRS: A small slipway for coastal vessels only is situated adjacent to the old main wharf.

CUSTOMS: Port of Entry. Collector of Customs Tel: 214428.

AIRPORT: Jacksons Airport, Papua New Guinea's only international airport is 13 km. from the wharf and is served by flights to and from Australia daily, to Manila, Hong Kong, Japan, Singapore and Honolulu weekly as well as almost daily flights to all main internal centres.

POLICE/AMBULANCE/FIRE: Police Tel: 000. Ambulance Tel: 256822. Fire Tel: 225169.

HOLIDAYS: The port is closed to normal work on Christmas Day and Good Friday. The port is subject to closure unofficially on New Year's Day, Independence Day and Provincial Days, depending on the willingness, or otherwise of the Waterside Workers and Seaman's Union to work on these days.

BANKS: Papua New Guinea Banking Corporation, P.O.Box 78, Port Moresby. Tel: 22-9700. Fax: 21-1954.

Westpac Bank – PNG Limited, Douglas Street, Port Moresby. Tel: 22-0700. Fax: 21-3927.

ANZ Bank, Douglas Street, Port Moresby. Tel: 21-1666. Fax: 21-4896.

Bank of South Pacific Limited, Douglas Street, Port Moresby. Tel: 21-2444. Fax: 21-3741.

CURRENCY: Currency unit is Kina. 1 Kina = U.S.$1.0402 (9.3.94).
DELAYS: The port now has 3 overseas berths although only 1 of these is capable of handling direct container traffic. Some delays can be expected at peak times.
GENERAL: *Storage:* See "Berthing".
Chart: AUS 621.
AUTHORITY: Papua New Guinea Harbours Board, P.O.Box 671, Port Moresby, Papua New Guinea. *Tel:* (675) 211400. *FAX:* (675) 211546.
Regional Port Manager, P.O.Box 384, Port Moresby, Papua New Guinea. *Tel:* (675) 211637, 211634. *FAX:* 21-3606.

RABAUL: 04.12 S. 152.10 E. (See Plan)

(See General Section on Papua New Guinea Ports)

PORT LIMITS: Seaward Boundary of port limits is a line between the Eastern extremity of Matupit Island and Raluana Point.
DOCUMENTS: Basic Customs documents for entry:
1 copy Cargo Manifest.
1 copy Passenger Manifest.
1 copy Disembarking Passenger Manifest.
1 copy Embarking Passenger Manifest.
1 copy Crew Manifest.
1 copy Stores List.
1 copy Customs Declaration (Ship).
1 copy Customs Declaration (Crew).
1 copy Customs Declaration (Passengers).
1 copy Health Declaration.
Also see "General" before first port.
PILOTAGE: Compulsory. Pilotage service operated by Port Authority (Papua New Guinea Harbours Board). Notice of ETA must be given at least 12 hours in advance. Boarding ground is in position Lat. 4° 15′ S., Long. 152° 13.75′ E. Pilot launch is fitted with VHF and operates on Channels 12 and 16.
Coastal Pilotage: Pilotage services through the Great North East Channel to Torres Strait, through China Strait to Rabaul, and through China Strait and Raven Channel to Lae are conducted by pilots of the Queensland Coastal Pilot Service Pty.Ltd. and the Queensland Coast and Torres Strait Pilot Service. See Australia – "Torres Strait" for details.
Pilotage recommendation: The Great North East Channel is covered by a recommendation on pilotage by IMO. See Australia – "Torres Strait" for details.
APPROACHES: Depth at entrance to Simpson Harbour is in excess of 100 m.
ANCHORAGE: There are no recommended anchorage areas for large ships, but anchorage in approx. 30 m. of water may be obtained in good holding ground in a position with lower leading light bearing 015° (T) distant 1,110 m.
RESTRICTIONS: Berthing and sailing are normally restricted to between 0600 hrs. and 2200 hrs.
MAX. SIZE: The largest vessel to berth at the port's facilities was the "Europa" with a length overall of 200 m.
HEALTH: Quarantine Officer and Health Officer Tel: 92 1416.
RADIO/VHF: Arrival information to Agents can be routed through Rabaul Radio. The port is equipped with VHF and may be contacted by calling Port Control on Channel 16. Working channel is Channel 12, or as allocated by Port Control. A listening watch is maintained during normal hours and outside normal hours when ships are expected.
TUGS: None.
BERTHING: There are two overseas berths. Bay Road Wharf (Berth No. 2) is 152.4 m. long, height above LAT 2.8 m., min. depth of water at LAT 10.2 m.
Blanche Street Wharf (Berth No. 1) is 121.9 m. long. Height of deck above LAT 2.8 m. Minimum depth at LAT 7.9 m.
Vessels may berth either port or starboard side to at either wharf at the discretion of the Port Authority.
Load/discharge is by ship's own gear (Except under special arrangement).
STEVEDORES: Stevedoring is carried out by private contractors licensed by the Board. Normal working hours are from 0800 hrs. to 1600 hrs., Monday to Friday. However, stevedoring operations can continue outside normal hours by arrangement with the stevedoring contractor concerned. At least 24 hours notice must be given to the stevedoring contractor to arrange labour.
TANKERS: Discharge facilities are available for overseas vessels at the Blanche Street Wharf only.
FRESH WATER: Available at a rate of 25 t.p.h., supply sometimes restricted.
FUEL: Diesel fuel and distillate available by road tanker. Suppliers: Shell, Mobil and B.P.
REPAIRS: Only light deck repair facilities available.
SURVEYORS: Lloyd's Agent, Burns Philp (N.G.) Ltd., P.O.Box 87, Rabaul.
CUSTOMS: Port of Entry. Collector of Customs Tel: 92 1173.
AIRPORT: Rabaul Airport is 4 km. from the port and is served daily by Air Nuigini.
HOLIDAYS: The port is closed to normal work on Christmas Day and Good Friday. The port is subject to closure, unofficially, on New Year's Day, Independence Day and Provincial Days, depending on the willingness, or otherwise of the Waterside Workers and Seamen's Union to work on those days.
POLICE/AMBULANCE/FIRE: Police: 922222. Ambulance: 7333. Fire: 921411.
BANKS: Papua New Guinea Banking Corporation, P.O.Box 85, Rabaul. Tel: 92-1788.
Westpac Bank PNG Limited, Mango Avenue, Rabaul. Tel: 92-2844. Fax: 922820.
ANZ Bank, Mango Avenue, Rabaul. Tel: 92-1299. Fax: 923192.
Bank of South Pacific Limited, Mango Ave, Rabaul. Tel: 92-1266. Fax: 921240.
GARBAGE DISPOSAL: Garbage services are provided by Rabaul Town Council, P.O.Box 1133, Rabaul. Tel: 922522. Charges: Every year rates vary from K.10.00 to K.20.00. Collection time: Only when requested, whilst ships are in port.
WASTE OIL DISPOSAL: No companies dispose of waste oil, however, Shell Company does provide one road tank for mixture of oil and water, whereby the oil product is put back into tank storage and then blended. Contact: Shell Company, P.O.Box 226, Rabaul. Tel: 922606.
SEAMAN'S CLUBS: None.
CURRENCY: Local currency Kina and Toea. Kina 1.0 = U.S.$1.0402 (9.3.94). Exchange rates fluctuate every day. Rates can be seen in daily paper.
There is no local restriction on Kina and Toea as is nationally used in rural and urban areas.
All major overseas currencies are accepted, *except* Taiwanese currency which is not accepted by P.N.G. banks.
DELAYS: Delays at Rabaul are unlikely, except for union activities from time to time.
GENERAL: *Storage:* Covered Storage: 6,890 sq.m. Open Storage: 20,300 sq.m.
Chart: AUS 680.
AUTHORITY: Papua New Guinea Harbours Board, P.O.Box 671, Port Moresby, Papua New Guinea. *Tel:* (675) 21-1400. *FAX:* (675) 21-1546.
Regional Port Manager, P.O.Box 592, Rabaul. *Tel:* (675) 92-1317. *FAX:* (675) 92-1367.

SAMARAI: 10.36 S. 150.39 E. (See Plan)

(See General Section on Papua New Guinea Ports)

PORT LIMITS: Seaward boundary.
From a point on the Northernmost point of Samarai Island due North for 800 m. thence due West for 1,300 m. thence due South for 1,000 m. thence due East for 1,000 m. to a point on the N.W. coast of Samarai Island.
PILOTAGE: Not available.
ANCHORAGE: There are no recommended anchorage areas for large vessels in the vicinity of Samarai.
HEALTH: Quarantine Officer Tel: 62 1257. Health Officer Tel: 62 1225.
TUGS: Not available.
BERTHING: Berth No. 1. (Main Wharf). Length 28 m. Depth at LAT 7.8 m. Tidal range 1.0. m.
Vessels may berth either port or starboard side to at the discretion of the Port Authority.
Load/discharge is by ship's own gear.
STEVEDORES: 72 hours notice preferred, but a minimum of 24 hours required.
Licensed Stevedores: Murina Stevedoring Company, P.O.Box 33, Samarai.
Osiri Trading Co., P.O.Box 1, Samarai. Tel: 62 1238.
TANKERS: Discharge only at main wharf.
FRESH WATER: Not available.
FUEL: Diesel available by pipeline. Supplied by Shell.
CUSTOMS: Port of Entry. Collector of Customs Tel: 62 1226.
AIRPORT: There is no airport at Samarai. The nearest airport is at Gurney, outside Alotau.
POLICE/AMBULANCE/FIRE: Police Tel: Samarai 62 1222. Ambulance Tel: 62 1225. Fire: No service available.
DELAYS: Delays at Samarai are most unlikely.
GENERAL: *Storage:* Covered Storage: 950 sq.m.
Open Storage: 140 sq.m.
Chart: AUS 625.
AUTHORITY: Papua New Guinea Harbours Board, (Through Agents – Milne Bay Fishing Authority), P.O.Box 86, Samarai, Papua New Guinea. *Tel:* 621348. *Cables:* Fisheries. *Contact:* N. Stanton, Port Manager.

UMUDA: 08.29 S. 143.54 E.

SHIPMASTER'S REPORT: January 1994.

Vessel: 24,000 g.r.t. 42,000 d.w.t.
Umuda Station: So called "Umuda Station" is M/V "Karabi" which is anchored at approximate position Lat. 08° 29.5′ S., Long. 143° 54.5′ E. in the estuary of the Fly River in Papua New Guinea. The M/V "Karabi" is anchored abeam of the most Southern island in the mouth of the river, which has no name. Umuda is closest to this place/island with a proper name. M/V "Karabi" is anchored in depth of 12.0 m. at MLW (Chart AUST. 378).

M/V "Karabi": It is a vessel built in 1972. LOA 218 m., beam approximately 30.0 m., max. draft approximately 12.5 m. with 4×25 tonnes cranes situated on her starboard side. She has 7 holds but only 6 are in use. Hold No. 1 is inoperative, as a helicopter platform is located above the Hold No. 1. Six Yokohama fenders are floating on chains alongside her starboard side, also tractor tyres are fixed as fenders on her starboard side, just below railings. Hull is rusty and has lots of minor damage. Starboard lifeboat is missing (was crushed some time ago during berthing of a vessel). M/V "Karabi" is anchored with her port anchor, 10 shackles in the water. She looks like metal scrap, but is well equipped. She has GPS system, two good radars, gyro, sat nav system, satcom system, computer weighing system (connected with grabs) and good mooring lines. Each grab takes about 10 tonnes of cargo. Average loading capacity is about 175 tonnes/hour/crane.

Cargo: Wet concentrate of copper has allowed transportation content of water 10.3%. They have laboratory which continuously monitors water content and at the end of loading gives to the vessel a certificate showing actual water content (less than 10.3%). Cargo is extremely expensive. Content of gold inside each ton of concentrate is about one ounce plus other rare metals, plus natural copper.

Cargo is delivered from mines, which are about 500 miles up the river, by small vessels (2,000 – 3,000 d.w.t.). They have problems with delivery of the cargo during dry season (May – September), as river becomes very shallow and not navigable, even for these small vessels.

Navigation Aids: No lighthouses, marks or buoys exist in the approaches to the estuary of the Fly River and M/V "Karabi". The place is not described in the Pilot Book. The only way for our vessel to fix the ship's position was by radar observations of the island abeam of "Karabi". As shoals on both sides of "Karabi" are not marked with buoys, we had to fix ship's position, even during berthing, up to close approach (5 cables) from the stern of "Karabi". In this situation, a GPS system would have been of great assistance.

Preparations: We had to wait at anchor for 3 days for collecting enough cargo (30,500 tonnes). Torres Pilot was on the vessel as it was cheaper for Charterers to pay additional days for Pilot than to take him back by helicopter and to send him to the vessel again after loading (one way helicopter trip costs U.S.$ 3,000 – 4,000). The Pilot was not a port pilot, but he had 50 years experience in sea practice. So combining his 50 years and my 35 years practice, we evolved a plan of approach to the "Karabi" and mooring.

Authorities: Local Authorities (Quarantine Officer, Customs Officer and Shipper's representative) arrive on the vessel by helicopter. Customs Officer collects Customs documents and sealed Bonded Stores. He is most interested in "magazines" which he collects and puts under seal also. Quarantine Officer checks that the ship hoists "Q" flag before helicopter arrival. Supervisor gives full information about loading, documents, etc. He also advises on how to moor. It is important to listen to his advice, but not to follow it as he is not a seafarer. When there is no Pilot, the supervisor acts as advisor during mooring. The supervisor can be used to maintain contact with the Master of "Karabi" on VHF Channel 12.

Mooring: The Master of the "Karabi" nominates the time of approaching alongside. The idea is to have about 2 knots of current. This is a very important matter which fully depends on the experience of the Master of the "Karabi".

We approached the "Karabi" on ebb tide (to avoid coming around "Karabi" on flood tide). Ebb heading of "Karabi" is about 330° – 340°, and flood tide heading is about 130° – 140°. Our course was about 10° less than course of M/V "Karabi", and we steered a little ahead of her forecastle. When 6-7 cables off the stern of the "Karabi", we stopped the engine, later we used only kicks. We approached to a distance of 30 m. – 40 m. off on a parallel heading. Though we arrived 15 minutes before time fixed, the current was already 3 knots and increased quickly.

Method of giving first 2 head lines is as follows:
"Karabi" fires rocket with line.
Crew takes the line, then messenger.
Fix messenger to head lines.
Crew of "Karabi" takes the messenger, then ship's lines.
Put them on "Karabi" bollards.
Vessel's crew takes the slack of head lines.

Naturally it takes a lot of time and the best distance to fire rocket is 80 m. – 100 m. between ship's bows. Master of "Karabi" gives the command to fire rocket. These 2 moments (strong current and late giving of ropes) made mooring even more dangerous. Using engine, helm and later on head lines, we succeeded in getting alongside safely.

The current between ship's hulls is quicker than outside current and it's speed increases all the time when the vessels become closer. At a distance of between 10 m. – 15 m., the speed of this current became 5-6 knots, pressure dropped and force of suction arose. Vessel came on to "Karabi" very quickly. This phenomena is known about from literature and "Karabi" advised us about the matter before mooring. So we succeeded in making our hull parallel to "Karabi" at this moment and lay alongside on many Yokohama fenders.

Loading/Lying Alongside: We had to load cargo in two places (Amamapare and Umuda) and at Umuda for two Consignees. As a result we had to make 2 shiftings, 20 m. back each time, and "Karabi" could only use 2 cranes on each stage of loading. It doubled time of loading and risk accordingly. The most dangerous time during loading is swinging when tide changes. It happens 4 times a day. After mooring, we greased all Panama leads (naturally ropes were sent only through Panama leads) and put burlap material (tarpaulin, old bags, etc.) on mooring ropes in the places of contact with metal parts on our vessel and on the "Karabi". All ropes were very tight and had same tightness.

Our crew kept sea watches (officer and 2 seamen on deck). It was rainy season, so sailors worked with mooring ropes and closed/opened hatches. When swinging we made all hands on deck, engine on stand-by and chief engineer and electrical engineer in the engine control room. We had swell from S.S.E. at 2.0 m. – 2.5 m. During each swing, both vessels rolled up to 9° on both sides and their periods of rolling did not correspond. Mooring ropes and fenders took very big strains. Due to all precautions, only 2 ships' ropes were broken and immediately changed. When swinging, it is impossible to work with cranes and they stop loading.

Another problem is during ebb tide, which is naturally stronger (about 4 knots) than flood in river. This vessel is too big for the "Karabi", so her anchor dragged on full strength current. Usually drift did not exceed 1-2 cables, but on one occasion, "Karabi" dragged her anchor for 2 miles to S.E., notwithstanding working with her engine dead slow ahead, sometimes (kicks) slow ahead. All this time, "Karabi's" crew and our crew were at mooring stations and we were ready to depart.

Nobody calculated holding force of "Karabi" anchor and strength of her chain. Our experience showed that holding ability of "Karabi's" anchor is not enough for 2 vessels, and without any calculations, I can tell that in bad weather "Karabi's" anchor chain would have broken.

Weather: April – September is the worst season at Umuda Station, as it is season of S.E. Monsoon. Umuda Station absolutely open to S.E.-S.S.E. winds and swell.

They consider November to March the best season for loading, as it is N.W. Monsoon season (wind from shore). The only problem is cyclones which pass the area, most often in December, January and February (usually 5-6 cyclones in these 3 months). From arrival up to January 30th 1994, cyclone "Sarah" crossed Coral Sea. That is why we experienced S.S.E. swell. On January 30th-31st 1994, cyclone "Sadie" was in the Gulf of Carpentaria. As a result, West winds were over the area and swinging lasted 1.5 – 2 hours instead of 0.6 – 1 hours.

Unmooring: As unmooring was totally controlled by our vessel, it was much easier and safer than mooring. We let go all ropes except 2 head lines and 2 stern springs, then started to pay out head lines and made rudder 20° to starboard. Stream entered between hulls, bow began to go to starboard, we let go everything forward, rudder midships. Started to pay out stern springs. When bow about 10 m. and stern about 5 m. off "Karabi", we gave dead slow ahead and let go all aft.

Conclusions: Umuda is an unsafe place from any point of view – contractual, practical, logical, etc.

Vessels of this size must not be loaded at Umuda in my opinion. Vessel of any size is at risk when mooring/loading/unmooring at Umuda. Naturally smaller vessels reduce the risk. In my opinion, the biggest vessel which could relatively safely be loaded at Umuda is 30,000 – 35,000 tonnes d.w.t. The ideal case is when vessel has bow thruster.

In any case, the following to be done to increase chances of safe completion:

Master of the vessel must receive all possible information about Umuda before departure from some previous port to have possibility to make preparations for this trip.

Vessel must have full supply of fresh water and provisions.

Charts could be obtained through Agent in Australia and delivered by Torres Strait Pilot.

Vessel must have sufficient good mooring ropes and tarpaulins, or other materials could be used as burlap materials to protect ropes.

Vessel must have some good fenders to protect ship's constructions (superstructure, wing, etc.), if necessary.

Cargo plan should be for loading of all 5 hatches (1 port of loading) or at least 4 hatches (if 2 loading ports). It gives possibility to load 30,000 tonnes of cargo in about 50 hours.

Pilot is compulsory. If no Pilot at Umuda (on "Karabi"), it is necessary to use assistance of Torres Pilot. There are already at least 3 Torres Pilots who have been to Umuda. Master of the vessel which has been to Umuda could also be used as a Pilot.

When berthing, it is necessary to try to approach the "Karabi" with a slight current (1-2 knots) when ebb tide.

"Karabi" must fire rocket with line at a distance at least 70 m. – 80 m.

When alongside, full scale watch must be kept on deck in any weather. Most dangerous moments are swinging when tide changes and when ebb current has maximum speed.

Utmost attention to be payed to the mooring ropes. They must be tight at all times.

The ship must lie alongside as parallel as practicable to touch as many Yokohama fenders as possible.

NOTICE: Ok Tedi Mining Limited.

Guidance Notes and Responsibilities for Masters of Export Vessels Loading Ok Tedi Copper Concentrates at Umuda Station:

Dear Captain

On behalf of Ok Tedi Mining Limited, we are pleased to welcome you to Umuda Station, Papua New Guinea, and our transfer and loading terminal M/V "Karabi".

The following Notes are to assist you in the mooring, loading and unmooring of your vessel at "Karabi".

For your information, apart from what is already described in the Charter Party between your Owners/Disponent Owners and Ok Tedi, your responsibilities whilst at Umuda Station are as follows:

1. Notwithstanding any pilotage advice or assistance given by "Karabi", the Master of the export vessel is at all times responsible for it's safe navigation.
2. To provide a sufficient quantity of good quality ropes (wires or nylon ropes, which can snap without warning will NOT be handled by "Karabi") to ensure that the vessel can be safely berthed and remain alongside.
3. Nominating the holds to be loaded and quantity of cargo to be loaded into each hold (as per governing Charter Party Clause 7B). This will be the subject of discussion with the Charterer, but will in no way relieve the Master of his responsibilities.
4. To ensure at the end of loading of each hold, directions are given to the Deck Officers of your vessel to stand-by at the hold and inform us for trimming if required (Cahrter Party Clause 7B). See paragraph below "Trimming Cargo".
5. To ensure vessel is maintained in seaworthy trim and condition, and safely and properly loaded, having regard to the International Loadline Certification (Charter Party Clause 7B).

6. To ensure mooring lines are properly tended throughout the time alongside "Karabi".
7. To ensure vessels crew maintain the hatch covers in working order and open/close them as necessary during the loading, and in particular if required to do so in the event of adverse or threatening weather.
8. To provide accommodation and board for one Customs Official throughout your stay.
9. To ensure the vessel is at all times maintained in a state of readiness to unberth from "Karabi" at short notice in the event of an emergency or adverse conditions (See paragraph 12 below "Engine Readiness").
10. To maintain a continuous watch on VHF radio, Channels 16 and 12. See also paragraph 26 below.
11. To pilot your vessel to safely unberth and depart from "Karabi".
12. Berthing:
    "Karabi" is fitted with Yokohama fenders on starboard side, and large ore-truck tyre fenders attached to the sheer strake. No fenders are required on your vessel.
13. There is no Pilot at Umuda Station, you have to pilot your vessel alongside "Karabi". We normally berth vessels on flood tide and heading into the wind. However, if the wind is not too strong, we may ask you to berth with wind astern, always heading into the tide. we may also ask you to berth at night, if conditions are favourable, subject to the Master of "Karabi" and yourself being in agreement. The tides can be very strong, at times running at 3 – 5 knots.
14. Do NOT (unless in an emergency) drop your anchor approaching "Karabi". It will only give you serious manoeuvring problems, resulting in you possibly striking the Terminal Ship.
15. Approach "Karabi" on almost parallel heading, either approximately 140°T on flood tide, or 315°/320°T on ebb tide. Stay well clear of "Karabi" when approaching. If you come too close to the stern area, the wind and current will set you down, bearing in mind your vessel is in ballast and will be prone to leeway.
16. When sufficiently close, "Karabi" will fire a rocket line to your vessel's foc'sle with a messenger rope attached. Heave these lines on board and attach your mooring lines (two headlines if possible) to the messenger rope. Please ensure that your ropes are prepared, your winches are professionally manned and heaving lines ready and available. Speedy and efficient making fast of these two head lines is of utmost importance. The aft spring is next, and then later we will double up on this aft spring, as it and the headlines take all the weight of your ship against the current and wind. Again, the "Karabi" will NOT handle wires or nylon ropes.
17. If at all possible, all ropes should go through your Panama leads (not roller leads), otherwise when your vessel is loaded, and your freeboard is much less than the "Karabi" freeboard, your ropes may jump off the roller leads, resulting in damage to your ship's structure, or breaking the lines, causing your vessel to part from the Terminal Ship.
18. Unberthing:
    Please take careful note of the following paragraphs relating to unberthing of your vessel:
    Recently there have been two potentially serious incidents during the unberthing operations. The "Karabi" suffered minor damage, but the anchor chain was at great risk of being cut. *Both export vessels suffered extensive damage.*
    The incidents were identical in nature, and these guidance notes are offered in an attempt to ensure it will not happen again.
    When proceeding to unberth from the "Karabi", it is normal to single up to 2 head lines forward and 1 or 2 back springs aft. The two headlines are let go and the bow allowed to separate from "Karabi's" bow prior to kicking ahead on your engines and letting the back springs(s) go. Patience and calm is of the essence to accomplish a proper separation.
    It is absolutely essential that the bows separate before going ahead on your engines.
    If you go ahead without this separation having taken place and whilst still in contact without fenders, you will just take us with you and as our anchor cable draws tight astern, it will keep us pressed firmly together. The inevitable result being that as you gradually draw ahead, you will take a sheer to port across our bow and your bridge wing area will impact on the break of our foc'sle head with the additional grave risk of fouling your propeller/rudder on our anchor cable.
    The tide is sufficiently strong to virtually guarantee that this separation will take place with little problem, providing no attempt is made to depart while the vessel is swinging to the change of tide. We recommend that you should wait about an hour after the swing before departing, in order to allow the tide to gain sufficient velocity to guarantee the separation.
    Once separated from the "Karabi", keep a good distance off and in case of need, avoid crossing the "Karabi" bow until well ahead of us, bearing in mind that the tide will set your vessel down towards the "Karabi" and her anchor chain.

Other:

19. Trimming Cargo:
    On completion of loading of each of your holds, we will, if required, do utmost to trim the top off the cargo using our grabs. To assist us in this, we suggest that when about 300 tonnes balance remain to be loaded in that hold, your Duty Officer directs these last approximate 30 grabs to whatever area of the hold they are required, e.g. forward/aft, port/starboard. If after loading any further trimming is required, your Duty Officer is required to stand-by at that hatch and direct our crane driver accordingly, or pass the information to our Desk Officer by VHF who will inform the crane driver.
20. Deballasting:
    Please consult the Master of "Karabi" before you commence pumping out ballast tanks. We may require limited air draft on your vessel to permit us to reach the offside of your hatches.
21. Engine Readiness:
    Please ensure that whilst alongside "Karabi", your main engine is kept at readiness for use at 15 minutes notice or less. Should this be impracticable, or should you wish to carry out maintainance work on the main engine, kindly consult with the Master of "Karabi".
22. VHF Communication:
    We keep VHF watch on Channel 12 if you or your Officers wish to communicate with "Karabi's" Master, Deck Officer or the Ok Tedi Terminal Supervisor.
23. Agency:
    A Papua New Guinea Customs Official remains on board your vessel throughout your stay. Please provide him with suitable cabin and board. He will sign the Loading Manifest on completion of loading, sight the Bills of Lading prior to you signing, and give you Port Clearance. The Terminal Supervisor handles all Agency matters, inwards/outwards, cargo documents and assists the "Karabi" Master in your vessel loading. Do not hesitate to call on the Supervisor for assistance in any Agency matter. It should be noted, however, that in addition to the Pilots and tugs not being available, there are no services such as provisioning, fresh water, bunkers, crew changes, medical, mail, telex, fax, available at "Karabi".
24. Fishing Lines:
    The Master of "Karabi" insists that no fishing lines are permitted between the two vessels. Fishing from our vessel's starboard side may take place only. The "Karabi" fenders have on occasions been found coated with fishing lines and hooks, resulting in damage and collapse of fenders, with repair bills running into thousands of dollars.
    If any of your crew members are seen fishing, we have to advise you that photographs (film dated) will be taken, and your Owners will be put on Notice by Owners of "Karabi", holding you responsible for any damage to the fenders and cost of repairs to same for your Owner's account.
25. Radio Silence:
    Due to heavy traffic in the Fly River area, you are requested to keep Radio Silence (unless in an emergency) between 0800 hrs. – 1000 hrs. and 1500 hrs. – 1800 hrs., to facilitate communication between river vessels and the Mine Operation Centres.
26. Progress of Loading:
    The amount of cargo loaded at any time can be read off our loading computer and passed to you. These figures are in any case passed to you daily at 0700 hrs. and 1800 hrs. Subject to weather conditions, loading time is of course depending on the amount of cargo your vessel is loading. However, as a rule, an average of 175 tonnes per crane per hour is obtainable, with faster loading in the early stages and slowing down towards the end of the loading.
    If any queries, you are welcome to contact the undersigned. In the meantime, we wish you a pleasant stay in Papua New Guinea.

Signed:
Terminal Supervisor
Ok Tedi Mining Limited.

VANIMO: 02.41 S. 141.18 E. (See Plan)

(See General Section on Papua New Guinea Ports).

PILOTAGE: Pilotage not compulsory. Pilot available from Madang on request at 48 hours notice. Pilot Boarding Place: Lat. 2° 39′ S., Long. 141° 18′ E.

HEALTH: Quarantine Officer Tel: 87 1210. Health Officer Tel: 87 1196.

VHF: Call Vanimo Port Control on VHF 16 and 12. Listening watch maintained during working hours and when ships are expected during non-working hours.

TUGS: None available.

BERTHING: *Papua New Guinea Harbours Board:* Position of wharf: Lat. 02° 41.09′ S., Long. 141° 17.84′ E. Length, 18.7 m. (61.5 ft.); width 6.1 m. (20 ft.). Minimum depth alongside at LAT 4.9 m. (16 ft.). Tidal range 1.6 m.

Vanimo Forest Products: Position of wharf: Lat. 02° 40.85′ S., Long. 141° 17.36′ E. Length 75 m. Storage 3,000 sq.m. Minimum depth 8.00 m. Max. draft 7.5 m. Contact: General Manager, P.O.Box 41, Vanimo. Tel: 87 1018.

FRESH WATER: Not available to ships.

FUEL: Distillate available by road tanker. Supplier: Mobil Oil (NG) Ltd. Tel: 87 1221.

CUSTOMS: Port of Entry. Collector of Customs Tel: 87 1192.

POLICE/AMBULANCE/FIRE: Police Tel: 87 1022. Ambulance: 87 1080.

GENERAL: *Storage:* 1 Shed – 135 sq.m.
Chart: AUS 389.

AUTHORITY: Papua New Guinea Harbours Board, P.O.Box 71, Vanimo, Papua New Guinea. *Tel:* 87-1024. *FAX:* 87-1024. *Cables:* Portman, Vanimo. *Contact:* Port Manager.

WEWAK: 03.34 S. 143.39 E. (See Plan)

(See General Section on Papua New Guinea Ports)

PORT LIMITS: Seaward Boundary.

From Wewak Point by a straight line due North for 2,900 m. thence by a straight line due East for 3,725 m. thence by a straight line due South for 4,780 m. to a point 800 m. due East of Cape Boram, thence to Cape Boram.

PILOTAGE: Pilotage is not compulsory but a Pilot will attend from Madang if given 48 hours notice of the ship's intention to call at Wewak.

Pilot Boarding Ground: Lat. 3° 32′ S., Long. 143° 39.4′ E.

ETA to be sent not less than 12 hours prior to arrival via Port Moresby Radio (P2M) or Rabaul Radio (P2R) and to be confirmed not more than 5 hours and not less than 4 hours prior to arrival.

ANCHORAGE: There are no recommended anchorage areas for large vessels in the vicinity of Wewak.

HEALTH: Quarantine Officer Tel: 86 2586. Health Officer Tel: 86 2166.

VHF: Call Wewak Port Control on VHF Channels 16, 12, 6. Listening watch maintained during working hours and when ships expected during non-working hours.

TUGS: None available.

BERTHING: Overseas Wharf is 73.1 m. long, height of face above LAT is 3.5 m., min. depth of face at LAT is 6.7 m. Tidal range 1.3 m.

Vessels may berth port side to only.

Load/discharge is by ship's own gear.

Berthing may be delayed during the N.W. season December – March.

STEVEDORES: 72 hours notice preferred, but a minimum of 24 hours required.

Working Hours: Day shift: 0800 – 1200, 1300 – 1600. Evening shift: 1600 – 1900, 2000 – 2400. 2 hours extension to finish possible.

Licenced Stevedores: Sepik Coastal Agencies, P.O. Box 118, Wewak. Tel: 86 2464. Kreer Development Corp.Ltd., P.O.Box 695, Wewak. Tel: 86-2869.

TANKERS: No overseas discharge or bunkering facility exists.

FRESH WATER: Not available.

FUEL: Diesel available from road tankers. Suppliers: Mobil and Shell.

CUSTOMS: Port of Entry. Collector of Customs Tel: 86 2591.

AIRPORT: Wewak Airport is 5 km. from the port and is served regularly by Air Nuigini.

POLICE/AMBULANCE/FIRE: Police: 86 2222. Ambulance: 86 2166. Fire: 86 2122.

DELAYS: Delays at Wewak are unlikely but if they do occur are of short duration.

GENERAL: *Storage:* Covered Storage: 2,200 sq.m.

Open Storage: 11,500 sq.m.

Chart: AUS 651.

DEVELOPMENTS: The port development plan which is unlikely to take effect for a few years, calls for a land backed facility off the causeway joining the land to the existing wharf.

AUTHORITY: Port Manager, P.O.Box 270, Wewak, Papua New Guinea. *Tel:* 86 2298. *FAX:* 86-2506. *Cables:* Portman, Wewak.

NOTES

Please also advise Shipping Guides Ltd.

Paraguay

NOTES

Please also advise Shipping Guides Ltd.

GENERAL:

DOCUMENTS: *Consular Documents:*

If ports of embarkation are non-Paraguayan, the Agency must submit an original Cargo Manifest and two copies, as well as three copies of the Crew List to the Paraguayan Consulate. The Consul returns the original and one copy of each of these documents, and the Agency must ensure that these papers are mailed, time permitting, or delivered to the vessel.

Prior to Arrival:

Arrival Notice:

The time and date of the vessel's arrival shall be reported at least 24 hours in advance to the following Authorities: Port Authority (National Navigation and Port Administration), the General Prefecture of Ports (National Navy), Customs, Migration, and Maritime Health.

Information on Cargo for the Port:

The shipping Agency must receive duly in advance the following documents for presentation to the Authorities and for the preparation of the tally books: Cargo Manifest and Stowage Plan. It is of the utmost importance that manifests be received duly in advance, even if by telex, to avoid any delay in servicing the vessel.

The manifests and a written request that may be submitted 72 hours prior to the arrival of the vessel, must be delivered to Customs. Customs opens a Customs file and allocates a number to the vessel to expedite the processing of the import documents.

Requests for Port Services:

A request must be submitted to ANNP, indicating the expected time of arrival (ETA) of the vessel, to obtain clearance for berthing and port services. 5 copies of the manifests giving the number assigned by Customs to the vessel and 1 copy of the Stowage Plan must be presented, as well as copies of the tally books, and a list of container contents.

In the absence of manifests, clearance for berthing will not be given and, therefore, the cargo cannot be handled.

On Arrival:

Type of Document	*Number and Distribution of Documents*						
Basic Forms	*Gen. Pref. Ports*	*Customs*	*Immigration*	*Marit. Health*	*Veterinarian†*	*Agency*	*Total*
1. General Declaration(a)	1	–	–	–	–	1	2
2. Cargo Manifest	1(b)	1(b)	–	–	1	1	4
3. Crew List	1(b)	1(b)	1	–	–	1	4
4. Passenger List	1	1	1	–	–	1	4
5. Ship's Stores List	–	1	–	–	1	2	4
6. Crew Effects Declaration	–	1	–	–	–	1	2
7. Maritime Declaration of Health	–	–	–	1	–	–	1
8. Mail List	–	–	–	–	–	1(c)	1
Additional Documents:							
9. In-ballast Declaration	1	1(b)	–	–	–	1	3
10. Bills of Lading	1	1(b)	–	–	–	1	3

†Transitory provision of the Ministry of Agriculture, of November 1978.

(a) If the vessel has the forms, LAFTA/OAS Form 1 should be employed; if not, Agencies use their own form, containing data on 1 through 10 and 11A of the General Declaration.

(b) Visaed by the Consulate of Paraguay.

(c) For the Postal service.

Prior to Departure:

A Departure Request must be filed with Customs, to which the Export Cargo Manifest and the Provisional Export Permit must be attached. This procedure cannot be started until the entire cargo has been loaded.

After this request has been recorded by the Registration Division and the Cashier's Office, the Customs Administration issues the safe-conduct for departure.

Once the safe-conduct is obtained from Customs, this is attached to the Crew List and submitted to the General Prefecture of Ports, which authorises clearance, and designates the Pilots who are to guide the ship on the stretch Asuncion-Confluencia.

Peru

GENERAL:

FLAG: The Peruvian Flag must be hoisted at all times whilst vessel is in Peruvian Waters until time of leaving Peruvian Waters.

DOCUMENTS:

Prior to Arrival:

Arrival Notice:

Notice of a vessel's arrival must be sent 24 hours in advance to the Captain of the Port, Customs, International Police, Migration and Public Health.

Information on Cargo and Passengers for the Port:

The Agency must have received the following documents by air, sufficiently in advance to submit them by the deadlines indicated in the following paragraph, and to prepare the tally sheets:

5 sets Cargo Manifest.
2 sets Freighted Cargo Manifest.
1 copy Passenger List.
6 copies List of Container Contents.
5 copies Dangerous Cargo List.
2 copies List of In-Transit Dangerous Cargo.
2 copies Stowage Plan.

Deadlines for Submission of Documents:

(a) Vessels from South American and Pacific coast ports are exempt from submitting documents by air mail in advance. However, the Agency must receive by telex, in sufficient time to prepare and submit before initiating tally sheet operations, the following information on regional cargo: marks, numbers, amount, class and weight of cargo, its location on board, shipper and consignee.
(b) Vessels from Panama and Colombian ports on the Atlantic. 24 hours before the vessel's arrival. Fine for failure to comply with the deadline.
(c) Vessels from Central American ports. 48 hours before the vessel's arrival. Fine for failure to meet the deadline.
(d) Vessels from any other port. 72 hours before the vessel's arrival. Fine for failure to meet the deadline.

Request for Port Services:

24 hours before the vessel's arrival, the request for pilotage and berthing, and port services shall be submitted to the marine terminal of the Peruvian National Ports Agency (ENAPU) on special forms.

On Arrival:

On entrance of the vessel, the following documents must be submitted:

Type of Document	*Number and Distribution of Documents*						
Basic Forms	*Captain of Port*	*Customs*	*ENAPU*	*Police*	*Migration*	*Public Health*	*Total*
1. General Declaration	1	2	2	–	–	–	5
2. Cargo Manifest	1	2	4	–	–	–	7
3. Crew List	1	2	–	1	1	1	6
4. Passenger List	1	2	2	1	1	1	8
5. Ship's Stores List	–	2	1	–	–	–	3
6. Crew Effects Declaration	–	2	–	–	–	–	2
7. Maritime Health Declaration	–	–	–	–	–	1	1
8. Mail List	–	2	2	–	–	–	4
Additional Documents:							
9. Clearance from last Port	1	–	–	–	–	–	1
10. In-transit manifest	1	1	–	–	–	–	2
11. "No Passengers" Declaration	1	2	2	1	1	1	8
12. List of Passengers In-transit or "No In-transit Passengers" Declaration	1	2	2	1	1	1	8
13. List of Passengers Baggage or "No Baggage" Declaration	–	4	4	–	–	–	8
14. List of unaccompanied Baggage or "No unaccompanied Baggage" Declaration	–	4	4	–	–	8	16
15. Bill of Lading	–	1	2	–	–	–	3

Prior to Departure:

Clearance Documents:

The Clearance Permit must be duly paid for at the Bank of the Nation. Receipts therefore must accompany the request for clearance.

The Clearance Permit is requested from the Captain of the Port on a special form in triplicate, accompanied by 3 sets of the General Declaration, the Crew List and the List of Passengers on board, In-Transit or "No Passengers" Declaration.

At the time of clearance, a representative of the Captain of the Port returns on board a stamped set of these documents.

In addition, the following must be submitted before clearance:

Documents:

	ENAPU	*Migration*
Crew List		1
List of Passengers Embarked or "No Passengers" Declaration	1	
List of Passengers Baggage or "No Baggage" Declaration	1	
Bill of Lading for all cargo loaded	2 sets	

Within 24 hours after clearance, Customs must be given a copy of the Export Cargo Manifest or a set of the Bills of Lading for all export cargo.

Request for Pilotage:

Requests for unberthing, including the request for pilotage shall be submitted daily at 1500 hrs. to the ENAPU on a special form.

SHIP REPORTING: The following was received from a ship's agent in November 1991.

POSITION AND SAFETY INFORMATION SYSTEM IN PERUVIAN WATERS:

National and foreign merchant and fishing ships of more than 1,000 g.r.t., are obligated to report their positions by radio to Coast Guard General Director, via Peruvian Coast Stations of Paita, Mollendo or Callao, if they enter, stay or depart from Peruvian waters. The nonfulfillment of this procedure is subject to fines up to U.S.$5,000.

Peruvian Water Boundaries:
Northern: Lat. 03° 25' S.
Southern: Lat. 18° 20' S.
Western: 200 nautical miles offshore.

Structure of Message Information:

Message Identification: SHIPREP.

Model:

A. A group of two or three letters.
"EPW" (Entrance notification into Peruvian waters).
"PR" (Notification of position).
"FR" (Final notification).
"DPW" (Sailing out of Peruvian waters notification).
B. Vessel name, call sign and nationality.
C. Date and local time, a group of 6 figures to indicate the day of the month (first 2 figures), hour and minutes (last four figures).
D. Situation, port of origin.
E. Position, a group of 4 figures to indicate the Latitude in degrees and minutes, with the 'N' or 'S' suffix and a group of 5 figures to indicate the Longitude in degrees and minutes with the suffix 'E' or 'W'.
F. Course, a group of 3 figures.
G. Speed, a group of 2 figures.
H. Port of destination.
I. ETA at port of destination, a group of 6 figures, to indicate the day (first 2 figures) and to indicate the hours and minutes (last 4 figures).

Model Examples: All messages have to be sent to: "Director General de Capitanias y Guardacostas".

1st Case:

EPW Information on Entrance to Peruvian Waters that the vessel must send at the moment of entering Peruvian waters.
SHIPREP/A/B/C/D/E/F/G/H/I.
Example:
SHIPREP / EPW / Smederevo – YTJ6 – Yugoslav / 281257 / Oita – Japan / 10325S – 07750W / 150 / 12 / San Nicolas 300500.

2nd Case:

PR Position Report of the vessel at 0800 hrs. and 2000 hrs. (local time) each day that the vessel is navigating in Peruvian waters.
SHIPREP/A/B/C/E/F/G/H/I.
Example:
SHIPREP / PR / Smederevo – YTJ6 – Yugoslav / 282000 / 10401S – 07730W / 148 / 11 / San Nicolas 300600.

3rd Case:

FR Final Report. Information to be sent one hour before arrival at destination port.
SHIPREP/A/B/C/H.
Example:
SHIPREP / FR / Smederevo – YTJ6 – Yugoslav / 300500 / San Nicolas.

4th Case:

DPW Information on Departure from Peruvian Waters to be sent at the time the vessel leaves Peruvian waters.
SHIPREP/A/B/C/E/H.
Example:
SHIPREP / DPW / Smederevo – YTJ6 – Yugoslav / 030500 / 1820S / Bar – Yugoslavia.

Coastal Station Frequencies: Frequencies to be used to contact Coastal Radio Stations.

Name	*Call Sign*	*Frequencies Transmits (kHz)*	*Frequencies Receives (kHz)*	*Type of Emission*	*Working Hours*
Paita Radio	OBY2	8527	8363.2 – 8366.4	0.1 A1A	24
		2182 – 2738	2182	H.3E/J3E	24
		156.70 MHz	Channel 14 VHF	F3E	24

		13015.5	12544.8 – 12549.6	A1A	24
		2182 – 2738	2182	H3E/J3E	24
		156.60 MHz	Channel 12 VHF	F3E	24
		156.70 MHz	Channel 14 VHF	F3E	24
		156.80 MHz	Channel 16 VHF	F3E	24
		Telex No.	26069 COASTCAL		
Mollendo Radio	OBF4	8490	8363.2 – 8366.4	0.1 A1A	24
		2182 – 2738	2182	H3E/J3E	24
		156.70 MHz	Channel 14 VHF	F3E	24
		156.80 MHz	Channel 16 VHF	F3E	24

Messages to be addressed to: Director General de Capitanias y Guarda Costas, Telex No. 26071 DICAPI.

Remarks: If the vessel cannot make contact with Paita or Mollendo coastal stations, she can make contact with Callao radio station.

If contact is not made, the Master must submit a detailed written report explaining the causes or reasons why there was no communication with the above coastal stations.

Master's report will be inspected by the Port Captain in order to determine whether there is a responsibility or not.

The radio information has to be transmitted when the vessel is in position or before.

Nonfulfillment of the above regulations will be cause for a fine of U.S.$1,000 to U.S.$5,000. The amount of fine will depend on the Port Captain's office.

Shipmaster's Report: If possible, send messages by telex in order that you may obtain an answerback for photocopy and proof that messages were sent and received.

OFFICIALS: Master must be at gangway to greet authorities. If he is not there, Harbour Master may impose a fine.

HEALTH: Vessels are cleared before entering port.

Ratguards must be in place at all times. Harbour Master will check hourly, and if any ratguards not in position, vessel will be fined.

In 1991, Cholera was a problem (see below).

RADIO: Vessels are to maintain radio contact with the Port Authorities at all times whilst in Peruvian Water, until vessel has left Peruvian Waters.

Cholera: *New Regulations on the Peruvian Coast:*

Please be advised following telex received from Peruvian Port Authorities:

Quote

We are pleased to inform you, that recently the United States Government has detected the "Vibrio Cholera" bacteria in the ballast water of 3 vessels proceeding from Latin American ports, hence U.S.A. has extremed the warning measures in order to avoid the reach of Cholera epidemic at North America coasts. Therefore, the Peruvian Port Authorities, through the Coast Guard, have decided, as from this date on, and for an indefinite time, to forbid the ballasting in Peruvian ports and coast, for all vessels dedicated to the international maritime traffic, being able to make this duty only 12 nautical miles from the coast, registering same in the Deck Log, detailing the starting and finishing time.

Unquote.

The following is a circular letter to Masters from Callao Agent (dated 2nd March 1992):

Re: Vibrio Cholerae

Dear Sir,

We refer to our previous letter on the subject and now transcribe complementary instructions on ballasting and deballasting, as received from the Port Captain today:

(a) Ballasting effected within 12 miles must be deballasted during the transit to the next port of call.

(b) In the event vessel requires to ballast in navigation to the next port, the ballast water obtained at the port from where vessel sailed, must be interchanged in transit, in order that on arrival to that port the tanks may only have water taken 12 miles off the coast.

(c) These tasks should be recorded in the Log Book, indicating date/hour and position at the beginning and completion of same.

Master's Note: It all comes down to recording in the ship's Log Book, where each tank has been ballasted, in order to prove/show that all ballast is from outside the 12 mile zone.

If the vessel has to ballast in or near any port, this is to be changed at sea outside the 12 mile zone, before reaching the next port.

ATICO: 16.14 S. 73.43 W.

Atico is an open roadstead and unprotected. The main activity is the loading of fishmeal.

PILOTAGE: Not available.

ANCHORAGE: Vessels anchor in the open roads.

TUGS: 1 available.

LIGHTERS: 3 available, 100 tons each.

CRANES: None.

STEVEDORES: See "Pimentel" for working hours and overtime rates.

There are 2 gangs available.

MEDICAL: Available at Mollendo.

FRESH WATER: Not available.

FUEL: Not available.

GENERAL: *Swell Period:* Heavy swell in the Winter months, June-September.

CALLAO: 12.03 S. 77.10 W. (See Plan)

PILOTAGE: Compulsory. 24 hours advance notice of ETA required. Pilot boards at anchorage after vessel has been granted Free Pratique. Various pilot launches painted white, black and red.

RESTRICTIONS: Vessels of up to 32 ft. draft may enter at any time. Vessels of more than 32 ft. draft must enter at high water. Pilots available 24 hours.

MAX. SIZE: Length and breadth practically unlimited, draft 32 ft. plus height of tide making allowance for keel clearance.

HEALTH: Cable Agent requesting Free Pratique. Agent must be notified in advance if any illness or disease suspected on board. Free Pratique is hardly ever given unless Health Officer and Captain of the Port and other Officers board.

Also see "General" – "Health" before first port.

DOCUMENTS:

Airmail copies must be presented to Port Authorities 72 hours before arrival of vessel as otherwise vessel will be fined. No docking is allowed until Cargo Manifests and Cargo Plan are presented.

Vessel copies to be delivered on clearing vessel inbound on arrival when Health, Customs and other Authorities board.

	By Air	*By Sea (With the Vessel)*
Cargo Manifests, including additionals. Must be faithful copies of Bills of Lading descriptions	5	7
Same Manifests, but freighted	5	2
Cargo Manifests covering cargo shortshipped but manifested on previous vessels calling at Callao	5	7
(If Master Stencils are airmailed, the required number of Manifests will be printed)		
Transit Cargo Manifests	–	3
Freighted copy of each Bill of Lading	–	4
Lists of Containers with their numbers	2	2
Content List, each Container, properly identified with marks, numbers and Bills of Lading numbers	2	2
Dangerous Cargo Lists showing complete description of goods, Flash Point, IMO Classification, Type of Label, marks, numbers and Bills of Lading numbers	3	3
Transit Dangerous Cargo Lists	3	3
Mail Manifests	5	5
Passenger Lists	1	10
Transit Passenger Lists	–	10
Tally Books	–	16
Stowage Plan	3	–
Consolidated Stowage Plan, prepared or checked on board	–	3
Visaed Tonnage Certificate or General Declaration from First Port receiving cargo for Peru and every port of call thereafter	–	1
Health Clearance, last port of call	–	1
Vaccination List	–	1
General Declaration	–	7
Crew List	–	10
Crew Personal Effects Declaration	–	3
Stores List	–	4
Sealed Consular Documents addressed to Customers, in envelope	–	1

Also see "General" before first port.

Shipmaster's Report: September 1991.

The following documents should be presented to Authorities on arrival:

	Total	Presented by Agents
General Declaration		5
Cargo Manifest	2	5
Cargo in Transit Manifest	2	
"IMO Cargo" Manifest	2	
"IMO Cargo" in Transit Manifest	2	
Crew List	10	
Passenger List or "Nil" Declaration	2	
List of Passenger in Transit or "Nil Declaration	2	
Ship Stores List (including radios, refrigerators, etc.)	3	
Crew Effects Declaration	3	
List of Passengers Baggage or "Nil" Declaration		
List of unaccompanied Baggage or "Nil" Declaration		
Maritime Health Declaration	1	
Vaccination List	2	
Mail List or "Nil" Declaration	1	
List of Arms and Ammunition or "Nil" Declaration	1	
List of Animals or "Nil" Declaration	2	
Ports of Call List (last 30 days)	1	
Last Port Clearance	1	

Before sailing, 3 copies of "Sailing Plan" have to be presented to Authorities.

ANCHORAGE: Very large area to the West of entrance buoys.

Shipmaster's Report: December 1988.

The following is part of the telex received with the above ("SHIP REPORTING").

Re: Port of Callao

The Port Captaincy of Callao has appointed the following official anchorage places for arriving vessels:

	Latitude:	Longitude	
1.	12° 02′ 00.0″ S.	77° 11′ 49.5″ W.	(These are the corner points of Anchorage "A", as per B.A. Chart No. 1853)
2.	12° 02′ 11.3″ S.	77° 10′ 41.5″ W.	
3.	12° 01′ 10.0″ S.	77° 11′ 41.5″ W.	
4.	12° 01′ 21.0″ S.	77° 10′ 33.5″ W.	

NON-FULFILLMENT OF THESE INSTRUCTIONS WILL RESULT IN A HEAVY FINE.

RADIO: Radio Costera, OBC3, 460, 500, 8546, VHF 16 and 14 (Peruvian Navy 24 hours).

Arrival Advice: 24 hours' Notice of Arrival should be sent to the Captain of the Port and the Agent.

Shipowner's Report: October 1982.

Please note there is a new regulation for vessels calling Callao. All ships must send 1 hour prior to arrival at Callao Roads a telegram addressed to "Costera Callao" indicating their revised ETA. If this is not done and Authority gets notice of this, vessel will be fined (A copy of this telex is to be produced when vessel is being cleared at the anchorage).

As per experience this telegram arrives at "Costera Callao" after vessel has departed. Sometimes Authority asks for presentation of telegram copy.

Radio Officer's Report: September 1982.

During a recent call at Callao and Pisco at the beginning of September 1982, only slight difficulties were experienced in establishing radio contact with Callao Radio – OBC3.

However, Callao Radio seems mostly to be listening only on 8364 kHz HF, answering calls on its working frequency 8546 kHz. Also the station seems to be using "QRY-operation". Ships' radio operator will get his turn number, whereafter Callao Radio calls back in due time for QSO.

Even at a very close range, no answer was obtained on 500 kHz. However, a call on VHF Channel 16 was answered at once, and vessel was advised to shift to the above mentioned HF frequency for QSO.

VHF: Port Captain on Channel 16. Working on Channel 12. All communications carried out in Spanish.

TUGS: Port Authority Tugs join vessel once inside mole, 1 or 2 as required, using vessel's lines, later passed to pier. 4 tugs available; 2 at 175 h.p., 1 at 500 h.p. and 1 at 800 h.p.

BERTHING: There are 9 piers with a total of 24 berths, 22 for large vessels, and 2 for coasters.

The various berths of the port can be subdivided into areas for their appropriate usage as follows:

	Quays	*Berths*
General cargo	1, 2, 3, 4, 5	1A, 1B, 2A, 2B, 3A, 3B, 4A, 5A, 4B.
Dry bulk cargo	11, 9	11A, 11B, 11C, 9A, 9B, 9C.
Liquid bulk cargo (Oil derivates)	7	7A, 7B.
Minerals	5	5B, 5C, 5D, 5F.
Logistic supplies and coastal vessels	9, 10	9D, 10A, 10B.

All piers except the petrol pier are connected to railway system for unloading and loading to railway wagons.

Within port limits anchorages can be used for discharge of livestock, scrap and occasionally for general cargo after permission obtained from the Port Authorities.

Berths 5B, 5C, 5D and 5E are equipped with conveyor belts for shipping granulated bulk ore.

Berths 9A, 9B and 9C have a conveyor belt for shipping fishmeal in pellets.

For discharge of grain, there are three pneumatic mobile suction towers and silos with a capacity up to 23,000 tons. The average rate of discharge of the pneumatic towers is 2×100/150 t.p.h. and 1×300 t.p.h.

STEVEDORES: No particular advice necessary but Agent must receive Stowage Plan beforehand to advise Port Authority of planned operation.

Working Hours: 1st shift 0700 – 1200 hrs. and 1300 – 1600 hrs. 2nd shift 1700 – 2400 hrs. Both are compulsory, except 2nd shift on Sundays and Holidays. 3rd shift 0100 – 0700 hrs., optional, except after Sundays and Holidays when not worked. There is an additional charge of 25% for the 3rd shift.

Lighters: In the port, a lighter service is provided by private concerns to enable vessels to discharge at moorings, and thus reduce the time they are at the quays.

CRANES: There are a number of cranes with lifting capacity from 4 tons to 50 tons. The Callao Naval Base has a floating crane with a lifting capacity of 80 tons, which can be called upon if necessary.

MEDICAL: Advance information as to sick crew members not required but helpful. Ample first class facilities in the Lima area.

TANKERS: Petroleum Pier: Pier No. 7: Max. depth 35 ft., however, depth in approaches to berth is 33 ft. at HW and 31 ft. at LW, max. length about 200 m.

There are numerous loading and discharge pipelines of different diameter to handle oil derived products.

These lines can be used simultaneously at the Berths A and B, but also depending on store facilities on shore or delivery into trucks.

Discharging pressure of the lines: 100 lb./sq.in. for 12 in. to 22 in. lines. On the pipeline of 6 inches it is possible to reach a pressure of 250 lb./sq.in., for discharge of LPG.

Connections: There are connections from 4 in. to 10 in. for all kind of flanges.

Water: Supply of water is possible, 40 t.p.h.

Discharge of ballast or slops inside mole prohibited. Tankers loading fish oil must arrive free of ballast.

DENSITY: Sea water.

FRESH WATER: Available at Oil Pier No. 7 only. Cost U.S.$ 3.14 per cu.m.

FUEL: Available from Petroleos del Peru in an emergency only. Arrangements take a long time and cost is high.

FIRE PRECAUTIONS: Use of Port Authority Fire Equipment mandatory during discharge of petroleum products with charge for service. Safety equipment charge applied to all vessels on tonnage moved.

REPAIRS: Normal Deck and Engine repair facilities available through private companies in Lima and Callao.

DRY DOCKS: Major repairs can be undertaken by the Naval Industrial Department, including careening and repairs in dock.

(a) Dry dock – length 632 ft., width 82 ft., depth 21 ft.
(b) Floating dock 107 – length 408 ft., width 48 ft., depth 20 ft.
(c) Floating dock 106 – length 288 ft., width 46 ft., depth 14 ft.

SURVEYORS: Lloyd's Register of Shipping, ABS, R.I., and N.V.

GANGWAY/DECK WATCHMEN: Recommended. Ship's crew should supplement the watchman service.

PIRACY: *Report:* October 1990.

The pirates were armed with knives and daggers, and managed to steal various articles such as mooring ropes.

CERTIFICATES: All vessels arriving at Callao must have updated certificates, this refers especially, and as per MARPOL agreement, to Oil Pollution Certificate and Engine Log Book.

If these certificates are not in order, the vessel will be heavily fined. All may be required but normally only the Derat Certificate is asked for. If ratguards are not used on all lines, vessel is liable to fines.

CUSTOMS ALLOWANCES: Any amount over normal consumption usually causes difficulties, including searching.

CARGO GEAR: No additional requirements.

REPATRIATION: All foreign crew members who do not have Peruvian Visas, which only obtainable abroad, must be repatriated by quickest means (Air) by Agent, paying all detention expenses. Peruvian and foreign crew members available.

AIRPORT: Lima/Callao within city limits has regular direct international service North and South America, Europe and Far East.

HOLIDAYS: Only 1st May when work is not possible.

SHORE LEAVE: Permitted.

Officers and crew should not walk alone at night whilst in the city, and should not wear jewelry or carry valuables.

IDENTIFICATION CARDS: Supplied by Agent and stamped by Immigration. Authorisation required for all crew members.

DEVELOPMENTS: Quay No. 5 is being converted to a container terminal.

SHIPMASTER'S REPORT: September 1980.

Navigational Notice: All vessel navigating in Peruvian waters to a distance of 200 nautical miles from the coast are required to radio their position, course, speed and destination every 12 hours to: "Capitania General de Costera y Capitania de Puerto Callao" via Callao Radio, which is very difficult to contact as naval traffic appears to be their main concern. Other coastal radio stations are even less available.

Documents: Cancel all reference to LAFTA documents which are now obsolete and also there is no longer any visaed or consular items to obtain. The requirements for air mailed copies still remains for Bills of Lading, Cargo Manifest and Contents List where applicable. The remaining requirements are the same as listed.

Pilotage: The Pilots boarding station is 1.25 miles 095° from that marked on BA Chart 1853.

Anchorage: Very large area to the North and West of entrance leading line. The area to the South is reserved for Peruvian naval and merchant vessels which navigate therein without lights on occasions.

Restrictions: The maximum draft dictated by the entrance channel is 33 ft. 10 in. (10.30 m.). On occasions with a maximum tide, vessels in excess will be docked but the chances are based upon the Pilot's willingness. With a 3 ft. (1 m.) rise this vessel charted a minimum under keel clearance of 1.3 ft. on a draft of 34 ft. 3 in. within the channel outside the breakwaters.

Density: This was checked daily and found to be 1027.5 to 1028 in Berth No. 11.

Berthing: For discharge of grain there are 3 pneumatic suction towers on rails with 3 suction pipes to each. The two Southern units are reserved for loading road trucks while the third and most Northern discharges onto the silo belt only. Thus delays may be experienced due to lack of trucks and subsequent order of discharge regulated to accommodate this factor. There is a minimum depth of 36 ft. by hand lead at this berth.

Fresh Water: Very early request via Agent and follow up. Max. 10 t.p.h.

Gangway/Deck Watchmen: The strictest watch must be maintained at ALL hours for persons who board to steal. The worst are those whose identity card is for "Tribulante" indicating a seafarer, for they know where most ship's officers stow gear and where the keys to the chartroom are, etc. A patrol is required as well as a static gangway watch. Cargo thieves are very well organised.

Ashore, no person should travel alone in Callao or Lima.

Port Authority Permits: These are required for repairs, overside painting, etc., and a 3 man inspectorate will board to check progress and conditions.

SHIP'S OFFICER'S REPORT: January 1985.

Hull maintenance only possible after permission obtained from Port Captain.

A very extensive cabin search made on sailing day and articles not declared on arrival were taken away (if possible).

The following were not declared on arrival (but should have been declared): Cabin refrigerators, portable cabin heaters, Loadmaster computer.

In our case all charges and fines were waivered after consultations. Therefore if in doubt all items should be declared.

Make sure all ratguards are marked with ship's name otherwise they may be stolen and resold to the ship.

Ensure correct courtesy ensign is flown otherwise a fine will be imposed.

SHIP'S OFFICER'S REPORT: October 1990.

Documents: Vessel's copies to be delivered on clearing vessel inbound on arrival, when Health, Customs and other Authorities board.

Cargo Manifests, including additionals. Must be faithful copies of Bills of Lading descriptions (Manifiesto de carga para puerto).	4
Same Manifest, but freighted.	Nil

Transit Cargo Manifests (Manifiesto de carga en transito).	3

Bills of Lading, full set and copies.	3
Dangerous Cargo Lists (Lista de carga peligrosa para puerto).	2
Transit Dangerous Cargo Lists (Lista de carga peligrosa en transito).	2
Mail Manifests (Guia de correos).	2
Passenger Lists (Pasajeros para puerto).	6
Transit Passenger Lists (Pasajeros en transito).	6
Tally Books.	Nil
Stowage Plan	Nil
Consolidated Stowage Plan, prepared or checked on board.	Nil
Visaed Tonnage Certificate or General Declaration from first port receiving cargo for Peru and every port of call thereafter.	1
Health Clearance, last port and a Declaration of Health (Declaracion de sanidad).	1
Vaccination List (Lista de vacuna).	1
General Declarations (provided in port).	7
Crew Lists (Rol de tripulacion).	8
Crew's Personal Effects Declarations (Declaracion de efectos de la tripulacion).	3
Stores Lists (Declaracion de suministros del buque).	3
Baggage Declarations (accompanied) (Equipajes acompanades).	4
Baggage Declaration (unaccompanied) (Equipajes no acompanades).	Nil

Remarks:
(a) The vessel considered, is a general cargo vessel, without passengers or mail on board.
(b) No containers were unloaded at Callao, and therefore no container lists.
(c) There was no transhipment cargo on board.
(d) It seemed preferable to prepare the documents in Spanish for the good reason that "everything ran smoother".

SHIPMASTER'S REPORT: May 1992.
Arrival Procedure: Vessel to call "Tramar" on VHF Channels 12, 16 and 70, and request permission to enter the Control Area (10 miles around San Lorenzo Lt.). State ETA and request permission to proceed to anchorage for clearing by Authorities.

"Tramar" will indicate where to anchor, vessel to reduce speed to 5 knots when 4 miles from the anchorage.

After Free Pratique has been granted, vessel to inform pilot, and pilot will request vessel to proceed to pilot station. Before doing so, vessel to request permission to proceed from "Tramar" (max. speed again 5 knots).

Fines are imposed if vessel does not follow these guidelines.

AUTHORITY: Port Captain, Terminal Maritimo de Callao.

CHANCAY: 11.35 S. 77.16 W. (See Plan)

Chancay is an unprotected open roadstead about 31 miles North of Callao. The main activities are the loading of fishmeal and discharging of fertilisers.
PILOTAGE: Compulsory. The Port Captain currently acts in this capacity.
ANCHORAGES: There is a good anchorage, in 5 and 8 fathoms of water, on a sand and mud bottom, located in the outer area of the bay, which is 1 mile long by 0.5 miles wide.
RADIO: *Arrival Advice:* 24 hours' Notice of Arrival should be sent to the Captain of the Port and the Agent.
TUGS: 2 Tugs of 56 h.p.
BERTHING: There is a pier for loading barges.
LIGHTERS: 12 lighters with a capacity of 40 tons each.
CRANES: 2×14 tons capacity.
STEVEDORES: The same system applies here as throughout the Republic, the tariff only altering according to the number of workers employed.
3 shifts and 2 more if necessary.
MEDICAL: Medical consultations possible.
FRESH WATER: Not available.
FUEL: Not available.
AUTHORITY: Port Captain.

CHIMBOTE: 09.05 S. 78.37 W. (See Plan)

Chimbote is a port with possibilities to load and discharge from and into lighters if berths are not available. Main activity: Loading of fishmeal and minerals; discharging of iron, steel, and general cargo.
PILOTAGE: Compulsory. Official Pilot boards vessels at entrance to bay and leads ship to appropriate anchorage according to draft. Private Pilot to moor to the quays of the "Corporacion Peruana del Santa" and to "Sogesa". Vessels enter the inner roadstead through Southern side of each channel. Depart through Northern side of channel.
ANCHORAGES: Good anchorages in bay according to draft. Anchorages are of mud and sand. Best place to anchor ship of medium draft is inner side of Paso del Norte, 6 fathoms deep, near port and safe. Another good anchorage for ship of medium draft is with Island bearing 170° and Rosas Blancas bearing 275°, 6 fathoms deep.

DOCUMENTS:
For Entry
2 Entry Declarations (Form No.1).
1 Departure Licence of the last foreign port en route.
1 Maritime Health Declaration (Form No. 2).
2 Passenger Lists with entry baggage (Form No. 3).
1 Consular Roll of the last foreign port en route.
1 Consular Passenger List of the last foreign port.
Customs Administration
1 Original Cargo Manifest(s) with the Consular stamp. (Form No.4).
The envelope(s) from the Consul, enclosing copies of the Consular invoices, Bill of Lading and Cargo Manifest for the port with the Consular stamp.
1 Cargo Manifest (Form No.4).
1 Cargo Manifest of cargo, but with further destination for another national or foreign port (Form No. 4).
1 Cargo Manifest in transit.
1 Gross or Net Tonnage Certificate, with Consular visa.
1 Unaccompanied Baggage List (Form No. 5).
Customs
1 Entry Declaration (Form No. 1).
1 Cargo Manifest(s) for port without Consular visa (Form No. 4).
1 Manifest of Cargo for port, but with further destination for another national or foreign port, without Consular visa (Form No. 4).
2 Passenger Lists with entry baggage (Form No.3).
2 Unaccompanied Baggage Lists (Form No. 5).
1 Crew Personal Effect List.
1 Stores List, food and spirits.
1 Mail List.
Port Administration
1 Entry Declaration (Form No.1).
1 Passenger List with entry baggage (Form No. 3).
1 Unaccompanied Baggage List (Form No. 5).
3 Cargo Manifests for the port, without the Consular visa (Form No.4).
3 Manifests of Cargo for port, but with further destination for another national or foreign port, without Consular visa (Form No. 4).
3 Sets of Bills of Lading.
Also see "General" before first port.
HEALTH: Health Authorities board on arrival.
RADIO: Hablanaves Radio at Talara and Trujillo (Buenos Aires), Radio Costera at Callao.
Arrival Advice: 24 hours' Notice of Arrival should be sent to the Captain of the Port and the Agent.
TUGS: 6 private, 3 of 80 h.p., 1 of 60 h.p. and 1 of 165 h.p. and 1 of 180 h.p. The Port Authority has two tugs, 1 of 400 h.p. and 1 of 200 h.p.
BERTHING: 3 Piers available.
No. 1 Pier: Length 158 m., width 16 m., depth alongside 27 ft. – 28 ft.
No. 2 Pier: Used only for the loading and discharge of lighters (fishmeal). Length 54 m., width 18.40 m. Average depth 4.5 m.
No. 3 Pier: Operated by Siderperu. Length 265 m., width 25 m., depth alongside 28 ft. – 31 ft. There are two bridges for discharging coke and minerals by clamp. (Total capacity 300 t.p.h.)
LIGHTERS: 12 for dry cargo: 2 at 150 tons and 10 at 50 tons. 10 tank lighters with a total capacity of 1,300 tons.
CRANES: 5 cranes: 3×17 tons, 1×13.8 tons and 1×6.25 tons capacity.
STEVEDORES: See "Callao".
MEDICAL: Agent arranges emergency attention. Hospital and private clinic available.
TANKERS: Three zones for load/discharge of fish-oil and lubricants. Ship loads fish-oil by barges at anchor. Discharge of fuel when ship anchored to buoys by means of submarine lines.
FRESH WATER: Not available.
FUEL: Not available.
CONSULS: Only the Vice-Consul of Spain and Panama.
REPAIRS: Only minor repairs are possible.
DRY DOCKS: "Sima" have a 15,000 ton floating dock.
GANGWAY/DECK WATCHMEN: Watchmen are necessary.
OPENING/CLOSING HATCHES: This job is carried out by stevedores.
CUSTOMS ALLOWANCES: Tobacco: 10 packets per person per week. Wine and/or Spirits: With approval of Customs, within normal consumption.
CARGO GEAR: Vessel's derricks used, the quay has fixed crane for 50 tonnes and 3 mobile cranes for 15 tons.
REPATRIATION: Facilities for crew changes and arranging any necessary repatriation.
AIRPORT: Port has airstrip, but it is only for national use, not for international flights.
TIME: GMT minus 5 hours, all year round.
HOLIDAYS: Cargo work can be arranged on holidays with an extra 100% charge over basic pay. The only exception is 1st May, on which cargo work cannot be arranged.
TELEPHONES: No arrangements for placing telephones on board. They are about 50 m. from ship.
SHORE LEAVE: Crew members allowed ashore.
IDENTIFICATION CARDS: Needed for both crew and passengers.
REGULATIONS: Not allowed to use wireless when ship is in port. Nor allowed to put any boat on the water without permission of Capitania del Puerto. Not allowed to throw any waste or litter into bay. Not allowed to make unnecessary sound signals.
GENERAL: *Swell Period:* February/March and June/October.
DEVELOPMENTS: New quays to be built.
AUTHORITY: Capitan de Puerto – Direccion Capitania de Puerto Chimbote.

CONCHAN: 12.10 S. 77.00 W.

Tanker Buoy berth about 30 miles South of Callao.
DOCUMENTS: Tankers calling at Conchan must first call at Callao anchorage to be received and cleared by Authorities. Not necessary to call at Callao after discharge as clearance is simultaneous with reception.
PILOTAGE: Private Pilot boards vessel at Callao anchorage and either remains on board or returns to take vessel out, as required by Master.
BERTHING: Vessels moor to buoys. Depth 60 ft. One submarine line of 16 in. reducing to 12 in. at vessel's connection, running 1,000 m. from shore opposite Conchan refinery.
LAUNCH: Launch service between Conchan and Callao or Conchan and Fish Pier at Barranco, southern suburb of Lima, during vessel's stay in port.
GENERAL: Two Customs police and two refinery employees board at Callao and remain on vessel during discharge.

ETEN: 06.56 S. 79.52 W. (Port closed)

Eten is about 348 miles North of Callao. The port is an unprotected open roadstead. All cargo operations are undertaken by lighters. The main activities are the export of sugar and import of fertiliser and general cargo.
PILOTAGE: Not available.
ANCHORAGE: Vessel anchors about 0.5 miles off the Mole Head in 7 – 8 fathoms.
RADIO: *Arrival Notice:* 24 hours' Notice of Arrival should be sent to the Captain of the Port and the Agent.
TUGS: 4 tugs of 80 h.p. each.
LIGHTERS: 13 lighters with a total capacity of 635 tons.
BERTHING: There is a pier for handling barges.
CRANES: 3 steam cranes, 2×2 tons and 1×15 tons. 1 diesel crane of 3 tons capacity.
STEVEDORES: See "Pimentel".
MEDICAL: There is a hospital at Chiclayo 15 km. from the port.
FRESH WATER: Not available.
CONSULS: Vice-Consul of the Netherlands.
GENERAL: *Swell Periods:* Eten being an unprotected open road port it frequently occurs that the port has to be closed due to heavy swell. The swell comes up suddenly and is not subject to any specific period, but it occurs more frequently during June/September and the Easter week.

GENERAL SAN MARTIN: 13.48 S. 76.17 W. (See Plan)

PISCO: 13.43 S. 76.14 W.

PILOTAGE: Compulsory.
RADIO: *Arrival Advice:* 24 hours' Notice of Arrival should be sent to the Captain of the Port and the Agent.
Also see "Callao" – Radio Officer's Report.
TUGS: 16 tugs available. 10 h.p. – 800 h.p.
BERTHING: 1 quay with 4 berths each 175 m. in length. Max. draft 32 ft. (25,000 tons). Cargo is loaded by portable conveyor belts.
LIGHTERS: 28 wooden lighters for general cargo, total capacity 1,800 tons. 5 steel lighters (not immediately available), total capacity 600 tons. 3 lighters for liquid cargoes, total capacity 500 tons.
CRANES: 1×13.61 tons, 1×22.68 tons and 1×6.25 tons capacity.
STEVEDORES: *Working Hours:* 0800 hrs. – 1200 hrs., 1300 hrs. – 1700 hrs., 1800 hrs. – 2400 hrs., 0100 hrs. – 0700 hrs.
109 stevedores available.
MEDICAL: There is a hospital available.
TANKERS: *Submarine Pipe-line:* The pipeline belongs to Petroperu. Position Lat. 13° 36′ 20″ S., Long. 76° 15′ 54″ W. Length of pipeline 700 m., diameter 8 in. Pilotage is compulsory. Depth of water 7.5 fathoms. Pumping rate 70-75 t.p.h.
FRESH WATER: Not available.
FUEL: Not available.

HUACHO: 11.07 S. 77.37 W.

Huacho is an unprotected open roadstead about 69 miles North of Callao. The main activity is the loading of fishmeal and minerals and discharging of fertilisers.
PILOTAGE: Not available.
ANCHORAGE: Vessels anchor in open roads.
RADIO: *Arrival Advice:* 24 hours' Notice of Arrival should be sent to the Captain of the Port and the Agent.
TUGS: 4 tugs available, 1 each at 50, 60, 72 and 180 h.p.
LIGHTERS: 29 lighters, total capacity 1,450 tons.
BERTHING: There is a pier for mooring barges, length 223 m.
CRANES: 3×13.60 tons each.
STEVEDORES: See "Pimentel" for working hours and overtime rates.
4 gangs of 9 men each available.
MEDICAL: Assistance available.
FRESH WATER: Not available.
FUEL: Not available.
GENERAL: *Swell Period:* Frequently during the Winter months (May-September).

HUARMEY: 10.06 S. 78.10 W.

Huarmey is an unprotected open roadstead for the loading of fishmeal.
PILOTAGE: Not available.
ANCHORAGE: Vessels anchor in the open roads.
RADIO: *Arrival Notice:* 24 hours' Notice of Arrival should be sent to the Captain of the Port and Agent.
TUGS: 4 tugs available, 2×145 h.p. and 1 each at 120 h.p. and 165 h.p.
LIGHTERS: 18 at 50 tons each.
CRANES: 1 of 2 tons capacity and 1 mobile crane.
STEVEDORES: See "Pimentel" for working hours and overtime rates.
3 gangs of 9 men each available.
MEDICAL: Assistance available.
FRESH WATER: Not available.
FUEL: Not available.
GENERAL: *Swell Period:* June to August.

ILO: 17.39 S. 71.21 W. (See Plan)

DOCUMENTS: Original Cargo Manifest to be sent by Agency from loading port.
6 Crew Lists.
4 Personnel Effects Lists.
4 Stores Lists.
4 Narcotic Lists.
3 Passengers to Disembark Lists.
3 Passenger Lists.
3 Passengers in Transit Lists.
3 Mail Lists.
3 Vaccination Lists.
1 Maritime Declaration of Health.
Also see "General" before first port.
PILOTAGE: ENAPU Pilot (Port Authority) on VHF Channels 16 and 12. Practimar Pilot on Channels 16 and 68. Pilots to be ordered 2 hours in advance by Agent.
Ilo Pilot (Captain Cesar Ulfe Herrera) may be contacted on Tel/Fax: 51-781495.
Pilot boards at anchorage 0.8 miles from extension of the SPCC Quay.
Shipmaster's Report: July 1986. Tanker.
Pilot compulsory. All Pilots for tankers calling Peruvian ports are situated in Callao. An accurate ETA to Callao Agent is very important in order to provide Pilots with sufficient time to fly to the appropriate port of call.
Pilot boards approximately 1 mile off the berth. The Pilot stays onboard the vessel if 2 or more ports are called at in Peru.
ANCHORAGES: See chart.
RESTRICTIONS: Port closed during heavy swell. Berthing and unberthing day and night.
MAX. SIZE: See "Berthing".
HEALTH: Pratique given by Customs. In cases of suspected illness a doctor should be requested in advance. When the ship arrives from another Peruvian port Free Pratique is automatic.
RADIO: Cables connect with National Communications network. ETA sent to Port Authority and to Agencies.
TUGS: 1×690 h.p. tug available.
BERTHING: Berthing anytime. There are two piers, one belonging to Southern Peru Copper Corp. and one to ENAPU.
SPCC: Two vessels are able to berth alongside. Length of pier 520 ft., width 60 ft. Depth alongside varies from 35 ft. to 50 ft.
ENAPU: Length of pier 300 m., width 27 m. Depth alongside varies from 23 ft. to 60 ft. Vessels able to berth both sides. South side depth 23 ft. at inner end, 54 ft. at outer end. North side depth 28 ft. inner end, 60 ft. outer end.
STEVEDORES: Stevedores are ordered by Agents.
Loading Rates: Copper sheets loaded 65 tonnes/p.h. Fish-flour loaded at 100 tonnes/p.h. in a 6 hour shift.
Working Hours: 0000 – 0600, 0600 – 1200, 1200 – 1800, 1800 – 2400 hrs.
MEDICAL: Medical assistance ordered by Agents. Hospital "El Centro de la Salud", and the Saint Geronimo Hospital.
TANKERS: *Ilo:* Discharge line diameter 10 in., 2 lines, connection to the ship's manifold 8 in. Connection and flexible line working pressure 100 lb. A buoy mooring berth.
Depth of water 40 ft. Vessels of Petroperu have preference.
Also see "Shipmaster's Report" – July 1986.
Pesca Peru Buoys for loading fish oil. Depth 50 ft.
Punta Tablones: Discharge line diameter 12 in., connection to the ship manifold 8 in. Flexible connection line, working pressure 100 lb. or 400 b.p.h. A buoy mooring berth.
Max. length 750 ft. Depth of water 40 ft.

DENSITY: Salt water.
FRESH WATER: Available by truck.
FUEL: Not available.
CONSULS: None.
REPAIRS: Some minor repairs.
GANGWAY/DECK WATCHMEN: Watchmen provided by Agents when necessary.
OPENING/CLOSING HATCHES: By crew or stevedores.
CERTIFICATES: When the ship comes from foreign port it is compulsory to produce Certificate of Gross Tonnage.
CUSTOMS ALLOWANCES: Tobacco: 10 packets per person. Wine and/or Spirits: Sufficient for meal times. Normal crew consumption only.
REPATRIATION: There are facilities for effecting crew changes and arranging any necessary repatriation. Those who are going to be repatriated must have a permit from the Port Authority to be allowed ashore.
AIRPORT: Ilo Airport, 8 km. Scheduled flights twice a week on Tuesdays and Saturdays. Regular airport in Tacna, 1.5 hours by taxi, scheduled flights twice daily to Lima.
TIME: GMT minus 5 hours. No alterations during the year.
HOLIDAYS: 1st January (New Year); Maundy Thursday and Good Friday; 1st May (Labour Day); 29th June (Saint Peter and Saint Paul); 28th and 29th July (Motherland Days); 30th August (Saint Rosa of Lima); 1st November (All Saints Day); 8th December (Our Lady); 25th December (Christmas).
POLICE/AMBULANCE/FIRE: Southern Peru Copper Corporation operate fire service. Police, tel. No. 3; Ambulance, tel. No. 3.
TELEPHONES: No arrangements for placing telephones on board.
SHORE LEAVE: Crew members allowed ashore and identify themselves with cards signed by Capitania del Puerto given through ship's Agents.
IDENTIFICATION CARDS: Agents arrange for cards to be signed by Port Authority for each crew member.
DELAYS: Only delays when quay is occupied by 2 ships. In the load/unload operations the port can attend to 4 ships simultaneously and 4 more when new quay (now being built) is completed.
GENERAL: Tank cleaning and well cleaning must be done 5 miles leeward of port. Explosive cargoes may be unloaded if written authorisation is obtained.
DEVELOPMENTS: Terminal quay of 900 ft. long is now being built.

SHIPMASTER'S REPORT: July 1986.
Anchorage: Approximately 1.2 miles, 280° from the Cape in front of the hotel.
Approaches to the Berth: No difficulties encountered.
Immobilisation of Engines: Permitted.
Brief Description of Berth: Conventional buoy mooring.
4 buoy berth.
3 buoys astern and 1 port side ahead.
Both anchors to be used.
Starboard anchor 8 to 9 shackles and port anchor approximately 6 shackles in the water.
2 lines to each buoy. The 2 headlines and the first line aft (centre buoy) to be long and of good quality.
Maximum draft 12.0 m. to 12.5 m. and this making allowance for swell as the minimum depth of water in the area of the stern buoys is 15.2 m.
Charts: Approaches to Matarani and Ilo, U.S. chart No. 22182.
Peru Hidronav Chart No. 2359.
Tugs: None.
Berthing: Vessel to be moored in an S.E. direction.
Density: 1025.
Description of Shore Line System: Position of connections amidships on port side. 2×8 in. hoses available. Connecting and disconnecting of hoses is carried out by shore gang.
Maximum back pressure at the manifold allowed by Petroperu is 7.0 kg./sq.cm.
Discharge rate approximately 1,150 cu.m.p.h. Lines to be flushed with water after completion of discharge.
Availability of Bunkers, lubricants and water: None.
Availability of Provisions: Fresh vegetables and fruits in limited supplies.
Points of Interest: All documents, oil record books and cargo papers are checked very carefully by the Authorities.
Shore leave is possible by launch to Ilo port.

SHIPMASTER'S REPORT: April 1988.
We berthed at night without problems, but the buoys are unlit and the mooring boat had no searchlight. Bridge wing projectors or the Suez light would assist in securing lines to the mooring buoys. These are fitted with hooks and lashings are not used.
Following moorings were used:
Starboard Anchor – 6 shackles.
Port Anchor – 3 shackles.
2 lines to port head buoy (60 m.).
2 lines to port quarter buoy (60 m.)
2 lines to stern buoy (25 m.).
1 line to starboard quarter buoy (60 m.).
Ship's head in berth 237°. Depth in berth 20 m. aft, 23 m. forward.
2×8 in. hoses were connected on the port side.
The berth was well sheltered from South Easterlies by the headland, but quite open to the North and West.

AUTHORITY: Empresa Nacional de Puertos S.A. (ENAPU), Terminal Maritimo de Ilo, Calle Zepito s/n, Ilo, Peru. *Tel:* 781520. *FAX:* 781215.
Contact: Roberto Espinosa Espinosa, Manager.
Capitania de Puerto, Ilo, Peru. *Tel:* 781151. *FAX:* 781151.

LA PAMPILLA: 11.55 S. 77.09 W. (See Plan)

Tanker Buoy Berth about 30 miles North of Callao.
DOCUMENTS, ETC.: As for Callao.
Tankers calling at La Pampilla must first call at Callao Anchorage to be received and cleared by Authorities. Not necessary to call Callao after discharge as clearance simultaneous with reception.
PILOTAGE: Pilot boards vessel at Callao anchorage and either remains on board or returns by launch to take vessel out, as required by Master.
BERTHING: Vessels moor to buoys. 1 submarine line of 18 in. reduced to 10 in. at vessel's connection running 1,500 m. from shore opposite La Pampilla refinery. Max. size 200,000 d.w.t. or 250,000 d.w.t. with part load.
LAUNCH: Launch service between La Pampilla and Callao during vessel's stay in berth.
GENERAL: 2 Customs police and 2 refinery employees board at Callao and remain in vessel during discharge.

SHIPMASTER'S REPORT: December 1991.
The Oil Terminal consists of two moorings, one for products and the other for crude oil.
On arrival into Peruvian waters all merchant ships must send "Reporting Messages". Non-compliance can lead to fines and delay for the vessel. When clearing inwards, the Harbour Master's representative requires certified Xeroxed copies of these "Reporting Messages".
For Pilots and Clearance Inwards, vessels must proceed to Callao anchorage (about 10 nautical miles S.S.W. of La Pampilla), where after clearance, pilot boards and then proceeds to La Pampilla.
Considerable swell is experienced at moorings and the vessels head S.W'ly. The current is predominantly N.E'ly.
Position of Moorings:
No. 1 (Product): Lat. 11° 55.0′ S., Long. 77° 09.0′ W.
No. 2 (Crude Oil): Lat. 11° 55.9′ S., Long. 77° 11.2′ W.
When mooring at No. 2, both anchors are used. In addition there are four buoys aft and one buoy on the port bow to which mooring ropes are made fast (See "Plan"). The first lines out have to be doubled (two lengths joined together) and at least 2 ropes forward and 4 ropes aft should be doubled and ready.
There are 2 hoses (2×12 in.) at No. 2 made fast on the port manifold, which lead to a 34 in. submarine pipeline. Very little back pressure is experienced.
About 8 shore representatives have to be provided with meals during vessel's stay and three single cabins are also required. The shore personnel were very cooperative.
All services to vessel are from Callao and the boat ride is about 1 hour.
For departure from moorings, pilots come from Callao and require 12 hours accurate notice to arrange launch, etc. Pilot disembarks just off moorings.
Mooring and unmooring is possible 24 hours. No tugs are available.
Berth Particulars:

	Sea Berth No. 1	Sea Berth No. 2
Cargo Handled	Black and white products	Crude oil
Number of Sealines	2 (one black, one white)	1
Diameter of Sealine	16 in.	34 in.
Distance to Shore	1.5 km.	4.5 km.
Manifold Connection	2×8 in.	2×12 in.
Depth at Berth	53 ft. – 59 ft.	63 ft. – 64 ft.
Max. Draft	39 ft.	47 ft.
Max. d.w.t.	32,000	70,000
Berth Heading	–	210°
Max. LOA	700 ft.	930 ft.

MATARANI, including Mollendo: 17.00 S. 72.07 W. (See Plan)

Matarani is a berth port. Main activity: loading of minerals, wool, coffee, skins, tin-ingots, discharging general cargo. Matarani is an important transhipment port for cargo to and from Bolivia.
PILOTAGE: Compulsory.
RADIO: *Arrival Advice:* 24 hours' Notice of Arrival should be sent to the Captain of the Port and the Agent through Radio Station in Naval Station, frequencies as per Callao.
TUGS: 1×780 h.p., 1×690 h.p. and 1×800 h.p.
BERTHING: 1 quay with 4 berths. Length 540 m., width 20.15 m. Vessels of 570 ft. length can berth. Depth alongside 30 ft.
Berth 1A, 1B and 1C each 150 m. length. Berth 1D length presently 90.50 m., but being lengthened to 132.9 m. length.
CRANES: 5×10 tons, 4×6.25 tons and 1×20 tons lifting capacity.
MEDICAL: A hospital is available.
STEVEDORES: *Working Hours:* 0800–1200, 1300–1700, 1700–2400, 0000–0600 hrs.
9 gangs available of 15 men each.
TANKERS: Buoy Berth at Mollendo. See "Shipmaster's Reports".
FRESH WATER: Not available.
FUEL: Not available.
GENERAL: *Swell Period:* From June to August.
DEVELOPMENTS: A Ro/Ro berth is under construction at the Southern end of Muelle de Atraque.

SHIPMASTER'S REPORT: July 1986.
Berth: Mollendo – Conventional buoy mooring in Position Lat. 17° 02′ 18″ S., Long. 72° 00′ 19″ W.

Radio Advise prior to Arrival: In order to avoid heavy fines Master must send a cable or telex to Paita, Mollendo or Callao Radio Stations according to Peruvian Regulations (for details see "General" – before first Port).

Copies of these cables to be handed over to Harbour Master on arrival. It is difficult to contact the above mentioned station by telegraphy.

Telex is recommended. Callao/OBC3. Telex: 0036-26069PE Costcal. Mollendo/OBF4. Telex: 0036-59644PE Kececomo.

Documents: Original Cargo Manifests to be sent by Agency from loading port.

6 Crew Lists.
6 Personal Effects Lists.
6 Stores Lists.
6 Narcotic Lists.
6 Passengers to Disembark Lists.
6 Passenger Lists.
6 Passengers in Transit Lists.
6 Animal Lists.
6 Mail Lists.
1 Vaccination List.
1 Maritime Declaration of Health.

Pilot: Compulsory. All Pilots for tankers calling Peruvian ports are situated in Callao. An accurate ETA to Callao Agent is very important in order to provide Pilots with sufficient time to fly to the appropriate Port of Call. Pilot boards approximately 1 mile off the berth.

Restrictions: Berth is closed during heavy swell. Berthing recommended during daylight only. Unberthing day and night.

Anchorage: Approximately 1 mile off the berth.

Approaches: No difficulties.

Immobilisation of Engines: Permitted.

Description of Berth:

Conventional buoy mooring.

4 buoy berth.

3 buoys astern and 1 port side ahead.

Both anchors to be used.

Starboard anchor approximately 8 shackles and port anchor approximately 6 shackles in the water.

2 lines for each buoy. The 2 headlines and the first line aft (centre buoy) to be long and of good quality.

Maximum draft approximately 16 m. This draft makes allowance for heavy swell as the depth of water is approximately 21 m.

Charts: Approaches to Matarani and Ilo U.S. Chart No. 22182.

Peru Hidronav No. 2337.

Tugs: None.

Berthing: Vessel to be moored in a S.E. direction.

Density: 1025.

Shore Line: Position of connections midships, port side. 2×8 in. hoses available.

Connecting and disconnecting of hoses is carried out by shore gang.

Maximum back pressure at the manifold allowed by Petroperu is 7.5 kg./sq.cm. Discharge rate approximately 930 cu.m.p.h.

Lines to be flushed with water after completion of discharge.

Bunkers, Lubricants, Water and Stores: None.

Tank Cleaning/Dirty Ballast Facilities: None.

Points of Interest: All documents, oil record books, and cargo papers are checked very carefully by the Authorities.

Shore leave possible by launch to Matarani.

SHIPMASTER'S REPORT: April 1988.

Berth: Mollendo.

We berthed at night and the same remarks apply (See "Ilo", Shipmaster's Report, dated April 1988) and are even more relevant. The mooring boat was a small, open, double ended fishing boat, not fitted with means for going astern. It is doubtful if this launch could handle mooring wires, since it can only handle one rope at a time. Mooring buoys are unlit and fitted with hooks. Lashings are not used.

The following mooring was used:

Starboard Anchor – 8 shackles.
Port Anchor – 7 shackles.
2 lines to port head buoy (80 m.).
2 lines to port quarter buoy (140 m.).
2 lines to stern buoy (100 m.).
1 line to starboard quarter buoy (140 m.).

Ship's head in berth 187°. Depth in berth 24 m. aft.

This is an open sea berth, subject to swell. Moorings are liable to chafe. 2×8 in. hoses were connected on the port side. We discharged Diesel No. 2, other grades handled are fuel oil, Jet, Mogas and gas oil.

Peruvian ports in general do not accept Crew Lists, etc., in English, the agent will provide the appropriate forms in Spanish.

The port officials board with the pilot.

PACASMAYO: 07.24 S. 79.35 W.

APPROACHES: Reference points are the lighthouse of Cruz Punta Pacasmayo with a range of 12 miles, and during the day the cylindrical tower of cement factory with a height of 50 m. situated in the S.E. of the bay. On the head of the quay there is also a small iron tower of 9 m. height with a permanent red light of 2 miles visibility. The quay is very old and only flat boats can moor.

PILOTAGE: The port has no Pilots as it is an open bay.

ANCHORAGE: To the South of an East-West line from the quay, as there are obstacles to the North.

MAX. SIZE: Wide anchorage without problems concerning length or breadth. Recommended draft 24 ft., but it is possible to find 6, 8 or 10 fathoms towards the West. Current from South to North at an average of 6 knots.

DOCUMENTS:

3 copies Voyage Log Extract.
2 originals and 5 copies of Entry/Exit Declaration, endorsed by Consul.
8 copies of Passenger Lists for the Port.
8 copies of Transit Passenger List.
4 copies of Stores List.
4 copies of Personal Belongings Manifest.
13 copies of Cargo Manifest.
1 Maritime Health Declaration.
2 Crew Lists.
1 Vaccination List.

When this is the first Peruvian port, Gross Tonnage Certificates.

When having cargo for the port, Statement of Cargo, endorsed by Consul.

When Pacasmayo is the first or last port called, Lists or Manifests of Cargo in Transit (2 copies each).

Also see "General" before first port.

HEALTH: Sanitary control is carried out by the health doctor who comes on board with port officials. Normally, Masters notify any suspected illness or any other information by telegraph.

TUGS: They only bring in or take out flat bottomed barges to the vessel once the vessel is anchored.

BERTHING: Vessels anchor in open bay. There is an Iron Quay for the use of barges, length 533 m., width 10 m., depth at West end 3 m.

LIGHTERS: 9 lighters with a total capacity of 400 tons.

CRANES: 1×1 tons, 2×3 tons.

STEVEDORES: Agents order the number of gangs required. These gangs work at a tariff hour/ton and the amount is controlled by the Port Captain. The number of gangs (9 men each) depends on loading/discharging speed required and on the number of holds and winches available. For overtime rates see "Pimentel".

MEDICAL: Can be provided by Centro Preventivo del Area de Salud or by Hospital Regional de Chepen, 35 km. from port (150 beds).

DENSITY: Salt water.

FRESH WATER: Not available.

FUEL: Not available.

CONSULS: There are no Consuls in the port.

REPAIRS: There is a small workshop in the port for minor repairs such as soldering, etc. There is no foundry.

DRY DOCKS: Nearest at Callao.

OPENING/CLOSING HATCHES: Carried out by the stevedores.

SHIP CERTIFICATES: Derat or Fumigation Certificate; Vaccination Certificates for Crew and Passengers; Tonnage Certificate when coming from abroad.

CUSTOMS ALLOWANCES: Only tobacco, wines, spirits required for normal consumption, which must be included in vessel's Stores List.

CARGO GEAR: Ship's gear used.

REPATRIATION: Members of crew and passengers can be repatriated subject to Port Authorities' permission and passport control.

AIRPORT: There is a small emergency airport 2 km. from the port where planes can land.

TIME: GMT minus 5 hours.

HOLIDAYS: Holidays have been restricted. The national official holidays are: 27th and 28th July (National Independence Days); 1st January (New Year); 25th December (Religious Fete); Maundy Thursday and Good Friday; variable days and 1st May (Workers' Day).

POLICE/AMBULANCE/FIRE: Police 2126; Ambulance 2225; Fire 2081.

TELEPHONES: It is not possible to install telephones on board. Communication by walkie-talkie radio.

SERVICES: There is no tank-cleaning equipment and the discharge of tank washing and any other kind of garbage is forbidden, as the bay is a bathing area.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Not required unless leaving the vessel.

DELAYS: The vessel is anchored on arrival. Delays can occur due to heavy sea or rain in case of cement loading.

GENERAL: Fresh and dry provisions can be supplied, such as meat, poultry, vegetables and fruits.

DEVELOPMENTS: When the mines of Micchiquillay (copper) start working, the loading capacity of the port has to be 100,000 tons per month. Consequently it is planned to build a quay for minerals or a floating island 6 miles from the port for loading raw materials by pipelines.

AUTHORITY: Captain of the Port.

PAITA: 05.05 S. 81.07 W. (See Plan)

DOCUMENTS:

5 Copies Peruvian "Declaracion de Entrada".
13 Crew Lists.
5 Cargo Manifests, from each port where cargo loaded, or negative.
5 Copies of each Bill of Lading.
3 Personal Effects Lists.
13 Stores Lists.
1 Tonnage Certificate from first and last port.
1 International Maritime Health Certificate.
13 Passenger Lists, disembarking, or negative.
13 Passenger Lists, in transit, or negative.
1 Clearance from last port.
1 Sealed envelope from Peruvian Consulate addressed to Customs.
(Documents should be visaed by Peruvian Consulate.)

Also see "General" before first port.

PILOTAGE: Compulsory. There are two Pilots, on 24 hour service. Arranged by Agent. The boat is an old disembarking launch, hoisting blue flag with a white "P" Pilot will board at anchorage after Free Pratique has been granted by Port Captain and Health Authorities.
ANCHORAGE: Recommended in Lat. 5° 03.5′ S., Long. 81° 06′ W.
RESTRICTIONS: Draft restricted to 31 ft. at low water.
MAX. SIZE: Length and breadth practically unlimited.
HEALTH: Agent will notify Health Authorities about the vessel's arrival.
RADIO: Recommended Balboa Radio.
Arrival Notice: 24 hours' Notice of Arrival should be sent to the Captain of the Port and Agent.
VHF: Pilots on Channel 16, working on Channel 14.
TUGS: 1 tug of 850 h.p., 1 tug 360 h.p. and one launch 60 h.p. used by the Pilot.
BERTHING: One finger pier, length 475 m. width 36 ft. Four berths available, depths are as follows:

No. 1A (North-West Berth)	32.0 ft.
1B (North-East Berth)	32.0 ft.
1C (South-West Berth)	23.8 ft.
1D (South-East Berth)	22.9 ft.

A safety margin of 3 ft. should be observed. It is advisable to request (from Pilot) Berths "B" or "D", if empty, due to the prevailing winds. The berths have good fenders.

Cranes with capacity of 25,000, 15,000 and 10,000 lbs. available.
STEVEDORES: Arranged by Agent at 24 hours' notice.
Working Hours: 0800 – 1200, 1300 – 1700, 1700 – 2400 and 0000 – 0700 hrs.
Night Work: Possible, as long as it is ordered in plenty of time.
10 gangs of 9 men each available per shift.
MEDICAL: There is a local hospital with all facilities.
TANKERS: There are 4 mooring buoys 0.25 m. East of the finger pier. Facility is the property of Petroperu. Oil loaded and discharged by submarine pipeline.
DENSITY: 1030.
FRESH WATER: Not available.
FUEL: Not available.
FIRE PRECAUTIONS: Port Authority fire equipment stationed at the end of the pier.
CONSULS: Ecuador.
REPAIRS: No facilities.
STORES: Fresh provisions available.
GANGWAY/DECK WATCHMEN: Available on request.
CERTIFICATES: Not requested.
CUSTOMS ALLOWANCES: Two cartons and one bottle per person.
CARGO GEAR: No additional requirements.
REPATRIATION: Allowed on request to the Port Captain.
AIRPORT: Piura Airport 55 km. with domestic flights to Lima International Airport.
HOLIDAYS: 1st May only.
IDENTIFICATION CARDS: Not required.
GENERAL: Painting and chipping ship's side restricted. Very strict concerning rat-guards, disposal of garbage, etc.
AUTHORITY: Captain del Puerto.

PIMENTEL: 06.50 S. 79.56 W. (See Plan)

Pimentel is an unprotected open road port, loading/discharging only from/into lighters. Clearance is possible day and night, including Sunday and holidays, but of course with overtime additional. Main activity: Sugar export, import of fertilisers and general cargo.
PILOTAGE: Not available.
ANCHORAGES: Vessels usually anchor about 1.5 miles off the Pier Head in 7 – 8 fathoms.
RADIO: *Arrival Notice:* 24 hours' Notice of Arrival should be sent to the Captain of the Port and the Agent.
TUGS: 2×82 h.p., 2×120 h.p. and 2×134 h.p.
LIGHTERS: 15 lighters with a total capacity of 1,170 tons.
CRANES: On the mole there are 3 diesel cranes each 3 ton capacity, 3 steam cranes with 4, 6 and 15 ton capacity. Maximum dimensions of cargo handled 27 ft. (length)×15 ft. (wide)×21 ft. (height).
STEVEDORES: *Working Hours:* 0700 – 1100 and 1300 – 1700 hrs. Overtime (plus 100%) 1100 – 1300 and 1700 – 2400 hrs. Overtime (plus 200%) 0000 – 0700 hrs.

On Sundays and holidays an additional 100% to the above-mentioned tariffs.
MEDICAL: There is a hospital at Chiclayo 15 km. from the port.
TANKERS: *Submarine Pipe-line:* Diameter 8 in. max. draft 18 ft. 1 pipeline for clean products and 1 for dirty products. Length of pipeline 1,770 m.
FRESH WATER: Not available.
FUEL: Not available.
CONSULS: Vice-Consul of the Netherlands.
SURVEYOR: Mr. Manuel S. Reyes H., sub-agent of Lloyd's of London.
GENERAL: *Swell Periods:* Pimentel being an unprotected open road port it frequently occurs that the port has to be closed due to heavy swell. The swell comes up suddenly and is not subject to any specific period, but it occurs more frequently during June-September and the Easter week.

PUERTO BAYOVAR: 05.47 S. 81.03 W. (See Plan)

SHIPMASTER'S REPORT: December 1985.

Puerto Bayovar is operated by both, Petroleos Del Peru (PETRO-PERU) and Empresa Nacional de Puertos S. A. (ENAPU). No breakwater as is a natural sheltered harbour. However, there is a constant mild swell which causes the vessel to gently surge continuously at the berth. The current is mild and at the berth flows in a direction of about 300°. The port consists of a jetty, shore tanks and the main office building. There are no facilities of any kind nearby. The nearest town is Piura, which is 125 km. away (2 hours by car).

The port has 15 steel tanks to store approximately 1,700,000 barrels of crude. In addition there is a basin with 50,000 tonnes capacity for dirty ballast.

All the surrounding land is barren and dusty, and according to the Pilot there is negligible rainfall throughout the year.

Except for the Saybolt Inspector, nobody else speaks passable English. However, they understand all the technical terms and loading was not a problem. They keep a strict log of all timings and every small detail is put in the Time Sheet.
DOCUMENTS:
4 copies General Statement (these will be made out by the Agent after he boards along with the Authorities).
5 copies Cargo Manifest. If none then "Nil" lists.
5 copies Cargo Transit Manifest. If none then "Nil" lists.
10 copies Crew List.
10 copies Passenger List.
10 copies Crew Declaration.
10 copies Ship's Stores List.
10 copies Accompanied/unaccompanied Baggage Lists. If none then "Nil" lists.
In addition the vessel must have ready:
Insurance Policy on Hull and Machinery.
Covering Contract of P & I.
Oil Record Book.
IMPORTANT: 1 copy of the statutory cables sent to the Direccion General de Capitanias y Guardacostas regards entering and plying within Peruvian waters. If these messages not sent, a fine of U.S. $1000 – 5000 is levied by the Peruvian Authorities.
See "General – Ship Reporting" before first port.
PILOTAGE: Pilotage is compulsory for berthing the vessel. However, pilotage is *not* compulsory for proceeding to the anchorage within the boarding area, or elsewhere. Frequently, when sending the ETA messages by cable to the Harbour Authorities they assume that a pilot is required to anchor the vessel. This implies an extra charge of U.S.$1000. Since the anchoring is straightforward, a Pilot is not necessary, and the Master should specifically state that a Pilot is not required if the vessel is to proceed to anchor. Also, the Master must refrain from asking any information about pilotage in his ETA messages. When berthing the Pilot will board within the boarding area.
ANCHORAGE:
Boarding Area: There is a boarding area bounded by the following co-ordinates:

Latitude (South)	Longitude (West)
5° 46′ 08″	81° 00′ 54″
5° 45′ 43″	81° 00′ 54″
5° 45′ 43″	81° 01′ 24″
5° 46′ 08″	81° 01′ 24″

The vessel must be within these co-ordinates for the Harbour Authorities to board and clear the vessel. If vessel is asked to anchor, it is better to anchor directly in the boarding area.

The depth in the boarding area is approximately 26 m., rocky bottom. We used 7 shackles on deck to be safe. The wind sometimes worked up to Force 4 – 5, but, coming from land, caused no heavy swell.
MAX. SIZE: 250,000 d.w.t. Max. LOA 400 m. Max. draft 21.95 m. No limit on beam. No restriction as to minimum size of vessel.
HEALTH: Authorities board at the anchorage.
RADIO: We sent our ETAs to our Agent and asked them to inform all parties, which they did.
TUGS: 3 Tugs available. 'Oro Negro' and 'Bappo' 1,852 h.p. and 'Corvina' 150 h.p.
BERTHING: *Mooring:* Vessels are always moored port side to, except in extreme cases. Reason is that after being loaded it is very difficult to turn the vessel because of the tugs power, wind and current.

Tugs made fast were 'Corvina' on starboard bow, and 'Oro Negro' on starboard quarter, one ship's line to each tug. The forward tug was ineffective.
Note: The tugs cause considerable pollution around the vessel and it is good to bring this to the notice of the Terminal if the vessel is to avoid difficulties later on.

When 100 m. off the berth, starboard anchor was let go to 2 shackles on deck and then paid out as necessary while coming alongside until 5 shackles on deck. After letting go anchor, the tugs will then push the vessel gently onto the berth. As it was a calm day, mooring was easy, but according to the Pilot, when the wind blows (mostly from a direction of 170° – 140°), it builds up the current in the same direction which sets the ship's stern onto the berth. Pilot wanted the mooring arrangement as 2 head/stern lines, 2 breast and 2 springs, but we changed it to 3/3/2, due to the constant movement of the vessel at the berth. Moorings have to be regularly tended. First ropes sent out are 2 breast ropes each forward and aft.
Berth: There is only one berth. It is a "T" shape with the manifold at the head and 8 platforms (4 on each side) along the arms. When the ship is moored she will head in a direction of 322°. There are quick-release hooks on each platform, and also an electric capstan on each. The fenders are good and keep the vessel 2 m. off the pier. There are 4 loading arms, they are modern Chicksan hydraulic type. No ships derricks are required. Due to a constant mild swell, the ship continually

surges gently at the berth. The pier is provided with an elevator-type gangway and also an MOT ladder. We used the MOT ladder for fear of damaging the other which was previously damaged by another vessel and took a long time to repair.

LOADING: *Cargo:* There is only one type of cargo exported which is Loreto Crude.

Source: Received through a pipeline 825 km. long, into the shore tanks on top of the hill next to the jetty.

Loading Rate: Loading rate through each of the 4 loading arms is 25,000 bbls.p.h., making a total capacity of 100,000 bbls.p.h. However usually only 2 – 3 arms are connected.

Method: Loading is by gravity only, from the shore tanks. The rate is readily adjusted to suit the vessel's requirements.

Flanges: Flange sizes are 16 in. diameter.

API: Varies between 22 – 24. Very occasionally API 21. We loaded API 23.4.

Load Temperature: Varies around 84°F.

B S & W: 0.2%

Flash Point: +15°C

Pour Point: −5°C

After cargo is loaded, there is a usual delay for inspection, calculations and waiting for shore papers to arrive, amounting to 5 hours. Thereafter 1 long blast is given on the ship's whistle to call the Pilot and the tugs.

BALLAST: Dirty ballast facilities available.

MEDICAL: There is a First Aid post only. All hospitalisation and other cases must be sent to Piura.

DENSITY: Sea Water, 1025.

FRESH WATER: Not available.

GANGWAY/DECK WATCHMEN: See "General-Security".

REPATRIATION: *Transportation/Repatriation:* Agent must be given advance notice so as to arrange car/bus to come from Piura to pick-up personnel. Takes about 2 hours. There is a daily flight from Piura/Lima which takes about 1.5 hours.

Charges for transportation to Piura are as follows:

1 car for 5 passengers approx. U.S.$80.00
1 bus for 12 passengers approx. U.S.$150.00
Waiting period per hour approx. U.S.$6.00

Agent said these charges were for a round trip, but cannot be sure.

Agents report that they have carried out quite a few crew changes successfully, but advance notice must be given.

AIRPORT: At Piura, distance 125 km.

GENERAL: *Security:* No one except the terminal representatives must be allowed on board. Keep all unused accommodation and stores doors locked. Absolutely no one must be allowed to stroll around in the accommodation, especially at night, no matter what their excuse. Only 1 shore guard may be allowed on board and he must be kept at the gangway. During our stay, at night, while the Master was on deck attending to problems, 3 guards entered his cabin. 2 guards kept a lookout while the 3rd guard was rummaging through the drawers. They were caught by surprise and taken to a room and searched. After that they were made to leave the ship. No case was made.

Note: Nobody boards the vessel while at anchor.

Cash: As much advance notice as possible required. 2% will be deducted from the amount to be delivered to cover special insurance for theft, assault, etc.

Fresh Provisions: Restricted quantities available from Piura, but Agent must have as much advance notice as possible.

Sea Water Temperature: Just prior to arrival the sea water temperature was 26°C. After anchoring, and throughout our stay the temperature was around 18°C – 19°C.

Agent: Our Agents were extremely helpful, and very prompt in their telex replies.

Fines:

1. If vessel comes alongside pier without previously informing the Port Authority of having Dangerous cargo aboard U.S.$2,000.
2. If vessel does not immediately inform the Port Authority of any emergency on board the vessel U.S.$500.
3. If vessel discharges any bilge water U.S.$1,000.
4. If vessel throws any garbage overside, in each case U.S.$500.
5. If vessel discharges water onto the pier U.S.$500.
6. If vessel discharges water onto any warehouse U.S.$500.
7. If any repairs carried out which immobilise the vessel U.S.$1,000.
8. If vessel berths, unberths, shifts or comes alongside another vessel without Pilot's assistance, in each case U.S.$500.
9. If vessel uses welding machines on deck, paints or scrapes hull without Port Authorities' permission U.S.$500.
10. If vessel does not have rat-guards on each line, for each unguarded line per day U.S.$20.
11. If vessel does not have 1 man constantly at duty to attend to any emergency on board U.S.$100.
12. If vessel's auxiliary pumping equipment not functioning U.S.$150.
13. If vessel does not have cargo protection nets during loading or unloading, for each net not rigged per day U.S.$20.
14. If vessel's Master sets aside the Pilot's assistance in spite of the Pilot being on board U.S.$500.
15. If vessel's anchoring system is not working U.S.$200.
16. If vessel's fire-fighting equipment is not working U.S.$250.
17. If unused anchors are not housed during loading or unloading of inflammable cargoes in bulk U.S.$70.
18. For pollution of pier or water with funnel soot U.S.$200.

PUERTO CHICAMA: 07.42 S. 79.26 W.

Puerto Chicama is about 295 miles North of Callao. Fishmeal is loaded from lighters in an open roadstead.

PILOTAGE: Not available.

ANCHORAGE: Vessels anchor about one mile from the Mole.

RADIO: *Arrival Advice:* Advise general Agents in Lima who will telephone Port Agents.

TUGS: 3 tugs available, 1 of 65 tons and 2 of 80 tons each.

BERTHING: 1 Pier, length 324 m.

LIGHTERS: 20 lighters with a total capacity of 1,000 tons.

CRANES: 4 cranes, 2 of 2 tons, 1 of 4 tons and 1 of 6 tons.

STEVEDORES: Working hours are from 0700 – 2400 hrs. These hours may be exceeded to complete loading. Five gangs of 9 men are available.

FRESH WATER: Not available.

FUEL: Not available.

GENERAL: *Swell Period:* During the months of June, July and August.

SALAVERRY: 08.13 S. 78.59 W. (See Plan)

DOCUMENTS: See "Callao".

PILOTAGE: Compulsory.

RESTRICTIONS: Harbour entrance is sand and liable to silting. Advisable to check draft requirements in advance, as depths are subject to latest dredging. Designed depths: Entrance channel 11.0 m. Basin 10.0 m. Berths 11.0 m.

MAX. SIZE: Approx. 25,000 d.w.t. with up to 29 ft. draft. Draft varies greatly and quickly due to heavy constant sanding, although dredging is practically continuous.

HEALTH: Cable Agent requesting Free Pratique. Agent must be notified in advance if disease suspected on board.

RADIO: *Arrival Advice:* 24 hours' Notice of Arrival should be sent to the Captain of the Port and the Agent.

TUGS: 4 tugs available, 1 each at 690 h.p., 190 h.p., 85 h.p. and 40 h.p.

BERTHING: *No. 1 Pier:* Length 225 m. Vessels able to berth both sides. Max. draft 28 ft. There are pipes installed for the discharge of liquids and loading of molasses and alcohol.

No. 2 Pier: Length 230 m. Vessels able to berth both sides. Max. draft 28 ft. This pier is specially for the loading of sugar in bulk, 2 loading bridges available, loading rate 300 tonnes/p.h. each.

CRANES: 1×22.68 tons, 1×13 tons, 2×6.25 tons and 1×4.5 tons.

STEVEDORES: *Working Hours:* 0700 – 2300 hrs. Sugar and molasses in bulk loaded 24 hours a day. 10 gangs available of 9 men each.

MEDICAL: At Trujillo, 15 km. from the port.

TANKERS: *Submarine Pipe-line:* Length 700 m., diameter of 10 in., depth 26 ft.

FRESH WATER: Not available.

FUEL: Not available.

CONSULS: Nearest at Callao/Lima.

REPAIRS: Workshops available.

GANGWAY/DECK WATCHMEN: Recommended.

CUSTOMS ALLOWANCES: Any amount held over normal consumption may result in Customs search being imposed.

HOLIDAYS: Only 1st May when work is not available.

IDENTIFICATION CARDS: Supplied by Agent and stamped by Immigration. Required for all crew members.

GENERAL: Due to constant swell and undertow which, during Winter months, May/September, may even close port, it is recommended vessel moor with greatest possible number of synthetic lines which must be constantly adjusted, otherwise usual line breakage will increase.

SAN NICOLAS: 15.14 S. 75.14 W. (See Plan)

LOCATION: The port of San Nicolas Bay is located between the parallels of 15° 09′ 30″ S. and 15° 14′ 30″ S.

The harbour and its approach were surveyed in 1987 by the Peruvian Navy Hydrographic Office. The following Peruvian charts were revised that year: Chart No. 2218, shows the San Juan and San Nicolas Bay, Chart No. 2219 shows the Southern section and pier area of San Juan Bay and Chart No. 2220 shows the Southern section and the pier area of San Nicolas Bay.

A vessel is considered to be an "arrived vessel" when, after entering San Nicolas Bay, she has arrived at pilot station (1 mile North of Pier Head).

DOCUMENTS:

Port Authorities Inspection: As the Peruvian regulations indicate, the Master of the vessel should receive the Harbour Master on deck (by accommodation ladder) when anchored. If the vessel is under way or manoeuvring, the Chief Officer or 2nd Officer should receive the Harbour Master on deck. Nonfulfillment of this rule will cause fines of about U.S.$1,000.

Official hours for port officials are from 0700 hrs. – 1100 hrs. and from 1300 hrs. – 1800 hrs., Monday to Friday. Upon request Port Officials will board vessels at any time, day or night, Sundays and holidays included.

Reception official hours are 0700 hrs. – 1100 hrs. and 1300 hrs. – 1800 hrs., Monday to Friday. Upon request, reception is carried out at any time, day or night, Sundays and holidays included. Authorities overtime fee is about U.S.$2,500 for a vessel of 60,000 g.r.t.

Masters must be sure to get the corresponding clearance from the previous port and complete the official forms provided by the Agent.

If the vessel has no forms on board, they will be completed after arrival, an extra set of forms will be provided by the agent prior to departure for the next voyage.

Controls are very strict and any attempt to smuggle goods is heavily fined, the same applies for any breach of the port regulations, which are internationally known, such as anti-pollution measures, use of radio while anchored, bad behaviour of crew members, etc.

Normally, you can change foreign currency in local banks. Any crew member or passenger going ashore with foreign currency should change money at the bank. There is no strict regulation as there was previously. In the interest of security it is better to change currency at a bank or at the Agency office. The Agency will help the Master with any Peruvian cash advances he may require, or will direct the crew member's through proper channels to local banks but, in case of emergency, be sure that the currency is being changed in a reliable place.

The following documents should be available for inspection:

Vessel's Certificates.
Clearance from Last Port of Call,
Valid fumigation or Exemption Certificate.
Crew's identity documents.
International Vaccination Certificates of all persons on board.
International Oil Pollution Prevention Certificate.
Oil Record Book, fully up to date.

This book must be strictly completed according to Marpol 73/78 (Annex I, Chapter II, Regulation 9 and 20). If vessel is other than a tanker, she must record code letter and item number in the Oil Record Book Part – Machinery Space Operations (instructions for all ships). If your vessel is a combined carrier, i.e. O/O or OBO type vessel, in addition to Part I she must also record code letter and item number in Oil Record Book Part II – Cargo/Ballast operations (additional instructions for oil tanker) when such cargo/ballast operations have been carried out.

All operations must be recorded continuously, so do not leave empty spaces between any two operations recorded. Vessel should also keep on board the last Oil Record Book with operations. When incorrect data is found, vessel will be subject to very severe fines.

Sewage Treatment Plant Certificate and/or latest report of inspections.
International Tonnage Certificate.
P & I Policy Number.
Hull and Machinery Policy Number.
The following completed forms:
2 copies Health Declaration*.
5 copies General Declaration*.
5 copies Cargo Manifest*.
5 copies Manifest Cargo in Transit.
6 copies Crew List*.
6 copies Passenger List*.
5 copies Passenger's Effects Declaration.
4 copies Stores Declaration.
4 copies Crew's Effects Declaration.
2 copies Postage Manifest.
List of Ports of Call in last 4 months.
* Forms supplied by Agent.

PILOTAGE: Pilotage is compulsory for berthing and unberthing. When approaching the pier, the docking speed should not be more than 50 cm. per second, or about 1 knot. Vessel will not proceed to the pier until permission to berth has been granted.

While loading or during periods of heavy swells and surge, a Pilot will be on board permanently. Masters are requested to make arrangements and facilities available.

Upon arrival in port, vessels must wait for Pilot. The starboard accommodation ladder must be rigged for Port Officials and Agency representatives. Ships approaching San Nicolas must fly their national, Peruvian, call letters and quarantine flags. If vessel is carrying any type of explosive material, she must fly "B" flag.

ARRIVAL ADVICE: All vessels proceeding to San Nicolas Port will telex to Empresa Minera del Hierro del Peru, Telex: 20005PE Hierrope; and Agentes Navieros San Nicolas, S.A., Telex: 21410PE Agnav; her ETA, 5 days, 48 hours and 24 hours prior to arrival.

When vessels are within or outside the 200 miles of jurisdictional Peruvian waters, they have to contact Paita (OBY2), Callao (OBC3), or Mollendo (OBF4) coastal stations, in order to transmit their messages; a Pre-Stowage Hatch List has to be transmitted to Agnav giving tonnage per hatch and loading sequence.

Berthing instructions and other messages from port Agent at San Nicolas will be transmitted by the above coastal stations.

The port Agency is Agentes Navieros San Nicolas, S.A., Telex: 21410PE.

Changes in ETA should be transmitted as soon as possible.

Vessels can get in contact by VHF communication system (Channel 16) 4 hours before arrival at San Nicolas by calling Agnav.

Also see "Radio" and "General" before first port.

BREAKWATER: A 808.6 m. (2,653 ft.) long breakwater has been built in order to reduce the effects of the swell alongside the pier. The breakwater is at the West side of the pier 800 m. off and does not run parallel to the pier, but at a N. 36° 35′ 28″ E. angle. The North end of the breakwater is 435.84 m. (1,430 ft.) from the North end of the dolphin, but the perpendicular distance from the pier to the closest point of the breakwater is only 322.22 m. (1,090 ft.)

At the North end of the breakwater there is a light with the following characteristics: Fixed red light, visible 3 miles.

AIDS TO NAVIGATION:

(a) San Juan Lighthouse, located on Pt. San Juan, Lat. 15° 21′ 27.2″ S., Long. 75° 10′ 49.1″ W. Characteristics: 2 W.Fl. ev. 22.5 secs. light 0.4 secs. eclipse 3.6 secs. light 0.4 secs. eclipse 18.1 secs. Height of light above sea level 85.03 m. vis. 22 miles. Sector illuminated 360°. Type of building: Circular concrete tower, white.

(b) San Nicolas Lighthouse, located on Pt. San Nicolas in Lat. 15° 15′ 11.0″ S., Long. 75° 15′ 20.6″ W. Characteristics: 1 W.Fl. ev. 4 secs. Height of light above sea level 58.60 m. vis. 20 nautical miles. Sector illuminated 360°. Type of building: Square steel and plastic tower, painted 2 black stripes and 2 white stripes.

(c) Fixed red light, vis. 3 nautical miles, located at the North end of the breakwater.

(d) Fixed red light, vis. 3 nautical miles, located on the head of San Nicolas Pier.

(e) Fixed green light located at the South end of the pier, used as a leading light for berthing purposes.

(f) Around the dolphin which is North of the pier head, there are 9 red lights, 3.048 m. (10 ft.) above the water level and lower than the dolphin deck, visible only from 1 mile distance.

(g) There is a radio beacon located at Lat. 15° 21′ 27″ S., Long. 75° 10′ 09″ W., transmitting on 395 kHz – 24 hours and signal letters SJN.

(h) In position Lat. 15° 14′ 36.5″ S., Long. 75° 14′ 08.5″ W. exists a luminous buoy with following characteristics: 1 white flash ev. 4 secs. (light 0.4 secs. eclipse 3.6 secs). Sector illuminated 360° vis. 3 miles. Height 1.52 m. (5 ft.).

ANCHORAGES: The anchorage areas recommended for vessels waiting for berth are:

(1) Lat. 15° 14′ 00″ S., Long. 75° 14′ 00″ W.
(2) Lat. 15° 13′ 52″ S., Long. 75° 14′ 29″ W.
(3) Lat. 15° 13′ 31″ S., Long. 75° 14′ 07.5″ W.
(4) Lat. 15° 13′ 23″ S., Long. 75° 14′ 38″ W. (only for vessels having dangerous cargo on board).

When anchoring, it is essential to leave sufficient sea room, about 0.75 miles for ships to manoeuvre in and near the berth.

Wreck of M/S *Templar* lies in position: Lat. 15° 13′ 27″ S., Long. 75° 15′ 01″ W., or 341° from the pier head, distance 1.6 nautical miles. The obstruction lies in approximately 150 ft. of water. Clearance above the obstruction is 18.29 ft. (60 ft.). Do not anchor in the vicinity of the wreck.

MAX. SIZE: The following are the maximum permissible vessel's characteristics at the Hierro-Peru – San Nicolas Loading Pier:

LOA – 320.02 m. (1,050 ft.)
Max. beam – 49 m. – 53 m. (161 ft. – 174 ft.) if it is previously co-ordinated.
Max. draft – 17.98 m. (59 ft.)
Max. airdraft – 12.26 m. (40 ft. 3 in.)

Loading boom belt speed has been increased and maximum beam approved is 53.0 m. if it is previously co-ordinated. Also LOA has been increased to 335 m., provided maximum distance from bow to aft end of last hatch coaming is no more than 266 m. Vessels whose distance from port side hull to port side hatch coaming is greater than 16.76 m. (55 ft.), previous co-ordination will be required to see if it may load.

General Arrangement Plan must be submitted well in advance, indicating measurements of the hatches and clear height at loading draft.

RADIO: Coast Radio Station "OAS" is located in port of San Juan and serves both San Juan and San Nicolas. This station listens on 500 kHz, 1200 – 2200 hrs. GMT each day. It handles traffic on 410, 425, 444, 448, 454, 468, and 480 kHz.

There is a new transmitter with the following frequencies schedule:

8,680 kHz – 1600 – 1630; 2000 – 2030 hrs. GMT
16,978 kHz – 1330 – 1400; 1630 – 1655; 2100 – 2200 hrs. GMT

TUGS: 2 small tugs available at 300 h.p. each

BERTHING: *Pier and Mooring Facilities:* The pier is located at the South side of the bay and is built in a North-South direction. It is constructed of pre-stressed concrete and steel tubes with deck 304.79 m. (1,000 ft.) long and 15.24 m. (50 ft.) wide. The deck is 3.43 m. (11 ft. 3 in.) above MLW.

At the pier head, a 15.24 m. (50 ft.) diameter mooring dolphin has been constructed to make fast the stern lines of any vessel bigger than 274.31 m. (900 ft). overall length. Distance from Northern end of pier to Northern end of dolphin 60.35 m. (198 ft.)

There are 3 big bollards, 2 pelican hooks and an electric winch to make fast the stern lines. There is also a connecting bridge from the pier to the dolphin, which is 45.11 m. (148 ft.) long.

There is a fendering system on both sides of the pier consisting of wood pilings and a continuous rail of laminated lumber and rubber cylinders which keep vessels 1.52 m. (5 ft.) from the concrete pier. On the West side of the pier (ore-loading side) there are 28 mooring cleats, 12 bollards and 3 double mooring bitts. At the centre of the pier-head there is one bollard. On the East side of the pier there are 23 cleats, 2 bollards and one double mooring bitt.

The depth of the loading berth at the West side of the pier is 18.9 m. (62 ft.) alongside the pier and up 91.44 m. (300 ft.) Westward from the pier fender, except in the place known as "anchor pocket" which is located between the pier-head and the dolphin. The anchor pocket is 21.33 m. (70 ft.) deep, 76.20 m. (250 ft.) long and 91.44 m. (300 ft.) wide. When docking the 2 anchors are let go in that pocket where enough water exists to prevent any collision of the ship with her own anchors when she is fully loaded.

The East side of the pier still has the original depth, which is 12.5 m.

The bottom alongside is mud and sand. The ore ship loader has a pier straddle clearance height of 4.27 m. (14 ft.) and width of 3.66 m. (12 ft.) when the gantry is positioned inshore thus restricting the size of cargo parcels placed on the pier.

Berthing and Mooring: Vessels calling at San Nicolas for the discharging of general cargo must berth on the East side of the pier with the starboard side of the ship to the pier.

Ore vessels berth at the West side of the pier. Wires are not permitted as moorings to the pier except when attached to tension winches.

VERY IMPORTANT: While vessels are alongside the pier, engines must be ready for immediate use. Sufficient crew must be on deck at all times to tend mooring lines and heave in the slack as loading progresses. Failure to do so may result in a stoppage of loading and the vessel being moved out from the berth.

LOADING: Prior to commencement of loading the Master or Chief Officer will deliver to the Port Agent a pre-stowage plan with the following information:

Total cargo required, calculated tonnage per hatch, sequence of loading, fuel on board, water and stores on board in long tons, and calculated draft and trim upon completion of loading.

Loading is generally carried out at a rate of about 4,000 long tons per hour, depending on cargo type and size.

Tonnage on board at any stage of the loading is available from the Loading Master, or at the scale house at the upper end of the pier. In order to avoid last minute delays, it is very important that a constant check be made of vessel's draft, ballast left to discharge and cargo on board during the entire loading.

Any change in tonnage of cargo required must be reported to the Port Agent or Loading Master not later than when there is approximately 2,000 long tons remaining for completion of loading, and always in writing.

It is convenient to check drafts, ballast and tonnage of cargo on board each time the loading gantry shifts from one hatch to the next.

While loading is actually in progress in a hatch, no loading interruptions are permitted, except in case of emergency. At the termination of each pouring, a slip stating cargo loaded and draft readings, will be delivered to the Chief Officer.

It should be remembered that cargo is spout trimmed only.

No trimmers/bulldozers are available at San Nicolas.

Vessels will depart from the pier immediately upon completion of loading.

The Pilot will take the vessel out from the berth. If the Master wants to anchor in San Nicolas Bay prior to proceeding to sea, he must advise the Pilot who will in turn advise suitable anchorage. The Master will advise the Pilot of the estimated time of departure in order that this may be reported to the Port Authority.

Delays of port operations, as well as delays of other vessels waiting to berth, caused by a vessel which for any reason is not prepared and able to move from the pier when so ordered by the Port Operator, *are chargeable to the vessel which causes the delay.*

Clearance papers, Bills of Lading, Statement of Facts and all necessary papers for clearance of the vessel will be delivered shortly after completion of loading. This can be accomplished while the vessel is being moved from the berth, or at anchor, *but never alongside the pier when other vessels are waiting for loading turn.*

CRANES: None.

STEVEDORES: *Working Hours:* 0800 – 1200, 1300 – 1700, 1800 – 2400, 0100 – 0700 hrs.

MEDICAL: Medical attention may be arranged through the port Agent's office. No person will be attended to unless he is provided with a letter from the Master authorising such treatment. All costs incurred will be for the vessel's account.

Send radio message advising how many people require medical attention in order to make proper appointments with doctors at San Juan Hospital. Otherwise the medical inspection will be very difficult.

TANKERS: On the West and East side piers there are 3 raisers to which 3×8 in. diameter hoses can be connected to a main pipeline of 16 in. diameter for the discharging of Bunker C. Flanges are U.S. Standard (ASA). Location on the pier is for midship connection on vessels.

Maximum pressure permissible is 125 p.s.i. and maximum temperature 135°F. The length of the 16 in. pipeline from the manifold on the pier to the storage tanks is 1475 m. (4,840 ft.).

There are 3 storage tanks of 7,000 bbls., 67,000 bbls. and 252,000 bbls. Total capacity 326,000 bbls. The height of the tanks above MLW is 43.28 m. (142 ft.) to the bottom and 57.91 m. (190 ft.) to the top of the tanks. The intakes to the tanks are at the top.

Diesel oil is discharged in San Nicolas.

There is a crew on the pier to sling the hoses; the vessel's crew is required to operate the winch, boom, hoist the hoses on board, and connect same to vessel's manifold.

BALLAST: Special attention is called to ballast requirements of vessels which do not need ballast in order to enter under the loading boom. Such vessels are required to carry sufficient ballast for safe handling during berthing. It is permissible to discharge clean ballast in the bay.

A ballast discharge rate of 4,000 long tons per hour is recommended. Any delay in loading operations due to slow deballasting, is not only on account of the vessel, but if any other vessel is waiting for loading turn, the vessel slowing down the loading process is liable to be undocked in order that the vessel waiting for turn to load may be docked. All time lost and expenses for undocking and redocking the vessel is for Owner's account.

FRESH WATER: Not available.

FUEL: Not available.

CONSULS: At Lima.

REPAIRS: Except in extreme emergency, ship repairs cannot be effected at this port.

GANGWAY/DECK WATCHMEN: Recommended by crewmen to prevent stowaways.

OPENING/CLOSING HATCHES: Stevedores/crew.

CARGO GEAR: The loading boom extends 18.29 m. (60 ft.) from face of pier fender, and can be retracted from this position to a minimum length of 9.45 m. (31 ft.). Gantry with loading boom is mobile. Range of its mobility is 272.56 m. (900 ft.) starting at a point 33.52 m. (110 ft.) from the head of the pier. Shifting of vessels during loading is therefore not required. When not loading, the gantry is parked at the inner end of the pier with its boom and the loading conveyor belt in a vertical position. In the most vertical position the boom has a clearance of about 1.22 m. (4 ft.) inside the face of the dock fender.

After the gantry has been moved into loading position, the boom is lowered to horizontal position. Height from water level to underside of boom is 12.5 m. (41 ft.).

Vessels must be ballasted so that height of any coaming or any other objects in the vicinity of the hatch where loading is to start will not exceed 12.25 m. (40 ft.) above waterline.

REPATRIATION: In cases where crew changes are to take place in San Nicolas, at least 7 days' advance cable notice is required to obtain the necessary Immigration Authorities' permission. The advance cable must set forth name, nationality and passport number. If the above is not complied with, crew changes cannot be carried out. The above applies also to passengers.

TELEPHONES: Available, Masters are able to communicate with any port in the world.

SHORE LEAVE: Shore leave may be granted at the Master's discretion. All crew members must possess gate passes before proceeding ashore. These must be shown to the Immigration Authorities when required. Peruvian laws and Immigration Regulations must be strictly adhered to in order to avoid unnecessary difficulties. Crew members are not permitted to travel 100 km. outside of San Nicolas – San Juan port areas without written authorisation or pass from the Master approved by Immigration Authorities.

IDENTIFICATION CARDS: Required (Seaman's Book or Passport). Also see "Shore Leave".

GARBAGE DISPOSAL: Not available.

WASTE OIL DISPOSAL: Not available.

SEAMAN'S CLUBS: None.

CURRENCY: Nuevos Sole.

WEATHER: There is generally a prevailing S.E. wind which may vary from a light breeze to a strong wind. The months of May, June, July, August and September are Winter months. Swell and surge are occasionally experienced in the port.

CONDITION OF CARGO HOLDS: Cargo holds must be properly cleaned. Special care must be taken when vessel, prior to her arrival at San Nicolas, has carried the following cargoes: Gypsum, phosphate, pyrite, coal, sulphur, silica, aluminium, sand, gravel or quartz, or any other ore containing arsenic, phosphorous, silica, aluminium or copper.

Prior to commencement of loading, cargo holds will be inspected by a Representative of the Shippers. Furthermore, Master is requested to present a list of cargoes loaded in the last 6 months.

MAIL: All mail received by the port Agent will be delivered to the vessel upon arrival. For quickest delivery, mail should be addressed as follows: c/o Agentes Navieros San Nicolas, S.A., Apartado 1229, Lima 1, Peru.

Officers or crew members should be advised that taxes could be charged by the Peruvian Customs Authorities, depending on the contents of parcels mailed to them at Peruvian ports. Outgoing ship and crew mail will be accepted ONLY directly from the Master. The vessel will be billed the corresponding amounts for postage.

GENERAL: It is forbidden to throw out garbage, debris or any kind of dirty ballast in the Bay.

It is forbidden to hunt seabirds; to throw out explosive material or to use any pyrotechnic object on board.

Vessels can do underwater work only with Port Captain's permission.

Emergency Signals: A number of short blasts on the whistle indicates an emergency. The whistle will not be used except for emergency in accordance with Peruvian regulations.

Provisions: Fresh provisions are available at San Juan and Nazca. Vessels may acquire provisions on shore by themselves, by advance written notice to the agent and the Customs House.

Stowaways: Unauthorised persons should not be allowed on board the vessel. Cases of attempted stowaways have occurred. Masters must take all necessary care and precautions to insure against unauthorised personnel being on board while in port.

Stowaways aboard on arrival should be reported to the Port Captain in order that the necessary steps be taken to prevent their unauthorised landing. It should be noted that all costs for the repatriation of stowaways is for account of the vessel concerned.

Crew Replacement/Deserters: Masters are requested to have ready identity documents and lists of personal effects (in triplicate) prepared for delivery to Port Agent as soon as possible covering deserters and hospitalised crew members.

A letter of authorisation is required when the Port Agent is expected to provide hotel accommodation, meals, medical attention, transportation, travel expense, and/or cash advance to the disembarking crew for account of vessel.

No crew member may be paid off from a foreign vessel without prior permission from the Port Captain. Under Peruvian Law, Agents are responsible for repatriation of all foreign seamen left in Peru.

Authorisation for crew replacement requires at least 7 days' prior notification by radio/telex. The notification must provide names, passport number, age and nationality of persons to be embarked or disembarked.

Fumigation: Facilities are not available at this port.

Visitors: Visitors to vessels at San Nicolas may board only at the Master's request, who will deliver a list with the guest's names to the agent, in order to obtain the corresponding pass from Port Authorities.

When visitors are on board, they are the sole responsibility of the Master.

Drugs: Drug trafficking is forbidden and strictly punishable under Peruvian Law.

Master, Officers and Crew should take necessary steps to avoid drug traffic. Any misunderstanding or breach of the measurements of international (IMO) recommendations to prevent drug traffic could be understood by the authorities as being collaboration with the trafficker, causing the Master and officers to be arrested until the case is clarified.

SHIPMASTER'S REPORT: March 1992.

General: Reports are to be made to Peruvian Authorities (Coast Guard) upon entering, transitting and leaving Peruvian waters. Authorities are very strict about this, and non-compliance can invite a fine of up to U.S.$ 10,000.00.

Reporting limits, i.e. boundaries of Peruvian waters, are as follows:
Northern limit: Parallel of latitude 03° 25′ S.
Southern limit: Parallel of latitude 18° 20′ S.
Eastern limit: 200 nautical miles.

Copies of all "SHIPREP" messages are to be handed over to Harbour Master upon arrival.

Apart from Coast Radio Stations through which "SHIPREP" messages can be sent, following are the latest telex numbers for ships with satellite communications – 20143 PE, 20671 PE.

Approaches/Anchorages: Approaching from North or South, it is best to come to parallel of 15° 14′ S., and enter port heading on a course of 090°.

Vessel can anchor 1 mile North or N.N.E. of pier head in depth of 50 m. (vessel anchored in position pier head dolphin bearing 190° × 9 cables).

Free Pratique/Arrival Formalities: Radio Free Pratique is not granted. Upon arrival, vessel must anchor off pier head, where Harbour Master and other Authorities board vessel. Starboard side accommodation ladder should be ready for Authorities. As per Peruvian regulations, Master has to receive Harbour Master at gangway.

Free Pratique is granted by Harbour Master after inspecting certificates and documents.

Apart from usual documents, the following are important: P & I Policy Certificate, Hull & Machinery Insurance Policy Certificate (copy), Sewage Treatment Plant Certificate, Oil Record Book, List of Ports Called in last 4 months, Port Clearance from previous port.

Berthing: Ore loading berth is West side of pier, always port side alongside.

Pilot boards at anchorage. Berthing is carried out without tugs, and both anchors are used. From anchorage position North of pier head, vessel heads directly towards dolphin at pier head. Approach speed is always kept to below 2 knots. Both the anchors are lowered to 2 shackles and kept ready on brakes. When bow is just about a ship's length away from the dolphin, vessel is allowed to cant to starboard (hard over to starboard). When stern is in line with dolphin, vessel is swung to port and Officer forward must stand-by on anchors. As vessel becomes parallel to pier, both the anchors are dropped, just when bow is in line with pier head (i.e. about 20 m. – 30 m. off dolphin), both cables are laid out to 9 shackles and vessel moves forward. Between dolphin and pier head, the bottom is deeper and serves as an anchoring pocket. If by any mistake or communications gap between bridge and forward, anchors are not dropped in time in the anchoring pocket, there will be a risk of a deeper draft, vessel sitting on her own anchor towards final stages of loading.

Recommended mooring is 4+2+2 forward and 4+2+2 aft. However, continuous offshore winds were experienced, and significant continuous swinging resulted in parting of 3 ropes. More ropes were passed later to keep vessel in position, final moorings were 11 ropes forward and 11 ropes aft. Breakwater does not provide much protection from swell. Wind can suddenly freshen, and a vessel breaking her ropes will land on breakwater. Tidal range is small.

Loading: Loading is through travelling conveyor loader, and shifting of vessel is not required. Large vessels will invariably have to take extra hold ballast to meet the airdraft restriction of 41 ft.

"Empresa Minera del Hierro del Peru" are the shippers. Pilot usually acts as the representative of the shippers, and signs Hold Inspection Certificate, ship's Draft Survey Forms, etc. Cargo is shipped directly from the processor, which is close to mines right on the mountains, through a conveyor system, which is about 25 km. long. Each time the loader shifts, Loading Master on duty gives a slip to the vessel, stating amount of cargo poured in hold. Bill of Lading figures are taken from shore weightometer, and 1% difference from ship's figures is usual.

Departure Formalities/Documentation: Usually vessel is instructed to depart from berth immediately after completion of loading, and loading documents are prepared while she is casting-off. Harbour Master boards again off the berth by boat to give Port Clearance. Master, however, can request formalities and documentation to be carried out whilst alongside, if there are no ships waiting for berth.

A sailing plan showing route and alteration points has to be submitted before departure.

Agency: The only Agency is "Agentes Navieras San Nicolas". Agents have their branch office at the end of pier. Language difficulty is frequently experienced as most people only speak Spanish.

AGENT: Agentes Navieros San Nicolas, S.A., P.O. Box 1229, Lima. Tel: 411493, 418314. Fax: 51-14-411493. Telex: 21410 agnav pe or 20005 hierrope pe.

San Nicolas Port Office: Superintendent – Tel/Fax: 034-223511. Assistant Superintendent – Home Tel: (San Juan) 476. Chief Traffic – Home Tel: (San Juan) 481.

All documents relating to vessels calling at San Nicolas and San Juan should be addressed to the head office in Lima.

SUPE: 10.48 S. 77.45 W.

Supe is about 84 miles North of Callao. Cargo operations are undertaken in an open unprotected roadstead. The main activities at the port are the loading of fishmeal and discharging of fertilisers, cellulose and chemical products.

PILOTAGE: Not available.

ANCHORAGE: Vessels anchor in the open roads.

RADIO: *Arrival Advice:* 24 hours' Notice of Arrival should be sent to the Captain of the Port and the Agent.

TUGS: 8 tugs available, 1 of 65 h.p., 2 of 85 h.p., 4 of 134 h.p., and 1 of 165 h.p.

BERTHING: There is a pier for mooring barges, length 331.5 m.

LIGHTERS: 32 (14 of wood and 18 of steel) for dry cargo only. The capacity of the lighters varies from 50 to 100 tons. Total capacity being 2,100 tons.

CRANES: 3×9 tons and 1×11 tons.

STEVEDORES: See "Pimentel" for working hours and overtime rates. 5 gangs of 9 men available.

MEDICAL: There is a hospital at Barranca.

TANKERS: *Submarine Pipe-line:* One line 10 in. diameter for dirty products and one line 8 in. diameter for clean products. Depth of water 48 ft. At Paramonga there is a 10 in. line, depth 36 ft.

FRESH WATER: Not available.

FUEL: Not available.

GENERAL: *Swell Period:* June/August.

TALARA: 04.35 S. 81.17 W.

DOCUMENTS, and all general information, refer to "Callao".

PILOTAGE: Compulsory. In the vicinity of Talara there are several off-shore oil drilling platforms and near the entrance to the port there is a shallow of 24 ft.

ANCHORAGES:

Summer	Lat. 04° 34′ 09″ S.,	Long. 81° 17′ 36″ W.	9.25 Fathoms
Winter	Lat. 04° 34′ 12″ S.,	Long. 81° 17′ 29″ W.	10 Fathoms
3rd Position	Lat. 04° 34′ 03″ S.,	Long. 81° 17′ 42″ W.	6 – 10 Fathoms

RADIO: Arrival Notice should be sent at least 24 hours before arrival to Captain of the Port and Agent via the government radio station OAH. Station on 500 kHz from 0800 to 2400 hrs.

TUGS: 1×13.5 h.p.

BERTHING: At Talara there are 2 berths for loading fuel and water; one is a regular quay, the other a petroleum berth in which vessels lie, moored to dolphins alongside hose platform.

Quay length 385 ft., depth alongside 18 ft. to 34 ft.
Petroleum berth, length 585 ft., depth alongside 34 ft.

Talara is mainly a bunkering port as it is the main port for the Northern Peru Oilfields. The little general cargo discharged is done at the quay; bunkering being done at the quay and at the dolphin berths.

Larger vessels load/discharge into lighters at anchorage. Seven lighters are available, total capacity 1,400 tons.

CRANES: 3×5 tons, 1×31 tons and 1×22.5 tons.

TANKERS: See "Berthing".

Submarine Pipe-lines: 12 in. diameter. Vessels with a max. draft of 36 ft. can moor to the pipeline.

BALLAST: Facilities for 10,000 barrels of dirty ballast.

STEVEDORES: It is possible to work 24 hours a day with interruptions at meal hours. 3 gangs of 16 men each available. Overtime only charged for Sundays and holidays at 50%.

MEDICAL: A private clinic is available.

FRESH WATER: Not available.

FUEL: Not available.

CONSULS: Panama and Nicaragua.

REPAIRS: Minor repair facilities.

GENERAL: Smoking is prohibited on deck, at the piers and near the refinery installation.

Philippines

GENERAL

DOCUMENTS: *To be Submitted in all Government and Private Ports:*

1 copy of Quarantine Pratique.
6 copies of the Inward Cargo Manifest for all cargoes to be discharged in the Port.
2 copies of Cargo Storage Plan or Hatch List.
3 copies of Stores List.
3 copies of Passenger List.
4 copies of the Crew List.
4 copies of the Crew Declaration List.
3 copies of Bonded Stores List.
3 copies of Firearms and Ammunition Inventories.
3 copies of List of Drugs and Narcotics.

Original copies of all Through Cargo Manifests destined to other ports to be deposited with the Customs Inspector on board and to be returned to the Master prior to the departure of the vessel.

Clearance from the last port.

TIME: GMT plus 8 hours. Daylight Saving Time (1990) GMT plus 9 hours from April 21st until August 31st.

SHORE LEAVE: Nationals of countries with whom the Philippines maintains diplomatic relations are allowed ashore after securing a pass from the Immigration Officer in the Port.

REGULATIONS: We quote below pertinent sections of PPA Administrative Order No. 13 – 77 regarding PPA General Port Regulations on Arrivals/Departures of Vessels and Berthing Regulations:

Article II – Arrivals and Departures

Section 4. *Notice of Arrival* – The Owner or Agent of every vessel other than a vessel of 100 g.r.t. or less, intending to call at a port shall, within the time specified in Section 29 of these Regulations, prior to the ETA, give notice in writing to the Authority of its arrival, and make application for a berth if it is intended to berth at the wharf, pier, or anchorage within the Port, Port District or harbour limits.

Section 5. *Particulars to be Furnished* – The notice of arrival and the Application for a Berth shall be a form prescribed by the Authority and shall contain full particulars regarding:

(a) Name of vessel and its flag.
(b) The Gross Registered Tonnage (g.r.t.) and Nett Registered Tonnage (n.r.t.).
(c) Draft, LOA, and beam.
(d) Names of the Owner, Master, ship's Agent in the port of call.
(e) ETA and ETD of vessel.
(f) Tonnage of cargo to be discharged and loaded.
(g) Dangerous Cargo (Whether to be discharged or not).
(h) Number of passengers, disembarking and embarking.
(i) Any other pertinent information relating to the working (e.g. heavy lifts) or safety of the vessel in the port.

Section 6. *Hoisting of National Colours* – The Master of every vessel entering or leaving a port between sunrise and sunset shall cause to be hoisted its national colours and signal letters, if any. The national colours shall continue to be exhibited while the vessel remains in port.

Section 7. *Immigration and Quarantine Signals* –

(a) The Master of every vessel arriving from a foreign port shall exhibit the Customs, Immigration and Quarantine signals as prescribed by those government agencies. Such signals shall remain hoisted until the proper officer has given the permission to lower those signals.

(b) No vessel other than an authorised vessel shall approach within 200 m. to a vessel which is exhibiting the Immigration, Health, or Customs signals. An authorised vessel shall mean an Immigration, Health, Customs, Pilot Launch, or Philippine Coast Guard (PCG) vessel.

(c) No person other than a Pilot or authorised government officer(s) may board or disembark from any vessel coming from a foreign port until the vessel is cleared by the Immigration, Quarantine, Customs and PCG officers and the respective signals have been lowered.

Section 8. *Securing of Vessel before Discharge/Loading* – Every vessel entering a port shall be anchored or properly secured to a wharf, pier, or buoy before commencing the loading or discharging of cargo, and/or the embarkation or disembarkation of passengers.

Section 9. *Port Clearance* – No vessel shall leave a port unless in possession of a valid PPA Port Clearance issued by, or on behalf of, the Authority, in addition to the requirements of other government agencies and the final clearance issued by the PCG.

Article IV – Berthing

Section 29. *Berthing Regulations* –

(a) The allocation of a berth belonging to, or operated by, the Authority shall be at the Authority's discretion.

(b) A vessel shall be considered for berthing allocation only after the Agent of said vessel has filed an application for berth.

(c) All applications for berthing at pier/wharf/anchorage shall be submitted 24 hours before arrival for vessels on scheduled runs and 36 hours for tramping vessels (without regular schedules). In either case application should be filed within sufficient allowable time.

(d) All applications received after berthing meeting shall be deliberated upon the following day before the actual arrival of the vessel.

(e) No vessel shall be berthed or unberthed alongside a wharf or pier belonging to, or operated by, the Authority without its permission or contrary to its directions, nor shall any vessel occupy a berth other than the berth allocated to said vessel.

(f) First-come-first-served basis shall be the general rule in determining berthing priorities of vessels, subject to the exceptions hereunder provided. Vessel's arrival will mean the time a vessel drops anchor at the Anchorage Area when there is no available area or the time a vessel reaches the Port's Boarding Area when a berth is available.

(g) When the available berthing space is inadequate for berthing a larger vessel having the priority to berth, the smaller vessel next in priority which can be accommodated shall be allowed to berth on condition that should additional space be made available such that the larger vessel can be accommodated, the smaller vessel shall be moved to the anchorage to allow the larger vessel to berth.

(h) The Pilot manoeuvring a vessel to berth shall be advised by the Authority as to the position or berth which the vessel will occupy and the vessel shall comply with the directions or instructions therefor of the Authority and/or the Pilot.

(i) When a vessel scheduled to berth encounters some mechanical troubles thereby restraining said vessel from docking, an allowance of one (1) hour shall be given for repairs. If after the lapse of this grace period, said vessel is still inoperative, the priority to berth shall be passed on to the vessel having the next priority to berth.

(j) Vessels with berthing priority but scheduled to depart the following day shall be allowed to berth to allow passengers to disembark. Provided, however, that said vessel shall pull-out from berth to give way to passenger vessel scheduled to depart on the same day.

(k) Any vessel intending to berth solely for the purpose of loading fresh water, bunkering or victualling, before such vessel will be able to depart for another port, shall be given priority over other vessels, provided that such stay shall not exceed the time fixed by the Authority.

(l) Government-owned vessels on official business, vessels of foreign government not engaged in foreign trade, vessels under stress, and vessels carrying perishable articles or goods shall be given berthing priority over other vessels.

(m) Whenever practicable, passenger liner or tourist vessel shall, subject to the discretion of the Port Manager/OIC, also be given priority of a limited number of hours stay at berth over purely cargo vessel.

(n) Berthing priority of any vessel shall not be waived in favour of another vessel.

(o) Vessels waiting for cargoes shall be moved to anchorage to allow the next vessel to berth. However, said vessel shall be allowed to berth again, provided that cargoes for loading are ready, unless another vessel is allowed to take the berth temporarily by the Authority.

(p) Domestic vessels may be allowed by the Authority to dock at berths designated for foreign vessels if there are no other vessels waiting to dock at such berths.

(q) Shut-down time caused by heavy rains and other major calamities or accidents which will stop work on a vessel shall be excluded from the time limitation prescribed herein. However, breakdown of lifting gear and also loading of fresh water, bunkering and victualling which should be done simultaneously with cargo handling operations shall not be considered as reason for time extension.

AUTHORITY: Philippines Ports Authority, P.O.Box PA62, Manila. *Telex:* 40404 (ITT) and TABX 0203. *Cables:* Phports Manila.

ANTIMONAN, Luzon: 14.00 N. 121.55 E. (See Plan)

SHIPMASTER'S REPORT: 1976.

Berth in position Lat. 14° 00′ 30″ N., Long. 121° 55′ 30″ E. Vessel required to be ballasted to one third deadweight. Tidal range 6 ft. Nature of bottom at berth, mud and sand. Density 1025. Anchorage 0.5 miles S.E. of jetty.

Terminal Information: Ship's hoses used to rail only. Length of shoreline, 3,000 ft. diameter 8 in. Products handled at the berth, coconut oil and pellets of copra.

Port Information: Pilotage compulsory. Notice of 24 hours and 12 hours required. Pilot boards from a small catamaran flying the pilot flag. Boarding position 2 miles S.W. of the port. Vessel is able to enter or leave at any stage of the tide. Vessel cannot enter after dark and it is not advisable to leave after dark as some of the piles on the sea bed near the jetty are broken. Also there are no navigation lights in the bay and many vessels are fishing. Max. LOA 650 ft. Max. beam 100 ft. Max. draft 44 ft. No tugs available. Radio station used, Manila, though messages delayed in receipt at Antimonan.

Facilities Available: Fresh water in small quantities for cash. Fresh provisions, groceries and meats in small amounts, doctor and hospital.

No repair facilities, laundry, fuel or slop facilities.

Improvements: The face of the jetty is being piled and breasting dolphins created.

At the present time a barge is inserted between the ship and jetty as the piling is broken.

APARRI (Including Port Irene, San Vicente, Mission, Abulog, Maconacon and Divilacan), Luzon: 18.22 N. 121.38 E. (See Plan)

See "General" before first port.

PORT LIMITS: Quarantine anchorage or loading point.

DOCUMENTS: *Before the Vessel's Arrival:*

Submit/transmit to Philippine Ports Authority – Aparri Terminal/Irene Terminal, the vessel's Notice of Arrival, at least 48 hours before ETA for foreign vessels and 24 hours before ETA of domestic vessels.

Upon Vessel's Arrival:

Aparri Terminal/Irene Terminal Safety Officer will inspect cargo handling gear of all incoming vessels.

Submit to Aparri Terminal/Irene Terminal a copy of the following documents:

Inward Foreign Manifest (for foreign vessels); Coasting Manifest (for domestic vessels).
Passenger Manifest.
Crew List.
Stowage Plan/Hatch List.
Transit Cargo Manifest (if any).
Oath of Master.
Vessel's Roll Book – to be temporarily filed.
Vessel's Information Sheet – to be completed.

Before Vessel's Departure:

Submit to Aparri Terminal/Irene Terminal a copy of the following documents:

Outward Foreign Manifest (for foreign vessels); Coasting Manifest (for domestic vessels).
Passenger Manifest.
Transit Cargo Manifest (if any).
Oath of Master.

Entrance and clearance formalities in the traditional sense of the terms of foreign and domestic vessels shall remain with the Bureau of Customs until Aparri Terminal/Irene Terminal's own clearance is duly stamped in the Manifest and after all port charges, fees, dues and other charges had already been paid.

Payment of charges leviable against the vessel and cargo shall be made either in cash, Manager's or Cashier's Cheque to the Aparri Terminal/Irene Terminal.

Notice must be transmitted to Aparri Terminal/Irene Terminal of Aparri when Export Entry is processed and Wharfage fee is paid to the Philippine Ports Authority – Aparri Terminal/Irene Terminal of PPA HO.

PILOTAGE: ETA to be sent to Aparri Pilotage Station, Aparri, Cagayan, one day before vessel's arrival.

Pilot Boat is a motorised launch.

ANCHORAGES:

Port of Aparri: Boundaries – Lat. 18° 22′ 39″ N., Long. 121° 35′ 33″ E. Depth – 11 fathoms.
Port Irene: Boundaries – The portion between Nulton Pt. and Batulinao Pt. This bay known as Casambalangan. Depth – 12 m.
San Vicente Port: Boundaries – Lat. 18° 30′ 43″ N. Long. 122° 08′ 26″ E. Depth – 15 fathoms.
Port of Divilacan: Depth – 11 fathoms.
Mission Port (Cagayan): Boundaries – Lat. 18° 17.5′ N., Long. 121° 54.2′ E. Depth – 8 fathoms.
Abulog Port (Cagayan): Boundaries – Lat. 18° 28.8′ N., Long. 121° 26.5′ E. Depth – 9 fathoms.
Maconacon Port (Isabela): Boundaries – Lat. 17° 24.25′ N., Long. 122° 14.75′ E. Depth – 7 fathoms.

RESTRICTIONS: Aparri: Enter channel with Pilot's assistance and at daytime only. Abulog, Mission, Maconacon: Enter channel with Pilot's assistance.

RADIO: RCPI. TELEFAST. PT & T. TELECOM. All in Aparri, Cagayan.

VHF: RCPI. TELEFAST. PT & T. TELECOM. All in Aparri, Cagayan.

RADAR: Pagasa Weather Bureau Radar, located in Bukig, Aparri, Cagayan.

TUGS: Available at Claveria, Aparri, Port Irene, Abulog, Mission, Maconacon and Divilacan.

BERTHING:

Port of Aparri: Anchorage area. Ship's side loading and ship's own gear. Cargoes handled at Shipper's log pond.
Port Irene: Two available berths. Ship to pier with ship's derricks. Cargoes to be handled at a specified reclaimed area.
San Vicente: Anchorage area.
Port of Divilacan: Anchorage area. Ship's side loading and ship's own gear. Cargoes handled at Shipper's log pond.
Mission Port: Anchorage area. Ship's side loading and ship's own gear. Cargoes handled at Shipper's log pond.
Abulog Port: Anchorage area. Ship's side loading and ship's own gear. Cargoes handled at Shipper's log pond.
Maconacon Port: Anchorage area. Ship's side loading and ship's own gear. Cargoes handled at Shipper's log pond.

CRANES: Truck mounted cranes.

BULK CARGO FACILITIES: None.

SPECIALISED CARGO HANDLING FACILITIES: None.

BRIDGES: No bridges.

STEVEDORES: North Luzon Port Services Inc. – Aparri, Cagayan; Krisandra Services Corp. – Port Irene; ACME Group of Companies – Maconacon, Isabela; Basco Arrastre and Stevedoring Services, Basco, Batanes.

MEDICAL: Aparri Emergency Hospital.

TANKERS: River stream-draft 16 ft. Discharge lines are through depot discharging pipelines Aparri, Cagayan.

FRESH WATER: Not available.

FUEL: Diesel, gasoline and kerosene.

FIRE PRECAUTIONS: None.

CONSULS: None.

REPAIRS: No facilities.

DENSITY:

Port of Aparri: 30%.
Port Irene: Salt.
San Vicente Port: 30%.
Port of Divilacan: 30%.
Abulog Port: 30%.
Mission Port: 30%.
Maconacon Port: 30%.

DRY DOCKS: None.

SURVEYORS: None.

GANGWAY/DECK WATCHMAN: Available from Stevedore in Aparri.

HATCHES: Normally carried out by crew and stevedores.

CARGO GEAR: Cranes.

REPATRIATION: With permission of Bureau of Immigration, Aparri, Cagayan.

AIRPORT: Tuguegarao Airport – Flights Monday, Wednesday and Friday. Aparri Airport – Flight temporarily suspended.

POLICE/AMBULANCE/FIRE: Aparri Integrated National Police, Tel: 2-2222; Aparri Emergency Hospital, Tel: 2-2233; Aparri Fire Department, Tel: 2-2014. All in Aparri, Cagayan.

TELEPHONES: PLDT.

SERVICES: None.

SHIP SUPPLY SERVICE: *Water Taxi Services:*

There are 3 private operators engaged in the ship-to-shore transport of personnel duly registered by the The Port Authority, namely:

1. O. Ragonjan Water Taxi Services – Orlando Ragonjan (Operator/Owner).
2. G. Alveza Water Taxi Services – Gregorio Alveza (Operator/Owner).
3. J. Ragonjan Water Taxi Services – Julio Ragonjan (Operator/Owner).

The business addresses of the above operators are all located at Punta, Aparri, Cagayan.

All the above listed operators are based in Aparri, Cagayan. However, special arrangements could be made with any of them for precise details and other conditions relative to the services required including rendezvous positions. They could be contacted through local telecommunications systems available in the locality such as RCPI, PT & T, and the Philippine Long Distance & Telephone Co., Inc.

Ship Supply/Shipchandling Services: None.

SHORE LEAVE: Request permission from the Bureau of Customs.

IDENTIFICATION CARDS: Issued by the Bureau of Customs and Philippine Ports Authority.

REGULATIONS: See "General" before first port.

DELAYS: Weather conditions.

AUTHORITY: Philippines Ports Authority, Aparri Terminal/Irene Terminal, Aparri, Cagayan. *Tel:* 2-2134. *Contact:* Jerome A.Balisi, Aparri Terminal Supervisor. Ruben M.Santos, Irene Terminal Supervisor. Captain Bonaparte Casenas, Chief Pilot.

Head Office: Philippines Port Authority, Marsman Building, South Harbour, Port Area, P.O.Box No. PA62, Manila, *Telex:* 40404 (ITT), 0203 (Tx Bx). *Cables:* Phports, Manila.

BATAAN (Limay - Mariveles), Luzon: 14.30 N. 120.38 E. (See Plan)

(A) BATAAN (Including Mariveles).
(B) BATAAN – CBM.
(C) BATAAN – SBM.
(D) PRODUCT PIER.
(E) LPG PIER.
(F) PLANTERS PRODUCTS INC. PIER.
(G) LAMAO.
(H) BATAAN STORAGE CORPORATION PIER.

SECTION (A) – BATAAN

See "General" before first port.

DOCUMENTS: See Section (B).

PILOTAGE: Pilotage is compulsory, Pilots assigned by the Manila Pilots Association. Pilot boards vessel just off the berth.

ANCHORAGE: There is a good anchorage with depth of 9.1 m. – 11.3 m.

Designated Lay-up Area: In Mariveles Bay in Lat. 14° 25′ 36″ N., Long. 120° 29′ 30″ E.

RESTRICTIONS: Approaches are open deep water. Vessels may berth and unberth at any hour and any stage of the tide. Keel clearance of 10 ft. required.

MAX. SIZE: LOA 1,000 ft. Max. draft 52 ft. at conventional buoy mooring. See "Section B".

HEALTH: Port Health Officials board with the Pilot. Radio request for Free Pratique can be made prior arrival.

RADIO: Manila Radio. At the berth, shore communication with vocaline JRC 475 transceivers on 465 MHz.

VHF: Vessels can advise their ETA via "Lamao Pilots" on Channel 16 or via the Refinery by calling "Limay 1" or "Limay 2" on Channel 67.

TUGS: Available.

BERTHING:

	Length (m.)	Width (m.)	Depth (m.)
Lamao National Public Pier	90.00	9.00	4.50
Petron Bataan Refinery	343.20	15.90	9.90 to 30.00
Planters Products Inc.	317.99	—	14.60
LPG Pier	24.60	3.00	5.40
Bataan Storage Corporation			
Sea Berth	261.00	40.00	10.97
Finger Pier	60.97	3.66	3.30
Baseco/PDC/7-R Shipyard	850.00	7.90 to 9.10	8.50

Also see "Repairs/Dry Docks".

DENSITY: 1025.

MEDICAL: Doctor and hospital facilities available. Advance notice required of any medical attention needed.

TANKERS: *Products Pier:* Inner berth depth 13 ft. Outer berth depth 32 ft. Can accommodate vessel up to 530 ft. length. No slop discharge facilities available. Also see "Shipmaster's Report – September 1980" and "Sections B, C, D, E and H".

FRESH WATER: Available at Lamao Pier and PPI Pier.

FUEL: Bunkers, fuel and diesel, obtainable from berth, advance notice required.

REPAIRS/DRY DOCKS: Repair facilities available at Baseco Shipyard, located at Mariveles Bay, about 20 km. away.

Mariveles Shipyard Corp. Port: Two integrated bulk handling terminals rae currently being constructed at this port. Total berth length of about 850 m. with maximum depth of 30 ft. Along the berths are air and water pipes. A graving dock can accommodate a 10,000 d.w.t. vessel. There are 15 repair buildings, shops and 4 warehouses with a total floor area of 7,500 sq.m. or volume capacity of 20,000 cu.m. with large vacant areas, which in the past have been used for storage of containerised cargoes. Along the wharf are 3 fixed 30 ton Dolby cranes, a fixed 60 ton gantry crane and a rolling 45 ton crane at the graving dock. At the PDC side are the 80 ton and 60 ton gantry cranes.

Foreign vessels docking at the Shipyard are boarded by the Pilot at the Mariveles Anchorage and guided to their assigned berths alongside the pier or wharf the conventional way. Any shifting of the vessels at the private ports does not require PPA's approval. Usually, it is Shipyard that informs PPA's office beforehand of any vessel that is arriving at the shipyard for repair or dry docking. Ship's Agents do this when there is any cargo handling involved.

SURVEYORS: (1) Cargo Inspectors available.

(2) Surveyors such as Lloyd's Register, American Bureau, etc., have offices in Manila.

CERTIFICATES:

Certificate of Registration.

Certificate to Operate.

Certificates of Officers and Engineers (Licences).

Officers and Seaman's Books.

CUSTOMS ALLOWANCES: 200 cigarettes for each crew member, and 1 bottle of liquor for each crew member.

REPATRIATION: Effecting crew changes and arranging necessary repatriation are carried out by the Immigration Office in the port with the assistance of the ship's Agent and the Foreign Embassy concerned.

HOLIDAYS: New Year's Day (1st January); Bataan Day (9th April); Holy Thursday (variable); Good Friday (variable); Labour Day (1st May); Independence Day (12th June); Republic Day (4th July); All Saints' Day (1st November); National Heroes Day (30th November); Christmas Day (25th December); Rizal Day (30th December). When any holiday falls on a Sunday, the following day (Monday) is by law considered a public legal holiday. Employees of the Philippines Port Authority – Port of Manila, Limay Sub-Port, report for work on Saturdays, Sundays and Holidays.

EMERGENCY CO-ORDINATION CENTRE: For emergencies, please contact Philippine Ports Authority, Port District Office Manila, PDO-Manila Building,South Harbour, Port Area, Manila. Tel: 47-34-41 to 49.

BANKS: No American or European banks are operating in the area. Excellent banking facilities and services available at Manila.

STORING: See "Prelims".

(1) Vessels can be stored by barge or "water taxi".

(2) Vessels can be stored by barge only after discharging at the anchorage.

(3) Not applicable.

(4) Not applicable.

(5) Companies which sell stores to ships calling at Limay must secure clearance from the Philippine Ports Authority – Port of Manila, Limay Sub-port and from the Bureau of Customs.

(6) Local riggers may be allowed to assist in storing.

IDENTIFICATION CARDS: Essential.

GARBAGE DISPOSAL: No facilities.

WASTE OIL DISPOSAL: No facilities.

SEAMAN'S CLUBS: None.

CURRENCY: Philippine Peso. U.S.$1.00=P.26.50 (8/1994).

GENERAL: Customs Inspector and 2 guards accommodated on board during vessel's stay.

SHIPMASTER'S REPORT: September 1980.

Locally the port is known as Limay, Bataan. VHF Channel 11 appears to be used for all communications. 7 copies each of all forms.

If any crew members being repatriated then Agents require their full names, nationality, ages, and Passport or Seaman's Books number in advance.

Hand soundings alongside South side of jetty indicated 38 ft. and 34 ft. at Eastern end and about 450 ft. Westward (inshore) respectively at LW.

Liberty boat from vessel to shore as crew personnel are not allowed through refinery. Vessel loaded Mogas at rates of between 250 and 450 t.p.h. Good holding ground in the anchorage off berth in Manila Bay.

SBM for VLCCs being constructed in approximate positionLat. 14° 31.7′ N., Long. 120° 38.8′ E. (See "Section B").

Experienced a strong Southerly current, about 4 knots, the day after a typhoon passed about 100 miles to the North. This current due to flood waters leaving the bay.

3×500 h.p. tugs used for berthing, only pushing, do not make fast. 2.5 hours to Manila by bus. No shore passes required. Fresh water by barge from Manila but very expensive. I was advised that the first 137 tons would cost £285.00 including tug. For the next 163 tons tug and barge would cost £841.00.

SHIPMASTER'S REPORT: April 1981.

Ship to ship transfer into m/t "Petron Gasul".

Approaches: Chart BA 976. The approach is straightforward with good fixes being available by radar and visual means. The light on La Monica is extinguished. Ample water and there is nothing to be gained by using the South Channel.

Advised that the transfer position would be 14° 31′ N., 120° 37.5′ E., although this may be altered slightly to suit "Petron Gasul" and may be affected by the amount of shipping at anchor off the refinery.

PNOC carry out a number of lightening operations in the area and awaiting tankers may be encountered between Lat. 14° 28′ N. to Lat. 14° 34′ N., and bounded by Long. 120° 40′ E. (This anchorage area is not official). Besides the buoys marked on the chart there is a mooring buoy in approximate position Lat. 14° 31.8′ N., Long. 120° 38′ E. This red buoy has a pipeline attached and you are advised to anchor well clear to allow PNOC vessels access to the buoy. There is a large white cross on Mt. Samat which is not marked on the chart and affords a good reference point for anchor bearings.

Large numbers of unlit fishing vessels may be met in the bay and the approach channels and especially so at sunset and sunrise. These fishing boats also haunt the anchorage area.

Advised by Agents that movements were limited between sunrise and sunset but this appears to depend upon the local Pilots. The anchoring on arrival was done without a Pilot.

Documents:

Clearance from Last Port of Call.

8 copies Crew List – visaed, if possible, at departure port.

List of Passengers.

Lists of Animals, Narcotics, Firearms, mails.

List of Bonded Provisions, including Deck and Engine Stores.

List of Animals, etc., were simply 'nil' statements and were perfectly satisfactory.

Formalities are unlikely before 0800 hrs., and were straightforward. Bonded stores sealed and application may only be made after 10 days for an issue of cigarettes, etc.

Health: The doctor who clears for Pratique is a local doctor and will carry out any necessary vaccinations. Very helpful. Crew requiring specialist or hospital treatment must go to Manila.

Shore Access: By means of small outrigger launch. The daily charge for 3 journeys to and from the ship was 800 pesos.

Agents: The main agency (C. F. Sharp) is in Manila although they station a representatitve locally ashore in Limay. Attendance was very good and only hampered by local communications by telephone, telex and VHF. Our visit coincided with the Easter holidays and this seriously disrupted communications to and from U.K. As an urgency measure radio messages were sent via Manila Radio. VHF contact to Manila was easy via Channel 16 and thence to working channel.

Transfer: Contact may be made with "Gasul" on Channel 13. The "Gasul" in effect is used as a storage vessel by PNOC and delays may be expected due to the status of her tanks on arrival and the availability of fenders. This last is serious since there only appears to be one set of fenders for all lightening operations and this includes oil tanker transfers.

Small local gas tankers take the product from "Gasul" and as these are few in number this can also lead to considerable delay. A certain amount of blending of propane and butane is sometimes necessary into these craft and on the whole tends to lead to a very confused situation as regards the probable time of commencement of transfer. Estimates varied wildly from day to day and perhaps the most reliable estimates may be gleaned direct from "Gasul".

The Master and Chief Officer will board to discuss the transfer and decide on the final transfer position.

A Pilot will board to shift to the new position. "Gasul" is manoeuvred alongside by a Pilot and 2 tugs. If necessary another tug may take a line from your stern to hold the vessel steady during berthing. Three of her lines each end further supplemented by our own moorings.

"Gasul" was well fendered with three (3.3 m.×6.5 m.) and two (2.5 m.×5.5 m.) fenders.

Reputed to have a full range of hoses and reducers on board but some have 300 ASA flanges.

The transfer was completed without any difficulties although "Gasul" can only accept one grade at a time necessitating shifting lines from one manifold to another. VRL used.

Surveyors: SGS attended with PNOC surveyor. Figures based on our vessel's outturn since the gauging devices and temperature recorders on "Gasul" are suspect.

Pilots are reluctant to unberth during the hours of darkness and this decision will also be affected by the prevailing weather conditions. Two Pilots for the operation.

SHIPMASTER'S REPORT: January 1994.
Communications: Arrival notices to the Agents who will make all arrangements for Pilots and tugs.

Limay Port Radio and Quarantine can be contacted, when in range, on VHF Channel 16, working Channel 13, and will give anchorage instructions for clearance.

Clearance: Carried out at anchor with up to 15 officials attending, but is informal and courteous.

Customs: A Customs Officer remains on board the vessel throughout the stay in port and requires food and accommodation.

Port Health: Officials carry cholera vaccine and will make good any expired certificates. Yellow fever vaccinations are not obtainable.

Immigration: Request a visaed Crew List from the Philippine Embassy in the previous port, but will accept a letter explaining that there was insufficient time at the port for the visas to be obtained.

Shore leave passes are not issued.

Shore leave is by boat from the offshore gangway.

Coast Guard: Officials inspect all Philippine Seamen's Books.

Approaches: B.A. Chart No. 976 and 3545 found to be as charted with the following exceptions:

(1) The pier in position Lat. 14° 29′ N., Long. 120° 36.9′ E. is in ruins, and the 4 mooring buoys close to it do not exist.
(2) The beacon, F.R. 18 ft. (occas) in position Lat. 14° 29.34′ N., Long. 120° 36.9′ E. does not exist.
(3) The wrecks in position Lat. 14° 30.41′ N., Long. 120° 37.4′ E. and Lat. 14° 30.62′ N., Long 120° 37.4′ E. are reported to have been blown up and to have a depth of 9.0 m. over them.
(4) The two buoys, R. P.D. in position Lat. 14° 30.95′ N., Long. 120° 37.4′ E. do not exist.

Anchorage: The vessel anchored for clearance in position Lat. 14° 30′ N., Long. 120° 38′ E., although requested to anchor North of this position, the presence of other vessels at anchor and fishing boats made this impractical.

Pilotage: The Pilots and tugs come from Manila and board the vessel at anchor after Inward Clearance has been granted.

Approach to the berth is from the South, with tugs on the starboard bow and quarter made fast with ship's lines.

Berth: Position Lat. 14° 31.4′ N., Long. 120° 36.8′ E., the 'T' Pier on B.A. Chart No. 3545, noted with 'crane" is for discharge of bulk cargoes, mainly cement clinker.

The head of the 'T' was originally constructed of 9 dolphins on steel piles with a fixed gantry crane on the centre, larger, dolphin.

The Northern and Southern dolphins are not fitted with fenders and are used for mooring ropes only.

The third dolphin from the Southern end is damaged and only the piles remain, which causes problems when shifting astern to work Holds No. 1 and 2, as it is necessary to stop the stern swinging in to either sit on the jagged piles of the missing dolphin or land on the penultimate Southern dolphin.

The fenders on the dolphins are not even, the centre (crane dolphin) being about 0.5 m. wider than on the others, which increases the danger of the stern swinging in onto the missing dolphin.

Depth: The echo sounder gave 4.8 m. under-keel at 10.56 m. draft, however, there is a build-up of cargo under the centre dolphin which was hand sounded at 8.0 m., and which keeps the vessel about 1.5 m. off the fenders until partly discharged. At loaded draft, engines are required to move the vessel between holds, but at light draft warping with moorings is sufficient.

Current: The Pilot reported a tidal current of up to 3 knots on the South-going tide, but only about 0.5 knots on the North-going tide.

Cargo Working: The gantry crane has seen better days and is equipped with a 6 ton capacity grab, discharging 38,500 tonnes of cement clinker, a discharge rate of 215.6 tonnes/hr. was achieved, excluding stoppages for rain, breakdowns and shifting.

In addition to the gantry cranes, barges were put alongside the off-shore side, and about 6,000 tonnes was discharged to these using a shore grab on ship's cranes.

Gantry outreach is about 14.0 m. when the vessel is alongside the fenders, which results in the vessel taking an off-shore list which has to be compensated with ballast until enough cargo is cleared to put in payloaders to discharge the off-shore side. The discharge is very dirty, even though the hatch covers are swept regularly.

Air Draft: Air draft of the crane is about 15.0 m.

Fresh Water: Available from the pier at about 3 tonnes per hour.

Provisions: Available from chandlers in Manila.

Guards: Six armed guards are employed round the clock in groups of three and require meals, but not accommodation.

Draft Surveyor: Remains with the vessel throughout discharge and requires food and accommodation.

AUTHORITY: Philippines Port Authority, Port Management Office – North Harbour, Fronting Pier 8, Marcos Road, North Harbour, Tondo, Manila, Philippines. *Tel:* 27-34-19, 26-22-15. *Contact:* William A. Enriquez, Port Manager.

SECTION (B) — CBM.

LOCATION: The Seaberth of Petron Bataan Refinery is located at Limay Town in Bataan Province.

The berth is a conventional buoy mooring (CBM) system and is located in position 14° 32.1′ North., 120° 35.9′ East.

The enterprise is owned by Philippine National Oil Company and operated by Petron Bataan Refinery.

Products handled: Crude Oil, IFO, Naphtha, Diesel, Fuel Oil and Kerosene.

Also see "Single Buoy Mooring".

DOCUMENTS: *Immigration:* Vessels coming from countries where Filipino Consular Authority is available are required to have, on arrival, visaed Crew Lists. However, in the event that the vessel, for some reason, is not able to obtain a visaed Crew List, this requirement is waived, provided the Agent furnishes a guarantee for payment of the visa fee.

When the vessel has on board personnel from countries without political relations with the Republic of the Philippines, at least 2 Immigration Officers remain on board during the vessel's stay in port and food and spare cabin should be provided for them. These personnel are forbidden to leave the vessel and are not granted shore leave.

The following documents are required by Immigration on arrival:

Visaed Crew List (1 original and 1 copy).
Ordinary Crew List (12 copies).

Customs: Bonded lockers containing spirits, cigarettes, etc., are required to be sealed. Each crew member is allowed to retain 1 carton of cigarettes. Cigarettes in excess should be placed in bonded lockers.

A Customs Inspector and 2 guards will remain on board throughout the vessel's stay in port. Food and a spare cabin should be provided for them.

The following documents are required by Customs:

Crew Personnel Effects List (6 copies).
Stores List (6 copies).
Firearms and Ammunitions List (6 copies).
Bonded Stores List (6 copies).
Narcotics List (6 copies).
Currency belonging to Crew and Ship List (6 copies).
Last Port Clearance.
Ship's Register.
Tonnage of Cargo for Discharge.
Duly Accomplished Certificate of Lading (6 copies).

The following documents are required by the Authorities at Bataan, Bataan C.B.M. and Bataan S.B.M.

Notice of Arrival.
Application for Berth.
Inward and Outward Foreign Manifests.
Oath of Master.
Statistical Supplement.
Application for Assessment.
Clearance.

All of the above to be available and submitted by the Agent.

Outward Clearance: This clearance is granted by the Customs officials who board the vessel prior to departure and effect clearance on board. Also, an Immigration Inspector goes on board, just prior to departure, and musters the crew and verifies that all crew members are on board.

The following documents are required for the Outward Clearance:

Port Clearance.
Immigration Clearance.
Customs Clearance.
Coast Guard Clearance.

The above documents are prepared and arranged by Agent.

APPROACHES: *From End of Sea Passage to Pilot Station:*

Manila Bay is entered between Limit Point and Cochinos Point. The entrance is divided into 2 channels, named South Channel and North Channel, by Corregidor and Caballo Islands; both these channels are deep and clear of dangers in the fairway.

As a general rule, vessels use the channel which provides the shortest route into the bay. Entry is not recommended during darkness or periods of poor visibility if vessel is not equipped with radar.

Vessels entering Manila Bay through the North Channel shall pass midway between La Monja Island and Guardia Shoal and shall proceed directly through the middle of the channel between Corregidor Island and the mainland, steering 070° until 1 mile distance from the shore is cleared. The same route shall be followed by vessels when leaving Manila Bay through the North Channel.

Vessels entering Manila Bay through the South Channel should not approach any shore closer than 1 mile and shall keep South of the restricted area, South of La Monja, Corregidor and Caballo Islands, which is embraced within The North section of the following bearings: 296° from El Fraile Island and 236° from Caballo Island lighthouse. Furthermore, on the Southern side of the channel, vessel should not approach the line joining El Fraile and the N.W. point of Limbones Island closer than 1 mile. The same restriction applies to vessels leaving Manila Bay through the South Channel.

Deep draft laden crude tankers should always enter through the Southern Channel, which is wider and deeper.

After having entered the channel, vessels should make for the Pilots embarking point. Pilot boat usually waits 2 miles off Lokanin Point. During the approach to the above position, vessels should steer clear of land for at least 1 mile.

Many fishing boats are operating in the area and very often they are without lights and unable to move from their fishing position as they have nets laid down. Therefore, utmost caution should be exercised; radar watch and visual lookout should be maintained and a wide berth, to the maximum possible extent, should be given to any fishing boat.

When entering or leaving the port, especially during hours of darkness, we suggest to consider having the tanker preceded, at a close distance, by a service boat or a tug boat. This boat steaming right ahead of the vessel could clear the vessel's way of fishing boats or other craft or could at least warn the tanker in advance of any danger laying ahead.

ANCHORAGE: Vessels awaiting berth should anchor about 0.5 miles S.E. of the Conventional Buoy Mooring (CBM).

RESTRICTIONS: *Controlling Depth:* Entry Channel more than 66 ft. below MLLW. Approach Channel 64 ft. below MLLW. Alongside Berth 64 ft. below MLLW.

LOA Limitation: 1,000 ft.

Breadth Limitation: 160 ft.

Berthing and Unberthing: No particular restriction applies and vessels are berthed and unberthed at any stage of the tide; also during hours of darkness except during particularly severe metereological conditions. Following unberthing, ship is expected to move out, with assistance of tugs instead of using her own power. The strong turbulence created by the ship's propellers tends to get the hoses entangled with each other.

MAX. SIZE: Below are the maximum vessel sizes that are acceptable at the Petron Bataan Refinery – Crude Seaberth:

DWT	120,000 tons
LOA	890 ft.
Beam	135 ft.
Draft	52 ft.

However, crude tankers greater than 120,000 d.w.t. with LOA and beam up to 1,000 ft. and 160 ft., respectively, could be accepted at the sea berth if the tanker is partially loaded, such that draft does not exceed 50 ft. and if the prevailing climatic condition warrants safe berthing.

HEALTH: The Quarantine Doctor boards the vessel in the outer roads during her approach to the port. After Pratique is granted, the Pilot, Customs and Immigration Officers, the Loading Master, the Petron Bataan Refinery representative, and the hose gang are allowed to board. *No Radio Pratique is contemplated.*

The following documents to be ready prior to arrival of health officials:
Maritime Declaration of Health.
Vaccination Lists (4 copies).
Health papers of all ratings.
Derat Certificate (vaild for 6 months).

RADIO: Whilst at sea, vessel is to communicate with "Philippine National Oil Company – Manila" via Manila Radio. VHF Channel 67 is the working frequency of PSTC, owners of tugs and service boats assisting the mooring.

In the arrival message, Master to include: ETA, forward and aft drafts, confirmation that instructions contained in port information are understood and will be adhered to, any requirement.

It is most essential that vessel confirms ETA 72, 48 and 24 hours before arrival.

Communications between vessel, tugs, mooring gang and refinery are well established by various portable VHF sets supplied by the refinery and contractors and working is on several channels.

VHF: Channel 71 is the working channel of Petron Bataan Refining.

BERTHING: The Sea Terminal consists of 8 mooring buoys of 16 ft. dia.

Buoys 2, 3, 4 and 6 are fitted with 1 self-releasing Pelican hook and Buoys 1, 5 and 8 are provided with 2 Pelican hooks each.

Mooring/Unmooring: Currents usually set in a North-South direction at the berth, and vessel always approaches and enters the berth from South. However, berth is so designed that tankers, depending on prevailing wind and/or current direction, could enter from the North, if necessary. Mooring and unmooring may take place also during hours of darkness, provided meterological conditions are fair and visibility is good. Currents are weak and berthing or unberthing takes place at any state of the tide.

Berthing of vessels should be assisted by a Pilot, Petron Bataan Refinery's Maintenance Superintendent or Supervisor, a Mooring Master, and a Radio Operator, the latter two of PNOC Shipping and Transport Corp., which also provides the mooring gang. The Radio Officer brings along his own portable VHF radio set for communicating with the mooring crew and service boats.

Vessels usually approach the berth from a S.S.E. direction and are stopped some 3,000 ft. off the South end. From this point vessels proceed to and enter berth at dead slow speed between Buoys 5 and 6. Just before entering, the starboard anchor is usually dropped. This anchor is dragged or paid out accordingly in order to check the vessel's bow. The bow is brought abeam of Buoys 1 and 2 where the port anchor is dropped. Lines are then given ashore and the vessel is backed into final position approximately 40 ft. abeam of the floating beacon marking the pipe-end manifold. When using anchor, caution should be exercised so as not to foul the buoy legs or cargo pipes and hoses.

Usually, 2 powerful service tugs are in attendance for mooring plus 2 large tugs with capacities of not less than 2,000 h.p. for assisting tankers. These tugs are suitable for handling the heavier wire ropes. Usually, 2 lines are run on Buoys 1, 2, 7 and 8 and one to Buoys 3, 4, 5 and 6. There is no particular requirement on whether ropes have to be of wire or nylon. Pilots indicated that they may require, at times when wind from S.E. is particularly strong, additional lines to be run to Buoys 3 and 5.

Night berthing is carried out with the assistance of the service boats, which tie up alongside Buoys 1, 7 and 8 and indicate quite effectively the approach and entry to the berth.

Vessels calling at the CBM should make use exclusively of wire ropes of suitable dimensions, quality and condition.

When leaving, vessel must be towed and engine of tanker shall be at standstill to prevent kinking of hoses caused by strong current generated by the tanker/vessel propeller.

HOSES: Presently, 5 strings of hoses are used.

(a) Two strings consist of 3 lengths of 20 in. diameter × 30 ft. and 4 lengths of 16 in. diameter × 30 ft. each. The two over the rail lengths are provided with a 12 in. ASA 150 hand operated butterfly valve.

(b) One string consists of 7 lengths of 10 in. diameter × 30 ft. provided with a 10 in. ASA 150 hand operated butterfly valve with separate manifold.

(c) Two strings consist of 3 lengths of 14 in. diameter × 30 ft. and 4 lengths of 12 in. diameter × 30 ft. each.

The submerged pipe end manifolds can be connected to each other by a 'Y' spool piece for shipboard connections and flushing of lines.

The end of each hose is marked by a buoy consisting of 2 cans welded together. When resting on the sea bed, the ends of the hoses are attached to these buoys by means of a chain. For lifting the hoses onboard, divers disconnect the chain from the cans and pass them to the vessel's derrick hook. The marker buoys remain on the water.

The hoses are connected and disconnected by a shore gang supplied by a contractor. It takes, on the average, about 1 hour 30 minutes to have 2 hoses connected and cargo started. Ullages and cargo calculations are carried out concurrently with connecting of cargo hoses. It takes about 30 minutes to 1 hour for disconnecting, but this is done concurrently with ballasting operations after discharge.

In order to expedite turnaround time, vessels should arrive with both derricks rigged for a minimum safe working load of 7 tons.

Blanks at 2 connections of the port manifold should be removed prior to arrival and 2 reducers, if available, should be installed to have the manifolds ready for the 12 in. ASA hose connections.

Safe working load and connections available should be notified to Petron Bataan Refinery prior to arrival.

Minimum acceptable manifold height above deck is about 20 in. Minimum spacing of ship's cargo manifold for connecting hoses to adjacent manifolds is about 18 in.

The hoses when in operation are not suspended from ship's gear but are fastened to the vessel's superstructure by means of chains.

There are no specific guidelines for disconnecting in emergency. The hose gang remains on stand-by throughout the operation and can be readily available.

Hoses are to be connected to the vessel's reducers with bolts and nuts fastened to every second hole of the flange.

The maximum pressure requested at the vessel's manifold is 150 p.s.i.

LOADING: *Description of Cargo System:*
Crude is presently received at the 8 buoy seaberth, located about 2,100 ft. off the end of the Product Pier. The current crude receiving facilities consist of a 28 in. dia. line. The line from the tank to the berth is about 4,700 ft. long. This includes the submerged section from the pier head to the berth of 2,040 ft. The end pipeline manifold is fitted with 2 outlets. Each outlet is provided with a 20 in. butterfly valve, a 20 in. check valve and a 20 in. chicksan swivel joint where currently 2 strings of 3×20 in. dia.×30 ft. and 4×16 in. dia.×30 ft. hoses are connected. The butterfly valves are manually operated by divers. The other facilities for diesel/kerosene, napthta and fuel oil loading and unloading consist of 3 lines of 14 in. diameter each from the manifold product lines at the pier end to the berth of about 2,040 ft. The submerged pipe end manifold consists of 7 lengths 10 in. dia.×30 ft. hoses which can be connected to each other by a 'Y'-spool for shipboard connection and flushing of line.

The pipe manifold is marked by a 'T' buoy, and in order not to put hoses under strain, the vessel's manifold should be abeam of this marker at a distance of about 20 ft.

MEDICAL: The Agent will arrange for transportation to and from Manila for crew members requiring elaborate medical or dental attention; otherwise, they will be attended to in Bataan.

FRESH WATER: Supply by barge. Requirements should be included in arrival message. Ample notice is required if water supplied by barges.

FUEL: Bunkering is by barge. Bunkering may take place concurrently with discharging operations. Ample advance notice required.

REPAIRS: There are several repair firms in Manila that can undertake minor repairs. Requirements for repairs should be passed on to the Agent, and briefly outlined in ETA message. Major classification societies available.

GANGWAY: For vessels at the CBM, gangway to be prepared and rigged prior to arrival, on port side.

STORES: Stores and provisions can be supplied by ship chandlers in Manila. Master should radio requirements at least 36 hours before arrival to the Agent so that stores can be transported from Manila to the ship on time. Bonded stores are unavailable, except for local beer. Laundry requires a minimum of 36 hours.

WEATHER/WIND/TIDE: *General:* Although the Petron Bataan Refinery is only 26 miles across the bay from Manila, rainfall data is not exactly the same for both of these locations. This is partially due to the mountain directly behind the refinery, which tends to precipitate the S.W. monsoon immediately as they come over the mountain, dissipating them to some extent by the time they reach Manila.

The average rainfall for the Petron Bataan Refinery is about 98 in. per year varying from 56 in. to 136 in. per year. Maximum and minimum air temperature are about 102°F and 58°F respectively.

Wind and Typhoon: During the typhoon season, from June through September, the winds are predominantly from the S.W. and are known as the S.W. monsoons. In October through January, the winds are from the N.E. For the month of February, the winds are predominantly from the East and in March through May, from the S.E.

The typhoons are frequent during their season and bring with them high winds and heavy rains. The typhoons generally go up the East coast of Luzon, however, late in the year, they cross the land mass.

Range of Tide: For Lamao, data obtained from the coast and geodetic survey of the Philippines are:

Extreme High Water	5.60 ft. (58 year record)
Mean Higher High Water	2.99 ft.
Mean High	2.54 ft.
Mean Tide Level	1.41 ft.
Mean Sea Level	1.36 ft.
Mean Low Water	0.29 ft.
Mean Lower Low Water	0.00 ft.
Extreme Low Tide	2.00 ft.
Mean Tide Range	2.25 ft.

There are no unusual weather conditions associated with these tides.

Intensity and Direction of Currents: A hydrographic survey in February and March, 1958 indicated that current, at its greatest strength, to be not exceeding 1 knot. However, there was sufficient indication that the current is of the reversing type; that is, tidal in nature. Current varies from day-to-day, principally in accordance with the range of tide, its diurnal inequality, and its daily routine, whether diurnal or semi-diurnal. The rising tide is counteracted, to some extent, by the water which enters Manila Bay from rivers, and thereby lessening its velocity. The ebb tide is assisted by this water and accounts for the maximum recorded velocity, which, however, seems always to be less than 3 knots.

Water Density: Salinity varies from a high of 36.1 parts per thousand to a low of 4.6 parts per thousand during a monsoon. The mean salinities are 14 in June, the lowest month, and 34 in May, the highest.

The surface temperature of the sea water adjacent to the site ranges from about 76°F to 90°F.

Tankers arriving at Petron Bataan Refinery in laden condition should not consider this density variation, which is very difficult to predict and to determine.

Waves: About 2 ft. to 3 ft., based on information given by Pilots.

Sea Bottom: Upper layer of sea bottom is soft mud.

SECURITY: Serious security problems may arise during nighttime and strict surveillance and alertness must be exercised at all times. Guards supplied by a local contractor and arranged by the Agent should be employed at all times. Stores and cabins should be kept under lock.

Vessel's Master, at all times, should take positive steps to prevent smuggling and keep native boats away from the ship and watch for pilferage while the vessel is approaching or is in port. We believe that security guards may be of help and we recommend Masters to use them at all times.

Shore leave may be arranged by Agent. Crews are ferried to and from the CBM to the near local village. Tug service is arranged by the Agent.

Crews of vessels moored at the product pier or LPG pier have also to go ashore by boat since nobody is authorised to pass through the refinery.

EMERGENCY PROCEDURES: Petron Bataan Refinery is not provided with an anemometer nor specific procedures to vacate the berth under severe metereological conditions. Should weather conditions deteriorate, the vessel's Master, in consultation with the Pilot, Mooring Master, and Petron Bataan Refinery representative, take the decision to vacate the berth.

A close watch should be maintained for typhoon and weather forecast. At all times, vessels should maintain a state of readiness and engines should be kept on standby and at short notice. No repairs or tank cleaning should be allowed alongside.

PBR REPRESENTATIVE: An employee of a third party surveyor, (representing Petron Bataan Refinery) boards the vessel after quarantine clearance to co-ordinate unloading operations. A ship-to-shore portable radio is placed on board for communication and controlling ship's discharge only. The Petron Bataan Refinery representative remains onboard throughout discharge and liaises between shore and ship. During the pre-discharge, sounding and final inspection after discharge, a Petron Bataan Refinery operator boards and accompanies the third party surveyor.

SHIPMASTER'S REPORT: June 1982.

Pilotage: Arranged by Manila Agent.

Health: Doctor will board and give Free Pratique and perform vaccinations.

Radio: Arrival message to include Master's name and number and nationalities of all crew.

VHF: Contact was made Channel 11 at 25 miles from S.W.

Tugs: One tug stands by during vessel's stay and 1 service boat is available for transportation to and from the shore.

Berthing: The sea berth has 4 buoys each side, with hoses on port side, derrick required and shore hose gang for connecting. Buoys to starboard are numbered 1 to 7 buoys and to port are numbered 2 to 8 from forward to aft in both cases and these numbers are referred to by Pilot when berthing. There is also a Loading Master on the bridge who liaises for ship's positioning regarding hoses. 2 tugs for pushing and 1 tug puts line aboard. 2 service boats for running lines. It is best to have wires without rope tails and service boats are quite powerful enough to run the wires. 1st lines are headline to No. 1 Buoy and stern line to No. 7 Buoy. Then usually No. 2 and No. 8 Buoys, followed by No. 4 and No. 5 Buoys. Usual final moorings are 3 lines each to Nos. 1, 2, 7 and 8 Buoys and 1 each to 3, 4 and 5 Buoys. No. 6 Buoy not normally used unless there is a strong offshore wind. It is advisable to keep a note of the order of putting out ropes in case of letting go during the hours of darkness. On approaching berth it is usual to let go starboard anchor to 2 shackles. The anchor is hove up before commencing to single up on departure.

Medical: If Doctor boards for vaccinations then he will attend to any patients.

Tankers: For Sea berth 2×12 in. reducers, for SBM 2×16 in. reducers.

SECTION (C) — SBM.

LOCATION: The sea berth of Petron Bataan Refinery is located at Limay Town in Bataan Province.

The berth is a single buoy mooring (SBM) system and is located in position Lat. 14° 31′ 32.47″ N., Long. 120° 37′ 48.90″ E.

The enterprise is owned by Philippine National Oil Company (PNOC) and operated by Petron Bataan Refinery.

DOCUMENTS: See Section (B).

RESTRICTIONS: *Water Berth:* 94 ft.

Max. Operating Conditions: Wave height 8 ft. Wind speed 55 m.p.h. and current 3 knots.

VHF: See "Section A".

MAX. SIZE: 300,000 d.w.t. 1,120 ft. LOA. 175 ft. beam and 70 ft. draft.

Shipmaster's Report: March 1987.

Vessel discharged at the SBM.

The characteristics of the vessel are as follows:

LOA 343 m.
Breadth 53 m.
DWT 283,400 tonnes.
Arrival Draft 22 m.

We were allowed to enter with the above draft and did not experience any difficulties on entering through the Southern entrance or at the SBM itself.

At all times we had more than 3.0 m. keel clearance. There is therefore a minimum draft of at least 22 m. at this port.

BERTHING: The SBM is installed in Manila Bay, approximately 1 mile offshore. From the surface, all that is visible is the top of the 23 ft. diameter mooring buoy and 2×800 ft. long strings of floating loading hose. The mooring buoy is painted orange, yellow and white and the hose strings are orange and black spiral stripes. At night the buoy is marked by a white flashing light and the hose strings are marked by 8 white flashing lights. The hose strings will generally float in the direction of current but they may be influenced by the wind direction.

Preparation of the Tanker: Usually, 2 powerful service tugs are in attendance for mooring plus 2 large tugs with capacities of not less than 2,000 h.p. for assisting tankers. Additionally, 2 small tugs of not less than 250 h.p. each will be needed for mooring lines and hose handling.

All tools and materials required for the mooring and hose hook-up operations should be placed aboard the hose handling and mooring launches in readiness for passing to the tanker.

Prior to the approach of the tanker, the Pilot or other terminal personnel should ascertain the size of the tanker's cargo manifolds, the capacity of its hose lift derricks, and the arrangement and capacity of its forward fairleads, bollards and winches. If spool pieces, lines and special fittings are required, these should be made ready.

The hoses may be brought to either side of the tanker, although it is customary that they be brought to the port side. The appropriate derrick should be rigged for lifting the end of each hose string. The lift to the manifold of a loaded tanker will be approximately 4 tons. However, a lift capacity of approximately 11 tons will be required to lower each hose string from the tanker in a light condition (based on 70 ft. draft amidships).

A clear area is required adjacent to the manifold for storage of the pick-up buoys. Cables and come-alongs should be rigged to strong points in the vicinity of the manifold to tie-off the hoses.

A boarding ladder should be rigged on the tanker side opposite the operating manifold. Boat ropes should be rigged along each side of the tanker. Messenger lines should be made ready on the forecastle for picking up the hawsers.

The arrangement of fairleads, fittings and obstructions should be studied carefully to determine the best means of securing the tanker to the mooring.

The mooring fittings should be capable of withstanding the appropriate loads. If the environment should worsen to the capacity of the mooring or the tanker fittings then the tanker should apply ahead power, suspend discharging, lower the hoses and leave the mooring.

Each mooring line is provided with chafing chain assembly which is used for 100,000 d.w.t. to 300,000 d.w.t. tankers having chain stoppers or no conventional mooring fittings. The use of Smit Bracket (or pin type) is very risky particularly during strong winds and current.

At the end of the chain assembly is a secondary triangular plate for connection of the 500 ft. polypropylene pick-up ropes. These ropes are incorporated in the assemblies, strictly for the purpose of winching the mooring assemblies on board the vessel and should on no occasion be used for mooring. The chains must be brought partway through fairleads on the forecastle and secured to towing brackets, bitts or other fittings on the deck of the tanker.

Experience has indicated that no standard means of securing the chain can be advised since a wide variety of arrangements are apt to be encountered on a tanker forecastle. It is recommended that the chains are secured to Smit towing brackets or chain stoppers if these are available. Otherwise wires or ropes will have to be improvised to secure the chains to ship's fittings. It is important that, whatever means and fittings are used, the arrangement must be adequate to withstand severe loads.

Fairleads as close to the stem as possible should be used to pass the chafing chains. If available, a lead in the centre of the bow should be used to pass both lines. Arranging the mooring lines through fairleads as close together as possible will assure that loads are equally distributed between the lines and will minimise the possibility of parting a line.

Mooring: Prior to making the approach to the mooring, the Pilot and tanker Master should carefully study the wind, waves and current to determine the best approach direction. The approach should be made in the direction in which the tanker can best be handled at very low speed and can best be held stopped in the water. There is adequate depth to manoeuvre a loaded 300,000 d.w.t. tanker (70 ft. draft) within a 3,360 ft. (1025 m.) radius of the mooring buoy.

The side to which the hoses should be brought should also be determined. This is preferably the port side for tankers with conventional right hand screws as the tanker will then move away from the hoses as the tanker moves forward out of the mooring. At the single anchor leg mooring the hoses may be brought to either side of the tanker. In cases where it is evident that the hoses will tend to string to starboard of the tanker during the entire unloading operation, it may be preferable to bring the hoses to the starboard manifold.

The instructions given here assume that the hoses are to be brought to the port manifold. These instructions should be reversed if the hoses are to be brought to the starboard manifold.

The tanker may, if necessary in an emergency, drop an anchor or anchors while approaching the mooring. Anchors should not be dropped, however, within 200 ft. of the mooring buoy, or along the route of the submarine pipelines. If an anchor is dropped during an approach to the mooring, it may not be left down after the mooring is completed. A tanker may not remain moored to both the mooring buoy and its own anchor during unloading. Care must be taken not to foul the hose strings or mooring lines in dropping or lifting an anchor.

Just prior to the approach of the tanker to the mooring, the hose launch should pull the hoses to a position to port of the direction of approach. In making the approach the tanker must stay well clear of the hose. During the final approach the tanker should take a course which would pass to starboard of the buoy so that, if the tanker moves too far forward it would safely pass the buoy and not endanger the hoses.

As the tanker approaches the mooring, a messenger line should be passed from the forecastle to the mooring launch. The mooring launch should then proceed ahead and to port of the tanker and make the messenger fast to the port mooring pick-up line. If the large messenger line marker buoys are in position they should be removed from the line and stowed on the launch. The small buoys can pass through the ships fairlead and may therefore be left in position.

At this point the tanker should have only enough headway to carry it within about 150 ft. of the mooring buoy. As soon as the launch is clear, the messenger should be winched aboard the tanker as rapidly as possible. As the mooring pick-up line is winched on deck, it should be coiled on deck. When the chafing chain passes through the fairlead, it should be snubbed in the best manner possible to secure ship fittings.

Stern movement should be used if necessary to avoid overrunning the mooring. The tanker should be allowed to settle back slowly on the port mooring line. Meanwhile, the mooring launch should take another messenger line from the forecastle and secure it to the starboard mooring line messenger. As soon as the launch is clear, the starboard messenger should be winched aboard and the chafing chain made fast to ship's fittings.

Once the tanker is secured to the mooring, the engines should be placed on stand-by. Grease may be applied to the chafing chains at the fairlead to prevent wear. The mooring lines, chafing chains and other mooring gear should be inspected frequently while the tanker is at the mooring.

Connecting the Cargo Hoses: As soon as the tanker is securely moored, the hose launch may tow the ends of the floating hoses to a position beside the tanker manifold. The necessary tools and fittings should be made ready on the tanker deck. The manifold derrick runner should then be lowered to the launch and secured to the pick-up buoy of the hose nearest the tanker.

The hose should be lifted approximately 20 ft. above deck level and the end swung inboard. Make sure the hose is not lying over sharp edges at the rail. Anti-chafing material may be necessary to protect the hose. The hose should be securely tied-off with cables and come-alongs to strong points on the tanker.

Remove the blind flange from the hose end. There should be no danger of oil spillage because the hose remains sealed by the butterfly valve. Check the "O" ring seal on the quick coupling. The hose can now be connected to the tanker manifold by the quick coupling. The hose lifting chain may now be lowered and the hose marker buoy stowed near the rail. the second hose may now be lifted and connected to the manifold in the same manner.

Fit the hand wheels to the butterfly valve gear operators. The tanker manifold valve and butterfly valves may now be opened. *The butterfly valves should be locked in the open position. Under no circumstances should the hose end butterfly valves be operated while oil is flowing through the hose.*

The shore station should be notified that the tanker is prepared to begin discharging. When instructed by the shore station, pumping should begin. Pumping should begin slowly at first until crude oil is recorded reaching the shore station and it is determined that the whole system is operating satisfactorily. The hose launch should inspect the hose strings and the area around the mooring buoy for evidence of leakage.

When it is certain that the entire system is operating correctly, the pumping rate may be increased to the maximum rate prescribed by the shore station. The pumping pressure must not exceed 200 p.s.i. During discharge, periodical inspections should be made of the manifold connection, the entire hose system and the area around the mooring buoy. This inspection may be made from the deck and forecastle of the tanker during daylight hours, night or when visibility is poor, the inspection should be made from a launch.

At regular intervals the pressure at the manifold and the quantity of cargo discharged from the tanker should be recorded. These figures should be compared with those recorded by the shore station. Any marked discrepancy between quantities should be investigated immediately.

It is inadvisable to allow the tanker to get to a completely light condition. Ballast should be taken aboard as necessary to keep the tanker near ballasted trim with the screw completely submerged at all times.

Disconnecting the Hoses and Departing the Mooring: When discharge is completed, the butterfly valves and tanker manifold valves should be closed and the hand wheels removed and returned to the hose launch. Beginning with the hose string further from the tanker, connect the derrick to the hose pick-up chain with the marker buoy in place, and take up the weight of the hose. Depending on the freeboard of the tanker, the lift load may be great. Disconnect the manifold connection and replace the blind flange on the quick coupling. A small amount of cargo may spill into drip pans during this operation.

The hose securing lines should now be released. After both hoses are released the hose launch should pull the hoses away from the side of the tanker.

After the hoses have been disconnected and released and the tanker has taken on sufficient ballast, the tanker may leave the mooring by disconnecting and lowering the mooring lines. The mooring pick-up line should be attached to the chafing chain and the assembly should be lowered until the end of the chain is at the water surface. The mooring pick-up lines may then be dropped. The tanker should get up steam and may use power to move forward before dropping the lines.

Once the lines are dropped, the tanker may either drop slowly astern until clear of the floating hose or may proceed forward and to starboard to pass beside the mooring buoy on the side opposite the hoses. The tanker may then proceed on its voyage.

SHIPMASTER'S REPORT: September 1983.

Prior to Arrival: Prior to arrival Agent requests (if using SBM) height from deck to centreline of manifold, distance of manifold flange faces from side railings and the flange diameter PCD and bolt size manifold or reducers. Also requires dimension of fairlead opening, distance of Smit lock pin to fairlead, bracket clearance of Smit lock assembly and pin diameter.

Berthing: Our vessel (140,000 dwt.) berthed at SBM during SW Monsoon. We picked up one line from the buoy while larger vessels take two lines. PNOC officials will inspect vessel's Smit lock or other mooring arrangement. Used one tug for berthing with tug's line starboard.

Require Customs clearance before commencement of discharge.

Fuel: Bunker suppliers wanted payment or Agent's guarantee thereof before supplying.

Circular: Following letter received on arrival:

M/T.......................... Port of Limay, Bataan
Attn: M/T.......................... The Master/Chief Engineer
Gentlemen:

As in ports all over the world, the quality of the environment has become a matter of vital concern to the government. Thus, the Port of Manila Authorities have promulgated regulations covering water pollution, oil spillages and indiscriminate dumping of waste.

Our Company, VRV Resources Corporation, in line with the government's ever continuing campaign to keep Manila Bay and the waters surrounding the Philippine archipelago clean from oil pollution, service inter-island and ocean-going vessels on the *safe handling of slops, used oil* and *contaminated fuel.*

To service our ever-increasing clients, we have a fleet of self-propelled barges and trained personnel ready to receive and safely dispose of potential water pollutants efficiently and without any delay to the ships' schedule. This service is our contribution to the government's effort to keep Manila Bay clean without any expense to the vessel, that is *free of charge.*

SECTION (D) – PRODUCT PIER: **(See Plan)**

The pier is an open concrete structure, finger shaped, extending 840 ft. in an East/West direction from a 280 ft. long causeway. The piling is of steel pipes covered by concrete from the pier deck to just below the lower tide level. There are 3 loading stations on each side (North-South) of the pier equipped with 20 marine loading arms terminating in an 8 in. or 6 in. ASA flange. Ship should be properly installed with required manifold ready for connections.

The structural strength of this pier is sufficient to safely handle up to 30,000 d.w.t. vessels. Stations 5 and 6 are provided with a fendering system consisting of panels made up of vertical members and horizontal walers faced with wooden rubbing strips and backed up by Resilie & T Rubber (Bridgestone) fender buffer units. At the other stations, fender panels, faced with rubbing strips and backed by resilient fender buffers, are used. Stations 5 and 6 are provided with 2 bollards of cast steel material of 50 tons capacity and 3 others of 25 tons which should be sufficient to handle fully loaded "Kure Class" vessels.

The fendering system is designed to absorb the impact of 18,000 d.w.t. approaching at a speed of 1 knot and it is suitable to contain the impact energy of the smaller vessels and barges using this pier.

Barges and vessels' Masters should carry out proper manoeuvring, limiting their approach speed to 0.5 knots and coming alongside almost parallel or at a small angle of incidence (10° max.).

Should Masters be unable to manoeuvre properly, assistance of a service boat or tug boat should be sought and charged to the vessel's Owners. Vessels of about 2,000 d.w.t. capacity should be berthed only with tug assistance.

Berthing operations are normally witnessed by a Petron Bataan Refinery representative and claim for any damage is properly filed holding owners of vessels responsible. A fully loaded "Kure Class" vessel, down at her tropical mark and drawing 31 ft. 6 in. may be accommodated at this berth. Vessel would come alongside with her starboard side to, but special care should be exercised for the aft mooring arrangements since the stem of the vessel would be over the pier by about 50 ft. Approach to the pier is somewhat obstructed by the CBM. When going alongside either the North or South side of the pier, use the offside anchor for keeping the bow under control.

Considering the limited width of the dredged basin and presence of cross currents, 2 tugs of 400 h.p. each are recommended to manoeuvre in an out of this berth.

The Northern slope of the – 35 ft. below MLLW basin extends seaward parallel to the South face of the pier. In front of the jetty head, close to and parallel the to North slope of the basin the submarine pipes running to the CBM are laid down. The depth of water above these pipes is not well defined but is certainly less than that of the dredged basin. Deep draft laden tankers leaving or entering Station 5 should at all times avoid passing North of the Northern slope of the basin since a danger of running aground and hitting the submarine system exists.

Masters and Pilots should be aware and read poster placed at the pier end warning mariners of this danger.

Smaller tonnage should also make use of the Pilots and assistance of a service boat (100 h.p.) in view of cross currents when manoeuvring alongside or off Berths No. 5 and 6.

Product Pier Data:

Number of berths: Six.

Berths No. 3 and 4 can handle tankers up to 17,000 bbls. capacity.
Berths No. 5 and 6 can handle all vessels up to 120,000 bbls. capacity.
Barges can be handled at all six berths.
Fixed berth time (time exclusive of loading) is 3 hours per barge.
Fixed berth time for 120,000 bbls. vessel is 8.5 hours.
Fixed berth time for 70,000 bbls. vessel is 7.0 hours.
Fixed berth time for 30,000 bbls. vessel is 5.5 hours.

Fendering system: Load 18,000 d.w.t. at 1 knot speed.
Bollards: 2×50 tons and 3×25 tons.
Pier average draft: 32 ft.
Marine loading arm envelopes:
NW/SW Stations (Berths No. 1 and 2): 19.22 ft. × 16.8 ft.
NC/SC Stations (Berths No. 3 and 4): 19.22 ft. × 19.1 ft.
NE/SE Stations (Berths No. 5 and 6): 26.21 ft. × 43.575 ft.
Distance of vessel from pier edge: 6 ft. (plus 5 ft. allowance).
Safety Fire Fighting:
At the Product Pier, foam protection is provided by 13×6 in.×2.5 in. double hydrants in the berthing area at 100 ft. – 150 ft. centres. Some of them are fitted with hydrofoam nozzles, specifically those located near the NE and SE stations. Two 500 gpm. foam-water monitors are also permanently stationed on this pier. They can be connected directly to the fire main or can be supplied with foam solution from 1,000 gpm. fire trucks. Also, there are 6 fixed water monitors directly connected to the fire water line.

Two manually started diesel engine driven pumps, each rated at 750 gpm., situated at the far end of the Refinery pier, may be used for pumping salt water into the mains should other Refinery fire water facilities fail. Additional foam can be supplied by a 4,000 gallon capacity foam nurse truck.

In addition, 3 completely equipped foam hose carts with cellar nozzle, 2.5 in. and 1.5 in. diameter fire hose lines, 2.5 in. and 1.5 in. diameter nozzles, foam eductors and foam nozzles and 2×150 lbs. wheeled dry chemical extinguishers are provided.

The LPG pier is protected by one fixed monitor with 2.5 in. hose connections.

Total foam liquid storage at Refinery will be maintained at 7,500 U.S. gallons.

SECTION (E) — LPG FACILITIES.

Alongside the breakwater, there is a "T"-shaped jetty designed to accommodate LPG vessels. The pier consists of 2 breasting and 2 mooring dolphins. The breasting dolphins are provided with a fendering system consisting of a panel made up of vertical steel members and horizontal waler faced with wooden rubbing strips and backed up by rubber arch fenders.

Maximum dimensions of vessels received at this berth are as follows: LOA 210 ft., beam unlimited, d.w.t. 700 long tonnes. Energy of absorbtion, maximum displacement and speed of approach are not available.

The approach basin to and alongside this berth has been dredged (in 1971) and sounding revealed a minimum depth below MLLW of 18 ft. Therefore, a max. draft of 16 ft. appears safely acceptable at all tidal conditions.

Because of the limited size of the basin and lack of any beacon or buoy indicating its extent, assistance of Pilot should be sought. Also, it would be advisable to request the assistance of a 100 h.p. service boat to enter and leave the basin since the approach and the clearing of the berth has to be made in a parallel direction to the axis of the berth.

LPG is loaded through a Niigata Chicksan loading arm which carries both the liquid and vapour lines. Liquid line is connected directly on the loading arm with a bolted 4 in. flange. The vapour line is connected by a section of 2 in. diameter × 5 ft. long hand rubber hose terminating in a 2 in. ASA flange. An additional 2 in. rubber hose is available should vessel's vapour and liquid connection be more than 5 ft. apart.

SECTION (F) — PLANTERS PRODUCTS INC.

SHIPMASTER'S REPORT: November 1979 (Updated 1992).

PORT: Limay: Lat. 14° 34′ N., Long. 120° 36′ E.
DOCUMENTS: 3 copies of Visaed Crew List. The form for the Crew List should be in the approved form and these are available from the Philippines Embassy at the loading port.
4 copies of Ships Stores List.
7 copies of Ordinary Crew List.
1 copy of Maritime Declaration of Health.
APPROACHES: This is a very minor port with 1 berth for discharging dry cargo and 1 berth for tankers. The only conspicuous land mark is a single gantry crane. Limay Port Authority has a VHF station and can be contacted on Channel 13. The vessel has to clear Health and Immigration prior to berthing. The quarantine anchorage and pilot boarding ground is between 14° 30′ N. – 14° 31′ N. and 120° 37′ E. – 120° 38′ E. Immigration and Health Authorities board the vessel (generally only during daylight, especially since the weather deteriorates at night) on arrival and clear the vessel.
PILOTAGE: Pilotage is compulsory. 2 Pilots are available. The Pilots are from Manila and they are stationed at Limay for 2 weeks duration on rotation.
TUGS: 2 tugs are available. They are normally stationed at Manila and brought to Limay when vessel berthing/unberthing at Limay. 6 hours notice has to be given. The large tug is 750 b.h.p.

As per "Pilot" during the months of October-November the surface current runs North-South and the undercurrent which is very strong runs East-West. Due to this, it is very "tricky" while berthing and unberthing. Tankers are not berthed or moored during night. Dry cargo vessels may be berthed at night if weather is good. The pier is not very well lit. Moreover very often empty barges, etc., may be in the fairway to the berth and thus makes berthing or unberthing more difficult.
BERTH: The dry cargo berth is about 500 m. long consisting of 3 concrete dolphins on either side of the crane. The crane is gantry type with 6 tons SWL grabs. The berth juts out from the land and the discharged cargo is directly taken into the factory by conveyor. If there are no breakdowns cargo can be discharged at up to 2,000 tonnes per day.

Bulldozers are used to collect the cargo in the hold. The crane is fixed and the vessel has to be warped fore and aft if cargo has to be discharged from more than one hold. Stevedores work 24 hours. Berth is mainly used by the Farm Products Co., which imports muriate of potash and urea. They export NPK fertiliser. The maximum depth found alongside by hand lead and line was 48 ft. and minimum 41 ft. (Planter's Products Inc. is not operating, facilities now leased to Teletrade Corporation).

There is one wreck near the dry cargo berth where a tanker blew up and sank. The position of the wreck is approximately Lat. 14° 30.3′ N., Long. 120° 37.3′ E. which is marked by an unlit buoy.
DENSITY: Between 1017 and 1020 reducing during rains.
FRESH WATER: Available at berth and at Government Pier at Lamao.
FUEL: Can be arranged from Manila.
REPAIRS: Not available.
STORES: Available but expensive compared with Manila.
WATCHMEN: It is advised to take watchman due to piracy which was reported recently. Generally watchmen are arranged by the Agents.
HATCHES: To be opened by the ship's crew.
CUSTOMS ALLOWANCES: 1 bottle of spirits and 200 cigarettes per crew member.
CARGO GEAR: Not required.
REPATRIATION: Can be arranged. The nearest airport is at Manila which is 2 hours by car.
SHORE LEAVE: Shore leave is allowed. But no crew are allowed to pass through the factory. Boat has to be arranged to take crew to the nearest village next to the factory. The nearest town is Balanga which is the capital of the District. Small mini buses run frequently between Limay and Balanga which is about 20 miles away by these buses.
MEDICAL: Good medical facilities are available at Manila.

SECTION (G) — LAMAO.

DOCUMENTS: See Section (B).
BERTHING: Government owned pier with 2 berths. Depth alongside 13 ft. General cargo loaded and unloaded from small vessels.
STEVEDORES: Contractor has to be notified in advance. A meeting is held at the P.P.A. Office with Agent and Charterer.
Working Hours: 0600 – 1800 and 1800 – 0600.
FRESH WATER: Available alongside and at anchorage by barge.
FUEL: Available.
SERVICES: Trucking, ships stores, ferry, car rental, ship chandler, mooring/unmooring.

SECTION (H) — BATAAN STORAGE CORPORATION.

Bataan Storage Corporation is engaged in the storage of liquid bulks and petroleum products at Lucanin Point, Mariveles, Bataan. The company also provides the facilities and manpower services of customers who come with tankers for loading and unloading through the use of pipelines and submarine hoses.

Five mild steel vertical cylindrical tanks with capacities of: Tanks No. 1 and 2 – 135,000 barrels; Tank No. 3 – 3,081,690 litres; Tank No. 4 – 1,320,204 litres and Tank No. 5 – 3,220,466.54 litres.

Pipe trestle consisting of 3 pipes, 2×10 in. diameter and 1×6 in. diameter with average receiving and discharging capacities of 350,000 litres per hour, utilising 3 GM engines with model 353 pumps. With mooring array consisting of 4 main mooring anchor buoys and 2 intermediate buoys capable of handling tankers with a maximum draft of 36 ft. There is also 1 barge loading pier capable of handling a maximum of 1,000 tons with 3×6 in. diameter discharging lines and with average loading rate of 65,000 litres per hour for petroleum products.

At the Bataan Storage Corporation Pier, loading of imported oil products belonging to Union Refinery Corporation takes place at the finger pier, where small tankers could berth alongside and receive cargoes from the storage tank ashore through large hoses.

BATANGAS (including Tabangao), Luzon: 13.45 N. 121.03 E. **(See Plan)**

See "General" before first port.
PORT LIMITS: Batangas Harbour embraces all waters of Batangas Bay extending seaward up to an imaginary line connecting Cazador Point and Matuco Point.

DOCUMENTS: Upon arrival, the following papers should be forwarded to the Authorities:

2 Crew Lists (visaed).
3 List of Stores, Deck, Engine, Stewards Dept.
3 List of Stores, Firearms, Medicine and Narcotics.
6 Personal Effects Declaration.
6 Inward Manifest.
8 Ordinary Crew List.
Clearance from last port of call
Also see "Shipmaster's Reports".

APPROACHES: "Suggested Approach": From the South between Matuco Point and Malajibomanok Islands, with an opening of 3.5 miles. White flashing beacon on Malajibomanok Island duration 0.3 seconds every 10 seconds visible for 8 miles in clear weather. Islands and point can be approached within 0.5 mile.

Landmarks and Coastal Lights: Government Pier at Bo. Sta. Clara may be approached safely from either direction paralleling its face. Batangas church dome, Bauan church bell tower, refinery stacks and columns and wharves are good landmarks. Batangas Lighthouse is Gp. Fl. (3) green every 5 seconds.

PILOTAGE: Pilotage for shifting from Quarantine Anchorage, docking and undocking compulsory for all vessels engaged in foreign trade. The vessel is met by the harbour pilot approximately 2 miles South of the wharf. Pilotage for entering the Batangas Harbour and anchoring in the Quarantine Anchorage is optional but pilotage for shifting therefrom or changing in the stream is compulsory for vessel engaged in foreign trade. At least 48 hours before ships arrival, advise ship's Agents of estimated time of arrival (ETA).

Visual Signals, "I need a Pilot" – The single hoist of the International Code flag "G".

Sound Signals – "I need a Pilot" – the International Morse Code "G" or 2 prolonged blast, followed by 1 short blast of the ship's siren.

Pilot Launch: 25 g.r.t. white with a black "P" at both sides of bow and with International Code Flag "H" hoisted. At night time, all around white light on top of a red light in a vertical line, with green and red sidelights.

ANCHORAGE: All vessels entering Batangas Harbour shall show their colours and signal letters shall be kept flying until the vessel is boarded by the proper Officials within 2 miles before arriving at the designated Quarantine Anchorage.

1.	13° 45′ 06″ N.	121° 02′ E.	Quarantine
2.	13° 45′ 13″ N.	121° 02′ 14″ E.	for vessels less than 1,000 g.r.t.
3.	13° 45′ 06″ N.	121° 02′ E.	for vessels over 1,000 g.r.t.
4.	13° 45′ 30″ N.	121° 01′ 55″ E.	for vessels over 3,000 g.r.t.
5.	13° 45′ 30″ N.	121° 01′ 42″ E.	
6.	13° 46′ N.	121° 01′ 15″ E.	for Caltex wharf
7.	13° 43′ 35″ N.	121° 02′ 50″ E.	for Shell wharf
8.	14° 42′ 54″ N.	121° 03′ 06″ E.	for Pacific Flour Mills Pier
9.	14° 46′ 18″ N.	120° 58′ 15″ E.	for Batangas Bay Terminals, Inc. Pier.

MAX. SIZE: See "Berthing" and "Tankers".

TUGS: Tug service is not furnished by the two oil refineries. The use of a tug for berthing and unberthing is required. Although a tug is normally available at Batangas it may be necessary to dispatch a tug from Manila. Accordingly, it is important for Masters of vessels to provide at least 48 hours advance notice of ETA to ensure availability of the tug boat.

BERTHING: Berthing may be done any time during the day or at night and Masters should exercise their own judgement in this respect. Vessels moor either port or starboard side to, depending on prevailing conditions.

Batangas Govt. Pier:

	Length (m.)	*Width* (m.)	*Depth* (m.)
Pier I	127.5	15	10.5
Pier II	105.0	15	10.0
	48.0	12	
Pier III	84.0	15	5.0

Bauan and Mainaga Pier:

Bauan: Lat. 13° 46′ 48″ N., Long. 121° 04′ 06″ E.
Mainaga: Lat. 13° 35′ 48″ N., Long. 120° 57′ 12″ E.

Alternative loading or discharging ports, but only in cases when there is congestion at the government piers at the Port of Batangas.

Pacific Flour Mill: Location: The area contained from the Southernmost pile of the Shell Refinery to the area West of Little Tabangao River extending 1 mile Westward.

Max. Size: LOA 492 ft., draft 45 ft.

Pier: Length 93 m. with 142.5 m. causeway, width 7.5 m., depth 14 m.

Special Regulations:

(A) That a navigational and mooring area of 0.5 mile from the Northernmost and Southernmost mooring dolphins of the PFM Pier be free from fish traps and other fishing devices.

(B) That a freeway from incoming and outgoing vessels from the PFM Pier be kept free from all fish traps of any forms, and/or any other fishing devices that may obstruct navigation for a distance of 0.5 mile North and South of the PFM pierhead outside of the 50 ft. depth contour approach to the pier.

Purefoods Corporation – Flour Mill:

Location: Mabini, Batangas.

Position: Lat. 13° 43′ 08″ N., Long. 120° 53′ 07″ E.

Pier:

Causeway 75 m.
Pierhead length 40 m.
width 29 m.
Depth 20.0 m. – 11.5 m.

Max. Draft: 11.5 m. (approx.).

Discharge Equipment: High speed pneumatic suction system and a network of chain conveyor and bucket elevator.

Discharging Rate: 250 tonnes per hour/6,000 tonnes per day.

Storage Capacity: Total capacity 30,000 tons, in 33 silos.

Owners: Purefoods Corporation, Greentop Building, Ortigas Avenue, San Juan, Metro Manila, P.O.Box 2695, Manila. Tel: 722-0411/16, 721-6171/74. Telex: 42282 PFC. Fax: 722-4619.

Pilotage: Compulsory. Pilot will board the vessel at Quarantine Anchorage.

Tugs: 2×3,500 h.p. Vessels of 100 m. LOA or more have to use a minimum of 2 tugs. Tugs are available at Sta. Clara Pier, Batangas.

Line Handling: There are 12 line handlers for docking/undocking.

Line Boats: Two line handling boats of 120 h.p. are available for assisting with docking/undocking.

Water: No water available at the pier. Fresh water is delivered by water truck or by water barge or tugs.

Batangas Bay Terminal, Inc: Pier facilities: 3 breasting dolphins 80 m. apart; 2 fender piles (wooden) and 2 mooring dolphins. Causeway 290 m. long.

Max. Size: LOA – 700 ft. Draft – 39 ft.

Location: The Batangas Bay Terminal, Inc. located at 13° 47′ 00″ N. and 120° 59′ 02″ E. It is in Bo. Bolo, Bauan, Batangas, the total area (shoreland) is 5.5 hectares and 18 hectares (foreshore) land.

Special Regulations:

(A) That the area contained between the S.W. site of the BBTI for a distance of 1 mile from shoreline North and South be entirely free permanently from all forms of fishing devices.

(B) That a distance of 100 yards around the pier be entirely free from all forms of fish traps, fish corrals, fish weirs, etc. and it be "Off Limits" to all unauthorised persons, including fishermen and those travelling by bancas underneath the said pier.

PNOC Shipping and Transport Corp.:

Max. Size: LOA 340 ft., draft 14 ft. Pier: Length 97 m., width 4.87 m.

PNOC Energy Supply Base:

Max. Size: LOA 426 ft., draft 25 ft.

All vessels proceeding to Batangas should radio either Caltex or Shell, whichever is their destination, their estimated time arrival at Batangas as early as possible, but not less than 96 hours before arrival, amending this ETA subsequently if it varies more than 2 hours from the original estimate in order to arrange towing gangs with the Luzon Stevedoring Corporation.

Vessels loading sugar: See "Iloilo – Shipmaster's Report".

STEVEDORES: Stevedoring is usually handled by Luzon Stevedoring Corporation.

MEDICAL: Both refineries have small hospitals for handling emergency cases. Should any ship's personnel need prolonged hospitalisation, arrangement will have to be made to transfer the patient to Manila or to the Provincial Hospital of Batangas where suitable medical attention is available. Dental treatment can be obtained from local dentists in the town of Batangas.

TANKERS: *Shell Refinery, Tabangao:*

Jetty No. 1:	
Length	336 m.
Width	9.0 m.
Depth	15.0 m.
Hoses	2×10 in.
Jetty No. 2:	
Length	700 m.
Width	9.0 m.
Depth	15.0 m.
Loading Arms	4×12 in.
Max. Size	75,000 d.w.t.
Jetty No. 3:	
Max. Size	20,000 d.w.t.
Max. LOA	165 m.
Max. Draft	9.3 m.
Grades Handled	Crude LPG (pressurised) Mogas Kerosine Gas oil Fuel oil
Jetty No. 4:	
Max. Size	320,000 d.w.t.
Max. LOA	348 m.
Max. Draft	23.0 m.
Grades Handled	See "Jetty No. 3".
Shore Connections	Crude: 4×16 in. hard arms. LPG: Hard arms (Contact Shell on advice on adaptability). Liquid – 6 in. 300 ASA. Vapour – 3 in. 300 ASA.

LPG: Report: Dated June 1984.

1. Send ETA to "Shell Gas Manila".
2. Vessel to dock port side alongside.
3. Shore manifolds from stern to bow – Butane – Butane Vapour – Propane Vapour – Propane.
4. Shore flange characteristics:
   Butane liquid 12 in. diameter ANSI 150 lb. flat flange.
   Butane vapour 8 in. diameter ANSI 150 lb. flat flange.
   Propane vapour 8 in. diameter ANSI 150 lb. flat flange.
   Propane liquid 12 in. diameter ANSI 150 lb. flat flange.
5. Appropriate cross-overs and reducers for simultaneous discharge of propane and butane (both with vapour return) should be installed by ship prior to arrival.
6. Vapour will be returned to ship while discharging.
7. Cargo must arrive as cold as possible, propane at −43°C and butane at −10°C, during discharge. Ship's tanks back-pressure against vapour return must not exceed 80 millibars gauge. To achieve the above conditions, the ship may have to operate its refrigeration equipment at full capacity during the inward voyage and while discharging cargo at the port.
8. The ship should provide an accommodation ladder or gangway.

Also see "Shipmaster's Reports" dated April 1990 and August 1990.

Caltex Refinery Wharf: The Caltex Refinery including the island wharf is located North of the government pier and at night can be distinguished by illumination lighting on its structures and red aviation warning lights at the top of the columns. A gas flame at the top of the 150 ft. flare stack is also visible several miles from shore. The Caltex Wharves are adequately lighted to facilitate night berthing or unberthing operations if desired. LOA 755 ft., draft 41 ft. Jetty designed for 45,000 d.w.t.

Location: Lat. 13° 48′ 24″ N., Long. 121° 01′ 00″ E.
Lat. 13° 46′ 12″ N., Long. 121° 01′ 36″ E. (Service Wharf)

Construction: 2 wharves with the following dimensions:

T-Head: Length 84 m., width 13 m., depth 14 m., with 2 mooring buoys 244 m. apart parallel to the berths facing the shoreline.

Island Wharf: 2 breasting dolphins 91 m. apart. Length 16 m., width 12 m., depth 27 m., with unloading platforms installed in between the dolphins and provided with 2×125 ton quick release hooks and 2×125 ton bollards.

Crude oil is delivered by 200,000 d.w.t. to 300,000 d.w.t. supertankers.

Special Regulations:

(A) That a distance of 100 yd. around each of the 2 wharves (including island wharf) be entirely free from all forms of fishing devices such as "bonbons" fish corrals, fish weirs, etc., and that it be "Off Limits" to all unauthorised persons, including fishermen and those travelling by bancas within the areas.

(B) That a navigational and mooring area of 0.5 miles North and South respectively of the limits stipulated be likewise free from fish traps and other fishing devices, but with option to fishermen to fish with hooks or with bancas within the said area provided that they do not come within 100 yd. around the jetty.

(C) That a freeway for incoming and outgoing vessels from the Shell Refinery piers be kept free from "bonbons" and/or any other fishing devices that may obstruct navigation for a distance of 0.5 miles North and South of the jetty head outside of the 50 m. depth contour approach to the jetty. See "Shipmaster's Report" dated June 1982.

DENSITY: 1026.

FRESH WATER: Fresh water is available to vessels loading, unloading or bunkering at Batangas Port. It is delivered to the vessel through hose connections. The water satisfies the physical and chemical requirements for drinking water.

FUEL: Bunkers are available from the 2 refineries. Prior advice should be given through the ship's Agent.

FIRE PRECAUTIONS: At both refineries smoking or open fires are prohibited on the wharves or on vessels alongside or within 100 yards of either wharf. Furthermore, each vessel's personnel is responsible for the safety of its own ship at all times.

CONSULS: Consulates are located in Manila.

REPAIRS: *Keppel, Philippines:* (Finger Pier) Total berth of 300 m. with deep water, provides facilities for repair of vessels of up to 5,000 d.w.t.

Cranage: 1×5 ton travelling crane on floating deck; 2×37 ton crawler cranes; 1×12 ton mobile crane.

Hull shop: 80 m.×22 m. covered workshops equipped with 2 units 10 ton overhead travelling crane; 1×750 ton×6 m. long flanging press; 1×500-ton hydraulic portal press.

Machine shop: 80 m.×14 m. covered workshop equipped with 1×5 ton overhead travelling crane, 1×10 m. long×800 m. swing lathe, other lathes, milling machines, drilling machines, etc.

Electrical shop: Facilities for electrical repairs, rewinding, insulation repairs, etc., other shops are pipe and carpenter shop to give full range of services for new constructions and repairs.

PNOC Marine Corporation: Principal Facilities:

Shiplift Drydock:
Lifting Capacity: 7,500 long tons.
Length of Platform: 172.5 m.
Width of Platform: 28 m.
Maximum Draft Liftdock at MLLW without Keel Blocks: 7.97 m.
Elevation at Top of Pier at MLLW: 4.6 m.

Transfer System Parameters:
Total Rated Lift Capacity: 7,500 long tons.
Maximum Lift Capacity: 11,300 long tons.
Keel Block Bogie Jacks: 164 units (maximum).
Outrigger Bogie Jacks: 46 units (maximum).
Rail Lift Cylinders: 120 units (maximum).

Work Berths:

New Construction Berth No. 9: Capacity 7,500 long tons (light displacement weight). Length 168.3 m. Width 27 m.

Repair Berth No. 8: Capacity 7,500 long tons (light displacement weight). Length 168.3 m. Width 27 m.

Repair Berth No. 7: Capacity 5,000 long tons (light displacement weight). Length 108 m. Width 27 m.

Repair Berth Nos. 1 – 6: Capacity 2,700 long tons (light displacement weight). Length 108 m. Width 21 m.

Other Facilities, Buildings and Shops:

Lift Control Building. New Construction/Erection Area. Gantry Crane (50 ton capacity). Whirley Crane (42 ton capacity). Receiving and Control Building. Covered Fabrication Area. Steel Fabrication Shop. Open Storage. Carpentry Shop and Mold Loft. Vehicle Repair Shop. Power Plant. Propane Storage Pad. Flammable Storage. Oxygen Plant. Water Storage Tank. Pump House. Crane Control House. Warehouse. Gate and Control Building. Parking Area. Administration/Clinic Building. Employee Service. Canteen. Outfitting Shop. Piping Storage. Foundry Shop. Transfer Area.

DRY DOCKS: Keppel, Philippines has its floating dock with the following data of information: Max. length of vessels, 110 m.; Max. beam of vessels, 19 m.; Max. draft of docking, 5 m.

CUSTOMS ALLOWANCES: Sufficient for crew's use in port.

REPATRIATION: Pre-arrangement by ship's Agent and/or Master of the vessel and the Immigration Officer assigned on board the vessel.

AIRPORT: At Manila.

HOLIDAYS: New Year's Day (January 1st); Holy Thursday; Good Friday; Labour Day (May 1st); Independence Day (June 12th); R.P.-U.S. Friendship Day (July 4th); Bonifacio Day (November 30th); Christmas Day (December 25th); Rizal Day (December 30th); Special holidays declared by the President of the Philippines are also included. If any other legal holiday falls on Sunday the following day is observed as a holiday. Cargo handling work can be arranged on any or all holidays with the vessel's Agent.

POLICE/AMBULANCE/FIRE: PPA Port Police: 725-2882. National Customs Police: 725-2971. Batangas City Police: 725-2125. Ambulance: 725-2890. Fire Department: 725-2470.

TELEPHONES: At present placing telephones on board foreign vessels is not available; however, telephone service is available on the jetty of both refineries.

IDENTIFICATION CARDS: Not required in the Port of Batangas. Pedestrian and vehicle passes required.

GENERAL: *Discharge of Ballast:* No dirty ballast may be dumped into the territorial waters of the Republic of the Philippines. The refineries have provisions for off-loading a limited amount of oil water ballast.

Rat Guards: Rat Guards shall be placed on all mooring lines to the wharves and piers.

Parking Facilities: 7,226 sq.m.

DEVELOPMENTS: New coal discharge terminal to be completed for vessels of 100,000 d.w.t., discharge rate 1,600 t.p.h.

Passenger terminal and concrete wharf (550 m.) to be constructed.

SHIPMASTER'S REPORT: June 1982.

Caltex Island Wharf:

Prior to arrival call "Luzsteveco" (Luzon Stevedoring Co.) on Channel 16 or 11 for berthing information. Berthing is slow as pilot boat runs lines and is not powerful enough to handle big wires. Moorings are 3, 2, 2. We were advised 16 in. reducers but they prefer 14 in. which are more suitable for their hydraulic clamps. 4 surveyors on board for cargo. Boat required to get ashore.

SHIPMASTER'S REPORT: January 1987.

Daylight berthing only at BBTI Pier as berthing dolphins (2) are only 60 m. apart. Also lighting is insufficient. Pilot advises that depth at pier is 45 ft.

SHIPMASTER'S REPORT: May 1987.

On arrival, the Port Officials, Pilot and Agent board the vessel from a tug in the vicinity of Batangas Town and the ship then drifts while they clear the ship before proceeding to the berth. The number of officials are numerous and include the Plant Quarantine Officer who requires a list of all pot plants onboard.

They depart on the tug after completion of formalities.

The following documents are required by Port Authorities on arrival at Tabangao:

9 copies Crew List.
6 copies Crew Declaration List.
6 copies Crew Vaccination List.
6 copies Vessel Information List.
8 copies Stores List.
7 copies Provisions List.
6 copies Narcotics List.
7 copies Plant and Animal List.
6 copies Ammunition List.

Distribution of documents is as follows:

Medical Quarantine Doctor - 1 copy of Crew Vaccination List.

Customs - 5 copies of each document.

Immigration - 2 copies of Crew List.

Plant Quarantine Officer - 1 copy each of Stores List, Provisions List and Plant and Animals List.

Animal Quarantine Officer - 1 copy each of Stores List, Provisions List and Plant and Animals List.

Narcotics Police - 1 copy of Narcotics List.

Coast Guard - 1 copy each of Crew List, Crew Declaration List, Stores List and Ammunition List.

Agent - 1 copy each of Crew List and Vessel Information List.

SHIPMASTER'S REPORT: April 1990.

The following is a copy of a telex received from Pilipinas Shell in Manila.

Quote:

Please advise following information:

(a) Number and Nationality of Crew.
(b) D.w.t. / Beam / Draft on Arrival / Call Sign.
(c) Flag / Port of Registry / Year Built / Owners / Speed.
(d) Voyage No. / Next Port of Call after Batangas.
(e) Last Port of Call / Date Sailed Last Port of Call.
(f) Bill of Lading Details: Figures / Shipper / Bill of Lading Date.

The following documents are required by Port Authorities on arrival at Tabangao:

1. 12 copies Crew List.
2. 6 copies Crew Declaration List.
3. 6 copies Crew Vaccination List.
4. 6 copies Vessel Information List.
5. 8 copies Stores List.
6. 7 copies Provisions List.
7. 6 copies Narcotics List.
8. 7 copies Plant and Animal List.
9. 7 copies Ammunition List.
10. 5 copies Stowage Cargo Plan.
11. 1 copy Derat Certificate.
12. 5 copies Bills of Lading.
13. 6 copies Port of Call or Voyage Memo.
14. 5 copies Cargo Manifest.
15. 5 copies Parcel List.
16. 10 copies Passenger List.

Grateful if you could arrange distribution of documents before arrival Tabangao as follows:

1. Medical Quarantine Doctor: one original copy of Items 3, 11, 13.
2. Customs: 5 copies each of all documents, except 11.
3. Immigration: 5 clear copies of Items 1 and 16.
4. Plant Quarantine Officer: 1 copy each of Items 5, 6 and 8.
5. Animal Quarantine Officer: 1 copy each of Items 5, 6 and 8.
6. Narcotics Police: 1 copy of Item 7.
7. Agent: 1 copy each of Items 1, 4 and 12.
   Please ensure that a copy of the Bill of Lading is given to the attending Agent to enable us to satisfy Government Regulations on freight remittance.
8. Coast Guard: 1 copy of Item 1.

Please be advised that the following procedure is being applied in port formalities:

(a) Medical Quarantine Officer: Will board the vessel before Customs and Immigration Officers. Kindly prepare to show him your crew's yellow fever/cholera vaccination cards, properly segregated into those with expiring vaccination and those with new vaccination. Also please show him your latest Derat Certificate. You will be required to fill up a form "Maritime Declaration of Health". After Pratique is granted, you can lower your yellow flag.

(b) Customs Boarding Officer: Hand over 5 copies of all documents requested above and your Last Port Clearance. If none, please prepare an explanation why you do not have any Customs Clearance at last port.

He will further brief you with current port regulations, especially the strict regulation against illegal and unauthorised boarders. For your information, the penalty for illegal boarders or unauthorised boarders like women, vendors, is ten thousand pesos.

Kindly ensure that this regulation is strictly followed to avoid any problem and ensure maximum safety of your vessel.

For your information, agents of the communist rebels may pose as hospitality girls with intention to sabotage vessel or terminal. Also, the terminal will not allow berthing with illegal boarders on board your vessel. Further, 3 Customs Officials will be staying onboard the vessel until operation is completed.

(c) Immigration Boarding Officer: Please hand over all travel documents: Passport and Seaman's Book of crew members for verification. If you do not have a valid crew visa on board issued by the Philippine Consulate, kindly prepare a brief explanation as to why you do not have a Crew Visa, and address your letter to the following:

Commissioner of Immigration and Deportation.
Through the Alien Control Officer.
Port of Batangas.

The Immigration Officer will be inquiring whether you need to have shore passes. Accept the Immigration Officer's offer of shore passes for all crew. Please advise early of any intended crew changes at Batangas (crew signing on/off). If you have any signing-off crew members for repatriation, please prepare a referral letter on your ship's letterhead with the following format:

Quote
To whom it may concern.
Dear Sir,
The following personnel will be paying off the vessel at Tabangao:
Name Rank Passport No.
This is a certification of their seamen's status and good for whatever purpose it may serve them.
Yours faithfully,
(Master) M.V."........"
Unquote.

Also, please hand over travelling documents of the signing-off crew to the Immigration Officer for stamping/verification, and give same to Agent, who will forward it to Manila to secure their plane tickets if required.

(d) Plant Quarantine: Please hand over required above-mentioned documents.

(e) Animal Quarantine: Please hand over required above-mentioned documents.

(f) Narcotics Police: Please hand over Narcotics List. He will inspect/seal your narcotics cabinet. Ensure that all narcotics are declared in the Narcotics List.

(g) Coast Guard: Please hand over one copy of Crew List.

Please send us your Crew and Vaccination Lists, and your requirements (cash advance, bunkering, crew changes, provisions, expected mails/spares delivery from owners, etc.) in advance to avoid delays due to holidays, etc.

For LPG tankers, there is no land transport between Jetty No. 2 and the Jetty Gate, a distance of approximately 1 km. Crew wishing to go ashore will have to walk this distance. Therefore to avoid inconvenience, joining and signing-off crew should join/disembark the vessel while at anchorage. Also, delivery of requirement should be done before or after discharge, at anchorage. This is due to strict safety regulations of terminal for LPG operations.

SHIPMASTER'S REPORT: August 1990 (Updated June 1992).

The following is a copy of a telex received from Pilipinas Shell in Manila.

Quote:

A. Please prepare following documents and arrange distribution as follows:

1. 12 copies Crew List (5 copies for Customs, 5 copies for Immigration, 1 copy for Coastguard, 1 copy for Agent).
2. 6 copies Crew Declaration List (5 copies for Customs).
3. 6 copies Crew Vaccination List (1 copy for Quarantine Doctor, 5 copies for Customs).
4. 6 copies Vessel Information List (5 copies for Customs, 1 copy for Agent).
5. 8 copies Stores List (5 copies for Customs, 1 copy for Plant Quarantine, 1 copy for Animal Quarantine).
6. 7 copies Provisions List (5 copies for Customs, 1 copy for Plant Quarantine, 1 copy for Animal Quarantine).
7. 6 copies Narcotics List (5 copies for Customs, 1 copy for Narcotics Police).
8. 7 copies Plant and Animal List (5 copies for Customs, 1 copy each for Plant and Animal Quarantine).
9. 6 copies Ammunition List (5 copies for Customs).
10. 5 copies Stowage Cargo Plan (5 copies for Customs).
11. 1 copy Derat Certificate (for Medical Quarantine).
12. 6 copies Bill of Lading (5 copies for Customs, 1 copy for Agent).
13. 7 copies Ports of Call or Voyage Memo (1 copy for Medical Quarantine, 5 copies for Customs, 1 copy for Agent).
14. 5 copies Cargo Manifest (5 copies for Customs).
15. 5 copies Parcel List (5 copies for Customs).
16. 10 copies Passengers List (5 copies for Customs, 5 copies for Immigration).
17. Last Port Clearance: Please hand over to Customs.
18. Vessel Arrival Condition Report (1 copy for Agent).

B. Following is the normal procedure with Port Formalities:

1. Medical Quarantine will board your vessel first. Please prepare your yellow fever/cholera vaccination cards with expired cards separated.
2. Customs/Immigration/Plant and Animal Quarantine will board vessel upon advice of the Quarantine Doctor.
3. Customs Boarding Officer will brief you on the current Port Regulation against illegal boarding, specially "women". For your information, penalty for illegal boarding is ten thousand pesos. 3 Customs Officials will stay on board until vessel sails.
4. Immigration Boarding Officer: Please hand over all crew's Passport/Seaman's Books for verification. If vessel does not have Valid Crew List Visa, kindly prepare brief explanation addressed to the following:

   Commissioner on Immigration and Deportation.
   Thru Alien Control Officer.
   Port of Batangas.

   The Immigration Officer will ask if you need shore passes. Please accept the offer of shore passes for all the crew. If you have crew for repatriation, kindly prepare referral letter on ship's letterhead in the following format:

   Quote
   To whom it may concern.
   Dear Sir,
   The following personnel will be paying off the vessel at Tabangao:
   Name Rank Passport No.
   This is a certification of their seaman's status and good for whatever purpose it may serve them.
   Yours faithfully,
   (Master)
   Unquote.

Master's Note: A total of 15 officials boarded and required all the copies prepared and more. Fortunately extra copies had been prepared.

C. Quarantine Anchorage at Lat. 13° 45′ 06″ N., Long. 121° 02′ 00″ E.

AUTHORITY: Philippine Ports Authority, Port of Batangas, Batangas City, Philippines. *Tel:* 725-2862, 725-3793. *Contact:* Salvador L. Reyna, Port Manager.

AGENT: See "Manila".

BISLIG, Mindanao: 08.14 N. 126.22 E.

See "General" before first port.

PILOTAGE: Vessel should send direct advice to the Pilot or through its Agents 48 hours prior or at the very least 24 hours before ETA by commercial telegraphy.

There is no VHF operated by the Pilot.

Pilot boat is painted black (hull) and white (bridge and mast). International Code Signals used to call Pilot.

Pilot station is located at Lat. 8° 11.4′ N., Long. 126° 21.2′ E.

Pilot boat will be located (if by prior advice/arrangement by Master requiring specific service of meeting vessel outside of entrance and conducting vessel through channel to inner harbour) at Lat. 8° 16.85′ N., Long. 126° 26.50′ E. or 340°, 2.35 miles off Sanco Pt. Lighthouse.

Pilot will always board a vessel (outside of entrance) via the Pilot's or Jacob's ladder on the leeward side of the vessel.

ANCHORAGE: While waiting for a Pilot, the recommended anchorage (at entrance) is at Lat. 8° 16.1′ N., Long. 126° 26.1′ E. on or about this position and/or within an area of 0.5 miles radius from this point.

Quarantine anchorage or inner harbour is based on the point Lat. 8° 12.9′ N., Long. 126° 22.0′ E. to within 0.25 miles radius from this point as centre, otherwise 1 mile North of BBLCI Pier's end.

Working anchorage at stream. When vessel is through with all the port formalities, she has to go to a working area for loading/unloading operations, thus:

BBLCI: Vessels will anchor at least within a 0.5 mile radius from the tip of BBLCI Pier.

PICOP: Is especially preferred during N.W. monsoon at least within a 0.5 mile radius from the foot/base of PICOP breakwater.

Bislig Bay: In general is bounded by a line from *(a)* Sanco Pt. to *(b)* Mawes I. to N.W., thence to *(c)* town of Bislig to the S.W., thence to *(d)* the village of Mangagoy to the S.W., and back to *(a)* Sanco Pt.

MAX. SIZE: 30 ft. at PICOP Pier.

HEALTH: Any vessel can be given Free Pratique if upon inspection everybody is healthy, vessel is clean and all certificates of vaccination are complete. However, if there is a suspicious quarantinable disease, a probationary Pratique should be issued and after 6 days, if it was found out that there was no quarantinable disease at all, Free Pratique will be issued.

RADIO: RCPI, Clavecella and CRC.

TUGS: Tugs normally meet vessel with Pilot at the 5 miles limit and assist Pilot in docking, using ship's lines. 5 available. 4 at 225 h.p. and 1 at 112 h.p.

BERTHING: Berthing is on a first-come first served basis. During the N.E. monsoon berthing is in daylight only for precautionary measures.

BBLCI and PICOP maintain 2 piers and 1 marginal pier.

BBLCI: Pier Position Lat. 8° 11′ 51″ N., Long. 126° 21′ 55″ W. This is an all concrete pier 800 ft. long and 30 ft. wide with berthing space of 550 ft. on each side. Max. draft 28 ft. at seaward end, 22 ft. at shore end. Both sides are protected by dolphins constructed of pile fenders and large tyres as absorbers. Largest vessel to berth at pier at present is 18,500 tons gross. Lumber, veneer, plywood and logs are loaded at this pier.

BBLCI Marginal Pier. For vessels of less than 1,000 tons gross and 10 ft. draft.

PICOP Piers:

	Length (m.)	*Width* (m.)	*Depth* (m.)
Pier I (concrete)	244	8.0	8.8
Pier II	130	17.7	9.1

There are several patches of reefs projecting N.W. of the channel from Sanco Point to the fairway leading to the PICOP Piers. The port therefore should be entered only during daylight.

January, February and March, the season of the N.E. monsoon, makes it difficult for approaching and securing ship because of strong winds and heavy seas.

CARGO HANDLING FACILITIES: Both companies have ample equipment. Fork lifts, lighters, mobile cranes max. lift 50 ton (BBLCI), and 75 ton (PICOP), sideloaders, trucks and trailers.

STEVEDORES: ETA should be advised 2 days before ship's arrival stating workable hatches and gang requirement for berthing and gang arrangement.

20 gangs available, shifts change at 0600 and 1800 hrs. when port is full. If only few ships in port change at 0600, 1500 and 2300 hrs.

MEDICAL: It is necessary for the Agent to receive advance notice if there is serious medical attendance and hospitalisation. However, less serious medical attendance does not need notification. Port of Bislig has hospital facilities with complete cholera, El Tor and typhoid vaccine available.

DENSITY: About 1025 with tendency to become heavier during dry season and on flood tide.

FRESH WATER: Available at East end of BBLCI Pier. The connection is 2 in., situated 100 ft. from the approach, discharge rate 20 g.p.m.

FUEL: Small quantities available. BBLCI maintain 3 tanks for Caltex.

1. Bunker oil tank	30,000 bbls.
2. Diesel oil tank	11,300 bbls.
3. Gasoline tank	5,100 bbls.

Tank trucks available to deliver oil and gasoline.

REPAIRS: May be made to ship's gear and equipment by arrangement with BBLCI. The company have an engine repair shop, machine shop and foundry.

GANGWAY/DECK WATCHMEN: P1.00 per hour for at least 3 men.

OPENING/CLOSING HATCHES: Rigging of booms is done by ship's crew, while opening and closing of hatches is carried out by stevedores.

CUSTOMS ALLOWANCES: 200 cigarettes and 1 bottle liquor for each man.

AIRPORT: 5 km. distant; daily flights.

HOLIDAYS: On Christmas Day; New Year's Day and Good Friday. Cargo work may be arranged.

IDENTIFICATION CARDS: Needed.

GENERAL: Engineering supplies available from BBLCI and PICOP. Dunnage available through BBLCI. Provisions available through chandler or market 1 km. from BBLCI Pier.

DEVELOPMENTS: More berthing facilities are on the programme for the next 3 to 5 years when the pulp and paper mill is in operation. Installation of more log-processing plants to increase shipments.

SHIPMASTER'S REPORT: June 1978

Bislig Bay – East coast of the Philippines – 8° 15′ N., 126° 25′ E.

Apart from the B.A. Charts, Philippine Charts 4627 and 4664 were used. (Available at Manila).

Directions: Experienced an insetting current along the coast before entering the bay. For High and Low water Bislig Bay see A.T.T. Hinatuan, No. 5057.

(a) The tower at Sanco Point has been destroyed though the foundation (5 m. high) is still visible when not obscured by trees when entering the bay.
(b) All buoys have disappeared.
(c) Beacon B was blown away but Beacons A & C are conspicuous.
(d) Prominent Hill of 920 ft. in the direction of 230° was invisible because of morning mist.

Kept Beacon "A" on bearing 205° till Beacon "C" was 130° and the small island of Agonoy 270°. One way of keeping clear of the shallow depths near the entrance.

Altered course to 230° and steered for the Quarantine Anchorage when Agonoy was 320°.

There is one Pilot available. Pilotage is compulsory. He embarked halfway between Sanco Point and the anchorage from a prao, displaying a large "H" flag.

Berthed starboard side to at the East side of the pier with starboard anchor one shackle in the water slacking away when necessary. Observed a noticeable swell on the other side of the pier. Moored with 3 headlines and 1 spring forward. Two springs from Hatch 6 leading forward and 2 lines from the fore-end of Hatch No. 5, Hatch No. 6 could not be accommodated alongside the wharf. Inferring not to stow any Bislig cargo in that hatch. It is possible but this hampers the despatch as cargo has to be driven by fork lift truck from the deck of Hatch 6 to Hatch 5.

Two small mooring boats assist in the berthing. On departure these 2 boats assisted in pushing the vessel around.

The normal Quarantine telegram, as for other countries, is not necessary for the Philippines.

Two cabins are required for Immigration and Customs.

Connection with shore: Via the offside gangway and prao. There is a curfew from midnight till 0600 hrs.

Cargo handling: The width of the wharf and the lack of fork lift trucks slowed down operations. Another factor is the presence of another discharging or loading vessel alongside the other side of the pier.

Agency: Agent from Manila Office flew from Manila to assist the local offices.

Fruits and vegetables available.

AUTHORITY: Collector of Customs.

CAGAYAN DE ORO, Mindanao: 08.32 N. 124.40 E. (See Plan)

See "General" before first port.

DOCUMENTS:

Application for Berth.
Vessel's Information.
Inward and Outward Manifests.
Passenger Lists.
Oath on entering Vessel from Foreign Port.
Oath of Clearance of Vessel.
Crew Lists.
Store Lists.
Personal Effects Lists.

PILOTAGE: Pilotage is compulsory for vessels engaged in foreign trade of 100 tons or over, docking or leaving at or leaving the Government Wharf or any privately owned wharf in the Port of Cagayan de Oro.

Notice of ETA should reach the Pilot Association of Cagayan de Oro 24 hours before vessel's arrival. Call Pilot on VHF Channel 16, 3 hours prior to arrival. For purposes of berthing allocation, foreign vessel's ETA should be received by PPA 72 hours before arrival. Approaching vessels are required to blow whistle (2 long and 1 short blast) stop the engine and wait for the Pilot to come. A foreign vessel is met by the Harbour Pilot approximately 2 miles from the wharf except for vessels docking at Philippine Sinter which requires the Pilot to meet the vessels 5 miles from the PSC wharf.

ANCHORAGE:

Quarantine Anchorage: Lat. 8° 30.5′ N., Long. 124° 40.5′ E.
Anchorage Area No. 1: Lat. 8° 29.5′ N., Long. 124° 40.5′ E.
Anchorage Area No. 2: Lat. 8° 29.5′ N., Long. 124° 41.0′ E.
Anchorage Area No. 3: Lat. 8° 29.5′ N., Long. 124° 41.5′ E.
Anchorage Area No. 4: Lat. 8° 29.0′ N., Long. 124° 42.0′ E.

MAX. SIZE: Max. draft of 13 m. alongside, 80 m. from the Northern portion of the quay; the rest 10.5 m. along the quay side.

HEALTH: Foreign ships will clear quarantine on arrival at Cagayan de Oro Harbour. Quarantine officers will board the vessel before the pilot's boat meets the vessel.

RADIO: It is not wise to send ETA of vessel through the radio station. ETA could be best transmitted through the different telegram offices in the city such as RCPI, PT&T, Telefast, Clavecilla and Globe Mackay which is worldwide.

VHF: PPA Port Radio on Channel 16, Pilots on Channels 16 and 12.

TUGS: 4×3,200 h.p. tugs for hire, available through Cagayan Harbour Pilots Inc.

BERTHING: Berthing may be done any time during the day or during the night. Max. permissible ship's draft along the 80 m. portion from the North of the quay is 13 m. and 8.5 m. along the rest of the quay. The present quay is 982 m. in length, giving a total of 11 berthing spaces.

CARGO HANDLING FACILITIES: The port has two cargo handling operators. Phase I is operated by The Gold City Integrated Port Services, Inc. (INPORT). The company has 18×3 ton forklifts; 1×5 ton forklift, 1×20 ton forklift, 1×25 ton forklift; 1×35 ton forklift; 1×10 ton crane; 1×24 ton crane; 4× 6-wheel trucks.

Phase II is operated by the Continental Arrastre and Stevedoring Company (CASCO). The company has 15 forklifts with capacity 2.5 tons – 20 tons, 1 top loader with 35 tons capacity and 1 mobile crane with 25 tons capacity.

MEDICAL: Hospital facilities are available in the City of Cagayan de Oro.

FRESH WATER: The Philippine Ports Authority supplies water at the Cagayan de Oro Port. Water is delivered through hose connections direct from PPA's underground water tank. There are 8 outlets at Phase I and 6 outlets at Phase II.

FUEL: Vessels are required to apply for bunkering at PPA with a bunkering fee of P25.00 per vessel. Fuel oil is supplied by the local distributors of Caltex, Petrophil and Shell.

REPAIRS: Minor repairs, not to exceed 2 hours, may be allowed for vessels at berth upon approval by the Philippine Ports Authority. Major repairs have to be done at the anchorage.

SURVEYORS: None locally. Available from Manila and Cebu.

HATCHES: Opening and closing of hatches is carried out by the stevedoring companies.

CUSTOMS ALLOWANCES: Sufficient amount for crew's consumption whilst in port.

AIRPORT: Lumbia Airport is 9 km. from the Macabalan Wharf and is served by regular airlines.

HOLIDAYS: New Year's Day (January 1st), Holy Thursday, Good Friday, Labour Day (May 1st), Araw ng Kagitingan (May 6th), Independence Day (June 12th), Phil. American Friendship Day (July 4th), Bonifacio Day (November 30th), Rizal Day (December 30th).

Special Holidays declared by the President of the Philippines are included. If a legal holiday falls on a Sunday, the following day is a holiday. Normally, the integrated port service works on the vessel regardless of the day except for a 4 hour break in the afternoon of Good Friday, Christmas and New Year's Eve.

POLICE/AMBULANCE/FIRE: Police Tel. 110; Ambulance: Tel. 35-01 (Northern Mindanao Regional Training Hospital); 30-69 (Medical Centre); 42-21 (Madonna and Child Hospital); 32-66 (Cagayan Capitol College Hospital).

EMERGENCY CO-ORDINATION CENTRE: Philippine Coast Guard Station, Port Area, Cagayan de Oro City. No telephone.

STORING: See "Prelims".

1. Truck.
3. Yes.
4. Yes.
6. Yes.

SHIP SUPPLY SERVICE: The following Chandlers operate in the Port:

Alpha Premier Enterprises, 30 Matilde Neri St., Cagayan de Oro City.

Amity Shipping Agency, 70 Gomez, Cor. Capistrano Sts., Cagayan de Oro City.

Andres A. Maandig, Jr., Corrales Ext., Cagayan de Oro City.

Citizen Protective Agency, 1346 Buara, Puntod, Cagayan de Oro City.

D A Ship Chandler, 248 San Juan II, Lapasan, Cagayan de Oro City.

Doris C. Talaroc Shipchandling, 9-4th Sts., Nazarethe Subd., Cagayan de Oro City.

DVJ Trading, Mr. Obulan St., Capistrano Complex, Gusa, Cagayan de Oro City.

Pair Marine Supplies, 190 CM Recto Ave., Lapasan, Cagayan de Oro City.

Q.C. Magada Shipping Agency, YMCA Bldg., J. Pacana St., Cagayan de Oro City.

IDENTIFICATION CARDS: Seaman's Book and/or Passport, Shore Leave or Liberty Pass.

GARBAGE DISPOSAL: Service provided by City General Services Department, Cagayan de Oro City. Tel: 49-78. Skip hoist lorries available.

WASTE OIL DISPOSAL: No registered waste oil disposal facilities. However, vessels may upload waste oil in drums with proper clearance from the Bureau of Customs.

SEAMAN'S CLUBS: None, however, Philippine Ports Authority, PMO Cagayan de Oro, has basketball and tennis hard courts which can be utilised by seafarers at P10.00/hour.

CURRENCY: Philippines Pesos (P).

GENERAL: *Lay-Up Area:*

1. Cabulig Bay, Jasaan Area: Lat. 08° 38.5′ N., Long. 124° 45.5′ E.
2. Tagoloan Area: Lat. 08° 31′ 24″ N., Long. 124° 44′ 42″ E.

SHIPMASTER'S REPORT: June 1978 (Updated 1988).

Anchored 4.75 cables, 337° from the lighthouse. (F.R. 58 ft.) lowered 4 shackles into the water and after dropping slacked away to 7 shackles in the water in 50 fathoms of water.

Moored port side to owing to the distribution of the cargo in hatches Nos. 5 and 6. The Pilot prefers to berth starboard too.

Fore and aft springs, use nylon ropes (no wires, to facilitate the handling by the boat crews). Small tugs push vessel alongside. Anchor lowered with 1 shackle in the water, slacking away when necessary.

Cargo handling was good. Pallets were nicely stacked on the wharf. Provisions, vegetables and fruit, available.

Recommendation: Arrivals at daylight only. Consult Agents before signing papers.

AUTHORITY: Philippine Ports Authority, Port of Cagayan de Oro, Port Management Unit, Macabalan, Cagayan de Oro City, Philippines 9000.*Tel:* 44-48, 45-48. *Contact:* Regino R. Labilles, Port Manager.

CEBU, Cebu Island: 10.18 N. 123.53 E. (See Plan)

See "General" before first port.

GENERAL:

Port of Cebu City: General Description:

Situated at the city frontage between Cebu and Mactan Island. 4,474 m. of quayside (including international and domestic zones).

3 finger piers at 155 m.×32.8 m. The international zone has a length of 451 m., excluding the 2 finger piers.

3 government transit sheds on each pier with a total area of 6,264 sq.m.

Total port area is 423,245 sq.m.

Port District of Cebu:

(a) The National main Port of Cebu.

(b) Aside from the main Port of Cebu, there are 11 other ports within Cebu Harbour namely:

1. The Ludo Private Port.
2. The Mandaue Municipal Wharf.
3. Ouano Private Wharf.
4. San Miguel Corp. Private Wharf.
5. Fil Oil Depot Private Pier.
6. General Milling Corp. Private Wharf.
7. Matimco Private Wharf.
8. Opon Municipal Wharf.
9. Mobil Oil Depot Private Wharf.
10. Caltex Oil Depot Private Wharf.
11. Shell Island Depot Private Wharf.

PORT LIMITS: The Port Limits of Cebu: Cebu Harbour as that part of the Strait between Mactan Island and the Island of Cebu within the following boundaries: an imaginary line extending from Bantolinao Point, Mactan Island, due North (true) to the Island of Cebu; and an imaginary line extending from Lawis Ledge, Mactan Island, to Lipata Point, Island of Cebu.

DOCUMENTS: *For Entry:*

7 copies of the Inward Foreign Manifest listing therein all cargoes to be discharged in the port.
4 copies of the Cargo Stowage Plan.
3 copies of the Stores List.
3 copies of Bonded Store List.
3 copies of Firearms and Ammunition List.
3 copies of List of Drugs and Narcotics.
3 copies of Passenger List.
3 copies of Crew List.

The original copy of the Manifest for all through cargo destined for other ports to be deposited with the Customs Inspector on board.

For clearance:

3 copies of Post Office Clearance (for mail discharged or loaded).
3 copies of Request for Clearance.
5 copies of B.C. Form 101 (Customs Inspector report on departing vessel).
5 copies of B.C. Form 98 (Clearance of Vessel to Foreign Port).
5 copies of B.C. Form 198 (Oath of Master).
3 copies of Quarantine Clearance.
1 copy of Plant and Animal Quarantine Clearance.
7 copies of B.C. Form 88 (Outward Foreign Manifest).
6 copies of B.C. Form 88–A (Statistical Supplement).
5 copies of Master's Oath covering list of officers on board.
5 copies of Crew List.

PILOTAGE: At least 48 hours before arrival, the Shipmaster shall transmit to the ship's Agent in Manila through the Coastal Station, Manila Radio (DSZ, operated by the Association of International Shipping Lines), a message indicating the ship's position and the estimated time of arrival (ETA).

In turn, the ship's Agent shall pre-arrange the meeting time at the designated boat station through a telegram to the Cebu Harbour Pilots' Association.

Boat Station No. 1:

1 mile off Black Buoy No. 1 in the vicinity of Bantolinao Lighthouse, Mactan Island for foreign vessels coming from the North of Cebu Harbour.

Boat Station No. 2:

1 mile off Lauis Ledge, Mactan Island for foreign vessels coming from the South of Cebu Harbour.

Visual Signals: Request for Pilot. The single hoist of the international code flag "G".

Sound Signals: Request for Pilot. The international morse code "G" or 2 prolonged blasts, followed by 1 short blast of the ship's whistle.

Pilot Boats:

During night-time:

1. All around white light on top of a red light in a vertical line.
2. Side lights.

During daytime:

A motor launch of approximately 20 gross tons, with the single hoist the international code flag "H".

APPROACHES: *Fairway:* Vessels can enter the harbour through the narrow strait either from the Northeast or from the South. With the construction of the Cebu-Mactan Bridge, large ocean going vessels have to take the South entrance. The Northeast channel is narrow. It has a navigable width of at least 50 m. and a controlling depth of 8.8 m. It is comparatively straight and properly marked with beacons, buoys and lights for navigational guides. The channel from the Southern approach is wider. It is 805 m. or 0.5 miles wide at the narrowest point.

Navigational Aids: To achieve maximum safety to sea navigation, the port is equipped with the following safety facilities:

The Cebu North Channel: Black Buoy No. 1, Red Buoy No. 2, Bantolinao Light Beacon No. 3 and White Beacon Fronting Pier No. 1.

The Cebu South Channel: Lawis Lighthouse and Red Buoy No. 1, Black Buoy C No. 3, Black Buoy C No. 1, Red Buoy C, Beacon No. 2, Capitol Light, Ludo Wharf, San Nicolas Church Red-Lighted Cross.

ANCHORAGE: *North Stream:*

(a) 1st Anchorage: In front of Pier 3 in position, Lat. 10° 17.8′ N., Long. 123° 54.90′ E. Depth MLLW=4 fathoms.

(b) 2nd Anchorage: In front of William Lines Warehouse in position, Lat. 10° 18.0′ N., Long. 123° 55.25′ E. Depth MLLW=5 fathoms.

(c) 3rd Anchorage: In front of Aboitiz Terminal in position, Lat. 10° 18.2′ N., Long. 123° 55.5′ E. Depth MLLW=6 fathoms.

South Stream:

(a) 1st Anchorage: Opposite Ludo Wharf in position, Lat. 10° 16.88′ N., Long. 123° 53.43′ E. Depth MLLW=6 fathoms.

(b) 2nd Anchorage: N.E. of Kawit Island in position, Lat. 10° 16.54′ N., Long. 123° 53.33′ E. Depth MLLW=8 fathoms.

(c) 3rd Anchorage: Lat. 10° 16.17′ N.. Long. 123° 53.28′ E. Depth MLLW=6 fathoms.

(d) Explosive Anchorage: South of Lipata Point, West of Lawis Ledge.

Anchorage Instructions:

(a) Only 3 vessels of 600 ft. overall length can anchor at the anchorage with a safety margin for dragging and swinging during bad weather with 4 shackles in the water recommended for safe anchorage.

(b) For each vessel of 600 ft. overall length with 4 shackles of anchor chain in the water, approximate turning circle radius is 960 ft.

RESTRICTIONS:

1. Foreign ships are not allowed to pass the North Channel, due to the bridge between Madaue and Opon. However, ships of 80 ft. vertical height from MLW and length of 300 ft. may pass with utmost care.

2. Draft limitation of 40 ft. for Cebu Channel while port established berthing spaces vary from 10 ft. up to 30 ft.

3. Ballast, oil are prohibited to be discharged within the Cebu Harbour and Philippine waters.

MAX. SIZE: See "Berthing".
HEALTH: Pratique obtained after Quarantine personnel have boarded, mustered crew and passengers, and examined ship's health documents. Pratique automatic if vessel coming from another Philippine port.
RADIO: Globe Mackay & Radio Corp. Call letters DZM. (Other call letters and frequencies available).

Working Frequencies: 4328 kHz, 6492 kHz, 8656 kHz, 12984 kHz.
Listening Frequencies: 425 kHz and 500 kHz; 6258.5 – 6265.5 kHz; 8354 – 8374 kHz; 12531 – 12561 kHz.

Master may contact Cebu Stevedoring Company through Channel 1 (156.7 MHz) and Channel 2 (157.8 MHz) VHF.
VHF: Harbour Pilots may be contacted on VHF Channel 16.

Vessels are to call "Cebu Pilots" 2 hours prior to arrival advising them if coming from the North or South.
TUGS: The Cebu Harbour Pilots Association has available tugs of varying h.p. When additional h.p. is required, National Stevedoring and Lighterage Corporation can provide for more powerful tugs of varying capacities.
BERTHING: Berthing may be done at any time during the day or at night and Masters should exercise their own judgment in this respect. Vessels moor either port or starboard side to, depending on prevailing conditions.

Port of Cebu: Berthing of vessels engaged in foreign trade are limited to moor only at the following berthing areas.

(a) Cebu International Port:

Berth Number	*Length of Berthing space* (m.)	*Draft Limitation* (ft.)
1	172.5	30
2	172.5	30
3	172.5	30
4	172.5	30

1×35 ton and 1×25 ton level luffing cranes for containers; 3×25 ton forklifts; 3 toploaders × 20 tons capacity; 49 reefer points; 14 trailers; 2 prime movers; C.F.S. of 6,480 sq.m.; open storage area of 10,000 sq.m.

(b) Ludo Private Port: Berthing of vessels engaged in foreign trade at Ludo Private Port are moored to concrete dolphins running N.E. or S.W. of the Ludo Pier. Draft limitation: 40 ft.

Port Establishment of Mandaue: Berthing of vessels engaged in foreign trade are not allowed at Mandaue. Draft limitation: 12 ft.

Port Establishment of Mactan: Berthing of vessels engaged in foreign trade are allowed at General Milling Corporation Private Wharf, and Shell Island Depot Private Wharf.

Port District	*Draft Limitation* (ft.)
General Milling Corp. Pvt. Wharf	25
Opon Municipal Port	15
Mobil Oil Depot	25
Caltex Oil Depot	25
Shell Island Depot	30

Cebu is a principal port of entry open to both foreign and domestic trade.

Other Ports of Entry under PMU-Cebu.

I. Mactan. Another port of entry, N.E. of the Port of Cebu City. Considered as an industrial port, it has jurisdiction over all of Mactan, Shell and Olango islands. Average ship call is 145 vessels (foreign and domestic) per month.

Other ports of entry under the jurisdiction of PPA-Mactan but owned by private entities are:

General Milling Corporation – A 275 m. private marginal wharf with an average depth of 12.20 m. Foreign vessels usually carry raw wheat materials for processing at GMC mills.

Mobil Oil Philippines – 97 m. long with an average depth of 9.90 m. Has total storage capacity of 424,162 bbls. Used exclusively by tankers.

Caltex – Shell – 156.34 m. long with total storage capacity of 273,750 bbls.

II. Tagbilaran. Tagbilaran City is the capital and commercial centre of Bohol. It has a population of 56,000 out of Bohol's total of 0.9 million.

The port of Tagbilaran is the biggest and main port of Bohol. It is situated right in the heart of Tagbilaran City at the narrow channel formed by a cove on the S.W. end of Maribojoc Bay and Panglao Island, the later providing a natural barrier that protects the port from adverse weather.

Tagbilaran is 41 nautical miles from Cebu City (approximately 4 hours sailing). The whole of Bohol is provided with a coastal and central road network which makes travel around and across the island possible.

Pilotage is compulsory which is handled by the Tagbilaran Harbour Pilots Association.

Philippine Sinter Corporation (PSC) Private Port: Situated in Garcia Hernandez, S.E. of Bohol and is 53 km. from Tagbilaran City.

Port Facilities:
245 m. of berthing.
14 mooring bitts.
10 rubber fenders.
41 rubber tyre fenders.
2 fixed Ro-Ro ramps.

Draft of 8.0 m. alongside; 6.0 m. at the entrance channel (below MLLW).

Storage and back-up area of 18,200 sq.m. and 13,300 sq.m. respectively.

Transit shed of 300 sq.m.

Passenger Terminal of 200 sq.m., complete with amenities.

Central water system with 16 cu.m. elevated water tank and underground reservoir.

Stevedores: Cargo handling services is provided by Tagbilaran Maritime Services Inc.

Equipment:

No.	Description
3 × 2 ton	Forklifts
1 × 3.5 ton	Forklift
2 × 6.0 ton	Forklifts
6	Freight trucks

III. Other Private Ports which also serve as Ports of Entry.

Atlas Consolidated Mining & Development Corporation (ACMDC) at Sangi, Toledo. Under the jurisdiction of the PPA Sub-port of Toledo, this private port caters to ocean-going vessels which unload imported machinery and equipment, anhydrous ammonia, sulphuric acid among others. While those exported are copper concentrates and pyrite cinders.

Durano Private Port in Danao, Cebu.

APO Cement Corporation Private Port in Tina-an Naga, Cebu.

Philippine Mining Service Corporation Private Port, located at the Municipality of Dalaguete, Cebu caters to foreign vessels to load dolomite with the use of conveyor belts.

National Power Private Port, located at Tina-an Naga, Cebu caters to foreign and domestic vessels to load or unload coal.

Total Bulk Corp. in Mandaue City.
Prime White Cement in Asturias, Cebu.
Petrophil Corp. in Mandaue City.

CRANES: Level-luffing cranes of 25 tons and 35 tons are available at Cebu International Port only.
BULK CARGO FACILITIES: Bagging hoppers available. Discharging/loading of break bulk 15 tons/net gang hr. For containers 11 boxes/hr. Quay crane outreach maximum of 7 rows of containers.
BRIDGES: The Opon-Mandaue Bridge crossing the North channel is completed and open to traffic. According to Cebu Pilots Association, clearance is 76 ft. at HW and 80 ft. at LW.
STEVEDORES: Ordered by Agents, no ETA to stevedores necessary from Master.

Cranes (50 ton floating crane), forklifts, trucks, tugs, barges and lighters are used for cargo handling and are mostly owned by private contractors.
MEDICAL: No advance notice to Agents needed. Hospital facilities available anytime.
TANKERS: See "Berthing".
DENSITY: 1030.
FRESH WATER: Most berths supplied by shore installation, otherwise by barge or trucks.
FUEL: Fuel oil can be obtained by arrangement with the different oil installations on Mactan Island (Shell, Caltex and Petrophil).
FIRE PRECAUTIONS: Tankers discharging: Smoking only allowed in saloon (officers), crew in the messroom.
CONSULS: Norwegian 9-77-20; Chinese 7-45-85; American 7-31-51.
REPAIRS: Minor repairs possible.
DRY DOCK: Cebu Shipyard – Dry dock: 160 m.×30 m.×6.0 m. on sill. 6 slipways, max. size 6,000 d.w.t.
SURVEYORS: Jardine Surveying Services.
GANGWAY/DECK WATCHMEN: Services of watchmen necessary subject Master's recommendation.
OPENING/CLOSING HATCHES: Stevedores, with aid of ship's crew.
CUSTOMS ALLOWANCES: (Tobacco) 1 carton a week for each crew member. (Wine and/or Spirits) 1 bottle a week for each crew member.
REPATRIATION: Facilities available.
AIRPORT: Distance 7 miles from port and regularly served by all domestic airlines.
HOLIDAYS: Cargo can be arranged on following holidays: Holy Thursday; Bataan Day (April 9th); Labour Day (May 1st); Independence Day (June 12th); Republic Day (July 4th); Bonifacio Day (November 30th); Rizal Day (December 30th). No work on Christmas Day, Good Friday or New Year's Day.
SERVICES: Compass adjusting services available. Contact Captain Chong at G.P. Shipping Lines or Captain Basa at Aboitiz Shipping Lines.
SHORE LEAVE: Possible. Nationals of Communist countries require clearance from Immigration Office.
IDENTIFICATION CARDS: Required by Immigration Authorities.
GARBAGE DISPOSAL: Garbage disposal can be arranged with the Port Management Office, Philippines Port Authority, Port of Cebu.
WASTE OIL DISPOSAL: There is no collection service available. Each shipping line has its own waste oil disposal.
SEAMAN'S CLUBS: There is no Seaman's Club operating at the port. However, Fr. Roland Doriol is in the process of organising a club in the Port of Cebu. Tel: 21-64-79 or 9-54-92.
CURRENCY: Local currency is Peso. Under Central Bank Circular No. 1318 dated 3rd January 1992, Chapter II Section 11, maximum local currency imported/exported into or out of the Philippines should not exceed P.5,000.00 without Central Bank authorisation.
DELAYS: Berthing on North side of piers depends upon tide and current. South side of piers, vessel can dock any time.
DEVELOPMENTS: *Future Port Development:*

Reclamation of an additional area in the shallow basin Northward of the existing port will serve as the room for expansion of the proposed facilities. The area is divided into three development stages with varying implementation schedules, depending on its viability.

The proposed reclamation will have wider potential back-up areas, less constraints in layout design and the availability of the areas for Stages II and III for future expansion of cargo handling facilities. The disadvantages include the shortage of suitable fill materials, the probable settlement in the newly reclaimed areas and longer construction. (Detailed surveys and soil investigations have already been completed for these sites).
AUTHORITY: Philippine Ports Authority, Port of Cebu, MacArthur Boulevard Extension, North Reclamation Area, Cebu City, Philippines 6401. *Tel:* 214268, 70815, 96281. *FAX:* (06332) 91859. *Cables:* PPA-Cebu. *Contact:* Manuel T.Gorme, Port Manager – PMO Cebu.

AGENT: See "Manila".

DADIANGAS (General Santos City), Mindanao: 06.06 N. 125.09 E. (See Plan)

See "General" before first port.

PORT LIMITS: Port of General Santos embraces all that portion of Saranggani Bay bounded by an imaginary line extending across the bay from Tampuan Point to Sumpang Point, thence along the shoreline until the point of commencement (Lat: 06° 06′ N., Long: 125° 09′ E.). This shall include all foreshore areas and delineated port area of Makar Wharf.

DOCUMENTS: Vessels calling at General Santos are required upon entry to submit to the Philippine Ports Authority the following: 2 copies of Inward Manifest, Passenger and Crew Declaration List, 1 copy of Cargo Storage Plan, Hatch List and Vessel Particulars.

APPROACHES: At sea, navigating towards Dadiangas, there is only 1 navigational marker (Tinoca Point in Saranggani Strait) and that is an approach from the open Pacific, about 40 miles from Dadiangas. There are no buoys, beacons or other radar targets. The sea and harbour approaches are open and free of obstructions, and there is deep water almost to the beach, all the way into Saranggani Bay.

PILOTAGE: Pilotage is compulsory for all vessels of foreign registry of 100 g.r.t. and over, and domestic vessels of 50 g.r.t. or over. The Pilotage District covers the waters and harbours of the Port of General Santos, Saranggani Bay, Glan, Kiamba and other ports of South Cotabato.

Pilot Boarding Ground: One mile East of Dole Pier by a red and white pilot launch flying the "H" flag. Privately owned pilot launches are used by the Harbour Pilots in serving vessels calling at General Santos. The pilot launches are painted white and red with the marking "Pilot" at their bows and fly a small Philippine flag and the red and white flags. These launches are stationed at the Western end of the quay at Makar Wharf.

One Pilot and one stand-by Pilot are on duty on a 24 hour basis.

Docking Priority: As a general rule, the port has adopted the "first- come-first-served" basis in determining berthing priorities of vessels, subject to the exceptions hereinafter provided. Vessels arrive at pilot boarding area which is one mile East of Dole Pier.

Navigation Signals:

The following signals are recognised by all Pilots:

The pilot jack hoisted at the fore.

The international code signals or P.T.

The international code signal P.T. by flashing lights.

ANCHORAGE: Vessels drop anchors at the designated area along the Saranggani Bay Cove near Barangay Bula Zone and just off the city. Vessels proceed immediately to pilot boarding area where Pilot boards vessel for anchorage or for berth at the public or private wharves or to wait for Customs boarding formalities and quarantine.

Anchorage of vessels is prohibited at the Fairway area, between the Dolefil Pier and Makar Wharf.

RESTRICTIONS: No restrictions on entering the harbour limits even at night time, but shipping Agents must notify and secure permits from the Authorities before incoming vessels are allowed to enter.

MAX. SIZE: Makar Wharf: Draft 8.0 m. – 10.0 m.

HEALTH: Foreign vessels calling at the port are inspected by Immigration Officers to determine whether the vessels observe quarantine rules and regulations or whether the vessels are free from any quarantinable or communicable diseases.

RADIO: There is one privately owned radio installation in Dadiangas and one communication system from Dadiangas Harbour Pilots Association, which should be listened to for special instructions and late priority needs.

Dadiangas	– Dole/Stanfilco Marine
Call Sign	– DXA2
Frequency	– 8722
Power	– 250 to 300 watts
Open	– 0630 to about 0700 hrs. daily. – Special arrangement can be made provided the station has been advised earlier.
Pilot	– Pilot Office inside port area maintains VHF radio on Channel 16.
Power	– 100 watts
Open	– 24 hours.

When at anchorage, 1 hour's notice of berthing is to be given on VHF Channel 16 by the ship sailing into the wharf.

Estimated Time of Arrival (ETA) Notices:

The Master of the vessel sends a radio message to the ship's Agent in Manila containing advance shipping information as follows: name of vessel, port of destination, discharging/loading point (public or private wharf, at anchorage or at berth), ETA, LOA (length overall), estimated draft while alongside (in metres), nature and tonnage of cargo for discharging, and special berthing or cargo handling gear/equipment requirement.

The ship's Agent relays this shipping information at the earliest possible time to the shipping line branch/agency or Agent either by telegram, long distance or radio message which in turn, the branch Agent applies for berthing and/or anchorage allocation at the PPA, Port of General Santos. In the case of foreign or domestic vessel where it has no local Agent, messages are sent to the Harbour Pilot and to the government concerned agencies and its supervisor usually comes to arrange with agencies involved in the berthing/anchorage allocation of the vessel.

TUGS: Two tugs available.

BERTHING: Berthing of vessel is done by Harbour Pilot and assisted by tugboat anytime during the day or night.

Generally, the length and breadth of a vessel entering the approaches of the Port of General Santos do not pose any problem.

	Length (m.)	*Width* (m.)	*Depth Alongside* (m.)
Public Berth:			
Makar Wharf	561	20	8.5 – 11.0 MLLW
Private Berths:			
Dole Pier	145	18	11.5
GMC Wharf	47	9	12.6
Agro-Techs (dry or liquid)	47 (with dolphin)	9	12.6
Fishing Wharves:			
Congson Pier	47	9	12.6
R.D.Fishing Industries	47	9	12.6

BULK CARGO FACILITIES: Bulk cargoes can be discharged/loaded at Makar Wharf, Dole Pier, GMC Wharf and Agro-Techs.

Port Services:

a. Port facilities servicing the banana, fish and pine industries with the use of refrigerated cargo container equipment are at the Dolefil Pier.

b. Port facilities servicing copra/by-products and other agricultural products are at Makar Wharf, GMC Pier and Agro-Techs.

c. Port facilities handling containers using the vessels' cranes or booms are at Makar Wharf, Dole Pier and GMC Pier.

CRANES: 2×40 tons.

SPECIALISED CARGO HANDLING FACILITIES: Ro/Ro ramp at Makar Wharf. Conveyor at Agro-Techs.

BRIDGES: None.

STEVEDORES: Agent of incoming vessel should advise and arrange gangs with cargo handling contractor at last 24 hours before arrival.

MEDICAL: There are three hospitals in General Santos City: Doctors' Hospital, St. Elizabeth Hospital and the General Santos Emergency Hospital. Shipping Agent makes arrangements with hospitals concerned in advance.

TANKERS: There are no available discharge facilities for tankers at the port except at the designated anchorage area where devices are installed by oil companies to allow vessels to discharge their cargo.

DENSITY: Variable.

FRESH WATER: Supply of fresh water is available alongside the quay. The Authority (PPA) has its own water system capable of supplying fresh water simultaneously to all vessels lying alongside the wharf. Present rate is P20.00 per ton for domestic vesssels and P25.00 per ton for foreign vessels.

FUEL: Supply of fuel or bunkering is done privately by local oil companies. A vessel shall be allowed to refuel at berth provided prior permit from the Authority is secured.

FIRE PRECAUTIONS: As a precautionary measure, vessels intending to refuel at the port are required to provide fire extinguishers for use in case of emergency. Vessels with dangerous cargoes are not allowed to berth alongside, but will be provided with a special area in the anchorage.

CONSULS: None.

REPAIRS: Minor repairs at berth may be allowed provided that a permit is secured from the Authority.

DRY DOCKS: 2 dry docks for fishing vessels only.

SURVEYORS: None available locally, but can be arranged from Manila or Davao.

GANGWAY/DECK WATCHMEN: Shipping Agents arrange with private security agencies the hiring of gangway/deck watchmen when the service is needed.

HATCHES: Stevedores usually open and close hatches. But when a vessel is of different model and the hatches are constructed differently, Crew members are requested to assist stevedores.

CUSTOMS ALLOWANCES: Quantity of goods permitted for each Crew member to be held out of bond are goods the crew can use for personal consumption.

CARGO GEAR: Special cargo equipment used in the discharge or loading of heavy lifts can be arranged with private contractor.

REPATRIATION: Shipping Agent can arrange this with the Bureau of Immigration Office.

AIRPORT: There are 2 airports intended for domestic flights: Buayan Airport located 10.5 km. N.E. from the port; and the Allah Valley Airport in Surallah, South Cotabato is located 75 km. from Makar Wharf. Flights from Buayan Airport: Monday, Tuesday, Wednesday, Friday and Sunday 0745 hrs.; Thursday and Saturday 1040 hrs. Daily afternoon flights are at 16.25 hrs.

HOLIDAYS: There are about 11 public holidays in the Philippines. Cargo work can be arranged with the contractor during any of these holidays.

POLICE/AMBULANCE/FIRE: Use telephone system.

		Telephone No.
Police:	Desk Sergeant	119
	Chief of Police	3011
	Makar Sub-Station	2534
	Lagao Sub-Station	4427
Ambulance:	Doctor's Hospital	3141; 4714
	GS Emergency Hospital	115; 2811
	St.Elizabeth Hospital	3162; 4784
Fire:	Desk Officer	113; 4013
	Fire Chief	3013

SERVICES: Aside from the usual services rendered by the port, other ancillary services which are performed by private contractors are bunkering, re-watering, victualling, tug assistance, mooring, ship chandling, etc.

SHORE LEAVE: Crew members are allowed ashore provided that at all times there are sufficient personnel on board to attend in case of movement/shifting of vessel lying alongside the wharf.

IDENTIFICATION CARDS: Seaman's Book or shore pass is sufficient.

GARBAGE DISPOSAL: Garbage collection is available anytime, and performed by the dock workers. This can be secured or negotiated through the PPA operations personnel or the stevedoring contractor. Negotiations determine the charges as there is no permanent or franchised company to perform the services.

WASTE OIL DISPOSAL: There is no firm rendering this kind of service in the port of General Santos. However this can be performed anytime by the cargo handling operator through proper negotiation with the Philippine Ports Authority.

SEAMAN'S CLUBS: None.

CURRENCY: Philippines Pesos (P).

REGULATIONS: PPA gate pass system is enforced to regulate and control the movement of vehicles and pedestrians in the port zone.

DELAYS: Work stoppages due to rain/inclement weather/strikes/waiting for cargo.

GENERAL: The Port of General Santos is considered the country's first modern port and is equipped with the newly introduced cylindrical rubber fenders fixed to the wharf's cope line which serve as protectors to both berthing vessels and the wharf.

Three transit sheds with an area of 6,480 sq.m. and a 26,820 sq.m. open storage area with lighting are available.

AUTHORITY: Philippine Ports Authority, Port of General Santos, P.O.Box 53, General Santos City, Philippines. *Tel:* 4446, 4484, 4705. *Contact:* Manuel C.Albarracin, Port Manager.

DAVAO, Mindanao: 07.04 N. 125.38 E. **(See Plan)**

See "General" before first port.

PORT LIMITS: Vessels enter the port through the Southern entrance of Pakiputan Strait. A vessel is considered to be an "arrived ship" and laytime will commence (subject to Charter-Party Terms) at the Pilot's boarding position located approximately 3 miles off the lighthouse at Sta. Ana Pier.

DOCUMENTS: Required on entry

The Philippine Ports Authority (PPA):

3 Inward Foreign Manifest.
1 Cargo Stowage Plan and Hatch List.
1 Passenger List.
1 Crew Declaration List.

The Bureau of Customs (BOC):

7 Inward Foreign Manifest.
5 Cargo Stowage Plan and Hatch List.
5 Stores List.
5 Bonded Stores List.
5 Firearms and Ammunitions List.
5 Drugs and Narcotics List.
5 Passenger List.
5 Crew Declaration List.
Clearance from last port of call.

PILOTAGE: The pilot station is furnished with a copy of the approved Application for Berthing/Anchorage Permit filed with the Port Authority 36 hours prior to ship's arrival, serving as a notice for meeting an incoming vessel.

ETA Notices: The Master of the vessel sends a radio message to the ship's Agent in Manila through the coastal radio station (DSZ) Manila, operated by the Association of International Shipping Lines containing the advance shipping information as follows:

Name of vessel.
Port of destination and discharging/loading point.
ETA.
LOA.
Estimated draft whilst alongside.
Nature and tonnage of cargo for discharging.
Special berthing or cargo handling gear/equipment requirement.

The ship's Agent in Manila consequently relays this shipping information to the local Agent at the Port of Davao either by long distance telephone, telegram or telex. Where the vessel does not have a local Agent, necessary messages are sent to the Harbour Pilot and GovernmentAgencies directly involved; the supercargo normally comes a day ahead of the vessel's ETA.

Signals: The following signals are recognised by all Pilots:

To ask for Pilot by day:
The pilot jack hoisted at the fore.
The International Code Signals or P.T.
To ask for a Pilot by night:
The pyrotechnic light, commonly known as blue light, flashed every 15 minutes.
A bright white light, flashed or shown at short or frequent intervals just above the bulwark for about a minute at a time.
The International Code Signal P.T. by flashing lights.

Pilot Launches: A total of 6 launches are regularly used by the Harbour Pilots distinctively painted red and white with a number preceded by "P" at their bows and fly a small Philippine flag and a red and white flag. 3 Pilots are posted to attend to all pilotage needs of vessels on an 8 hour shift scheduled for 24 hours. The pilot launches are stationed at Sta. Ana Pier, Sasa Wharf and Hijo Wharf.

The Pilot's boarding position is at 7° 02.0′ N. 125° 39.0′ E.

Shipmaster's Report: June 1987.
Call "Davao Pilots" on VHF Channel 16, 2 hours before arrival, and advise them that you are arriving from the North or South.

RESTRICTIONS: There are no particular restrictions in entering the harbour limits, even at night time, after prior advices have been served and prescribed berth/anchorage permit has been secured from the Port Authority.

MAX. SIZE: Generally, length and breadth of any vessel does not pose a problem in entering the approaches of the Port of Davao, however, berthing in individual ports varies on the ports' facilities and characteristics as listed below.

MAX. SIZE:

Name of Port Facility	*Location*	*Controlling Draft (m.)*	*Length Overall (m.)*	*Approx. Heading/ Position*	*MLLW Elevation (Sea Level) (m.)*	*Remarks*
A. Principal Ports. (Port of Entry).						
1. Sasa Wharf	Sasa, Davao City	10.6	920.0	007°/187°	3.05	General cargo, Foreign, Domestic
2. Sta. Ana Pier	Sta. Ana Davao City	4.0	N–104.4 S–88.5	270°	2.65	General cargo, domestic only.
B. Sub-port of Entry						
1. Mati Wharf (Also see Mati)	Mati, Davao. Oriental	7.3	81.0	—	—	General cargo.
C. Private Ports. (Port of Entry).						
1. Caltex Jetty I	Sasa, Davao City	7.0	66.0	030°/210°	—	Oil berth.
Caltex Jetty II	Sasa, Davao City	9.7	55.18	041°/221°	—	Oil berth.
2. NIDC Wharf	Sasa, Davao City	9.3	205.0	042°/222°	4.3	Coco oil, general cargo. Foreign only.
3. Shell Jetty.	Sasa, Davao City	10.4	42.98	032°/212°	—	Oil berth.
4. Tefasco Wharf	Ilang, Davao City	10.0	400.0	017°/197°	3.0	General cargo.
5. MTBS Wharf	Ilang, Davao City	8.8	101.0	347°/167°	—	General cargo, banana berth.
6. DUCC Wharf	Ilang, Davao City	7.0 9.5	142.0 131.0	— —	3.0 3.0	Cement, coils, coal, slag, gypsum, clinker.
7. Pacinter Wharf	Bayawa, Panabo, Davao	12.0	110.0	050°/230°	3.6	General cargo, banana berth.
8. Tadeco Wharf	Bayawa, Panabo, Davao	12.0	258.5	050°/230°	4.3	General cargo, banana berth.
9. HPI Wharf	Madaum, Tagum Davao.	13.0	270.0	318°	4.3	General cargo, banana berth.
D. Municipal Ports						
1. Dawis Pier	Digos, Davao del Sur	5.0	27.0	6° 45′ N. 125° 30′ E.	2.5	General cargo, domestic only.
2. Malalag Wharf	Malalag, Davao del Sur	10.0	30.0	6° 36′ N. 125° 35.5′ E.	5.0	Cane molasses and general cargo.

ANCHORAGE: General Anchorage.

Sta. Ana Anchorage: Vessels awaiting berth availability, anchor about 450 yards N.E. or S.E. of Santa Ana Pier in 12 fathoms, mud. The anchorage is well protected except during the S.W. monsoon.

Loading Anchorage.

Maco Anchorage: Anchor in 50 fathoms with the sawmill bearing 057°, the white plantation house near the mouth of Madaum River bearing 288°, and, the Western tangent of Bassa Point bearing 223°. The bottom is mud and evidently is good holding ground.

Tambongon Anchorage: Anchorage can be taken in 10 to 20 fathoms with good holding ground.

Bunawan Anchorage: Vessels anchor Eastward of the ruined pier in 8 to 15 fathoms.

Tibungco Anchorage: Vessels anchor Eastward of the ruined pier about 0.5 mile offshore in 12 to 15 fathoms.

Talomo Anchorage: Vessels anchor at the Southwestern part of the bay in 20 fathoms, mud bottom. It is open to the S.W. monsoon.

Daliao Anchorage: Vessels anchor about 300 yards Southeastward of the ruined pier in 8 to 15 fathoms. This anchorage is exposed to Easterly winds and sea.

Tagabuli Anchorage: A deep inlet, 0.9 mile long and about 500 yards wide, is 2.3 miles Northward of Digos Point. The anchorage is protected from winds, except those from E.S.E., is in the middle of the bay in 16 to 20 fathoms, mud bottom, where the width of the bay is about 400 yards between the edges of the reefs.

Malalag Anchorage: Anchorage for vessels of any size and with more protection is Northeastward of the pier in 16 to 19 fathoms, mud bottom. Vessels entering the bay for shelter will find good protected anchorage between the islet near the head of the bay and the North shore in 20 fathoms mud.

HEALTH: Vessels arriving from foreign ports are subject to quarantine inspection at their first port of call in the Philippines. A vessel inspected and granted a Pratique in a Philippine port is not subject to quarantine inspection at its next Philippine port of call except when during the trip there has been a case of illness or death on board or its last Philippine port of departure is infected with a quarantinable disease.

Vessels from the U.S.A., Canada, Australia, or New Zealand are permitted to enter a port, disembark and commence operations provided they have complied with the provisions of the Controlled Free Pratique.

The following are required from the Master:

1. Maritime Declaration of Health duly signed by the Master.
2. Crew List.
3. A valid Derat and/or Exemption Certificate.
4. Cargo Manifest.

For any suspected disease or fever on board, the following will apply:

1. For quarantinable disease, special measures by the Quarantine Medical Officer will be undertaken to prevent its entry.
2. For a non-quarantinable disease, patients should be disembarked and hospitalised and the local Health Officer notified. For non-landing patients, they should be isolated on board and treated.

RADIO: Other than those mentioned under "Pilotage", all messages from vessels to Agents can be sent via Apo Communication Service in Davao City, HF frequency DXF and VHF, DXF-6.

VHF: Radio communication linking Pilot to Philippine Ports Authority uses VHF Channel 16. Everett Steamship Corp. have VHF Radio set capable of connecting a ship in port to local office communications.

RADAR: No radar facilities available.

TUGS: Tugs are available for vessels entering the Port.

BERTHING: For details of available berths and types of cargoes handled respectively thereat, see table of port facilities under "Max. Size". Normally, discharging and loading of cargoes are by ship's gear.

CRANES: 65 ton, 35 ton and 25 ton cranes are available at Sasa Wharf and 30 ton cranes at Legoil and Tefasco wharves.

BULK CARGO FACILITIES: Bulk cargoes, if any, are handled at general cargo berths. Loading rate is from 10-20 tonnes per net gang hour at Sasa Government Wharf and various banana berths.

SPECIALISED CARGO HANDLING FACILITIES: There are none available, except for those mentioned as oil berths, all other ports are utilised as multi-purpose berths.

BRIDGES: The fairway is clear of bridges.

STEVEDORES: Upon arrival, the Arrastre Stevedoring Company is furnished a copy of the Application for Berthing Permit which is filed 36 hours prior to ship's arrival. Based thereon, gangs are mobilised as would be necessary to service the size of cargoes to be handled.

Conventional cargoes are worked at the rate of 14 tons per net gang hour at Sasa Government Wharf.

MEDICAL: There is 1 government hospital and 4 private hospitals in the area equipped with adequate medical services and facilities.

TANKERS: Diameter of discharge lines at oil berths range from 1.5 in. – 8.0 in.

DENSITY: Average salinity – 1025.

FRESH WATER: Fresh water is available and delivered by tank lorries or barges.

Point of Delivery	*Distance (Nautical Miles)*	*Minimum Delivery (Tons)*	*Method of Delivery*
1. Source	—	—	
2. Sta. Ana	10	50	Barge
3. Sasa	12	50	Barge Lorry
4. Panacan	16	50	Barge Lorry
5. Panabo	24	100	Barge
6. Madaum	29	100	Barge
7. Maco & Malalag	31	200	Barge

FUEL: All grades available – bunkering and other special fuel.

Mindanao Trucking Corp., Lanang, Davao City Tel: 7-55-15, 7-41-33.

Caltex (Phils) Inc., Sasa, Davao City Tel: 7-82-52.

Shell Chemicals Co., (Phils) Inc., Sasa, Davao City Tel: 7-84-91, 7-91-17.

FIRE PRECAUTIONS: At the oil berths, there are no specific fire precautions other than the usual non-smoking precaution.

CONSULS: Japanese Consulate Tel. No. 7-37-81

Indonesian Consulate General Tel. No. 7-84-86

REPAIRS: Engine overhaul; all types of deck repairs; underwater bottom cleaning.

DRY DOCKS: Temporarily non-operational; capacity – 1,600 g.r.t.

SURVEYORS: R. J. del Pan Mindanao Surveyors, Inc. representing Lloyd's, A.B.S., N.K.K., Cargo and Marine Engineers, P&I Club, G.L. and Cargo Gear Bureau.

GANGWAY/DECK WATCHMEN: Watchmen necessary and recommended. Minimum cost per watchman – Philippine P.4.75 per hour; overtime P.6.41.

HATCHES: Normally, opening/closing of hatches is carried out by the stevedores.

CUSTOMS ALLOWANCES: Crew members are allowed to bring out supplies to be held out of bond but not to cost more than P.10.00 per article. Generally, sufficient amount for crew's consumption while in port is permitted.

CARGO GEAR: Ship's gear usually used in loading and discharging. When shore cranes are needed, vessel's notice to Agent should contain the requirement.

REPATRIATION: The Immigration Station can effect crew changes and likewise, allow the disembarkation of alien seamen for repatriation to their countries of origin, provided, they possess valid travel documents. Final repatriation shall be effected in Manila after securing the necessary immigration clearances.

AIRPORT: Davao International Airport, 3 km. from Sasa Wharf. Regular daily jet flights to Manila and other major cities. Turbo-prop services available for other points.

HOLIDAYS: New Year's Day (Jan. 1st); Holy Thursday; Good Friday; Labour Day (May 1st); Araw Ng Kagitingan (May 6th); Independence Day (June 12th); Fil-Am Friendship Day (July 4th); National Heroes Day (Aug. 31st); Bonifacio Day (Nov. 30th); Christmas Day (Dec. 25th); Rizal Day (Dec. 30th). Special holidays declared by the President of the Philippines. Work can be arranged on any holiday with the shipping Agent.

POLICE/AMBULANCE/FIRE: Police Tel: No. 7-26-48; Ambulance Tel: No. 7-27-31; Fire Tel: No. 07.

EMERGENCY CO-ORDINATION CENTRE: Philippine Port Authority, Sasa Wharf, Davao City 8000, P.O.Box 501, Philippines. Main office: Tel: 78461-63; Sasa Terminal Office: Tel: 7-95-86; Sta. ANA Sub Office: Tel: 7-49-54. Mati Sub-port: Tel: 596.

TELEPHONES: No facilities for placing telephones onboard.

SERVICES: Cleaning on board is done either by stevedores or hired deckhands with the use of ship's equipment.

Catering, laundry, Ship chandling also available.

SHIP SUPPLY SERVICE:

Launches Services:

Arcal Development Inc., Corner Guzman & 3rd Ave., Davao City. Tel: 7-69-32, Gen. Manager: Mr. Rafael N. Garcia.

Coco Traders Inc., Corner 2nd Ave., Sta. Ana, Davao City. Manager Mr. Ricardo Ng Suy.

Garcia's Water Transportation, Dona Rosario Bldg., Guzman St., Davao City. Tel: 7-66-60. Manager: Antonio D. Garcia.

SHORE LEAVE: Crew members are issued shore pass by the Bureau of Immigration Officers.

IDENTIFICATION CARD: Seaman's Book is sufficient.

GARBAGE DISPOSAL: Not available.

WASTE OIL DISPOSAL: Not available.

SEAMAN'S CLUBS: Mary Star of Sea Centre (Seaman's Centre).

CURRENCY: Philippines Pesos (P).

REGULATIONS: All vessel's movements and works thereof are regulated by the Port Authority.

DELAYS: Usual causes of delays are due to non-availability of berth and rain.

GENERAL: Sasa Wharf, St. Ana Pier, and Mati Wharf are government port facilities; the others are privately-owned.

DEVELOPMENTS: Construction of passenger terminal proposed. Clean bulk terminal and an additional Ro-Ro ramp to be built.

SHIPMASTER'S REPORT: September 1977 (Updated 1986).

Berthing (for bananas):

1. HPI Wharf – Del Monte, Banambo, Fruiti Rita bananas
2. Tadeco Wharf – Chiquita bananas
3. Pacinter Wharf – Dole bananas
4. MCP Wharf – Del Monte bananas.

Berthing (for general cargo):

Sasa Wharf: Max. draft North 14.8 m., Centre 11.0 m. and South 13.5 m.; max. length 920 m. with 1 Ro-Ro berth, 2 container berths and 4 general berths.

Documents:

14 copies Inward Foreign Manifest
12 copies Crew List
8 copies Passenger List
8 copies Narcotic List
8 copies Personal Effects List
10 copies Store List
5 copies Vessel's General Information
8 copies Money List
8 copies List of Arms and Ammunition
8 copies Parcel List
1 copy Clearance from last port
2 copies Quarantine Declaration
8 copies Plant List
8 copies List of Animals

Note: Narcotic List, Money List, List of Ammunition and Arms, List of Plants and Animals may be on the same sheet.

Radio/VHF Communications:
APO Communications DXF and Marphil Radio. The Agents Maritime Company of Phil and Everett Steamship Company are equipped with VHF in their offices.
Hospital: Davao Medical Centre (government-owned); Brokenshire Memorial Hospital, San Pedro Hospital, Davao Doctors' Hospital, Ricardo Limsu Medical Centre. All hospitals located in Davao City.
Identification Card: Not required.
Shore Leave: Curfew hours from 2400 (0000) up to 0400 hrs.
Repatriation: Expensive. Crew to be escorted by one Immigration Officer from Davao City to Manila and all expenses including overtime of Immigration Officer to be charged to Owner's account.
Holidays: New Year – Jan. 1st; Bataan Day – April 19th; Labour Day – May 1st; Independence Day – June 12th; Fil-Am Day – July 4th; All Saints Day – Nov. 1st; Bonifacio Day – Nov. 30th; Christmas Day – Dec. 25th; Rizal Day – Dec. 30th.
Bunkers: Fuel, diesel and lube oils available, clearance takes only a short time.
Shipchandler/Laundry: Available, prices reasonable.
Working Gangs for Painting Cleaning, etc (1986): Foreman: regular time – Peso 5.50/hour; overtime – Peso 7.50/hour. Ordinary workers: regular time – 4.88/hour; overtime – 6.58/hour.

Other charges: Meals. Foreman require 3 meals per day; ordinary require 2 meals per day. Transportation included in working hours.
Repairs of Ship's Instruments: Radar – any type; Radio – any type; Gyro – any type.
Ship Repairs: Minor.
Time: Standard time minus 8 hours on GMT (but 1977 was the first year with Summer time which commenced in March until September.)

AUTHORITY: Philippine Ports Authority, Port District of Southern Mindanao, Anteliz Hotel Complex, Lanang, Davao City; Port Management Office, P.O.Box 502, Sasa Wharf, Davao City 800, Philippines. *Tel:* 78461-63; Sasa Terminal Office 7-95-86, Sta. Contact: Tantung L. Abam, Port Manager. Capt. Edgardo V. Estarija, Harbour Master. Ernesto J. Fernando, Port District Manager. Commander Carlos L. Agustin, General Manager. Romulo C. Andres, Port Services Division Manager.

AGENT: See "Manila."

DUMAGUETE, Negros: 09.15 N. 123.18 E.

Bacong Ammonia Terminal.
PILOTAGE: Pilots/Port Officials come from Dumaguete City, which is approx. 10 km. North of Bacong Terminal.
MAX. SIZE: Max. draft 12 m., max. d.w.t. 20,000 tons.
TUGS: No tug assistance.
BERTHING: Length of pierhead – 40 m. Wooden fenders fore and aft, 40 m. from pierhead.
HOSE CONNECTION: 6 in. single manifold. Pipe-line 6 in. diameter, 300 m. long, leading to shore tank with 6,000 tonnes capacity.
GARBAGE DISPOSAL: Not available.
WASTE OIL DISPOSAL: Not available.
SEAMAN'S CLUBS: None.
CURRENCY: Philippines Pesos (P).
AUTHORITY: Philippine Ports Authority, Port Management Office, Port Area, Dumaguete City 6200, Philippines. *Tel:* 32-52, 25-58, 40-41.
Contact: Prudencio B. Mercado, Jr., Manager - Port Management Office. Raul V. Merecido, Manager - Port Services Division.

GINGOOG, Mindanao: 08.50 N. 125.06 E. (See Plan)

BERTHING: *Gingoog Municipal Port:*
Location: Gingoog City.
Position: Lat. 8° 50′ N., Long. 125° 06′ E.
Berthing: Reinforced concrete pier, 114 m. long × 12 m. width, with timber pile fenders on both sides. Depth alongside 2.0 m. – 12.0 m.
Indophil Port:
Location: San Luis, Gingoog City.
Position: Lat. 8° 53′ 26″ N., Long. 125° 02′ 23″ E.
Berthing: Reinforced concrete pierhead (6.0 m. × 6.0 m.) for foreign and domestic export cargoes. There are breasting and mooring dolphins either side of the pierhead. Depth alongside 10.0 m. There is a 140 m. catwalk to the shore with a 135 m. long conveyor and 8 in. pipeline for coconut oil.

Close by to the export pier is an import pier (4.0 m. × 10.0 m.) for receiving copra from domestic vessels. Depth alongside 4.0 m. The berth is equipped with a hopper, 110 m. long copra conveyor and a jib crane.

SHIPMASTER'S REPORT: October 1982.
The loading berth for Copra expeller pellets is situated in position Lat. 8° 52.5′ N., Long. 125° 02.6′ E. This is not marked on the Admiralty Charts. There is deep water all around and the approach is fairly safe. The Pilot boards about 1.5 miles N.E. of the berth and approaches in a mechanised canoe with outriggers. Vessel is berthed either side alongside depending on the flood or ebb. No night pilotage. The loader height is sufficient and deep water at the berth. No VHF facilities. Repatriation not possible. Neither fresh water or bunkers can be supplied at this berth. No piracy or thefts but vigilance of security should not be neglected.

SHIPMASTER'S REPORT: January 1990.
Chart: B.A. Chart No. 3810.
Location: The port of Gingoog is situated on the West side of Gingoog Bay on the North coast of Mindanao (position Lat. 08° 53′ N., Long. 125° 03′ E.). The port is about 1.5 miles S.E. × S. from Medina Lt. (Fl.G.5s.). The terminal is owned by Indophil Oil Mills Inc. of San Luis, Gingoog City and is used for the export of copra pellets and coconut oil.
Documents: Visaed Crew List: Vessels arriving from abroad to any Philippine port must be in possession of a Visaed Crew List, issued by a Philippine Consulate at last foreign port. Failure to have such a document can result in the vessel being fined. In addition to Name, Date and Place of Birth, Nationality, Passport No., etc., they require physical details such as complexion, colour of eyes and hair, also height and weight.

An Immigration Officer will stay onboard throughout the vessel's stay in and between all Philippine ports, at the Owners expense.
Note: The number of Immigration Officers staying on board is governed by the number of crew members (one Immigration Officer for every ten crew members).
Officials: At the first port of arrival in Mindanao Island a Supercargo from the Manila Agents, together with a Cargo Surveyor, board the vessel and travel with the vessel to all loading and discharging ports. At each port of call an Immigration Officer and 2 Customs Officers will remain onboard after formalities have been completed and will require food and accommodation.
Pilotage: Compulsory. Pilot comes from Cagayan de Oro. Vessels should send their ETA to main agent in Manila at least 36 hours prior to arrival to enable Manila agent to order the Pilot and Port Authorities.

The pilot boards the vessel about 2 miles from the berth from an outrigger type canoe with an outboard motor. The pilot requires the accommodation ladder to be rigged as the outrigger cannot get alongside a normal pilot ladder.
Anchorage: There are not suitable anchorages so vessels normally drift in the Bay awaiting a berth.
Tugs: None available.
Berthing: Vessels berth port or starboard side alongside dependent on the weather and tidal conditions. An outrigger canoe is used to run the ship's lines to the mooring dolphins so no wire ropes are allowed.
Berth: The berth consists of 4 dolphins orientated 163°/343° with a distance between dolphins of approximately 50 m. giving a berthing face of approximately 150 m. The berth is 150 m. from the shore and the loading tower is 100 m. high with a span of 12 m.

In addition to the 4 mooring dolphins there are concrete dolphins 100 m. either side of the outer berthing dolphins which are set back about 100 m. from the mooring line. The depth alongside the berth at MLLW is 15 m.
Loading: The single fixed loading gantry is fed by the covered conveyor into a flexible steel spout and has a reach of about 12.0 m. The conveyor belt is supported by steel pylons and is angled up to the loading tower which is 100 m. high.

There is a small discharging berth about 70 m. North of the main loading gantry which also has a covered conveyor belt which is fed by a crane and is used by small coastal craft for discharging copra.

The gantry tower, which is 150 m. from the shore, also carries an 8 in. (20 cm.) diameter pipe for the loading of coconut oil.

Vessels up to 60,000 g.r.t. have berthed and the dolphins are well fendered.
Exports: Copra pellets and coconut oil. The pellets are loaded at a rate of approximately 150 t.p.h. – 200 t.p.h., but loading stops for rain or if there is a threat of rain. Coconut oil is loaded through 2 × 6 in. hoses at a rate of up to 300 tonnes per hour.
Cranes: There is a small crane at the end of the discharge pier for unloading small coastal vessels.
Medical: There are 2 hospitals in Gingoog City.
Fresh Water: Only brackish water available.
Fuel: Not available.
Repairs: No facilities available.
Airport: Not available.
General: Communications: There is no telephone or telex at the plant. The local plant uses R/T via Manila Radio for communications. (The agent from Manila had to travel to Cagayan de Oro in order to telephone his office in Manila).
Security: Large scale thefts are prevalent in all Philippine ports. It is advisable to hire private security guards. The cost is not high.
Rescue and Distress: No centre locally.
Ship Chandlers: None available.
Authorities: The port is officially administered from Cagayan de Oro in Macajalar Bay which is about 130 km. by road. They make a special journey to meet each ship. (Also see "Documents").

AUTHORITY: See "Cagayan de Oro".

HONDAGUA, Luzon Island: 13.56 N. 122.14 E.

SHIPMASTER'S REPORT: 1974.

APPROACHES: B.A. Charts 3806 and 3475, neither of which are of very much assistance. There are no navigational marks by night, but the water is deep and we made a comfortable approach by Radar.
PILOTAGE: Minimum 12 hours' notice required. Pilot boards at Siain, a village 10 miles West of Hondagua on the North coast of the mainland. Pilot boat is a small dug-out canoe fitted with outriggers and an outboard motor, and by day exhibits the pilot flag, and at night a single white light similar to a normal fishing canoe. Pilot shouts to attract attention when close to the vessel at night.
DOCUMENTS: Officials embark at Siain but not before 0630 hrs., due to curfew. Accommodation ladder required. All documents required as for first port of entry, excepting quarantine which is not performed twice.

10 Ship's Stores Lists.
8 Crew Personal Effects lists.
12 Crew Lists.
3 Health Declarations.
2 Visaed Crew Lists.
2 Plant Quarantine Lists.
2 Animal Lists.

Officials disembark again at Siain with the exception of the 3 Customs Officers, who remain on board and who require meals and accommodation.
TUGS: Not available.
BERTHING: One berth only, for grain discharge and for coastal tankers supplying fuel to the Mill. Berth lies East/West with approx. depth at LW East Dolphin 28 ft., Elevator about 34 ft. 6 in., and West Dolphin about 39 ft. The berth is thought not to be suitable for vessels exceeding 500 ft. LOA. The dolphins are of timber-pole construction, and the elevator is concrete. Arrival and departure from the berth is during daylight only. Mooring arrangement is 2 head ropes to buoy, 2 breast ropes to shore, spring-wire to bollard on elevator, 4 stern lines to concrete dolphin, and 1 spring-wire to bollard on elevator. An old landing-barge is used as a mooring boat, but this has only one engine on the port side and is not very manoeuvrable. A motorised dug-out canoe also assists, but is not powerful enough to pull a line very far. The elevator has two discharging suckers, but these are fixed and the vessel has to be shifted hatch to hatch. Combined capacity about 80 t.p.h. which could be improved, but foundations of conveyor-belt system damaged by earthquakes.
FRESH WATER: Available at berth but not of very good quality. Ship's hoses required.
AIRPORT: None. There is a train service to Manila, about a 6 hour journey.
CURFEW: Area is under Martial Law. Curfew from 2300 hrs. to 0600 hrs.

ILIGAN, Mindanao: 08.14 N. 124.14 E. (See Plan)

DOCUMENTS:

8 copies Foreign Outward Manifest – Last Port of Call.
8 copies Slop Chest – Bonded List.
8 copies Crew List.
8 copies Crew Declaration List.
8 copies Money List (Currency List).
8 copies Arms and Ammunition List.
8 copies Through Cargo Manifest.
8 copies Stowage Plan.
8 copies Ship's Arrival Condition.
8 copies Ship's Property List.
8 copies Parcel List.
8 copies Itinerary of Travel.
12 copies Inward Foreign Manifest.
12 copies Pre-Pratique.

PILOTAGE: Pilotage for docking and undocking at government and privately owned piers/wharves for foreign vessels is compulsory. The Harbour Pilot meets the vessel 1 to 2 miles N.W. of the pier. Vessels coming from foreign ports intending to dock at any of the private piers will first anchor at designated anchorage area for boarding formalities.

For docking vessel, at least 24 hours advance notice of the ETA is required. For undocking, at least 3 hours notice is needed. Tel: 20858, or VHF Channel 16.
ANCHORAGES: Anchorage in the Iligan area is almost anywhere at a distance of about 0.5 to 1 mile from the coastline. The average depth varies from 37 m. to 56 m. At a distance of more than half a mile from the coastline, anchorage is difficult due to the deep water that runs to over 180 m., which has caused several vessels to lose their anchor. The characteristic of the bottom near the beach is muddy and hilly. Beyond 0.5 miles, there is good holding ground with sand and gravel. In case of strong S.W. winds, vessels may resort to natural protection of Initao and Kiwalan, called the "Quinalang Cove".
RESTRICTIONS: See "Berthing".
MAX. SIZE: Max. LOA 240 m. Max. draft 25 ft. and 15,000 g.r.t. at the R.C.Wharf (For foreign-going vessels).
HEALTH: Vessels clear quarantine upon arrival from foreign port. Health Officer boards the vessel 2 miles off the pier at designated area.
VHF: Port Office on Channel 16.
TUGS: The Iligan Harbour Pilot's Association owns 2 tugs both serving the domestic and foreign vessels. The use of tug is necessary, especially when docking and undocking vessels on government and private piers. Additional tugs are also available if the Harbour Pilot thinks necessary. It is important that the Masters of vessels/shipping Agents notify the Harbour Pilot at least 48 hours in advance of vessels arrival to ensure the availability of tugs.
BERTHING: Berthing for domestic vessels may be done anytime of the day or night. Foreign-going vessels berth during daylight hours and undock at anytime.

	Length	*Width*	*Depth*
Pier No. 1 (Concrete)	96 m.	12 m.	5.4 m.
Pier No. 2 (Concrete)	96 m.	12 m.	5.4 m.
R.C. Wharf	240 m.	15 m.	7.62 m.
Ro/Ro Wharf	15 m.	10 m.	5.4 m.

There are also 8 private ports along the coast of the City of Iligan. (See "Plan").
CRANES: The cargo handling contractor has a 25 ton mobile crane. A 100 ton capacity crane is available at nearby private port of National Steel Corporation.
BULK CARGO FACILITIES: None in the Government Port of Iligan, but available in nearby private ports.
SPECIALISED CARGO HANDLING FACILITIES: None for foreign vessels, domestic Ro/Ro wharf (15 m. × 10 m.).
BRIDGES: None.
STEVEDORES: The cargo handling contractor is the Iligan Merged Arrastre/Stevedoring Company (IMASCO). At least 24 hours advance notice is needed by them to assign sufficient number of men to work on the vessel.

Labour Productivity:

Foreign	35 tons per net gang hour.
Domestic	30 tons per net gang hour.

Overtime is possible upon arrangement.
MEDICAL: Medical and dental facilities are available in the city.
TANKERS: No facilities.
FRESH WATER: Fresh water is only available at night. It is supplied to the vessel through a 4 in. pipeline (Cost: P 38.00 per ton).
FUEL: Bunkers are available, provided prior notice is given through the ship's Agent.
CONSULS: In Manila.
REPAIRS: No facilities.
DRY DOCKS: None.
SURVEYORS: Available locally.
GANGWAY/DECK WATCHMEN: There should be sufficient men to man or take care of the vessel. Watchmen available for hire.
HATCHES: Opening/closing of hatches is carried out by stevedores.
REPATRIATION: Local Immigration takes care of any repatriation or disembarkation, provided advance notice is given together with the names and destination of each crew member.
AIRPORT: Baloi Airport 15 km. Lumbia Airport, Cagayan de Oro City 110 km.
TIME: GMT plus 8 hours.
HOLIDAYS: New Year's Day (January 1st); Araw ng Kagitingan (April 9th); Holy Thursday and Good Friday (movable); Labour Day (May 1st); Independence Day (June 12th); National Heroes Day (August 30th); Bonifacio Day (November 30th); Christmas Day (December 25th); Rizal's Day (December 30th).

Special holidays declared by the President of the Philippines and the Regional Autonomous Government are included.

Cargo work can be arranged on any holidays, except Good Friday and New Year's Day.
POLICE/AMBULANCE/FIRE: Police 101; Fire Department 103; City Hospital 21558; Mindanao Sanitarium Hospital 20558; Dr.Uy's Hospital 20818; Iligan Medical Centre 21253.
EMERGENCY CO-ORDINATION CENTRE: Philippine Ports Authority. Tel: 21013, 21780, 21022.
TELEPHONES: Placing of telephones on board foreign vessels is not available at present.
SERVICES: Special services are available, provided advance notice is given by the ship's Agent to the service contractors accredited by the Authority.
BANKS: Allied Banking Corp., Juan Luna Cor. del Pilar St., Iligan City. Tel: 21712, 21213.

Bank of the Philippine Island, Juan Luna Cor. de Leon St. Tel: 21152, 21269.

Far East Bank and Trust Co., Quezon Avenue Cor. Lluch St. Tel: 21768, 20780, 21804.

Al Amanah Islamic Investment Bank of the Phils., Roxas Avenue. Tel: 21027, 20950.

PCI Bank, (1) Quezon Avenue. Tel: 20083, 21771.
(2) Del Pilar Cor. Labao St. Tel: 20666, 20677.

Security Bank and Trust Co., Quezon Ave. Cor., Labao St. Tel: 21135, 20147.

Philippine National Bank, Gen. Aguinaldo St. Tel: 20664, 20665, 21843.

Development Bank of the Phils. – Noria Mahayahay. Tel: 20566, 21424.

Interbank, Quezon Avenue, Iligan City. Tel: 21006.
STORING: See "Prelims".

1. Yes, through local chandlers.
2. No, interference with cargo work.
3. Yes.
4. Yes.
5. –
6. Yes.

SHIP'S SUPPLY SERVICE: The ship's Agent usually contacts the local supply service contractors accredited by the Authority.
SHORE LEAVE: Crew members are usually allowed ashore.
IDENTIFICATION CARDS: Not compulsory, but helpful, if crew members have to identify themselves to the Authority.
GARBAGE DISPOSAL: No service available.
WASTE OIL DISPOSAL: No service available.
SEAMAN'S CLUBS: None.
CURRENCY: Peso.
REGULATIONS: None.
DELAYS: Only bad weather.
DEVELOPMENTS: None at present.

SHIPMASTER'S REPORT: 1974

Approaches: B.A. Chart 3426. This is of not very much use as an approach chart as the scale is too small. However, the water is deep and therefore it does not matter too much. On this voyage we made an approach in darkness and solely on Radar, the only navigational light, a fixed red, being very hard to distinguish.

Pilotage: The Pilot boards about 1 mile N.W. of the piers. Pilot boat is a river-type launch about 50 ft. in length with a grey hull and a white funnel.

Anchorage: 2 cables from old harbour piers. 7 shackles in 50 fathoms.

Radio: No VHF facilities.

Officials: Iligan is a Port of Entry. Officials board at the anchorage. Accommodation ladder required. Usual procedures take about 1 hour to 1 hour 30 minutes.

Documents:

20 Ship's Stores Lists.
14 Crew Personal Declarations.
3 Vaccination, and inoculation dates.
3 Ports of Call and dates for previous 3 months.

Immigration: Before leaving last foreign port for the Philippines, obtain 4 official Crew List Forms from the Philippine Consul. Complete these forms and have them visaed by the Consul who will retain 2, and return 2 to the ship. Passes are required for crew members going ashore.

Customs Allowance: 1 bottle and 200 cigarettes per person. 3 Customs officers live on board all the time, and require accommodation and meals.

Tugs: Up to 4 tugs available if required, but it is advisable to give notice of requirements well in advance, since these tugs may be engaged in towing barges elsewhere around the island.

Berthing: Quinalang Cove: 1 grain discharge berth. Depth at berth 40 ft. and ample room for a vessel of 600 ft. L.O.A. Discharge is by sucker direct to the Silo. There are 2 suckers with a combined average discharge rate of 100 t.p.h., but suckers are located in fixed positions requiring the vessel to be shifted hatch to hatch. Berth is well-fendered, with a shore gangway. Stevedores supply a good hatch-tent for working in the rain. 1 bulk-copra loading berth, 600 ft. in length and draft said to be 32 ft. 1 bulk-cement loading berth, reported to be capable of accommodating vessels of 25,000 g.r.t.

Camp Overton: Located South of Iligan, there is reported to be a steel-loading berth to accommodate vessels of 750 ft. length, and 36 ft. draft.

Fresh Water: Available at most berths.

Repairs: Only very minor repairs can be undertaken.

Airport: About 20 miles distant. Daily flights to Cebu and Manila.

Stores: Fresh fruit available, also good supply of seafood.

Time: GMT plus 8 hours.

Shore Leave: Crew members should take special care when proceeding ashore, and should not carry cameras or wear wrist watches, etc. It is advisable to return aboard before darkness.

SHIPMASTER'S REPORT: September 1976 (updated 1988).

Coconut Oil Berth: Located at "Quinalong Cove" 08° 17′ N., 124° 15′ E. Least depth of water in channel from sea to berth – 40 fathoms. Mean tidal range 5 ft. Density 1025. Nature of bottom at berth – mud. Vessels can berth in daylight only, unberthing anytime. This private facility is owned by San Miguel Corporation Iligan Coconut Oil Company.

Anchorage: 3 cables S.W. of City Pier. Depth at LW 70 fathoms, cable should be "walked out".

Vessel's hoses used, length of shore line 300 m., size 12 in. No shore booster pumps used. Products handled, coconut oil and coconut products.

Pilotage: Compulsory. Pilot requires 24 hours' notice and boards 1 mile N.W. of City Pier.

Max. size of vessel that can enter the port of Iligan is 100,000 d.w.t. and draft 45 ft. Keel clearance required, about 2 ft.

5 small and medium size tugs available.

Nearest consuls are in Manila.

Facilities available: Fresh water, 5 t.p.h. Fresh provisions. Laundry.

No slop tanks, surveyor, repair facilities, fuel.

Documents:

2 Visaed Crew Lists (Philippine) from previous port. If diverted at sea, a copy of the diversionary cable required.
6 Ordinary Crew Lists.
6 Personnel Effects Lists.
6 Stores Manifests.
6 Parcel Lists.
6 Arms Lists.
6 Mail Lists.
6 Narcotics Lists.
6 Animal Lists.
6 Plant Lists.
6 Cargo Manifests.
6 Transit Manifests.
6 List of Ports.
6 Currency Lists.

There is a cabin search by 4 Customs Officers, accompanied by 2 Ship's Officers. They collected an undeclared radio and 2 cameras. They did not impose any fine, as they said they had been courteously treated, and this was the vessel's first visit.

3 Customs Officers remain aboard, and have to be fed.

SHIPMASTER'S REPORT: June 1989.

Pilotage: Contact Pilot on VHF Channel 16, 3 hours prior to arrival and give your amended ETA. Pilot will meet foreign vessels to anchor at suitable anchorage for quarantine and customs formalities, prior to berthing at designated piers.

Radio: Radio Telephone (Marine SSB-Voice) available soon.

VHF: Our Agent (OROSHIP) on VHF Channel 16 for Agent's vessel only. Harbour Pilot Station has Channel 16 but for emergency assistance you can call through their facilities.

Medical: There are 6 private hospitals with modern facilities for crew.

Fresh Water: Available at all berths, or by trucks.

Watchmen: Recommended.

Surveyors: Local marine cargo surveyor is Del Pan.

Repatriation: Crew changes can be arranged by local Agent and will exit through Manila International Airport, which is about 1 hour 25 minutes by air from Cagayan de Oro/Iligan Airport.

Banks: Philippine National Bank; Philippine Commercial & Industrial Bank; Development Bank of the Philippines; Far East Bank and Trust Co.; Family Bank of the Philippine Islands; United Coconut Planters Bank.

Services: Oro Shipping Agency offers the following services: Chandling, laundry, chipping / painting, hold cleaning, lashing / shoring gangs, launch service and crew repatriation.

AUTHORITY: Philippine Ports Authority, Port Area, Iligan City, Philippines. *Tel:* 21013, 21022 and 21780. *FAX:* 76-4224. *Contact:* Benigno V. Magpale, Jr., Port Manager. Pedro A. Riego, Port Services Division Manager.

ILOILO, Panay: 10.41 N. 122.35 E. (See Plan)

See "General" before first port.

PORT LIMITS: Also see "Anchorage" – last paragraph. Iloilo Harbour is defined as that portion of Iloilo Strait within the following boundaries: an imaginary line extending from the Northern bank of Dumangas River, Island of Panay, across Iloilo Strait to Navalas Point on the Northern coast of Guimaras Island; thence along the N.W. and West shore of Guimaras Island to Luzaran Point thence along an imaginary line extending from Luzaran Point to the South bank at the mouth of Siuaragan River in the municipality of San Joaquin, Province of Iloilo, Island of Panay. Thence along the Southern shore line of the Island of Panay to the North bank of Dumangas River, the point of commencement.

DOCUMENTS:

Bureau of Customs:

1. On Arrival:
   7 Inward Foreign Manifests.
   3 Crew Lists.
   3 Personal Effect Lists.
   3 Stores Lists.
   3 Arms and Ammunition Lists.
   3 Narcotics Lists.
   3 Mail Lists.
   3 Bonded Stores Lists.
   3 Passenger Lists.
   3 Storage Plans (if vessel has cargoes to be discharged).
   2 Bills of Lading.
   1 Clearance from last port of call.
2. On Departure:
   4 Statistical Supplement (for vessels leaving directly for a foreign port).
   7 Outward Foreign Manifests.

Philippine Ports Authority:

1. On Arrival.
   2 Inward Foreign Manifests.
   2 Passenger Lists.
2. On Departure:
   2 Outward Foreign Manifests.
   2 Statistical Supplements.

PILOTAGE:

1. Application (notice) for pilotage services is usually made by a shipping Agent at least 24 hours before the vessel's arrival. Notice may also be tendered via a commercial telegraph office addressed to Iloilo Harbour Pilot Association, Muelle Loney St., Iloilo City. The Pilot Association is on VHF Channel 16.

2. The Pilot Association owns 5 standard-designed pilot boats, with one being utilised as water taxi for vessel's crew intending to go on shore leave.

3. Request for pilotage services may be done in either of the following ways:
(a) 2 long and 1 short blast of the vessel's whistle.
(b) Continuous flashing of blue light during night-time.
(c) Display of the international "G" flag during daytime.

4. There are 2 pilot stations where the Pilot may be taken aboard, namely:
(a) Sinapsapan Point at the South entrance, 8 miles from the port.
(b) Nabalas Point at the North entrance, 12 miles from the port.

5. With respect to the boarding and safety measures, the Pilot requires a sturdy and reliable pilot ladder.

VHF: Call "Iloilo Pilots" on Channel 16 advising that vessel wishes to take Pilot at Sinapsapan or Nabalasa.

ANCHORAGE: (proposed)

The anchorage of the Port of Iloilo is that portion of Iloilo Strait within the following boundaries: an imaginary line extending from Balabago Point, Island of Panay across Iloilo Strait up to Cabugao Point on the Northern Coast of the Island of Guimaras, thence along N.W. and West shore of Guimaras Island to Bondulan Point; thence along Southern shore line of the island of Panay to Balabago Point, the Point of commencement.

Note: A vessel is considered "arrived" after it drops anchor at any point within the boundaries described above.

RESTRICTIONS: Generally, a vessel may enter the port from the pilot station at any time of the day or night. However, said entrance of the vessel is restricted by the draft of the vessel and the tide at the time of entrance. At MLLW, only vessels with a maximum draft of 28 ft. may enter or depart from the port. At HW (5 ft.) vessels with a maximum draft of 33 ft. may enter or depart from the port.

MAX. SIZE: Iloilo Commercial Port Complex: Total length 400 m. Depth at MLLW 10.5 m. Max. draft 10.1 m.

HEALTH: The port has 1 Quarantine Doctor. Quarantine formalities are done while vessel is at the Quarantine Station. Notice for quarantine formalities is usually given by the shipping Agent 24 hours before the vessel's arrival.

The following documents are necessary for presentation to the Quarantine Officer on arrival.

A. On Arrival:

1. Derat Exemption Certificate. (If expired or about to expire, the same could be renewed at the port for a period of 6 months).
2. International Certificate of Vaccination. (If expired or about to expire, vessel crew could be vaccinated locally).
3. Maritime Declaration of Health. (Form to accomplish available locally).

Above documents are necessary for the issuance of Free Pratique.

B. On Departure:

1. Quarantine Clearance for Outgoing Vessels. (A fee of P4.00 or approximately $0.53).

Free Pratique is issued at the first port of call. It becomes automatic if the vessel intends to call at another port within the Philippines.

RADIO: Coastal Marine Radio Station:

Location:	Lat. 10° 41.4′ N., Long. 122° 32.8′ E.	
Call Sign:	DYV	
Frequencies:	8632 kHz.	0000 GMT – 0400 GMT
		0600 GMT – 0900 GMT
	12948 kHz.	0900 GMT – 1130 GMT
VHF	Channel 16	

Also private telegraph companies with international relaying stations; Central Radio Communications, Radio Communications of the Philippines., Inc.

VHF: Retransco on Channels 16 and 13.

TUGS: Tugs usually join vessels for docking and undocking operation. The services may be provided by the pilot's boat or tugs of the Visayan Stevedoring & Transportation Corp. The charge is P150.00/tug during daytime and P180.00/tug during nightime.

BERTHING: Also see "Shipmaster's Report".

Usually, loading and discharging are done with the use of the vessel's own gear, except catch-all nets and crane for heavy lift cargoes which may be provided by the Stevedore operator.

The Arrestre Operator is capable of handling general and heavy lift cargoes, cargoes in bags (like sugar, fertilisers, cements, copra cake, etc.). Bulk loading may be done also by "bleeding" cargoes in bags directly into the vessel's hold.

Commercial Port Complex: New facility of 400 m. length for container vessels and Ro-Ro vessels with depth 10.5 m. (MLLW). One mobile crane and 3×28 ton fork lift trucks available.

CRANES: 1 crawler crane with 15 ton capacity owned by private Arrestre. The Ministry of Public Highways has 4 heavy-lift cranes of 25 tons capacity.

BULK CARGO FACILITIES: Within the harbour limit of the port is sugar bulk-loading installation situated at Jordan, Guimaras Island. The berth is capable of accommodating a vessel with a LOA of 182 m. and a draft of 35 ft. at MLL.

Loading is done with the use of a mechanical conveyor which has a rated capacity of 400 – 500 tonnes per hour. The discharging gear has a maximum height of 30 ft. above HWL.

Cargo handled in this berth is exclusively sugar in bulk.

SPECIALISED CARGO HANDLING FACILITIES: The port is *not* specially equipped for handling containers or Ro/Ro traffic.

LPG facilities at Petron.

STEVEDORES: An advice of 24 hours before the vessel's ETA is required to prepare the gangs necessary to perform stevedoring services. Stevedoring services can average at the rate of 900 – 1,000 tonnes of loading/unloading per 24 hours.

MEDICAL: The port itself does not own any medical facilities. However, within the City itself are 6 modern hospitals which could be used by the vessel's sick crew. Vaccinations and inoculations may be done by the Quarantine Doctor who also issues corresponding certificates for the same.

TANKERS: Bunker is handled through 6 in. pipelines; however, Petron load bunker through a 4 in. pipe. "White oil products" are handled through 8 in. pipes. There are 2 privately owned oil-water separators.

Types of oil available: premium, regular, automotive diesel fuel oil, kerosene, and bunker C; rate of delivery: 10–12 t.p.h.

FRESH WATER: Fresh water can be supplied by a private supplier, Springwater Marine Services, Iloilo City. Water is supplied to the vessel while at anchorage or at berth from a water barge at the rate of 15 – 20 tonnes/hr. cost is P16.00 ($2.13) per tonne. Water is safe and potable.

FUEL: Bunker fuel and fuel oil (of any desired viscosity) are available and can be supplied by Philippine Shell Petroleum Corp., Lapuz, Iloilo City. It can be delivered either by barge or by road tanker at the rate of 10 – 12 t.p.h. An advance notice of 24 hours prior to delivery is necessary.

CONSULS: British, at Hongkong and Shanghai Bank, Ledesma Street, Iloilo City, Tel: 7-50-86.

REPAIRS/SERVICES: The Iloilo Dock and Engineering Company offers the following major services: Marine construction and repairs, conversion, machine shop, electronics navigational equipment installation and repairs, steel fabrication, sand blasting, engineering and project consultation. Other services offered: Marine salvage, stevedoring and longshoring, lighterage, towing-harbour, inter-island and ocean warehousing and in-transit handling.

Radar: Repair of ship's radar may be done by Louman & Sons Technical Service Inc. The company is capable of repairing radar, radio transmitter and receiver, fathometer and steering system. Usually contacted by the ship's Agent.

DRY DOCKS: Largest dry dock at Ideco is Shipway 1: Length 587 ft., width 56 ft. depth (draft at MLLW, 10 ft. without keel blocks), capacity 2,500 L.T. There are 4 other smaller docks, and several side berths.

SURVEYORS: Local Marine Surveyor, Delpan.

WATCHMEN: Watchmen are optional, however if the Master so desires, watchmen can be hired.

HATCHES: Opening/closing of vessel's hatches and securing the vessel's derricks, are usually done by the stevedores.

CUSTOMS ALLOWANCES: Vessel's crew are permitted an individual allowance of 1 bottle of whisky and 1 carton of cigarettes per week. However, if necessary, the Master may request the Collector of Customs through the Customs Inspector on board for a further issue within the week.

CARGO GEAR: Load/discharge is effected by ship's gear. There is no special cargo equipment except for heavy lift cranes.

REPATRIATION: Crew changes and repatriation may be effected by the local Regional Office of the Immigration Commission with the approval of its head office in Manila.

AIRPORT: An all-weather airport situated about 7 km. from the pier. Regular Iloilo – Manila flight is 3 times a day. Other flights to Cebu, Davao, Puerto Princesa, Palawan and General Santos.

HOLIDAYS: *Legal Holidays:* Sundays, January 1st (New Year's Day); April 9th (Bataan Day); May 1st (Labour Day); June 12th (Independence Day); July 4th (Phil.-American Friendship Day); November 30th (National Heroes Day); December 25th (Christmas Day); December 30th (Rizal Day).

Note:

1. Special Public Holiday may be issued by the President.
2. Under Philippine Law, if a legal holiday falls on Sunday, the following day (Monday) is also a holiday.

Regular working days in the Philippines are Monday through to Friday. Holidays notwithstanding, the Master/Agent may request continuance of stevedoring work after proper notice has been made with the stevedoring company.

POLICE/AMBULANCE/FIRE: Police Tel: 7-55-21; Fire Tel: 7-30-11; 7-49-89; Ambulance Tel: 7-25-61; 7-24-41.

TELEPHONES: PLDT (Tel Co.) can install a telephone on board a vessel at berth with the following charges:

P200.00	Deposit for the instrument, refundable upon return of the instrument.
74.41	rate/month
45.00	for services
3.00	electrician's fee
322.41	Total charges

Port Authority Telephone Numbers: Manager's Office: 7-69-45; Operations: 7-60-73; Administration: 7-76-43; Security: 7-29-79.

SERVICES: See "Repairs".

SHORE LEAVE: Shore leave is granted after the issue of shore passes by the local official of the Commission on Immigration.

DELAYS: Occasional congestion of the port may delay vessels berthing. Bunkering may be done whether the vessel is at anchorage or at berth.

IDENTIFICATION CARDS: Identification card is not necessary for the issue of shore passes. Visaed Crew List will suffice.

GENERAL: Vessel's ETA has to be relayed to Philippines Ports Authority, Iloilo at least 24 hours before arrival.

DEVELOPMENTS: The Iloilo Commercial Port Complex is fully operational. It is situated approximately 1 km. from the existing port, the Old Foreign Pier and the Marginal Wharf.

Proposed Development: Old Foreign Pier: Proposed Ro-Ro Facilities:

Ramp Movement	Reference Deck Elevation – 25 m.
Upward (max.)	2.00 m.
Downward (max.)	1.50 m.
Line Load (max.)	88 tons
Vessel Beam Consideration	12.6 m. to 20.6 m.
Vessel LOA Consideration	68.8 m. to 132 m.

Proposed Apron Widening: Widening of existing apron at RC from 12.0 m. to 18.0 m. toward the sea.

Proposed Reclamation: Reclamation of the open space area between Old Foreign Pier and the National Road, approximately 1.7 hectares to be used as back-up area.

SHIPMASTER'S REPORT: 1977

There are 3 ports where bulk sugar loading facilities exist, Pulupandan (which see), Iloilo and Batangas Bay. Ships first call at Pulupandan on Negros Island, approximate position Lat. 10° 31′ 30″ N., Long. 122° 47′ 36″ E. and load up to a draft (SW) of 29 ft. The rate of loading by using 1 trimmer is about 300 – 400 tonnes per hour. Pilotage is compulsory and the Pilot boards in a position (approx.) Lat. 10° 27′ 24″ N., Long. 122° 46′ 12″ E. After completion of port formalities, the vessel is berthed alongside the Bulk Sugar Installation with a stationary conveyor.

The vessel then proceeds to Iloilo for loading up to 32 ft. This vessel, which is 675 ft. in length, loaded bulk sugar in hatches 2, 4, 6, 7 and 8. It was possible to load in hatch No. 1 also. The loading is done from a fixed conveyor with 2 trimmers and the loading rate is between 400 – 500 tonnes per hour. Finally the vessel proceeds to Batangas Bay and after the usual formalities, goes alongside the Batangas Bay Terminals Inc. (BBTI) at Bolo – Bauan – Batangas, where there is no draft restriction. The loading rate is about 300 – 400 tonnes per hour. Loading is done from a fixed conveyor with one manually operated trimmer. Pilotage is compulsory and ships awaiting Pilots can anchor either at Santa Rita or Santa Clara (Batangas City) or Tabangas.

The main sugar crop is brought to Iloilo, known locally as Sugar City, because it is the main sugar exporting port, from Negros Island, where most of the sugar farms and factories are situated. The sugar for export at BBTI is brought from factories around Laguna Bay by trucks. The Stowage Factor for bulk sugar worked out to between 40 – 41.

AUTHORITY: Philippine Ports Authority, PMO – Iloilo, Iloilo Commercial Port Complex, Brgy Loboc, La Paz, Iloilo City. *Tel:* 7-69-45, 7-77-91, 7-77-92, 7-77-93. *FAX:* 7-69-45. *Contact:* Bienvenido P. Basco, Port Manager.

ISABEL, Leyte: 10.54 N. 124.25 E. (See Plan)

SHIPMASTER'S REPORT: July 1987.

See "General" before first port.

DOCUMENTS: See "General" before first port. Vessels anchor in bay prior to berthing and Officials board for Formalities. As there is no local Immigration or Customs post, there are occasionally delays waiting for the necessary officials to come from either Manila or Tacloban. Permits from Customs and Immigration are required for most things, but usually arranged by vessel's agent. 3 Customs Officers and 4 Immigration Officers stayed on board throughout vessel's entire stay. On vessels which cannot accommodate them, it is apparently possible for them to stay somewhere on shore in shifts.

The fact that this vessel has crew mainly from Eastern Bloc countries may have had something to do with large Immigration presence.

APPROACHES: Clear in deep water from seaward, BA. Chart No. 3825 rather small scale, but all features show up well on radar, and port is a blaze of light at night owing to extensive industrial installations on eastern shore of bay, which is frequently well occupied with anchored vessels.

PILOTAGE: Generally available on a 24 hour basis, pilots have Channel 16 and 12, but can be difficult to contact until quite close to. Pilot boat is a launch of fairly robust metal construction, but it is very slow, so ships should reduce speed in sufficient time.

Pilot generally meets large vessels about 0.75 miles off Catiyana Point, whether berthing or proceeding to anchor.

ANCHORAGE: Although chart does not indicate the fact, there is a fair amount of space for vessels in the bay. Vessels anchor in vicinity of 0.5 miles S.E. to E. of Sacay Point, in depths of 25 fathoms and decreasing to 15 fathoms. Smaller vessels can proceed closer inshore to shallower water.

Holding ground is fair in good weather, but reportedly poor in adverse conditions. The Admiralty Pilot recommends that 2 anchors should be used. This vessel, a 14,000 gross ton LPG Carrier, anchored for 2 days in good weather with 6 shackles on one anchor, on local Pilot's advice without any problems.

RESTRICTIONS: Berthing/Unberthing is apparently at Pilot's discretion, depending on weather conditions, but during vessel's stay in good weather, continuous movements were taking place on a 24 hour basis.

HEALTH: Quarantine Officer boards with Pilot and checks documents at anchorage and issues Free Pratique Certificate. He requires Maritime Declaration of Health, Vaccination Certificates (Cholera) and Crew List. it is possible to have Cholera vaccinations done at this port, but not Yellow Fever.

TUGS: There are 2 tugs, of standard Japanese design, adequate to assist all vessels capable of entering the port. Tugs ropes used.

BERTHING: The Terminal is operated by Philippine Phosphate Fertiliser Corporation, and main quay has 2 large gantry-type grab cranes for discharging phosphate on to a continuous conveyor belt. Other parts of the quay appear to be used for loading bagged fertiliser by ship's gear.

At Southern end of main quay are several Chicksan connecting arms for the discharge of Liquid Ammonia, Sulphuric Acid and Phosphoric Acid.

There is an additional small quay just south of main quay fitted with a large grab-crane, hopper and conveyor belt, which is mainly used by small local bulk carriers.

MEDICAL: There is a small hospital where non-serious cases can be treated, serious cases require transportation either to Ormoc City or Tacloban.

FUEL: Vessel was supplied with both Fuel Oil and Diesel Oil by barge which came from Cebu. It is possible to bunker ex-barge either at anchorage or alongside. Customs Permits required for bunkering.

REPAIRS: No commercial repair facilities available.

REPATRIATION: Possible via Tacloban Airport, about 3 hours by car from Isabel, thence to Manila on local flight to connect with International flights. If crew from Eastern Bloc countries (as has this vessel) it is necessary for Immigration Permits to be issued, and leaving/joining seamen require Immigration escort to and from Isabel to Manila.

AIRPORT: Tacloban Airport.

SHORE LEAVE: Permitted. Obtain pass from Immigration in return for passport.

GENERAL: Apart from pilot boat, all other communications between ship and shore whilst at anchorage was carried out by local fishing skiffs, which are fitted with large outriggers, thus making it impossible for them to come properly alongside pilot ladder or gangway. This makes any transfer of personnel or spare parts, etc., somewhat hazardous, even in calm conditions.

Provisions: Local Ship chandler available, prices for fair quality local fruit and vegetables is reasonable. The chandler has a fair selection of other items but anything imported or transported from elsewhere can be expensive.

Communications: All communications via main agent in Manila, who sends sub-agent to attend locally.

SHIPMASTER'S REPORT: October 1988.

VESSEL: 19,846 d.w.t.

LOCATION: Lat. 10° 56′ N., Long. 124° 26′ E.

For identification purposes the port is referred to as Isabel, Leyte.

DOCUMENTS:

Port Health:

3 copies Crew List.

1 copy Vaccination List (all crew members must have valid vaccination cards).

Immigration:

4 copies Crew List.

2 copies Visaed Crew List (General Visa/Visaed Crew List to be obtained from Philippines Embassy before entering Philippines waters).

Customs:

4 copies Crew List.

3 copies Crew Personal Effects Declaration.

3 copies Narcotics and Medicine List.

20 copies Cargo Manifest.

1 copy Declaration of Cargo/Favour Parcels on boards on prescribed forms supplied by Boarding Officer.

Accommodation: Accommodation is required for 1 Customs Inspector, 2 Customs Guards, 1 Immigration Officer or Assistant Immigration Officer and 2 Guards.

If accommodation and food cannot be provided on board it is to be arranged ashore on Owner's account.

PILOTAGE: Pilotage is available throughout 24 hours. Pilot boarding position is at Lat. 10° 53.5′ N., Long. 124° 25′ E., this is about 1.5 miles South of Sacay Point.

ANCHORAGE: Anchoring is carried out under Pilot's instructions. Vessels anchor in depth of 15 fathoms – 40 fathoms, depending on size of vessel and space available.

Our vessel anchored in a depth of 25 fathoms at a distance of 7 cables from Sacay Point.

TUGS: There are 2 tugs of approximately 6,000 b.h.p. Both tugs are used for berthing and unberthing. There is a mooring boat available to run lines.

BERTHING: *PHILPHOS:* 5 berths with a total length of 760 m.

Depth alongside: No. 1 – 12.0 m.; No. 2 – 9.0 m.; No. 3 and 4 – 7.0 m.; No. 5 – 5.0 m.

PASSAR: 1 berth with length 90 m. and depth 12.0 m.

CARGO HANDLING FACILITIES: Bulk, bagged and liquid cargoes handled.

PHILPHOS: 2 grab cranes used for discharge of cargo to chute and conveyor belt.

2 cranes available for loading bagged/bulk cargoes from chutes. 3 mobile cranes also available.

PASSAR: One crane available.

STEVEDORES: Cargo work carried out day and night on 3 shifts, 0800 hrs. – 1600 hrs., 1600 hrs. – 2400 hrs. and 2400 hrs. – 0800 hrs.

Our vessel loaded bagged fertiliser (DAP) by ship's gear at an average rate of 18 t.p.h. per gang. The Chief Supervisor of the stevedores claimed that the average loading rate was 30 t.p.h. per gang in perfect conditions.

MEDICAL: PHILPHOS and PASSAR have clinics available for their employees. Ship's crew can receive treatment at these clinics.

In cases of serious accident or illness, patients are sent to Ormoc or Tacloban.

FRESH WATER: Available.

FUEL: Fuel is not available locally but can be arranged by Philippines Petroleum, who can supply bunkers by barge, which is towed from Cebu. Fuel is also available by road tanker from Ormoc.

REPAIRS: No facilities locally.

SURVEYORS: Classification Society Surveyors can be arranged from Manila. Representatives of Admiral Adjuster and Surveyor, Manila and SGS Far East Ltd., Manila attend to cargo surveys at Isabel. They inspect holds and cargo during loading and unloading.

AIRPORT: Tacloban Airport with 2 daily flights to Manila is the nearest.

Ormoc is about 50 km. away. There are 2 weekly flights from Ormoc to Cebu and daily ferry services from Ormoc to Cebu.

Cebu is about 50 nautical miles by sea. The journey by ferry takes about 6 hours.

SHORE LEAVE: Permitted. Immigration Officers issue Shore Passes.

GENERAL: *Provisions:* There are 3 ship chandlers who attend vessels in turn, to provide provisions.

Telephone: Long distance (Domestic and International) calls can be made through the Passar Guest House between the hours of 0900 – 1400 and 1700 – 2200 local time.

Service Boat: There is a service boat available for taking crew from anchorage to the town, max. capacity 15 – 20 people.

Publications/Charts: Philippines Pilot, page 226. B.A. Charts No. 3810 and 3825. Philippines Chart No. 4426.

Agent: No agents maintain offices in Isabel. Agents representatives come from Manila to attend the vessel. Ship's telexes or telegrams are passed by telephone or telegram from the local post office to Manila, thereafter passed by telex to their destination.

Berth Operators: PHILPHOS (Philippines Phosphate and Fertiliser Corporation), Leyte.

PASSAR (Philippines Association of Smelting and Refinery Corp.), Leyte.

SHIPMASTER'S REPORT: March 1992.

DOCUMENTS:

Port Health:

2 copies Crew List.

Immigration:

4 copies Crew List.

2 copies Visaed Crew List (obtained from Philippines Consul in Fiji).

Customs:
4 copies Crew List.
3 copies Crew Personal Effects Declaration.
2 copies Narcotics List.

PILOTAGE: The pilot boat is a river-type tug of about 60 ft. length, with black hull, flying the "H" flag.

Pilot Boarding Ground: One mile S.E. of Sacay Pt. Pilot on Channels 16 or 12. At least 48 hours before arrival, Master shall send ETA to the ship's Agent in Manila, through a coastal station.

ANCHORAGE: See "Plan". Vessels anchor in Isabel Bay in depth of 15 – 40 fathoms.

Our vessel anchored in a depth of 23 fathoms, at distance of 6 cables East of Sacay Pt. There were 6 vessels of 5,000 d.w.t. – 30,000 d.w.t. at the anchorage. Our position Lat. 10° 54.66′ N., Long. 124° 25.41′ E.

TUGS: 2 tugs for hire available through the Harbour Pilots. Our vessel used 2 tugs for berthing, and 1 tug for unberthing. A mooring boat is available to run lines.

BERTHING: Philphos: Berths No. 1 – 5 with a total length of 760 m. Depth alongside 12.0 m. – 5.0 m. (See "Plan").

Pasar: 1 Berth – length 90 m., depth 12.0 m. (Berth No. 6).
1 Berth – length 30 m., depth 5.0 m. (Berth No. 7).

CARGO HANDLING FACILITIES: Philphos: Bulk, bagged and liquid cargoes handled.

Pasar: One crane available. Our vessel unloaded 7,300 tonnes of copper concentrate in 34 hours.

Berth No. 7 only for loading of slag by conveyor belt.

FRESH WATER: Available. Rate 5 t.p.h.

FUEL: Fuel is not available, but can be supplied by barge from Cebu, but is very expensive.

GENERAL: *Agent:* No Agents maintain offices in Isabel. Agents representatives come from Manila. Ship's telexes or telegrams are only by Fax.

Service Boat: There is a service boat available for taking crew from anchorage to the town, maximum capacity 15 people. Price about U.S.$ 8.00 – 12.00.

SHIPMASTER'S REPORT: August 1994.

Philipos cargo discharge facilities: Fertiliser Plant No. 1 and 2 Wharves. See "Plan".

Bulk cargo discharge wharves with 2 gantry cranes with grabs, running conveyor to factory of 10 tonnes capacity each.

Berths No. 3 and No. 4 have automatic bag loading facilities.

Berth No. 5 is a general cargo berth with mobile crane of about 10 tonnes capacity.

Imports are sulphur, phosphate acids and liquid ammonia.

Exports are bagged fertiliser and gypsum (Byproduct).

Berth No. 6 (Pasar Copper Smelter): Copper concentrate discharge with one movable jib crane with grab with conveyor to factory for discharge.

Berth No. 7: Slag loading fixed loader. Vessels normally tied-up port side to, and dolphins forward and aft for lines. Not a very good berth, especially during strong Southerly winds. Maximum hatch coaming airdraft 7.2 m., so vessels of about 12,000 d.w.t. have to ballast one hold to get under the loader. Not a very good situation when vessel loading No. 1 Hold and stern sticks out, almost unsupported by stern lines, which almost become spring/breast lines to aft dolphins.

Imports are copper concentrate.

Exports are copper products, copper slag and gold (gold goes by air).

Both Pasar and Philipos keep watch on VHF Channel 16 for Pilot and other information.

Anchorage available is about 30 m. deep, keeping the 3 points, the fixed light (Sakay Point), Isabel Finger Jetty and Airstrip Point 5 cables away and paying out about 6 shackles of cable (vessel anchored without Pilot).

Vessel berthed with 2 tugs and Pilot from Tacloban who rotates every 5 days with another Pilot.

The drive from Isabel to Ormoc is worthwhile with a good seafood restaurant by the sea in Ormoc City and basic shopping.

There is a small guesthouse in Pasar for making international calls. Entry is restricted to senior staff of the ship. Passes arranged by Agent.

JIMENEZ, Mindanao: 08.19 N. 123.52 E. (See Plan)

SHIPMASTER'S REPORT: January 1990.

LOCATION: The berth is located in Iligan Bay on the island of Mindanao, in position Lat. 08° 19.38′ N., Long. 123° 51.69′ E.

Charts: B.A. Charts No. 3810, 3811 and 3426.

APPROACHES: From the East steer a Westerly course to about 4.5 cables South of Tabu Pt. This will put the vessel in the middle of the channel between the reefs. When clear of the North reef, alter course to 308° (approximately) until 150 m. from the pier.

The fixed red leading light mentioned in Volume F of the Light Lists (1989) is non-existent.

Chart No. 3426 (Plan of the Port of Jimenez): This does not show the reef South East of the reef on the plan, with a now non-existent red conical buoy, so the actual width of the channel (approach) to the loading pier is not shown in its entirety.

PILOTAGE: Pilotage is compulsory. The pilot comes from Ozamiz City and boards 1.5 miles East of the reefs from a 22 ft. white pilot cutter.

Pilot should be ordered through vessel's main agent in Manila.

The pilot has a portable VHF set.

ANCHORAGE: There is no anchorage in Iligan Bay. Vessels may anchor for a few hours only, South of the "T" pier. The holding ground is poor.

RESTRICTIONS: Berthing and unberthing in daylight hours only.

MAX. SIZE: Max. draft 10.0 m. (33 ft.). Maximum size 28,000 g.r.t.

TUGS: There are no tugs available. The pilot cutter and canoes will assist in the running of mooring lines.

BERTHING: *New Concrete Pier:* The berth is for the export of coconut oil and copra products from the Jimenez Oil Mill, Inc. About 30 – 40 product tankers call each year to load coconut oil and about 12 – 15 bulk carriers call each year to load copra pellets. The pier head is 18.6 m. long and has mooring dolphins 100 m. off either end. Vessels berth port side alongside. The depth alongside at MLW is 10.67 m.

The covered loading conveyor is expected to be in operation August 1990.

Wooden Pier: There is a wooden pier adjacent to the new concrete pier mentioned above. This pier has been cut back in order to accommodate the new concrete pier. There is an 8 in. pipeline for coconut oil, pumping rate up to 300 tonnes per hour.

CRANES: None available.

MEDICAL: There is a doctor available locally and a hospital in Ozamiz City.

FRESH WATER: Available direct from the mill but the rate varies as the mill has priority. We loaded 100 tonnes in 2.5 days. At the present time vessels have to use their own hoses all the way from the shore to the ship.

When the new loading conveyor is completed there will be a 65 mm. pipeline to carry the fresh water from the seaward end of the pier to the shore.

REPAIRS: No facilities available.

GENERAL:

Hull/Tank Cleaning: No facilities available.

De-Rat Certificate: Health officials are based in Ozamiz City.

Ship Chandler: A limited amount of provisions are available.

Transport: There is a bus service during daylight hours between Jimenez and Ozamiz.

Communications: There are no telephones in the port. Telephones are available in Ozamiz City for long distance calls.

Authorities: All authorities are based in Ozamiz City.

SHIPMASTER'S REPORT: January 1991.

LOCATION: Approximate position of copra loading berth: Lat. 08° 19.4′ N., Long. 123° 51.7′ E.

DOCUMENTS:

Prepared by Agent:
10 copies Inward Foreign Manifest.
10 copies Outward Foreign Manifest.
10 copies Oath of Master.

Prepared by vessel:
Last Port Clearance.
6 copies Crew List.
3 copies Stores List.
3 copies Personal Effects List.
3 copies Animals List (even if 'nil').
3 copies Arms and Ammunition List (even if 'nil').
3 copies Plants List (even if 'nil').
3 copies Narcotics List (even if 'nil').
3 copies Passengers List (even if 'nil').
3 copies Ports of Call List.
2 copies Ship's Particulars.

If Jiminez is the first Philippine port:
1 copy Health Declaration.
2 copies Vaccinations List (Cholera and Yellow Fever).

PILOTAGE: Compulsory and during daylight only.

The Pilot comes from Ozamiz (about 20 minutes by car) and boards the vessel from the mooring boat between 1 mile and 1.5 miles East of Tabu Point lighthouse.

The vessel enters the port South of the small reef, which is noted as 'awash at L.W.' on B.A. Chart No. 3426. The red buoy noted on the chart is missing and only 2 bamboo sticks indicate the southern end of the reef. At the Northeastern side of this reef and the Southeastern side of the Madre Reef are 2 fixed beacons which could easily cause navigation errors as this is not the entrance to the port and is only suitable for small boats to pass.

ANCHORAGES: At Pilot's discretion. There is no anchorage for large vessels. Vessels should drift about 3 miles – 4 miles off shore when waiting for the Pilot. Pilot is furnished with a walkie talkie on VHF Channel 16 from which he can call the vessel to the boarding position.

BERTHING: Vessels are berthed port side to only and use the starboard anchor, with up to 6 shackles, to make unberthing an easier operation.

There is a concrete berth with a length of about 30 m. with a wooden pier connected to it. Depending upon the size of the vessel it is possible to load with 2 derricks. The cargo arrives in trucks with each truck carrying 2 buckets with a weight of 5 – 6 tonnes. The loading rate with one derrick is about 21 tonnes/hr.

Loading Facilities: A conveyor is under construction on the concrete berth which is hoped to be ready in mid-1991.

The conveyor will have an air draft of 17 m. and it's loading capacity will be 200 tonnes/hr.

RESTRICTIONS: As advised by Pilot. Maximum sailing draft is 35 ft.

FRESH WATER: Not available.

REPAIRS: Not possible.

JOLO (Jolo Island): 06.03 N. 121.00 E. (See Plan)

See "General" before first port.
DOCUMENTS: 4 copies each of Crew Lists; Passenger List; Import Cargo Manifest; Oath of Master and a copy of Vessel's Information Sheet.
PILOTAGE: Pilots are stationed at nearby Zamboanga City. Advice of ETA at least 3 days before is requested to facilitate arrangement of pilotage service.
ANCHORAGE: Anchorage areas are N.W. of Jolo Wharf and West of Caltex Depot.
MAX. SIZE: Main Wharf; Draft 4 m. LOA 60 m. At Caltex, Mobil and Petron Oil depot: LOA – no limit; Draft 6 m.
HEALTH: Ships will be cleared by quarantine officers upon arrival at anchorage.
RADIO: Presently SSB radio of Local Port Authority is waiting for re-installation. However ships may send message through Philippine Coast Guard Station at port or through local telecommunications like RCPI, PT & T and Post Office Telecom.
BERTHING: Berthing space at main wharf is reserved for large foreign vessels and domestic vessels. Max. permissible draft at MLLW is 4 m. (SW); Cargo handling by ship's own gear; Cargo may be worked at open storage and direct delivery only.
STEVEDORES: 24 hours advice before ETA is required. Stevedores provided by Sulu Dockhandlers and Forwarders, Inc.
MEDICAL: Sulu Public Hospital and Integrated Provincial Health Office.
TANKERS: The private wharf of Sulu Agro Industrial Corporation within the port limit is designed to handle crude coconut oil.
FRESH WATER: Water system has been installed at wharf with 4 in. piping and supplied by Local Waterwork Utility Administration (LWUA).
FUEL: Supplied by Petron and Caltex Philippines, Inc.
FIRE PRECAUTIONS: Dangerous cargoes are worked at assigned berthing area.
CONSULS: In Manila.
REPAIRS: Minor repairs may be undertaken by and within the vessel itself after permission is sought and granted by the Port Authority.
GANGWAY/DECK WATCHMEN: Customs Guard and Customs Inspector are on routine and continuous guard.
HATCHES: May be opened by stevedores and port workers.
CUSTOMS ALLOWANCES: Minimum quantity for personal use permissible only on board.
AIRPORT: Jolo Airport, flights to Zamboanga only, 2 flights a day.
HOLIDAYS: Cargoes are worked on holidays.
POLICE/AMBULANCE/FIRE: Central telephone system connects Port Authority with Police, Ambulance and Fire Departments.
BANKS: 6 banks available; Philippine National Bank, Metro Bank, Allied Bank, Producers' Bank, Land Bank of the Philippines and Philippine Amanah Bank.
SHORE LEAVE: Curfew hours are from 2200 hrs. to 0400 hrs. Crew members are allowed ashore. Identification cards not necessary.
GARBAGE DISPOSAL: Vessels are to provide their own containers/drums.
WASTE OIL DISPOSAL: No service available.
SEAMAN'S CLUBS: None.
REGULATIONS: No discharge of ballast oil in any territorial waters of the Philippines.
DELAYS: Delays in cargo handling: Rain.
DEVELOPMENTS: Reclaimation and wharf extension in progress.
AUTHORITY: Philippine Ports Authority, Port of Jolo, Jolo, Sulu, Philippines. *Contact:* Sisali B.Arap, Port Manager.

JOSE PANGANIBAN, Luzon: 14.18 N. 122.40 E. (See Plan)

See "General" before first port.
DOCUMENTS:
Inward Coasting Manifest.
Hatch Plan or Stowage Plan.
Vessel's Information Card.
PILOTAGE: Pilotage is compulsory. ETA advise should be sent to the Harbour Pilot Association, Legazpi City at least 36 hours before vessel's arrival. The vessel is met by the Harbour Pilot about 2 km. from the wharf aboard a boat displaying a pilot flag.
ANCHORAGE: Within Tanay Strait but not less than 500 m. from existing wharf.
RESTRICTIONS: Present port facilities could only allow vessels at anchorage considering the draft limitation and length of the pier.
MAX. SIZE: LOA 230 m. Draft 30 ft.
HEALTH: Vessels clear quarantine on arrival at Jose Panganiban Harbour. Quarantine Officers will normally board the vessel 2 km. from the wharf.
BERTHING: Present port facilities have been damaged by typhoon. Only 75 m. of the wharf is usable for berthing purposes. Length of quay 75 m., width 12 m. Max. depth of water 30 ft. Quay height above sea level 2 m. at high tide and 5 m. at low tide. Average rate of loading/discharging 18 tons per gang hour. Storage area 1.15 hectares.
CRANES: The port is not provided with shore cranes. Each vessel calling at the port is required to use her own gear.
STEVEDORES: Bicol Port Services.
MEDICAL: 1 government hospital located in the town about 3 km. from the wharf.
FRESH WATER: Can be provided by means of lorries and pipelines.
FUEL: All grades except premium gasoline obtainable from major oil depots and supplied by lorries alongside.
GANGWAY/DECK WATCHMEN: Available but not compulsory or necessary.
HATCHES: Opening and closing of hatches are part of stevedores' work or at the Master's option.
REPATRIATION: All facilities available for crew changes; good land and air connections.
AIRPORT: At the capital town of Daet, Camarines Norte.
HOLIDAYS: New Years Day (Jan. 1st); Holy Thursday; Good Friday; Labour Day (May 1st); Independence Day (June 12th); P.I. – U.S. Friendship Day (July 4th); Bonifacio Day (Nov. 30th); Special holidays declared by the President of the Republic of the Philippines are also included. If any other legal holiday falls on a Sunday the following day is observed as a holiday. Cargo work can be arranged on any or all holidays with the vessel's Agent.
SHORE LEAVE: Crews are allowed ashore in company of an Immigration Agent.
GENERAL: Vessels intending to call at Jose Panganiban shall apply for a berth space at least 24 hours before arrival. No dirty ballast may be dumped into the territorial waters of the Philippines. Rat guards shall be placed on all mooring lines. Berth allocation is on a first-come-first-served basis.
DEVELOPMENTS: Repairing of damaged wharf and water pipelines. 3 sets of fender pile clusters installed.
AUTHORITY: Philippine Ports Authority, Pier Site, Legazpi City, Philippines. *Tel:* 20-12, 29-96. *Contact:* Winfred G.Elizalde, Port Manager.

LEGAZPI, Luzon: 13.10 N. 123.45 E. (See Plan)

See "General" before first port.
DOCUMENTS:
Inward Coasting Manifest.
Hatch Plan or Stowage Plan.
Vessel's Information Card.
PILOTAGE: Pilotage is compulsory. ETA advise should be sent to the Harbour Pilot Association, Legazpi City at least 24 hours before vessel's arrival. The vessel is met by the harbour Pilot about 2 km. N.E. of the wharf aboard a boat displaying a pilot flag.
ANCHORAGE: Within the Albay Gulf outside the imaginary line within the vicinity of Legazpi Port from San Roque Lighthouse to the East breakwater with depths varying from 80 ft. to 100 ft. with good holding grounds. The bottom is generally of sand and coral.
RESTRICTIONS: Present port facilities allow for 1 vessel at a time considering the draft limitation and length of the pier.
MAX. SIZE: Legazpi Port: LOA – 120 m.; Draft – 25 ft.
Leg Oil Company: LOA – 230 m.; Draft – 35 ft.
HEALTH: Vessels clear quarantine on arrival at Legazpi Harbour. Quarantine Officers will normally board the vessel 2 km. N.E. of the wharf.
RADIO: Following Stations are normally used:
RCPI FILTEL
TELEFAST
TUGS: No tugs available. Motor launch is used to attend to mooring and unmooring. Arrangement for tugs can be made in Manila and Batangas.
BERTHING: Only the end of the wharf is usable by foreign vessels considering the draft limitation and constricted manoeuvring area. Legazpi Oil Company, Private Pier is, however, capable of accommodating vessels of any type and tonnage.
Legazpi Port: Length of quay 328 m. Width 30 m. Max. depth of water 30 ft. Quay height above sea level 2 m. at high tide and 5 m. at low tide. Average rate of loading/discharging 15.95 tons per gang hour.
Legazpi Oil Company, Private Pier: Length of quay 100 m. Width 10 m. Max. depth of water 60 ft. Quay height above sea level 3 m. at high tide and 6 m. at low tide. Average rate of loading/discharging 83.33 tons per gang hour. Facilities are suitable for handling of bulk copra, pellets, copra cakes and copra crude oil by conveyor and pipelines.
CRANES: The port has no shore cranes. Mobile cranes are provided by the Arrastre Operator to load/unload cargoes on non-sustaining vessels.
STEVEDORES: *Legazpi Port:* Provided by Regal Arrastre and Stevedoring, Incorporated. Tel: 2187 and 3107.
Legazpi Oil Company, Private Pier: Provided by Northern Carriers Inc.
MEDICAL: 1 government hospital and 6 private hospitals available.
TANKERS: See "Berthing".
FRESH WATER: Can be provided by Regal Arrestre and Stevedoring Inc. (See "Stevedores").
FUEL: All grades obtainable from oil depots and supplied by lorries alongside.
GANGWAY/DECK WATCHMEN: Available but not compulsory or necessary.
HATCHES: Opening and closing of hatches are part of stevedores' work or at the Master's option.
REPATRIATION: All facilities available for crew changes; good land and air connections.
AIRPORT: 5 km. from port area. Flights to Manila twice a day.
HOLIDAYS: New Year's Day (January 1st); Araw Ng Kagitingan (April 9th); Holy Thursday; Good Friday; Labour Day (May 1st); Independence Day (June 12th); P.I. – U.S. Friendship Day (July 4th); Bonifacio Day (November 30th); Special holidays declared by the President of the Republic of the Philippines is also included. If any other legal holiday falls on a Sunday the following day is observed as a holiday. Cargo work can be arranged on any or all holidays with the vessel's agent.
POLICE/AMBULANCE/FIRE: Police, Tel: 4222; Ambulance, Tel: 4432; Fire, Tel: 2666, 5222.

TELEPHONES: Placing of telephones on board can be arranged with the local telephone company (MATELCO).
SHORE LEAVE: Crews can be allowed ashore in company of an Immigration Agent.
GARBAGE DISPOSAL: Garbage truck from the city will collect garbage on request.
WASTE OIL DISPOSAL: Not available.
SEAMAN'S CLUBS: None.
CURRENCY: Philippines Pesos (P).
GENERAL: Vessels intending to call at Legazpi shall apply for a berth space at least 24 hours before arrival. No dirty ballast may be dumped into the territorial waters of the Philippines. Rat guards shall be placed on all mooring lines. Berth allocated is on a first-come first-served basis.
DEVELOPMENTS: Dredging of port basin to an average depth of 25 ft.

SHIPMASTER'S REPORT: April 1981.

Berth: Legazpi Oil Co. Jetty. Vessel loaded Copra Expeller Pellets in bulk.

For all details regarding control, pilotage, harbour installations, documents, etc., see "B.A. Pilot No. 33" and "Guide to Port Entry".

The docking manoeuvres were effected from an Easterly direction. The anchor was let go with 1 shackle prior to berthing. This served later, together with the rear cross buoy, to hold the vessel away from the pier (bad condition), and to heave off during the undocking manoeuvres.

The mooring buoys are secured to the bottom by 3 anchors each and 1 concrete block. However, their positions are not finite.

The vessel is to be maintained about 1.5 m. from the Dukes of Alba at the end of the pier, and therefore damage to the deteriorating pier is avoided.

A landing stage was positioned from the land, and was positioned likewise by the vessel on runners, since the vessel was rolling considerably in the persistent swell.

According to the Pilot, the swell in January is at its worst, and then the berth is not safe. During July and August, it is at its quietest in Albay Gulf. From October to December it is "Typhoon Time" and during November/December it is the heaviest rainy period, however, during the time we were in port there was considerable rainfall.

The pilot station has no VHF. The Pilot is ordered via the Agent, who was most co-operative. The pilot vessel brings the lines from the shore and to the buoys.

The copra expeller pellets were stored in a warehouse of approx. 80 m. × 50 m. According to the statement of the loader they were consistently loaded. The fresh goods, which came from the press at a temperature of approx. 44°C, were always loaded straight on top of the cargo already loaded. On board, temperatures of 32°C to 45°C between surface and core were measured.

According to the opinion of the loader, the high cargo temperature is not dangerous, but he was emphatic that a danger existed through wetness.

The expeller was brought to the weighbridge by lorry and then moved to the pile.

The conveyor belt is not covered, and the nozzle reached right up to the landside hatch coaming on the vessel.

The wet conveyor belt was "operated dry" with expeller and the wet material piled on deck, where it was bagged and shipped back to land. Also where due to sudden rainfall the cargo in the hold became wet, this was carefully segregated by the trimmer, and sent back to the land.

A trim extractor is available, and was partly used. The main trimming work is carried out by a gang of approximately 25 men.

Every instruction given from the ship was promptly executed by the conveyor belt personnel.

Delivery rate: 55 t.p.h. (approx.).
Stowage factor: 1.7 cu.m. to the ton (approx.).
Working time: Around the clock.

The loaders made sure that no chemical additive such as benzene, benzol or hexane had been used to extract the oil, and handed over a certificate with the following values:

Moisture content: 9.6%; Oil content: 6.2%.

The certificate of an independent surveyor showed 8.51% humidity and 7.15% oil content.

SHIPMASTER'S REPORT: October 1982.

Our ship was an 63,770 tons d.w.t. gearless bulk carrier of overall length of 225.03 m. which loaded 3,500 metric tons of Copra expeller pellets in bulk and stowing at an S.F. of 1.6 cu.m./ton. The loading terminal of the Legazpi Oil Company is situated in Lat. 13° 11.5′ N., Long. 123° 45.4′ E., which is unmarked on the Admiralty chart. There is over 54 ft. of water at the berth but the height of the loader is only 40 ft. hence it is important that ships do not arrive with a greater air draft than 39 ft. The port does not have VHF facilities or tugs. The Pilots are well experienced and normally meet vessels about 2 miles N.E. of the berth. The loader is protected by, recently constructed, 4 concrete dolphins and the vessel normally berths starboard side alongside. Two lines are passed to the shore side dolphins fore and aft, one line each to the seaward buoys and one line each to axis buoys and one spring fore and aft. The buoys are situated over 1,000 ft. from the axis of the berth and may necessitate joining of the mooring lines. The loading rate is about 80 t.p.h.

While we were at this berth we had the misfortune of encountering tropical revolving storm "Typhoon Irwing" which passed directly overhead. Berth was vacated when the storm was 150 miles from us to the East. Shelter was sought at an anchorage off the Legazpi harbour breakwater (bearing 230° – 1.0 mile from us). The eye of the typhoon passed directly over us within 24 hours and winds reached a velocity of 75 m.p.h. maximum. The holding ground was good and we rode out the typhoon with 9 shackles of chain out with engines going dead slow ahead when the winds increased to over 40 knots. With the aid of the doppler log on ground tracking and satellite navigator we were able to remain rock steady in the strongest gusts.

Wave heights at this anchorage was never more than one metre. The loading berth is directly exposed to sea and had we remained at the berth the vessel would have been pounded against the dolphins.

The Port Authorities are co-operative. There were no incidents of piracy or thefts.

AUTHORITY: Philippine Ports Authority, Port of Legazpi, Pier Site, P.O.Box 164, Legazpi City, Philippines. *Tel:* 20-12. *FAX:* 21-81. *Contact:* Winfred G.Elizalde, Port Manager.

MANILA, Luzon: 14.35 N. 120.58 E. (See Plan)

See "General" before first port.
PORT LIMITS: Manila Harbour is defined as that portion of Manila Bay within the following boundaries:

A line extending from the Vitas Estero due West (270°) to its intersection with a line running South (180°) to Sangley Point Light, thence along this latter line towards Sangley Point Light until its intersection with a line running E.N.E. (075°) to the N.W. corner of the airport site to the shore to the mouth of the Vitas Estero, the place of commencement. (Philippine Coast Pilot, Part 1, Coast and Geodetic Survey, 1968 edition, p.5-92).

However, Port of Manila jurisdictional district includes that of North and South Harbour and the Manila International Container Terminal.

Under the Port Management of North Harbour's jurisdiction are the smaller ports called sub-ports, namely Subport of Bataan, Romblon and Subic. The operational jurisdiction of Port Management of South Harbour includes the Terminal Management of Pasig.

DOCUMENTS:

Quarantine:

Innoculation List of Crew.
Innoculation List of Passengers, if any.
Health Certificate from Last Port of Call.

Customs:

General Declaration (6 copies) – APAA Form.
Cargo Manifest.
Crew List.
Ship's Stores List.
Passenger List.
Crew Effects Declaration.
Maritime Declaration of Health.
Transit Passenger List.
Plant and Animal List.
Arms and Ammunition List.
Mail List.
Parcel List.
Drugs and Narcotics List.
Stowaway List.
Foreign Currency List.
Dangerous Goods List.
Stowage Plan.
Sequence of Loading and Unloading.

Immigration/Customs Boarding Officer:

Crew List.
Passenger List, if any.
Seaman's Books.
Passports.
Oath of Master.
Inward Foreign Manifest.
Parcel List.
Stores List.
Medicine List.
Crew List.
Passenger List.

Crew Declaration List.
Narcotics and Dangerous Cargo List.
Arms and Ammunition List.
Ship's Clearance from Last Port of Call.
Through Cargo Manifest.
Through Parcel List.
Foreign Currency List.

Note: Above documents are requirements depending if there is such cargo on board vessel.

In order to avoid delay, the Owner, Master or Agent of a ship bound for the Port of Manila must notify the following government and private entities at least 24 hours prior to ship's arrival for regular vessels and 48 hours for non-regular vessels/tramping vessels.

1. Philippine Ports Authority – PDD Manila
   Attention: 1. The Port Manager, for PMO - South Harbour
   2. Office of the Harbour Master, Int'l Container Terminal Services Inc. for M.I.C.T.
2. Bureau of Customs – Boarding and Inspection Section
   Attention: Boarding Officer
3. Bureau of Quarantine
4. Commission on Immigration and Deportation
5. Bureau of Plant Quarantine
6. Bureau of Animal Quarantine
7. Philippine Coast Guard Boarding Team
8. Manila Pilots' Association (Private)
9. Cargo Handling Contractor (Private)
   Marina Port Services, Inc.

PILOTAGE: Pilotage in and out of Manila Harbour and to the piers and into the Pasig River is compulsory.

Agents or owners of vessels calling at the Port of Manila shall inform the Pilot of their vessel's arrival.

Agents can contact the Pilots Association through Channel 16, 24 hours a day, including Sundays and Holidays. Pilots are availableday and night.

The pilot boat is a white vessel with a big letter "P" and the number of the boat painted red at the forward end of the vessel. It is usually located in the vicinity of Quarantine Anchorage where port formalities are conducted.

During bad weather, the pilot boat is located inside the breakwater upon the expressed permission of Port Authorities.

Foreign vessels are boarded outside the breakwater while inter-island vessels at Buoy No. 1, near the entrance to the Pasig River and off the lighted buoy North of North Breakwater.

Notice of vessel's arrival shall be made at least 24 hours before their arrival.

Lights exhibited when a vessel has a Pilot on board are white over red together with other regular navigational lights. Otherwise, only navigational lights are displayed.

During typhoons and bad weather, Pilots require vessels to rig the pilot or accommodation ladder on the lee side.

ANCHORAGES: Vessels which for any reason do not intend to enter either harbour or the river immediately on arrival may anchor anywhere outside of the Entrance Channel. There is also deep water anchorage inside the breakwater. Anchorage is regulated by the Port Services Division, PMO - South Harbour, through the Marine Section.

Quarantine Anchorage: The Manila Quarantine Anchorage is bounded as follows: Beginning at the Manila Outer Harbour Lighted Buoy 1, approximate position Lat. 14° 33′ 09″ N., Long. 120° 54′ 04″ E. thence 000°, 2,360 yards to position Lat. 14° 34′ 23″ N., Long. 120° 54′ 00″ E., thence on a range of 076° 24′ (Customhouse in line with City Hall Tower), 4,000 yards to approximate position Lat. 14° 34′ 50″ N., Long. 120° 56′ 14″ E., thence 242° 30′, 4,440 yards to the Manila Outer Harbour Lighted Buoy 1, the point of commencement.

Forbidden Anchorage: Anchorage is prohibited in that portion of Manila Bay known as the Cable Area which is defined as follows: From a point approximately at Lat. 14° 33′ 42″ N., Long. 120° 59′ 05″ E., the junction of the breakwater forming the South side of the Yacht Basin with the shore of Manila Bay, thence along the breakwater to its end, from its end 255° to 3.65 miles North of Sangley Point Light, thence 066° to the shore of Manila Bay.

Explosives Anchorage: Vessels having gasoline, dynamite or other highly inflammable or explosive compounds on board are not permitted to berth at piers or wharves until such cargo has been discharged. Such cargo must be discharged into lighters from vessels at the anchorage within the circle with a radius of 175 yards centred in Lat. 14° 35′ 15″ N., Long. 120° 54′ 05″ E.

Other Special Anchorages: Lighters, scows, cascos and similar craft are prohibited from anchoring East of the breakwater, Manila Harbour, except in the following designated places:

(a) South of the new Luneta, inside of vessels' anchorages, but only in cases of urgent necessity and with special permission from the Chief, Marine Section.

(b) Along the East side of the West Breakwater and within 85 yards of it, and well clear of the fairway leading to the Engineer Island slipways and well clear of the manoeuvring space usually needed by vessels docking or leaving the oil wharf. No craft shall moor along the breakwater beyond the sharp bends of the breakwater towards the gap.

(c) In the Inner Basin (Engineer Island) East and well clear of the fairway and then only in case of urgent necessity. It is provided that such craft during severe typhoon weather with special permission of the Chief, Marine Section, may anchor temporarily in the Inner Basin West of the fairway, but well clear of the vessels.

Others:

1. No vessel shall anchor or moor in any prohibited anchorage nor use an anchor in that area except for the purpose of assisting in berthing alongside or unberthing.
2. No vessel shall anchor in, or use an anchorage, other than for the purpose for which the anchorage is designated or intended.
3. No vessel shall anchor, berth, moor or lie:
    (a) In the approaches to a port.
    (b) In any principal fairway.
    (c) In such a manner as to obstruct the approach to anchorage or pier/wharf used by other vessels.
    (d) In a cable reserve area, or in any special anchorage indicated on the chart of the Port or Port District except for the purpose specified.
    (e) In a position which is likely to foul a vessel which is anchored, moored, or made fast to a buoy.

RESTRICTIONS:

1. No explosives or dangerous goods shall be loaded or discharged between 1800 hrs. and 0600 hrs. without the permission of the Authority.
2. No vessel or harbour craft with explosives or dangerous goods on board shall remain alongside any other vessel or craft, pier or wharf or other physical landing place between 1800 hrs. and 0600 hrs. without permission of the Authority.
3. No person shall smoke and no fire or naked light, other than navigation or signal lights prescribed by the Collision Regulations, shall be allowed on board any vessel or harbour craft which has or is about to receive on board any explosives or dangerous goods.

MAX. SIZE: The maximum permissable draft inside the port is 9.75 m.

HEALTH: There are 3 types of Pratique that can be obtained at the port: Free Pratique, Provisional Pratique and Radio Pratique.

Foreign vessels calling at the port are inspected by Immigration Officers. When all the quarantine rules and regulations are complied with and the vessel is found free of any quarantinable or communicable diseases, Free Pratique is obtained by the vessel.

On the other hand, if some of the conditions above are not satisfied, a Provisional Pratique is given by the Quarantine.

Radio Pratique is provided to army and navy ships on the following grounds:

1. A doctor is among the crew of the ship.
2. There is no member of the crew sick with any disease.
3. Vaccination Certificates of the crew are in order and valid.
4. The vessel is not from a sick area.

For vessels calling at the Port District of Manila, but already coming from another port of entry in the Philippines, Pratique is automatic. However, if somebody aboard the vessel is sick during the voyage, Pratique shall still be obtained.

RADIO: The particular radio station to be used by a vessel to route ETA cables to agent is at the discretion and selection of the vessel.

Radio Officer's Report: August 1980.

Radio: Intercom Manila Radio, call sign (DZF) operated by the International Radio Communication Philippines. Serving ship to shore and vice versa, domestic and international communications, on HF, MF, and HF radio telephone on 24 hours operation.

VHF: The only coastal station equipped with VHF radio telephone listening on Channel 16 international calling frequency. Simplex and duplex operations on working Channels, for a direct contact with Agents.

Also accepting radio calls on land locally and international link via their local telephone network (PLDT).

VHF: Manila Pilots Association on Channel 16.

RADAR: No existing Port Radar Service.

TUGS: Tugs normally join vessel inside the breakwater.

BERTHING: There are 5 finger piers at South Harbour.

Pier No.	*Pier Length* (m.)	*No. of Berths*	*Depth* (m.)
3	389	4	10.02 – 11.90
5	390	5	9.23 – 11.08
9	393	5	9.49 – 11.68
13	494	7	9.65 – 10.95
15	397	4	10.82 – 11.86

Container Berths: PMO - South Harbour: There are 2 container berths at Berths No. 3 and 4 of Pier 3. Length 163.1 m. each.

One fixed Ro/Ro berth at Pier 13, of 50 ton capacity, 40 ft. loaded.

CONTAINER HANDLING FACILITIES:

Manila International Container Terminal:

Address:	International Container Terminal Services Inc., (ICTSI), ICTSI Administration Building, MICT South Access Road, North Harbour, Manila, P.O.Box 279, Manila Central, Philippines.
Telephone No.:	21-36-51, 21-36-61, 21-36-71, 21-36-81.
Telex:	27182 (ICTSI PH)
Fax:	274-780, 200-413 Planning
Location:	North of the mouth of Pasig River off Pier of the PMO-North Harbour.
Navigational Approach:	The Fairway Channel has a length of 4,000 m. and a width of 250 m. Controlling depth is 12.2 m.
Tidal Range:	Mean Range – 0.763 m. Diurnal Range – 1.021 m.
Total Berth:	Length: 900 m. Width: 420.28 m. Depth alongside: 12.0 m.

Facilities		
Container Yard 1 paved area	—	290,321 sq.m.
Rated capacity	—	19,000 TEUs
Monthly average throughput	—	39,000 TEUs
Reefer Facilities	—	40 Outlets × 220 Volts
	—	170 Outlets × 440 Volts
Container Freight Station Area (CFS 1 - 3)	—	27,238 sq.m.
Rated Capacity	—	114 container vans may be handled at any one time.
Average Tonnage Stored Daily	—	8,000 tons
Berths	—	4
Total Length	—	900 m.
Average Depth at Berth	—	12.0 m.
Average Length per Berth	—	215 m. except Berth No. 1 which has a length of 255 m.
Operational Berthing Space	—	850 m. (can accommodate 4 vessels at any given time with 150 m. LOA per vessel)
Berthing Hours	—	Anytime, with 24-hour notice
Working Hours	—	24 hours
Equipment		
Shore Gantry Cranes	—	3 (All electrically powered)
Capacity	—	35 tons SWL
Travelling Distance	—	645 m.
Waterside Outreach	—	35.05 m.
Back Reach (Landside)	—	10.66 m.
Upper Lift	—	1 container over 4 containers above deck
Lower Lift	—	8 tiers below deck
Straddle Carriers	—	14 Units (8 Valmet, 6 MHI)
Prime Movers	—	42 Units (4 Hino, 38 Ottawa)
Forklifts	—	61 Units (47 Toyota, 7 TCM, 1 Hyster, 4 Mitsubishi, 2 Sidelifters)
Chassis	—	119 Units (82 × 20/40 ft., 29 × 20 ft., 6 × 40 ft., 2 flatbed)
Service Vehicles	—	13 Units

Other Facilities

Weighbridges		—	2
Back-Up Area DASSAD	For dangerous cargo	—	5,000 sq.m. with 2 CFS at 1,500 sq.m. each
NAWACO	For overstaying containers	—	28,000 sq.m. with 8 CFS at 1,254 sq.m. each
APEX	For overstaying containers	—	28,840 sq.m. with 1 CFS
Truck Holding Area		—	2.8 ha.

CRANES:

	No. of Units	*Description*	*Capacity*
Container Terminal:			
Container Cranes (Liebherr)	3	Electric-powered with telescopic spreader for 20 ft., 30 ft. and 40 ft.	35 tons
Container Crane (MHI)	1	High operating speed, latest technological innovations	
Yard Transfer Cranes	2	Mitsubishi Rubber Tyred Gantry Cranes, 20/40 ft., telescopic spreader-bar	40 tons SWL
South Harbour:			
Container Cranes (Liebherr)	2	Electric-powered	35 tons
Mobile Cranes	3	MI-Jack	Lifting Crane

CONTAINER/GENERAL CARGO STORAGE FACILITIES:

Transit Shed	*Number*	*Use*	*Capacity*
Pier 15	2	Transit sheds – temporary storage for import and export	6,000 tons/ 5,750 sq.m.
Pier 13	1	Transit shed – temporary storage for import and export	3,000 tons/ 3,100 sq.m.
Pier 9	3	Transit sheds – temporary storage for import and export	11,020 sq.m.
Pier 5	4	Transit sheds – temporary storage for import and export	12,000 tons/ 12,664 sq.m.
Container Yard	3	Asphalt paved and partially concreted CY 01 3,150 TEUs CY 02 535 TEUs CY 03 250 TEUs	100,650 sq.m.
Container Freight Station	2	For stripping/stuffing, storage purposes	10,000 tons
Open Storage Area	5	Asphalt paved	24,300 sq.m.
Car Compound (STALAG)	1	For cars and other small vehicles	4,000 tons
Warehouses	9	Storage of import/export cargo	35,000 tons
Chassis Parking	1	Asphalt paved	2,000 TEUs, approx. 2 hectares

Liquid cargoes are handled at South Harbour, at the anchorage only through ship to ship or in to lighters.

BRIDGES: None.

STEVEDORES: Arranged by vessel's Agent prior to arrival.

MEDICAL: Notice from shipping Agents is required at least 24 hours in advance.

For quarantinable diseases, there is a 12-bed hospital, the Quarantine Isolation Centre is located at the airport.

Hospitals: Manila Doctors Hospital, Medical Arts Center, 664 T.M. Kalaw. Tel: 59-16-11

Hospital, 667 United Nations Avenue. Tel : 50-30-11.

Medical Center Manila, 1122 General Luna. Tel: 59-16-61, 59-09-21, 59-00-21.

TANKERS: Tankers are accommodated at Limay Sub-port.

Rosario: Filoil Refinery Sea Berth: Located at the entrance to Manila Bay in position: Lat. 14° 26′ 30″ N., Long. 120° 46′ 40″ E. This position is 2.5 miles off the shore of Rosario, Province of Cavite.

The mooring area is marked by 6 mooring buoys. A ship's guide buoy marks the point where the ship's starboard anchor will be dropped upon entry into the berth. 4 other buoys inside the berth at midport mark the end of the submarine pipeline, centre of ship's manifold and the hose ends respectively. The bearing of the centre of the berth is N. 65° E. The depth is 50 ft. at high tide and 45 ft. at low tide approximately.

The weather is quite good during the dry season, but is unfavourable during monsoon season (May to November). Wind and swells are mostly from a S.W. direction and usually prevalent during monsoon season.

It is emphasised that vessels moored at the berth must be in good condition to clear the berth immediately in case of an emergency. Ship's engines and gear must be ready with full power for immediate use. Ship's personnel should be at their stations at all times during mooring, unmooring and cargo unloading operations.

Radio: Filoil Makati Office may be contacted by dialling telephone Nos. 87-40-61 and 87-40-71. The Rosario Refinery may be contacted by dialling telephone Nos. 47-95-51 and 47-95-53.

Communication from the Sea Berth with the Refinery, Filoil's launch and Filoil Representative on board is through VHF radio. If VHF radio fails, the Filoil launch will be despatched to bring message either way.

Filoil Representative on board maintains a radio watch and constant communication with the shore for general purposes and emergencies.

Luzon Stevedoring Company tugboats also maintain a constant radio communication with their representative at the shore. In case of emergency, messages can be relayed via these tugs.

Ship's Agent: All vessels carrying crude or other cargoes for discharge at Filoil Refinery Sea Berth must appoint their local ship's Agent who will provide them with the necessary ship husbandry services.

Notice of Arrival: They must report their ETA to Filoil Refinery Corporation, cable address "Filoil", Manila, Philippines, 3 days after leaving port of loading and 72 hours before arrival at Manila.

Pilot and Boarding Parties: Pilots are arranged for by the ship's Agent. Generally, Pilots board the tanker at the Manila Anchorage to assist the Master to moor in the berth and leaves at the Sea Berth after berthing.

Filoil Representative boards the tanker 1 mile before the Sea Berth, but if it is the first voyage, he boards the tanker together with the Port and Government Authorities at Manila Anchorage.

Tugs: Tugboat service is arranged for by ship's Agent. Tugs generally come from Manila. Give at least 48 hours' notice when ordering tugs.

Quarantine, Customs and Immigration: Manila is the port of entry for the Rosario Sea Berth. Therefore, entry and clearance must be arranged by the Ship's Agent at Manila. Boarding Officers board the vessel in the Quarantine Anchorage prior to arrival within the mooring area. Pertinent Government Officials should be given sufficient time, usually not less than 24 hours Monday to Friday, and 48 hours Saturday and Sunday. Generally, entry and clearance can be arranged by the Agent who should advise Customs well in advance of the vessel arrival.

Ballast, Bilge and Garbage Disposal: There are no ballast facilities at the refinery. Masters are advised that in Manila Bay, the Harbour-Pollution Regulations are rigidly enforced. Therefore no bilge water, oil contaminated water, garbage or similar refuse which may pollute the sea water in any way, is to be discharged overboard while the vessel is within Manila Bay and approaches thereto. The staff at Rosario are required to report any violation of this Philippine Merchant Marine Regulation.

Launch Service: Regular launch service for crew transportation is not available and has to be arranged through ship's Agent. The Luzon Stevedoring launch is used to run lines, assist in picking up cargo hoses, etc. Filoil's owned or hired launch is for the exclusive use of Filoil Representative and personnel boarding the vessel; however, transportation may be arranged through Filoil Representative in cases of emergency.

Medical: Medical attention can be arranged by the ship's Agent. There is a clinic at the refinery. The nearest hospital is 0.5 miles.

Heading for the Sea Berth: As soon as government clearance (Pratique) is granted, vessel weighs anchor and heads for Rosario Sea Berth, a distance of about 16 land miles from Manila Anchorage.

Vessel Mooring Gears and Facilities: The vessel's bow is secured in the moorings by the use of both bower anchors. Therefore, ship must have both bower anchors ready for immediate use, each with a minimum of 150 fathoms of chain. Anchors, chains and anchor windlass must be in good condition and capable of heaving ship ahead with the chain or letting one chain go out on the run while heaving in on the other. Mooring Buoy No. 6 can be used instead of port anchor if 3 mooring lines are hooked up.

Vessels must be equipped with 10 in. manila or better mooring lines of not less than 8 in. circumference and not less than 90 fathoms in length of each line. 2 lines are required for each of 6 mooring buoys, 5 of which are aft to secure the ship's stern. Therefore, 5 lines are to be available on the fantail for mooring to Buoy Nos. 1, 2, 3, 4 and 5.

Vessels having wire moorings secured on warping winches with surge valve and brake are acceptable. Warping winches must be adequate to handle mooring line under heavy strain. Efficient stopper lines must be readily available to "stop" mooring lines for transfer from winch to bitts without loss of tension.

All chocks other than roller (if free) shall be fitted with chafing gear to protect lines before berthing operation commences, endeavouring to install chafing gear after the ship has been moored has proven impracticable. Old fire hoses or substitute is suggested.

If in the opinion of the Pilot, the vessel's mooring facilities lines and/or gear are inadequate, he will inform the Master and Filoil Representative, and in such event the vessel will not be allowed to enter the moorings until such conditions are deemed satisfactory.

Docking Procedure: To moor, the vessel approaches the mooring heading due South. When in proper position, the starboard anchor is dropped and the chain allowed to run until vessel crosses the mooring area to a point where the port anchor is let go or when the mooring lines are dropped to Buoy No. 6. Then the engines are backed and the vessel with the assistance of the tug, manoeuvred into the mooring area where after lines are run to the 5 mooring buoys and then the anchor chains are brought tight simultaneously with the securing of the stern to the mooring buoys. The vessel is then heading due West parallel with the tide current flow.

When secured in the berth, vessel should not be closer than 10 m. from the end of the submarine pipeline. Bower anchor chains should have spread of not less than 30° on either side of the ship's imaginary fore and aft line extended forward. Stern buoy moorings should be set as taut as possible and anchors form an approximate angle of 300° with water line.

Submarine Hose Lifting Gear and Manifold Connection: The derrick on the port side in way of the hose connection must be rigged to lift not less than 5 tons. The topping lift shall be available to raise or lower the boom as required and the winch and whip shall be of a quality and nature to lift the hose exactly and evenly. The hose and fittings are considered to weigh 3 tons. The hose connecting gang and its supervisor are from Luzon Stevedoring Company and are under contract to Filoil. They will use the ship's machinery to raise the 2×10 in. hoses from the bottom and secure same to the ship's side. They will also disconnect the hoses and lower same to the bottom of the sea after completion of discharging of cargo. The ship's manifold must have 10 in. flanges for connection to 10 in. submarine hoses.

Safety Rules and Regulations:

Mooring lines must be in good condition and kept tight at all times.

Sparking smoke stacks must not be permitted. If for any reason a stack catches fire or emits live sparks, cargo operations must be stopped immediately on this and adjoining vessels.

Throw nothing overboard from deck or portholes while at Sea Berth.

During cargo and/or ballast operations, vessels shall show red flag by day and red light by night. No smoking amidships during cargo and/or ballast operations.

No chipping, repairs, welding or hot work is allowed on any vessel while at sea berth unless special permission is given and a safety permit obtained. The ship must always be ready to sail out at a moment's notice. The Authority decides when vessels at pier side and Inner Anchorage be shifted to Outer Anchorage during Typhoons.

Pumping crude oils must be stopped during electrical storms or if lightning appears in close vicinity.

In case of fire, shut down all pumping and sound alarm. Disconnect hoses so as to be ready to shift from berth. All vessels at berth must have main engines ready for use. Water, foamite and steam are never to be used on electrical fires. Use dry chemical or Pyrene. Use foamite, water fog, steam CO_2 or dry chemical on oil fires.

Avoid spilling oil on deck. If any oil is spilled, it must be cleaned immediately. Gasoline or naphtha is not to be used for cleaning.

Only Underwriter's laboratory approved flashlights permissible use in methane and air mixtures by the U.S. Coast Guard are to be used for loading, discharging, ballasting and/or repair work on vessels.

Ullage screens are to be kept in place during cargo and/or ballast operations.

No extension cord or portable cables which are connected to an electric power source shall be used on deck in way of cargo or fuel tanks unless vessel is certified gas-free.

Fire hose shall be laid out and suitable fire extinguishers available. Failure to comply with any of the above rules will result in the vessel being shut down. Sufficient copies are to be presented to the Master so that they may be posted in various places about the vessel. It is the Master's responsibility to see that these rules and regulations are enforced.

Discharge of Cargo: After hoses are connected the Filoil Representative will, after communication with the refinery, advise commencement of pumping. In the beginning the rate is to be slow and the Filoil Representative will advise when pumping rate is to be increased to maximum. Discharge of cargo may be stopped due to adverse weather conditions. In which event, the hoses are disconnected and the submarine hose lowered to the sea bottom. Cargo discharge will be resumed when the adverse weather moderates.

Crude oil discharge through 2×10 in. hoses 255 ft. long through a 10 in. check valve and 10 in. gate valve then into the 24 in. pipeline which is 2.5 miles in length. The height of the shore tanks (foundation) above sea level if 15.5 ft. Pressure at the ship's side must not be less than 60 lb. Maximum pressure allowed is 120 lb. at the ship's side.

Stripping – Tank Draining: To keep a discharge time to a minimum, tanks should be stripped into one of the ship's tanks and the final stripping shall be from only one tank.

Board and Lodging Accommodation: Sufficient accommodation and meals are requested to be available and prepared for the Filoil's Representative in the Officers' quarters. He will remain with the vessel until casting off or until relieved to be of assistance to the crew.

DENSITY: Variable.

FRESH WATER: Fresh water is available from barges.

FUEL: This depends upon the requirement of the vessel. However, as to the quantity, the Philippine Government can only sell vessels sufficient for it to reach the next port of call.

FIRE PRECAUTIONS: The "Absolutely Non-Smoking Area" signs to be exhibited. Permission must be obtained from the Authority before following undertaken – welding work, onboard repairs, vessel imobilisation.

REPAIRS: Only minor repairs possible.

DRY DOCKS: *Bataan Shipyard and Engineering Co. Inc.:*

1 Graving Dock with max. length 164 m., breadth 23.16 m. and depth 12.19 m. Max. size 16,000 d.w.t.

1 Synchrolift for vessels up to 2,000 d.w.t.

Philippine Shipyard and Engineering Corp. (Philseco): Located at Subic Bay.

1 Graving Dock, 350 m.×65 m.×12.5 m. Capacity 300,000 d.w.t.
1 Berth, length 300 m., depth 9 m.
1 Jetty, lengths 185 m. and 135 m., depth 9.0 m.
1×80 ton crane and 1×30 ton crane.

Keppel Philippines: 2 dry docks:

1. 110 m.×19 m.×5.0 m. on sill.
2. 110 m.×15 m.×5.5 m. on sill.

SURVEYORS: Lloyds' Register, A.B.S. and others located in the city. Cargo inspectors available.

GANGWAY/DECK WATCHMEN: This service is available whenever needed.

HATCHES: Stevedores usually open and close hatches. In special cases, when the vessel is of a different model and the hatches are constructed differently, crew members are requested to assist stevedores.

CUSTOMS ALLOWANCES: The only allowable quantity of goods to be held out of bond is that which the members of the crew can use personally. Usually, one or two bottles of wine and a pack of cigarettes. Those brought out from the vessel beyond this will be considered for commercial consumption and will therefore be charged tax.

REPATRIATION: Shipping Agent can arrange this with the Bureau of Immigration.

AIRPORT: The nearest airport is the Nimoy Aquino International Airport, about 8 km. from the Port District of Manila. This is served by regular airlines.

TIME: GMT plus 8 hours.

HOLIDAYS: There are about 12 national holidays in the Philippines. Working days are from Monday to Friday, for government employees, and Monday to Saturday, for private employees. However, the Port of Manila does not observe any of these holidays. Operations at the port are on a day-to-day basis.

Work stoppages may be declared on the following holidays:
Good Friday (1800 hrs. Thursday – 1800 hrs. Friday)
Christmas Eve (1800 hrs. 24th December – 1800 hrs. 25th December)
New Year's Eve (1800 hrs. 31st December – 1800 hrs. 1st January)

POLICE/AMBULANCE/FIRE: Police Tel: 59-90-11, 59-43-44, 59-63-36. Ambulance Tel: 62-38-58, 61-53-76, 61-53-89. Fire Tel: 47-43-24, 48-37-34, 58-11-76.

EMERGENCY CO-ORDINATION CENTRE: Philippine Coast Guard Tel: 483257 (Operations).

TELEPHONES: Arranged by vessel's Agent from the Philippine Long Distance Telephone Co.

BANKS:

Far East Bank, Far East Bank Complex, Muralla St., Intramuros, Manila. Tel: 40-10-21/30.

Land Bank of the Philippines, South Harbour, Port Area, Manila. Tel: 47-43-48.

Philippines National Bank, Port Area, Bureau of Customs Compound. Tel: 48-54-88, 40-31-48.

SHORE LEAVE: Crew members are allowed ashore as long as sufficient members of the crew are left on board to manage the vessel in case of unforeseeable incidents. This is necessary in order that the vessel can be removed from berth or anchorage.

IDENTIFICATION CARDS: Shore passes are issued by the Bureau of Immigration.

GARBAGE DISPOSAL:

(a) Bunag Garbage Services,
253 Banalo, Bacoor, Cavite,
Philippines

(b) Capt. TVD Marine Services & Gen. Mdse.,
Nena Samio Building
1356 Gen. Luna St., Paco, Manila.
Philippines.
Tel: 521-45-42

Charges: P. 1,423.10 (alongside), P. 1,552.30 (anchorage).
Collection Time: Monday, Tuesday and Friday, or it depends on the vessel.

WASTE OIL DISPOSAL:

(a) CNR Enterprises,
S513 Downtown Center Building,
516 Quintin Paredes St., Binondo, Manila,
Philippines.

(b) Cristina Lee,
367 Rizal Avenue Extension,
Caloocan City, Metro Manila,
Philippines

(c) Oil Link Services & Enterprises,
Mez., Mary Bachrach Building,
25th St., Port Area, Manila,
Philippines.

SEAMAN'S CLUB: United Seaman's Service, Manila International Seaman's Center, Box 165, Bonifacio Drive, 8th Street, Port Area, Manila, Philippines 1002.

CURRENCY: Philippine Peso.

REGULATIONS: No particular or unusual regulations are observed at the port.

DELAYS: The expected delays are: During inclement weather, some difficulty may be encountered in berthing and when some of the specialised cargo handling facilities have failures.

DEVELOPMENTS: Manila's port expansion and upgrading is expected to be completed during the second quarter of 1994.

The rehabilitation of the harbour will restore the piers to their original engineered strength to enable the port to meet future requirements.

Work on the South Harbour consists of the structural repairs of all damaged slabs, beams, and piles of Piers 3, 5, 9 and 15, installation of rubber dock fenders, widening of the apron on both sides of Pier 9, levelling of the passages at Piers 5 and 15, demolition of 2,550 m. of curbs and beams at Piers 3,5 and 15 and at the seaside of Pier 9 and its replacement with new cast-in-place concrete curbs and fascia beams, construction of a 600 sq.m. single-storey building, demolition of a 9,200 sq.m. steel framed transit shed, improvement of existing roads, area lighting, water supply, drainage and sewer systems and ancillary works, and the rehabilitation of the existing breakwater on the West side of the harbour.

Project contractor for the South Harbour component is Kawasaki Steel Corporation.

When these projects are completed, ships will have shorter service time, and maintenance, equipment, and cargo handling costs will be reduced.

Reconstruction to keep abreast with world standards for port operation at South Harbour expects to accommodate the projected 13% average annual growth rate from 1992 to 1996 plus the anticipated 10% growth in the Pacific Basin in the 90's and beyond.

Commitment to Port Development: MICT

Proposed Development: The port will be converted to transtainer operations in 5 years. The container yard will be expanded by approximately 13 hectares when volume of throughput indicates the need. A new Container Freight Station building will also be built.

Container Berth No. 5: To be constructed. Length 300 m., depth 14.5 m. The berth will be equipped with 4 large gantry cranes.

AUTHORITY: Philippine Ports Authority (Head Office), Marsman Building, South Harbour, Port Area, Manila, Philippines. Associated with Jardine Shipping Agencies.

MASBATE, Masbate Island: 12.35 N. 123.31 E. (See Plan)

DOCUMENTS:

Inward Coasting Manifest.

Hatch Plan or Stowage Plan.

Vessel's Information Card.

PILOTAGE: Pilotage is compulsory. ETA advise should be sent to the Harbour Pilot Association, Legazpi City at least 36 hours before vessel's arrival. The vessel is met by the Harbour Pilot about 2 km. from the mouth of the channel of Masbate Bay aboard a boat displaying a Pilot's flag.

ANCHORAGE: Within Masbate Pass, but not greater than 500 m. from the mouth of the channel leading to Masbate Bay. The area within the Masbate Bay could only be used during emergencies and typhoons.

RESTRICTIONS: Present port facilities can only accommodate 1 vessel at a time due to draft limitation and physical length of the wharf.

MAX. SIZE: LOA 300 m.; Draft 40 ft.

HEALTH: Vessels will clear quarantine on arrival at Masbate Harbour. Quarantine Officers will normally board the vessel once it is inside Masbate Bay.

BERTHING: The entire berth length of the wharf could be utilised for the loading or unloading of cargoes. Length of quay 180.0 m. Width 10 m. Max. depth of water 40 ft. Quay height above sea level 2 m. at high tide and 4 m. at low tide. Average rate of loading/discharging 20 tons per gang hour.

CRANES: None available.

STEVEDORES: Provided by Masbate Consolidated Arrastre, Inc.

MEDICAL: One government hospital and three private hospitals.

FRESH WATER: Available by special arrangements.

FUEL: All grades obtainable from Caltex depot in the area and supplied by lorries alongside.

GANGWAY/DECK WATCHMEN: Available, but not compulsory.

HATCHES: Opening and closing of hatches are part of the stevedores' work or at the Master's option.

REPATRIATION: All facilities available for crew changes; good sea and air connections.

AIRPORT: 3 km. from port area. One flight to Manila and Legazpi daily.

HOLIDAYS: New Year's Day (January 1st); Holy Thursday; Good Friday; Labour Day (May 1st); Independence Day (June 12th); P.I.U.S. Friendship Day (July 4th); Bonifacio Day (November 30th); Special Public Holidays declared by the President of the Republic of the Philippines is also included.

If any other legal holiday falls on a Sunday the following day is observed as a Holiday. Cargo work can be arranged on any or all holidays with the vessel's Agent.

POLICE/AMBULANCE/FIRE: Police and ambulance can be contacted through the local PPA office.

TELEPHONES: Placing of telephones on board can be arranged with the local telephone company (PILTEL).

SHORE LEAVE: Crews can be allowed ashore in company of an Immigration Officer.

GENERAL: Vessels intending to call port at Masbate shall apply for a berth space at least 24 hours before arrival. No dirty ballast may be dumped into the territorial waters of the Philippines. Rat guards shall be placed on all mooring lines. Berth allocation is on a first-come first-served basis.

DEVELOPMENTS: Extension of the wharf by 80 linear metres.

AUTHORITY: The Supervising Officer, Philippines Ports Authority, Masbate, Philippines. *Contact:* Winfred G.Elizalde, Port Manager, Legazpi (Tel: 2012).

MASINLOC, Luzon: 15.32 N. 119.57 E. (See Plan)

SHIPMASTER'S REPORT: June 1988.

DOCUMENTS:

6 copies Crew List, these being in addition to visaed Crew Lists supplied in advance.

3 copies Stores List.

3 copies Bonded Stores List.

3 copies Crew Declaration.

1 Summary of Ship's Particulars.

1 copy Maritime Declaration of Health.

1 copy Manifest of Transit Cargo.

1 copy each of Passenger List, Livestock, Arms and Ammunition Declaration or "Nil".

Last Port Clearance.

PILOTAGE: Pilot boards in position 15° 33′ N., 119° 53′ E. In view of the absence of navigational aids (buoys) it is recommended that the vessel waits for the Pilot to fetch the vessel inside to the anchorage. The depth outside is too great for anchoring. We drifted, 8 miles offshore, for a period of 14 hours whilst awaiting the Pilot and experienced very little drift.

The Pilot boards from an outrigger fishing canoe exhibiting a large 'H' flag. For berthing, normal pilotage hours are from 0500 – 1000 hrs., but this may be extended in calm weather conditions. No docking or undocking during the hours of darkness.

The Pilot was competent in berthing the vessel, using a starboard anchor (7.5 shackles out when alongside) and a mooring boat to run lines to the jetty, buoys and dolphins.

ANCHORAGE: The anchorage is about half a mile from the berth in position 15° 32.5′ N., 119° 56′ E., depth of water 11 fathoms.

Clearance is sometimes carried out at the anchorage.

RADIO: All communications are via Manila Radio as there is no direct link with Masinloc.

VHF: No VHF communications possible with the port or pilot.

BERTHING: The bulk loading jetty is located in position 15° 32.9′ N., 119° 56.3′ E., depth alongside 31 ft.

Starboard anchor was used for berthing. Lines were run to buoys ahead, astern and starboard quarter. Breast lines were run to dolphins and springs were run to the jetty (See "Plan").

Loading: Loading is by conveyor and shoot which can be deflected slightly forward and aft. Rate 100 tonnes per hour – 120 tonnes per hour.

Access gangway provided from the jetty.

Loading is suspended in heavy rain and hatches are covered.

STEVEDORES: Loading is carried out throughout 24 hours.

MEDICAL: Consultations can be arranged.

FRESH WATER: Not available.

FUEL: Not available.

CONSULS: Nearest Consuls are at Manila.

REPAIRS: No facilities available.

SURVEYORS: Based in Manila.

REPATRIATION: Repatriation can be effected through Manila which is about 3 hours by car.

AIRPORT: At Manila.

GENERAL: *Chart:* B.A. Charts No. 3806 (approach), 3559 (plan).

Notice of Arrival: To be sent to Agent in Manila.

Telephones: The nearest telephone is 1.5 hours away by car.

Accommodation: There is a local lodging house, but no air conditioning available so probably more comfortable aboard the vessel.

Stores: Available at local market.

SHIPMASTER'S REPORT: January 1989.

PORT LIMITS: Notice of Readiness tendered showing the time we reached the pilot station (Lat. 15° 33′ N., Long. 119° 53′ E.), and it was accepted without objections.

DOCUMENTS:

8 copies Crew List.

8 copies Passenger List.

3 copies Personal Effects List.

3 copies Stores List.

1 copy Vaccination List.

1 copy Cargo Manifest (cargo to be discharged – obviously always "Nil").

PILOTAGE: Pilot boarding position Lat. 15° 33′ N., Long 119° 53′ E.

There is only one pilot available. No VHF equipment available. ETA should be sent through Manila Agent.

As all buoys and beacons are missing, the ship can proceed, assisted by Pilot, in daytime only, whether for berthing, unberthing or anchoring.

The latest time the Pilot will board, all year round, is 1800 hrs.

In the calm season, a place for temporary anchorage is located 2 to 3 cables from that recommended by B.A. Pilot. (This one, in my opinion, is too close to the bank).

The Pilot recommends waiting outside and drifting, from April till October, as the anchorage is unreliable.

ANCHORAGE: The inner anchorage can accommodate 2 vessels. During the typhoon season, vessels should seek shelter in other places in the North or in the South.

RESTRICTIONS: Daytime only for berthing and anchoring.

No restrictions for shifting the ship by her own ropes at the wharf, at any time, for loading purposes.

HEALTH: Radio Free Pratique requested in advance, but of no advantage. Authorities boarded for the formalities and the whole process for Free Pratique was performed then.

RADIO: No local radio station; Agent's representative will make contact through his Manila office.

RADAR: Not available.

TUGS: Not available.

BERTHING: Only one berth, owned by Benguet Co., for loading chrome ore, exclusively by shore equipment (See "Plan").

BULK CARGO FACILITIES: There is a conveyor belt feeding a "shuttle". The maximum reach of the shuttle is 48 ft., measured from the outer border of the horizontal fender in the wharf. Its overall length if 57 ft. 3 in.

Onshore, a payloader and bulldozers are used for handling of the ore.

The shuttle can move backward and forward following the axis of the wharf (See "Plan"), somewhat oblique to the fore/aft line of the ship.

There is a flat spout at the end of the shuttle that, according to how it is positioned, permits direct loading in four different fixed directions.

Nevertheless, the trimming of cargo is performed by 15 to 20 men with shovels.

Maximum air draft for the hatch coaming: 35 ft. (low water).

Maximum loading rate: 200 tonnes/hour.

The ore arrives by rail cars from the milling plant some 27 km. away and is stocked while no ship is berthed.

CRANES: No cranes available.
STEVEDORES: Regular employees of Benguet Co., working 24 hours a day.
MEDICAL: For emergency cases there is one hospital 10 km. from the port.
DENSITY: 1022 to 1025.
FRESH WATER: Not available at present.
GANGWAY/DECK WATCHMEN: Compulsory.
REPATRIATION: Through Agents via Manila.
AIRPORT: Ninoy Aquino International Airport (formerly "Manila International Airport").
HOLIDAYS: Only holiday is Good Friday when work ceases from 0700 hrs. – 0700 hrs. the following morning.
POLICE/AMBULANCE: From Masinloc City, 1 km. from the port.
DELAYS: Only delays caused by force majeure (typhoons or another vessel already berthed).
SHORE LEAVE: Shore passes are sufficient, there are no restrictions regarding time. For receiving visitors, Master should ask the Authorities for permission in advance. The best opportunity is during clearance formalities.
GENERAL:

(a) Agents, surveyors, workshops and ship chandlers come from Manila. It is therefore very important to make all arrangements well in advance, even the ETA to Pilot.
(b) Boat service: When at the anchorage, whether for bringing the crew ashore, spares or parts for repair, small boats with 2 stabilizers are commonly used in many places in Philippines. One of these boats is used for handling the first lines to the berth and when shifting ropes from one bit to another.
(c) Length of the pier: 207 ft. 7 in. (bridge and dolphin excluded).
(d) Distance from tunnel portal to pier end: 640 ft. 7 in.
(e) Dredging is in progress. After completion the guaranteed draft will be 34 ft. maximum. Before starting, it was 31 ft.
(f) Maximum permissible draft at LW is 34 ft.
(g) During the stay in port and at the anchorage, 2 Customs Officers live on board; a cabin and meals are required for them.

AUTHORITY: Philippines Port Authority (PPI).

SHIPMASTER'S REPORT: May 1989.

VESSEL:
LOA: 119.6 m.
Beam: 18.5 m.
D.W.T.: 9,262 tons
G.R.T.: 5,373 tons
N.R.T.: 3,082 tons
Loaded Draft: Forward: 7.4 m. Aft: 8.3 m.

CARGO: Chrome Ore.
DOCUMENTS: The following are required:
1 copy Last Port Clearance.
6 copies Crew List.
4 copies Crew's Personal Declaration.
4 copies Stores/Narcotics List.
2 copies Animal List.
2 copies Plant List.
2 copies Firearms Declaration.
2 copies Vaccination List.

Derat Certificate should be ready for inspection. If any crew changes then 2 copies of amended Crew List are required.
PILOTAGE: Compulsory for all foreign vessels. Pilotage is restricted to daylight hours, and in good weather only. There are 2 pilots for the port (one was on leave during our call). Pilot boat is a wooden fishing boat with 3 m. long spreaders on either side for boarding. There are many fishing boats in the vicinity and therefore it is difficult to distinguish the pilot boat from other boats. It is only when close by that you notice a small pilot flag on the boat. Pilot has a walkie-talkie with Channel 16 (it was malfunctioning during our call). Pilot boards 1.5 miles North West of Alupihing Point (Salvador Is.). Pilot was very experienced.
ANCHORAGES: Owing to numerous reefs, shallow waters and restricted manoeuvring space it is recommended that vessels remain underway in the offing at least 2 miles off the coast. There was a negligible drift in 4 hours whilst we were awaiting daybreak.
RESTRICTIONS: Port is entered during daylight hours and only in good weather. Buoys No. 1, 2, 3 and 4 are missing. Beacons (wooden piles) exist as marked on the chart (BA. Chart No. 3559). Leading beacons were white slatted top marks with front metal triangles. At present, they are very rusty and are very difficult to sight unless one is dangerously close. I gave the Pilot some white paint so they could be painted. All reefs are noticeable as discoloured water. Please refer to China Sea Pilot for further details. There is very little range of tide at Masinloc.
MAX. SIZE: According to Pilot 32 ft. draft is the maximum. Length of pier is 66 m. only. There is a new pier under construction which is due to be commissioned in July of this year.
HEALTH: Free Pratique is requested by the Agent at Manila. Doctor comes from Manila, remaining quarantine officials operate from Masinloc. Usual inspection is carried out upon arrival.
RADIO: No radio at Masinloc, all communications through Manila Agent.
VHF: No VHF communications available.
RADAR, TUGS: Not available.
BERTHING: Channel is surrounded by tree-covered mountains. Tying up procedure takes about an hour from the first line to the last line. There is only one berth, a T-head concrete pier, 66 m. long with a steel bridge extending at the S.E. end. A dolphin is used for breast lines forward and aft. Loader, red in colour, is stationary with maximum horizontal extension of 14.5 m. Trimming of cargo is done by hand by inexperienced labour. When shifting vessel fore and aft it is very important that vessel remains parallel to pier at all times as there is less water beyond the line of pier. Air draft was 12.2 m. Cargo from this port is chrome ore only. Ore is brought by railway wagons from mines to the storage area, where it is put on to a conveyor belt by earthmovers and finally loaded on to the vessel. Conveyor belt is about 200 m. long. We averaged a load rate of 140 tonnes/hr.

Draft surveyors work out quantities twice a day, along with the Chief Officer.

Shore load scale was found to have a difference of about 2% on the high side. During total loading operation of 70 hours, we had chute trouble for 6 hours and 3.5 hours was utilised in 3 shiftings.

We were port side to with starboard anchor 7 shackles in water.

Notice of Readiness is accepted after holds are passed for loading.
FRESH WATER, FUEL: Not available.
DENSITY: 1023, constant during our stay.
REPAIRS, DRY DOCKS: Not available.
CONSULS: None at Masinloc, only in Manila.
SURVEYORS: Can be arranged from Manila only. Sufficient notice should be given as it is a 5 hour drive.
CUSTOMS ALLOWANCES: 1 bottle of spirits and 200 cigarettes per person.
REPATRIATION: Possible via Manila.
TELEPHONES: Only possible from Subic City (an American Naval Base), which is 120 km. from the port (about 2 hours' drive). Even domestic calls are not possible from Masinloc.
SHORE LEAVE: Allowed. Shore passes are issued and must be carried at all times.
GENERAL: Watchmen (2) are recommended by the Agents, though I found the port safe in all respects. 2 Customs Officers stay on board at all times, accommodation and food is to be provided. No ship chandlers at Masinloc. No deck or engine stores available, same can be arranged through Manila Agent, but would be expensive owing to transportation costs. Some fresh provisions can be purchased at Olangapo City, 140 km. from port (20 km. from Subic City). Seafood was relatively cheap compared with other places. Masinloc is a small town with a few ordinary hotels, accommodation is always available. Main mode of transportation is bus.
AGENT: There are no agents at Masinloc. Agent comes from Manila and remains at Masinloc during vessel's stay and is available whenever required.

MATI, Mindanao: 06.56 N. 126.14 E. (See Plan)

SHIPMASTER'S REPORT: August 1990.

Also see "Davao".

DOCUMENTS: Entry formalities require 30 officials to clear vessel, and 6 copies of the following are required (these stapled together into small booklets to reduce confusion, with all officials taking papers simultaneously).
(a) Customs Inward Foreign Manifest.
(b) Ship's General Particulars and Information.
(c) List of Ports of Call.
(d) Crew List.
(e) Crew's Declaration Manifest.
(f) Ship's Bonded Stores List.
(g) Ship's Provisions List.
(h) Arms and Ammunition List – Nil.
(i) Animal List – Nil.
(j) Plants List – Nil.
(k) Mail List – Nil.
(l) Currency List – Nil.
(m) Passenger List – Nil.

Note: (h) to (m) can be included on one list to save paper.
APPROACHES: As it was the vessel's first visit, arranged arrival time to coincide with sunrise for approach into Pujada Bay. No navigational marks or aids seen at all.

Radar parallel index approach is possible, as land on either side steep to and good radar targets, as are Pujada and Uanivan Islands.

Pujada Bay is over 200 fathoms deep in places with plenty of space. Vessel entered Bay, and altered to leave a conspicuous white building (shown as "Mill" on chart, and is an old plywood mill, redundant) ahead.

Numerous small fishing pirogue dug-outs in Bay.

Actual loading berth is a dark, pyramid shed, with 3 oil tanks adjacent, which lie further to starboard.
PILOTAGE: Pilot comes from Davao, which is 4 hours away by bus, so plenty of advance warning to agent required. Vessel's Agent in Manila, so everything co-ordinated from there.

No VHF facilities to contact anyone locally.
ANCHORAGES: Anchoring not recommended without extensive local knowledge, as require to be close to shore, and there are underlying reefs off the town of Mati.

Vessel stopped, and waited for Pilot just inside the 100 fathom line, which is about 1.5 miles off the berth.
RESTRICTIONS: Do not shift too far ahead or astern when changing holds, as reef astern and shallow water ahead.
MAX. SIZE: 18,000 g.r.t. (about 180 m. LOA).
TUGS: None available locally. Tug available from Davao, but has to be ordered via Manila, and lots of paperwork required.
BERTHING: Pilot comes out in small yellow coloured boat, with top speed about 3 knots. This boat then serves as line handling boat for berthing, so vessel has to wait for it to return to berth before approaching.

Berth in daylight only and with no wind, any wind over 3 knots would be too dangerous. Use port anchor and berth port side to. Anchor will run to about 3.5 – 4 shackles, and great care should be taken, so as not to snatch bow and pull stern up onto reef.

Send spring first onto dolphin.

Best to let vessel pass final position, then bring back on lines once alongside, as reef also close astern (See "Plan").

STEVEDORES: All are copra mill employees and arranged by same through Agent. All pellets trimmed by hand.

CARGO: Coconut by-products; expeller pellets (by extraction method) and the oil (palm/coconut) from the process.

Bulk cargo as pellets and oil, both from same berth, by a conveyor belt running out from shore with a pipeline beneath, to a small elevator dolphin.

A smaller jetty alongside serves coastal vessels discharging the copra (coconut kernels), using a mobile crane into a lorry.

LOADING: A maximum airdraft to coaming of 39 ft. is required by mill, but vessel estimates 40 ft. 06 in. would have been possible (height of tide about 4 ft. at the time).

From dolphin loading tower, there is a fixed loading arm, the end spout of which can be manipulated by ship's crane to give some trimming.

Vessel has to shift under loading arm to load other holds, and would only permit loading up to No. 2 hold (vessel 180 m. LOA), as to load No. 1 would have put ship very close to reef astern. Similarly, to load No. 5 would have put vessel too close to shallow water ahead.

Loading rate of 90 t.p.h. – 100 t.p.h., as governed by pay-loader in shed feeding conveyor.

DENSITY: 1024.

FRESH WATER: Available by barge from Davao, but expensive. Coasters supplied by fire engine from mill.

FUEL: By barge from Davao.

FIRE PRECAUTIONS: No smoking on deck.

CONSULS: None locally.

REPAIRS: No facilities available.

SURVEYORS: None locally. Surveyor came from Manila to do On-Hire Survey and Draft Survey, and remained on board for surveys at other ports.

HATCHES: Operated by crew, and closed at first sight of rain, so cargo did not get wet.

WATCHMEN: Employment of local armed watchmen strongly advised as a deterrent. Ship's crew also used.

AIRPORT: Nearest airport at Davao.

SHORE LEAVE: No restrictions. Shore passes not required.

GENERAL: *Chart:* B.A. Chart No. 415.

Gangway: Access extremely difficult, as only loading tower dolphin connected to shore and insufficient space on this to use B.O.T. Gangway, etc. Crew had to climb up onto overhanging loading arm, or down pilot ladder onto some part of loading tower structure.

Stores: Very difficult to get through mill gate, and to get onto vessel equally difficult. Small amounts of fresh provisions possible via dug-out, but quality questionable.

SHIPMASTER'S REPORT: January 1991.

LOCATION: Approximate position of copra loading berth: Lat. 06° 56.0′ N., Long. 126° 14.2′ E., about 3 km. S.E. of the town of Mati.

DOCUMENTS:

Prepared by Agent:
- 12 copies Inward Foreign Manifest.
- 12 copies Outward Foreign Manifest.
- 12 copies Oath of Master.

Prepared by vessel:
- Last Port Clearance.
- 8 copies Crew List.
- 3 copies Stores List.
- 3 copies Personal Effects List.
- 3 copies Animals List (even if 'nil').
- 3 copies Arms and Ammunition List (even if 'nil').
- 3 copies Plants List (even if 'nil').
- 3 copies Narcotics List (even if 'nil').
- 3 copies Passengers List (even if 'nil').
- 3 copies Ports of Call List.
- 1 copy Ship's Particulars.

If Mati is the first Philippine port:
- 1 copy Health Declaration.
- 2 copies Vaccinations List (Cholera and Yellow Fever).

PILOTAGE: Compulsory and during daylight only.

The Pilot prefers daybreak for berthing and unberthing as there is normally no wind at that time.

The Pilot boards from a small orange coloured, open boat about 1.5 miles off shore. Vessels should wait for the Pilot at the 100 fathom line shown on B.A. Chart No. 415.

There is no VHF link with the pilot boat or shore. The Pilot comes from Davao (about 4 hours by bus) and must be ordered via agents.

ANCHORAGES: The Pilot advises that there are no safe anchorages for larger vessels.

RESTRICTIONS: Pilot advises maximum sailing draft is 14 m.

BERTHING: The berth consists of 3 concrete platforms in line with a distance of 60 m. between them. A fixed conveyor is installed on the central platform. Berthing is port side to.

There is a platform for the stern lines behind the first platform, about 60 m. to 80 m. away in a Northwesterly direction. In front of this platform is very shallow water which extends over the berth range. There is also a shallow water area in front of the whole berth, the Westerly end being marked by a cone buoy. This area is shown on B.A. Chart No. 415 with the symbol of underwater rock and stake. This area is wider than that shown on the chart. The distance between both shallow areas is 142 m., as advised by the Pilot, and the vessel has to berth/unberth at an angle of 30° to 40° to the platforms to avoid the shallow areas. The starboard anchor, with upto 4 shackles, will be used for berthing.

When unberthing the vessel goes astern dragging the anchor with one shackle until the bow is clear of the coned buoy. The vessel can then swing to starboard until Tataidaga Point is right ahead (about 222°). This heading should then be maintained until the vessel is 2.5 miles off Tataidaga Point when the vessel is then clear from the shallow water on the port side and can then proceed directly out to Pujada Bay.

MEDICAL: Facilities at Mati.

FRESH WATER: Available, but analysis should be carried out as the Agent advises that sometimes fresh water is mixed with sea water.

REPAIRS: Very small repairs possible at the factory workshop.

NASIPIT (Including Masao and Butuan), Mindanao: 09.06 N. 125.22 E. **(See Plan)**

See "General" before first port.

(Port Management Office of Nasipit) PMO-Nasipit presently covers the Baseport of Nasipit, PTO-Butuan and PTO-Masao.

PORT LIMITS: From Diwata Point up to the coastal limits at Bolo-Bolo Point, the territorial boundary between the Provinces of Agusan del Norte and Surigao del Norte.

DOCUMENTS:
- 3 Crew Lists.
- 3 Passenger Lists.
- 2 Stores Lists.
- 2 Stowage Plans.
- 2 Personal Effect Lists.
- 3 Inward and Outward Cargo Manifests.
- 1 Ship's Information sheet.
- 1 Statistical Supplement.
- 1 Cargo Bill of Lading, if any.

PILOTAGE: Compulsory.

ETA: Ocean going vessels – 24 hours' notice.
Coastal vessels – 12 hours' notice.

Pilot Boat Description: Upper structure white; lower structure black with a letter "P" at the bow. During night time, when a vessel requires a Pilot, particular light used is permanent red at the uppermost portion of the boat and a flashing white light.

Location of Pilot Station: Masao Harbour Pilot Association, 2nd Floor, St.Joseph Drugstore Building, Corner Lopez Jaena and Concepcion Streets, 8600 Butuan City.

For the Port of Masao, situated at Barangay Lumbocan, Butuan City, there is no alternative area in the event of bad weather as it is an open sea. However, at the Baseport of Nasipit, vessels can seek shelter during bad weather because of its natural cove which protects the vessels against strong winds and heavy seas.

Pilot Boarding Station:

Nasipit – One nautical mile N.E. of Nasipit Lumber Company Lighthouse, port side from seaward of the Nasipit Cove entrance.

Masao and Butuan – Two nautical miles North of the Pilot Station Tower at Barrio Lumbocan, Butuan City.

ANCHORAGES: Depth of safe anchorage: 20 m. – 75 m. deep along the shore line.

Masao Anchorage Berth:

Anchorage No. 1: Lat. 9° 01′ 05″ N., Long. 125° 29′ 50″ E.
Anchorage No. 2: Lat. 9° 01′ 00″ N., Long. 125° 29′ 40″ E.
Anchorage No. 3: Lat. 9° 00′ 55″ N., Long. 125° 29′ 30″ E.
Anchorage No. 4: Lat. 9° 00′ 45″ N., Long. 125° 29′ 20″ E.
Anchorage No. 5: Lat. 9° 00′ 35″ N., Long. 125° 29′ 00″ E.
Anchorage No. 6: Lat. 9° 01′ 15″ N., Long. 125° 29′ 45″ E.
Anchorage No. 7: Lat. 9° 01′ 10″ N., Long. 125° 29′ 35″ E.
Anchorage No. 8: Lat. 9° 01′ 04″ N., Long. 125° 29′ 25″ E.
Anchorage No. 9: Lat. 9° 00′ 55″ N., Long. 125° 29′ 05″ E.
Anchorage No. 10: Lat. 9° 00′ 50″ N., Long. 125° 28′ 55″ E.

RESTRICTIONS: Port of Butuan: Entrance and exit of vessels are controlled by the tide, particularly at the mouth of the Agusan River which is 3.5 m. deep at H.W.

MAX. SIZE: Masao: No limit.

Nasipit: Maximum possible length of vessel is 550 ft., breadth 65 ft., maximum mean draft is 25 ft.

Butuan: Maximum draft is 3.5 m.

HEALTH: For all 3 ports: Cable Quarantine Officer with name and nationality of ship, ports of call during voyage, number of crew and passengers, condition of health of all on board and, if any, type of sickness.

RADIO: (DWP 934 NAGOV) 8,776.4 kHz.

VHF: 140.88 MHz.

TUGS: Ports of Butuan, Masao and Nasipit: Tug assistance available from private companies upon request, on a rental basis (only small tugs available).

BERTHING:

Port of Butuan:

Butuan Government Wharf.

Area:	12,000 sq.m.
Berth length:	138.0 m.
Cargo Shed (semi-concrete):	540 sq.m.
Passenger Terminal:	75 sq.m.
Administration Building:	1 unit.
Amenity Building:	1 unit.
Load Capacity:	500 lbs./sq.ft.
Present draft alongside berth at MLLW:	5.0 m.
Distance from mouth of the Agusan River:	7 nautical miles.
Depth at the mouth of Agusan River at low tide:	8 ft.
1991 Cargo Throughput:	141,945 tonnes.

Port of Masao:

Government Wharf at Lumbocan, Butuan City.

Causeway:	280 m. (paved).
Berth Length:	32 m.
Depth alongside:	7 m.
Distance by road from Butuan:	14 km.
Load Capacity:	100 lbs./sq.ft.
1991 Cargo Throughput:	142,350 tonnes.

Port of Nasipit:

Berth Length:	299.35 m.
Length of Navigable Water:	800 m.
Width of Navigable Water:	200 m.
Width of the Entrance to the Nasipit port:	150 m.
Load Capacity – Container Berths:	830 lbs./sq.ft. (40 KPa).
Load Capacity – Ro-Ro Berth:	625 lbs./sq.ft. (30 KPa).
Open Storage Areas (paved):	9,600 sq.m.
Cargo Shed (paved):	1 unit.
Passenger Terminal Building:	1 unit.
No. of vessel to be accommodated at a given time:	4 domestic vessels. 2 foreign vessels.
Present draft alongside berth:	8.0 m.
1991 Cargo Throughput:	619,878 tonnes.
Distance by road to Butuan City (paved roads network):	27 km.
Cargo expected by 1992:	994,591 tonnes.

CRANES: None owned by the Authority nor by any cargo handling operators, but can be hired from the Department of Public Works and Highway or from private contractors companies.

BULK CARGO FACILITIES: Nasipit Port: Bulk oil / fuel pipeline owned by the Philippine National Oil Company (PNOC).

Nasipit Depot: Oil / fuel pipeline at Cabinet, Cabadbaran and Agusan del Norte owned by Pilipinas Shell Corporation.

SPECIALISED CARGO HANDLING FACILITIES: Ro-Ro ramp is available at Nasipit Port. A berth is allocated to handle oil products at the Southern portion of the wharf.

BRIDGES: None.

STEVEDORES: Masao and Butuan: Concord Arrastre and Stevedoring Services Corporation (CASCOR).

Nasipit: Nasipit Integrated Arrastre & Stevedoring Services, Inc. (NIASSI).

MEDICAL: No advance notice needed except in case of serious illness or injury. Hospital facilities available:

1. Government hospitals:
   (a) Butuan General Hospital
   (b) Butuan Maternity and Children's Hospital
   (c) City General Hospital and Medical Centre.
2. Private hospitals:
   (a) Butuan Doctors Hospital
   (b) M.J.Santos Hospital.

TANKERS: See "Bulk Cargo Facilities".

DENSITY: Average density of water in the port and surrounding anchorage area is 1010 – 1012.

FRESH WATER: Masao: The supply of fresh water can only be made by water tanker trucks.

Butuan: Licensed water supply operators.

Nasipit: Nasipit Water District, through water pipes.

FUEL: Oil delivered by tank trucks at all berths.

REPAIRS: Only minor repairs can be undertaken whilst in port.

GANGWAY/DECK WATCHMEN: Service of watchmen is optional.

HATCHES: Opening or closing of hatches is normally carried out by stevedores.

CUSTOMS ALLOWANCES: Tobacco: Each man 1 pack per day. Wine and Spirit: Each man 1 bottle per week.

REPATRIATION: Crew changes and repatriation possible.

AIRPORT: Bancasi Airport, approximately 7 km. from Butuan City, caters for domestic daily flights to and from Cebu and Manila.

CARGO GEAR: Gear provided by shipping, arrastre and stevedore operators.

HOLIDAYS: New Year's Day (January 1st); Bataan Day (April 9th); Holy Thursday, Good Friday and Easter Sunday; Labour Day (May 1st); Independence Day (June 12th); National Heroes Day (November 30th); Christmas Day (December 25th); Rizal Day (December 30th).

Cargo-handling operations, however, can still be arranged on these days.

BANKS: Philippine National Bank, Montilla Blvd., Butuan City. Tel: 23-12; 23-11.

Bank of the Philippine Islands, Montilla Blvd., Butuan City. Tel: 31-12; 31-13.

Family Bank, Juan Luna Street, Butuan City. Tel: 33-97; 33-98.

Rural Bank of Butuan City, Juan Luna Street, Butuan City. Tel: 30-42.

PCI Bank, Corner of Juan Luna and Zamora Streets, Butuan City. Tel: 20-13; 21-42.

Development Bank of the Philippines, Zamora Street, Butuan City. Tel: 35-21; 35-20; 35-22; 39-22.

Metro Bank, Corner of P.Burgos and San Francisco Streets, Butuan City. Tel: 33-44.

City Trust, Zamora Street, Butuan City. Tel: 33-82.

Allied Bank, Corner of P.Burgos Street and Montilla Blvd., Butuan City.Tel: 31-95.

POLICE/AMBULANCE/FIRE: Police: 115; Fire: 114; Ambulance: 24-14.

TELEPHONES: Not possible to place telephones on board.

SERVICES: Shipchandling Services, Mooring/Unmooring Services, Laundry, Water-Taxi, Cargo-Checking, Carpentry, Forwarding, Bunkering. All ancillary services operators are duly licensed by PPA.

STORING:

1. Trucks can proceed alongside the berth.
2. Forklifts can be used on the jetty to handle stores.
3. Local riggers can be employed to assist storing.

SHIP SUPPLY SERVICE: None.

SHORE LEAVE: After entry formalities are completed, crew members are allowed to go ashore without special permission.

IDENTIFICATION CARDS: Seaman's Book is sufficient.

WASTE OIL DISPOSAL: Not available.

GARBAGE DISPOSAL: No garbage collection service available. Garbage disposal regulated under Section 39(b) of PPA Administrative Order No. 13-77 known as the General Port Regulations of the Philippine Ports Authority, stating "No dirt, ash or rubbish of any description may be landed on any wharf or pier except in the receptacles provided for the purpose".

SEAMAN'S CLUBS: None.

CURRENCY: Philippines Pesos (P).

REGULATIONS: General Port Regulations promulgated and implemented by PPA.

DELAYS: Berth not available; Weather constraints, Tidal constraints, Lack of Equipment, Breakdown of Equipment, Pilot not available, Tug not available, cargoes for loading not ready.

DEVELOPMENTS: Butuan: Concrete paving of the back-up area at the Southern end portion of the wharf.

Masao: Extension of wharf to 205.30 m.; Reclamation (3 ha.) for back-up area; Office Building.

AUTHORITY: The Philippine Ports Authority, Port Management Unit of Nasipit, Butuan City, Agusan del Norte. *Tel:* 31-98, 34-29. *Contact:* Ferdinand C. Piencenaves, Port Manager. Oscar M. Beluan, Manager, Port Services Division.

POLLOC, Mindanao: 07.21 N. 124.13 E. (See Plan)

LOCATION: The Port of Polloc lies on the Southern coast of Polloc Harbour which, itself, is located N.E. of Illana Bay at about 14 km. in straight line North of Cotabato City. It is situated at Lat. 07° 21′ 12″ N., Long. 124° 13′ 27″ E.

PILOTAGE: Pilotage available 24 hours.

ANCHORAGE: Polloc Anchorage is contained between Lalayang Point and Polloc Island and provides a clear manoeuvring area some 3 km. in diameter with deep water along the marginal shallows which front the low cliffs of its Southern shore.

The anchorage along the Southern margin of Polloc Harbour also provides the port shelter and water depth as well as the best land and water frontage for the development of port facilities and of port-orientated industries.

Bongo Island, 6 miles long, is situated in the North Eastern part of the bay and affords some protection from the Westward to the Mindanao River Delta Area and Polloc Harbour.

RESTRICTIONS: None.

HEALTH: Quarantine anchorage at Lat. 7° 22′ N., Long. 124° 14′ E.

BERTHING: Main marginal wharf – 400 m. long.

Depth alongside – 10.5 m.
Lighter dock – 67 m. long on both sides.
2 government transit sheds – 11,960 sq.m.
Total port area – 102,350 sq.m.
Total area for open storage – 42,940 sq.m.
Total area reserved for private warehouses – 75,645 sq.m.

CRANES: 1×54 ton, 1×36 ton and 1×60 ton.

FRESH WATER: Available by road tanker.

FUEL: Diesel oil available by road tanker.

GARBAGE DISPOSAL: Service not available.

WASTE OIL DISPOSAL: Service not available.

SEAMAN'S CLUBS: None.

CURRENCY: Peso.

GENERAL:

Terminal Ports: Cotabato City and Kalamansig City. The latter is situated at Sultan Kudarat with coordinates of Lat. 06° 33′ N., Long. 124° 03′E., N.E. of Moro Gulf, South Coast of Mindanao Island which also caters to large ships loading logs at anchorage.

Tides: The tidal cycle is semi-diurnal and synodic form. The characteristics are as follows:

Highest Astronomical Tide = EL +2.3 m.
Mean High Water Springs = EL +1.9 m.
Mean High Water Neaps = EL +1.5 m.
Mean Low Water Neaps = EL +0.6 m.
Mean Low Water Springs = EL +0.2 m.
Lowest Astronomical Tide = EL −0.3 m.

Storm Occurrences: Mindanao is below the main typhoon belt and only minimal effects have ever been observed at Cotabato as a result of occasional typhoons over the island. This is thought to be due to the consistent nature of typhoons in this region which travel S.E. to N.W.

In the sheltered area of Polloc Harbour at the Easterly side of the Port of Polloc, the max. fetch of 8 km. is to the N.W. and only with winds of 40 knot during a storm will waves of 1.2 m. (4 ft.) be experienced. With an "onshore" typical wind of 15 knots from N.W., wave heights will be about 0.3 m. (1 ft.).

Port Site Description: West of the Haines Point which marks the Western Sarmiento boundary is the site of the port. A frontage of some 2 km. can ultimately be reclaimed from the shallows along this shoreline to provide land backing to the wharves of the port.

The Eastern half of the Southern shoreline is occupied by the extensive plywood factory of Sarmiento Industries (leased to Eversun Development Ltd., part of Vicwood Group of Companies) which has developed its industrial complex on land reclaimed over the sand foreshore with filling from the high land behind.

Main Sub-ports: The Philippine Ports Authority took over in October, 1977, the Cotabato City Wharf and Parang Pier. The former is a port with a depth restriction on the bar resulting in ships anchoring in the open sea of the North Mindanao River mouth and there being served by lighters, ferry boats and barges; while the latter caters to large ships which load logs and plywoods at anchor. It contains a deep water pier at the East shore of the bay and also a submerged marine pipeline for pumping ashore petroleum products into a Tank Farm at Parang.

The Cotabato City Wharf also services inter-island watercraft such as passenger/cargo motor launches and other small sea transports.

Access Roads: The Port of Polloc is accessible by land to Cotabato City through a 13 km. modern concrete pavement which winds up at Simuay Junction at the Cotabato-Davao National Highway extending some 9 km. more to reach the commercial centre. From this point, the port is accessible by all forms of land transport facilities to any place in the Cotabato area.

The port is also expected to serve the Southern-most principalities of the Province of Lanao Sur with the improvement of the Ganassi Road connecting the province with main artery of the Cotabato area.

SHIPMASTER'S REPORT: July 1984 (Updated 1990).

Port Limits: Entrance to bay.

Documents: Usual for Philippine Ports.

Pilotage: Pilot available. Port used by coastal cargo and passenger vessels, and foreign vessels.

Anchorage: 5 cables off the berth.

Health: Pratique granted on completion of formalities, normal inspection.

Radio: Manila.

VHF: Not available.

Radar: None.

Tugs: None. One man with small private tug produced certificate that he had piloted vessel alongside even though he had only guided through bay in front of vessel and neither towed vessel or handled lines. He did not speak English.

Berthing: 400 m. of well fendered wharf. No shore cranes, ship's gear only – plywood in crates, sawn lumber and bulk copra are the main export cargoes.

Cranes: None.

Bulk Cargo Facilities: None.

Specialised Cargo Handling Facilities: Copra buckets.

Bridges: None.

Stevedores: Good – but have a bad habit of smoking down holds, which is prohibited. Used small forklift trucks down hold to stack cargo pallets of plywood – very competently handled.

Medical: Doctor and dentist available at Cotabato City.

Tankers: No facilities.

Density: 1025.

Consuls: None.

Repairs: No facilities available.

Dry Docks: None.

Surveyors: None.

Gangway/Deck Watchmen: Customs and Immigration officials on board throughout vessel's stay.

Hatches: Opening and closing by crew.

Customs Allowances: Normal allowance. Bond sealed.

Cargo Gear: Ship's gear only.

Repatriation: Possible – but not advisable.

Airport: South of Cotabato City (Awang, Dinaig, Maguindanao) with daily connections to Manila, Cebu, Iligan and Davao.

Time: GMT plus 8 hours.

Holidays: Usual Philippine holidays.

Police/Ambulance/Fire: No telephones.

Telephones: None.

Services: None.

Shore Leave: Allowed. Shore passes arranged with Immigration Authorities. Going ashore advisable in daylight only – at night it is dangerous.

Identification Cards: Shore passes issued but identity card advisable.

Delays: Subject to berth availability.

AUTHORITY: Philippine Ports Authority, Port Management Unit of Polloc, P.O.Box 163, Cotabato City, Parang, Maguindanao, Philippines. *Cables:* PPA-PMO, Polloc. *Contact:* Ali L. Arumpac, Port Manager.

PUERTO PRINCESA, Palawan: 09.44 N. 118.43 E. (See Plan)

See "General" before first port.

Puerto Princesa, a large irregular inlet between Bancao-Bancao Point and Panagtaran Point, is 2 miles wide at the entrance, extending about 6 miles in a N.W. direction. Coral reefs about 0.5 miles wide making out on the entrance points narrow down the navigable width of the channel to about 1 mile, depths of 34 fathoms (62.2 m.), shoaling to 9 fathoms (16.5 m.) in the vicinity of the pier. The major portion of the Northwestern and Western part of the bay is mostly shoal. The shoreline is generally fringed with mangroves and fronted by mud flats. The surrounding land consists of extensive wooded plain, backed by a high mountain chain. Several small rivers navigable by launches and small boats empty into the bay. The inner part of the harbour is a good typhoon anchorage.

PORT LIMITS: About 1 mile South of the pier. This is the entrance to the inner harbour of Puerto Princesa.

PILOTAGE: Pilots can be contacted by radio message through the shipping Agent not less than 24 hours before ETA indicating among others the following information:

1. Name of vessel.
2. Name of shipping lines.
3. Country vessel is registered.
4. Type of vessel.
5. Overall length.
6. Draft.
7. G.r.t.
8. Volume of cargo to be discharged and storage required.
9. Nature of cargo.
10. Passengers disembarking, transit and embarking if any.

Pilot boat is a small pump-boat painted in white and named "Pilot". Sound signals requesting a Pilot are 2 long blasts and 1 short blast. The location of vessel at anchorage while awaiting a Pilot is a safe area, even during bad weather. When Pilot is not at usual station, vessel may proceed to berth after securing clearance from authorities to proceed to berth and after one hour waiting time at anchorage.

When Pilot is aboard the pilot boat, an international flag "P" will be seen flying at her foremast.

ANCHORAGE: Vessels not going alongside the T-shaped pier may anchor Southwestward of Princesa Point in 12 fathoms to 16 fathoms (21.9 to 29.2 m.), mud bottom. A better protected anchorage may be had in 9 fathoms to 10 fathoms (16.5 to 18.3 m.) about 400 yards Northward of the end of the pier.

RESTRICTIONS: At night, in approaching Puerto Princesa from offshore, the lights in the vicinity of Canigaran, Northward of the entrance, may cause some confusion to strangers as they are visible long before the Puerto Princesa Light can be seen. The port light which is fixed red, visible 7 miles over an area of 041°, only becomes visible close in and just off the mouth of the harbour. At daytime a course Southward of the range Thumb Peak-Tidepole Point clears the reef on the North side of the entrance. Mount Beaufort on range with Tidepole Point clears the reef on the South side.

MAX. SIZE: Vessels not going to dock alongside the pier may anchor in 9 fathoms to 10 fathoms or 12 fathoms to 16 fathoms. For vessels going to dock alongside the T-shaped pier, permissible draft is 27 ft. (8.2 m.)

HEALTH: Quarantine doctors are assigned in the Port to board the vessel and check any suspected disease or fever.

RADIO: Vessels at sea usually send their radio messages through the Association of International Shipping Lines in Manila to their Agents.

VHF: Not available.

RADAR: No radar station in the port.

TUGS: Tug service can be obtained by communicating with the local shipping Agent.

BERTHING: The City has a T-shaped concrete pier with a berthing face of 192.43 m. Depths 27 ft. (8.2 m.) alongside and 31 ft. (9.4 m.) about 6 yards off the face. The Northern and Southern ends of the "T" have depths of 11 ft. (3.3 m.) and 15 ft. (4.5 m.) respectively. The inshore arms of the "T" have depths of 11 ft. (3.3 m.) at each berth. Sailboats and other shallow vessels berth on each side of the concrete approach. Typhoon signals are exhibited from a pole on the rooftop of the PPA Building.

Open storage and 2 warehouses (12 m. × 56 m. each) available.

CRANES: 20 ton crane available. Forklifts of 10 tons – 16 tons available.

STEVEDORES: Advise Agent on volume of cargo to be discharged, storage required and nature of cargo. PCBSI (Prudential Customs Brokerage Services Inc.) is the authorised cargo handling operator.

TANKERS: May drop anchor at anchorage area.

FRESH WATER: Available, rate 10 t.p.h. – 15 t.p.h. Cost P.45.00/cu.m.

FUEL: Diesel oil, gasoline and kerosene may be purchased.

FIRE PRECAUTIONS: No smoking is allowed when vessels are refuelling within a radius of 100 m.

An improvised 3 in. hydrant is installed at the pier. The lines used to supply fresh water could be used in case of a fire.

CONSULS: Consuls from foreign countries in Manila.

REPAIRS: No repair facilities.

DRY DOCKS: No facilities available.

SURVEYORS: Lloyd's and other classification societies in Manila, none locally.

GANGWAY/DECK WATCHMAN: Watchman can be hired from local Security Agencies of the Port.

HATCHES: Opening/closing of hatches is usually done by stevedores.

CUSTOMS ALLOWANCES: Quantity permitted for each crew member to be held out of bond are the following: Cigarettes – 5 packs. Liquor – 1 bottle.

CARGO GEAR: Loading/unloading is effected by ship's gear.

A 20 ton crane and 2 forklifts (10 tons and 16 tons) are available for renting.

REPATRIATION: No facilities.

AIRPORT: The airport is about 2 miles from the pier with a schedule of 2 flights from Manila and back daily.

HOLIDAYS: The following are the Philippine National Holidays: January 1st – (New Year's day), Maundy Thursday, Good Friday, April 9th – (Bataan Day), May 1st – (Labour Day), June 12th – (Independence Day), July 4th – (Fil-Am Friendship Day), November 1st – (All Saint's Day), November 30th – (National Heroes Day), December 25th – (Christmas Day). Cargo handling operations may be arranged on these days at overtime rates.

POLICE/AMBULANCE/FIRE: Puerto Princesa City has all these facilities. There is a provincial hospital in Puerto Princesa. Private practising physicians and drugstores are available.

TELEPHONES: Pilipino Telephone (Piltel) services the City throughout 24 hours with a long distance call between the Port and Manila anytime of the day. Telephone connections for vessels alongside the quay can be arranged with the Telephone Company.

SERVICES: Mooring/unmooring, laundry, supply of ice.

BANKS: Philippine National Bank. Tel: 2341, 2321, 2521.
Land Bank of the Philippines. Tel: 2820, 2823.
Bank of the Philippine Islands. Tel: 2083.
Far East Bank and Trust Co. Tel: 2875, 2786.
Metrobank. Tel: 2238, 2779.
Rizal Commercial Banking Corp.
Philippine Commercial and Industrial Bank. Tel: 2491, 2679, 2713.
Development Bank of the Philippines. Tel: 2538, 2358.
Palawan Development Bank. Tel: 2489, 2589.
UCPB Rural Bank. Tel: 2066.
UCPB Savings Bank. Tel: 2811.
Rural Bank of Coron. Tel: 2608.

STORING: See "Prelims".
(1) Truck Only.
(2) N.A.
(3) Trucks may proceed alongside.
(4) Yes.
(5) Regulations not applicable.
(6) Riggers available.

SHORE LEAVE: Crew members are allowed ashore provided they always carry with them their Seaman's Book or Passport.

IDENTIFICATION CARDS: Seaman's Book is sufficient for crews to identify them when ashore.

GARBAGE DISPOSAL: Garbage collection is performed by the City Engineering Office. Garbage at the port is collected every day.

WASTE OIL DISPOSAL: Not available.

SEAMAN'S CLUBS: None.

CURRENCY: Philippines Pesos (P). U.S.$ 1.00 = P27.64 (23.3.94).

DELAYS: Due to lack of some Port facilities, delay in berthing, loading, discharging and bunkering is sometimes experienced.

DEVELOPMENTS: A proposed 150 m. R.C. wharf extension on the Northern end and reclamation at the Northern foot of the approach, construction of transit sheds, fence, office, road networks, etc.

AUTHORITY: Philippine Ports Authority, PMO Puerto Princesa, Port Area, Puerto Princesa City 5300, Palawan, Philippines. *Tel:* 2351, 2716. *FAX:* 2716. *Contact:* Buenaventura O. Robles, Port Manager.

PULUPANDAN, Negros: 10.30 N. 122.46 E. (See Plan)

See "General" before first port.

PORT LIMITS: The Pulupandan Pilotage District embraces the waters from the approach of the North and South Channel to Pulupandan Government Wharf including Philippine Bulk Corporation Wharf and also Banago Wharf and approaches. (Please take note that this definition of port limits is for the coverage of Pulupandan Pilotage District).

The seaward boundaries of the port within which a vessel is considered to be an *arrived ship* is bounded from the South Buoy at Lat. 10° 27′ N., Long. 122° 46′ E. and the North Buoy Lat. 10° 33′ N., Long. 122° 46′ E.

The "Notice of Readiness" is presented after quarantine and port formalities are completed after which acceptance laytime commences. Any deviation from this is subject to charter-party terms.

DOCUMENTS: The Master of the vessel should prepare the following documents in order to ensure a speedy clearance:
Clearance of a Vessel to a Foreign Port.
Oath on Entering Vessel to a Foreign Port.
Master's Oath.
Crew Lists.
Passengers Manifests (Disembarking and Embarking).
Cargo Manifests (Inward and Outward).
Advance Notice for ETA (Telegram).
Application for Berth.
Vessel's Information Sheet.
Identification Permit to PHILSUCOM (in case of exporting molasses and sugar).
Authority to Load (Telegram).
Guarantee Payment for Wharfage.
Charter Contract (Agreement of shipper and shipping company as to the activity of operations).

PILOTAGE: With the vessel's ETA, the Pilot can only presume that the incoming vessel is entering the port because most vessels usually wait beyond the harbour limits approximately 7 miles to 11 miles from the port. This is due to the restriction in the P.C. & G.S. Chart 4416 which is marked by red lines indicating "Anchorage Prohibited".

The area of "Anchorage Prohibited" is enclosed by the square red line bounded by Lat. 10° 30′ N. to the North side and Lat. 10° 23′ N. on the South side and Long. 122° 40′ E. to the West side and Long. 122° 50′ E. to the East side.

If a vessel anchors 10 miles from the pilot boat station, only the silhouette of the vessel can be seen so there is no guarantee that it is really the expected vessel. In this connection, the Agent makes assurances to the Pilot that it is the vessel expected in order for the Pilot to meet the vessel.

The telegraphic address is "Pulupandan Pilots", Pulupandan, Negros Occidental, Philippines. The required advance notice of ETA must be 48 hours before arrival. A follow-up notice of ETA must be sent 24 hours before arrival and if necessary an amendment of ETA if the vessel is further delayed. VHF is not available in the port of Pulupandan.

The pilot boat is 45 ft. in length with a wooden hull and superstructure painted white. The name "Pilot No. 3" painted in black on a white background is located at the upper portion port and starboard side.

At night time, a white light over the red light can be seen aside from the regular side lights. Sound signals requiring a Pilot are 2 long and 1 short blast on whistle and/or a display of pilot flag "H" during daytime.

ANCHORAGES: Though the Pilot boarding point is within the enclosed area of "Prohibited Anchorage", the vessel can drop anchor at this point and wait for the Pilot, depth 9 fathoms. Another anchorage area recommended for awaiting a Pilot is at Lat. 10° 33′ N., Long. 122° 46′ E. This point has a depth of 39 ft. Two miles North or West of this point is a good anchorage area, the depth ranging from 6 to 7 fathoms with a good holding ground.

The pilot boat is always stationed at the South end of the government pier South of Pandan Pt., for the look-out of incoming vessels. As soon as the expected vessel is sighted, the Pilot proceeds to the pilot boarding point Lat. 10° 27′ N., Long. 122° 46′ E. about 5 miles from the station. If the vessel cannot proceed to the boarding point, the Pilot will meet her beyond this point.

The specific requirement in boarding is a strong and well balanced Jacob's ladder to be placed on the leeward side of the vessel. A manrope is a necessity.

RESTRICTIONS: Entry to this port has no restrictions except in the case of bad weather when the pilot boat cannot proceed to meet the vessel. Since the loading point of a foreign vessel is mostly at Philippine Bulk Corporation Wharf, the docking and/or undocking is scheduled according to tide and current.

MAX. SIZE: The max. permissible length of a vessel handled at this port area particularly docking at PBC Wharf is 186 m. to 200 m. The controlling draft forward is 26 ft. and 30 ft. aft and after dredging a controlling draft of probably 30 ft. Vessels of this length are usually docked from slack to flooding and undocked from slack to ebbing.

HEALTH: Pratique procedure is a requirement for vessels calling at the port. The shipping Agent arranges Pratique procedure with the Department of Health, Department of Animal Industry and Department of Plant Industry. If there is a disease on board, the doctor of the Department of Health and the Plant and Animal Quarantine Officers will take the necessary action in curing the disease and preventing the spread of an epidemic.

RADIO: There is no radio facility available in this port.

VHF: VHF radio facility is not available at this port, hence, there is no communication with vessels approaching the port and also when manoeuvring within the port area.

RADAR: Radar facility is not available.

TUGS: There is no tugboat available at this port that can be readily used in case necessity demands. The Pilot usually requests the Agent and/or Master to hire a tugboat for docking and/or undocking. In most cases, tugs cannot be taken from Iloilo or Cebu. If ever, tugs can be hired from Cebu, the vessel having to wait for 3 days to 5 days.

In this regard, the Pilot will dock the vessel without tug assistance as requested by the Agent and/or Master in order not to delay the vessel. The Pilot encounters difficulties and risks in this situation but the Agent gives to the Pilot an additional bonus for his efforts.

BERTHING: The berth length of the Government Pier is 424 m., providing 241 m. as berthing space for secondary vessels and 183 m. for primary vessels. Secondary vessels usually handle molasses, sugar, lumber and fertilisers. Primary vessels handle as much as twenty-five commodities. Of these commodities, consumer goods, general cargo, metal and metal products, chemicals, live animals and empty bottles are the most common cargo handled.

CRANES: Cranes for cargo handling are not available.

BULK CARGO FACILITIES: The port area of Pulupandan includes the facilities and equipments of private piers of Philippine Bulk Corporation and Total Bulk Corporation.

The berth at PBC Wharf measures 189 ft. and the quay measures 442.09 ft. Conveyor gantry is the berth equipment used in handling molasses and sugar in bulk for exports. The max. height of the discharging-gear above HW level is 128.4 ft. at the discharging rate of 600 t.p.h. Max. loading depends on the draft of the vessel and max. draft is 22 ft. (salt water).

The quay of TBC measures 19.201 m. It has 1 tanker berth 40 ft. depth at MLLW. It has 5 mooring fender piles spaced at 13 m. with 2 mooring bollards 58 m. from both ends of fender piles. 25 ft. is the max. permitted draft.

Cargoes handled for exports through pipelines are molasses and alcohol. Load/discharge lines for molasses are 10 in. diameter, 8 in. diameter and 6 in. diameter while that of alcohol is 4 in. diameter. Max. loading/discharging rate for molasses is 350 m.t./h. and for alcohol is 70 m.t./h.

SPECIALISED CARGO FACILITIES: LPG and containerised cargo are also handled at the Government Pier but the port does not have facilities specially equipped for handling containers or liquid chemicals.

BRIDGES: There are no bridges in the harbour passage of Pulupandan port.

STEVEDORES: The shipping Agent should arrange with the arrastre/stevedoring office regarding the arrastre/stevedoring service to be rendered to the vessel. This can be facilitated by giving to the arrastre/stevedoring operator the schedule of the vessel's ETA. After the Customs Formalities which vary from 3 hours to 2 days are completed, the Agent should give to the arrastre/stevedoring office Notice of Readiness to discharge/load. When the Notice of Readiness is accepted, the arrastre/stevedoring workers can discharge/load cargoes from/to the vessel. The monthly average cargo tonnage discharged per vessel is 300 tonnes and 95 tonnes for loaded cargo. Cargo loaded and discharged at the government pier is mostly cargo from domestic vessels.

MEDICAL: Hospitals are not available in the port area but government and private hospitals can be easily reached by public vehicle as they are located in Bacolod City, 30 km. from Pulupandan.

A vessel is not allowed to berth and its crew and passengers not allowed to go ashore should there be fever, epidemic or any suspected disease on board. Inspection undertaken by the doctor of the Department of Health and the quarantine officers of the Department of Animal Industry and the Department of Plant Industry, by whom medical attention is given when needed.

TANKERS: See "Bulk Facilities".

DENSITY: Average salinity of water in the port is 1022 – 1023.
FRESH WATER: Water can be supplied by Nepoteco. Water from deep wells is delivered through a trucking service. The rate of delivery is 1 truckload per hour which costs P15.00 per ton.
FUEL: Fuel can be made available to the Master of a foreign vessel by notifying the shipping Agent of its need for fuel. The shipping Agent applies to the Department of Energy in Manila for the supply of fuel to a foreign vessel. If the application is approved, arrangement is made by the shipping Agent with the supplier.
FIRE PRECAUTIONS: Fire extinguishers are required for every office and establishment in the vicinity of the port.
CONSULS: Consuls are not available in the port of Pulupandan.
REPAIRS: There is no dry dock facility in the port.
SURVEYORS: The nearest surveyor is the Del Pan Sugar Surveyors in Bacolod City.
GANGWAY/DECK WATCHMEN: The need for the service of watchmen depends upon the discretion of the Master of the vessel. The cost of their service is P4.50 per hour for the Port District of Iloilo of which the Sub-port of Pulupandan is included.
HATCHES: Opening and closing of hatches carried out by both the crew and the stevedores.
CUSTOMS ALLOWANCES: The quantity of tobacco, wine and spirits allowed for each crew member to be held out of Bond must not be more than for personal consumption.
CARGO GEAR: The loading/discharge of cargo to/from the vessel is effected by the ship's gear.
REPATRIATION: There is no repatriation office in the port.
AIRPORT: The Airport is located in Bacolod City which is 30 km. from Pulupandan. Average number of flights is from 6 to 7 per day to different cities in the Philippines (Manila, Cebu, Iloilo and Davao).

All international flights commence at Manila International Airport.
HOLIDAYS: The following are National Holidays which are also observed in Pulupandan.

January 1st (New Year's Day), Holy Thursday and Good Friday (these religious holidays have no specific dates but often fall in March or April), May 1st (Labour Day), June 12th (Independence Day), July 4th (Fil-American Friendship Day), September 21st (Declaration of Martial Law), November 30th (Bonifacio Day), December 25th (Christmas Day, religious holiday), December 30th (Risal Day).

Official holidays of legal nature are usually working days for the port users due to the nature of work, while holidays of religious nature are often non-working days even for the port users.
POLICE/AMBULANCE/FIRE: The following are the telephone numbers of fire and police departments and government hospital where an ambulance can be made available.
Fire Department: San Juan 066, 2-31-91; Rodriquez Ave. 065; Lopez Jaena 064.
Police Department: 067; 062; 069.
Ambulance: 068; 2-30-96.

These departments are located in Bacolod City. There is a police department in this town but it does not have telephone facilities.
TELEPHONES: There is no telephone facility at this port.
SERVICES: Special services for tank-cleaning equipment, facilities for discharge of tank-washings, compass adjusting, etc., are not available in this port.
SHORE LEAVE: Crew members are allowed to go ashore.
IDENTIFICATION CARDS: Identification cards are not required as shore passes.
REGULATIONS: Refer to PPA Port Rules and Regulations.
DELAYS: Delay in berthing is due to the draft limitation of the port and the position of the port in case of bad weather.
DEVELOPMENTS: Extensive repair, complete rehabilitation of Northern portion of the pier and demolition of rock filled jetty.
AUTHORITY: Philippine Ports Authority, Sub-port of Pulupandan, Port District of Iloilo. *Tel:* 7-69-45.

RIO TUBA, Palawan: 08.30 N. 117.26 E.

SHIPMASTER'S REPORT: February 1989 (Updated 1992).

VESSEL:

D.W.T.	23,800 tons
G.R.T.	13,250 tons
Duration of Stay	26 days.

DOCUMENTS: See "General" before first port.

Officials come from Puerto Princesa.

Immigration require a visaed Crew List.
APPROACHES: There are 2 leading lights (Red) on approximate bearing of 301° from Sea Buoy in approximate position, Lat. 08° 25.2′ N., Long. 117° 31.5′ E.
PILOTAGE: Compulsory. Pilot comes from Puerto Princesa. It takes about 10 hours by public bus, 6 hours by taxi and 1 hour by private airplane. For this reason, the Master should send ETA at least 24 hours before arrival and much better to adjust speed to time according to ETA cabled.
Pilot Boat: Pilot comes by canoe. Pilot uses ship's accommodation ladder to come on board, not pilot ladder.
VHF: Not available.
Pilot Station: Approximately 0.5 miles off from Sea Buoy.
ANCHORAGES: Vessels always anchor in approximate position, Lat. 08° 28′ N., Long. 117° 26′ E. (1.1 miles off from the first leading light). Depth is approximately 18 m.
MAX. SIZE: Largest vessel (1991): M.V. "Shinyu Maru", 41,513 d.w.t.
HEALTH: Free Pratique is granted after inspection of Vaccination Cards.
VHF: No facilities.
BERTHING: No facilities.
LOADING: By ship's cranes and grab buckets from barges.
Loading Rate: Depends on condition of ship's gears. If equipped with 3 cranes/grab buckets (6.5 cu.m.), it is possible to load approximately 5,300 tonnes per day.
Cargo: Beneficiated Nickel Silicate Ore in bulk.
Shipper: Rio Tuba Nickel Mining Corporation.
STEVEDORES: 24 hours per day. No holidays.
MEDICAL: Mining company hospital nearby.
FRESH WATER: Not available.
FUEL: Not available.
GANGWAY/DECK WATCHMEN: Not required as loading carried out at anchorage and stevedores are Mining Company Personnel. It is necessary to lock all cabins and stores for safety.
REPAIRS: No facilities available.
TIME: GMT plus 8 hours.
TELEPHONE: No international facilities on shore.
GENERAL: *Chart:* Not available.
Notary Public: Not available.
AGENCY: No Agents in Rio Tuba. The Agent comes from Manila. Agent and other officials always stay on board until loading completed.

Sub-Agent is PCBSI (Prudential Customs Brokerage Services Inc.), also the authorised cargo handling operator at this private port.
AUTHORITY: See "Puerto Princesa".

SAN FERNANDO, Luzon: 16.37 N. 120.18 E.

(See Plan)

See "General" before first port.
DOCUMENTS:

Vessel's Particulars.
Inward/Outward Foreign Manifest, 3 copies each for P.P.A.
Bill of lading (1 copy).
Crew List.
Passenger List.
Customs Documents.
Health Documents
Ship's Repairs List.
Ship's Certificates.

APPROACHES: Vessels enter the harbour through a channel marked by 2 buoys and 2 range lights 144.5° (fixed green and red light flashing every 3 seconds.).
PILOTAGE: Pilotage is compulsory. Vessel is met at mouth of harbour by pilot boat that flies a red flag with letter "P" in white. Pilot then brings the vessel to Quarantine Anchorage. Conventional signals are used to call Pilots.

Harbour Pilot Boarding Station: Lat. 16° 38.6′ N., Long. 120° 17.6′ W.
ANCHORAGE: Located at centre of the bay with 8 fathoms to 9 fathoms and good holding ground. In the event of rough weather or strong monsoon wind, vessels in the harbour are brought here for safety.
MAX. SIZE: Size of vessels that could be serviced is controlled by depth along quay:

Pier	*Depth Pier Head* (ft.)	*Depth Shore End* (ft.)	*Length* (ft.)	*Width* (ft.)
Philex Conveyor	32	–	656	10
PNOC Coal Conveyor	49	2	460	19
Government Pier (Old)	54	2	656	62
Pier I (New)	50	2	492	69
Pier II (New)	47	2	492	69
Timber Trestle	16	10	95	55
Government Ramp	11	10	187	144

Notes: 1. The old Government Pier is under renovation by Bacnotan Consolidated Industries Inc., and has been leased to BCII for 25 years.
2. Depths are based on MLLW.

HEALTH: Immediately after vessel anchors at Quarantine Anchorage, Quarantine Officers board and clear vessel. Imported grain will be fumigated on board vessel at anchorage.
Boarding Formalities: Members of party are Bureau of Customs Inspector and guards, Immigration and Philippine Coast Guards. Pratique is then issued to indicate vessel as "arrived" and subject to Charter Party terms, laytime will commence.
RADIO: No direct radio communication system with vessels at sea is available in the locality. Ship Masters report ETA to Agent in Manila who relay message to San Fernando by telex or commercial radiogram. The PMO – San Fernando may be reached by Long Distance telephone 41-25-57.
Arrival Advice: 48 hours before ETA, ship Agent files request for berth at PMO office indicating: ETA, draft, LOA and breadth, consignee or shipper, type of cargo and stowage, dangerous cargo (if any). Heavy lifts (if any), number of hatches to be worked, vessel is self sustaining or not.

24 hours before arrival or earlier, upon receipt of Master's advice by telegram, a berthing schedule is issued by the PMO. Copies are furnished to: Pilot, Consignee/Shippers, Arrastre/Stevedoring Contractor and Ship's Agent.
TUGS: 1 tug owned by Philex Mining Corporation, of 1,100 h.p., engine equipped with Kort Nozzle, is available for assisting, docking and undocking and launch service. Tug assistance during docking and undocking at the Philex Pier is compulsory while its use at the Government Piers No. 1 and No. 2 is at the option of the Harbour Pilot. A shipping company may bring in tugboat to assist its own vessel.

Tug lines are available at no extra cost. Conventional signals are used by Pilot and Master of tugboat.

Tug assistance rates: 0800 hrs. to 1700 hrs, regular time – others, overtime.
BERTHING: See "Max. Size".

STEVEDORES: Stevedores, longshoremen, checkers and watch-men for Government Piers No. 1 and 2 are provided by Northern Carriers Corporation.

Stevedores, checkers, etc. are non-union members. Any number of gangs can be ordered on 3 hours' notice. Stevedores work on 3 shifts:

1st Shift – 0000 hrs. to 0800 hrs.
2nd Shift – 0800 hrs. to 1600 hrs.
3rd Shift – 1600 hrs. to 2400 hrs.

Sundays, holidays and nights, stevedores are paid overtime rates. Christmas, New Year's Day, Easter Sunday, Good Friday and Maundy Thursday, stevedores will work on double pay.

TANKERS: The 3 oil terminals maintaining tank farms in the port zone are Petrophil, Caltex and Shell. They operate a common set of pipelines for white and black oil product passing under the old Government Pier. PMO policy is 1 tanker discharging at a time. A "boom" is available at the quay side.

MEDICAL: 3 modern hospitals staffed by trained physicians and specialists and 8 clinics. They are open 24 hours.

FRESH WATER: Fresh water available at old Government Pier via road tanker. Pumping rate: 8 t.p.h – Summertime. 12 t.p.h. – Rainy season.

FUEL: Bunker and others, POL product obtainable and supplied by lorries.

FIRE PRECAUTIONS: The oil terminals in the area maintain chemical fire fighting equipment, a "boom" to contain oil spillage and "light water". Voice of America and the Airport are within a 3 km. radius to the piers and maintain modern fire trucks.

No naked flames and no hot works on board while motor tankers alongside pier.

REPAIRS: Atlantic, Gulf and Pacific Co. of Manila at Batangas operates ship repair facilities.

SURVEYORS: Poro Point Shipping Services of San Fernando are available on request. Surveyors also available from Manilla, 270 km.

GANGWAY/DECK WATCHMEN: Available from Arrastre contractor upon request of Ship's Agent.

OPENING/CLOSING HATCHES: First open and last close normally carried out by crew. Stevedores operate the hatches when it rains.

CARGO GEAR: Arrastre operators maintain complete loading/discharging gear for bulk, general cargo and heavy lifts. Also available are:

11 units	–	Forklifts, 1 to 8 tons capacity.
2 units	–	Mobile cranes, 25 tons capacity.

AIRPORT: San Fernando Airport is 3 km. South of Pier. No regular flights.

HOLIDAYS: New Year's Day (January 1st); Holy Thursday, Good Friday; Labour Day (May 1st); Independence Day (June 12th); All Saints Day (November 1st); Bonifacio Day (November 30th); Christmas (December 25th); Rizal Day (December 30th).

POLICE/AMBULANCE/FIRE: Police, Tel: 41-25-77) Hospital, Tel: 41-28-44, 41-23-55, 41-26-16; Fire Department, Tel: 41-24-88; Philippines National Police, Tel: 41-25-28.

TELEPHONES: Vessels docked at the port zone may request telephone connection from PLDT at PPA-PMO San Fernando Office.

SHIP SUPPLY SERVICE: The following authorised ship supply service operators with addresses in this port are:

1. A. Neral Chandling and Laundry Services, 32 Mabini Street, San Fernando, La Union, c/o Mrs. A. Neral (privately owned).
2. La Union Chandling and Laundry Service, Catbangen, San Fernando, La Union, c/o Mrs. Caridad Tabisola (privately owned).
3. Bureau of Quarantine, PPA Compound, San Fernando, La Union, (launch services – government owned).
4. Philex Mining Corporation, Poro, San Fernando, La Union, (launch services – privately owned).
5. Poro Point Shipping Services, PPA Compound, Poro, San Fernando, La Union (Shipping agency, chandling, cargo checking and other related port services).

SHORE LEAVE: Crew members are allowed to go ashore without special permission.

IDENTIFICATION CARDS: For control of persons inside the port zone and for security, I.D. should be available when requested by guards.

GARBAGE DISPOSAL: The Municipal Goverment of San Fernando through the Municipal Administrator can be requested in writing to provide this service. The garbage should be put in plastic bags or covered cartons, but never in drums. Tel: 41-26-01.

WASTE OIL DISPOSAL: Not available.

SEAMAN'S CLUBS: There are several night clubs/bars/night spots operating in the vicinity of the port but no official Seaman's Club.

CURRENCY: Philippines Pesos (P).

GENERAL: *Discharge of Ballast:* No dirty ballast may be dumped into the territorial waters of the Republic of the Philippines.

Rat Guards: Rat guards shall be placed on all mooring lines to the pier.

Accessibility: Port is accessible by road and air transportation.

Provisions: Fresh vegetables can be supplied directly from the vegetable capital of the Philippines (Baguio City).

Rest, Recreation: Beach resorts with miles of clean beach just minutes away by car. First class hotels with swimming pools, air conditioned rooms. Baguio City, Summer Capital of the Philippines is 70 km. East and 5,500 ft. above sea level. A golf course at Camp John Hay, the R & R centre of U.S. Servicemen, can be used by civilians.

Other Ports: PMO San Fernando has administrative jurisdiction over Currimao Port, Ilocos Norte; Salomague, Cabugao, Ilocos Sur; Sulvec Port, Narvacan, Ilocos Sur; Masinloc Port, Zambales; Acoje Wharf, Sta. Cruz, Zambales, Port of Aparri, Aparri, Cagayan and Port of Irene, Sta. Ana, Cagayan.

AUTHORITY: Philippine Ports Authority, Port Management Office, San Fernando, La Union, Philippines. *Tel:* 41-25-57. *FAX:* 41-25-57. *Contact:* Adolfo LL. Amor Jr., Port Manager.

SANGI, Cebu Island: 10.23 N. 123.39 E. (See Plan)

MAX. SIZE: 50,000 d.w.t.

TUGS: 1 small tug (15.53 g.r.t.) owned and operated by ACMDC.

BERTHING:

Pier No.	*Length* (m.)	*Depth At LW* (m.)	*Remarks*
AFC No.1	98.0	5.0	Load/Unload General and Bulk. Max. load on wharf 90 tons.
ACMDC No.2	7.85	7.75	Loading conveyor for concentrates. Max. load on wharf 20 tons.
ACMDC No.3	80.0	16.0	Ship unloader and conveyor system. Max. Load on wharf 250 tons.

CRANES: ACMDC own a truck mounted crane with lifting capacity 20-25 tons. Crane available for renting.

SPECIALISED CARGO HANDLING FACILITIES: Liquid cargoes may be loaded/unloaded by pipeline at No.1 Pier and unloaded by pipeline at No. 3 Pier.

STEVEDORES: Advise before 0700 hrs. in order to commence operations at 0800 hrs. or 1500 hrs. same day.

MEDICAL: ACMDC operate a private hospital and priority given to employees. Hospitals and facilities available in Cebu City, distance 60 km.

DENSITY: 1023.

FRESH WATER: Available. Requests should be made to Agent or Supercargo.

FUEL: Available. Delivery by tank truck, which is to be ordered through Agent.

FIRE PRECAUTIONS: No smoking on piers or on vessels.

CONSULS: None.

REPAIRS: Most deck and engine repairs can be carried out.

DRY DOCKS: None.

SURVEYORS: Available from Cebu City.

GANGWAY/DECK WATCHMEN: Usually ship's gangway used. Deck watchmen are available through Agent.

HATCHES: Normally by crew, occasionally stevedores will open and close hatches.

CUSTOMS ALLOWANCES: See "Cebu".

CARGO GEAR: In the case of coal and concentrates discharge is effected by shore gear (ship unloader) and conveyor for loading. General cargo loaded and unloaded by ship's gear.

AIRPORT: No local airport.

HOLIDAYS: New Years Day, Holy Thursday, Good Friday, Labour Day, Valour Day, Independence Day, Fil-American Friendship Day, National Heroes Day, Bonifacio Day, Christmas Day.

POLICE/AMBULANCE/FIRE: Using AFC telephone.

Toledo Fire Department Tel: 70.

Police department do not have a telephone. They are located along the shore.

Government ambulance can be contacted personally as they are located along the shore.

TELEPHONES: International telephone service available 1.5 km. from pier, at TMSI.

EMERGENCY CO-ORDINATION CENTRE: Coast Guard station along the shore but no telephone.

SERVICES: Available through Agent.

BANKS: Philippine National Bank and Rural Bank in Toledo City.

SHORE LEAVE: No restrictions.

IDENTIFICATION: Required.

GARBAGE DISPOSAL: Not available.

WASTE OIL DISPOSAL: Not available.

SEAMAN'S CLUBS: None.

CURRENCY: Philippines Peso.

DELAYS: None

DEVELOPMENTS: None.

SHIPMASTER'S REPORT: September 1991.

Location: The port of Sangi is located in the Western part of the island of Cebu in position Lat. 10° 22.07′ N., Long. 123° 38.2′ E.

On British Admiralty Charts it is either not indicated or is indicated incorrectly. It is located on the chart in the position of the town of Toledo and in many Philippine documents it is shown as Sangi-Toledo.

Documents:

7 copies Crew List (IMO forms).
3 copies Crew List (Philippine forms).
5 copies Arms and Ammunition List.
7 copies Bonded Stores List.
7 copies Stores List.
5 copies Ports of Call List and Intended Ports of Call.
1 copy Philippine General Declaration.
1 copy Maritime Declaration of Health.
Clearance from last port.
Manifest and Bills of Lading.
7 copies No Narcotics, No Animals, No Money, No Parcels and No Passengers if there are none on board.

Clearance is effected on board the ship when secured alongside.

Approaches: Several tall chimneys and prominent buildings can be seen on the approach to the port. We encountered many piroques and catamarans on our approach and this hindered our progress considerably.

Radio: ETA is required by VHF Channel 16, 4 hours prior to arrival.

Berthing: We berthed at the Cement Quay (See "Plan") which has very good cargo handling facilities and is called Berth No. 3. Depth of water alongside the berth is 50 ft. – 60 ft.

Cargo Operations: Work is carried out in 3 shifts throughout 24 hours. Loading and unloading of coal is by crane at Berth No. 3, coal being discharged on to a conveyor system.

Fresh Water: Fresh water is not available locally but is available from Cebu by barge, which is on the other side of the island so it is very expensive. Alternatively fresh water is available by trucks with 10 tons capacity. The quality of water varies greatly and may only be fit for washing.

Officials: At the request of the Port Authority we were expected to feed between 8 – 10 men, which was made up of Customs, Agent, Clerks and Police. On most occasions 6 persons were being fed.

With regard to carrying out formalities, the Port Authorities were very correct and friendly. The customs officers maintained a presence on board at all times as did the armed guards who were posted aboard to handle any serious attack upon the vessel.

AUTHORITY: Philippines Ports Authority.

Operator: Atlas Consolidated Mining & Development Corporation, ACMDC Minesite, Don Andres Soriano, Toledo City, Cebu, Philippines (P.O.Box 7066, Manila International Airport, Manila, Philippines). *Tel:* 819-0251/90. *Telex:* (ITT) 7425014; (RCA) 7222170; (Eastern) 3539; (ITT) 45642. *FAX:* 815-3089. *Contact:* Fernando S.Verde, Vice President – Production (Cebu Copper Operations).

SUBIC BAY, Luzon: 14.49 N. 120.18 E. (See Plan)

(A) GENERAL CARGO FACILITIES
(B) TANKER TERMINAL

(A) GENERAL CARGO FACILITIES

BERTHING:

Piers in the Subic Bay Area:

1. Alava Pier – (Waterfront)
2. Bravo Pier – (SRF)
3. Rivera Point – (SRF)
4. Sattler Pier – (NSD)
5. Marine Terminal – (NSD)
6. POL Pier – (NSD) – Also see Section (B)
7. Boton Pier – (Cubi)
8. Leyte Pier – (Cubi)
9. Nabasab Pier – (Navmag)
10. Kamayan Pier – (navmag)

The main commercial port will be at the Sattler Pier and the Marine Terminal Pier located at the former NSD.

The other piers in the area will complement and support the main commercial port.

SBMA Container Port: Container Pier (Sattler):
Length 600 ft. Width 80 ft. Draft 42 ft.
20 moves per hour. 40 tons maximum per lift.

Covered Pier (Marine Terminal):
Length 750 ft. Draft 46 ft.
90,000 sq.ft. (L-600 ft. × W-150 ft.) Transit shed.
Capacity: 4 cargo ships at one time.

Freight Workload:
2,300 container lifts per months.
1,300 container (loaded) vans per month.
8 ships per month – 12 hrs. load time per ship.

Note: The Port Authority have several portal cranes at the Alava and Bravo Piers which could load/unload cargoes, but land vehicles are needed to transfer the cargoes to/from the container port.

Container Marshalling Yard:
Length 900 ft. Width 250 ft. = 225,000 sq.ft. or 20,903 sq.m.

Storage Compound: 99 acres.

	700,000 sq.ft. covered storage area.
Building 1026	132,000 sq.ft.
Building 1022	135,000 sq.ft.
Building 1027	152,000 sq.ft.
Building 1012	32,000 sq.ft. – freeze warehouse.
Building 1035	26,000 sq.ft. – transhed.

1 million sq.ft. of open storage also available.

AUTHORITY: Subic Bay Metropolitan Authority, Building 229, Waterfront Road, Subic Bay Freeport, 2200 Philippines. *Tel:* (047) 222-5456. *FAX:* (047) 222-5278.

AGENT: See "Manila".

(B) TANKER TERMINAL

LOCATION: Coastal's Subic Bay Terminal is located in the Subic Bay Freeport Zone on the S.E. shore of Subic Bay at Lat. 14° 48′ 38″ N., Long. 120° 17′ 37″ E. Coastal is the only operator of the Petroleum, Oil and Lubricants (POL) Pier, and the Subic Bay Metropolitan Authority (SBMA) is the operator of the Subic Bay Port.

PILOTAGE: Pilotage is provided by Coastal, and is compulsory for all vessels when entering and leaving Coastal's Subic Bay Terminal or anchoring in the Subic Bay en-route to Coastal's Subic Bay Terminal, except for small launches and other craft regularly utilising Coastal's Terminal, or if waived by the Terminal Manager.

Masters of ships anchoring or leaving the Subic Bay Anchorage may do so without the assistance of a pilot, but those unfamiliar with the anchorage are strongly advised to use the services of a pilot before anchoring. Coastal does not provide a pilot for anchoring at the Subic Bay Anchorage.

Masters must sign the pilot's Indemnity Certificate before pilotage commences. Ships using Coastal's Subic Bay Terminal are liable for any damage caused by the ship to any of Coastal's property or to any other vessel lying therein, whether or not a Coastal pilot is assisting at the time.

Pilot Boarding and Landing Offshore: All pilots shall be boarded or landed from a ship not located alongside a berth by means of a pilot ladder when the freeboard does not exceed 30 ft., or a combination of accommodation ladder and pilot ladder when the freeboard exceeds 30 ft. All pilot ladders shall conform to the requirements of SOLAS 1974 Chapter V, Regulation 17. A pilot may refuse to board a ship if the means of access does not conform to the above. If the pilot agrees, a pilot hoist may be used in lieu of an accommodation ladder and pilot ladder, but a standard pilot ladder shall be immediately available in the event of a failure of the pilot hoist. As it is essential that ship's engines be stopped whilst the pilot is transferring between pilot boat and ship, the ships' Masters should not approach the coast too closely for boarding the pilot. As a general rule, pilot should board about 1.0 – 2.0 miles off the Coastal Subic Bay POL Pier.

ANCHORAGE: If, for any reason, a ship is required to anchor prior to or after berthing at Coastal, the anchorage must be coordinated with the SBMA Port Authority.

Use of Anchors: If an anchor is used during the berthing manoeuvre, it shall be hove home on completion of the mooring. No ship may lie alongside a berth with an anchor on the bottom. Loaded ships should not drop an anchor near the POL Pier berths as bottom clearance is limited with the danger of running over the anchor which could pierce the hull.

RESTRICTIONS: *Depths/Clearance:*

Minimum depth of water in approaches	60 ft.
Under Keel Clearance in approaches	20 ft.
Minimum water depth alongside	44 ft.
Under Keel Clearance alongside	4 ft.

Loaded and Ballast Draft Requirements: Each of the berths at the Coastal Subic Bay POL Pier is dredged and the maximum allowable draft will be advised by the pilot. It shall be recognised that loaded ships may be draft restricted at the next scheduled port after Subic Bay.

For safe handling of tankers at all the Coastal Subic Bay POL Pier berths, the following minimum drafts are recommended:

D.W.T.	*Draft Forward*	*Draft Aft*
5,000 – 10,000	6 ft.	14 ft.
10,000 – 20,000	8 ft.	18 ft.
20,000 – 30,000	10 ft.	20 ft.
30,000 – 40,000	14 ft.	22 ft.
40,000 – 50,000	14 ft.	24 ft.
50,000 – 90,000	16 ft.	26 ft.
90,000 and over	18 ft.	28 ft.

Note that ships arriving or sailing with part cargo only are also recommended to conform to the above minimum draft and maximum of 10 ft. trim by the stern. In special circumstances and in very good weather conditions, it may be possible to safely handle ships with less draft and/or a different trim than those recommended above. In these cases, Masters should consult with the duty Dispatcher.

Bow to Centre Manifold Restrictions at the Berths: The allowable bow to centre manifold distance at each of the berths is as follows:

Berth	*Maximum BCM*
1 and 2	85 ft.
3 and 4	288 ft.
5 and 6	450 ft.

In common for all berths, the distance from the tanker's most forward underwater point to the centre manifold has to be known accurately by Coastal to insure that there is sufficient length of deep water at the berth forward of the loading arm (hose) positions. All ships using the POL Pier must advise Coastal of their accurately measured horizontal distance from extreme bow (including the bulb bow) to the centre of their manifold connections, so that each ship is allocated a berth with sufficient length of deep water forward of the loading position.

MAX. SIZE: 100,000 d.w.t., maximum LOA 853 ft. and maximum draft 42 ft. Max. displacement 120,000 d.w.t.

RADIO: *ETA Requirements:* All ships shall advise their ETA at Coastal's Subic Bay Terminal 72, 48 and 24 hours in advance of arrival "via Manila Radio", and be able to communicate with "Coastal Subic Bay" on VHF Channels 16, 8 and 79 when within range. See "Pre-Arrival Information" required on cargo, bunker and ballast operations.

If a ship has received damage and/or is leaking oil, this must be advised in the ETA advice, so that the ship can be inspected by Coastal personnel before entering the port.

Pre-Arrival Information: All ships scheduled to load or discharge at Coastal's Subic Bay Terminal should, at least 48 hours prior to arrival, radio the following information to Coastal via Manila Radio (attention Operations Supervisor). If passage from last port is less than 24 hours, this information should be transmitted to Coastal on VHF as soon as in range.

(a) Clean Ships to Load Clean Products:

AA	Cargo Nomination (grades, volumes at 60°F).
BB	Proposed cargo layout.
CC	Last 3 cargoes carried in each tank.
DD	Cleaning done (hot wash, cold wash, descaling, draining, mopping) since last grade and between previous 2 grades.
EE	Condition of coating, if any.
FF	If gas-free, tanks of ships scheduled to load Kerosene and Turbo Fuel *must*, unless those tanks last cargo was also Kerosene or Turbo Fuel and have not carried ballast, be gas-free for entry and tanks scheduled to load Gas Oil or Heating Oil *must* be gas-free to below 40° of LEL (LFL) – Lower Explosive Limit (Lower Flammable Limit).

GG Number of ballast tanks in which ballast will be carried on arrival.
HH Estimated time to deballast and prepare ballast tanks ready for loading.
II Any slops on board, if so, quality and quantity.
JJ Any transit cargo on board, grade, volume, tank numbers.
KK Preferred sequence of loading, grades which can be loaded simultaneously.
LL Number of manifold connections (from forward) to be used for each grade (8 in.)
MM Maximum loading rate.
NN Maximum sailing draft.

(b) *Clean Ships to Discharge Clean Products:*
AA Bill of Lading quantity, gravity, temperature of each grade to be discharged.
BB Any discrepancy in Bill of Lading and ship's figures at loading port.
CC Quantity and grade of any transit cargo on board.
DD Number of ship's pumps available and estimated discharge time.
EE Number of manifold connections required (8 in.).
FF Estimated ballast time required at completion of discharge.

(c) *Dirty Ships to Load Dirty Products:*
AA Cargo nominations (grades, volumes at 60°F).
BB Last cargo carried, if crude oil what grade (source of origin) and what cleaning done.
CC Grade and quantity of any transit cargo on board.
DD Quantity of dirty ballast to pump ashore * and estimated time to deballast.
EE Quantity of slops to pump ashore *.
FF If more than one grade to be loaded, can grades be loaded simultaneously, if not, why not and preferred loading sequence of loading.
GG Maximum loading rate.
HH Maximum sailing draft.
* Note: The deballasting and slops system can handle only low Mercaptan sulphur slops. If previous cargo was "sour", it may not be possible to discharge slops at the Terminal.

(d) *Dirty Ships to Discharge Dirty Products:*
AA Bill of Lading quantity, gravity, temperature of each grade to be discharged.
BB Any discrepancy in Bill of Lading and ship's figures at loading port.
CC Grade and quantity of any transit cargo on board.
DD Number of ship's pumps available and estimated discharge time.
EE Quantity of ballast which can be loaded simultaneously with discharge, if agreed by Coastal.
FF Estimated residual ballasting time required.

(e) *Crude/Dirty Ships to Load Crude Oil:*
AA Cargo nomination (grades, volumes at 60°F).
BB Last cargo carried, if crude oil what grade of crude (source of origin).
CC Quantity and grade of any transit cargo on board.
DD Quantity of dirty ballast to pump ashore, estimated time to deballast.
EE Quantity and type of slops on board, to "Load-on-Top", segregate on board or pump ashore.
FF If more than one grade to be loaded, preferred sequence of loading.
GG Maximum loading rate.
HH Maximum sailing draft.

(f) *Crude Ships to Discharge Crude Oil:*
AA Bill of Lading quantity, gravity, temperature of each grade to be discharged.
BB Any discrepancy in Bill of Lading and ship's figures at loading port.
CC Grade and quantity of any transit cargo on board.
DD Number of pumps available for discharge, estimated time of discharge.
EE Does ship require crude washing of tanks during discharge, if so, reply to Crude Wash Check List.
FF Quantity of ballast which can be loaded simultaneously with discharge, if agreed by Coastal.

(g) *Speciality Ships:*
(1) Ships to Discharge Butane or Propane:
AA Bill of Lading quantity, quality and temperature of gas.
BB Any discrepancy between Bill of Lading and ship's figures at loading port.
CC If temperature of gas is much below ambient, what is the maximum temperature gas can be raised to on discharge (minimum discharge temperature acceptable is 60°F).
DD What is the minimum discharge pressure (maximum at manifold is 175 p.s.i. for Butane and 225 p.s.i. for Propane). Note: The terminal does not have a return line.
EE What is the estimated discharge time.
FF What is the size of the ship's manifold connection.
(2) Acid Ships to Discharge:
AA Bill of Lading quantity, quality and temperature of acid.
BB Any discrepancy between Bill of Lading and ship's figures at loading port.
CC Size of ship's manifold connection.
DD Does ship have acid hoses on board, if so what number and size.
EE Maximum discharge rate at 100 p.s.i. at manifold.
(3) Ships to Load Acid:
AA Nominated quantity.
BB Last 3 cargoes carried in nominated ship's tanks with cleaning done since each was discharged.
CC Type of coating in ship's tanks to be loaded and its condition.
DD Are heating coils in tanks to be loaded completely disconnected and blanked off?
EE Is loading system from ship's manifold to tank(s) completely segregated from all other systems?
FF What grades are loaded or to be loaded in tanks adjacent to the tank(s) to be loaded with this acid? Do any of these tanks require heating?
GG What size is ship's manifold connection.
(4) Ships to Discharge Strong or Spent Caustic:
AA Bill of Lading quantity, quality and temperature of cargo.
BB Any discrepancy between Bill of Lading and ship's figures at loading port.
CC Quantity and grade of transit cargo on board.
DD Size of ship's manifold connection.
EE Estimated time required for discharge (maximum pressure at manifold – 100 p.s.i.).

TUGS: Tugs are provided by Coastal and their use is compulsory. Towlines are provided by the tugs. Masters must sign the tugs' Indemnity Certificate presented by the pilot on boarding before tugs are made fast. The ship is liable for any damage to or caused by the tugs whilst assisting.

Communications between ship and tugs during manoeuvring are normally carried out on VHF Channel 8, the English language shall be used.

In case of a loss of VHF contact, the following signals shall be made on the ship's whistle or siren:
Forward Tugs (alongside or on hook):
1 short blast – ship's head to starboard.
Tug alongside port side – push.
Tug alongside starboard side – pull on beam.
Tug on hook – pull starboard bow.
2 short blasts – ship's head to port.
Tug alongside port side – pull on beam.
Tug alongside starboard side – push.
Tug on hook – pull port bow.
5 or more short blasts – stop.
After Tugs (alongside, tractor or on hook):
1 prolonged blast followed by 1 short blast – ship's head to starboard.
Tug alongside port side – pull on beam.
Tug alongside starboard side – push.
Tractor tug – pull on port-quarter (in).
1 prolonged blast followed by 2 short blasts – ship's head to port.
Tug alongside port side — push.
Tug alongside starboard side – pull on them.
Tractor tug – pull on starboard quarter (out).
1 prolonged blast followed by 5 or more short blasts – stop.
All Tugs:
3 short blasts – stop ship.
Tug on hook forward – stop.
Tug alongside – pull back (alongside).
Tractor tug aft – pull right aft.

It is emphasised that whistle signal form of communication between ship and tugs is for emergency use only and that, if possible, manoeuvres should be aborted or suspended until VHF contact is again possible.

TANKERS: POL Pier:

Berth	*Length* (ft.)	*Draft* (ft.)	*Controlling Depth* (ft.)
Southside	844	42	42
Northside	844	39	39

Mooring Operations: Ships berthing at the POL Pier berths shall have an adequate supply of heaving lines available for use. The forward spring lines are usually the first lines ashore.

The use of "rat guards" is mandatory.

All lines must be rope, or if steel, must have at least 150 ft. of rope leader for feeding to the dock line handlers.

Safety of Moorings: All ships must be securely moored to the satisfaction of the pilot. No cargo or bunker arms or hoses will be connected until the ship is securely moored. Moorings on winch drums shall be *securely braked off, self tensioning devices are not allowed.* On split drum winches, the number of layers of wire is taut and the ship in a fully loaded condition. Moorings of a different character (e.g. wire and fibre) shall not be sent out to the same dolphin or set of hooks/bollards. Moorings shall be monitored and kept taut by the ship's crew, and the ship maintained in her correct position and in contact with the berth fendering throughout the loading/discharging/ballasting/deballasting/bunkering operations. The Berth Assistant Operator is fully authorised to stop operations and disconnect cargo/bunker arms and hoses if moorings are seen to require attention, or if the ship is not kept in position and in contact with the fendering, or if the ship violates any other safe mooring practice.

Emergency Towing-off Wires: On completion of mooring, each ship at Coastal's Subic Bay Terminal shall provide towing-off wires, of adequate strength and condition, secured to the offside bow and quarter bollards with the eyes run out and maintained near the water line. The aft emergency towing-off wire shall be led through the central aftermost lead.

LOADING/DISCHARGING: POL Pier – Southside – Dock manifold data:

Number of Connection	*Diameter of Line* (in.)	*Product Handled*	*Maximum Discharge Rate* (bbls/hr.)	*Maximum Load Rate* (bbls/hr.)
4	6	F76	3,500	3,000

Notice of Readiness: Notice of Readiness will be signed for acceptance by the Operations Shift Supervisor after inspection and calculations are completed, and the vessel is in all respects ready to load or discharge.

If it is subsequently found that the ship was not, in all respects ready to load or discharge; in the case of loading, due to excessive deballasting time or unsuitability of tanks which, on inspection, require further cleaning or preparation for the nominated cargo; or in the case of discharging due to unavailability of pumps or inadequate temperature of cargo, a *Notice of Protest* will be delivered to the ship which will automatically cancel Coastal's initial acceptance of the Notice of Readiness. In such cases, the ship must prepare a revised N.O.R., cancelling the first one and stating a time tendered in accordance with its actual readiness.

Classifications of Petroleum: For the purpose of these regulations, the following classifications of petroleum products are established at Coastal's Subic Bay Terminal:

Clean Products:	Gasoline, Kerosene, Turbo Fuels, Gas Oil, Heating Oils, Light Diesel Oils. The ships which carry these products are designated "Clean Ships". Marine Diesel Oil (MDO) may be either a clean or dirty product.
Dirty Products:	All grades of Fuel Oil, Asphalt, Vacuum Gas Oil, Heavy Diesel. The ships which carry these products are designated "Dirty Ships".
Crude Oils:	All grades of crude oil including "Spiked" Crude. "Sour" Crudes are those crudes which contain appreciable amounts of hydrogen sulphide and/or Mercaptans. All Persian Gulf Crudes are classified as "Sour Crude". Ships which carry crude oil are designated as "Crude Ships". "Crude Ships" and "Dirty Ships" may be interchangeable.
Speciality Products:	Butane, Sulphuric Acid, Naphthenic Acid, Caustic Soda, Spent Caustic, TEL, Anti-Icing. Ships which carry these products are designated "Gas Ships", "Acid Ships", "Napacid Ships", etc., as the case may be.
Low Flash Petroleum:	Flash point below 60°C (140°F) as determined by the closed cup method of testing.
High Flash Petroleum:	Flash point of 60°C (140°F) or above as determined by the closed cup method of testing.

Manifold Requirements: Ships whose cargo and bunker manifolds conform to the OCIMF "Standards for Tanker Manifolds and Associated Equipment" will have no difficulty at Coastal's Subic Bay Terminal. Any ship which has a manifold construction other than steel, or has valves outboard of the supporting stool, must advise Coastal by VHF prior to arrival so that the manifold can be examined by Coastal Supervision and suitable precautions taken before and during connecting the arms.

Basic requirements for manifolds at Coastal's Subic Bay Terminal are:

Ships for the POL Pier (where ship may be portside or starboard side to berth): All products, clean or dirty, for ships up to 120,000 d.w.t. loaded to 42 ft. draft.

Cargo manifolds 2×8 in. ASA made of steel.

Bunker manifold 1×6 in. hose 150 p.s.i. rated flanges.

Distance from rail minimum 6 ft., maximum 10 ft.

All valves to be inboard of support stool or otherwise supported.

Distance apart of manifolds, including bunker, flange edge to flange edge, minimum 36 in., maximum 60 in.

If spill tank under manifold extends more than 24 in. outboard of connecting flange, the arm jacks will have to land on it.

Minimum height of lower edge of flange above spill tank (where fitted, or above deck if not fitted) 24 in., maximum 50 in.

If ship's connecting flanges are not made of steel, maximum allowable unsupported cantilever length of 24 in. will apply. Terminal Supervisor should be consulted.

Maximum Pressure at the Manifold: Never exceed the maximum allowable working pressure, as indicated below, at ship's rail, and make sure the loading rate is fully agreed.

Crude and refined products	–150 p.s.i.
Butane	–175 p.s.i.
Acids and caustics	–100 p.s.i.
Propane	–225 p.s.i.

Deballasting: Ships must not commence deballasting overside until the clean ballast has been inspected by a Coastal representative. If any oil is seen on top of the ballast, the Coastal representative will advise on what quantity of water may be discharged overside and what quantity has to be discharged ashore. Generally, clean ballast which has any oil floating on it should not be discharged overboard, after the tops of the suction pipelines in the tanks are uncovered. The responsibility for avoiding pollution during discharge of clean ballast overside remains with the ship. The shore deballasting system has a check valve in every lateral to prevent flow back. The ship should advise the Berth Operator and Coastal Operations Supervisor at least 30 minutes before completion of deballasting, so that tank inspection can be arranged without delay.

Tank Cleaning, Gas-Freeing Alongside: Permission to tank clean and/or gas-free alongside a berth must be obtained from the Operation Supervisor or his authorised deputy before commencing operations. Generally, this will not be refused unless in the opinion of the Operation Supervisor:

1. The weather or other conditions are considered unsatisfactory.
2. The equipment being used, the method employed, the experience or attitude of the officers and crew members involved are considered unsafe.
3. The length of time required to tank clean or gas-free is excessive.
4. The berth is needed for loading or discharging another ship. (See "General" – Vacating Berth).

No electrical equipment such as lighting and ventilation fans may be used unless certified flame or explosion proof and in good physical condition. Washing machine hoses must be tested for electrical continuity before washing commences. All tank cleaning and gas-freeing must be under the personal supervision of a senior ship's officer, who must always be in the vicinity of the tank cleaning operations.

Inert Gas System: It is important that inerted ships do not attempt to discharge cargo or ballast if their inert gas system is not functioning, or able to keep positive pressure on all tanks with less than 8% oxygen gas. Incoming air could cause pyrophoric iron to glow or ignite with resulting fire or explosion. Also see "Safety".

Tank Preparation for Loading at Coastal's Subic Bay Terminal: Unless otherwise specified, the ship's tank preparation for cargoes to be loaded at Coastal's Terminal shall conform to the Tank Cleaning Guidance Chart (See "Appendix").

Tank Inspection: Ships should call for tank inspection in good time to avoid delay.

1. Before loading clean cargoes: Tanks will always be inspected with lids open except those designed for low flash cargoes and which may not, therefore, be gas free. Tanks to be loaded with Turbo Fuel or Kerosene will always be entered (unless last cargo in tank was Turbo Fuel or Kerosene and has not carried ballast), and must therefore be gas free for entry. The inspector may need to witness an explosimeter and oxygen analyser reading of any tank before entering.

   A ship's officer must always be present when tanks are being inspected. Tanks for clean products must have main and stripping valves in each tank open during inspection. Ships scheduled to load clean cargoes, particularly Turbo Fuel, Kerosene and Heating Oil, may be required to anchor in the Bay for inspection prior to berthing. When inspection is done from the tank lid, and all tanks cannot be seen clearly, the inspector may ask for some tank cleaning plates to be removed. Ship's manifold valves on both sides of the ship will be required to be opened, and the pipelines visually inspected. Where draining of lines is done into the pumproom bilges, the inspector may ask to see the drain valves or plugs opened, and also see the drain cocks on the pumps opened.
2. Before loading dirty products or crude oil: Tanks will normally be inspected with tank lids closed, however, in cases of doubt, the inspector may ask for the tank lids and/or the tank cleaning plates to be opened.
3. Tanks will normally be inspected with tank lids closed, but the inspector may ask for a tank cleaning plate to be opened. If measurable quantities of the previous cargo are seen, hand dips will be made and an ROB quantity computed (See "Cargo Measurement"). This will be included in the Dry Certificate. A Note of Protest will be issued if the ship cannot reduce the ROB quantity and it is considered excessive.

Dry Certificates: Coastal Supervisors will sign Dry Certificates on presentation, but they are instructed to endorse them with observations of any free water or previous cargo seen, and to the effect that the contents of the pipelines are unknown. Coastal does not accept any liability as to the actual condition of the cargo tanks inspected.

Static Electricity Precautions: For all static accumulator products having a flashpoint of over 100°F (Kerosene, Turbo Fuel, Gas Oil and Heating Oil), tanks shall be gas-freed to below 40% of the LEL (LFL) before loading. No other static electricity precautions will therefore be necessary, unless these products are stored at a temperature near or above their flashpoints. The loading rates will be restricted until the ship's tank piping is covered, and special precautions in ullaging, sampling and taking temperatures will be enforced. For all static accumulator products having a flashpoint of less than 100°F (Naphthas and Gasolines), the main precaution to be taken is that ullaging, dipping and sampling equipment shall be firmly grounded (earthed) to the structure of the tank to be loaded prior to its introduction into a tank, and remain grounded until after its removal.

OBO Ships – Precautions in Cargo and Ballast Handling: Due to the problem of the effect of large free surfaces and the stability of OBO's, the minimum number of tanks are to be slack at any one time. Generally, when ballast and cargo are being handled simultaneously, only one cargo tank should be slack at one time, otherwise a maximum of two cargo tanks should be slack at one time, and the loading rate shall be calculated accordingly. If a ship's Master can demonstrate that the ship's stability is adequate without more stringent precautions, he should consult with the Coastal Supervisor on this and all free surface problems. If a list develops during loading or discharging, operations will be stopped and arms/hoses disconnected and remain so until the free surface in the ship has been reduced and the list corrected. OBO's arriving with part cargo to complete loading should ensure that they have no slack tanks on arrival.

Commencement of Loading: On being advised by Coastal's Tank Inspector that the ship's tanks are satisfactory to load, all tank lids and tank cleaning plates must be closed and secured, unused manifold connections blanked off and the ship's system, with the exception of the manifold valves, lined up for loading. Flame screens must be in place in each ullage hole. When the shore indicates it is ready to load, open the appropriate manifold valves and advise the shore that you are ready to load by gravity. If loading more than one grade, start each grade off separately. Do not ask for a pump to be put on until you are sure the cargo is flowing into the intended tanks. Agree with the Berth Operator on the number of pumps to be put on and on the stand-by time he requires for pumps to be cut out (See "Emergency Stopping of Pumps"). Communications with the shore will normally be by UHF radio, but the Berth Operator can also be contacted by shouting to the berth. Cargo tanks are to be checked before commencement of loading of each grade of cargo.

Topping-Off: If you require a reduction in loading rate for topping-off, arrange this with the Berth Operator.

Emergency Stopping of Pumps: To stop shore pumps in an emergency, use UHF Channel 1, making sure to identify ship's name and berth number before requesting "Stop Pumps – Emergency", repeat several times. All ships at the Terminal are on the same UHF channel, and unless you identify your ship's name and berth, the Operator will not know which ship is requesting a stop.

Discharging: If a ship is inerted, all deck openings shall be sealed and tanks under positive pressure. On non-inerted ships, flame screens must be in place in all ullage holes. Open manifold valves and start pumps only after you have been told by the Berth Operator that the shore is all lined up, open and ready. Maintain continuous watch on the UHF Channel 1 allocated to your ship, as this will be the means the shore will use to request you to stop pumps in an emergency. If, for any reason, you temporarily stop discharging or drastically reduce the discharging rate, you must advise the Berth Operator.

Loading of Bunkers: Where possible, bunkers will be loaded simultaneously with cargo operations. The ship's officer in charge of bunkering should contact the Berth Operator as soon as possible after arrival alongside to arrange a convenient time for bunkering, topping-off requirements and any requirements for samples and/or sighting bunker meter readings.

Generally, bunkers are loaded through meters and a ship's representative is invited to witness opening and closing readings. Where it is not possible to load bunkers through a meter, shore hand gauged quantities will be used or, in case of small ships taking small quantities, a ship's inspection or "Bunker Survey" will be carried out by a Coastal representative. Ship's officers are invited to witness gauging of shore tanks upon start and completion of bunkering if meters are not used.

Cargo Measurements: The accurate measurement of cargo discharged or loaded at Coastal's Subic Bay Terminal is essential to the Company's business. Contract Inspectors are engaged to measure each cargo discharged or loaded, and ship's officers are requested to give every assistance to these inspectors to take the necessary measurements and samples. Inerted ships will need to depressurise the inert gas to the extent, that up to 3 ullage plugs can be opened at any one time for handgauging, sampling and inspection. All tanks will be hand gauged/dipped, temperatures and samples taken and waterfinding done by the Contract Inspectors, who will require to be advised of the reference calibration tables to compute the cargo loaded or to be discharged. Otherwise, the inspectors will use their own equipment. A ship's officer must witness the taking of ullages and temperatures.

Normally, Vessel's Experience Factors are not used by Coastal in computing ship's cargo quantities, but if available, the Contract Inspector will record the VEF. Where slops from a previous cargo are retained on board, they will be measured and, unless commingled, with Coastal's agreement, with incoming cargo, again after completion of loading.

In cases of discrepancies of over 0.5% between the computed ship's cargo loaded or discharged and the shore computed quantities, the ship will, in the case of loaded cargoes, be held at the berth or at anchorage for re-ullaging and examination, until the reason for the discrepancy is discovered or some other agreement with the cargo owner is reached.

Particular attention should be given to ensure that the ship's pipeline system used during the loading is full on completion of loading or, if drained into tanks, what portion is drained. It is helpful if the capacity of these lines is known. In the case of discharged cargoes, where the discrepancy between ship's and shore computed cargo quantities is greater than 0.5%, the ship will be examined and re-dipped. Ship's officers must calculate their cargo quantity independently of the inspectors.

It is emphasised that the ship should not start ballasting into cargo compartments during or on completion of discharging, unless authorised to do so by a Coastal representative (NOT the Contract Inspector).

ROB quantities will be computed from dips of the wedges of all remains in each tank. Trim correction will *not* be applied when the liquid does not entirely cover the bottom of the tank. If available, wedge tables will be used. In cases of large discrepancies between discharged ships and shore quantities, the quantity of oil floating on top of the ballast taken into cargo tanks might be measured to determine a more accurate ROB. A ship's officer will be required to sign for the quantity computed as ROB *"without" correction for trim,* the actual quantity ROB will be agreed upon later. A Note of Protest will be served on a ship which has an excessive pumpable ROB and a claim filed.

In cases of large ship/shore discrepancies and/or cargo contaminations, a ship's Master may wish to appoint an independent inspector to act on the ship's behalf.

Logging of Times of Operations: The Berth Operator/Dispatcher keeps a log of events during your ship's stay alongside. As this will be compared with the ship's port log before the latter is signed on behalf of the Terminal, it will save unnecessary differences, if the ship will cross-check with the Berth Operator, times of stopping and starting all cargo, bunker and ballast operations, and reasons for delay whether caused by ship or shore. This information exchange may be carried out by use of the UHF radio put on board your ship, calling berth number from ship (name) to raise the Berth Operator. Ship's officers on duty are not required to leave their ship for this information exchange.

Loading of Bulk Materials: No facilities exist at the Coastal POL Pier for the loading of bulk materials. Only stores as defined herein will be permitted to be loaded while alongside.

Lightering Operations in Subic Bay: Lightering operations, i.e. transferring of oil products or crude oil from one ship to another in the Subic Bay, must be approved by the Port Authorities, The Subic Bay Freeport Authority. Coastal will maintain all the equipment required for this operation, which is done in support of the Terminal.

It is emphasised that all vessels, that are ordered to load by lightering in Subic Bay, must arrive with all clean ballast for pumping overside without causing pollution.

Ship-To-Ship Transfers at the Dock: When it becomes necessary to transfer cargo directly from one ship to another via headers and pipelines, it is essential that a proper communications system is set up between the two ships, so that the receiving ship can regulate the flows of oil it is receiving, and stop it when necessary. Because of language and radio channel difficulties between ships, Coastal will set up a communications system, stationing on each ship an operator with a radio on a special frequency which cannot be interrupted. These operators will remain on board during the entire transfer operation.

BALLAST: *Deballasting Facilities:* All dirty ballast must be discharged into shore tankage, however the capacity of the shore reception facilities is limited. All clean, oil free ballast should be discharged overside. The responsibility for avoiding oil pollution rests with the ship. As a general guideline, ships arriving in ballast should have no more than 8% of their summer deadweight, as dirty ballast requiring to be pumped ashore (e.g. a 50,000 d.w.t. tanker should have no more than 4,000 long tons of dirty ballast). The remaining ballast needed to conform to the minimum draft requirements (See "Restrictions") must be clean for pumping overboard without causing pollution. Ships may be required by their Operators/Charterers to arrive with clean ballast and consolidated slops.

Also see "Loading/Discharging".

Note: Ballast Facilities not yet available (October 1993).

MEDICAL: Hospital located in Olongapo City.

FRESH WATER: Fresh water is available for sale at all berths at the POL Pier at Coastal's Subic Bay Terminal for delivery to ships. The ship should advise Coastal of its water needs in advance of its arrival.

FUEL: It is essential that ship's Masters include their bunker requirements in their arrival cable, and confirm their requirements by VHF when in range, but note that for Coastal to be able to supply bunkers, a bunker nomination must have been received from Coastal Marketing Miami or Singapore.

Also see "Loading/Discharging".

AIRPORT: Cubi (Subic) or Manila.

GENERAL:

Applications of Regulations and Requirements: Coastal's Subic Bay Terminal means: The POL Pier and the waters immediately adjoining it to a distance of 100 m. Ship at anchorage within the Subic Bay and destined to berth at the Coastal Subic Bay Terminal shall also be deemed to come within the scope of these Regulations. These Regulations and Requirements herein described shall be strictly observed within Coastal's Subic Bay Terminal, by all persons including personnel of ships, barges, tugs, launches, mooring boats and other craft. In the event of any conflict between these Regulations on the one hand and any SBMA or Government Law on the other hand, then latter shall prevail to the extent to which they are in conflict with the Regulations.

Knowledge of Regulations: The Master or person in charge of any vessel, whilst within Coastal's Subic Bay Terminal, shall have adequate knowledge of these Regulations and Requirements, and ensure that his crew members are fully informed of all requirements. In the case of small craft operating within Coastal's Terminal, the Owners must ensure that their employees know and will obey these Regulations and Requirements. Additional copies of these Regulations can be obtained from the Terminal's POL Pier Office, located at the head of the Pier or from ship's Agents.

Inspection: Subject to the agreement of the SBMA Customs and Immigration Authorities, any authorised representative of Coastal shall have the right to board any vessel within Coastal's Subic Bay Terminal and/or Subic Bay at any time for the purpose of ensuring that these Regulations are being observed.

Permission to Enter Coastal's Subic Bay Terminal: No ship, tug, barge, launch or other craft shall enter Coastal's Subic Bay Terminal without first obtaining the permission of the Terminal Manager or his authorised deputy as well as notifying the SBMA Port Authority of their arrival.

Ship to Vacate Berth on Request by Coastal: As a condition of entry in Coastal's Subic Bay Terminal, a ship must vacate a berth promptly on being requested by Coastal (See "State of Readiness whilst Alongside").

Security of Buoyancy: When entering or leaving Coastal's Subic Bay Terminal in a loaded condition, it is important that the tanker's buoyancy is secured against ingress of water due to damage. Fore peak and pump room openings, including all ullage plugs, must be securely closed during the entire inward or outward passages.

Gangways: It is the ship's responsibility to provide and maintain a safe means of access between ship and shore. At the POL Pier berths, the ship must provide rig and tend a safe gangway or accommodation ladder, normally abaft amidships. The use of the shore hoist, where available, to assist in putting out or taking in a ship's gangway, is only allowed if the permission of the Berth Operator is given, and *if a Coastal employee is available to operate the hoist. Ship's personnel are not permitted to operate Coastal's equipment.* Coastal will accept no liability for damage caused by the failure of the hoist, and will bill the ship's Owner for any damage to the ship's gangway. If the ship's deck is higher than 10 ft. above the pier deck, a safety net must be rigged underneath the gangway. Particular attention must be given to providing safe access between the gangway and the ship's deck when the ship is high and the gangway is steep. Customs, Immigration, Quarantine and Coastal personnel will refuse to board a ship which does not have a safe gangway and access, with resulting delays for the ship's account.

State of Readiness of Ships Alongside: No repairs or work which will make the ship unable to move under its own power may be commenced without the written consent of the Coastal Terminal Manager or his authorised deputy. In general, such consent will be refused as, for the safety of the port, it is essential that ships maintain their propulsion, steering and other equipment required for unmooring and manoeuvring fully operational throughout their stay alongside. In cases where, through Force Majeure, a ship becomes immobilised whilst alongside, the Master must immediately advise the Berth Operator and the Operations Supervisor of the facts, so that a decision may be made on the advisability of continuing with cargo operations, and so that special precaution can be taken.

Ship/Shore Communications whilst Alongside: The Pilot, on boarding before berthing, will bring with him a portable UHF radio which he will use during the mooring operation and, before leaving the ship, will place under the care of the ship's Master. This radio will remain on board throughout the ship's stay alongside, and must then be handed back to the Pilot who sails the ship. Channel F1 on this radio is to remain open, so that the Berth Operator and Shore Operations Supervisor can contact the ship as necessary. The Berth Operator and the Operations Supervisor can be contacted on Channel F1 on this radio and overall control of loading/discharging can be maintained. This radio can also be used to advise time ballast is out, tank inspection is required, discharging is finished, stand-by or stopping loading pumps, ordering of pilots, etc. The radio must not be used for agency matters, nor for communicating with other ships and must be used responsibly. Should the radio be damaged or lost whilst under the care of the ship's Master, the cost of replacement will be billed to the ship's owner. The ship should call the Berth Operator or the Operating Supervisor if there is evidence that the battery is getting low or the radio is operating unsatisfactorily.

Appointment of Agent – Agency Services Available: No ship is allowed to enter Coastal's Subic Bay Terminal unless it has a duly appointed Agent or representative through whom all disbursements and ship's business can be channelled.

Also see "Safety".

SAFETY:

Ship/Shore Safety Check List: The Ship/Shore Safety Check List used at Coastal's Subic Bay Terminal is in general based on the ISGOTT Check List. It is Coastal's intent to check every ship as soon as possible after arrival. The Check List should also be used to self examine ship's safety, without waiting for Coastal personnel to perform a check.

Anchors: No ship may lay alongside a berth with an anchor on the bottom.

Emergency Towing-off Wires ('Fire Wires'): Fibre rope is not acceptable as an emergency towing-off wire.

Emergency Pilot Ladder: As soon as berthed, each ship at the POL Pier must put a pilot ladder over the offside just forward of the poop and keep the end just above the water level throughout the stay alongside, so that in an emergency, which makes boarding from the berth impossible, a pilot could board the ship.

Inert Gas Systems: All ships, having an inert gas plant (IGP), must before entry into Coastal's Subic Bay Terminal, confirm that the IGP is working correctly, i.e. maintaining positive pressure on all tanks with oxygen content of the inert gas less than 8% by volume. On arrival alongside, ships will be asked to depressurise tanks sufficiently to allow up to three ullage ports to be open at any one time for the purpose of gauging, sampling, waterfinding, temperature taking, tank inspection, etc., but ullage ports must be re-secured before cargo or ballast handling is commenced. During discharge of cargo or ballast, the IGP must be capable of producing sufficient inert gas of 8% or less oxygen quality to prevent air from entering the tanks. If necessary, the discharge rate must be regulated accordingly. *If the IGP is not operable, discharge will not be allowed to commence or, if during discharge of cargo or ballast, the IGP fails, the discharge must be stopped until the plant is again operational or, if this is likely to take more than 24 hours, until the ship's Owners and/or Charterers have been contacted, and a safe discharge plan agreed.*

When loading or ballasting into an inerted tank, the inert gas displaced must be vented through the ship's vent system and not the ullage plugs. The ullage plugs should only be opened during loading or ballasting for sighting, ullaging and sampling and personnel warned to keep upwind while carrying out these duties. If tanks which have been inerted have to be entered, after gas-freeing, for inspection, the inspectors must not enter the tanks until they are tested for oxygen content in addition to the normal test for hydrocarbons.

Loading Overall: Loading overall (through an open tank hatch or ullage plug) of any product is prohibited at Coastal Subic Bay Terminal.

Delivery of Stores over Coastal's Berths: The normal method of storing ships lying alongside Coastal's berths will be by stores launch. Minor amounts of stores defined as "dry goods" (no alcoholic or soft drinks) of a harmless nature in stout containers, which can be safely hand-carried up a ship's gangway with a total quantity of not more than 250 kg. or 4 cu.m., may be allowed to be put on board via the berth, but the supplier must first obtain a written permit from the Operations Supervisor. A shore crane will not be available for storing. The supplier will be responsible for clearing away any debris on the berth caused by the storing operation.

Repairs and Other Works, Storing by Launch, Hull Cleaning, etc., on Ships at Coastal's Subic Bay Terminal – Work Permits: All work performed on a ship alongside Coastal's Subic Bay Terminal by shore contractors must be with the permission of Coastal's Supervisor. Work requiring a cold work permit includes any cold work to be performed on the weather decks or hull of a ship alongside a berth at Coastal's POL Pier. Work performed by divers, including hull cleaning, and any work requiring a boat or a barge to lie alongside, including storing and lube oil delivery, requires a work permit to be issued prior to commencement of work. Hull cleaning by divers or machinery is *not* permitted when a ship is lying at a berth. Any diver working on the hull, rudder or propeller of a ship whilst alongside a berth must be accompanied by a helper and proper communications with the ship and Coastal established and maintained. All work requiring hot work, whether to be performed by contractors or ship's crew, on the weather decks or hull of ships alongside a berth at Coastal's Subic Bay Terminal, must be with the agreement of the Operations Supervisor, and done under the conditions of the Hot Work Permit issued by the Operations Supervisor. These permits are valid for 8 hours only, and must be renewed if work continues beyond an 8 hour period.

Tank Lids, Ullage Ports, Flame Screens, Tank Cleaning: All tank lids and tank cleaning plates shall be securely closed whilst loading, bunkering, discharging and ballasting. A tank cleaning plate may be opened during discharging where it is found safe to do so for the purpose of measuring remaining oil, water or sediments at the after section of a cargo tank. Only one plate shall be open at any time, and shall be closed immediately after the measuring is completed. Flame screens shall be in place in all ullage openings, and ullage ports shall be closed (and secured if ship is inerted) except when sighting, ullaging, sampling, etc. All lids of tanks not gas-free must be closed.

Chipping, Scraping and Painting: Chipping and scraping is not permitted on the weather decks or hulls of ships alongside a berth at Coastal's Subic Bay Terminal. Painting of ships' hulls from the deck, or fendering of a berth or from a position which can cause paint to fall onto the berth or its fendering, is not permitted. The painting of jetty fittings, pipelines, decks, etc., by ships' crew is strictly forbidden, and Coastal will bill the offending ship's Owner(s) with the cost of removing any such disfiguration.

Crew Access between Ship and Terminal Gates: The crew members of ships at the POL Pier berths are allowed to walk to the main POL Pier compound gate. The ship's Agent must arrange for transportation from there to the main Subic Bay Freeport gate going into Olongapo City. The Agent shall submit a Crew List to the SBMA and to Coastal (Operations Department).

Crew Passes and Crew Lists: Crew Lists must be submitted to Coastal's Operations Supervisor by ship's Agent, and crew members on shore leave must carry some means of identifications, so that they can be checked off against their ship's Crew List at the POL Pier main gate and at the SBF main gate.

Ship's Agent must make arrangements for crew members joining a ship at Coastal's Terminal to be issued with a pass to enter the SBF to join a ship.

Intoxicated Persons: No person who appears to be in an intoxicated condition or under the influence of drugs will be allowed within Coastal's Subic Bay Terminal. If a crew member in such condition arrives at the POL Pier gate, he will be refused permission to enter until the Master or an officer in charge of his ship provides an escort to supervise him between the gate and the ship.

Vehicular Traffic: No vehicles, except those delivering stores, will be permitted to enter Coastal's Subic Bay Terminal.

Ship Visiting: In general, the visiting of ships berthed at Coastal's Terminal by other than bona fide crew members, Owner's representatives and contractors having business on board (not seeking business) is not allowed or encouraged. In special cases, the Master may make arrangements with the Coastal Terminal Manager or his designee for others to visit his ship. Agents are not authorised to make these arrangements. Coastal Supervision and the Berth Operator will visit the ship from time to time in connection with their business, but in no circumstances should any Coastal representative visiting a ship be offered alcoholic beverages or gifts.

Fire Alarm: The Terminal fire alarm is situated on the POL Pier Office Building No. 1423 at the shore end of the POL Pier. The general fire alarm, which will be sounded in the event of a fire involving Coastal's Subic Bay Terminal or any ship or other craft at the Terminal, will be 8 short blasts on the fire siren repeated 3 times. The Terminal fire alarm will be tested on the first Monday of each month at 1100 hrs. All ships in the Terminal will be notified beforehand. Pull alarms are located at each station on the pier.

WEATHER/WIND/TIDE:

Tidal and Current Information: The tides are diurnal with a maximum amplitude of 4.7 ft. (1.43 m.) at the Spring solstices, but a normal average is 1.0 ft. to 1.8 ft. (0.31 m. to 0.55 m.). The datum used is MLW, and the water level is not likely to fall more than 7.2 in. (182 mm.) below this. The current at the POL Pier is non-existant. There can be some small current in the Bay during periods of high rainfall due to fresh water run off.

Electrical Storms: Severe electrical storms are not common in Subic Bay, but should one pass in the near vicinity during the handling of low flash cargo or loading or ballasting into non gas-free tanks, inert gas purging, tank cleaning and gas-freeing operations shall be temporarily stopped, and all tank openings and vent line valves closed until the storm has passed.

Heavy Rain Storms: Should a heavy rain storm, usually of short duration, occur during the topping-off operations in loading cargo or bunkers, the Berth Operator should be asked to stop the loading until the heavy rain has stopped.

Strong Winds: Although Subic Bay is a well protected natural harbour, strong winds can occur during typhoons and other strong storms. When wind speeds exceed 30 knots, ships will, depending on the wind direction and general weather synopsis, be alerted that cargo/deballasting/bunker operations may have to be suspended and arms disconnected. The Terminal has the responsibility of determining when wind conditions are reaching the limit of the design criteria for continued operation of the cargo arms.

Typhoons/Hurricanes: Coastal will monitor the movement of all tropical storms in the South China Sea and the Western Pacific. Ships will be alerted when weather conditions might affect the cargo operations, and based on the reported proximity and severity of the storm may be required to:

Suspend loading/discharging/deballasting operations and disconnect arms/hoses.

Keep engines and other equipment in a state of immediate readiness, should it be necessary to vacate the berth.

Ships at anchorage in the Subic Bay will be advised by the Subic Bay Freeport Authority what, if any, action should be taken.

APPENDIX: *Tank Cleaning Guidance Chart:*

Last Cargo If grade last carried does not fall within general specifications of grades given below, seek special instructions.	Avgas	Mogas	Lo Lead Naphtha	Kerosene Turbo	*Cargo to be Loaded* Gas Oil Heating Oil	Esso Heating	Belco Diesel	Marine Diesel	Vacuum Gas Oil	Fuel Oil	Crude Oil
Avgas	AD	D	C	HGSM	HG	HGM	HSF	HG	HG	H	D
Mogas	CSM	AD	C	HGSM	HG	HGM	HSF	HG	HG	H	D
Naphtha	CSM	D	AD	HGSM	HG	HGM	HSF	HG	HG	H	D
Kerosene/Turbo Fuel	CSM	D	B	AD	B	HM	B	B	D	D	D
Gas Oil/Heating Oil	HSM	B	B	HSMW	AD	BH	B	B	D	D	D
Marine Diesel	HSM+	B+	B+	HSMW+	U+	HGM+	HSF	AD	D	D	D
Vacuum Gas Oil	X	X	X	X	X	X	HSF	SH	AD	D	D
Fuel Oil	U	U	U	U	U	U	HSF	HS	H	AD	D
Crude Oil	U	U	U	U	U	U	HGF	HGS	HGS	See Note below	AD

For explanation of symbols see below.

+ Assumes MDO carried in clean ship. If not, substitute U.

Loading Fuel Oils after Crude Oils: Where unpumpable bottom residues, sediments or BS&W remain from the previous cargo of crude oil, tank bottoms must be machine-washed, hot or cold according to the removability of the sediments, lines and pumps flushed and all water and residues completely stripped from tanks, cargo lines and pumps into a single tank for pumping ashore prior to loading any residual type fuel oils. If appreciable sediments remain in ballast tanks on completion of discharge of dirty ballast ashore, it may be necessary to bottom wash these tanks. The slop tank, if being used to load fuel oil, after discharge ashore, must be hot machine-washed and stripped dry of all water and sediment, pumping directly ashore.

Note: If last cargo was a "sour" crude, see "Radio – Pre-Arrival Information – (c)".

Explanation of Symbols used in Tank Cleaning Guidance Chart:

A When similar cargo to the last cargo carried is nominated, and no ballast is carried in tanks or cargo system concerned, no preparation, other than draining, may be necessary unless advised to the contrary.

B Tank bottoms, cargo lines and pumps to be waterwashed; tank lines and pumps to be completely drained, special attention to be paid to deadends and low points, including deck lines and manifolds. Valves to be opened to drain lines of excess water.

C Tanks, lines and pumps to be cold water machine-washed; tank lines and pumps to be completely drained, special attention to be paid to deadends and low points, including deck lines and manifolds. Valves to be opened to drain lines of excess water.

D Tanks, lines and pumps to be completely drained of cargo and/or water, special attention to be paid to deadends and low points, including deck lines and manifolds.

F Fresh water rinse large tanks, lines, pumps and risers to remove traces of salt.

G Tanks must be gas-free to below 40° of the lower explosive (or flammable) limit.

H Tanks to be hot water machine-washed, lines and pumps to be hot washed; tanks, lines and pumps to be completely drained paying special attention to deadends and low points, including deck lines and manifolds. Valves to be opened to drain lines of excess water.

M After gas-freeing for entry, tank bottoms to be mopped dry of all water after valves have been opened, prior to loading.

S After gas-freeing for entry, all loose scale and sediment to be removed.

W Spot tank cleaning machines where necessary to cover shadow areas, under beams and plate stiffeners, etc.

X Special cleaning instructions required from Owners/Charterers.

U Not suitable for this grade to follow.

Note: 1. Hot wash water temperature (H) should be in accordance with coating manufacturers recommendations, but not less than 95°F.

2. If changing from dirty to clean trade special chemical cleaning is necessary.

AUTHORITY: Subic Bay Metropolitan Authority (See "Part (A)").

Operator: Coastal (Subic Bay) Terminal Inc., Building 1428, Subic Bay Freeport Zone, Philippines. *Tel:* 63-47-384-3401/4251/4352/4534. *FAX:* 63-47-384-4126. *Contact:* J. Van Der Linde, Marine Superintendent.

AGENT: Jardines Shipping Agencies (See "Manila").

SURIGAO, Mindanao: 09.49 N. 125.29 E. (See Plan)

PORT LIMITS: A vessel is considered an "arrived ship" when 1 mile N.E. of Lighthouse.

DOCUMENTS:

- Crew List.
- Passenger Manifest.
- Record of Vessels Boarded.
- Statement of Facts.
- Voyage Memo.
- Ship's Particulars.
- Coasting Manifests.
- Statistical Supplement.

PILOTAGE: Pilotage is compulsory for all vessels.

Maasin-Surigao Harbour Pilots Association, through Captain C.Toledo, is informed 24 hours before expected arrival of the vessel by telegram, or as the vessel approaches the port limits or anchorage area. The pilot is contacted through VHF Channel 16. The pilot boat is painted orange, and the Pilot Station is located at the side of the lighthouse. Pilot boat's docking area is located at the Northernmost portion of the baseport of Surigao, adjacent to Berth No. 1.

Harbour Pilots Boarding Station:

	Latitude	Longitude
Foreign Vessels	09° 51′ 30″ N.	125° 28′ 30″ E.
Domestic Vessels	09° 47′ 43″ N.	125° 30′ 40″ E.

ANCHORAGES: Vessels can anchor in 30 m. with sand bottom in a position 0.25 miles East or S.E. of Surigao Light. Anchorages are exposed to N.E. monsoon.

RESTRICTIONS: There are at present no tide or draft restrictions for entering the harbour for anchorage purposes for formalities. It is not recommended to transit through Hinatuan Passage for purposes of docking at Nonoc Pier at night, due to unpredictability of the current.

MAX. SIZE: Vessels maximum permissible length at baseport is 150 m., and maximum draft not to exceed 8.0 m. at M.L.L.W.

RADIO: Port Management Office (PMO) of Surigao is equipped with Single Side Band (SSB), which is used as the communication link between PPA – PMO Surigao and Head Office and all other PMOs throughout the country. The call sign is simply "PMO Surigao".

VHF: *Vessels Traffic System (VTS):* Part of the Port Operations Radio Traffic System is the Vessel Traffic System (VTS), where vessels arriving at baseport of Surigao establish voice contact with the Philippine Ports Authority (PPA) – PMO Surigao, through VHF Channel 16 and 148.57 MHz. Any information vital to docking, required cargo handling service, dangerous cargo warning, etc., are relayed to the base, whose call sign is "Blue Gee Base", or any of the following: Bollard Master: Port Manager. Bollard One: Operations Manager.

TUGS: No tugs available. For tug requirements, please contact PPA Cebu or Manila.

Note: Tugs on stand-by in the locality could be arranged for towage.

BERTHING:
Main Berth (Northern Portion): 354 m. long. 15.0 m. wide (working area).

At M.L.L.W., maximum permissible drafts are as follows:

Berths No. 1 – 1.5	4.0 m.
Berths No. 1.6, 2, 3 and 4	8.0 m.
Berths No. 5, 6 and 7	6.0 m.

Bulkhead (Southern Portion): 172 m. long; where smaller crafts like pump boats and motor bancas from the islands dock. Maximum permissible draft for Berths No. 8, 9 and 10 is 2.0 m.

Berths are numbered from 1 to 10, starting from the Northern portion of the wharf.

The port has no attached shore equipment or quay cranes, but it is capable of handling cargo/heavy lifts with the following equipment:

1 crane with S.W.L. 15 tons.
4 forklifts of 5 tons capacity.
1 forklift of 15 tons capacity.
27 units trucks.
4 LCT's for loading/unloading midstream.

Regulations: First come first served basis is the general rule in determining berthing priorities.

STEVEDORES: 24 hours before arrival of vessels, the cargo handling operator is informed, through a copy of the Application for Berth, to give ample time for the preparation of gang complement. One hour after vessel's failure, to arrive as scheduled, could mean settlement of laborers' stand-by time; unless the vessel's representative is able to file an amended schedule.

Cargo handling efficiency/performance is assured by the implementation of the Vessel's Operations Commitment (VOC), which serves as sort of contract between the carrier and cargo handler.

MEDICAL: Surigao Provincial Hospital, Miranda Family Hospital, Surigao Medical Center and Grace Christian Clinic of Surigao City service major and minor injuries. Laboratory facilities are also available.

FRESH WATER: The baseport of Surigao provides water at P.35.00 per cu.m. The fresh water at the port of Surigao is one of the factors that increases vessels' calls.

FUEL: Available.

FIRE PRECAUTIONS: The port has a well organised Fire Brigade and Evacuation Committee. It is equipped with fire extinguishers, sand drums, shovels, and axes at strategic areas of the port.

GANGWAY/DECK WATCHMAN: Provided by the security force of PMO – Surigao, as the port adopts the concept of Unified Security Command. During arrival of passenger vessels, or any vessel that requires security, security guards on tour of duty are augmented with those not on regular tour. On watch for any pilferage of cargo or any behavioural problem, the security guards, PPA Operations Officers, and members of Brazo sa Pantalan work as a team.

HATCHES: Opening/closing of hatches performed by dockhands and monitored by PPA Operations Officer-on-Duty.

AIRPORT: Airport is 4 km. away from the Baseport of Surigao City. Flight schedules of Philippine Airlines are as follows:

Tuesday, Thursday and Saturday: Arrival 0945 hrs., departure 1010 hrs.

Monday, Wednesday and Sunday: Arrival 0730 hrs., departure 0745 hrs.

BANKS: There are no banks within the port area, but all banks within the City are very accessible from the port area at a maximum distance of 1.0 km. These are the PNB, Far East Bank, PCI Bank, DBP, UCPB, BPI Family, BPI, Allied Bank, RCBC, Rural Bank, Land Bank and Metro Bank.

DELAYS: Delay is a very remote possibility, as the baseport has only an average berth occupancy rate of 40%.

GENERAL: *Port Management of Surigao:* One of the focal points of foreign and domestic shipping in Southern Philippines is PMO – Surigao. Port of Surigao is the principal port serving the provinces of Surigao del Norte, Surigao del Sur, including Bislig Port, Siargao and Dinagat Islands, Agusan del Sur and Southern Leyte.

AUTHORITY: Philippine Ports Authority, Port of Surigao, Port Area, Surigao City, Northern Mindanao, Philippines. *Tel:* 87366, 87361. *Contact:* Winfred G. Elizalde, Port Manager.

TABACO, Luzon: 13.41 N. 123.58 E. **(See Plan)**

DOCUMENTS:
Inward Coasting Manifest.
Hatch Plan or Stowage Plan.
Vessel's Information Card.

PILOTAGE: Pilotage is compulsory. ETA advice should be sent to the Harbour Pilot Association, Legazpi City at least 24 hours before vessel's arrival. The vessel is met by the Harbour Pilot about 2 km. from the wharf aboard a boat displaying a Pilot's flag.

ANCHORAGE: Within the Tabaco Bay but not less than 500 m. from the existing facility.

RESTRICTIONS: Berthing space is limited due to its physical length and the existence of a shipwreck at the Northern end of the wharf.

MAX. SIZE: LOA 300 m., draft 40 ft.

HEALTH: Vessels clear quarantine on arrival at the Tabaco Harbour. Quarantine Officers will normally board the vessel 2 km. from the existing wharf.

BERTHING: The existing facility can accommodate two foreign-going vessels of regular size at one time. Length of quay 300 m. Width 12 m. Storage area 2 hectares. Max. depth of water 30 ft. Quay height above sea level 2 m. at high tide and 5 m. at low tide. Average rate of loading/discharging 22 tons per gang hour.

CRANES: 2 shore cranes available with capacities of 20 and 25 tons. For heavy lifts, vessels are required to use their own gear.

STEVEDORES: Provided by Tafworks Arrastre Corporation.

MEDICAL: 1 government hospital and 2 private hospitals.

FRESH WATER: Can be provided by pipeline or hoses from the port facilities.

FUEL: All grades obtainable from major oil depots at Legazpi City which is approximately 27 km. from the port area and supplied by lorries alongside.

GANGWAY/DECK WATCHMEN: Available, but not compulsory.

HATCHES: Opening and closing of hatches is part of the stevedores' work or at the Master's option.

REPATRIATION: All facilities available for crew changes.

AIRPORT: At Legazpi City.

HOLIDAYS: New Year's Day (January 1st); Araw Ng Kagitingan (April 9th); Holy Thursday; Good Friday; Labour Day; (May 1st); Independence Day (June 12th); P.I-U.S. Friendship Day (July 4th); Bonifacio Day (November 30th); Special Holidays declared by the President of the Republic of the Philippines are also included. If any other legal holiday falls on a Sunday the following day is observed as a holiday. Cargo work can be arranged on any or all holidays with the vessel's Agent.

POLICE/AMBULANCE/FIRE: Police and Fire, Tel. 222; Ambulance, Tel. 215.

TELEPHONES: Placing of telephones on board can be arranged with the branch office of the local telephone company (MATELCO).

SHORE LEAVE: Crew allowed ashore in company of an Immigration Agent.

GENERAL: Vessels intending to call at the port of Tabaco shall apply for a berth space at least 24 hours before arrival. No dirty ballast may be dumped into the territorial waters of the Philippines. Rat guards shall be placed on all mooring lines. Berth allocation is on a first-come first-served basis.

DEVELOPMENTS: Salvaging of the shipwreck at the Northern end of the wharf, extension of the existing facility by 120 m.; Passenger Terminal; 5 sets cluster lights.

AUTHORITY: Terminal Supervisor, Philippines Port Authority, Port of Tabaco, Tabaco, Albay. *Tel:* 378.

The Port Manager, Philippine Port Authority, P.O.Box 164, Legazpi City. *Tel:* 2012. *Contact:* Winfred G.Elizalde, Port Manager.

TACLOBAN, Leyte: 11.15 N. 125.00 E. **(See Plan)**

See "General" before first port.

DOCUMENTS: *Entrance Formalities:* For submission to PPA Harbour Section:

3 copies Inbound Coasting Manifest with enclosed or attached on each copy the following:

Crew List.
Oath of Master.
Passenger List (passenger vessels only).
Import Declaration (foreign vessels only).
Pratique (foreign vessels only).

Roll Book for presentation and clearance from last port of call also required.

Exit Clearance:

3 copies Outbound Coasting Manifest with attached or enclosed on each copy the following:

Crew List.
Oath of Master.
Passenger List (passenger vessels only).
Export Declaration (foreign cargo vessels).

PILOTAGE: The following signals from vessels requiring a Pilot are:

By day:

(a) The pilot jack hoisted at the fore.
(b) The International code signals or P.T.
(c) 2 long blasts followed by 1 short blast on ship's whistle.

By night:

(a) The pyrotechnic light, commonly known as blue light every 15 minutes.
(b) A bright white light, flashed or shown at short or frequent intervals just above the bulwarks for about a minute at a time.
(c) The International code signals P.T. by flashing lights.

Telegraphic address is Tacloban Harbour Pilot's Association, Tacloban City. 24 hours notice of ETA is required before arrival of vessels. No VHF in pilot boat or pilot station.

All pilot boats in general are painted white above the waterline and black below, with the letter "P" not less that 12.5 cm. in length on both bows above the waterline.

During the day, boat in use shall carry at the mast a red and white flag not less than 6 decimeters wide and 9 decimeters long.

The exact location where the Pilot has to be taken on board when entering Tacloban through San Juanico Strait is at Canauay Island about 2 miles N.W. of said Island. For vessels entering Tacloban Port through San Pedro Bay, the Pilot may be taken on board a mile North of Mariquitdaqui Lighthouse.

In case of bad weather, vessels are advised to drop anchor about 3 miles South of Dio Island when waiting for the Pilot.

With respect to safety measures while Pilot boarding vessels, it is suggested that the Master put his vessel to windward in a postion where the pilot boat is protected from big waves and strong winds. They must lower their accommodation ladder or rope ladder.

The location of anchorage for vessels awaiting a Pilot is either 1 mile North of Mariquitdaqui or 2.5 miles S.E. of Dio Island.

ANCHORAGES:

Dio Island Anchorage:

Position – 2 miles S.E. of Dio Island

Depth – 6 – 7 fathoms

Area – 4 square miles

Basey Anchorage:

Position – 1.6 miles West of Jinamoc Lighthouse
(Lat. 11° 15′ 36″ N., Long. 125° 04′ 32″ E.)

Depth – 4.5 fathoms

Area – 0.8 square miles

Tacloban Quarantine Anchorage:

Position – 0.5 miles South of Binatac Point
0.7 miles North of Panirungan Point

Depth – 4 – 5 fathoms

Area – 1 square mile.

RESTRICTIONS: Controlling draft for vessels entering Port of Tacloban via San Pedro Bay is 19 ft.

Due to numerous shoals, reefs and fish traps which abound in the area along the channel, vessels arriving at night must drop anchor either at the point 1.5 miles North of Mariquitdaquit or at the point 2 miles S.E. of Dio Island. The Pilot will conduct the vessels in at daybreak.

Tides in Tacloban show great inequality, mostly at HW. Mean range of tide is about 1.6 ft., whereas the Diurnal range is 2.3 ft. Flood current sets in a Northeasterly direction, while ebb current sets Southeasterly with a maximum velocity of 3 knots.

MAX. SIZE: See "Berthing".

HEALTH: Pratique is only necessary and required in the first port of entry; it is automatic when entering ports in the same country of state.

RADIO: Radio communication of the Philippines, Inc., Manila.

TUGS: Tugs normally join the vessel when inside Tacloban Harbour. For docking, tugs usually use the vessel's lines.

BERTHING: Inform local office of Philippine Ports Authority at least 24 hours before ETA if vessel on scheduled voyage and 36 hours before ETA if a tramping vessel.

Length of quay – 1,048.8 m., with 217.3 m. allotted for foreign vessels, 585.5 m. allotted for domestic vessels and 246 m. allotted for pump boats.

Maximum permissible ship draft at low water (sea water), Foreign vessels – 6 m.; Domestic vessels – 4 m. – 6 m.

Note: Actual depth along berth for foreign vessel at LW, 7 m.; Domestic, 4 m. – 7 m.

Load/ Discharge – Usually by ship's own gear but shore equipment available for rent.

BULK CARGO FACILITIES: See "Berthing" for berth details.

Cargoes handled: Copra, grain, abaca, sugar, rattan, lumber, drinks, goods in cartons, crated products, heavy lifts, steel bars, etc.

Facilties: Rope nets, rope slings, cable slings, spreader sets, sliding boards and pallets.

STEVEDORES: ETA advices should be furnished to stevedores through ship's Agent.

MEDICAL: Advance notice of required medical attention to ship's Agent essential.

TANKERS: No facilities.

FRESH WATER: Fresh water available through local supply.

FUEL: Only available to domestic (small) vessels.

FIRE PRECAUTIONS: Fire station in port area.

CONSULS: None.

REPAIRS: Not possible.

DRY DOCKS: None.

GANGWAY/DECK WATCHMEN: Necessary for safety of vessel. Ship's Agent makes all necessary arrangements.

OPENING/CLOSING HATCHES: Normally carried out by stevedores.

CERTIFICATES: All documents required by International Shipping Rules and Regulations.

CUSTOMS ALLOWANCES: One carton cigarettes per week for each man. Wines/spirits at the discretion of the Collector of Customs.

CARGO GEAR: Load/discharge affected usually by ship's gear but shore equipment available for hire.

REPATRIATION: Immigration Officer effects crew changes and arranging necessary repatriations.

AIRPORT: Distance from airport, 9 km., and is regularly served by airlines.

HOLIDAYS: Depending upon agreement with stevedores, work may be performed during holidays.

POLICE/AMBULANCE/FIRE: All departments are within one minute's call from the harbour.

TELEPHONES: Can be connected on board if required.

SERVICES: No special services available.

SHORE LEAVE: Crew members allowed ashore.

IDENTIFICATION CARDS: Needed for inspection by Immigration Officer.

GARBAGE DISPOSAL: Garbage disposal is available upon request from the City Government of Tacloban.

WASTE OIL DISPOSAL: Not available.

SEAMAN'S CLUBS: No seaman's clubs organisation exists, however facilities such as telephone, church services, shopping centers exist, while other services can be arranged in coordination with local clubs such as YMCA, JAYCEES, Lions, Rotary and other organisations.

CURRENCY: Philippines Pesos (P).

REGULATIONS: No unusual regulations.

DELAYS: Berthing: When all berths are occupied upon arrival. Loading/discharging: Limited number of available haulers due to simultaneous operations of vessels at berth. Bunkering: Simultaneous bunkering of vessels.

SHIPMASTER'S REPORT: January 1991.

Documents:

Prepared by Agent:

12 copies Inward Foreign Manifest.
12 copies Outward Foreign Manifest.
12 copies Oath of Master.

Prepared by vessel:

Last Port Clearance.
12 copies Crew List.
5 copies Stores List.
5 copies Personal Effects List.
5 copies Animals List (even if 'nil').
5 copies Arms and Ammunition List (even if 'nil').
5 copies Plants List (even if 'nil').
5 copies Narcotics List (even if 'nil').
5 copies Passengers List (even if 'nil').
5 copies Ports of Call List.
3 copies Ship's Particulars.

If Tacloban is the first Philippine port:

1 copy Health Declaration.
2 copies Vaccinations List (Cholera and Yellow Fever).

Pilotage: Vessels entering from the South (San Pedro Bay) are strictly recommended to take the Pilot at a position about 1.5 miles North of the Mariquitdaquit Lighthouse, as all buoys shown on B.A. Chart No. 3840 are missing. In addition, the Pilot does not follow the recommended track on the said chart, he gives a wide berth to the West of the Egbert Shoals which are not marked by buoys.

The Pilot can be contacted by VHF on Channel 16.

The Pilot only works with visible landmarks, if they are obscured by rain and/or fog the Pilot anchors the vessel. Pilotage is carried out during daylight only.

Berthing: There are no tugs available. The Pilot will not berth and/or unberth the vessel during strong winds.

Vessels are berthed port side to.

Maximum allowed draft is 19 ft., but sailing with this draft is only possible at high water.

AUTHORITY: Philippine Ports Authority, Port Management Office, Port Area, Tacloban City, Philippines. *Tel:* 321-2469, 321-3373. *Contact:* Salvador L. Reyna, Port Manager.

TAGALOAN, Mindanao: 08.32 N. 124.44 E. **(See Plan)**

SHIPMASTER'S REPORT: February 1989.

LOCATION: Lat. 08° 31′ 50″ N., Long. 124° 44′ 21″ E.

The wharf is in Macajarlar Bay and is aligned 150°/330°.

The wharf is private and operated by Ferrochrome Philippines Inc., Tagaloan Misamis Oriental, P.O. Box 249, Cagayan De Oro City 9000, Mindanao, Philippines.

PORT LIMITS: The Agent declared vessel as "arrived" when in position Lat. 08° 32′ N., Long 124° 40′ E., which is the position given for picking up the Pilot (Cagayan De Oro), but the consignee considers the vessel arrived only when berthed.

DOCUMENTS: Fifteen Port Officials boarded the vessel at Cagayan De Oro and once vessel was cleared, after one hour, vessel proceeded to berth at Tagaloan.

Officials from Customs / Immigration / Quarantine / Plant and Quarantine / Health / Coast Guard / Agent and two separate officials boarded from Manila as vessel had People's Republic of China crew, whom the Philippine Authorities class as restricted crew for landing purposes.

Following documents were required:

4 copies Crew Personal Declaration.
4 copies Provision, Engine Room and Deck Stores.
4 copies Narcotic List.
4 copies Bonded Stores.
3 copies Cargo Manifest.
4 copies Plant and Animal Declaration.
4 copies Vaccination List.
3 copies Ship's Particulars.

PILOTAGE: Pilots were arranged by Agent from Manila. Vessel had given 7/5/3/2 and 1 day's notice of ETA to Agent. Vessel requested to pick up Pilot at Cagayan De Oro in position 08° 32′ N., Long. 124° 40′ E. Vessel did not send separate message to Pilots.

Anchorage only in deep water of about 90 m, vessel remained underway near the Cagayan De Oro until port officials had cleared the vessel.

The same Pilot will berth the vessel at Tagaloan, but had to proceed at very slow speed, as the Pilot launch had to keep up with the vessel and it is used for line handling at the berth.

Pilots at Cagayan De Oro are a private organisation and service the whole of Macajarlar Bay.

Address: Cagayan Harbour Pilots Inc.
Port Area Macabalan, Cagayan De Oro City
Tel: 24-47. Telex: 7789 (PT & T).

RESTRICTIONS: Pilotage available 24 hours, depending on weather conditions, as no tugs available.

MAX. SIZE: Max. draft 10.0 m., and max. deadweight 40,000 tons. Size restriction is due to stresses imposed on pier equipment when vessel is shifting alongside.

HEALTH: Free Pratique is granted on arrival. No Radio Pratique available.

VHF: Cagayan De Oro Pilots operate on VHF Channel 16 and work on Channel 6. Contact with Pilots was made at a distance of 35 miles when approaching from the West.

TUGS: Not available, but tugs can be obtained through Agents of the "Villanueva", 3,000 h.p., but very expensive. Pilot informed us that one tug of 1,000 h.p. will be available late 1989.

BERTHING: Max. draft 10.0 m., depth alongside 12.0 m.

Only one shore crane available with S.W.L. of 12.5 tonnes, reach 22.5 m., height of lift 26.0 m.

Conveyor capacity – 140 tonnes/hr. – 200 tonnes/hr.

Cleaning of holds is done by small skid loader. Conveyor not designed for lumpy ore and maximum size that can be discharged is 150 mm.

Discharging done by shore crane and vessel has to move alongside the berth, the only problem was when discharging the extreme end hatches, the leads for the lines were very short. Loading done by ship's gear and should be at least 15 tonnes SWL, as the buckets used, when loaded, weigh approximately 14.5 tonnes.

Rates given by pier operators were as follows:

Discharging Chrome Ore (Fine)	2,000 tonnes/day.
Chrome Ore Lumps	1,000 tonnes/day.
Coke	2,000 tonnes/day.
Loading Ferrochrome	1,500 tonnes/day.

For our vessel discharging Chrome Ore (fine), a rate of 3,400 tonnes per day was achieved.

STEVEDORES: Pier operators have their own stevedores.

MEDICAL: Medical and hospital facilities available at Cagayan De Oro City, which is 30 minutes by car.

DENSITY: 1023 – 1025.

FRESH WATER: Can be arranged by road tankers, but requires a very long hose of 200 m. at least, and therefore not recommended.

PROVISIONS: Good quality provisions can be arranged from Cagayan De Oro City.

GENERAL: At present, about 3 – 4 ships call at this port each month for discharging chrome ore, coke and other raw materials for the Ferrochrome plant. Main cargo loaded is Ferrochrome (finished product), about 80% to Japan and the rest for Europe. An average of about 2 or 3 ships call each month for loading the finished product, and quantities loaded do not exceed 5,000 – 7,000 tonnes at any one time.

The Ferrochrome Plant is a joint venture between the Philippines and an Austrian Company.

TANAUAN, Leyte: 11.06 N. 125.01 E. (See Plan)

SHIPMASTER'S REPORT: 1976

N.I.D.C. Coconut Oil Pier: Location of berth Lat. 11° 06′ 15″ N., Long. 125° 01′ 30″ E. The berth is 7 miles from the Pilot boarding point. Least depth of water in channel from sea to berth, 32 ft. At berth bottom is mud and sand. Density 1025. Docking and undocking in daylight only at any stage of tide.

Anchorage 1.5 miles North of Mariquitdaquit Light. Terminal Information: Use shore hoses. Length of pipeline – 3,000 ft. connection at manifold – 8 in. Shore-booster pump not used. No steam. Product handled, coconut oil.

Port Information: Pilotage compulsory. Pilot requires 12 hours' and 24 hours' notice. Pilot boards 1 mile North of Mariquidaquit Island and comes from Tacloban. It is unsafe to enter and leave after dark. Vessels can enter and leave any state of tide. Max. LOA 1,000 ft. Max. beam 90 ft. Max. draft 31 ft. No tugs available. Vessel able to berth andunberth without aid of tugs.

Facilities available: Fresh provisions available from Tacloban, a small town, 20 km. away. Chandler requires payment in cash for goods.

Airport at Tacloban. Doctor and hospital available. Groceries, meats and laundry available.

No fresh water, repairs, Lloyd's Surveyor or fuel available.

VILLANUEVA, Mindanao: 08.35 N. 124.44 E. (See Plan)

DOCUMENTS, etc.,: See "Cagayan de Oro".

MAX. SIZE: Max. LOA 340 m., max. draft 21.5 m., max. beam 55 m.

BERTHING: Max. workable length allowed without shifting 248.5 m., max. height of hatch coamings above waterline 17.0 m., max. width of hatch coamings 16.8 m., outreach of grab from fender line 33.0 m., mean (F.W.) depth alongside 23.55 m., length of berth 351.0 m., depth at MLW 23.28 m., depth at MHW 24.38 m., distance from pier face to MHW level 4.45 m., distance from grab to MHW 22.25 m.

SHIPMASTER'S REPORT: May 1980.

Location: The Port of Villanueva is situated in Macajarlar Bay on the North coast of Mindanao Island in position Lat. 8° 34′ 45″ N., Long. 124° 44′ 22″ E. and has a clear deep water approach.

Pilotage: The Pilot and possibly Quarantine Officials board in position Lat. 8° 35′ N., Long. 124° 40′ E. by launch from Cagayan de Oro City.

Approaches: When approaching from the East, passage through the Surigao Strait creates no difficulties as there is deep water. There are good radar targets and no excessive tides or currents. Passage between Camiguen Island and the coast is also clear and deep. Numerous fishing vessels encountered throughout the area as well as frequent passings of coastal traffic.

Anchorage: Although there is very deep water to close inshore there is an anchorage position, recommended by the Pilots, in position Lat. 8° 37′ N., Long. 124° 44′ 30″ E. which is 1 mile offshore.

Tugs: There are at least 4 tugs to assist with berthing, all modern efficient vessels of over 3,000 h.p. Tug's ropes used for towing.

Berthing: Berth is in position Lat. 8° 34′ 45″ N., Long. 124° 44′ 22″ E. and is aligned 050°/230°. The berth is 350 m. in length and fendered with 7 'Yokohama' balloon type fenders. Vessels of up to 300 m. in length berth port side alongside, vessels over 300 m. LOA berth starboard side alongside. Depth alongside 23 m. – 29 m. Daylight berthing only but reported able to leave at any time.

Moorings: Standard mooring equipment used, line boat used to run head and stern lines.

Moorings usually 4 head/stern lines, 2 breast lines and 2 springs at each end of vessel.

Loading: Loading is carried out by 1 loading unit with a capacity of over 4,500 t.p.h. The product, sinter ore, is a finished product with a stowage factor of 23 cu.ft.–24 cu.ft. per ton relatively clean and not much dust. The product can be loaded into holds previously containing coal without cleaning.

Discharge facilities exist on the same berth where there are 2 units using 60 ton grabs.

A thorough draft survey is carried out on arrival and again after loading completed.

General: After berthing the vessel is boarded by 14 port officials of various departments from plant quarantine to immigration, paperwork takes about 2 hours on arrival and again before departure after loading completed.

Fresh stores, including fish, are available of good quality and a reasonable price.

There is no VHF communication but telex service to Manila is reliable.

While alongside 3 Customs Officers/Inspectors remain on board and require food and accommodation on a 24 hour basis.

SHIPMASTER'S REPORT: January 1981.

Vessel: LOA 259.0 m., beam 39.6 m., draft 52 ft. 6 in.

Discharged 109,000 tonnes of iron ore at Philippine Sinter Corp. Pier.

General: The pier of Philippine Sinter Corporation at Villanueva is located at the S.E. end of the "J"-shaped bay of Macajalar, in position Lat. 08° 34.45′ N., Long. 124° 45.24′ E., on the North coast of the Philippine island of Mindanao, in the province of Misamis Oriental. Villanueva is only a very small village. The nearest city is Cagayan de Oro, 24 km. (45 minutes) by car from the plant. Our Agent and almost all other offices of importance, are located there.

Documents: The Authorities and the Agents' representatives boarded the vessel at the anchorage (14 persons). The following were required:

10 Crew Lists.
8 Cargo Plans.
2 Vaccination Lists.
1 Maritime Declaration of Health.
6 Ship's Stores Lists.
6 Personal Effects Lists.

In addition, there were other lists, but the Agent had all of them made out in advance.

Telegraphic Free Pratique is obtainable. A telegram sent to the Agent 24 hours before arrival stating the number of Filipinos and Europeans is also compulsory.

Upon departure, no Filipino crew member is allowed to depart if his Seaman's Book has expired, so all Seaman's Books must be renewed before departure. Filipino citizens who are not seamen (wives, etc.) are not allowed to join the vessel in a Philippine port and stay with the vessel to its next port of call. Visiting was no problem, except that a special Customs Permit must be obtained.

Pilotage: Pilotage is compulsory both when anchoring and at docking/undocking. The Pilots have a portable CB radio, but no VHF. The pilot cutter is about 50 ft. long, with a large (for its size) white superstructure. Pilot boarding ground Lat. 08° 37′ N., Long. 124° 42′ E. for inbound vessels. For outbound vessels, Pilot leaves as soon as the vessel is turned, and is about 5 cables off the pier.

Anchorage: The Bay of Macajalar is a deep water bay, with the exception of a shallow area centered at Lat. 08° 40.75′ N., Long. 124° 41.5′ E., and a strip of shallow water extending generally less than 0.5 miles off the coast.

The Villanueva Anchorage is the one exception on the East side of the bay. It is a ledge of less than 100 m. depth extending 1.4 miles Westward from Lat. 08° 37′ N., Long. 124° 45.5′ E. on the shoreline, and it is 3.5 cables wide. The recommended anchorage is 8 cables due West of Lat. 08° 37′ N., Long. 124° 45.5′ E. The depth here is 70 m. or less than 40 fathoms. We anchored here and found it to be good holding ground. Not being more than 0.8 miles from the reefs in a "J" shaped bay, consequently open to wind and sea from West to North, I would not like to anchor there in any strong Northwesterly wind.

In our case the wind was from N.E. to S.E. which, according to the Pilot, were the prevailing wind directions. We did, however, experience quite a bit of swell.

Berthing/Unberthing: Docking and undocking is only done during daylight. There are 4 tugs available in Villanueva, each of 3,500 h.p. The Pilot brought the vessel parallel to the pier about 0.2 miles off, and the 3 tugs we used (1 forward, 1 amidships and 1 aft) pushed us alongside without difficulty. We docked starboard side to. There was, according to the Pilot, no preference for docking starboard or port to, that is, for vessel's discharging.

Vessels loading must always dock port side to due to the construction of the shiploader.

The docking sonar had, in my opinion, the big fault that the Pilot had to rely upon verbal information via the CB radio. A display board visible from the bridge would have enabled us to form instant opinions.

Undocking was a reverse operation; we were pulled by 2 tugs until 0.2 miles off the pier, then the third pushed us around.

Cargo Handling Facilities: The pier is a concrete structure that rests on several large pipes that are sunk down to bedrock. It lays in direction 049° – 229°. There is a "gangway" connecting the pier to the shore. The pier itself is 380 m. long and about 50 m. wide. Large airfilled bags are used as fenders, 6 m. – 7 m. long with a radius of 1.5 m. – 2.0 m. So, even with a relative heavy swell, the ship lays very nicely alongside this cushion.

We tied up with 4 head/stern ropes, 2 spring and 2 breast ropes. The discharging cranes are of the same type as "Kawasaki" have in the port of Chiba, max. 6 tonnes with clamshells of 30 tonnes, portable cranes. Hourly average capacity on lump ore 1,100 tonnes per crane, and on fine ore 1,400 tonnes. We averaged 2,794 tonnes with 2 cranes.

The discharging operation was impressive, with regard to speed and precision.

The ship loader was a normal type conveyor belt with an airdraft of about 40 ft. Loading capacity 4,000 tonnes p.h. Free rail area at pier about 280 m., no shifting while loading for a ship of our size.

Services: There is good drinking water available at the pier. Bunkers are obtainable but at what quantity and price I was not able to find out.

As of repair facilities, I had the impression that only simple repair work could be carried out.

The city of Cagayan de Oro has an airport with a twice daily direct flight to Manila, and once a day connections with Cebu and Davao. There are no international flights.

International telephone service is extremely poor. One must make the call directly from the telephone company's office, and a 2 hour – 3 hour waiting time for Europe and the U.S.A. must be expected. A call to Manila may come through in less than an hour. The Agent had telex and this is the only sensible communication with Cagayan de Oro.

With mail from Europe and the U.S.A., one must reckon on 2 weeks to 3 weeks. It seems that all communications go through Manila, with the delays that this automatically causes.

The Agent had a minibus service from the plant to Cagayan de Oro. This proved a necessity, as taxis are scarce.

The ship chandler could only obtain foodstuff.

SHIPMASTER'S REPORT: December 1988.

The vessel arrived at Villanueva for loading Iron Ore Sinter for discharging at Sparrows Point, Baltimore, U.S.A. The information pertaining to port facilities and conditions have been collected and compiled during this call.

General: The Philippine Sinter Corporation (PSC) is one of the biggest single foreign investments in the Philippines today. This industrial joint venture between Kawasaki Steel Corporation of Japan and PSC was incorporated in 1974. Sinter production started in April 1977.

Mindanao Sinter Plant – Product and the Process:

The "Sintering" consists essentially of mixing fine iron ore with solid fuel, normally coke and flux such as limestone, and burning the mixture under controlled conditions to produce hard but permeable lumps which are ideal blast furnace feed. The mixture is spread evenly over a continuous train of pallets of the sinter machine in a uniform bed thickness and ignited under induced pressure provided by huge blowers. The blended material is agglomerated into big blocks of sintered ore. A hot crusher breaks these blocks into 150 mm. lumps, which are then cooled. The rest of the process involves screening to remove mediums and fines which are recycled.

PSC is diversifying into a new project which involves construction of drying plant to treat pineapple pulp into suitable cattle feed. The drying plant is located adjacent to existing sinter plant and will utilise the recovered waste heat from the sinter plant.

The Mindanao Sinter Plant has three main components.

1. The Ore Yard.
2. The Sintering Facilities.
3. The Port Facilities.

1. THE ORE YARD:

The 18 hectare ore yard is made up of 4×45,000 sq.m. yards with an aggregate storage capacity of 1,500,000 tons. The yards are equipped with a Wing stacker and reclaimer, etc.

The ore yard facilities are:

4 Ore yards, (50 m.×900 m.), for iron ore, sintered ore, limestone and coke breeze.
2 Stacker-Reclaimers, 3,600–6,000 t.p.h. and 3,600–1,500 t.p.h., rail mounted.
1 Wing stacker, 800 t.p.h., single wing and rail mounted.
8 Bulldozers.
6 Mobile truck cranes.

2. THE SINTERING FACILITIES:

These consist of one sinter machine with a 450 m. grate area, rated at 5 million tons per year and other ancillary equipment for limestone crushing, screening, coke grinding, material blending, mixing, storing, feeding and processing.

The equipment of the sintering facilities is:

14 Blending Hoppers, 600 cu.m. capacity.
1 Sinter Machine, 450 sq.m. grate area, Dwight-Lloyd type (90 m.×5 m.).
1 Sinter cooler, 400 sq.m. bed area, 15,000 cu.m./minute circular type.
2 Main blowers, 18,000 cu.m./minute, double suction type.

In addition other facilities include:

(a) De-dusting system equipment.
(b) Power equipment.
(c) Fuel tanks and deepwell.
(d) Maintenance shop for mechanical, electrical and instrumentation works.
(e) Laboratory for physical, chemical, bacteriological and environmental analysis.
(f) Instrumentation and control facilities.
(g) Communication facilities.

3. THE PORT FACILITIES:

The port has a main berth and a cargo berth. The 351 m. long main berth has a depth of 25 m. It can easily accommodate 300,000 d.w.t. bulk carriers and is equipped with 2 bulk unloaders with a capacity of 1,800 t.p.h. each and 1 shiploader with a capacity of 6,000 t.p.h. The cargo berth is 230 m. long with a depth of 5.5 m.

The following floating equipment is available:

2 tugs of 3,200 b.h.p., twin screw Z-peller.
2 tugs (pusher boats) of 3,200 b.h.p., twin screw.
2 barges each 6,000 d.w.t.
1 lineboat, 390 b.h.p., twin screw.

PORT INFORMATION:

Location: The Port of Villanueva is situated on the North coast of Mindanao Island, in Macalajar Bay, on the Eastern side in position Lat. 08° 34′ 45″ N., Long. 124° 44′ 22″ E.

Charts:

B.A. Chart No. 3811 – this chart is small scale for approaches.
U.S. Chart No. 92290 – this chart is fairly large scale and more useful.

Philippine Charts No. 4648 and 4649 – these charts were published by PC&GS in 1976 and are available from Philippine Sinter Corporation and may be obtained through Villanueva or Manila agents.

Port Limits: There is no specific demarcated port limit. Southern half of Macalajar Bay could be considered within port limits. However, entire bay is under control of Harbour Master of Cagayan De Oro Port, which is located on the Western side of the bay.

Pilotage: The Pilot and at times Quarantine Officers board vessels in position Lat. 08° 35′ N., Long. 124° 40′ E., by launch from Cagayan De Oro. Pilotage of Villanueva is carried out by pilots of Cagayan De Oro and is controlled by its Harbour Master.

Presently, there are 4 pilots at Cagayan De Oro for both ports. Usual arrival messages to be sent to Agent. VHF station at Cagayan De Oro keeps 24 hours' watch on VHF Channel 16. At least 6 hours prior to arrival, contact should be made with Port Authorities, calling "Cagayan Pilot Station" and give ETA, etc. Pilot boards vessel anytime, day or night, unless weather is bad, due to strong wind and rough seas hampering motor launch manoeuverability. Anchoring, berthing and unberthing at Villanueva is carried out anytime day or night on a 24 hour basis.

Anchorage: The Bay of Macalajar is a deep water bay. A strip of shallow water extends generally less than 0.5 miles off the coast. The Villanueva Anchorge is about 3 miles to the North of the berth, along the Eastern side of the bay. The recommended anchorage is in the vicinity of approximately 8 to 9 cables due West of position Lat. 08° 37′ N., Long. 124° 45.5′ E. In this area there is room for only 3 large vessels from Panamax size to 300,000 d.w.t. for safe distances whilst at anchor. The depth of water in this area is from 70 m. to 150 m. Anchoring is carried out by pilots anytime, day or night, however, it is preferable to anchor in daylight hours. On account of close proximity of coastline, during Northerly or North-Westerly winds, added precautions and vigilance would be needed to remain safely at anchorage.

While approaching the anchorage area, starboard anchor was lowered to 4 shackles in the water and the windlass was kept in gear. Vessel approached to within 1.15 miles of the coastline in position Lat. 08° 38′ N., Long. 124° 44.5′ E., ship heading 093° True, when echo sounder showed depth of 157 m. When vessel reached 0.77 miles off the coastline, cable was gradually lowered in gear up to 8 shackles in the water and subsequently was brought up when 0.68 miles off the coastline and water depth was 140 m. After swinging around with vessel heading on a Westerly bearing, water depth showed about 90 m. Holding ground was found to be good. There are no lights or buoys for checking anchor bearing. One has to improvise, using certain landmarks and conspicuous shore objects for ascertaining position by radar.

Approaches: Passage from East through Surigao Strait is safe as there is deep water. Most of the lights are either not working or are on low power. The passage through these waters can be made with good radar for night transits and impaired visibility periods during rain squalls. Numerous fishing vessels are encountered throughout the area, as well as coastal traffic. Also large vessels make use of Surigao Strait to and from Pacific.

Documents: The following documents were required and prepared by vessel:

10 copies Crew Lists.
4 copies Personal Declaration and 4 copies Stores List.
2 copies Vaccination List.
1 copy Maritime Declaration of Health.

In addition, there were other documents and Philippine forms which Agent had prepared in advance for Master's signature.

Vaccination List was not required by the Quarantine Officer.

Visaed Crew List: As informed by Agent, Visaed Crew List is a requirement. Prior to arrival at previous port, a telex message was received from Manila Agent advising that Crew List should be visaed by Philippine Embassy or Consulate. Therefore, 3 copies of Philippine Crew List forms were obtained from Philippine Embassy through Agent, which were then duly completed and sent for Visa. The visaed Crew List was forwarded by Agent to Villanueva in due course. Although it did not reach Villanueva when vessel arrived, Immigration authorities issued shore passes to crew without difficulty. Visaed Crew List reached Agent's office on day of departure (sent from Japan).

Health: Usual Radio Pratique message to be sent to Agent for presenting to Quarantine Officials. However, Pratique was granted by Quarantine Officer who boarded the vessel upon anchoring.

Boarding Formalities: Upon anchoring, 23 persons boarded the vessel, which comprises agents and representatives of various authorities:

Quarantine	1
Agents	3
Immigration	4
Customs	7
Plant and Animal	4
Coast Guard	4

Agent requested lunch and refreshments for all above officials.

Restrictions: There are no restrictions. Vessels up to 300 m. LOA and 250,000 d.w.t. are berthed at Villanueva for discharging iron ore and loading iron ore sinter. Maximum draft alongside berth is 25 m.

Radio/VHF: There is no radio or VHF station at Villanueva. Cagayan De Oro has a VHF station which keeps continuous watch. Vessels should send ETA messages through Manila Agent or directly by telex to Villanueva Agent.

At least 6 hours prior to arrival, contact should be made with "Cagayan Pilot Station" (Channel 16) for ETA notices and instructions.

Berthing Facilities: There are 4 motor launches for pilots at Cagayan De Oro which are painted red and are numbered "M.L. Pilot No. 2". "M.L. Pilot No. 3", "M.L. Pilot No. 4" and "M.L. Pilot No. 5". Launch No. 1 has been scrapped. There are 2 tugs of 3,200 b.h.p. and 2 pusher tugs of 3,200 b.h.p. There is 1 line boat of 390 b.h.p.

The main berth is 351 m. long with berthing capacity for vessels up to 300,000 d.w.t. and water depth of 25 m.

The main berth is used for discharging and loading operations. Berth is in position Lat. 08° 34.45′ N., Long. 124° 44.22′ E. and is aligned 050°/230°. The berth is protected by 7 "Yokohama" balloon type fenders. For discharging vessels there is no preference for docking starboard side to or port side to, whereas for vessels loading, docking with port side to is required due to location and movement of shiploader. Mooring lines are usually 4-2-2 at each end.

Cargo Facilities: For discharging there are 2 grab unloaders, rail mounted rope trolley type, each with a capacity of 1,800 t.p.h. These unloaders are adjacent to each other and are located on the Southwesterly side (i.e. after the shiploader).

For loading, there is one shiploader, rail-mounted luffing shuttling type, with a capacity of 6,000 t.p.h. However, in practice, average loading rate was found to be 4,500 t.p.h.

Air draft at berth is 40 ft. No shifting required while loading for Panamax size vessels. Iron ore sinter cargo stowage factor is 23 to 24 cu.ft. per ton. The cargo which was loaded was found to be very dusty, containing white-grey coloured powder (presumably limestone). Upon sailing, this powder was found to be sticking to hatch covers, main deck, pipelines, etc. and at some places use of scrapers was required as it could not be removed by hose washing. The dry powder remains could be swept more easily than removing when wet as it became sticky and hardened with water.

Fuel: HFO and DO can be supplied by trucks only, in any quantity. There is no pipeline facility for bunker supply at Villanueva.

Medical: Cagayan Medical Centre at Cagayan De Oro City is equipped with full medical and hospital facilities.

Stores and Provisions: A limited variety of deck, engine and catering stores are supplied from Cagayan, small quantities only can be supplied. Fresh provisions are also available at Cagayan De Oro. Prices of most items are normal, however certain items are expensive.

Surveyors: A.B.S. are stationed at Cebu. Surveyors of other Classification Societies are available from Manila with sufficient notice. Cargo surveyors at P.S.C. plant at Villanueva are from PNKKK, for carrying out draft surveys, etc.

Watchman and Safety: At anchorage, very efficient deck patrolling is necessary as pirates board unguarded vessels in dark hours. Loss of private property, ship's stores, ropes, paints, etc. are often reported. In addition to crew on deck, 3 armed guards, supplied by the Agents, patrol at night whilst at the anchorage.

Holidays: Government Offices, including Immigration and Customs, work 5 days a week. Agents and other commercial offices work half days on Saturdays.

Mail Service: Delays of up to 10 days to 15 days are normal as all mail is routed through Manila.

Telephones: Telephones are not provided on ship at berth. However, P.S.C. office located near the main berth has telephone for making domestic and International calls. Long delays for any International telephone calls from Villanueva, as well as Cagayan De Oro are normal.

Telex: Telex services to and from Villanueva were found to be normal.

Shore Leave: Immigration Authorities issue shore passes for crew to go ashore and crew can go to Cagayan De Oro. Agents arrange minibus for transportation to and from ship to Cagayan. Private taxis are also available. Travelling alone at night is not very safe.

Airport: Cagayan Airport is located 10 km. from Cagayan De Oro City and about 40 km. from Villanueva. Regular domestic flights are operated to and from Manila and Cebu.

Repatriation: Crew joining and leaving is possible, via Manila.

Time: GMT plus 8 hours throughout the year.

Consuls: Consulates of most countries are located in Manila and a few are located at Cebu.

Radio and TV Stations: AM/FM radio stations. Two TV channels from 1100 hrs. – 0000 hrs., programmes are in English and Tagalog.

Languages: English is widely understood and spoken. Visayas is the main language spoken on Mindanao Island. Tagalog, Spanish and English are taught in schools. Tagalog is the main language of Luzon .

Currency: The peso is the currency of Philippines. Exchange rate is linked to the U.S. Dollar. During ship's call, the exchange rate was U.S.$ 1.00=21.20 Pesos. However, in shops and stores, exchange was available at 20 pesos to U.S.$ 1.00.

AUTHORITY: See "Cagayan de Oro".

Operator: Philippine Sinter Corporation, Port Operations, Villanueva, Misamis Oriental, Philippines. Postal Address: P.O.Box 90, Cagayan Do Oro City, Philippines. *Tel:* 33-28. *Telex:* ITT-48406. *Contact:* Captain Emiliano Ea Duran.

WEST LINAPACAN, Palawan: 11.49 N. 119.07 E.

(See Plan)

LOCATION: *Location and Description of Terminal:*

1. West Linapacan Oil Terminal is located off the Western side of Palawan Island, at Lat. 11° 49′ 08.19″ N., Long. 119° 07′ 00.75″ E., in a water depth of 1,140 ft.

2. Navigation charts for the area are as follows:
British Admiralty Charts No. 967 and 3820, and U.S. Navy Charts No. 92490 or 14316.

3. The Terminal consists of a production and storage tanker called "FPSO II" of 125,000 tons, moored by means of a stern yoke to Single Point Mooring.

This vessel contains equipment necessary for production, storage and transhipment of crude oil. It is also the headquarters and accommodation of Terminal personnel.

To comply with international convention, during the hours of darkness, the vessel will show lights with the distinctive characteristics of the morse code letter "U". In periods of poor visibility, the fog signal will sound the morse code for the letter "U".

4. Vessels using the Terminal will be moored in Tandem, bow-to-bow, to the storage tanker, and loading is by means of a floating hose between the vessels.

ESSENTIAL REQUIREMENTS: *Summary of Most Essential Requirements to be met by Tankers Lifting Oil at West Linapacan Oil Terminal:*

1. No dirty ballast disposal.
2. Advise arrival time by radio.
3. Mooring Master meets ships 2 miles West of Oil Terminal.
4. Make a lee for the Mooring Master to board.
5. Have ready: 2 messenger lines forward, ship's derrick on port side, port manifold with 12 in. connection.
6. Vessel's Master responsible for safety of own ship at all times.
7. Lifting vessel's crew perform all operations of mooring, connecting and disconnecting hoses, and unmooring aboard lifting vessel.
8. Do not close valves against oil flow.
9. Emergency flow stop signal if all communications fail will be a continuous sounding of ship's whistle from either lifting vessel or "FPSO II".
10. No shore leave or crew change is permitted.
11. When arriving:
    By day: Fly flag "Q".
    By night: Display red light over white light for quarantine service.
12. Vessel's anchor to be secured against accidental use from the time the Mooring Master boards.
13. West Linapacan local time is GMT plus 8 hours throughout the year.
14. No supplies of any kind of medical services (except in case of emergency, and subject to a doctor being available), or other services of any kind are available at West Linapacan Oil Terminal.
15. Smit Connector or bow chain stopper of lifting vessel should have a minimum 76 mm. horizontal and vertical opening, and be properly greased and ready for use. A large 14 lb. hammer should also be available.

PORT LIMITS: The export vessel is considered "an arrived ship" when she has entered the territorial water of Palawan.

DOCUMENTS: Documents for arriving export vessel are:

Vessel's Last Port Clearance.
Crew Declaration.
Stores List.
Cargo Manifest.
Storage Plan (deleted if no storage is on board).
Health Quarantine Certificates.

PILOTAGE: Usual procedure is to advise export vessel to approach 2 miles West of the Oil Terminal, and wait for the supply vessel for pilot boarding.

Also see "Berthing" – "Mooring/Unmooring".

ANCHORAGE: West Linapacan Oil Terminal has no anchorage area. As water depth is in the region of 1,200 ft., arriving tankers are advised to drift outside of the 5 miles radius restricted area.

RESTRICTIONS: Port restrictions:

D.w.t.: 100,000 tons.
Arrival Displacement: 30% – 35% d.w.t.
LOA: No restriction.
Draft: No restriction.

HEALTH: The vessel should have a clean Bill of Health or equivalent document from the last Port of Call. The vessel's Master and all members of the crew shall possess International Certificates of Health showing such valid Vaccination Certificates as required by current Philippine Law. From time to time, Cholera Vaccinaton Certificates may be required, and it is therefore prudent that all crew members are in possession of valid Certificates.

RADIO/VHF: *Communications:*

1. Cable or Telex: It is most important that incoming tankers advise their ETA 72 hours, 48 hours, 24 hours and 4 hours in advance of arrival, stating GMT or local time.

Messages are to be sent as follows:
Cable Address: Alcorn Philippines.
Telex: 454371/22209/64293.
Attention: SVP Operations.

The following information shall be included in the message given 72 hours in advance:

(1) Name of tanker and radio call sign.
(2) ETA.
(3) Cargo requirements.
(4) Deballasting time.
(5) Maximum loading rate in barrels per hour.
(6) Estimated draft on arrival.
(7) If there is any sickness aboard or clean Bill of Health.

(8) Last Port of Call.
(9) Any hull, bulkhead, valve or pipeline leaks on vessel, which could negatively affect loading or cause pollution.
(10) Distance in feet from the bow to tanker's loading manifold, and from port rail to manifold.
(11) All vessels shall confirm ETA 24 hours and 4 hours prior to arrival, or any time a one-hour change of ETA is anticipated.

2. On receipt of the first message from the lifting vessel, Alcorn Philippine's office will respond to the tanker giving preliminary requirements of the Terminal. Vessel's Masters will comply with these requirements in all details, in order to facilitate vessel turnaround and Government formalities.

3. Radio Facilities:

Operating frequencies: West Linapacan Oil Terminal: IM/VHF/FM Storage vessel 6 ZMR (local call sign "FYPSO").

4. Once vessels are within 4 hours of West Linapacan Terminal, communication should begin with the "FPSO II" on VHF Channel 16. When contact has been made on this channel, further communication will be conducted on a mutually compatible channel, which would normally be Channel 6.

5. Mooring Master will carry a VHF/FM radio telephone, as he boards the tanker.

6. The 4 hour signal should confirm information on the time required to discharge ballast after arrival, and should establish a more exact ETA.

7. Insufficient or inaccurate ETA messages can cause delays as Government Officials have to come from Puerto Princesa. Acceptance of Notice of Readiness may be affected by such insufficiency or inaccurancy.

READINESS: *Loading Readiness and Arrival Time:*

1. The Terminal will make every effort to moor/load vessels upon arrival in daylight, weather permitting.

2. Notice of Readiness will not be accepted as at time of arrival, unless the vessel is in all respects ready to load. Arrival time will be considered at the time the Mooring Master boards the vessel, or the time the vessel reaches the deep water anchorage area, whichever occurs first. Notice of Readiness is to be in English.

If a vessel arrives while the Terminal is closed, Notice of Readiness will be accepted from the time the Terminal re-opens.

3. During the loading or unloading, the international code flag "B" shall be displayed.

TUGS: *Mooring Launches:* The Terminal maintains boats to assist in mooring and unmooring vessels. These are under the direct supervision and control of the Mooring Master.

BERTHING: Terminal Facilities:

1. The West Linapacan Marine Terminal offices, storage and testing laboratory are located on board the 125,000 ton Liberian registered Floating Production Storage and Offloading vessel called "FPSO II", which is stern moored to a Single Point Mooring. This vessel has a crude oil storage capacity of some 134,000 cu.m.

2. Vessels using the Terminal will be moored bow-to-bow (Tandem), to the "FPSO II", by means of a 45 m. nylon snotter. On the outer end of the snotter is a short length of chain, ending in an open pear shaped link, which is attached to the lifting vessel's Smit Connector or guillotine-type stopper.

The vessels should have bow chain stopper with minimum vertical and horizontal opening of 76 mm.

For vessels not equipped with a Smit Connector, extra equipment, consisting of a 25 m. × 16 in. snotter, two short lengths of chain, one fitted with a triangle plate and the other with special shackle, can be supplied.

3. During the period the lifting vessel is in the berth, a tug/supply vessel furnished by the Terminal will remain secured to the stern of the lifting vessel, in order to prevent the vessel from jack-knifing. The lifting vessel shall not have the authority to direct or control the tug/supply vessel.

4. Loading hose connection is ASA 150 12 in. I.D.

5. Loading rates at the Terminal will be governed by either the lifting vessel's maximum loading rate, or the maximum pumping rate of the FPSO II (approx. 15,000 b.p.h.), whichever is the lesser.

Berthing:

1. Lifting vessels will normally be accepted and berthed in chronological order of arrival, provided such vessels have current nomination for cargo, valid at the time of tender, carry clean ballast, if any, and have cargo tanks in a fit condition to receive cargo. Also they must be in all respects properly equipped, manned and ready to moor. Should berthing be delayed on account of bad weather, vessels will keep their position in line.

2. Vessels, required to leave the Terminal area on account of bad weather, should keep in contact with the Terminal via the Radio Telephone Station at West Linapacan Oil Terminal, call sign FYPSO, in order that they may be available when the weather is fit for resumption of operations. The Terminal reserves the right to load vessel out of turn following the return of good weather. Further the Terminal reserves the right to decline to moor a specific vessel, if its condition or facilities are unsafe for mooring or loading, even though the Terminal may be open to other vessels.

3. The West Linapacan Oil Terminal Mooring Master's decision on berthing will be final.

4. A lifting vessel will be expected to have ready on the forecastle head the following equipment:

Windlass ready for use.
Smit Connector free, open and greased.
A large coil of messenger line.
A large 14 lb. hammer.

On approaching the berth, a messenger line attached to a Norwegian buoy on mooring is recovered on forecastle, and line taken in until main recovery line is on deck. This line is placed on winch and brought in until mooring chain on deck, this chain then being secured in bow stopper, Smit Connector or any other suitable, safe, mooring arrangement. On completion of mooring, a supply vessel will then be secured to stem of tanker using ship's rope or wire, and this vessel will normally exert a minimum pull at all times to avoid contact of any sort between ship and "FPSO II".

MOORING/UNMOORING:

1. Vessels to be moored, anchored or manoeuvered at West Linapacan Oil Terminal, will be boarded by the Mooring Master. No lifting vessel may enter the Terminal area, unless a Mooring Master is on board.

The Mooring Master will advise the vessel's Master on approaches to the berth, mooring, unmooring, tug handling, connecting and disconnecting the hoses and other operations within the Anchorage and Terminal Area. All such manoeuvring of vessel shall be done only in accordance with the advice of the Mooring Master, except where the vessel's Master believes such advise to be contrary to the proper navigation and safety of the vessel and its crew, and subject to the understanding that in all cases and circumstances, the Master of the vessel being manoeuvered, shall remain solely responsible on behalf of his vessel's owners or charterers for the safety and proper manoeuvring of the vessel.

The vessel's Master, or one of his designated qualified Deck Officers specifically appointed by him at the time, must be on the navigation bridge at all times, while the vessel is being manoeuvered.

1. Vessels will provide a lee for the Mooring Master's boat while the Mooring Master is boarding and leaving. All vessels are requested to have a pilot ladder safely and securely rigged, and ready for immediate use and long enough to reach the Mooring Master's boat. A combination ladder, so arranged that personnel can first use the pilot ladder part way up the vessel's side, and then transfer to the accommodation ladder, is recommended, especially on very large vessels. A light line should be ready to take aboard the Mooring Master's portable radio. There should be adequate lighting at night.

3. The Mooring Master will be in direct control of all vessel's communications while in the Terminal area. Any unauthorised communications will at option of the Mooring Master be cause for the cessation of all operations except clearing of the berth, and the vessel's Notice of Readiness will immediately be nullified.

4. Raising, lowering, connecting and disconnecting of oil loading hoses, as well as all other labours and duties on shipboard, will be performed by the vessel's crew under advice of the Mooring Master.

5. The Mooring Master will report unsatisfactory conditions to the West Linapacan Oil Terminal Superintendent, who may at his discretion, reject the vessel until corrections are fully made. All costs or liabilities accruing therefrom will be to the vessel's account.

6. The services of the Mooring Master are provided without charge upon the express understanding and conditions that when the Mooring Master goes onboard a vessel for the purpose of assisting such vessel, he becomes for such purposes the servant of the owners or charterers of the vessel, and the companies shall not be liable for any damage or injury resulting from any advice or assistance or actions given or made by the Mooring Master.

7. The Mooring Master may require the vessel to unmoor at any time he deems it necessary for the safety of the vessel, or mooring or both or for infringement of these Terminal Regulations.

8. The West Linapacan Oil Terminal Superintendent shall be the sole authority, as to when the Terminal is opened or closed for normal working due to weather conditions.

9. Various combinations or wind, sea and tidal conditions, also size, length, ballasted trim, and handling qualities of a vessel, can affect the decision to berth a vessel at West Linapacan Oil Terminal.

All these factors have to be evaluated before a final berthing decision is made, and agreed by the vessel's Master and the Mooring Master. Delays to lifting vessels, due to the Terminal being closed because of bad weather conditions or statutory holidays, are not to be computed as "used lay time" when compiling a vessel's turnaround time.

Vessel's Gear:

1. The Mooring Master may reject a ship if it is not, upon inspection, properly equipped, or if it is not suitably manned, or if he deems it to have dirty ballast or tanks unsuitable for receiving the cargo.

A vessel is suitably manned if it has full complement of officers and crew in a sober condition, competent and willing to carry out their duties and orders and proficient English is spoken, so that the Mooring Master can understand and be understood.

2. A vessel must be equipped with a good working propulsion unit, as passed by the appropriate survey society. Inoperative vessels, or partially inoperative vessels, will be rejected. Should they become inoperative while in berth, they may be removed from the Terminal area.

3. Additionally, a vessel must have both bower anchors and ground tackle in good working condition, and in such sizes and amounts to meet either "Lloyd's" or "A.B.S." standards, although they may be in fact classified by other societies. On instruction from the Mooring Master, the vessel's anchors must be properly secured against accidental dropping.

4. All vessels must carry suitable stoppers for all Manila or synthetic lines for mooring use.

5. *Vessels must have suitable winches or capstans in good operating condition on the forecastle deck.*

6. Vessels must be adequately equipped with a 5 ton boom, blocks, tackles, wire runners and sundry equipment on the port side, to efficiently hoist the hoses to the loading position. Sundry equipment should include wrenches, drift pins, nuts and bolts, wire and fibre straps, drip pans, gaskets, etc.

To assist in vessel's turnaround, the vessel should have all necessary booms and cargo gear rigged and ready, before being boarded by the Mooring Master.

Vessels, which consider the lifting capacity of their gear to be marginal, should strengthen their gear accordingly. This does not relieve the vessel of the necessity to provide adequate lifting gear as already described for West Linapacan Oil Terminal operations.

7. Vessel's loading manifolds should be prepared for 12 in. 150 ASA hose connection prior to vessel's arrival. Where no crossover valves

exist on loading manifolds, it is recommended that loops between loading lines on the starboard side of these manifolds be fitted. Vessels, equipped with smaller than 12 in. hose connections at the loading manifold, should arrive with such hose connections suitably adapted for 12 in. hose, so that maximum flow through the 12 in. cargo hose will be achieved (12 in. ASA 150 flange).

Vessels, equipped with larger than 12 in. hose connections at the loading manifold, should provide their own reducers.

Connecting Hoses:

1. After the vessel is securely moored, the cargo hose will be hoisted on the port side. The berth is equipped with a single 12 in. loading hose string, the weight of the hose lift being approximately 3 tons. Therefore, all lifting equipment and tackle should have a safe working load of at least 5 tons. The hose is lifted by vessel's gear and crew, and all connecting of the hose will be done by them. The lifting derrick, equipment, tackle, etc., should be topped off and ready on arrival. Terminal loading hoses are fitted with ASA 150 flat face flanges, and vessels should have adapters and fittings to enable these hoses to be connected to the vessel's manifold. The Mooring Master advises the vessel's personnel on hose lifting and connecting procedures; however, a vessel's Master or Deck Officer must be present, and must direct the vessel's crew in all handling. The Mooring Master may reject a vessel for unsatisfactory hose handling.

2. When a Mooring Master is assigned to a vessel, the vessel at her cost will supply him with meals at the same time and in the same manner as for comparable personnel of the vessel. The vessel will also provide a suitable cabin and smoking facilities.

BALLAST: *Disposal of Ballast:*

1. Owners and Masters are responsible for complying with all International Conventions and Philippine Laws concerning pollution of the sea, having particular regard for Offshore Palawan area.

2. There are positively no facilities for disposal of dirty ballast. It is the Shipmaster's responsibility to see that no oil of any kind is pumped or spilled overboard from his vessel.

This includes oily water from bilges, crude residue from previous voyages or any other matter that may result in pollution of the sea. Any fines imposed or third party claims shall be for the vessel's account.

3. If evidence of oil appears during ballasting, the vessel will be rejected forthwith, and will not be accepted until satisfactory evidence is produced that such ballast was disposed of in a proper manner. If during inspection or during progress of loading, it is revealed that the vessel's tanks are not tight, or that oil is leaking from the vessel, the vessel may be rejected or refused further loading. The vessel will not be accepted for loading, unless satisfactory evidence of repair is submitted, duly certified by "Lloyds", "A.B.S.", or other recognised surveyors. Any vessel, rejected because of dirty ballast or sea pollution, will automatically nullify her "Notice of Readiness", and will lose any priority of position for loading.

4. A vessel must have proper trim and sufficient ballast and/or cargo already on board for safe handling, having due regard to existing weather and sea conditions (normally 30% – 35% of d.w.t.). The vessel's Master shall maintain a careful watch of the weather and sea conditions, and a frequent exchange of information between vessel and Terminal. Through his knowledge of the behaviour of his own vessel, the Master, if satisfied that it is safe to do so, may come to the Terminal with a minimum of ballast, and thus lessen any possibility of sea pollution or infringement of regulations.

5. Vessel equipped with a separate system of ballast tanks will be allowed to discharge ballast and load oil simultaneously, providing approval is first obtained from the West Linapacan Oil Terminal Superintendent.

6. Load-on-Top Method: Most responsible ship owners have adopted a system of tank cleaning using circulatory methods of transfer of tank washings on ship aboard, and treating these washings with chemicals. The result is that no oil is discharged into the sea, and the oil separated is collected in a slop tank. With the written permission of off-taking companies, the Terminal will "Load-on-Top" of such slops. To avoid pollution, this system is highly recommended.

7. All spillage of oil must be reported immediately to the West Linapacan Oil Terminal Superintendent, and a detailed report must be written, signed and submitted by the Master of the lifting vessel concerned.

MEDICAL: No medical assistance available, except in an emergency.

FRESH WATER: Not available.

FUEL: Not available.

CONSULS: The nearest Consuls are in Manila.

REPAIRS: No repair facilities at the Terminal.

SURVEYORS: SGS has acted as the independent surveyor for the liftings to date. Surveyor is nominated by the buyer and Alcorn.

CUSTOMS: Three Customs Officials are assigned to the export vessel, and will be onboard during the duration of the lifting. 2,000.00 Phils. Pesos per day is charged (U.S.$ 85.00) for their allowances and per diem. Customs' transportation is for the buyer's account.

EMERGENCY CO-ORDINATION CENTRE: All oil spills or emergencies are co-ordinated by the Coast Guard located in Manila.

REPATRIATION: Not possible.

TIME: GMT plus 8 hours throughout the year.

SHORE LEAVE: Not permitted.

Crew members cannot leave the vessel at West Linapacan Oil Terminal, except in cases of extreme urgency. Even in an emergency, it should be noted that Seamen's Books may not be valid under the local Governmment Law. A valid Passport is required.

SHIP SUPPLY SERVICE: A supply boat is available 24 hours a day.

This supply boat is the same boat assisting the export tanker. Once export tanker is secured, this supply boat is heaving and tied-up to aft of export tanker – so it will not be available for 24 hours a day.

GENERAL: After each tanker lifting, the Terminal will prepare all necessary loading documents, in accordance with the consignee's instructions. Documentation will be finalised on board the lifting vessel, as soon as practicable after loading operations are completed.

Visitors must obtain a special pass from the Company's Terminal Superintendent. Visitors will be restricted to a minimum due to hazards involved.

IMPORTANT NOTICE:

The attention of owners, charterers and Masters of vessels which visit the Terminal, is drawn to the importance of taking every precaution to ensure, that no oil of any kind is discharged or allowed to escape overside.

If there is any such discharge or escape, any resultant loss or expense to the companies will be for the account of the owners or charterers of the vessel.

The West Linapacan Oil Terminal is located within the Territorial Waters of the Philippines. Visiting vessels will therefore be subject to the Laws of the Republic of the Philippines.

SAFETY: *Safety Precautions:*

1. The lifting vessel's personnel are responsible for the safety of the vessel and themselves, and must take all necessary precautions whether or not so advised by the Mooring Master or other Terminal personnel. Any safety precautions imposed by the West Linapacan Oil Terminal Superintendent and disregard by the vessel's Master, Officers, or crew, will be considered just cause for rejection of the vessel and all expenses, losses, claims or liabilities related thereto will be for the account of the vessel.

2. When a vessel is in the moorings or vicinity thereof, its engines must remain on standby with full power always available for immediate use. Deck machinery shall be kept at instant readiness. Positively no repairs of any sort, affecting the availability of the vessel's machinery or engines, will be permitted in the moorings. Other repairs (including all painting), which present any hazard to the loading operation, are strictly prohibited. Vessel's whistle is to be at instant readiness at all times.

3. The bridge and/or control area shall not be locked or otherwise arranged to prevent immediate entry at all times by the Mooring Master.

4. Not less than one Deck Officer and three Seamen shall be on duty, sober, alert and available at all times. No person under the influence of alcohol is to be allowed on deck. The Mooring Master's opinion on the sobriety of any individual will be final, unless an independent medical physician present at the time indicated otherwise.

5. No transistor radio sets or other electrical appliances may be used on deck, unless certified for use in hazardous petroleum areas and subject to approval of the Mooring Master.

6. All scuppers must be plugged and witnessed by Mooring Master and the vessel's Master. Refusal to plug scuppers will result in the ship being rejected. Drain trays and all materials necessary to clean up any oil spillage on deck are to be available for immediate use.

7. After complete discharge of ballast, the Mooring Master and Petroleum Inspector (if any) will witness closing of pumproom sea suctions and sealing of same.

8. The presence of unauthorised craft alongside a vessel will render the vessel unacceptable. It is the duty of the vessel's personnel to see that the vessel's sides are clear of all such craft.

9. Fire fighting equipment shall be in instant readiness throughout the vessel, and additional equipment available at the loading manifold while in the berth. Water shall be available on deck service at all times, and fire hoses connected at all fire stations and flaked out for immediate use.

10. No radio transmission will be permitted on board, except by the express permission of the Mooring Master in each case; this to apply only during the period the vessel is in the Terminal area, or under the direction of the Mooring Master.

11. When vessel is at the Terminal, boiler tubes are not to be blown. Every precaution must be taken that no sparks escape from the funnel or stack or from the galley stack. No ullage hole shall be left open, unless effectively covered with a gauge mesh wire spark arrester.

12. Smoking will not be permitted on deck while in the moorings, and will only be permitted in places approved jointly by the vessel's Master and the Mooring Master. There may be occasions when smoking will be entirely prohibited. Cigarette butts should be thrown overboard or through portholes at any time.

13. Lifebuoys shall be available throughout the vessel, and in particular in the loading manifold area, and at all points of entry and exit, e.g. at pilot ladder.

14. All vessel personnel are to be adequately instructed by the vessel's Master to avoid breathing gas escaping from tank ullage plugs while loading, and gas vents should be used.

The vessel shall be equipped with fresh air masks, gas masks and resuscitators, which shall be kept in a conspicuous and readily acccessible position, ready for immediate use.

15. All accommodation doors, portholes and ventilators should be closed during loading operations, and doors and openings to machinery spaces in vicinity of vessel's tanks are to be closed.

16. If an emergency stop of loading is required, and communications between the vessel and Terminal fail, the vessel's siren or whistle is to be continuously sounded. *This signal stops all loading.*

17. Vessel shall have "Fire Towing Wires" of suitable strength laid out and hung overside to sea level from Poop Deck.

18. No swimming in the sea is permitted while vessels are in the berth.

19. No fishing is permitted in the loading berths or within the restricted navigation area.

20. The attention of the Master is drawn to the off-loading documents, in particular those documents that relate to the safety of the operation, i.e.:

Safety Requirements.
Ship/Terminal Safety Check List.
Fire Instructions.
Safety and Fire Regulations.
H_2S Instructions.

21. The attention of the Master is drawn to the fact that the West Linapacan crude oil is sour, and gives off H_2S gas, which may, during loading operations, give rise to hazardous accumulations in or in the

off-loading tanker. The Master is therefore to be aware of this possibility, and of the drill to follow as laid down in the H_2S Instructions if greater concentrations of 10 ppm. of H_2S are detected. The Mooring Master will carry an H_2S detector with him at all times to assist in detecting such concentration.

WEATHER: *Tides, Currents, Wind and Weather and Seas:*

1. The navigator is referred to published sailing instructions for this area for information on winds, tides and currents, viz:

United States Hydrographic Office, Publication No. 92, Vol. 3, "Sailing Directions for the Philippine Islands", published by the U.S. Government Printing Office, Washington D.C. or British Admiralty equivalent."

2. The information on currents, wind and weather and seas in this area is meagre.

Currents: The general circulation offshore Palawan is wind driven, and displays the monsoonal direction reversal. The speed has been observed from 0.25 to 1.0 knots.

Wind and Weather: The Palawan offshore environment is controlled by monsoonal meteorological variations.

Winter Monsoons – Wind from Northeast.
Summer Monsoons – Wind from Southeast.

The Winter monsoon with wind from the Northeast quadrant is the more severe of the two. It is fortuitous, however, that some sheltering is provided by Palawan and other islands to the Northeast, limiting the fetch, and thereby reducing the effect of the wind during this period. The Summer monsoon from the Southeast experiences a greater fetch by lesser wind velocity, which together yield generally smaller wave heights.

Typhoons are not a major threat to operations in this area, as the strongest ones normally pass North of Palawan. However, the location has been affected by eight typhoons within 200 miles over a ten-year period, which have occurred predominantly during the late Winter months. Tropical depressions in the South China Sea affect the area more than typhoons.

Visibility limitations are not a normal problem in the area, but may be experienced. The Winter months contain the poorest visibility conditions. The worst monthly average visibility from available data was 12.4 miles during December. The remaining months display generally good visibility with distance of 16 – 18 miles.

Waves: The waves are controlled by the monsoonal winds, and reflect the winds variation in the direction and intensity. The Spring transition (April – June) generally has lower wave heights. The Winter monsoon (December – March) with waves from the Northeast is more severe than the Summer monsoon (July – September). Wave heights from 2 ft. to 4 ft. are expected for 45% of the year, while heights of 4 ft. to 8 ft. are expected for 20% of the year. Waves in excess of 8 ft. are estimated for 5% of the year. A heavy swell, generally from the North, is raised by any typhoon or tropical depression passing through the Philippines, and this is liable to cause delays in operations.

AUTHORITY: *Operator:* Alcorn (Production) Philippines Inc., 19th Floor, Pacific Star Building, Corner Sen.G. Puyat Avenue and Makati Avenue (P.O.Box 2283, MCPO, Makati, Metro Manila, Philippines). *Tel:* 817-6021. *Telex:* 45371/22209/64293. *FAX:* 817-4643. *Contact:* Eduardo F. Hernandez, General Manager.

ZAMBOANGA, Mindanao: 06.54 N. 122.04 E. (See Plan)

See "General" before first port.

PILOTAGE: Vessels approaching the port use International Code Signals for calling Pilot.

Pilot Station: Telegraphic address is Zamboanga Pilots, Zamboanga City. Estimated time of arrival (ETA) must be radioed 24 hours in advance. Pilots always on duty. Pilot boat is wooden launch painted white with red trimmings and displaying the pilot flag. The exact area where a Pilot will board vessel is in the vicinity of Little Sta. Cruz Island, for vessels coming from West, and near the vicinity of Rio Hondo for vessels coming from East. Alternative area in the event of bad weather is in the vicinity of Zamboanga Pier at a distance of at least 1 mile either way. Vessels awaiting Pilot should not necessarily drop anchor, provided 24 hours' notice of their ETA is given by local Agents or the Master, to the Zamboanga Pilots, for a Pilot is *always* on duty.

ANCHORAGES: Owing to the steep bank, strong currents and hard, uneven bottom, there are no good anchorages off Zamboanga. However, anchorage may be made anywhere Southward of the wharf at a distance of about 3 cables from shore Eastward of an imaginary line from the Tide Indicator, at a depth of between 25 fathoms and 30 fathoms and giving 7 shackles of chain in the water. This will hold vessel even at strongest current of 6 knots. In the event of very bad weather the vessel should transfer her anchorage to Caldera Bay, which is approximately 7 miles West of the anchorage area.

MAX. SIZE: No limits for anchoring. For berthing, up to 10.0 m. draft.

HEALTH: Quarantine Officer will board the vessel for the necessary inspection of all crew on board. Thereafter he issues Pratique, if and when he finds that there is no disease or fever on board. The Pratique is valid until after the vessel departs to a foreign port.

RADIO: Philippine Telegraph & Telephone Corp. (PT & T), Universal Telecommunication Services (UTS), Radio Communications of the Philippines (RCPI), Central Radio Communications (CRC), Capitol Wireless Inc., (CWI), Telefast Communication and the Bureau of Telecommunication operated by the National Government for receiving and transmitting radio messages. Night and day services.

TUGS: The position where tugs normally join the vessel is in the stream and the usual ship's lines or tug's lines are used. There is no charge collected for the use of the tug's lines.

BERTHING: The Zamboanga Government Wharf is 1,363 linear metres long with a depth at the latest survey of the following: East end 5.0 m.; mid-section 7.0 m. and West end 10.0 m. at MLLW. There is a private wharf at Baliwasan and vessels of 27,000 g.r.t. can dock there with the following limitations: Draft forward must not exceed 32 ft.; draft aft must not exceed 36 ft., upon completion of loading. Vessels docking at this wharf can only be docked at *flood* tide (current running East to West) and can only be undocked in the same manner.

2 anchors must be used in berthing and vessels lay alongside the concrete pier port-side-to. This wharf in Baliwasan is for loading coconut oil and copra pellets only.

Also see "Developments".

STEVEDORES: The Master of the vessel shall cable to the local Agents so that contract could be made with the shipper to arrange gangs.

MEDICAL: It is necessary for Agents to receive advance notice of required medical attention. Hospital facilities are available at all times. Inoculations are also required by the Quarantine Officer upon boarding a vessel.

TANKERS: There are 4 oil depots at Gavilan Pt. and at Baliwasan. (Shell, Mobil, Esso and Caltex.) Max. tonnage of 4,000 gross with a draft of not more than 18 ft. can be moored for discharge.

FRESH WATER: Fresh water can be obtained any time of the day. There are 5 water outlets strategically distributed at the new quay.

FUEL: Fuel, diesel, and crude oil available.

FIRE PRECAUTIONS: Smoking is entirely prohibited on board a tanker entering this port. The Master must advise all persons boarding his vessel.

GANGWAY/DECK WATCHMEN: The services of watchmen are necessary to stop looters from boarding the vessel.

OPENING/CLOSING HATCHES: Normally opening and closing by the crew, and if done by stevedores the vessel has to pay.

CUSTOMS ALLOWANCES: 200 cigarettes per man. Upon arrival in port the cigarettes are sealed in a bonded store by the Customs Authorities, and can be opened only upon permission granted by the Collector of Customs.

CONSULS: None available.

REPATRIATION: Effecting crew changes and arranging necessary repatriation are carried out by the Immigration Office in the port with the assistance of the ship Agent and the foreign Embassy concerned.

AIRPORT: Distance from Zamboanga Pier to the airport is 3 km. Served by regular airlines. There are 2 flights daily (0920 hrs. and 1930 hrs.) from Zamboanga to Manila by Philippine Air Lines (PAL). Airport is also open to International flights.

HOLIDAYS: Cargo work can be arranged with the Stevedoring Company through the shipper to work during holidays, including Sundays.

POLICE/AMBULANCE/FIRE: Police Department, Tel. 119; Ambulance, Zamboanga Regional Hospital, Tel. 25-11; and Fire Department, Tel. 110.

TELEPHONES: Telephones cannot be installed on board when docked at the pier as is not allowed by the City Government.

SERVICES: Special services may be available, e.g. tank-cleaning equipment, facilities for discharge of tank-washings, compass adjusting, through representations to be made with the shipper or local Agent of the vessel.

IDENTIFICATION CARDS: All crew members to have identification cards for immediate identification in case of trouble while the crews are on shore.

DEVELOPMENTS: A new quay 220.44 m. length and 10 m. depth is in operation.

New Facilities:

a. New Quay:	220.44 m.
b. Ferry Pier:	20 m. wide × 49.9 m. length of reinforced concrete.
c. Closed Transit Shed:	40 m. × 126 m. with two 6 m. × 15 m. office spaces and a 24 m. × 40 m. Passenger Terminal.
d. Gate House:	18 m. × 30 m. with 2 × 50 ton capacity weighbridges, through booths and 2 guardhouses.
e. Equipment Shed:	15 m. × 60 m.
f. Maintenance and Fire Station Building:	15 m. × 66 m.
g. Passenger Terminal Building at Eastern Section:	30 m. × 54 m.
h. Amenity Block:	6.5 m. × 10 m.
i. Generator Shed/Power House:	15.4 m. × 25 m.
j. Administration Building:	Three storeys (1,296 sq.m.)
k. Open Storage Area:	40 m. × 135 m.
l. Container Marshallilng Yard:	100 m. × 137 m.

AUTHORITY: Philippines Ports Authority, PMO-Zamboanga, Port Area, P.O.Box 360, Zamboanga City 7000, Philippines. *Tel.* 2991-2995, 7156. *Contact:* Prudencio B.Mercado, Jr., Port Manager.

AGENT: See "Manila".

Poland

GDANSK: 54.21 N. 18.39 E. (See Plan)

ICE: Efforts made to keep port open all year round. Only in very severe Winter are difficulties experienced.

DOCUMENTS:

8 copies Cargo Manifest.
1 copy Bill of Lading.
Passports or Seaman's Books.
Ship's Register.
Maritime Declaration of Health.
5 copies Ship's Articles/Crew List.
Derat Certificate or exemption from Sanitary Certificates, covering food cargoes and/or of animal origin, destined for discharge here.
Specification of Dangerous Cargo, even if in transit.
2 Stowage Plans.
Trimming Class Certificate.
Crew Effects Declaration.
Bonded Stores Declaration.

PILOTAGE: Compulsory. Advance notice of 12 hours required prior to arrival and 2 hours notice required prior to departure. Boarding in Gdansk Roads. Gdansk Pilot Station available on VHF Channel 14.

Also see "Baltic Deep Sea Pilotage".

ANCHORAGES: Gdansk Roads. Anchorages No. 1, 2 and 3 for ships up to 738 ft. LOA.

Anchorages: No. 1 draft 29 ft. 06 in.; No. 2 draft 34 ft. 05 in.; No. 3 draft 39 ft. 04 in.; No. 4 for bulk carriers with max. draft 52 ft. 06 in.; No. 5 for large tankers with max. draft 63 ft. 11 in. No tides.

RESTRICTIONS: On arrival or if moving or in every case of emergency conditions contact Harbour Master's Office on Channel 14. Tel: 43-07-10.

MAX. SIZE: Baltimax size for ships entering North Port. Max. size of ships permitted to enter inner port: Draft 10.20 m. brackish water, max. LOA 225 m. Also see "Berthing".

HEALTH: Maritime Declaration of Health to be presented on arrival. In the event of suspected disease, the vessel should cable to "Quarantine Gdansk", or via Agents.

RADIO: Messages should be sent via Gdynia Radio.

RADAR/VHF: Port Radar Service acting with pilot station, can be contacted on VHF Channel 14. Also see "Gdynia".

Polish Notice No. 202/86: Ship Reporting System: The following are required to report by VHF to the Harbour Master of destination on crossing the latitude of 54° 45′ N. (Repline Hel) in the entrance to the Gulf of Gdansk:

All vessels – if on account of special circumstances they may cause a risk of collision or pollution.

Vessels bound for Gdansk – of 150 g.r.t. and above.
Vessels bound for Gdynia – of 500 g.r.t. and above.

The report should include:
REPHEL (abbreviation of Repline Hel)
Name and call sign
Date and time
Position
Destination and ETA
Type and quantity of cargo
Draft
Any deficiencies, e.g.
  (a) Overloading, or excessive heel or trim.
  (b) Faults affecting manoeuvring capability.
  (c) Uncleaned tanks, etc.
  (d) Anything which might cause pollution.

The consent of the Harbour Master must be obtained before entering the roadstead of the port of destination.

TUGS: 14 tugs available. Join in Gdansk Roads. Vessel's lines must be used. Tugs compulsory for all vessels over 2,000 g.r.t. Tugs available up to 2,500 h.p.

BERTHING: Max. draft mentioned below is to be taken as normal water level. No tide. Max. difference from mean level is plus/minus 3 ft., subject to wind direction.

Inner Port:

Name of Quay	*Length* (m.)	*Max. Draft* (m.)	*Max. LOA* (m.)

Port Polnocny/North Port:			
Liquid Fuel Terminal	335	15.00	280
Coal Terminal	354	15.00	300
Ore Terminal	300	12.00	200

BULK HANDLING FACILITIES: Coal Handling Facilities at North Port Coal Terminal capable of receiving vessel up to max. draft 15.0 m. Daily loading rate 50,000 tons. Also Inner Port-Weglowe Quay equipped with 8, 10 and 16 tons cranes for vessels up to 9.6 m. draft. Bulk and liquid sulphur handled at Obroncow Poczty Polskiej Quay. 20 tons grab cranes and conveyor system for fertilisers in bulk at Chemikow Quay.

Grain elevator: Grain is also discharged by grabs. Conveyor system for loading salt and sodium in bulk.

Timber handling facilities at Rudowe and Westerplatte Quays.

CRANES: Quay cranes up to 40 tons; mobile quays up to 60 tons and floating cranes of 60 tons, 100 tons and 300 tons.

Also see "General Cargo Handling Facilities".

STORAGE FACILITIES:

Coal yard: 650,000 tons.
Phosphate shed: 60,000 tons.
Grain elevator: 8,000 tons.
Solid sulphur store: 20,000 tons.
Warehouses: 100,000 sq.m.
Open storage: 550,000 sq.m.
Refrigerated warehouse (Oliwski Quay): 5,000 tons.

GENERAL CARGO HANDLING FACILITIES: Passenger cargo/Ro-Ro terminal at Ziolkowskiego Quay.

Port is equipped with new Ro-Ro floating berth which can operate at every general cargo quay.

Westerplatte Quay: Warehouse and open storage yards. Handling of general cargo and packaged pulpwood. This quay is also used for waiting.

Oliwskie Quay: Warehouses on quay can handle general cargo, fruit and vegetables. Open storage yards for general cargo and packaged pulpwood.

Gorniczy Basin: Ore bridges have been dismantled. Max. draft up to 10.2 m. Handling general cargo and steel products.

Wislany Quay: Equipped with 3-16 ton portal cranes for general cargo and 7-8 ton cranes for bulk cargo, a grain elevator and special suction installations. Warehouses and open storage for general cargo and bulk cargo. Handling general cargo, steel products and heavy units.

STEVEDORES: As gangs for the following day must be ordered before 1100 hrs., vessel's ETA should reach the Agents relevantly in advance.

Stevedores work 24 hours per day, which is considered to be between 2300 hrs. – 2300 hrs. following day. First shift from 2300 hrs. – 0700 hrs., second shift from 0700 hrs. – 1500 hrs., third shift from 1500 hrs. – 2300 hrs.

Timber, general cargo and heavy lift operations are usually performed in two shifts only between 0700 hrs. and 2300 hrs. Sulphur, superphosphates, phosphorites, apatites, grain and other awkward dusty cargoes worked in 4 shifts of 6 hours each.

Port works Sundays, holidays and free Saturdays at premium rates. 1 in 4 Saturdays are worked.

MEDICAL: No special notice required. Full hospital facilities available.

TANKERS: Liquid Fuel Terminal at North Port.

Location: Southern part of the Gulf of Gdansk, 54° 25′ N., 18° 43′ E. approximately. Advisable route via "ZN" Beacon, to "ZS" Beacon, then anchorage on No. 5 Beacon 54° 27′ N., 18° 53′ E.

Facilities: 1 L-shaped jetty for berthing consists of 1 main platform and 4 main dolphins, fitted with quick release hooks. The main platform is fitted with gangway tower and 7 movable handling arms for loading and discharging purposes. Only 1 mooring place available. The jetty accessible for vessels having minimum 150 ft. (about 10,000 d.w.t.) and maximum 1,000 ft. (150,000 d.w.t.) length and 49 ft. 03 in. draft.

No facilities for liquefied gases.

For towing purposes there are 3×2,500 h.p. and 2×1,650 h.p. diesel tugs available, if necessary further 1,200 h.p. tugs are at hand. All tugs equipped with fire fighting equipment.

Cargo Handling Equipment: The 7 mobile handling arms, Luceat Production, are used as follows: No. 2, 3 and 4 for discharging of crude oil, rate about 10,000 cu.m./hr. No. 1 and 5 for loading bunker oil and water, rate about 2,000 cu.m./hr. No. 6 and 7 loading liquid fuels and refined products, rate 2,000 – 2,500 cu.m./hr. Loading pressure of vessel's pumps should not exceed 14.5 kg./sq.cm. at any time.

Facilities for handling of vessel's ballast water available.

Services: Marine diesel and fuel oil available at the jetty. Storage tanks located in the neighbourhood of the terminal and connected with central pipeline system of Poland. Laboratory for testing purposes and repairing facilities available.

DENSITY: Salt content: Below 0.3%

FRESH WATER: Available at hydrants, and delivery to vessels in roads.

FUEL: Heavy, intermediate and thin fuels, marine diesel oils and gas oils available ex-shore installation or lighter. 48 hours' notice required.

CONSULS:

Chinese People's Republic Consulate General, Tel: 41-64-76.
German Consulate General, Tel: 41-43-66
Russian Consulate General, Tel: 41-06-13.

At Gdynia:

Belgian Consulate, Tel: 20-39-83.
Brazilian Consulate, Tel: 21-61-31.
Italian Vice-Consulate, Tel: 21-51-15.
Swedish Consulate, Tel: 21-62-16.

At Sopot:

Finnish Consulate, Tel: 51-50-52.
Also representing other Scandinavian countries.

REPAIRS: All types of deck and engine repairs performed by specialised ship repair yard.

Floating docks: No. 1, 6,400 tons lifting capacity, dimensions 135×25.20 m. No. 2, 8,000 tons lifting capacity, dimensions 156×27.20 m. No. 3, 11,000 tons lifting capacity, dimensions 176×28.00 m. 1 floating jack of 1,700 tons capacity and 3 minor docking pontoons.

GANGWAY/DECK WATCHMEN: Recommended and available.

OPENING/CLOSING HATCHES: Normally carried out by stevedores, crew allowed to handle.

CERTIFICATES:

Load Line Certificate.
Cargo Gear Certificates.

CUSTOMS ALLOWANCES: For 3 days – 160 cigarettes or 30 cigars or 150 gm. tobacco per crew member. Master is allowed double ration. 1 bottle wine and 1 bottle of spirits per crew member for each 3 days. Master is allowed double ration.

REPATRIATION: Crew changes and repatriation can be arranged by Agent.

AIRPORT: Gdansk Airport.
TIME: Middle European Time, which is 1 hour ahead of GMT.
HOLIDAYS: New Year's Day (January 1st); Easter Sunday (movable); Easter Monday (movable); Labour Day (May 1st); Constitution Day (May 3rd); St.Mary's Day (August 15th); Corpus Christi (movable); All Saints' Day (November 1st); Christmas Day (December 25th); Boxing Day (December 26th). On Christmas Eve and New Year's Eve, work stops at 1500 hrs. In justified and approved cases, overtime on Sundays and holidays can be arranged.
POLICE/FIRE/AMBULANCE: Police: Gdansk-Nowy Port, Wladyslawa IV-3, Tel: 31–48–61; Ambulance: Gdansk-Wrzeszcs, Al. Zwyciestwa 49, Tel: 41–10–00; Fire: Gdansk-Nowy Port, Na Zaspy 57, alarm phone Tel: 41–22–22.
TELEPHONES: Available on most general cargo quays.
SERVICES: Collecting of oily ballast water to Ballast-water Treatment Plant. Cleaning of holds, bilges and ship's tanks.
STORING: Baltona ship chandlers supply ships with provisions, cabin, deck, bonded stores as well as spare parts for main and auxiliary engines. "Duty Free" shops for crew convenience.
IDENTIFICATION CARDS: Each crew member must be in possession of a valid Discharge Book/Seaman's Book, and will receive a separate shore permit issued by the Immigration Authorities, entitling him to go ashore within the area of Gdynia/Sopot/Gdansk.
GARBAGE DISPOSAL:
1. Port Service Ltd. Tel: 20-07-21. Fax: 20-85-98. Telex: 59219. Disposal. Tel: 21-50-42, 20-85-71 (Cell: 226 or 277). Collection time 24 hours. Charges: U.S.$ 7.8 for 1 bag (0.3 cu.m.), minimum charge for 5 bags, all to Port of Gdansk tariff.
2. Grudel SC. Tel: 32-15-25.
3. Comal Ltd. Tel: 41-56-26. Telex: 051-2965.
4. Ship Service Ltd. Tel: 20-26-62.

WASTE OIL DISPOSAL:
1. Port Service Ltd. (data given above). Special tankers collect waste oils. Non-toxic oils permitted. Charges depend on kind of fuel (oil) and grade of contamination. Transformer oil and those containing PCB are not accepted. Transmission and engine oils in any quantity are accepted. Special tankers collect oily dirty ballast water for transportation to Ballast Water Treatment Plant situated in North Port (Tel: 43-71-41). Facilities: Tanker, barges and drums.
2. Comal Ltd. (data given above). Collect oily ballast water with barges and tank lorries.

SEAMAN'S CLUBS: No Seaman's Clubs in Gdansk. The nearest Club is in Gdynia. Shipchandler Baltona has duty free shops at Ziolkowsiego Quay, and at Wolnoici 16 Street in Nowy Port.
CURRENCY: Zloty.
DEVELOPMENTS: 2×40 ton shore cranes have been installed at Szczeciniskie Quay.

Szczeciniskie is being adapted for container handling and Ro/Ro vessels. Storage space of 20,000 sq.m. and container handling equipment will be available.
AUTHORITY: Commercial Sea Port of Gdansk – Joint Stock Company, 18 Zamknieta Street, Nowy Port, 80-955 Gdansk, Poland. *Tel:* 430-327, 439-200, 439-500. *Telex:* 0512324 MPH PL, 512846 MPH PL. *Cables:* Geoport. *FAX:* 439-308, 436-376. *Contact:* M.Switek, General Manager. M.Ploski, Operations Manager.

AGENT: See "Szczecin".

GDYNIA: 54.32 N. 18.34 E. (See Plan)

ICE: On average, during most of the Winter periods both port and the roads are ice-free. Only prolonged and severe frosts may result in ice cover formation in basins and in the roads outside. Winds of gale force may shift some drifting ice floes from other parts of the bay and render navigation in the roadstead difficult. In such cases the approach channel and the port basins are kept free of ice and unobstructed to navigation by icebreakers of the Polish Ship Salvage Company and powerful tugs of the Port Authority. The cost of icebreaking is borne by the Port Authority. These phenomena, however, are rather rare, since Winters are usually mild in those areas.
PORT LIMITS: A vessel is an "arrived ship" and laytime commences from time of ship's entry into the roads.
DOCUMENTS:
11 copies Cargo Manifest.
2 copies Bills of Lading.
Discharge Books to be collected for presentation.
Ship's Register.
Ship's Articles/Crew List.
Maritime Declaration of Health.
Derat Certificate.
Sanitary Certificates covering food cargoes and/or of animal origin, destined for discharge here.
Specification of Dangerous Cargo (even if in transit).
2 Stowage Plans.
Load Line Certificate.
Cargo Gear Certificates.
PILOTAGE: Compulsory. Pilots to be ordered 12 hours prior to arrival and 2 hours prior to departure. Boarding in Gdynia Roads. Gdynia Pilot station available on VHF Channel 12. Traffic around the clock.

Also see "Baltic Deep Sea Pilotage".
ANCHORAGES: Gdynia Roads at Buoy GD, up to 200 m. – 500 m. off port entrance. No tides.
RESTRICTIONS: Depth in main entrance 11.36 m.
MAX. SIZE: No limit on length, max. draft 12.00 m. at Hel I and Hell II Quay, also see "Berthing".
HEALTH: Maritime Declaration of Health to be presented on arrival. In the event of suspected disease the vessel should cable "Quarantine Gdynia", "Radio Medical Gdynia" or via Agents.
RADIO/VHF: Message should be sent via Gdynia Radio. Port Radar Service acting with the pilot station, can be contacted on VHF Channel 12, Gdynia. Contact Agent VHF Channel 7. Gdynia Radio on Channel 16, working on Channels 12, 24, 26 and 27. Traffic lists at 0035, 0835, 1235, 1635 and 2035 on Channel 26.
TUGS: 11 tugs available. Join vessel in Gdynia Roads. Vessel's lines must be used.

DRY DOCKS: 3 floating docks of a lifting capacity of 4,500, 3,500 and 1,200 tons. 12 slipways of 150 tons lifting capacity each.

GANGWAY/DECK WATCHMEN: Recommended.

OPENING/CLOSING HATCHES: Opening/closing hatches normally carried out by stevedores, but crew allowed to handle.

CERTIFICATES:

Load Line Certificate and Cargo Gear Certificates.

CUSTOMS ALLOWANCES For each 3 days – 150 cigarettes or 30 cigars or 150 gm. of tobacco per Crew member. Master is allowed double ration. 1 bottle wine and 1 bottle spirits per Crew member for each 3 days. Master is allowed double ration.

REPATRIATION: Crew change and repatriation can be arranged.

AIRPORT: Gdansk-Rebiechowo Airport, situated 35 km. from Gdynia. Daily flights to Warsaw to connect with international flights.

TIME: Middle European Time, which is 1 hour ahead of GMT is kept in Autumn and Winter; East European Time, 2 hours ahead of GMT, is kept in Spring and Summer.

HOLIDAYS: New Year's Day (January 1st); Easter Sunday (movable); Easter Monday (movable); Labour Day (May 1st); Corpus Christi (movable); National Holiday (July 22nd); All Saints' Day (November 1st); St. Barbara Day (December 4th, for coal workers only); Christmas Day (December 25th); Boxing Day (December 26th). On Christmas Eve and New Year's Eve work is generally suspended at 1500 hrs. In justified and approved cases overtime on Sundays and holidays can be arranged against extra payment.

POLICE/FIRE/AMBULANCE: Emergency Numbers: Police 997, Ambulance 999, Fire 998.

EMERGENCY CO-ORDINATION CENTRE: Urzad Morski, Gdynia 81–338, Chrzanowskiego 10, Telex: 054285; Tel: 20-69-11; Alarm: Gum Radio. Tel: open 24 hours: 21–61–62, VHF Channel 16.

TELEPHONES: Available on most general cargo quays.

Placing of telephones on board is according to current costs per 24 hours.

IDENTIFICATION CARDS: Each crew member must be in possession of a valid Discharge Book and will receive a separate shore permit issued by the Immigration Authorities entitling him to go ashore within the area of Gydnia-Sopot-Gdansk.

SERVICES: Hold cleaning, container and watchmen provided by "Port Service", Celna Street 5, extension telephone 50-34, 50-36; bunkering provided by "Port Service", extension telephone 50-42. Hold cleaning and container washing provided by Port of Gdynia Authority, Rotterdamska 9, Gdynia.

BANKS: Handlowy S.A., Branch Office, 81–370 Gdynia, Skwer Kosciuszki 14, Tel: 20-63-83.

GENERAL: Cargo is handled around the clock in 3 shifts of 8 hours each. Work on 3 Saturdays per month is paid by addition of 100 per cent. Sunday and holiday interruptions last from 2300 hrs. on Saturdays or days before holidays and terminate at 2300 hrs. on Sundays or holidays.

Transhipment of cargo at port rates. Extra fast despatch can be arranged at additional charges.

DEVELOPMENTS:

1. Further development of the Baltic Container Terminal:

Extending of the Ro-Ro and Lo-Lo quays to the total length of 1,080 m. including next fixed ramp Ro-Ro berth at Hel II Quay.

Expanding of the container storage areas.

Building of the container cleaning station, vast parking areas and M+R workship for containers and road trucks.

After the completion of the first stage of construction of the Baltic Container Terminal the handling capacity of the Terminal will go up to 1.5 million tons/170,000 TEU per year and will be able to accommodate various types of container vessels up to 30,000 d.w.t. capacity.

The second and final stage of construction works will increase the handling capacity of the Baltic Container Terminal to 2 – 2.5 million tons/250 – 300,000 TEU per year.

2. Modernisation of the Peace Fighters Quay – extension of the quay and equipping it with new cranes.

3. Total reconstruction and modernisation of general cargo warehouses.

4. Converting bulk cargo quays in Basin No. 3 into highly specialised general cargo berths.

5. Building of fruit warehouse in the area of Baltic Container Terminal.

6. Total reconstruction and modernisation of Grain Terminal at Indian Quay.

AGENT'S REPORT: September 1991

Oil:

Berth Operator: Morski Port Handlowy Gdynia, except Oksywie which is Polish Navy base.

Breakwater: Crude oil, gas oil, gasoline, max. LOA 210 m., max. draft 12.50 m.

Fresh water can be supplied by barge only.

Danish Quay: Gas oil, gasoline. Max. LOA 100 m., max. draft 7.30 m.

Dutch Quay: Gas oil only. Max. LOA 200 m., max. draft 10.50 m.

Swedish Quay: Gas oil only. Max. LOA 200 m., max. draft 9.10 m.

Oksywie: Gas oil only. Max. LOA 100 m., max. draft 8.00 m.

No tides at Gdynia Port.

Max. depth in approaches 11.30 m.

Water density 1,005.

Berthing/unberthing 24 hours per day.

Bunkers available on prior arrangement.

Fresh water delivery from all piers by hydrants.

Type of berths: Concrete.

No minimum size of vessel restriction.

Dirty ballast/slops removing accepted, only to the barge.

One tug compulsory for vessels over LOA 90 m. Two tugs over 131 m. or draft 8.0 m. Three tugs over 166 m. or more than 9.0 m. draft. Four tugs compulsory over 200 m. One tug can be added by Harbour Authorities for vessels carrying dangerous/inflammable cargoes.

No air draft restrictions caused by bridges, etc.

No pilot boarding area on roads.

Agents are obliged to inform all parties concerned regarding flash point, and IMO class of cargo, which will be discharged.

Dry Bulk Cargoes:

Silesian Pier: Max. LOA 200 m., max. draft 8.50 m., max. outreach of cranes from jetty face across vessel 12.0 m.

5 cranes with capacities 7 tons and 10 tons.

Travel distance of cranes 400 m.

Loading rate for coal: 5,000 – 6,000 tons per day.

Loading rate for coke: 3,000 – 4,000 tons per day.

Dry bulk cargoes handled: Coal, coke, iron ore, bauxite and grain. 2 open storage areas of 80,000 tons available.

Dutch Pier: Max. LOA 200 m., max. draft 10.50 m.

Max. outreach of cranes 22.0 m.

6 cranes with capacities 10 tons and 16 tons.

Travel distance of cranes 360 m.

Loading rate from open storage: 10,000 tons per day (maximum).

Dry bulk grades handled: As above.

2 open storage areas of 23,000 tons.

Indian Pier: Alumina discharged via floating elevator to warehouse with capacity 8,000 tons. Discharge rate 3,000 tons per day.

SZCZECIN: 53.25 N. 14.32 E. (See Plan)
Including Swinoujscie, 53.55 N. 14.15 E.

DOCUMENTS:

12 copies of Cargo Manifests.
2 copies Bills of Lading.
Tonnage Certificate.
4 copies of Crew List.
Passenger List.
Maritime Declaration of Health.
Derat Certificate.
Specification of Dangerous Cargo (even if in transit).
2 copies Stowage Plans.

PILOTAGE: Contact pilot station, VHF Channel 12 and 14, also 26 or 27. Harbour Master's office, Channel 12. Light and sound signals used according to international rules. The Pilot is taken on board at the anchorage. Pilot compulsory for all vessels over 150 g.r.t.

Also see "Baltic Deep Sea Pilotage".

RESTRICTIONS: Vessels exceeding LOA 176 m. enter/leave port during daylight only.

Power Cable: An overhead power cable (clearance 64 m.) has been established in position Lat. 53° 31.55′ N., Long. 14° 37.88′ E. to Lat. 53° 31.72′ N., Long. 14° 38.35′ E.

HEALTH: All ships arriving Szczecin from South of Cape Finistere are subject to sanitary inspection.

RADIO: Szczecin Radio, SPE, 2182 kHz. Medium frequencies.

TUGS: 15 tugs with capacity 800 h.p. – 1,500 h.p.

In ports Szczecin and Swinoujscie:

For ships over 85 m. – 1 tug compulsory.
For ships over 120 m. – 2 tugs compulsory.
For ships over 160 m. – 3 tugs compulsory.
For ships over 180 m. – 4 tugs compulsory.

MAX. SIZE: The depth at the operating berths in Szczecin enables loading and unloading ships of draft up to 9.15 m. and length up to 210 m.

The relationship between permissible length, breadth and draft for ships of overall length over 160 m., entering the port of Szczecin, is shown in the following table:

Overall length of ship in metres	*Maximum breadth of ship in metres*		
	up to 25 m.	up to 28 m.	up to 31 m.
	Maximum draft in fresh water in metres and feet		
160 – 176	8.99 m. (29 ft. 06 in.)	8.84 m. (29 ft. 00 in.)	8.69 m. (28 ft. 06 in.)
176 – 186	8.76 m. (28 ft. 09 9in.)	8.61 m. (28 ft. 03 in.)	8.46 m. (27 ft. 09 in.)
186 – 196	8.61 m. (28 ft. 03 in.)	8.46 m. (27 ft. 09 in.)	8.31 m. (27 ft. 03 in.)
196 – 210	8.46 m. (27 ft. 09 in.)	8.31 m. (27 ft. 03 in.)	8.15 m. (26 ft. 09 in.)

BERTHING:

Szczecin:

Name of Quay	*Length (m.)*	*Depth (m.)*	*Designation*	*Equipment*
Katowickie	434	9.15	Bulk cargoes	3×10-ton cranes, 3×16-ton cranes, 7,022 sq.m. cargo bins. Pneumatic equipment for loading bulk cement directly from wagons into ships.
Chorzowskie	290	8.0	Coal and ore	2×10-ton bridge cranes, open storage 10,000 sq.m.
Gliwickie	260	8.9	Bulk and general cargo	3×16-ton, 1×10-ton cranes, 3,000 sq.m. cargo bins.
Bytomskie	342	9.16	Bulk cargo	3×10-ton, 2×8-ton cranes, 3,770 sq.m. cargo bins.
Pirs Tasmowiec	E-188 W-185	8.8 8.8	Coal Coal	Shiploader with loading capacity 700 mt./hr. wagon tipper.
Walbrzyskie	256	9.1	Coal	4×10-ton and 1×8 ton cranes, 5,406 sq.m. cargo bins. Terminal for handling liquid tar pitch.
Gornoslaskie	286	9.0	Bulk cargo and general	1×20-ton, 3×10-ton cranes, 13,300 sq.m. cargo bins, 87,000 sq.m. open storage.
Parnica	300	6.0	Bulk cargo	2×8-ton, 1×7-ton cranes, 1,646 sq.m. cargo bins. Pneumatic equipment for handling bulk cement (wagon-ship directly).
Huk	268	7.5	Bulk cargo and timber	2×10-ton, 1×8-ton cranes, 17,900 sq.m. open storage.
Noteckie	283	6.5	Timber and general cargo	4×6-ton cranes, open storage.
Regalica	220	6.0	General cargo	3×6-ton, 2×3-ton cranes, 32,472 sq.m. open storage, 10,000 sq.m. dutch barn.
Zbozowe	220	9.15	Grain	Grain silo of 73,000 cu.m. (working import and export).
Czeskie	420	9.15	General cargo	2×16-ton, 3×6-ton cranes, Container Mobile Crane 50 t. Container terminal, Ro-Ro ramp, 8,000 cu.m. warehouses, storage yards for about 100,000 tons of cargo.
Slowackie	565	9.15	General cargo	Warehouse of 10,030 sq.m., storing yards for about 100,000 tons of cargo, 2×16-ton, 3×6-ton cranes.
Polskie	425	9.15	General cargo	2×16-ton cranes, 7,268 sq.m. open storage.
Belgijskie *	240	9.15	General cargo	3×6.3-ton cranes, 5,800 sq.m. warehouse, 1,200 sq.m. open storage.
Holenderskie *	161	8.20	General cargo	1×16-ton, 1×6-ton cranes, 5,300 sq.m. open storage
Luksemburskie *	53	9.15	Lay-by berth	
Wegierskie	592	8.2-9.0	General cargo	9×6-ton, 3×3-ton cranes, 12,000 sq.m. open storage, 10,150 sq.m. warehouse.
Rumunskie	600	7.10	General cargo	6×6-ton cranes, 3,740 sq.m. warehouses, 1,470 sq.m. open storage.
Albanskie	80	6.5	General cargo	1×6-ton crane, 2,380 sq.m. warehouse.
Rosyjskie	323	7.4	General cargo	6×3-ton cranes, 23,800 sq.m. warehouse, 3,500 sq.m. open storage.
Starowka	620	5.2	General cargo	1×10-ton, 1×7-ton, 3×3-ton, 5×2-ton cranes, 5,600 sq.m. warehouse, 8,100 sq.m. open storage.
Greckie	627	5.6-6.0		Anchorage for ships and barges.
Jugoslowianskie	95	5.9-4.7	General cargo	1×3-ton crane, 3,280 sq.m. open storage.

Note: * New Quays.

Name of Quay	*Length (m.)*	*Depth (m.)*	*Designation*	*Equipment*
Swinoujscie:				
Portowcow	215	10.60	Bulk cargo, general cargo.	1×10-ton, 2×16-ton cranes, 4,200 sq.m. open storage.
Gornikow	260	12.80	Coal	Coal terminal capable of accepting vessels upto 65,000 d.w.t. Shiploader with daily capacity of 30,000 tons. Fully mechanised open coal storage area equipped with rubber-belt conveyors for transport of coal at the storage areas. Storage capacity 700,000 tons.
Wladyslawa IV	554	10.0		The quay is used for lighterage and as a lay-by berth.
Chemikow	282	12.8	Bulk, fertiliser	2×20-ton gantry cranes. Import raw chemical materials such as phosphates. Covered storage for 100,000 tons of cargo. Handling rate of 10,000 tons daily. Barges and wagons can be loaded directly ex-ship or ex-store with capacity of 500 tons.
Hutnikow	329	12.8	Ore	1×40-ton gantry crane handling ore, aggregate and heavy general cargoes. Open storage of 5,200 sq.m.

In Swinoujscie there is also a defreezing plant for railway cars and railcar dumpers.

BULK HANDLING FACILITIES: See "Berthing".

CRANES: Floating cranes of 16 tons for bulk cargoes, 90 tons and 200 tons for heavy lift handling and various mobile cranes upto 70 tons available.

Also see "Berthing" for quay cranes.

STEVEDORES: 24 hours ETA required to arrange gangs.

1 in 4 Saturdays are worked.

MEDICAL: Doctors and hospital facilities available.

TANKERS: All empty tankers have to give 24 hours ETA advice whether they are gasfree and name of last cargo carried. No residue discharge facilities.

DENSITY: 1000.

FRESH WATER: Fresh water supplied from hydrants on quays or by water tanker. The minimum charge is for 5 tons of water. For supply of water on Sundays and holidays a surcharge of 100% is levied. Cost per ton – via hydrant $3.90, via barge $7.20.

FUEL: All grades of Shell fuel oil and Castrol marine lubricants.

GANGWAY/DECK WATCHMEN: Available but not compulsory.

OPENING/CLOSING HATCHES: Normally opened by crew.

CUSTOMS ALLOWANCES: Each man – 160 cigarettes and 1 bottle of spirit. Master allowed double.

CARGO GEAR: No additional requirements; all gear supplied by stevedores except rain tents.

CONSULS: Swedish Consulate (represents Denmark and Norway), Russian Consulate, Czech Rep. Consulate, German Consulate and Cuban Consulate.

Compass adjusting available. Chart corrections possible. British Admiralty and Polish charts available.

STORING: See "Prelims".

1. Vessel can be stored by barge/motorboat/or truck.
3. Trucks can proceed alongside at the berth. Vessel can store from barge/trucks during loading/discharging operation using her derricks or port crane.
5. Customs Office must be informed about storing.
6. Local riggers (strictly port's workers) can be employed to assist with storing.

SHIP SUPPLY SERVICE: Supplied by Agent.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Each crew member must be in possession of a valid Discharge Book and will receive a separate shore permit issued by the Immigration Authorities entitling him to go ashore within the city area.

GARBAGE DISPOSAL: Shipservice, ul. Przejazd 1, 70-607 Szczecin, Poland. Tel: 337-162, 342-471. Telex: 422282. Fax: 338-284.

Clean Up Service II, ul. Komuny Paryskiej 32c/8 Szczecin. Tel: 520-322.

WASTE OIL DISPOSAL: See "Garbage Disposal".

SEAMAN'S CLUBS: Sailor's Home, 10/12 Malczewskiego Street, 70-612 Szczecin, Poland. Tel: (48-91) 240-001. Telex: 425159. Fax: (48-91) 228-578.

CURRENCY: Polish Zloty (Zl). U.S.$ 1.00 = 22030 Zl. (18.3.94).

DEVELOPMENTS: The Szczecin port has been in the main developed as a general cargo port. A main investment effort has been directed toward an establishment of a modern general cargo potential. New berths and terminals working on the "Roll-on/Roll-off" and "Lift-on/Lift-off" system will be built. The investment will comprise: berths, storage space, cranes, trucks and the other equipment for transhipment of conventional and containerised general cargo.

The Port of Swinoujscie is still being built in as a bulk cargo harbour, capable of serving large vessels. Simultaneously the port will be developing ferry services. A modern ferry terminal built in 1972-1973 is under further development and a target project stipulates 4 berths and 10 arrivals and departures per day.

Fertiliser plant under construction at Police. For vessels up to 38,000 d.w.t.

NOTES

Please also advise Shipping Guides Ltd.

Portugal

AVEIRO: 40.39 N. 08.45 W. (See Plan)

PORT LIMITS: A vessel is considered "arrived" when she is 3 miles from the piers.

DOCUMENTS:

5 Crew Lists.
4 Lists of Passengers Disembarked.
2 Lists of Passengers in Transit.
5 Cargo Manifests.
1 Manifest of Cargo in Transit.
1 Provisions List and Spares.
2 Health Certificates.
2 Dangerous Cargo Lists (when applicable).
2 Lists of Articles held by the Crew.

PILOTAGE: Compulsory for vessels of 200 g.r.t. and above.

Pilots address: Departmento de Pilotagem do Porto de Aveiro - Barra - 3830 – Ilhavo. Hours: 0800 – 1200 and 1400 – 1800.

Telephone: 369 429.
Telex: 37338 Inppda p.
Telefax: 369244.
VHF: Channels 14 and 16.

At least 3 hours notice of ETA required by VHF or telephone.

In normal conditions of weather and sea, the area of boarding is usually 1 miles N.W. of North Pier. If not possible to board in this area the pilot boat will guide the vessel across the bar. If weather and sea do not allow this, vessel will be guided by VHF Channel 14 and take the Pilot between piers.

There are 3 pilot boats, one of 18 m. and the other 12 m. length, both have black hull and white superstructure, identified with a "P", and another fast boat totally white. All boats display a white flag sorrounded by narrow blue strip, with a black "P" in the centre.

ANCHORAGE: West of North Pier, at a distance of about 1.5 miles.

RESTRICTIONS: Depth at bar 5.0 m. to 8.0 m. Tidal variation 3.0 m. Entering and sailing only during daylight. No entry during thick fog.

It is expected that 24 hour entering and sailing will commence soon.

MAX. SIZE: LOA and draft are regulated by Port Captain's Notice No. 5/89.

North Terminal: Length 130 m., draft 6.0 m.

South Terminal and Industrial Port (tankers): Length 90 m., draft 5.2 m.

HEALTH: Usual international health regulations to be observed. Free Pratique automatic for vessels coming from other Portuguese ports.

RADIO: Aveiro Pilots Radio on VHF Channels 14 and 16. Radio station is Lisbon Radio.

VHF: See "Pilotage".

RADAR: Pilot boat has radar that can assist vessels during approach to harbour entrance.

TUGS: 1×145 h.p., 2×400 h.p. and 1×475 h.p.

BERTHING:

	Length (m.)	*Depth at LW* (m.)
North Terminal	500.00	8.0
South Terminal	400.00	6.0
Industrial Port:		
Petrogal (GALP) Wharf	35.00	6.0
E/PI Wharf	41.50	6.0
F/PI Wharf	49.00	6.0
Fishing fleet port	25.90 – 45.00	3.0 – 5.0

CRANES: *North Terminal:* 6×12 ton and 1×39 ton electric cranes. *South Terminal:* 4×6 ton and 2×12 ton electric cranes. *Mobile cranes:* 2×3 ton, 6×7 ton, 7×16 ton, 1×50 ton, 1×100 ton.

BULK CARGO FACILITIES: Petro chemicals at Industrial Port. Grabbing cranes at North and South Terminals of up to 9.0 cu.m. capacity.

SPECIALISED CARGO - HANDLING FACILITIES: There is a Ro/Ro berth at the Northern part of North Terminal.

STEVEDORES: Advise agent 24 hours before vessel's arrival. *Working hours:* 0800 – 1700 hrs., overtime possible.

MEDICAL: Hospital and clinics in town. Advance notice not required. Required vaccination certificate, and when ship comes from affected regions, also yellow fever certificate.

TANKERS: Private quay of Petrogal/GALP used by small-sized tankers. Two Port Authority quays for tankers, wine, liquid combustibles and chemicals. No facilities for dirty ballast.

DENSITY: About 1025.

FRESH WATER: Supplied from quay at 20 t.p.h. or by road tanker.

FUEL: Only diesel available. Smaller quantities supplied from road tankers. Otherwise, from Petrogal's private quay (pipeline).

CONSULS: Nearest Oporto, 60 km.

REPAIRS: All types of repairs can be carried out.

DRY DOCKS: 1 Dry dock (100 m.×18 m.) for vessels up to 3,000 d.w.t. and 1 floating dock for vessels up to 1,200 d.w.t.

SURVEYORS: Cargo and ship surveyors available.

GANGWAY/DECK WATCHMEN: Available but not compulsory.

OPENING/CLOSING HATCHES: By crew.

REPATRIATION: Possible. If crew member has letter from Master of vessel, 40% discount allowed on fare.

AIRPORT: Oporto Airport (Pedras Rubras) at about 80 km. Lisbon Airport (Portela) at about 250 km. Both served by regular airlines covering all the world.

TIME: From October to April: GMT; April to October: GMT plus 1 hour.

HOLIDAYS: New Year's Day; 1st April; Liberty's Day (25th April); Portugal's Day (10th June); Workers' Day (1st May); 12th May (Local Holiday); 2nd June; 10th June; 15th August, (Religious Holiday); Corpus Christi (movable); Proclamation of the Republic (5th Oct.); All Saint's Day (1st Nov.); Independence of Portugal (1st Dec.); Immaculate Conception (8th Dec.); Christmas Day. No work allowed on Christmas Day and New Year's Day.

CUSTOMS ALLOWANCES: 125 grams tobacco, and 1 bottle wine/spirits for each man.

POLICE/FIRE/AMBULANCE: Call 115 for all services.

TELEPHONES: Not available on board.

SERVICES: Ship repairs, fresh water, towage, provisions, repatriation, gyro/radio repairs, fumigation, bunkering, medical, surveys, divers.

BANK: Lloyd's Bank and Portuguese Banks.

STORING: See "Prelims".

1. Yes.
2. No interference with cargo work.
3. Yes.
4. Yes.
5. –
6. Yes.

SHIP SUPPLY SERVICE: Available. Contact agent.

SHORE LEAVE: Crew allowed ashore.

IDENTIFICATION CARDS: Crew members going ashore will need a special card issued by Customs Officer and Maritime Authority. Ship's Agent takes these cards aboard, where they are completed in accordance with Crew List. See "Lisbon".

GARBAGE DISPOSAL: Service available, 0.8 cu.m. containers, provided alongside by Port Authority.

WASTE OIL DISPOSAL: Collection service at port, by private local ship repair company, using a 7.0 cu.m. capacity tanker truck. Contact: "Navalria". Tel: (034) 23654. Fax: (034) 25728. Telex: 37393.

SEAMAN'S CLUBS: Club Stella Maris, Av. Bacalhoeiros 354, Gafanha da Nazare, 3830 Ilhavo, Tel: (034) 361150.

CURRENCY: Portuguese Escudos (PTE).

DELAYS: As a tidal port, arrivals and sailings are subject to tides. Delays may occur owing to bad weather, especially during the Winter months.

DEVELOPMENTS: Construction of container terminal.

1×1.5 tons at 24 m. (electric)
3 tons at 16 m.
1×2.3 tons at 16 m. (mobile)
16 tons at 3 m.
1×52.5 tons at 23 m. (normal operation) or
72.5 tons at 17 m. (maximum – mobile), with spreaders for containers up to 40 ft.
20×3/25 ton forklift trucks.

STEVEDORES: Advise Agent 24 hours before arrival.
MEDICAL: No prior advice is necessary. All medical facilities available.
DENSITY: About 1020.
FRESH WATER: Each quay has its own installations.
FUEL: Only diesel available.
CONSULS: France, Spain and United Kingdom.
REPAIRS: There are two shipyards and repair facilities, also a slipway for ships up to 4,000 tons.
GANGWAY/DECK WATCHMEN: Available but not compulsory.
OPENING/CLOSING HATCHES: Work usually done by crew.
CUSTOMS ALLOWANCES: No limit, but must be declared.
REPATRIATION: No difficulty in crew repatriation.
TIME: From last Sunday in September till last Sunday in March GMT and the rest of the year GMT plus 1 hour.
HOLIDAYS: New Year's Day; Good Friday; 25th April; 1st May; Corpus Christi (movable); 10th June; 24th June; 15th August; 5th October; All Saint's Day (1st November); 1st December; 8th December; 24th December; 25th December.
POLICE/FIRE/AMBULANCE: Police 22022; Ambulance 115; Fire 22122 and 22030.
SHORE LEAVE: Crew allowed ashore.
DELAYS: As a tidal port, arrivals and sailings subject to tides. Delays may occur owing to bad weather, especially during Winter months.
IDENTIFICATION CARDS: See "Lisbon".
GARBAGE DISPOSAL: Available.
WASTE OIL DISPOSAL: Available.
SEAMAN'S CLUBS: Stella Maris.
CURRENCY: Escudos. U.S.$ 1.00 = 170.00 Esc. (January 1994).
DEVELOPMENTS: Dredging in progress. Regularisation of River Mondego banks up to bridge to be concluded second half of 1994. Foreseen for 1994 is the beginning of the construction of a new bulk terminal to be served by railway, and it is expected to be concluded by the end of 1995.
AUTHORITY: Junta Autonoma do Porto da Figueira da Foz, Avenida de Espanha, 3080 Figueira da Foz, Portugal. *Tel:* (033) 22365, 22366. *Telex:* 52339 Porfig P. *FAX:* (033) 23945. *Contact:* Joao de Oliveira Barrosa, Port Director.

AGENT: A. J. Goncalves de Moraes, Lda., 262-Rua da Republica, 3080 Figueira da Foz – Portugal. Tel: (33) 22584. Fax: (33) 20543. Telex: 53017. Cables: Amoras. After office hours: (33) 25016 and (33) 24666 ("Aveiro" network). Shipping and Forwarding Agents, Chartering and Brokers, Insurance Agents, Stevedoring.

LEIXOES and OPORTO (Douro River): (See Plan)

Leixoes: 41.11 N. 08.43 W. Oporto: 41.09 N. 08.37 W.

DOCUMENTS:
Health Certificate.
5 Crew Lists.
Provision List — ship and individual.
Tobacco Declaration and Entrance Forms supplied by Agent on arrival.
5 Manifests and 2 copies of each B/L concerning cargo to be discharged.
1 Transit Manifest if cargo in transit exists.

APPROACHES: *Leixoes:*

By day: Vessels coming from the North should take due heed of the Orca Rock situated 1,300 m. beyond the Northern Quay on the parallel 41° 10′ 37″ N. and should pass to the South of the breakwater light.

By night: Vessels approaching the port should be guided by the lights of the breakwater and then by the lights of the lighthouse, positioned at the heads of the North and South Moles of the Port, placing the Leca lighthouse in the middle of them.

Entrance Channel: The width of the port entrance between the heads of the breakwaters is 220 m.; in the foreport the channel widens to 500 m., from the entrance for 240 m. and is reduced again towards the entrance of Dock No. 1 to 113 m. By dredging, the depths are maintained at 10 m. The width of the entrance to Dock No. 2 is 58 m.

PILOTAGE: Pilotage is compulsory for entry and leaving, with the exception of coastal vessels and national flag craft up to 500 g.r.t., coastal and local fishing vessels and pleasure craft. Available day and night in Leixoes, but in Oporto only between sunrise and sunset, and then dependent upon sea conditions. Vessels must communicate their ETA a minimum of 12 hours ahead and confirm again 4 hours in advance. Departures must be communicated 2 hours ahead between 0800 and 1800 hrs. This must be done via the Radar Station.

Pilot boat recognition:

By day – black hull, with the letter "P" painted in white. Also a flag may be hoisted which is white, lined in blue, and with a black letter "P" in the centre.

By night – a white light at the top of the mast forward and lower down a red light.

Call-up signals by ship's siren:

To call Pilot – Letter "G" in morse, or Letter "O".

To call pilot launch – Letter "O" in morse.

VHF: Pilots on VHF Channels 9, 12, 13 and 16.

ANCHORAGES: *Douro River:*

Outside the port: Vessels may await entry, anchoring to the North of the alignment of the bar entrance lights of the Douro River in an area defined by the alignments of the Leca lighthouse, and the N.W. side of the Leixoes mole. In this area the depths vary between 16 m. and 21 m.

The anchorage is not safe in certain weather conditions.

Inside the port: Vessels can anchor with 2 anchors at the bow and 1 small anchor at the stern, and even by passing lines ashore at the following points: Alfandega, Cabrea, Pedras, Bicalho, Gas, Lugan, Carbonifera, Gaia and Monchique.

Leixoes:

Outside the port: Vessels can await entry, anchoring outside a radius of half a mile from the head of the breakwater to the West, and with an Eastern limit as the alignment of the Leca lighthouse with the breakwater light itself.

Anchorage is not safe during bad weather.

Inside the port: Vessels can anchor in the foreport.

MAX. SIZE: *Douro River:* Permitted draft on entering the port, variable with the state at the bar is from 18 ft. to 19 ft. (HWST) and 16 ft. to 17 ft. (HWNT).

The height of the tide of the port is: Average during Spring tides 2.30 m; average during Neap tides 1.80 m.

At times and particularly during the months of January, February and December, normal movement of vessels is affected by the rough sea which in conjunction with the river current causes frequent variation, both in the width and in the depth of the access channel, and necessitates annual dredging in order to guarantee conditions of navigability.

Leixoes: Cargo vessels 31 ft. Also see "Tankers".

RESTRICTIONS: *Douro:* Subject tide and bar conditions.

The main alignments of the bar, are as follows:

1. Tres Orelhas (a pillar with 3 battlements on the upper part, located at Sobreiras) or Marca Nova do Mato, on the Anjo (an archway on the Tower of S. Miguel da Cantareira);
2. Tres Orelhas by Marca Nova da Cantareira (light on iron column).

Marking of navigation channel – The channel is defined by 7 buoys.

HEALTH: Free Pratique authorised for vessels coming from other ports in mainland Portugal. For vessels coming from other countries Health Declaration supplied by the Pilot must be filled in, and delivered to the Agent. Radio Pratique also available.

RADIO: *Leixoes Naval Radio Station:* Operated by the Leixoes Port Captaincy, working with permanent listening-watch on 2182 kHz for aid to navigation; receives and listens on frequencies 2182, 2097, 2566, 2657, 4474.5 and 7510 kHz. Transmits weather report and Notices to Mariners by radiotelephony for the coastal strip for a distance of 50 miles to seaward of the coast of Portugal at the times 0735 Z, 1005 Z, 1935 Z, 2205 Z, on frequency 2657 kHz.

It listens out permanently on VHF Channel 16 (156.80 MHz) for aid to navigation and has working Channels 11, 13, 19, 39 and 60.

RADAR/VHF: *Leixoes Radar Station:* Operated by the Administration of the Ports of the Douro and Leixoes, it is equipped with radar for control and support to navigation, and has a range of 18 miles. It also has VHF equipment, permanently listening out, working on the 156 – 175 MHz band, it being possible for any vessel, up to a distance of 50 miles to contact this station for identification, port matters and meteorological information. The permanent listening channels are 12 and 16. The working channels are 9, 10, 11 and 68.

TUGS: Normally join the vessel.

At Leixoes: 7 tugs, 1,300 – 2,800 h.p. In the outer harbour up to 700 g.r.t., no tug required; from 700 up to 1,800 g.r.t. 1 tug compulsory. Over 1,800 g.r.t., 2 or more tugs required.

Report: 1994.

Large vessels require 4 tugs (2×35 ton B.P. from Port Authority and 2×45 ton B.P. from Petrogal).

At Douro River: As a rule service necessary on arrival/sailings. Thus they join the vessel after passing the bar.

BERTHING: *Douro River:* Gaia Quay: Length 280 m. Depth 18 ft. Estiva Quay: Length 140 m. Depth 11 ft. – 17 ft. Porto A Quay and Alfandega Quay are for small craft only.

In addition there are private facilities of Secil (4 cement silos, total capacity 12,000 tons), Leiria Cement Company and Mobil.

Outer Harbour: The depth of water at the entrance and in the centre of the outer harbour is 10.00 m. at MLWST; Maximum rise of tides 3.99 m.; Minimum rise of tides 0.07 m.; Total water area 117.36 ha.; Breadth of entrance (harbour) 220.05 m.; Breadth of entrance (Dock No. 1) 113.00 m.

Dock No. 1: Length of North Quay 487 m.; South Quay 551 m.; Maximum draft 29 ft.

Dock No. 2: Length of North Quay 670 m. and South Quay 743 m.; Maximum draft 31 ft.

South Mole: Length of Quay 370 m.; Depth 19 ft.

Ro/Ro Terminal: Quay with a usable length of 145 m. and max. depth of water of 18 ft.

Dock No. 4: Length of quay 500 m., max. draft 30 ft.

CONTAINER HANDLING FACILITIES: *South Side:* 540 m. of usable quays with a depth of 39 ft. The total open storage area for containers is 3.4 hectares. It is equipped with a jib crane with a 35 ton capacity and a reach of 30 m., 2 Transtainers with 35 ton capacity and 40 m. reach, 2 Karricons for container movement with a capacity of 30.48 tons and 8.44 m. lift, 2 Valmets with a capacity of 30.48 tons and 9.0 m. and front loading stackers, 2 with a max. capacity of 25 tons and a max. lift of 6.1 m. and 1 with a capacity of 15 tons and 3.05 m. lift.

North Side: 360 m. of usable quay with a depth of 30 ft. Its usable open area for containers is 1.97 hectares. It is equipped with 2 quay jib cranes with 35 ton capacity and 30.1 m. reach and 5 transtainers with a capacity of 35 tons and various reaches. Also available are 20 semi-trailers for container transport with a capacity of 50 tons.

CRANES: *Leixoes:* Dock No. 1: 1×94 tons on the North side and 8×3 tons and 7×5 tons on the South side.

Dock No. 2: 2×15 tons, 13×5 tons and 2×15 tons on the North side, and 1×31.8 tons, 11×5 tons and 2×12 tons on the South side.

South Mole: 5×5 tons.

Douro: Gaia Quay: 2×1.5 tons, 1×3 tons and 1×5 tons.

TANKERS: *Terminal Operator:* Petroleos de Portugal E.P. (Petrogal).

Pier A: Max. d.w.t. 120,000 tons. Depth of water: 14.0 m. Max. draft: 44.5 ft. (with dredging). Max. length: 250 m. Daylight berthing only.

Products Handled	Capacity t.p.h.	Hoses (in.)
Crude Oil	10,000 disch/2,000 load	4×12
Gas Oil	1,500 load	1×12
Fuel Oil	2,000 load	1×12, 1×10
Naphtha	1,200 load	1×10

Pier B: Max. d.w.t. 27,000 tons. Max. draft: 30 ft. Max. length: 200 m. Berthing at night possible. Depth alongside 9.0 m. Depth in approaches 7.7 m.

Products Handled	Capacity t.p.h.	Hoses (in.)
Crude Oil	4,000 load	2×10
Gas Oil	1,500 load	1×10
Fuel Oil	2,000 load	1×12, 1×8
Gasoline	700 load	2×10
Petrol (Jet)	400 load	1×8
Lub Oil	300 load	1×6
Benzine	350 load	1×8
Toluene	350 load	1×8
Octoxylene	350 load	1×8
Paraxylene	350 load	1×8

Pier C: Max. d.w.t. 5,000 tons. Max. draft 19 ft. Max. length 100 m. Berthing at night possible. Depth alongside 5.7 m.

Products Handled	Capacity t.p.h.	Hoses (in.)
Fuel Oil	2,000 load	2×8
Gas Oil	1,500 load	2×8
Gasoline	700 load	2×8
Petrol (Jet)	400 load	2×8
Lub Oil	300 load	1×6
LPG	200 load	1×6
LPG/B	200 load	1×6

Moorings: Vessels are to be moored with following lines, as a minimum:

Pier	Head Lines		Breast Lines		Springs	
	Fore	Aft	Fore	Aft	Fore	Aft
A	4	4	2	2	2	2
B	3	3	2	2	1	1
C	3	3	–	–	1	1

BRIDGES: Bridge at Leixoes between Docks 1 and 2 opening regularly.

STEVEDORES: Ordered by Agents according to berth and cargo.

MEDICAL: Masters to advise by radio prior to arrival if medical attendance is required on board. Hospital facilities available.

DENSITY: 1026.

FRESH WATER: Available alongside or by barge.

FUEL: Available from Shell, Petrogal, Mobil and B.P.

LISBON: 38.42 N. 09.11 W. (See Plan)

LOCATION: Lat. 38° 42′ 30″ N., Long. 9° 11′ 10″ W. Capital and principal port of Portugal.

PORT LIMITS: A vessel is considered to be an "arrived vessel" when, after entering the Tagus Estuary, she has left behind the alignment between the Torre of S. Juliao and the Torre of Bugio.

DOCUMENTS:

Health Certificate.
6 Crew Lists.
10 Passenger Lists.
2 Lists of Articles held by the crew: cameras, binoculars, radios, cigarettes, spirits, etc.
2 Stores Lists.
All to be bigned by ship's Master.

Certificates for vessels up to 500 tons: – Tonnage Register, Loading and Navigation Certificates.

For vessels over 500 tons: – Tonnage Register; Load Line; Radio; Safety Equipment and Navigation Certificates.

Cargo Documents:

10 Manifests.
3 sets of Bills of Lading.
For cargo in transit: 2 Manifests.

APPROACHES: The Port of Lisbon is situated on the Tagus estuary which is 25 km. long and between 2 km. and 14 km. wide with a highest tidal rise of 4.4 m. At the bar which gives access to the port is a channel with a depth of 13 m. (16 m. at HT).

PILOTAGE: Compulsory. Cascais is the main station for Pilots at Lisbon. There is another station on the Tagus, near Belem Tower. The charge varies according to the tonnage of vessel, from $100.00 in or out for vessels up to 100 tons to $4,000.00 for vessels of 185,000 tons. At night, plus 50%. These charges are obligatory whether Pilots are employed or not (tourist vessels half rate). Exemptions from payment are as follows: Vessels calling solely to land sick crew or passengers, or vessels made to shift by order of the Port Authority, half rates for pilotage in creeks of River Tagus. Reduction of 50% as follows: (1) Tourist vessels; (2) vessels calling solely for supplies of provisions, fuel or water; (3) vessels calling for shelter only. The attendance of Pilots at all movements inside the River Tagus is compulsory.

For this assistance (mooring or unmooring and shifting in the harbour) the charge varies.

MAX. SIZE: See "Berthing".

RADIO: ETA to be advised by Master, to Agent, 24 and 12 hours before ship's arrival.

VHF: Channels 1–84 used in the port. Pilots on Channel 14, Port Authority on Channels 12-68, Maritime Police on Channel 19. Ship-to-Ship on Channels 06 and 08. Tugs on Channels 09, 10 and 69.

TUGS: 5×420 h.p. – 3,500 h.p.

BERTHING:

Accommodation: The port wharves have an overall length of 13,000 m. on the North Bank with water depths varying between 4 m. and 13 m. On the South Bank the wharves have a total length of 3,000 m. with depths of from 3 m. to 17 m. Total covered warehouse area, 220,000 sq.m.

*Possible depths are shown. For clarification of usable depths at specific times the Port Authority should be consulted.

**Berth has dolphins which permit vessels of up to 25,000 d.w.t. to berth.

PORT EQUIPMENT/FACILITIES:

45 electric cranes on rails, capacity 1.5 tons – 12 tons, outreach 13.5 m. – 32 m.

2 Coles mobile cranes with capacity 15 tons and 30 tons.

3 container cranes with 30 tons, 35 tons and 35 tons capacity.

5 fork stackers, 1×2.2 tons and 1×4.5 tons and 3×2.5 tons capacity.

4 tractors, 5 tons capacity.

29 trucks, 1×12 tons, 3×5 tons, 8×4 tons, 7×3 tons, 9×1.0 tons and 1×0.5 tons capacity.

7 transtainers for 20 ft., 30 ft., 35 ft. and 40 ft. containers.

8 stackers, 12 tons – 40 tons capacity.

1 heavy lift crane, capacity 488 tons.

2 floating cranes, capacity up to 60 tons.

Tank Cleaning Station: Located at Porto Brandao; belonging to LISNAVE. It has 2 Dukes of Alba 120 m. apart, a service platform with 5 mooring points for vessels up to 600,000 d.w.t. and depth of 12 m.

The station occupies an approximate area of 60,000 sq.m. and has a storage capacity of 20,000 tons of oil and residue.

Cold Stores: Apart from the warehouses of the fish dock, there are those of FRISSUL – Entrepostos Frigorificos Lda. (Olivais) with a capacity of 15,000 tons, and Sociedad Continental de Alimentacao (Jardim do Tabaco) with 2,300 cu.m. and Companhias Reunidas de Congelados e Bacalhau (Alcantara) with 9,500 tons.

CONTAINER HANDLING FACILITIES: *Container and Ro/Ro Facilities:* The Santa Apolonia Container Terminal, which is operated directly by the Port of Lisbon Authority has 870 m. of quay length, 8.0 m. to 10.0 m. depth alongside, 8 ha. of storage and is equipped with three Mague 35 ton capacity container gantries. There are 7 Paceco 35 ton capacity rubber-tyred transtainers, 2 mobile cranes, 8 frontal stackers and 35 tractors and trailer units. Their maximum handling capacity reaches 120,000 containers/year.

The Alcantara-Sul Ro/Ro terminal, operated by Liscont, concessionnaire with German participation (of Eurokai, container operator in the Port of Hamburg) counts with 630 m. of quay length, 10 m. to 13 m. depth alongside and 8.5 ha. of storage. This terminal still under development, is equipped with 2×45/60 ton gantry cranes. The round the clock service after having been established, as foreseen, in this terminal, whose main scope is the development of a complete transhipment service, will enable it to handle from 130,000 to 150,000 containers a year.

2 Roll-on/Roll-off terminals at Alcantara for ferry boats and cargo. Ramp capacities 60 tons and 100 tons.

BULK HANDLING FACILITIES: *Ore and Bulk Cargo Facilities:* A grain silo of 110,000 tons capacity is sited at Poco do Bispo with depth alongside of 8.0 m. with unloading by elevator at 1,000 t.p.h., operated by SILOPOR.

Trafaria Grain Silo, also operated by SILOPOR has a main jetty with close water depths of 14 m. – 18 m. and silos with capacity for 200,000 tons, being considered one of the largest in Europe. Intake Jetty: 1×120,000 d.w.t. vessels (17.2 m. depth) on outside and 2×60,000 d.w.t. (13.2 m. depth) on inside. 3 unloaders, combined rate 3,000 t.p.h. (3×1,000 t.p.h.). Export Quay: Length 240 m. Depth 13.5 m. Can receive vessels up to 30,000 d.w.t. Loading 2,000 t.p.h. (4×500 t.p.h.).

The Palenca Terminal for oleaginous cargo (soya oil), etc., operated by Tagol, has a storage capacity for 100,000 tons of seed and includes a factory for edible oil with silos of 20,000 cu.m. capacity.

A cement storage terminal operated by Secil is available at Poco do Bispo, and, at Alhandra, another cement terminal is operated by Cimpor. At Barreiro, iron ore is discharged for the steelworks at Seixal.

HEALTH: Ordinary visit made at central area with vessel anchored, from 0800 hrs. to 1900 hrs. Master may ask for Free Pratique to get ship moored immediately on arrival. For this, necessary to cable the Health Authorities, addressing cable as follows: Sanidade Maritima de Lisboa, Rocha do Conde de Obidos, maximum 15 hours and minimum 4 hours prior to the ship's arrival. Text of cable: "ship's name, nationality, code (MIBDU), day and time of arrival" signed by the Master.

STEVEDORES: Ordered by Agents according to berth and cargo.

MEDICAL: Masters to advise by radio prior arrival if medical attendance required on board. Hospital facilities available.

TANKERS: Shell and Petrogal berths exposed to 9 knots HWST current. Essential to use good new mooring lines.

Cabo Ruivo Terminal: This is operated, on a concession basis, by Soponata and has depths of 8.0 m. – 11.0 m., capable of mooring tankers up to 65,000 d.w.t. alongside its jetty.

Fuel Oil Facilities: The Port of Lisbon fuel oil installations belong to private companies and are concentrated along both banks of the Tagus at the following points:

Sacavem and Cabo Ruivo (with oil refinery facilities), Montijo, Barreiro, Santa Iria, Porto Brandao, Porto dos Buchos.

Also see "Berthing".

Report: *Cautionary Advice:* The entrance to the River Tagus (Rio Tejo) is fully exposed to the Atlantic Ocean, especially from the S.W., and heavy, breaking seas are experienced at the Bar during and after Western semi-circle gales. The worst conditions arise during Southwesterly gales on an ebb tide. During a maximum of 30 days per year Pilots cannot board in the normal boarding area. The channel through the Barra Grande, the normal entrance for larger ships, is poorly defined. The 047° leading lights Esteiro and Gibalta have little sensitivity at the Outer Reaches of the channel and can be obscured by poor visibility and Pilots usually use radar to identify ship's position. Day marks using a beacon on Mama Sul in line with beacons at Caxias and at Boa Viagem delineate the Northern and Southern extremities of the channel only after crossing the Bar where the dredged width is only 200 m. wide and unmarked. The flood tide sets on to Forte Bugio and Cachopo do Sul, the ebb tide sets on the Cachopo do Norte. When approaching the pilot station at Cascais from the South and when proceeding from the pilot station to the entrance channel care must be taken not to be set on to Cabeca do Pato.

The channel is dredged to 14.0 m. chart datum.

Fishing boats operate in the Outer Reaches and to seawards of the channel in fine weather, sometimes without lights at night.

Pilotage: Pilots board from shore based pilot boats. A good lee is required. Pilot hoists are acceptable, but if no hoists are available on ships over 9 m. from sea level to the embark/disembark point, a combination of the pilot ladder and accommodation ladder is required.

Attention must be paid to pilot ladders which must be in accordance with the SOLAS regulation (17th rule).

If the weather is bad for boarding in Cascais area, the pilot boat, or a tug with a pilot, will sometimes lead a ship through the South Channel until S.Juliao Lighthouse, where the pilot will board the ship. Helicopter may also be used for the operation.

Pilotage service is a public service, operated by 52 pilots recruited from the Merchant Marine, having a Master's Certificate. During the first two years after recruitment, pilots are limited to handle ships up to 15,000 g.r.t., being unrestricted after that period.

Traffic Control: Port Regulations lay down certain traffic priorities and other controls that are exercised by the Pilots.

Anchorages: The main anchorage inside the port is at the confluence of the Samora Channel with the various channels S.E. of Lisbon, also on the South side, West of the bridge that crosses the River Tejo.

The anchorages which are numbered are shown on the I.H. Charts No. 46/INT1876 and 47/INT1877.

All these anchorages are good and sheltered.

Cautionary Advice: There is some silting in the river, therefore Masters must ensure that the ship's draft is no more than that advised. This silting takes place in all the berths and piers of the North bank of the river, and also at the Trafaria Terminal (Esso) and in the channels, piers and terminals of Siderurgia, Quimigal, Tanquipor, Rosairinho and Seixalinho.

Swell is sometimes felt at Esso Terminal (Trafaria), Silopor (Trafaria) and also at Liscont Container Terminal.

The water density changes from 1025 at the anchorages up to 1023 at Cabo Ruivo Petrol and Gas Terminals, and to 1002 at Alhandra and Cement Terminals.

As at all riverside berths in Lisbon, the current is strong, particularly on the ebb tide, and special attention must be paid during the rainy season.

DENSITY: 1025.

FRESH WATER: Usually supplied by barge unless vessel lying alongside a pier where water provided.

FUEL: Shell, Esso, Petrogal. These companies can supply through their own barges or alongside their private bunkering stations on pier.

CONSULS: Most countries are represented in Lisbon.

REPAIRS: There are several repair workshops. The biggest is Lisnave Shipyard with several docks, one for vessels up to 300,000 tons and a new dock where vessels up to 1,000,000 tons can be repaired.

REPATRIATION: No difficulties for crew changes or repatriation.

AIRPORT: Within the Lisbon area. Regular International services.

TIME: End September-end March – GMT. End March-end September – GMT plus 1 hour.

HOLIDAYS: 1st January; 25th April; 1st May; 13th June;10th June; 15th August; 5th October; 1st November; 1st December; 8th December; 25th December.

POLICE/AMBULANCE/FIRE: Maritime Police 608101; Ambulance 115; Fire 322222.

IDENTIFICATION CARDS: Crew members going ashore will need a special yellow card issued by Agent and stamped with police visa. The cards are supplied by Agent to be completed on board in accordance with crew list particulars. With these shore passes crew members may circulate between Lisbon and Cascais, and Lisbon and Sintra.

Master and/or Owners will be fined Esc. $1,000 for any crew member found ashore without that card. A double fine will be imposed in case of recurrence.

Similar cards, but white, are required for passengers in transit.

GARBAGE DISPOSAL: The Port of Lisbon Authority provides a daily service for the collection of solid waste along the quays and in the docks, using metal containers with a capacity of 1,100 litres, together with plastic sacks attached to appropriate receptacles. This service is provided along the whole of the North Bank from Matinha to Belem Dock. Contact: APL – Prevention Service (Tel: 396-91-11) for service.

WASTE OIL DISPOSAL: A cleaning service is provided for tankers at Porto Brandao, capable of storing 20,000 tons of oil and waste. Contact: ETC – Maritime Terminals S.A. (Tel: 296-16-32) for service.

Reservoirs are available at the Belem and Bom Sucesso Pleasure Docks for the collection of used engine oil.

CURRENCY: Escudo (PTE). U.S.$ 1.00 = 175 PTE (14.4.94).

SHIPMASTER'S REPORT: May 1991.

Anchorage: The anchorage is said to be unsafe and have a sandy bottom. We anchored stemming the ebb tide, using one tug made fast on a line forward, and a second tug standing by.

Pilot advised that a second anchor must be ready for immediate dropping, full bridge watch required and engines on short notice. Pilot station keeps permanent watch on VHF Channel 14.

Vessel is not allowed to immobilise engine for maintenance. The agent confirmed that ships do frequently drag, particularly in Winter with freshets or strong gales. On occasions tugs have to be kept fast to the ship at all times when at anchor in bad weather conditions.

Communications: Port Control and agents monitor VHF Channel 12, and shift to a duplex channel for working. However, out of office hours there is only a skeleton staff and calls are often not answered as the staff are attending vessels.

The watchman's office has a telephone with a meter and, when not otherwise engaged, will arrange telephone calls (accepts cash).

Officials: Vessel was cleared by an inspection party consisting of the Agent, Customs and Immigration on dropping anchor (0100 hrs.). A Customs officer stays on board throughout the discharge but did not ask for a cabin.

Berthing: Tagol Silo Berth: This is the first berth downstream from the bridge on the South bank and handles mainly animal feedstuffs. This 219 m. vessel berthed starboard side to the line of dolphins, some 180 m./190 m. long, using the port anchor with 4 shackles in the water. A total of 4 tugs were employed. The pilot required 5 headlines to shore, 2 breastlines and 2 forward springs to the dolphins and 4 long sternlines, 2 long breastlines to the shore and 2 after springs to the dolphins (a total of 17 lines). However when the ebb tide developed it was seen that only one after backspring was holding the vessel and so 2 forward springs were sent out from the main deck plus an extra backspring aft to make a total of 20 mooring lines. The ebb tide sets off the berth and lines had to be tended frequently to keep the ship alongside the dolphins.

Access to the ship is by shore gangway from a tower and then over a bridge to the shore. The berth has a pneumatic suction pipe at each end and a central chain and pneumatic suction unit in the middle. All are mobile and move along the line of the dolphins.

Non-portable stores have to be lifted onboard by the stevedores at their convenience, a cage is provided.

Water is not available and a water barge had to be employed.

It was not possible to discharge oil sludge due to the distance offshore.

Stevedore working hours are from 0800 hrs. – 2400 hrs. Monday to Friday.

Two tugs were employed on sailing in light draft.

It was said that only 2 sets of scales were fitted to the equipment.

Stores: All stores, provisions, lub oil, etc. seemed to be delivered after 1700 hrs.

Repairs: Port State Inspection: Vessel carried out engine maintenance alongside and was inspected by a representative of the Harbour Master to ensure that all work was completed under Port State Regulations.

AUTHORITY: Port of Lisbon Authority, Cais do Sodre, 1293 Lisbon Codex, Portugal. *Tel:* 3462321. *Telex:* 18529 P. *FAX:* 3462325.

Administracao do Porto de Lisboa, Rua da Junqueira, 94 1300 Lisboa. *Tel:* 3637151, 3637954. *Telex:* 18529 Porli P. *FAX:* 3643114. *Contact:* Dr. Lucinda Ascencao, Head of Public Relations and Marketing Department.

AGENT: A. J. Goncalves de Moraes, Lda., 22 Rua do Alecrim – P.O.Box 2772 – 1119 Lisboa Codex. Tel. (1) 3464943. Telex: 12296A, B & C. Fax: (1) 3464716 (direct line). Cables: Amoras. After office hours Tel: (1) 4645786. Shipping and Forwarding Agents, Chartering and Brokers, Insurance Agents, Stevedoring.

SETUBAL: 38.30 N. 08.55 W. (See Plan)

DOCUMENTS:

6 copies Crew Lists.
5 copies Passenger Lists.
3 copies Personal belongings of the Crew (portable radio, binoculars, cameras, etc).
3 copies Stores List.
2 copies Health Declaration.

For cargo: 4 Dangerous Cargo Lists, 4 Cargo Manifests, 3 Transit Cargo Manifests (if any) and 2 copies of Bills of Lading.

PILOTAGE: The pilotage service is supplied exclusively by the Departamento de Setubal do Instituto Nacional de Pilotagem dos Portos which runs a permanent service.

To assure prompt attention, requests for Pilots must be made in the following manner:

Entries: To send at least 6 hours beforehand a radiotelegram or a radiotelephone message preferably on S.S.B./AM to Pilotos de Setubal, giving the name of the ship, ETA and draft.

This information must be confirmed on VHF or MF 2 hours before the ship arrives at the bar.

Departures and movement in the River: Between 0800 hrs. and 1800 hrs. on weekdays and 0800 hrs. and 1300 hrs. on Saturdays, Sundays and holidays to communicate by telephone or on VHF with the "Estacao de Pilotos de Setubal" at least one hour beforehand, giving the name of the ship, the time and place where the Pilot is required and the service needed.

Only in cases of emergency will requests be accepted outside these hours.

To effect requests for Pilots, the Pilots use the following means of communication:

VHF — Listening permanently on Channel 14 being able to reply on any of the following Channels as requested: 11, 12 and 16.

MF — Listening in permanently on 2182 kHz, replying on 2132 kHz, their working frequency. Once contact has been established ships must change to this frequency. Communications can be made in SSB or AM according to the equipment of the ship.

Telephone No. (065) 522914.
Fax: (065) 526404.

The Pilots embark by motor launch based in Setubal and wait near the fort at Portinho da Arrabida when necessary and the weather permits.

To increase speed and safety on embarking and disembarking, ships of more than 4,000 tons gross, when light, and those of greater capacity in any condition, unless they have a door in the side or other modern means for Pilots to board and leave, and if the weather permits, should lower the gangway to about 3 m. above sea level and fix a rope-ladder so that it stays alongside the lower platform of the gangway.

Bad weather from the South, causing breaking waves at the edge of the shoals, sometimes prevents the pilotage service from operating.

In such conditions, ship must contact the Pilots to discover the state of the bar and limitations imposed on the pilotage service.

ANCHORAGES: Only inside harbour with a Pilot aboard.

RESTRICTIONS: No restrictions on night entry. At low tide vessels only up to 25 ft. draft. Max. draft 31 ft. 6 in., length/breadth no restrictions.

HEALTH: Free Pratique automatically given when ships come from other Portuguese port. Otherwise, Health Certificate is to be handed over to Health Authorities during clearance procedures.

Maritime Health: This station is located next to the Commercial Dock, Avenida de Luisa Todi 80. Apart from normal sanitary visits, observation of sick crew members, etc., the station issues Derat Certificates to vessels of all nationalities. Tel: 2 39 22.

RADIO: Call through Lisbon Radio.

Coastal radio station known as "Setubal-Pesca", with call sign CUX 9. Listens out permanently on 2182 kHz and replies on 1848 kHz. On receipt of the reply, vessels must change to 2284 kHz.

The station transmits weather bulletins and Notices to Mariners at 1105 hrs. and 1405 hrs., and makes general calls at 0205, 0505, 0805, 1105, 1405, 1705, 2005, and 2305 hrs.

TUGS: 12 available.

BERTHING: All installations are along the right (North) bank of the Rio Sado Estuary.

Fontainhas Terminal: Length 530 m. Depth 9.5 m. – 10.5 m. Used for general cargo. 12 electric cranes, 3 tons – 25 tons capacity.

Ro-Ro Terminal: Length 215 m. Depth 10.5 m. 2 berths with one side ramp and one stern ramp.

Container Terminal: Length 165 m. Depth 10.5 m. 1 gantry crane (20 ft. – 40 ft.); maximum capacity 65 tons at 30 m.

All the terminals are connected to the international highway and railway network. Water and electric power points available.

Equipment: 3 mobile cranes, capacity 2 tons – 45 tons, 1 reach stacker (1×22 tons for 20 ft. containers). Private equipment also available including 1×50 ton Coles mobile crane, 23 forklift trucks and 9 loading shovels.

Private Facilities:

Secil – Companhia Geral de Cal e Cimento: Length 104 m. Depth 11 m. Products handled: cement, clinker, coal and sand.

Ford/VW: Ro-Ro Terminal used for exportation of the automobile production from the Ford/VW factory near Setubal. Length 365 m., depth 10.5 m.

Propam – Consorcio Portugues de Panificacao, S.A.R.L.: Depth 6 m. Pontoon quay.

Pirites Alentejanas, S.A.R.L.: Length 125 m. Depth 9 m. Products handled: Pyrites.

Sapec – Societe Anonyme de Produits et Engrais Chimiques du Portugal: Pontoon – Length 80 m. Depth 5.5 m. Quay – Length 100 m. depth 9.0 m. Products handled: Pyrites, clay, phosphates.

Mague – Construcoes Metalomecanicas: Length 91 m. Depth 9 m. Products handled: Cranes, rolling bridges, alternators. Quay can take loads of 10-20 tons/sq.m.

Solisnor: Construction and repair of vessels. Depth 8.0 m. – 10.0 m.

Lisado: Pontoon quay. Gas freeing and tank cleaning.

Eurominas – Electro-Metalurgia, S.A.R.L.: Length 130 m. Depth 11.5 m. Products handled: Ferro-manganese and silicon manganese.

STEVEDORES: Ordered by the Agent some time in advance.

MEDICAL: Prior to arrival and in order not to delay ship's clearance, Master should inform by radio if medical assistance required, this only in case of contagious or epidemic diseases.

TANKERS: Shell Maritime installation with private pier. Discharge lines 4 in., 6 in. and 8 in.

Port Authority equipment for local oil spill response (skimmers, booms, transfer pumps, sorbents, storage tanks, etc.) available.

DENSITY: About 1026.

FRESH WATER: Supplied from shore to all piers.

FUEL: Supply available on request.

FIRE PRECAUTIONS: Repairs such as cutting, welding and other types of hot work shall be limited, as far as practical, at marine terminals and piers.

Hot works are not permitted:

(a) During gas freeing operations.

(b) Within 30.5 m. (100 ft.) of bunkering and bulk cargo operations involving hazardous materials.

Smoking only allowed in designated areas approved by the Master or the Port Authority. Open flames and smoking are not permitted within 30.5 m. (100 ft.) of hazardous materials storage areas.

Permits must be issued for hot, electrical and cold works undertaken in hazardous and dangerous areas. Fire watchers with suitable fire fighting equipment must be available.

Ship's watchman must be on duty at all times.

CONSULS:

Finland	Tel. 26018
France	" 24612
Spain	" 22018

Many countries represented in Lisbon (40 km.).

REPAIRS: All types available. Solisnor Shipyard and Dry Docks for new building and repairs for very large ships in the estuary of Setubal.

The facilities consists of: 1 dock for ships up to 700,000 d.w.t., 1 dock for ships up to 350,000 d.w.t. and 1 berth for ships up to 700,000 d.w.t.

GANGWAY/DECK WATCHMEN: Available but not compulsory.

OPENING/CLOSING HATCHES: By crew unless otherwise specified in C/P. Stevedores usually help.

CUSTOMS ALLOWANCES: About 200 cigarettes and 2 bottles of spirits per man.

CARGO GEAR: Supplied by stevedores.

REPATRIATION: All facilities.

AIRPORT: Nearest at Lisbon, about 50 km. away.

TIME: GMT from late September to late March. From late March to late September – GMT plus 1 hour.

HOLIDAYS: January 1st, April 1st and 25th, May 1st, June 2nd and 10th, August 15th, September 15th, October 5th, November 1st, December 1st, 8th and 25th.

Movable holidays: February 15th (Carnival), February 7th, 14th and 17th, May 27th, April 3rd and May 22nd.

POLICE/AMBULANCE/FIRE: Tel: 115.

IDENTIFICATION CARDS: Supplied and filled in by the Agent. Crew members cannot leave Three Castles area (Setubal-Palmela-Sesimbra) without a special permit from Customs Guards obtained through Agency.

WASTE OIL DISPOSAL: A 10 cu.m./hr. oil treatment station and several mobile tanks are available at the Solisnor Shipyards.

CURRENCY: Escudo. U.S.$ 1.00 = Esc.171.0 (16.3.94).

DEVELOPMENTS: By February 1995, the entrance will be dredged to 11.0 m. and the North Channel to 12.0 m.

AUTHORITY: Administracao dos Portos de Setubal e Sesimbra, Praca da Republica, 2900 Setubal, Portugal. *Tel:* (065) 534095. *Telex:* 43200. *FAX:* (065) 30992.

AGENT: A. J. Goncalves de Moraes, Lda., 5 Trav. Trabalhadores do Mar, 2900 Setubal. Tel: (65) 522399. Telex: 16212. Cables: Amoras. After office hours: (65) 2188753. Shipping and Forwarding Agents, Chartering and Brokers, Insurance Agents, Stevedoring. *Fax:* (65) 524205.

SINES: 37.57 N. 08.52 W. (See Plan)

PORT LIMITS:

North:	Parallel 38° 03′ N.	West:	Meridian 8° 55′ W.
South:	Parallel 37° 52′ N.	East:	Shore Line.

Vessels considered to be "arrived" when 3 miles off West breakwater head.

DOCUMENTS:

6 Crew Lists.
3 Stores Lists.
3 Crew Personnal Effects Lists.
1 Health Declaration.
3 copies Bill of Lading
3 copies of Manifest.

Ship's papers for clearance:

Tonnage Certificate.
Safety Construction Certificate.
Safety Equipment Certificate.
Safety Radio Certificate.
Load Line Certificate.
Report on inspection in accordance with the Memorandum of Understanding on Port State Control (M.O.U.).

PILOTAGE: Compulsory. Pilot service available 24 hours a day. To be ordered by Agent. Pilot station keeps permanent watch on VHF Channel 12.

Notice of ETA and request for Pilot must be made to the pilot station at least 24 hours in advance and confirmed 2 hours before entering Pilotage Area.

The Boarding Area for Pilot must be adjusted by VHF, depending on weather conditions.

Address: Sines Pilot.
Tel: 069/634041, 069/634042.
Fax: 069/635043.

ANCHORAGES:

Vessels up to 20,000 d.w.t.:

(C) 37° 56.8′ N.	8° 52.0′ W.	(E) 37° 56.0′ N.	8° 52.4′ W.
(D) 37° 56.8′ N.	8° 52.4′ W.	(F) 37° 56.0′ N.	8° 52.0′ W.

Vessels from 20,000 d.w.t. to 150,000 d.w.t.:

(C) 37° 56.0′ N.	8° 52.4′ W.	(E) 37° 55.5′ N.	8° 51.5′ W.
(D) 37° 56.0′ N.	8° 52.0′ W.	(F) 37° 55.5′ N.	8° 52.4′ W.

Vessels of more than 150,000 d.w.t.:

(E) 37° 55.5′ N.	8° 51.5′ W.	(G) 37° 54.0′ N.	8° 52.4′ W.
(F) 37° 55.5′ N.	8° 52.4′ W.	(H) 37° 54.0′ N.	8° 51.0′ W.

Vessels are advised to contact Sines Pilot Station to confirm positions.

RESTRICTIONS: Vessels of more than 150,000 d.w.t. berth in daytime only, but in good weather conditions berth any time.

MAX. SIZE: Max. LOA 350 m. Max. draft 22.5 m.

VHF: "Sines Port Control" always keeps watch on Channels 12 and 16. Other channels available.

TUGS: 2×35 ton bollard pull and 3×25 ton bollard pull.

BERTHING: See "Tables" on Pages 1643.

STEVEDORES: Stevedores available for handling of stores, spares and small amounts of cargo. Application for stevedores should be made to the vessel's Agent.

MEDICAL: Doctor available.

Dentist at Santiago do Cacem (17 km.).

Hospitals at Santiago do Cacem (17 km.), Setubal (95 km.) and Lisbon (165 km.).

TANKERS: See "Tables" on Page 1644.

DENSITY: 1025.

DIRTY BALLAST: Facilities available for receiving ballast and residue on Berths No. 2, 3, 4, 5, 6, 7, 9 and 10. Notice of quantity and quality must be given in advance.

FRESH WATER: Available on all berths. Rate of delivery about 40 t.p.h.

FUEL: Supplied by the refinery. Application to be made to the vessel's Agent. Fuel also available by barge.

REPAIRS: Repair shops available in Sines. Authorisation for repairs should be previously obtained from the Port Authority and Safety Department. Application for repairs should be made by the vessel's Agent.

SURVEYORS: Bureau Veritas, S.G.S., Saybolt and others are available.

CUSTOMS REGULATIONS: Same as other Portuguese ports.

REPATRIATION: Possible.

AIRPORT: At Lisbon 165 km. distance. Airfield at S. Torpes (15 km. distance).

TIME: GMT plus 1 hour. In Summertime (from last Sunday of March to last Sunday of September), GMT plus 2 hours.

HOLIDAYS: The Terminal works all days except Christmas Day and New Year's Day.

GARBAGE DISPOSAL: Service available free of charge. Ships should request the service through local agent as soon as possible or on arrival to the Terminal Representative.

WASTE OIL DISPOSAL: Service available at oil and petrochemical terminals – Piers No. 2 – 7, 9 and 10. Ships should request the service through the local agent as soon as possible or on arrival to the Terminal Superintendent.

SEAMAN'S CLUBS: Clube Stella Maris de Sines, Av. Domingos Pablo. Tel: 633941. Casa do Marinheiro, Lg. Gago Coutinho 56. Tel: 633965.

CURRENCY: Portuguese Escudo (PTE). U.S.$ 1.00 = 175.00 PTE (1.3.94).

SHORE LEAVE: Possible. Shore passes issued by Customs.

DELAYS: In Winter, vessels may suffer delays due to bad weather.

SAFETY: The following are some of the safety rules.

Loading and Discharging Operations:

Loading and discharging operations can be commenced only after the Master or his Deputy fills out and signs the Safety Check List.

1. The loading or discharging of static accumulator products such as: Gas oil, Kerosene, Jet fuel, Naphtha, Gasoline, etc., should commence in accordance with the following scheme (a cargo plan of the ship should be produced to the Safety Inspector who, together with the Operations Team Supervisor, will analyse it).

Any loading or discharging shall begin at a slow flow rate (not higher than 1 m./sec.):

(a) In case of loading, and until the ship's lines are full, free from air and water, and the product height in the tank bottom is sufficient (between 0.6 m. and 1 m.) to prevent both air dispersed product particles and liquid surface turbulence.

(b) In case of discharging, until the ship lines and loading arms are full and Refinery confirms that the product is rising in the tank.

Only after beginning in accordance with (a) or (b) above, may the loading or discharging speeds be increased up to 5 m./sec. or to the maximum the ship and Terminal can support, in the event that ship/terminal cannot reach that limit.

2. *Non static accumulator products* (crudes, fuel oil) loading or discharging should commence at a slow rate until:

(a) In case of discharging, the Refinery confirms that the product is filling the tank.

(b) In case of loading, the Chief Officer confirms that product is entering the tank or tanks in accordance with the cargo plan.

As soon as the above conditions are sustained the flow rate can be raised to the required rate.

3. *Loading or Discharging Operations Completion – Pressure Surges:*

The line length between Terminal and Refinery is about 8 km.

The following precautions should be taken while pumping in or off cargoes at high flow rates:

(a) The cargo pump rate should be slowly reduced when finishing or whenever there is a stoppage.

(b) Flow rates should change slowly by controlling the cargo pumps r.p.m.

(c) If the flow rate reductions of loading/discharging operations interruptions are controlled by valves they should be slowly reduced or closed.

Usually motor-valves have an acceptable closing speed which does not cause pressure surges when flow rate reductions of loading/discharging interruptions take place.

Simultaneous loading and deballasting operations are permitted if a previous agreement has been settled between Master and the cargo loader or receiver, with terminal agreement.

Ballast: Ballast in the cargo tanks cannot be pumped out into Sines Harbour waters.

On arrival Masters must declare the ballast loaded in the cargo tanks. Ballast will be pumped out into inland ballast tanks or will remain on board. Port Authority Safety Inspector may request the ballast tank measurements together with the ballast valves sealing.

The permanent ballast can be pumped out to the sea. Before pumping the permanent ballast into the sea, the Master must be sure it is not contaminated. Terminal Safety Inspector may require a sample of the ballast which will be sealed in the presence of the Master or his Deputy.

Crude Oil Washing – Inert Gas: Sines Port Authority gives permission for crude oil washing (C.O.W.) during discharging. Permission to be requested through Agent 48 hours in advance.

However, this operation can only be permitted if the ship has an inert gas system in good working condition.

The tank atmosphere will be considered inert when the percentage of oxygen in it is not higher than 8%. Nevertheless, during operations, the oxygen percentage in the tanks cannot be higher than 6%.

If by any means the oxygen percentage increases to over 8% or its evaluation is doubtful, the washing procedures should cease at once.

The washing operations also cease if there are leakages or traces of leakages in the deck lines.

If the condition of the pipes is not satisfactory under a visual inspection the washing is not permitted.

Transhipment: This type of operation in the Sines Harbour is subject to the permission of the Maritime Authority and A.P.S. (Port Administration) who will set up the conditions by which the transhipment should be performed.

When this operation is a ship-to-ship transfer the correct functioning of the inert gas system is compulsory.

During approaching and mooring manoeuvres, ballast, deballasting, internal cargo transfers, bunkering, etc., are not permitted.

If there will be a gas concentration over the ships or the wind velocity is lower than 4 knots, the transhipment will cease.

Also there will be a stopping of the transhipment and separation of the ships if the weather conditions become unfavourable for that type of operation.

All the applicable safety rules should be strictly followed during the transhipment.

Gas Freeing and Cleaning of Ship's Cargo Tanks: Under previous permission of A.P.S. and the Maritime Authority, gas freeing and cleaning can be performed by a ship at anchor.

With bad weather threatening or wind velocity lower than 4 knots these operations should cease.

Cleaning of tanks alongside is possible for ships equipped with inert gas system and fixed washing systems.

Entry of persons inside cargo tanks for cleaning or drying operations not permitted whilst vessel alongside.

LPG tankers can inert tanks on Piers No. 9 or 10. The owner should contact Neste Chemicals, S.A., to agree to the operation.

Bad Weather: When there is bad weather threatening, all operations must cease, the tank lids must be closed and secured and the loading arms disconnected. In the case of bad weather, when it is likely the ship will exceed the safety limits of the loading arms, all operations should be brought to a stop.

Masters are requested to strictly follow the Operations Team Supervisor and/or the Terminal Safety Representative instructions.

Even with surplus mooring lines, there will still be a threat to the ship and/or the Port, and vessel must prepare to unberth.

In the case of a thunderstorm threatening from windward about 5 km. away the operations should cease and tank lids be closed.

Undertow: The Port of Sines, as with any other open port, is subject to the undertow effects. The phenomenon is due to waves which may have their source either in the North or South hemispheres.

At Sines the undertow effects show up between November and March. During that period the Masters must be more concerned about their ship's mooring. If necessary and taking into account the weather forecast for the laytime, Masters will be supplied with special safety instructions.

Foodstuff, Lubricants or Spares: Foodstuff, lubricants or spares can be shipped aft if permission is granted by A.P.S. and the Maritime Authority, after ascertaining that there are no operations on board, that involve tank lids opening or zones with gas concentrations (next to the pump house, blowers, etc.).

With ship alongside, shipping of foodstuff and spares can be done over the quay when the packages can easily be carried by hand.

Metallic objects or steel banded packages should be handled with care to avoid direct contact with the steel deck plate.

A ship with an inert gas system can receive heavy packages for shipping at the stern while loading, discharging or ballasting. If there is no inert system in the ship, packages to be loaded must be held until after loading.

Shipping of foodstuff, spares, etc., whether the ship is alongside or anchored can only be made with permission of A.P.S. and the Maritime Authority.

Watchmen and Crew: Master must maintain permanently on duty, sufficient number of qualified members of the crew to ensure the execution of manoeuvres, operations, to face an emergency and stand guard at the gangway.

Visitors: Persons who are not crew such as family, visitors, technicians, etc., must carry a special permit issued by the ship's Agents.

Permits issued by the Port Safety Authority are to be used for circulation in the Terminal premises only.

Visitors on board are the Master's responsibility.

During loading, discharging or ballasting operations visitors are not allowed to stay on the forecastle or amidship, especially women and children.

Crew Identification and Circulation in the Terminal: Crew are requested to keep with them their IDs (especially the yellow pass given by Customs) which must be shown on request to any Terminal Officials.

Crew and visitors are not permitted to walk around the Terminal Zone and when in it Safety Rules in force should be strictly followed.

Mooring Lay Time: The ship is not permitted alongside more than 2 hours after operations are completed.

GENERAL: The anchorages are provisional. No difficulties arise in Summer. In Winter, the decision to anchor is at the option of the Master. It is recommended that in the event of bad weather, anchorage be suspended and that vessels should heave to off the coast.

SHIPMASTER'S REPORT: October 1987 (Updated 1992).
Chart: BA. Chart No. 3276
Documents:
6 copies Crew List.
2 copies Crew Declaration.
2 copies Manifest.
1 copy Health Declaration.
6 copies Cargo Manifest.

Bond not sealed. Shore passes are issued by Customs/Immigration and have to be returned before departure.

Approaches: The approaches are visually identified and on the radar.

Anchorage: Small vessels anchor under the direction of Port Control in approximate position Lat. 37° 56.5′ N., Long. 08° 52.2′ W. between the Petro Chemical Terminal and the new Coal Harbour breakwater. The anchorage is relatively sheltered.

In fine weather the Pilot boards off the Molhe Oeste Buoy and in bad weather inside the main breakwater. The Pilot boards from a pilot boat and is available throughout 24 hours for berthing and unberthing. Pilot may be contacted on VHF Channels 16 and 12.

The Pilot reports that berthing is undertaken in most weather conditions.

Tugs: 7 × 2,400 h.p. – 2,800 h.p. stationed at the port. A minimum of 1 tug is required for all vessels and it is too large and too powerful for handling small vessels.

Berthing: Vessel berthed at the Petro Chemical Terminal (B.A. Chart No. 3276).

The depth at both berths was approximately 12.0 m. but the pilot reports maximum draft normally allowed is 10.0 m.

For ethylene loading and discharging, Berth No. 10 on the East side is used. Vessel berths head out, starboard side to.

For propylene and "C4" discharge, Berth No. 9 on the West side is used. Vessel berths head out, port side to.

It is possible to berth head in if this is required for manifold connections.

The concrete quay is very high and has large fenders.

There is a swell running in the harbour even when conditions are calm in Winter time.

Tidal range is approximately 2.5 m.

Berthing and unberthing undertaken throughout 24 hours. Moorings consisted of 2 head/stern lines, 2 breast lines and 2 springs at each end. These were secured on to hooks.

2 mooring boats are provided. Shore gangway provided.

Cargo: Berth No. 10: Vessel loaded ethylene. The liquid and vapour arms are 8 in. 150 ASA.

We loaded at a rate of approximately 100 tonnes per hour with two plants. Manifold temperature −99°C.

The charterers were concerned at the temperature due to discharge port temperature requirements and only 20 hours steaming. Just before completion of loading the shore agreed to connect the vapour arm and we loaded an extra 20 tonnes to take account for a vapour return. Two plants are required and shore compressor drew from manifold.

It took 8 hours to return 20 tonnes and reduce temperature from −99°C to −101.9°C.

Bill of Lading figures are calculated using the weight of Air not Vacuum.

Shore personnel connect and disconnect arms.

Berth No. 9: Vessels discharge propylene (Refrigerated storage).

Shore requested maximum of 3 pumps which gave discharge rate of 150 tonnes per hour.

The Terminal like the product very cold. Ours being at −48°C created no difficulties. However some ships arrive with the product at around −40°C and this can cause difficulties.

The liquid arm is 8 in. No vapour return line. It was not used due to product contamination.

It was requested that we berthed starboard side to in order to connect to our extended starboard manifold but this was not satisfactory as the Chicksan arm was too close to the catwalk, so we had to shift around and berth port side to.

Shore tank pressure maximum 90 mbs.

Shore nitrogen is used to purge the Chicksan arm upon completion. They do not allow a vessel to "hot gas" purge ashore.

Bureau Veritas Cargo Surveyor attended.

Fresh Water: Fresh water is available from the quay at a good rate and is metered. The waterman supplies shore hoses.

Stores: It was difficult to store at both berths as the lorry can only proceed to the car park which is about 100 m. from the ship. From there a hand truck is to be used and there is no shore crane.

General: Personnel are not allowed to walk through the Terminal. The use of transport is compulsory and this is arranged through the agent.

The new Coal Harbour to the East of the oil port is very conspicuous.

The breakwater is completed and has navigational lights: Fl. G. 6 sec. on the N.W. head; Fl. Y. 6 sec. on the S.E. head, and Fl. R. 4.5 sec. on fishing harbour breakwater.

Berth construction is finished and operations start in 1992.

VIANA DO CASTELO: 41.41 N. 08.50 W. (See Plan)

DOCUMENTS:
Health Declaration.
3 Crew Lists.
Provision List (ship's and individual).
Tobacco Declaration and Entrance Forms supplied by Agents on arrival.
2 Manifests and 1 copy of each Bill of Lading concerning cargo to be discharged.
1 Transit Manifest if cargo in transit exists.

PILOTAGE: Pilotage compulsory. ETA should be given to Agent with ample notice. Signals; during the day Flag "G" of International Code, and at night 3 long blasts. Boats black with white cabins. Pilots to be taken on board in outer or inner harbour respectively with good or bad weather.

ANCHORAGES: Outer or inner harbour according to weather conditions.

RESTRICTIONS: Entering and sailing only during daylight unless exceptionally good weather. Depth in entrance 6.5 m.

MAX. SIZE: Max. draft 26 ft. on HWST.

HEALTH: Free Pratique authorised for vessels coming from other Portuguese ports. For vessels coming from other countries Health Declaration must be filled in and delivered to the Agents.

RADIO: Call Viana do Castelo Pilots frequency 2182 kHz and listen on 2132 kHz.

TUGS: 3 tugs of 1,160 h.p., 400 h.p. and 1,400 h.p.

BERTHING: Over 1,500 m. of Commercial Quays with 500 m. of Commercial Quays with depth of 9.0 m.

Ro/Ro Terminal: Max. LOA 160 m. Max. draft 7.6 m. Length of quay 233 m. Terminal equipped with 3×40 ton capacity Tugmasters, 1×56 ton at 12 m. mobile crane, 1×42 ton forklift and small forklifts of 2 tons – 7 tons capacity.

BRIDGES: 1 bridge which allows entrance/sailing at any time.

CRANES: 1×5.5 tons, 2×12.5 tons, 2×18 tons, 6×12 tons, 1 × 40 tons and 1×56 tons.

STEVEDORES: Ordered by Agents 8 hours in advance.

MEDICAL: No prior advice is necessary.

FRESH WATER: Supplied by shore installations.

FUEL: Only small quantities of gas oil can be supplied.

CONSULS: France 22412. Spain 23018.

REPAIRS: All types of deck, engine and electrical repairs can be carried out.

DRY DOCKS: Three dry docks available.

	Length	*Breadth*	*Draft*
Dock 1	203 m.	34.0 m.	18 ft.
Dock 2	127 m.	18.5 m.	18 ft.
Dock Eng. D. Pacheco	104 m.	11.0 m.	16 ft.
Fitting Dock	190 m.	65.0 m.	21 ft.

No special equipment for tank washing is available.

GANGWAY/DECK WATCHMEN: Available but not compulsory.

OPENING/CLOSING HATCHES: Work usually done by crew.

CUSTOMS ALLOWANCES: No limit, but must be declared.

REPATRIATION: No difficulties for crew repatriation.

AIRPORT: Nearest is Oporto Airport, 55 km.

TIME: From end September to end March – GMT. From end March to end September – GMT plus 1 hour.

HOLIDAYS: 1st January; Holy Friday; 25th April; 1st May; Corpus Christi; 10th June; 15th August; 5th October; 1st November; 1st, 8th, 24th and 25th December.

POLICE/AMBULANCE/FIRE: Tel. 115.

SHORE LEAVE: Crew allowed ashore.

IDENTIFICATION CARDS: Required.

DEVELOPMENTS:
1. Roadworks.
2. Marina.

AUTHORITY: Junta Autonoma dos Portos do Norte, Rua do Marques No. 65, 4900 Viana do Castelo, Portugal. *Tel:* 058-829096/7/8/9. *Telex:* 32609 Porvia P. *FAX:* 058-829106. *Contact:* Jose Monteiro de Morais, Managing Director. Captain Z. Cavaco, Harbour Master. (*Tel:* 058-22168).

VILA REAL DE SANTO ANTONIO: 37.10 N. 07.26 W.

DOCUMENTS:
2 Health Certificates.
3 Crew Lists.
1 List of Passengers in Transit.
2 Lists of Passengers Disembarking.
2 Dangerous Cargo Lists.
1 Ship's Register.
1 Tonnage Certificate.

PILOTAGE: Black boat, wooden hull, white "P" at bow. Stationed near buoy No. 1 (harbour entrance). All sea-going vessels entering or leaving harbour are obliged to avail themselves of the services of a Pilot. Latest 24 hours before arrival cable "Corporacao dos Pilotos de Vila Real de Santo Antonio" or to Agent. Departing vessels should apply for their Pilots at least 6 hours before the time of departure.

MAX. SIZE: Entrance channel 4,000 m. long, has a depth of 4 m. (12 ft.) at LW. Vessels drawing up to 5.5 m. (16 ft.) can enter under normal circumstances 1 hour before HW, a keel clearance about 1 ft. will be maintained.

TUGS: Tugs up to 105 h.p. available.

BERTHING: 1 pier 300 m. long. Depth at pier 20 ft.

STEVEDORES: Ordered by Agents. ETA to stevedores is necessary. No work allowed on Sundays.

MEDICAL: Inoculations in hospital Marques Pombal - Vila Real de Santo Antonio.

FRESH WATER: Obtainable alongside quay.

FUEL: Gas oil can be supplied in small quantities.

CONSULS:
Finland, Avenida da Republica, 133
France, Avenida da Republica, 114
Greece, Avenida da Republica, 109
Italy, Avenida da Republica, 11
Netherlands, Avenida da Republica, 73
United Kingdom, Rua Dr. Oliveira Salazar, 4

REPAIRS: There is 1 small ship repair yard at Vila Real de Santo Antonio.

GANGWAY/DECK WATCHMEN: Compulsory.

OPENING/CLOSING HATCHES: Crew allowed to open and close.

CUSTOMS ALLOWANCES: About 200 cigarettes and 1 bottle of spirits per man.

HOLIDAYS: 1st January; Holy Friday; 25th April; 1st May; 10th June; 15th August; 5th October; 1st November; 1st December; 8th December; 25th December.

POLICE/AMBULANCE/FIRE: Police 66; Ambulance 202; Fire 202.

AUTHORITY: Junta Autonoma dos Portos de Sotavento do Algarve, Rua Conselheiro Bivar 68, 8000 Faro. *Tel:* (089) 22025, 22049. *Telex:* 56117 Japsa P. *Contact:* Eng. Jose Domingos Mendonca de Sousa, Director.

NOTES

Please also advise Shipping Guides Ltd.

Puerto Rico

AGUADILLA: 18.26 N. 67.10 W.

DOCUMENTS: See "San Juan".
PILOTAGE: Mayaguez's Pilots provide service in Aguadilla. At least 24 hours advance notice required.
RESTRICTIONS: Open port, very deep, safe in good weather. Cold fronts from North cause very heavy swells. Vessels cannot berth during this kind of weather.
MAX. SIZE: 600 ft. long, 36 ft. draft.
HEALTH: Free Pratique granted on arrival.
BERTHING: *Harbour:* 1 mile North of the town is a conveyor pier with 1 dolphin berth at its head. Least depth alongside 12.2 m. (40 ft.). Length of mooring lines not less than 180 m. (600 ft.). Vessels tie up to 4 mooring buoys, with spring lines to 2 bollards at the loading tower. 10 in. connection to molasses line. 1 off-shore tanker berth with 9 m. (30 ft.) depth consists of mooring buoys and pile clusters, connecting platform and pipelines for discharging aviation gas for Borinquen Airport.
MEDICAL: 24 hours' notice preferred; local hospital available.
TANKERS: See "Berthing".
FRESH WATER: Available. 2 in. pipeline with meter.
CONSULS: No local representation.
GANGWAY/DECK WATCHMEN: Usually crew members are used.
OPENING/CLOSING HATCHES: Performed by stevedores.
CUSTOMS ALLOWANCES: U.S. Customs Regulations. For Customs service Aguadilla is under the jurisdiction of the Mayaguez Custom House.
REPATRIATION: Can be arranged.
AIRPORT: 20 minutes' drive. Regular airlines.
TIME: Atlantic Standard Time, 4 hours less than GMT. No alterations during year.
HOLIDAYS: Refer to "San Juan".
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: Required to go ashore.
DELAYS: No delays unless another ship is already berthed.
AUTHORITY: Puerto Rico Ports Authority. See "San Juan".
Captain of the Port, Aguadilla. Tel: 832-3590.

GUANICA: 17.57 N. 66.54 W.

DOCUMENTS: See "San Juan".
GENERAL INFORMATION: Refer to "Ponce".
PILOTAGE: Port operations are under the control of the Captain of the Port. Pilot services are available day and night, by previous arrangement with Mayaguez Pilots.
ANCHORAGES: Harbour is located 8 miles Westward of Guayanilla Bay. Though small, it is one of the best hurricane harbours in Puerto Rico.
TUGS: Available from Guayanilla.
BERTHING: Bulk sugar, bulk fertiliser and bulk grain handling facilities. Length 700 ft.; depth alongside 28 ft. During recent years, operations at the port have been practically nil.
MEDICAL: Medical assistance is available; if hospitalisation is required for any crew member, it will probably be necessary to arrange for admittance to a Ponce hospital.
FRESH WATER: Available in limited quantities for emergencies only.
FUEL: Available by trucks from Ponce.
CONSULS: None available locally, nearest at Ponce.
AUTHORITY: Puerto Rico Ports Authority. See "San Juan".
Captain of the Port, Guanica. Tel: 821-2860.

GUAYANILLA (incl. Tallaboa Bay): 18.00 N. 66.46 W.

(See Plan)

DOCUMENTS: See "San Juan".
PILOTAGE: Port operations are under the control of the Captain of the Port and Pilot services are available day and night. Pilots stand-by on VHF Channel 16 and operate on Channel 14. Arrangements should be made with at least 4 hours advance notice.
ANCHORAGES: Guayanilla is the largest hurricane harbour and one of the best in Puerto Rico. It has protected anchorage for 5 vessels. Maximum draft permissible is 42 ft. It is protected at its entrance by extensive reefs which extend a mile or more offshore. The entrance channel between these reefs is about 1.5 miles long and about 0.4 miles wide.
HEALTH: Pratique is not necessary. In case of continuous high fever or contagious disease, Agents must be notified prior to vessel's arrival. Agents will immediately contact Public Health for proper action.
RADIO: Chatham Radio (WCC) – Chatham, Massachussetts. Equipped with RCA automatic land line circuit direct to New York, N.Y., San Francisco, California and Washington, D.C.
TUGS: Available 24 hours daily from South Puerto Rico Towing Co., Tel: 809-835-2795, as requested by vessel.
BERTHING: The Union Carbide Company has berthing facilities for barge operations and LPG.
New port facilities for Pittsburgh Plate Glass are owned by the Puerto Rico Ports Authority. 2 berths at jetty, each 240 m. length. Depth alongside 35 ft.
Berths were recently dredged and actual restrictions are as follows:
**Refinery Dock – Guayanilla:*

DWT	80,000 tons	
LOA	830 ft.	
BCM	400 ft.	(Critical)
Draft	42 ft.	(South Face, Berth No. 5)
	42 ft.	(North Face, Berth No. 4).

**Petrochemical Dock – Guayanilla:*

DWT	50,000 tons	
BCM	449 ft.	
Draft	36 ft. 06 in.	(South Face, Berth No. 3)
	30 ft.	(North Face, Berths 1 & 2) Ships only
	28 ft.	(North Face, Berths 1 & 2) Barges only

*Commonwealth Oil Refining Co. Ltd. facilities.
Texaco: There is a private pier owned and operated by Texaco for the receipt of clean petroleum products. Berth 650 ft. long and 24 ft. deep being dredged to 36 ft. Diesel bunker available.
Punta Gotay Pier: 1 berth at dolphins with depth 38 ft.
Punta Pepillo Pier: 1 berth at dolphins with depths 12 ft. – 28 ft.
Tallaboa Bay: 1 dolphin berth with depth 20 ft. and 1 jetty with depth 38 ft.
Also see "LPG".
LPG: Dolphin berth at Cayo Rio in Tallaboa Bay in Lat. 17° 59′ N., Long. 66° 44.5′ W.
Report: February 1984.
Max. Size: Vessel's dimensions not to exceed: length overall 965 ft. Max. draft 41 ft. Max. beam no restriction.
Manifold Position: The manifold must be positioned within 50 ft. fore or aft of the midpoint of the vessel's overall length.
Dock: The dock has been designed to accept the breasting load from a ship (or ships if vessel to vessel discharging is arranged) of up to 109,000 long tons total loaded displacement.
Depths: Depth of the docking area and approaches has been increased by dredging to over 44 ft. Due to swell and tidal actions, the maximum allowable vessel draft has been set at 41 ft. This draft has been approved by the U.S. Coast Guard and nautical charts affected are being updated accordingly.
Mooring Basin: The docking area is 450 ft. wide and is designed to handle a 125,000 cu.m. (145 ft. beam) vessel and a 75,000 cu.m. (120 ft. beam) vessel moored side by side.
Hose handling: Although connecting hoses and supplying the equipment necessary for doing so is the vessel's responsibility, receivers can, at their discretion, make such connections provided that the carrier's manifold elevation above water plus its manifold distance inboard plus its manifold distance from the midpoint of the carrier's overall length is 60 ft. or less. If it is more than 60 ft. the carrier would have to provide hose handling assistance including a crane to lift the end of the loading hose to the deck.
Carrier/loading platform access: An accommodation ladder will be provided for those carriers that have a deck height of 25 ft. or less above the water and are accessible from loading platform. Carriers that cannot meet the above must provide their own accommodation ladder. Transportation from their accommodation ladder will be provided.
Sanitary waste removal: Dumping of sanitary wastes into Tallaboa Bay is not permitted. Therefore, for those carriers that stay in port for 20 days or more, removal of sanitary wastes by barge will be provided. The carrier must provide the means (to be approved by Union Carbide Company) of transferring the wastes from the carrier to the barge.
Potable water: Potable water is not available at berth, but fresh water is. A fresh water connection is available on the loading platform. The carrier must provide his own hose for hook up. Should the carrier wish to purchase such water a release must be executed.
Bunkers: Bunkers are not available.
Night navigation: No U.S. Coast Guard regulation prohibits the berthing or unberthing of LPG carriers at night unless the incoming/departing vessel is being moored alongside another (storage) vessel.
MEDICAL: Medical service is available; hospitalisation at Ponce, which is only 15 minutes distant.
FRESH WATER: Available whenever requested by the vessel. Water delivery very slow (3 to 5 tons per hour).
FUEL: Available only whenever arranged by Owners of the vessel and/or charterers prior to arrival.
Fuel Dock: Length 680 ft. with deep water alongside. Mooring dolphins and moorings buoys installed to assist with clearing the dock.
CONSULS: None available locally; nearest at Ponce.
REPAIRS: Various marine contractors available in Ponce upon request. Minor repairs available in Guayanilla and Ponce. No drydock facilities in the area. For drydock facilities and other major repairs refer to "San Juan".
Radar: For radar technician contact local Agent prior to vessel's arrival. Various technicians available in San Juan.
REPATRIATION: Arranged by ship's Agents.
AIRPORT: International Airport in outskirts of San Juan served by regular airlines. Small airport in Ponce connects with San Juan.
CUSTOMS: For Customs service, Guayanilla is under the jurisdiction of the Ponce Custom House.
SHORE LEAVE: Foreign crew members are allowed to go ashore through U.S. Immigration.
IDENTIFICATION CARDS: Shore passes are sufficient for shore leave.
AUTHORITY: Puerto Rico Ports Authority. See "San Juan".
Captain of the Port, Guayanilla. Tel: 835-2647.

JOBOS (Aguirre): 17.56 N. 66.13 W.

DOCUMENTS: See "San Juan".
GENERAL INFORMATION: Refer to "Ponce".
PILOTAGE: The Port of Jobos is served by the Pilots of Ponce. Services must be arranged in advance.
ANCHORAGES: A fine land-locked harbour, located on the South coast, approx. 42 nautical miles Eastward of Ponce and 20 miles West of Point Tuna. Anchorage inside the bay is Southward of the pier in depths of 19 ft. – 24 ft., soft mud bottom.
RESTRICTIONS: The principal entrance is from Westward between Morrillo Cay and Ratones Cay.
TUGS: No tugs available.
BERTHING: To the West of the sugar pier (not in use and not buoyed) is an open concrete barge dock 632 ft. in length with a buoyed access channel for the receipt of fuel oils for the Water Resources Authority.
MEDICAL: Medical assistance is available; if hospitalisation is required for any crew member, it will probably be necessary to arrange for admittance to a Ponce hospital.
TANKERS: See "Las Mareas".
FUEL: No bunkers are available.
CONSULS: None available locally; nearest available at Ponce.
AUTHORITY: Puerto Rico Ports Authority. See "San Juan".
Captain of the Port, Jobos. Tel: 821-2860.

LAS MAREAS: (Guayama) 17.55 N. 66.10 W. **(See Plan)**

The Puerto de Las Mareas Terminal is located on the South side of the island of Puerto Rico. It is located approximately 26 nautical miles East of the port of Ponce. The nearest city is Guayama.

All vessels calling at Phillips Puerto Rico Core Inc., Puerto de Las Mareas Terminal should be consigned to Phillips Puerto Rico Core Inc., and all official documents for such ships should show them so consigned. In conformance with port regulations, no vessel will be allowed to tie up alongside a pier without having first obtained a berthing permit from the Ports Authority Captain of the Port.

DOCUMENTS: The following documents are required by the Customs and Immigration authorities for entry and clearance:
Master's Oath (original and 1 copy) Entry and Clearance.
General Declaration (original and 1 copy) Entry and Clearance.
Stores List (original and 2 copies) Entry.
Crew Purchases List (Curio List) (original and 2 copies).
Cargo Declaration (original and 1 copy).
Crew List (1 copy certified and 2 copies not certified).
Clearance from Last Port (if arriving on an international voyage).
Crewmen Landing Permits (for each crew member without the Plastic Form 1-14).
Passenger List (if any passengers).
All permanent documents of the vessel.
Also see "Customs" and "Firearms".

Passenger Lists: The Passenger List must show full names, sex, age, nationality, and occupation of passengers landing at Puerto de Las Mareas. The ultimate destination of in-transit passengers must also be shown in the Passenger List.

Outward Clearance: In most cases, outward clearance and cargo documents will be delivered on board by the ship's Agent, making it unnecessary for Masters to obtain such clearance in person from the U.S. Customs Office (Ponce).

APPROACHES: The harbour is entered through a channel 250 ft. in width at its narrowest portion, bearing 025.6° (T). It is protected on the Eastern side by a rubble mound breakwater extending approximately 700 ft. from the shore line. The dredged channel extends out to the 40 ft. depth contour and has a width at this contour of approximately 900 ft., narrowing to 250 ft. approximately 2,100 ft. inshore from the 40 ft. contour. The 250 ft. wide portion of the channel is approximately 1,000 ft. long. At the inshore end of the 250 ft. wide channel, the harbour itself extends for a length of 2,300 ft. and a maximum width of 1,100 ft. The harbour has a depth of 38 ft. below MLW but the maximum draft allowable for inbound and outbound vessels is 37 ft. The above dimensions are given to the bottom of the channel; the sides of the channel and the harbour are sloped at 1 in 3.

PILOTAGE: The use of Pilots is compulsory for all vessels. Vessel's Agent will arrange for Pilot, upon receipt of the arrival notice. Pilot will board inbound vessels off the entrance to the harbour about 1 mile offshore.

When approaching the dock and channel, vessels must have one anchor, to be designated by the Pilot, free of the hawse pipe and ready for quick release if necessary to stop the vessel.

Note: Every vessel arriving or departing must provide, properly secured, a pilot ladder which conforms to the standards of construction normally accepted by international safety standards.

Also see "Pilot's Report".

NAVIGATIONAL AIDS:
A. Lighted Buoy LM: This sea buoy is located 300 ft. West of the centre line of the channel, 2 miles offshore from the end of the rubble mound breakwater. It displays a white light through 360° flashing Morse code letter "A". (0.5 seconds on, 0.5 seconds off, 2.0 seconds on, 0.5 seconds off). The buoy is painted with black and white vertical stripes and is fitted with a radar reflector. Water depth is 70 ft.

B. Channel Marker Buoys:
(1) Buoy 1: This buoy has 360° green light flashing 0.6 seconds on and 3.4 seconds off. It is painted black and has a green retro-reflective tape in buoy superstructure panels. Water depth is 40 ft.
(2) Buoy 2: This buoy has 360° red light flashing 0.5 seconds on and 2.0 seconds off. It is painted red and has red/orange retro-reflective tape in buoy superstructure panels. Water depth is 40 ft.

C. Channel Marker Navigation Lights: There are 4 channel marker navigation lights, 3 are located on piling, and 1 on the end of the rubble mound breakwater.
(1) Channel Marker Number 3: This marker is located on a single pile 400 ft. West from the centre line of the channel, 2,024 ft. inshore from the channel marker buoy No. 1. The light is located 25 ft. above MLW, and is displayed through 360°. It is a green light, flashing 0.6 seconds on and 3.4 seconds off. The marker is fitted with 3 ft. square dayboards with green retro-reflective centre and dark green reflective border, numeral 3.
(2) Channel Marker Number 4: This marker is located on a tower at the end of the rubble mound breakwater, 50 ft. above MLW. The light is displayed through 360°, red, flashing 0.5 seconds on and 2.0 seconds off. The marker has 4 ft.×4 ft. triangular dayboards with red retro-reflective centre and dark green reflective border, numeral 4.
(3) Channel Marker Number 5: This marker is located 175 ft. West from the centre line of the channel, 1,000 ft. inshore from the end of the rubble mound breakwater. It is on a single pile 25 ft. above MLW and displays a green light through 360° flashing 0.4 seconds on and 0.6 seconds off. The marker is equipped with 3 ft. square dayboards with green retro-reflective centre and dark green reflective border, numeral 5.
(4) Channel Marker Number 6: This marker is located 175 ft. East from the centre line of the channel, 1,295 ft. inshore from the end of the rubble mound breakwater on a single pile 25 ft. above MLW. It displays a 360° red light, flashing 0.4 seconds on and 0.6 seconds off. The marker is equipped with 4 ft.×4 ft. triangular dayboards with red retro-reflective centre and dark reflective border, numeral 6.

D. Obstruction Light: This light is mounted on the protective dolphin at 10 ft. above MLW and displays 3 fixed red lights through 360°.

E. Range Lights: LLNR 1380.55 front range light is mounted on a tower located on the centre line of the channel 3,500 ft. inshore from the end of the rubble mound breakwater. It consists of a quick flash white light 86 ft. above MLW and visible on range line only. The tower is fitted with a 6 ft.×12 ft. KRW dayboard, covered with red/orange reflective coating with an 18 in. white stripe down the centre.

LLNR 1380.56 rear range light is mounted 104 ft. above ground on a tower located on the centre line of the channel 5,500 ft. inshore from the end of the rubble mound breakwater. It consists of an equal interval, white, 3.0 seconds on and 3.0 seconds off. The tower is fitted with a 6 ft.×12 ft. KRW dayboard covered with red/orange reflective coating with an 18 in. white stripe down the centre.

RESTRICTIONS: The entrance channel has a depth below MLW of 40 ft. and the harbour itself has a depth of 38 ft. Hence vessels using the port are limited to a maximum draft of 37 ft.

Vessels are required to have a minimum draft of 14 ft. forward and 24 ft. aft when entering or leaving the port.

MAX. SIZE: 55,000 d.w.t., LOA 221 m. (725 ft.). Beam 32.3 m. (106 ft.) and draft 11.28 m. (37 ft.).

HEALTH: Free Pratique is not required for vessels arriving at Puerto de Las Mareas, except when cases of communicable disease are on board. In such cases, U.S. Public Health Service doctors are available, and should be requested through the Agent 48 hours prior to arrival.

RADIO: Agents of vessels or Owners or its representatives should advise Phillips Puerto Rico Core Inc. by telex, cable or telephone, 72 hours, 48 hours, and again 24 hours before their expected arrival at the sea buoy.

ITT Telex No. 3451056 "Philcorgya".
Telephone (809) 864-1515.

Incoming vessels should advise the Agent by radio 48 hours and again 24 hours before their expected arrival at the sea buoy.

Coast stations available for such advice are:

Lantana Radio (WOE) - Lake Worth, Florida. (Equipped with RCA automatic land-line circuit direct to New York City, San Francisco and Washington, D.C.)

Transmits Traffic Lists at (GMT) 0005, 0205, 0405, 0605, 0805, 1005, 1205, 1505, 1605, 1805, 2005 and 2205. Transmits weather bulletins at (GMT) 0105 and 1600.

New York Radio (WNY) - New York City. (Equipped with RCA automatic land-line circuit direct to New York City, San Francisco, Washington, D.C.)

Transmits Traffic Lists at (GMT) 0010, 0210, 0410, 0610, 0810, 1010, 1210, 1410, 1610, 1810, 2010 and 2210. Transmits weather bulletins at (GMT) 1000, 1400, 1600 and 2200.

Also equipped with teletypewriter (TWX) for direct communication with steamship companies in the United States having this equipment.

Chatham Radio (WCC) - Chatham, Massachusetts. (Equipped with RCA automatic land-line circuit direct to New York City, San Francisco and Washington, D.C.)

Transmits Traffic Lists at (GMT) 0050, 0450, 0850, 1250, 1650 and 2050. Transmits weather bulletins at (GMT) 0100, 1300 and 1700.

In addition to the above commercial radio facilities, incoming vessels may contact the port through radio facilities on tugs stationed at the port. These facilities are as follows:

VHF radio: range 30 miles. Channel 16 (156.8 MHz), working frequency Channel 14 (156.7 MHz).
SSB radio: 12 MHz, 8 MHz, 4 MHz.
Call letters: WA 6617 and WS 6560.

Diverted Vessels: Vessels diverted to Puerto de Las Mareas must furnish the required 48-hour and 24-hour notices of arrival, unless notice of diversion is received less than 48 hours before anticipated arrival, in which case the notice of arrival will be given as soon as notice of diversion is received. In such cases, however, Phillips Puerto Rico Core Inc. reserves the right to refuse to load or unload such vessels if tankage is not available for the cargo, or if cargo is not available to loading.

TUGS: The use of tugs is compulsory for arriving and departing vessels. Two tugs are stationed in the harbour to assist in docking, undocking and turning. Arrangements for the use of tugs should be made through the Agent well in advance of the vessel's arrival. A minimum of 2 tugs required for berthing and a minimum of one tug required for unberthing.

Tug Operator: McAllister Brothers Inc. Tel. (809) 721-8888, 722-8111.

BERTHING: The dock at the terminal consists of a finger pier approximately 800 ft. in length inside the harbour with a tanker loading berth on each side. The finger pier consists of a cargo platform 45 ft. by 90 ft., fitted with fender piling and dolphins (3 breasting dolphins, 2 mooring dolphins and 1 protective dolphin). The cargo platform is connected to shore by a driveway 12 ft. 6 in. wide. The mooring and breasting dolphins outboard of the cargo platform are connected to each other and to the platform by a walkway. No launches are required to handle mooring lines. The top of the cargo platform is 12 ft. above MLW level. Water depth alongside the finger pier is 38 ft. at MLW. There is no current at the dock or in the harbour.

Bollards for mooring lines are provided on the breasting dolphins, the mooring dolphins and the turning dolphins.

Turning Basin: Turning basin 1,100 ft. wide and 1,060 ft. long, outboard of the turning dolphin, is provided. The turning basin has a depth over its entire area of 38 ft. at MLW. Normal procedure will be for vessels to enter the harbour and turn prior to docking.

Vacating of Berths: Vessels will be required to vacate berths promptly on completion of loading or discharging cargo. Permission to use a berth when not loading or discharging cargo may be granted under special circumstances, and must be requested through the Agent.

If the vessel fails to vacate the berth on the expiration of the allowed time, it will be held liable for payment of any demurrage and/or damages incurred by Phillips Puerto Rico Core Inc., as a result of delays to other vessels waiting berths, or for any other consequence of its failure promptly to vacate the berth.

HURRICANES: The South coast of Puerto Rico is subject to winds of hurricane force, accompanied by abnormally high tides, during the late Summer and Autumn. In the event of such abnormal conditions, vessels may be required to put out additional moorings, or if necessary, to suspend all operations and put to sea until normal conditions prevail.

MEDICAL: Medical assistance or hospitalisation arrangements should be made through the Agent. If hospitalisation is required for any crew member, arrangements should be made through the ship Agent with hospitals located in the Municipality of Guayama. Ambulance service can be furnished upon request to the Agent.

TANKERS: The various cargoes available at the Puerto de Las Mareas terminal include motor fuel, cyclohexane, benzene, paraxylene, orthoxylene, mixed xylenes, paraffinic naphtha, and other special products. Feedstock for Phillips Puerto Rico Core Inc. facilities is naphtha, and there is a fuel oil unloading line.

Cargo handling is accomplished through various sizes of lines, as follows:

Product	*Hose size (each side of dock)* No. (in.)	*Line size* (in.)	*Loading/ discharging rate with one pump* b.p.h.
Naphtha Feedstock	3 × 8	20	13,700
Motor Fuel Regular	3 × 8	20	10,000
Motor Fuel Premium	2 × 8	12	5,700
Motor Fuel Unleaded	1 × 8	14	7,000
Benzene	1 × 8	12	3,800
Cyclohexane	1 × 8	10	4,000
Paraxylene	1 × 8	12	5,000
Orthoxylene	1 × 6	8	2,200
LP-7 Raffinate	2 × 8	16	7,500
Mixed Xylenes	1 × 6	8	2,000
Toluene	1 × 8	8	800
Fuel oil	1 × 8	12	3,500
Ballast	1 × 8	12	6,000
Domestic water	1 × 2	2	3
Butane	1 × 6	16	2,000

CONNECTING/DISCONNECTING HOSES: Service will be provided by the terminal to connect and disconnect hoses on the ship. Vessels are requested to have blanks removed from the cargo lines and hose handling booms rigged on arrival at the dock.
